THE proceedings in the Probate Court at the third hearing of the Winsborough Peerage Case were brief but somewhat dramatic. As soon as the judge had taken his seat, Mr. McGonnell rose and addressed him to the following effect:

“I have, this morning, my lord, to bring to your lordship’s notice certain facts which would seem to make it unnecessary to proceed with the case which has before the court. That case was an application by Mr. Christopher Pippet for permission to presume the death of Percy Engleheart, Sixth Earl of Winsborough. Now, in the interval since the last hearing, information has reached the Earl’s representatives that the said Earl Percy died about three years ago.”

“You say ‘about’ three years ago,” said the judge.

“The exact date, my lord, has not been ascertained, and is not, apparently, ascertainable, but it is believed that the Earl’s death took place sometime in March, 1918. The uncertainty, however, relates only to the time when the death occurred; of the fact that it did occur there appears to be no doubt at all. I understand that the body has been recovered and identified and is being sent to England. These facts were communicated to me by Mr. Brodribb; and perhaps the Earl’s representatives might more properly inform your lordship as to the exact circumstances in which the Earl’s death occurred.”

Here McGonnell sat down and Anstey took up the tale.

“The tidings of the Earl’s death, my lord, were conveyed to us in a letter written by a certain Major Pitt at Pará and dated
the 13th of last October. The facts set forth in that letter were briefly these:

“In the latter part of 1917 and the beginning of 1918, Major Pitt and the Earl were travelling together in the neighbourhood of the River Amazon, shooting, collecting and exploring. About the middle of January, 1918, the Earl announced his intention to explore the tract of country inhabited by the Munderucu Indians; and, as Major Pitt had planned a journey along the main stream of the Amazon, they separated and went their respective ways. That was the last time that Major Pitt saw the Earl alive, and for three years he had no knowledge of the Earl’s whereabouts or what he was doing. The Major, himself, made a long journey and was several times laid up for long periods with severe attacks of fever. It was not until the spring of the present year that he, at last, got tidings as to what had befallen his friend. Then, taking the Munderucu country on his way back to the coast, he learned from some natives that a white man had come to the country some three years previously and had died from fever soon after his arrival, which would be about March, 1918.

“On this, Major Pitt made more particular inquiries, the result of which was to leave no doubt that the man who had died could be none other than the Earl Percy. However, the Major, realizing the importance of accurate information, not only assembled the dead man’s effects—a considerable part of which he was able to recover, and which he was, of course, able to identify—but he went so far as to cause the body to be disinterred. Naturally, it was, in the ordinary sense, unrecognizable; but by the stature and by certain characters, particularly the teeth, some of which had been filled with gold, he was able to identify it with certainty as the body of Earl Percy.

“But, to make assurance doubly sure, he commissioned the natives—who have great skill in preserving bodies—to preserve this corpse, in so far as there was anything to preserve, so that it could be sent to England for further examination if such examination should seem necessary or expedient. But the Major’s description of the body, the clothing, the weapons, scientific instruments and other effects, together with the natives’ description of the man, the time of his arrival, and all the other circumstances, leave no doubt whatever that this man was really the Earl Percy.”

“In that case,” said the judge, “if the fact of the Earl’s death is to be accepted as proved, the application for permission to presume death necessarily lapses, automatically. And the applicant’s claim to be the heir presumptive also lapses. He will now claim to be the heir; and that claim will have to be preferred in another place.”

“I understand, my lord,” said McGonnell, “that it is not proposed to proceed with the claim. That is what I am informed by Mr. Pippet.”

The judge glanced at the vacant solicitors’ table and then asked:

“Was that decision reached on the advice of his solicitor?”

“No, my lord. Mr. Gimbler is not in court, and, I believe, is absent from his residence. I understand that he has been unexpectedly called away from home.”

The judge received this piece of information with an inscrutable face.

“It is not for me to express an opinion,” he remarked, “as to whether Mr. Pippet is well or ill advised to abandon his claim; but I may point out that the crucial question is still in suspense. According to the evidence which we have heard, the coffin which was examined was not the coffin of Josiah Pippet, and, consequently, the question whether the funeral was a real or a sham funeral has not been settled. It is unfortunate that that important issue should have been confused by what look like highly irregular proceedings; concerning which I may say that they will call for further investigation and that I shall consider it my duty to hand the papers in this case to the Director of Public Prosecutions.”

This rather ominous observation brought the proceedings to an end; and, as we were no longer litigants, the whole party trooped out of the court to gather in the great hall for more or less friendly, unofficial discussion. Mr. Pippet was the first to speak.

“His lordship,” he remarked, “was extremely delicate in his language. I should call the proceedings in regard to that coffin something more than irregular.”

“His lordship,” McGonnell remarked, “was probably bearing in mind that all the facts are not known. He, no doubt, has his suspicions as to what has happened and who is responsible; but, until the suspicions have been verified, it is as well not to be too explicit in assigning responsibility to individuals.”

Mr. Pippet smiled grimly. “It is well for you to say that, Mr. McGonnell,” said he, “seeing that both you and I are involved in those suspicions. But I am not inclined to take this business lying down, if you are. Gimbler was acting as my agent and I suppose I am responsible for whatever he chose to do, ostensibly in my interests. But I presume I have some remedy. Is it possible for me to prosecute him? You are my legal adviser. I put the question to you. What remedy have I for being involved in this discreditable affair?”

Mr. McGonnell looked uncomfortable, as well he might, for he was in an unpleasant position in more than one respect. After a few moments’ reflection, he replied:

“I have as little reason as you have to be pleased with the turn of events. If a fraud has been committed in this case, that will not enhance my professional reputation. But I must again remind you that we have not got all the facts. It does certainly appear as if that coffin had been tampered with; and if it had, the responsibility lies between you and me and Mr. Gimbler. Evidently, the suspicion lies principally on Gimbler. But, having regard to the fact that a quantity of stolen property—which was certainly not his—was found in the coffin, there is a clear possibility that the coffin may have been
tampered with by some persons for their own purposes and without his knowledge. We have to bear that in mind before we make any direct accusations."

"That is a very ingenious suggestion," said Mr. Pippet, "but it doesn’t seem to commend itself to me. I should leave it to him to prove, if he can."

McGonnell shook his head. "That is not the position, at all, Mr. Pippet," said he. "If you assert that Gimbler planted a sham coffin in the vault, it will be for you to prove that he did, not for him to prove that he did not. But I think that you had better take the advice of a solicitor on the subject, or, at any rate, of some lawyer other than me. You will understand that I shall naturally be reluctant to be the first to set up a hue and cry after a man who has been my colleague in this case. If he has committed a fraud, I hope that he will receive the punishment that he will have deserved; but I should rather that some hand other than mine delivered the blow."

"I understand and respect your point of view," said Pippet, "but it leaves me high and dry without any legal guidance."

Here Thorndyke interposed. "If I might venture to offer you a word of advice, Mr. Pippet," said he, "it would be that you do nothing at all. If any offence against the law has been committed, you may rely on the proper authorities to take the necessary measures."

"But suppose they regard me as the offender?"

"When you are accused, it will be time to take measures of defence. At present, no one is accusing you—at least, I think I may say so. Am I right, Superintendent?" he asked, turning to Miller, who had been unostentatiously listening to the conversation.

The Superintendent was guarded in his reply. "Speaking personally," said he, "I am certainly not accusing Mr. Pippet of any complicity in this fraud, if there has really been a fraud. Later, I may have to apply to him for some information as to his relations with Mr. Gimbler; but that is in the future. For the present, your advice to him is the best. Just wait and see what happens."

"And meanwhile," said Thorndyke, "if it appears that Mr. Gimbler has withdrawn himself from among us permanently, I am sure that Mr. Brodribb will consent to take charge of your affairs so far as recovery of documents and other winding up details are concerned."

To this, Brodribb agreed readily, to Mr. Pippet’s evident relief.

"Then," said the latter, "as we have disposed of business matters, I am going to propose that we make up a little luncheon party to celebrate the end of the Winsborough Peerage Case. I’d like to have the whole crowd, but I suspect that there are one or two who will cry off."

His suspicions were confirmed on particular inquiry. McGonnell had business at the Central Criminal Court; Mrs. Engleheart and Miss Pippet had some secret mission, the nature of which they refused to divulge, and Anstey had other legal fish to fry.

"Am I to have the pleasure of your lordship’s company at lunch?" Pippet inquired, fixing a twinkling eye on Mr. Giles, and obviously convinced that he was not.

Giles laughed, knowingly. "I should have been delighted," said he, "to lunch with my noble cousin, or uncle, or whatever he is, but I have an engagement with another noble cousin. I am taking Jenny to the Zoo to show her the new chimpanzee, and we shall get our lunch on the way."

Mr. Pippet shook his head resignedly and turned to the faithful few, consisting of Thorndyke, Brodribb Miller and myself, and suggested an immediate adjournment. Thorndyke and I retired to the robing room to divest ourselves of our legal war-paint, and, on emerging, rejoined the party at the main gate, where two taxis were already waiting, and were forthwith conveyed to Mr. Pippet’s hotel.

Throughout these proceedings and those of the subsequent luncheon, I was aware of a rather curious feeling of pleased surprise at our host’s attitude and apparent state of mind. Especially did I admire the sporting spirit in which he accepted his defeat. He was not in the least cast down; and, apart from the discreditable incidents in the conduct of the case, he appeared perfectly satisfied with the result. But the oddest thing to me was his friendly and even deferential attitude towards Thorndyke. A stranger, unacquainted with the circumstances, might have supposed my colleague to be the leading counsel who had achieved a notable victory for Mr. Pippet, instead of an expert witness who had, vulgarly speaking, "put the kybosh" on Mr. Pippet’s case. Any pique that he might, quite naturally, have felt seemed to be swallowed up by a keen sporting interest in the manner in which he had been defeated; and I was not surprised when, as the luncheon approached the coffee and cigar stage, he began to put out feelers for more detailed information.

"This trial," said he, "has been to me an education and an entertainment. I’ve enjoyed every bit of it, and I’m only sorry that we missed the judge’s summing-up and reasoned decision. But the real tit-bit of the entertainment was Dr. Thorndyke’s evidence. What delighted me was the instantaneous way in which every move in the game was spotted and countered. Those screws, now; it was all obvious enough when it was explained. But the astonishing thing was that, not only was the character of those screws observed, but the significance of that character appreciated in a moment. I want you to tell me, Doctor, how you manage to keep your eyes perpetually skinned, and your brain skinned at the same time."

Thorndyke smiled appreciatively as he thoughtfully filled his pipe.
“You are giving me more credit than is due, Mr. Pippet,” said he. “You are assuming that certain reactions were instantaneous which were, in fact, quite deliberate, and that certain deceptive appearances were exhibited to unprepared eyes whereas they had been carefully considered in advance. I have no doubt that the person who prepared the evidence made a similar mistake.”

“But,” objected Mr. Pippet, “I don’t see how you could consider in advance things that you didn’t know were going to happen.”

“It is possible to consider in advance,” Thorndyke replied, “those circumstances which may conceivably arise as well as those which will certainly arise. You seem to think that the little surprise packets which the manipulator of evidence devised for our undoing found us unprepared. That was certainly the intention of the manipulator; but it was very far from what actually happened.”

“Why call him ‘the manipulator’?” Mr. Pippet protested. “His name is Horatio Gimbler, and we all know it.”

“Very well,” said Thorndyke, “then we will throw legal caution to the winds and call him Gimbler. Now, as I said, Gimbler made his little arrangements, expecting that they would come on us with all the charm of novelty and find us unprepared to give them that exhaustive consideration which would be necessary to ascertain their real nature, but which would be impossible in the course of proceedings in court. He would assume that, whatever vague suspicions we might have, there would be neither the time nor the opportunity to test the visible facts presented. What he had overlooked was the possibility that the other players might try the moves over in advance. But this is exactly what I did. Would it interest you to have some details of my procedure?”

“It would interest me very much,” Brodribb interpolated, “for, as you know, I sat on the bird-lime like a lamb—if you will pardon the mixed metaphor. Perhaps I might say ‘like a fool’ and be nearer the mark.”

“I hope you won’t, Mr. Brodribb,” said Pippet, “because the description would include the lot of us, except the Doctor. But I am sure we should all like to hear how that rascal, Gimbler, was unmasked.”

“Then,” said Thorndyke, “let us begin by noting what our position was. This was a claim advanced by an unknown person to a title and some extremely valuable property. The claimant was an American, but there was nothing significant in that. All Americans of English origin have, of course, English ancestors. What was significant was the fact that this stranger had elected to employ a police court solicitor to conduct his case. Taking all the circumstances together, there was quite a fair probability that the claim was a false claim; and if that were so, we should have to be on the look-out for false evidence.

“That was my function in the case; to watch the evidence, particularly in regard to the physical characteristics of any objects produced as ‘exhibits’ or put in evidence. The purely legal business was in the hands of Mr. Brodribb and Mr. Anstey, whereas I was a sort of Devil’s Advocate, in an inverted sense, concerned, not with the legal issues, but with illegal attempts to tamper with the evidence. Now, in the criminal department of my practice, I have been in the habit, from the first, of using what I may call a synthetic method. In investigating a known or suspected crime, my custom has been to put myself in the criminal’s place and ask myself what are the possible methods of committing that crime, and, of the possible methods, which would be the best; how, in fact, I should go about committing that crime, myself. Having worked out in detail the most suitable procedure, I then change over from the synthetic to the analytic method and consider all the inherent weaknesses and defects of the method, and the means by which it would be possible to detect the crime.

“That is what I did in the present case. I began by assuming that wherever the evidence was insufficient or adverse, that evidence would be falsified.”

“Sounds a bit uncharitable,” Mr. Pippet remarked, with a smile.

“Not at all,” retorted Thorndyke. “There was no accusation. It was merely a working hypothesis which I communicated to nobody. If there had been no falsification, nothing would ever have been said and nobody would ever have known that the possibility had been entertained. But supposing falsification to be attempted, what form would it take? Apart from mere oral tradition and rumour, the value of which the judge would be able to assess, there was very little evidence. Of real, demonstrable evidence there were only two items—the diary and the coffin. Let us take the diary first. In what respects was falsification of the diary possible?

“There were two possibilities. The entire diary might be a fabrication. This was extremely unlikely. There were seven volumes, extending over a great number of years. The fabrication of such a diary would be a gigantic and very difficult task. Still, it was possible; but if the diary was in fact a fabrication from beginning to end, the falsification would almost certainly have been the work of the claimant, himself. But when one considers that the latest volume of this dairy was alleged to have been written eighty years ago, it is obvious that the difficulties surrounding the production of a new work which could possibly be passed off as genuine would be practically insurmountable. I need not consider those difficulties or the means by which the fraud could be detected, since the case did not arise. On inspection, it was obvious that the diary was a genuine document.

“The second possibility was the insertion of a false entry; and this was not only quite practicable but, in the known circumstances, not very improbable. The question was, therefore, supposing a false entry to be inserted, would that entry have any special characteristics for which one could be on the look-out? And the answer was that it almost certainly would.

“As to the forgery, itself; it would certainly be a good forgery. For, if it had been executed by the claimant, it would have to be good enough to satisfy Mr. Gimbler. That gentleman was too experienced a lawyer to attempt to pass off an
indifferent forgery in a court of law. But if it were not the work of the claimant, it would have to be produced either by Gimbler, himself, or under his superintendence. In either case it would certainly be a first-class forgery; and, as the passage would probably be quite short—possibly only a few words—it would be almost impossible to detect by mere examination of the written characters. In a short passage, the forger’s attention need never flag, and no effects of fatigue would become apparent. The forger could try it over and over again until he could execute it perfectly. But in such a case, even the greatest experts—such as Osborn, in America, or Mitchell or Lucas in this country—could give no more than a guarded opinion. For, however eminent an expert may be, he cannot detect differences that do not exist.

“But if the imitation of the hand-writing were too good for detection to be possible, were there any other, extrinsic, characters that we could be on the look-out for? Evidently, by the nature of the case, there must be three. First, if a passage were inserted, it would have to be inserted where insertion was possible; that is to say, in a blank space. Accordingly, we should have to keep a look-out for blank spaces. And, if those blank spaces were of any considerable size, we should look for the interpolated passage or passages either at the beginning or end of the blank space or spaces.

“The second character of an interpolated passage would be the matter contained in it. It would contain some matter of high evidential value which was not contained in any of the genuine entries; for, if it did not, there would be no object in inserting it. As to the nature of this matter; since the crucial issue in this case was whether the two persons, Josiah and the Earl, were one and the same person, an interpolated passage would almost certainly contain matter supporting the belief that they were.

“The third character would be an unavoidable difference between the ink used for the forgery and that used by the writer of the genuine entries. They could not be the same unless the writer of the diary had elected to use carbon ink; which was infinitely improbable, and, in fact was not the case. If he used ordinary writing ink—the iron-gall ink of the period—that ink would have become changed in the course of over eighty years. The original black tannate or gallate of iron would have become converted into the faint reddish-brown of the oxide of iron. Now, the forged writing would have to imitate the colour of this old writing. But a new ink of the same colour as the old would necessarily be of a different chemical composition. Probably it would contain no iron, but would be one of the modern brown drawing inks, treated to match the colour exactly.

“In this difference of chemical composition would lie the means of detecting and exposing the forgery. A chemical test would probably be objected to, though it could be insisted on if the forgery were definitely challenged. But, for the reasons that I gave in my evidence, a photograph would be nearly certain to demonstrate the difference in the chemical composition of the ink. And to a photograph there could be no objection.

“But, you see, the whole matter had been examined in advance, so that, if a forgery should be offered in evidence, we knew exactly what it would be like. And when it did appear, it corresponded perfectly with the hypothetical forgery. We heard McGonnell read out, in his opening statement, a number of quotations from the diary, all very vague and unconvincing; and then, at the end, a single short entry of an entirely different character, explicitly implying the identity of the two persons, Josiah and the Earl. Here was one of the characters of the possible forgery; and when Anstey had elicited in cross-examination that neither you nor your sister had seen it before the book went into the hands of Mr. Gimbler, it became a probable forgery. Then, on inspection, it was seen to have another of the postulated characters; it was at the end of a blank space. Finally, on closer examination, it was found to have the third character; it was written in an ink which was different from that used in the rest of the diary.

“So much for the forgery. In the case of the coffin a similar method was used. I put myself in Gimbler’s place and considered the best way in which to carry out the substitution.”

“But,” objected Mr. Pippet, “Gimbler had never suggested any examination of the coffin. On the contrary he had decided to avoid any reference to an examination until the case went to the House of Lords. I thought he was giving that coffin as wide a berth as he could.”

“Exactly,” said Thornyke. “That was the impression that he managed to convey to us all. And it was that which made me suspect strongly that a substitution was intended. It looked to me like a very subtle and admirable tactical manoeuvre. For, you see, the examination could not be avoided. It was impossible to burke the coffin, and Gimbler knew it. Not only was it the one piece of definite and undeniable evidence in the case; it contained the means of settling conclusively the whole issue that was before the court. If Gimbler did not produce the coffin, himself, it would certainly be demanded by the other side or by the judge.

“But now observe the subtlety of Gimbler’s tactics. The crude thing to do would have been to make the substitution and then apply for an order of the court to have the coffin examined. But in that case, the coffin would have been approached by the other side with a certain amount of suspicion, and minutely scrutinized. But when Gimbler seemed to have been taken by surprise, and to agree reluctantly to the examination of the coffin, the suspicion that he had got it all ready and prepared for the examination would be unlikely to arise. ‘The other side’ would be caught off their guard.”

“Yes, by Jove!” chuckled Brodribb, “and so they were. I was quite shocked and embarrassed when I saw you sniffing round that coffin and openly showing that you suspected a fraud; and McGonnell was really and genuinely indignant.”

“Yes,” said Pippet, “he very much resented the implied doubt as to his good faith, and I must admit that I thought the Doctor a trifle over-sceptical. But don’t let me interrupt. I want to hear how you anticipated so exactly what Gimbler would do.”
“As I said,” Thorndyke resumed, “it was by putting myself in Gimbler’s place and considering how I should go about making this substitution. There were two possible methods. One was to open the old coffin and take out the body, if there was one there; the other was to prepare a new coffin to look like an old one. The first method was much the better if it could have been properly carried out. But there were one or two serious difficulties. In the first place, there would, presumably, have been a corpse to dispose of, and the operators might have objected to handling it. But the most serious objection was the possibility of a mishap in opening the coffin. It was an old coffin, and the wood might be extensively decayed. If, in the process of opening it, the lid should have broken or some other damage should have been done, the fraud would have been hopelessly exposed. For no repair would be possible. But in any case, an ancient coffin could not have been opened without leaving some plainly visible traces.

“The second plan had several advantages. The new coffin could be prepared at leisure and thoroughly examined, and the proceedings on the spot could be quite short. You remember that there is, adjoining the burial ground, a stable yard with an empty cart shed in which a van could be housed while the substitution was being made. There would be little more to do than drive into the yard, exchange the coffins and drive away again. I considered both plans in detail and eventually decided that the second one was the one that would be more probably adopted.

“Now, suppose that it was; what would the exact procedure be, and what pit-falls lay in wait for the operators? What would they have to do, and what mistakes would they probably make in doing it? In the first place, the coffin would pretty certainly be made by a regular coffin-maker; and the chances were a hundred to one, or more, that he would use modern screws and try to produce the appearance of age by rusting them. If he did, the coffin would be definitely labelled as a fabrication beyond any possible dispute.

“Then there was the sheet-lead. What he would put in would most probably be modern, silver-free milled lead, whereas the original would almost certainly have been cast sheet. Still, he might have got some old sheet lead; and in any case the discrepancy would not have been conclusive or very convincing to the judge. We could not have given a definite date, as in the case of the screws.

“The next pit-fall would be the dust. In that vault, everything would be covered with a mantle of dust of eighty years’ growth. But if once that dust were disturbed—as it necessarily would be in moving the coffin—there would be no possibility of obliterating the marks of disturbance. There would be nothing for it but to sweep the vault out clean and blow in a fresh supply of dust which would settle down in a smooth and even layer. And there one could confidently expect that a serious mistake would be made. To most persons, dust is just simply dust; a material quite devoid of individual character. Few people realize consciously that dust is merely a collection of particles detached from larger bodies, and that when those particles are magnified by the microscope, they reveal themselves as recognizable fragments of those bodies. If our friends blew dust into the vault, it would be dust that had been collected ad hoc and would be demonstrably the wrong sort of dust.

“That was how I reasoned the matter out in advance; and you will see that, when I came to the vault, all that I had to do was to note whether the appearances were normal or whether they corresponded to the false appearances which were already in my mind. As soon as I saw the screws, the question was answered. It remained only to look for additional details of evidence such as the dust and anything that might be distinctive in the character of the lead.”

“The platinum, I take it,” said Pippet, “had not been included in your forecast?”

“No,” replied Thorndyke. “That was a free gift of Providence. It came as a complete surprise; and I might easily have missed it but for the rule that I have made to let nothing pass without examination. In accordance with this routine procedure, I took up each piece of lead and inspected it to see if it showed any peculiarities by which it would be possible to date it. As soon as I lifted the first lump of platinum alloy, I realized that Providence had delivered the gay deceiver into our hands.”

“Yes,” said Pippet, “that was a stroke of pure luck. But it wasn’t necessary. I can see that your method of playing a trial game over in advance—of ascertaining what your adversary may do, instead of waiting to see what he does do—brings you to the table with all the trumps up your sleeve, ready to be produced if the chance occurs.”

He reflected awhile, stirring his coffee thoughtfully, and, apparently turning something over in his mind. At length, he looked up at Thorndyke and disclosed the subject of his cogitations.

“You have told us, Doctor,” said he, “that you got this vanishing coffin stunt worked out in advance in all its details. But there is one little matter that you have not referred to, and it happens to be one which interests me a good deal. I am wondering what has become of Josiah. It may seem only a matter of sentiment; but he was my grandfather, and I feel that it is up to me to see him put back in his proper residence in accordance with his wishes and the arrangements which he made during his life. Now, did the advance scheme that you drew up include any plans for disposing of Josiah?”

“Certainly,” replied Thorndyke, “Assuming a new coffin to be used, the disposal of the old one was an important part of the problem; important to those who had to carry out the proceedings, and to us who had to prove that they had been carried out. The recovery and production of the old coffin would be conclusive evidence for the prosecution.”

“Well, now,” said Pippet, “tell us how you proposed to dispose of Josiah and how you intend to go about getting him back.”

“There were two possible methods,” said Thorndyke, “of getting rid of the old coffin. First, since a van or cart must have been used to bring the new coffin to the vault, it would have been available to take the old one away. This would have been
a bad method, both for the plotters and for us; for it would have left them with the coffin on their hands, and us with the task of finding out where it had been hidden. So we will leave it until we have dealt with the more obvious and reasonable plan. I did not propose to bring the coffin away at all.”

“You don’t mean that you proposed to bury it?” said Pippet.

“No,” replied Thorndyke. “There was no need to. You have forgotten the arrangement of the place. There were six vaults, each secured only by a large, simple lock. Now, our friends must have had a big, strong skeleton key to open Josiah’s vault. With the same key they could have opened any of the other vaults; and there was a perfectly excellent and convenient hiding-place.”

“Gee!” chuckled Mr. Pippet. “That’s a quaint idea! To think that, while we were poring over that dummy coffin, Josiah, himself, was quietly reposing next door! But I guess you are right, Doctor; and the question is, what are you going to do about it?”

Thorndyke looked at the Superintendent.

“It is your move, Miller,” said he. “You have got the skeleton key, and you have the Home Office authority.”

“That is all very well,” Miller replied, cautiously, “but the judge’s order doesn’t authorize us to break into any of the other vaults.”

“The judge’s order,” said Thorndyke, “doesn’t say anything about a particular vault. It authorizes and directs you to open and examine the coffin of Josiah Pippet. But you haven’t done anything of the sort. You opened the wrong coffin. You have not complied with the judge’s order, and it is your duty to do so without delay.”

Miller grinned and glanced knowingly at Mr. Pippet.

“That’s the sort of hair-pin the Doctor is,” he said, admiringly. “Thomas a Didymus combined with a casuist of the deepest dye. He could argue the hind leg off a donkey; and that donkey would have nothing for it but to get a wooden leg.”

Here Mr. Brodribb intervened with some warmth. “You are doing Dr. Thorndyke an injustice, Superintendent,” said he. “There is nothing casuistical in his argument. He has stated the legal position quite correctly, not only in the letter but in the spirit. The judge made an order for the examination of the coffin of Josiah Pippet for the declared purpose of ascertaining the nature of its contents. But we have not examined that coffin, and we still do not know the nature of its contents. You will remember that the judge, himself, pointed that out at this morning’s proceedings.”

Miller was visibly impressed by these observations from the very correct and experienced old lawyer; and I could see that he was quite willing to be impressed, for he was as keen on the examination as any of us. But he was a police officer, and, as such, Josiah Pippet was not his pigeon. Civil cases were not in his province.

Thorndyke evidently saw the difficulty, and proceeded adroitly to turn his flank.

“Besides, Miller,” he said, “you seem to be overlooking the importance of this matter in relation to a possible prosecution. A police officer of your experience is lawyer enough to realize the great difference in value between positive and negative evidence. Now, at present, all that we can do is to show cause for the belief that the coffin that we found in the vault was not Josiah’s coffin. But suppose that we are able to produce the actual coffin of Josiah Pippet. That would leave the defence nothing to say. And, in any case, for the sake of your own reputation and that of the C.I.D., that coffin has got to be found; and common sense suggests that we begin the search in the most likely place.”

This argument disposed effectually of Miller’s difficulties.

“You are quite right, Doctor,” he agreed. “We shall be expected to produce that coffin, or, at least, to prove its existence and its whereabouts; and I certainly agree with you that the vault is the most likely place in which to look for it. I hope we are both right, for, if it isn’t there, we may be let in for a mighty long chase before we get hold of it.”

Agreement on the principle having been reached, it remained only to settle the details. Mr. Pippet, with characteristic American eagerness to ‘get on with it,’ would have started forthwith for the burial ground; but, as Miller, naturally, had not got the keys about him, and as Thorndyke had certain preparations to make, it was arranged that the parties to the expedition should meet at the latter’s chambers at ten o’clock on the following morning.

XIX. — JOSIAH?

THERE was something distinctly furtive and conspiratorial in the appearance and bearing of the party of six which filed into the burial ground under the guidance of Superintendent Miller. At least, so it seemed to me, though the impression may have been due to Polton; who carried a small suit-case with a secretive and burglarious air, persisted in walking on tip-toe, and generally surrounded himself with the atmosphere of a veritable Guy Fawkes.

As soon as we were all in, the Superintendent closed the gate and locked it from the inside, putting the key in his pocket. Then he followed us to the neighbourhood of the vaults, where we were screened from the gaze of possible onlookers.

“Well,” he remarked, stating an undeniable truth, “here we are, and here are the vaults. We’ve got five to choose from, and the chances are that we shall open four wrong ones before we come to the right one—if there is a right one. What do you say, Doctor? Any choice?”
"On general grounds," said Thorndyke, "it would seem that one is as likely as another; but on psychological grounds, I should say that there is a slight probability in favour of the sixth vault."

"Why?" demanded Miller.

"Because," replied Thorndyke, "although, as a hiding-place, any one vault would be as good as any other, I think there would be a tendency to get as far as possible from the vault in which the dummy coffin had been planted. It is merely a guess; but, as we have nothing else to guide us, I would suggest that we begin with number six."

"While the brief discussion had been taking place, Polton had been peering into the keyholes with the aid of a small electric lamp and inspecting the edges of the respective doors. He now reported the results of his observations. "I think you are right, sir," said he. "There seems to be a trace of grease in the inside of the lock of the last door, and there is something that looks rather like the mark of a jemmy on the jamb of the door. Perhaps Mr. Miller might take a look at it."

Mr. Miller, as an expert on jemmy-marks, accordingly did take a look at it, and was inclined to confirm our artificer's opinion; on which it was decided to begin operations on number six. The big skeleton key was produced from the Superintendent's pocket and handed to Polton, by whom it was tenderly anointed with oil. Then a dressing of oil was applied to the rusty wards of the lock by means of a feather poked in through the keyhole, and the key inserted. As it refused to turn, in spite of the oil, Polton produced from his case a "tommy"—a steel bar about a foot long—which he passed through the bow of the key and worked gently backwards and forwards to distribute the oil and avoid the risk of wrenching off the bow. After a few trials, the key made a complete turn, and we heard the rusty bolt grate back into the lock.

"I expect we shall have to prise the door open," said Polton, after one or two vigorous tugs at the key, using the tommy as a handle. He threw back the lid of his suit-case, which was lying on the ground at his side, and looked into it—as, also, did the Superintendent.

"Well, I'm sure, Mr. Polton!" the latter exclaimed. "Are you aware that it is a misdemeanour to go abroad with housebreaking implements in your possession?"

Polton regarded him with a cunning and crinkly smile.

"May I ask, Mr. Miller," he demanded, "what you would use to force open a jammed door? Would you use a corkscrew or a sardine opener?"

Miller chuckled, appreciatively. "Well," he said, as Polton selected a powerful telescopic jemmy from his outfit, "I suppose the end justifies the means."

"You can take it, sir," said Polton, sententiously, "that people whose business it is to open doors have found out the best tools to do it with."

Having delivered himself of this profound truth, he inserted the beak of the jemmy between the door and the jamb, gave it one or two tweaks at different levels, and then, grasping the key and the tommy, pulled the complaining door wide open.

The first glance into the mouldy and dusty interior showed that Thorndyke's selection had been correct. There were two names on the stone slab above the vault, but there were three coffins; two lying in orderly fashion on the stone shelf, and a third flung untidily across them. That the latter was the coffin which we were seeking was at once suggested by the fact that the handles and name-plate were missing, though the spaces which they had occupied and the holes for the screws were conspicuously visible.

"That is Josiah's coffin right enough," said Mr. Pippet, pointing to these marks. "There can't be a shadow of doubt."

"No," agreed Thorndyke, "but we mustn't leave it at that. We must put the two coffins side by side and make an exact comparison which can be described in evidence in terms of actual measurement. I noticed that the beadle had not taken away the trestles. We had better set them up and put this coffin on them. The other one can be put on the ground alongside."

We fetched the trestles, and, having set them up, the four tallest of us proceeded to hoist out the coffin.

"He's a mighty weight," Mr. Pippet remarked, as he lowered his end carefully to the trestles.

"Probably there is a lead shell," said Miller. "There usually was in the better class coffins. I'm surprised they didn't put one in the dummy to make it a bit more convincing."

While the removal was being effected, Polton, armed with the skeleton key—the jemmy was not required—had got the door of the other vault open. Thither we now proceeded, and, lifting out the empty and comparatively light dummy, carried it across and laid it on the ground beside the trestles.

"The first thing," said Thorndyke, "will be to take off the name-plate and try it on the old coffin. An actual trial will be more convincing to a judge or jury than the most careful measurements."

"Is it of any great importance," Mr. Pippet asked, "to prove that the dummy was faked by using the old coffin furniture?"

"It is absolutely vital," Thorndyke replied. "How else are we to prove that this is the coffin of Josiah Pippet? There is no mark on it by which it could be identified, and we find it in a vault which is not Josiah's. Moreover, in the vault which is his, there is a coffin bearing his name-plate which is alleged to be his coffin, and which we are trying to prove is not his
coffin."

"I thought you had done that pretty effectually already," said Pippet.

"We can’t have too much evidence," Thorndyke rejoined; "and in any case, we have got to produce positive evidence of the identity of this coffin. At present we are only guessing, though I have no doubt that we are guessing right. But if we can prove that the nameplate on that coffin was removed from and belonged to this one, we shall have proved the identity of this one and the fraudulent character of the other."

While Thorndyke had been arguing this rather obvious point, Polton had been engaged in carefully and methodically extracting, with a clock-maker’s screw-driver, the six screws with which the name-plate was attached to the dummy coffin-lid. He now held one of them up for his employer’s inspection, remarking:

“You see, sir, that they used the original brass screws—the old, flat-ended sort; which will be better for testing purposes, as they won’t go into a hole that wasn’t properly bored for them.”

While the screw was being passed round and examined, he proceeded with the testing operations. First, he lifted the plate from its bed, whereupon there was disclosed an oblong patch of new, unstained wood, which he regarded with a contemptuous crinkle.

“Well!” he exclaimed, “if I had been faking a coffin, I’d at least have finished the faking before I screwed on the plate and not have given the show away like this.”

With this, he picked up the plate and laid it on the old coffin-lid in the vacant space, which it fitted exactly. Then, with a fine awl, he felt through one of the corner holes of the plate for the corresponding hole in the wood, and, having found it, dropped in one of the screws and ran it lightly home. Next, in the same manner, he probed the hole in the opposite corner of the plate, dropped in the screw and drove it home. Then, discarding the awl, he dropped in the other four screws, all of which ran in quite smoothly.

“There, Mr. Pippet,” said Thorndyke, “that establishes the identity of the coffin. The six holes in the brass plate coincide exactly with the six holes in the wood; for, as Polton points out, the screws, being blunt-ended, would not enter the wood if the holes were not precisely in the right place. So you can now take it as an established fact that this is really the coffin of your grandfather, Josiah Pippet. Does that satisfy you? Or is there anything else that you wish to have done?”

Pippet looked at him in surprise. “Why!” he exclaimed, “we’ve only just begun! I thought we came here to find out exactly what is in that coffin. That is what I came for. I had made up my mind before I came to England that the first thing that I would do would be to find out whether Josiah was or was not in that coffin. Then I should have known whether to haul off or go ahead.”

“Exactly,” said Thorndyke; “but are you sure that you still want to know?”

I looked quickly at Thorndyke, and so did Mr. Pippet. The question was asked in the quietest and most matter-of-fact tone; and yet I had the feeling that it carried a significance beyond either the tone or the words. And this, I think, was noticed also by our American friend, for he paused a few moments with his eyes fixed on Thorndyke before he replied:

“It doesn’t matter so much now, as I’ve dropped the claim. But, still, if it doesn’t seem irreverent, I think I should like to have a look at Josiah. I hate to leave a job unfinished.”

“Very well,” said Thorndyke; “it’s your funeral in a literal as well as allegorical sense. You would like to have the coffin opened?”

“I should, though I don’t quite see how you are going to manage it. There don’t seem to be any screws.”

“The screws are plugged,” Thorndyke explained, “as they usually are in well-finished coffins. They are sunk in little pits and the pits are filled up with plugs of wood, which are planed off clean so as to show an uninterrupted surface. Possibly those plugs were the deciding factor in the question as to whether the old coffin should be opened and faked, or a new one made. You can see that it would be impossible to get those plugs out and replace them without leaving very visible traces.”

This statement was illustrated by Polton’s proceedings. From the inexhaustible suit-case he produced a cabinet-maker’s scraper, with which he set to work at the edge of the lid, scraping off the old surface, thereby bringing into view the little circular inlays which marked the position of the screws, of which there were eight. When they were all visible, he attacked them with a nose bit set in a brace, and quickly exposed the heads of the screws. But then came the tug of war. For the rust of eighty years seemed to have fixed the screws immovably; and by the time that he had managed, with the aid of a driver bit in his brace, to get them out, his crinkly countenance was streaming with perspiration.

“All right this time,” said Mr. Pippet, picking up one of the screws and inspecting its blunt end. “I guess I’ll take these screws to keep as a memento. Ah! You were right, Doctor,” he added, as Polton prised up the lid and lifted it clear. “It was the lead shell that made it so blamed ponderous.”

Here Mr. Brodribb, casting a slightly apprehensive glance at the leaden inner coffin, announced, as he selected a cigar from his case,

“If you are going to open the shell, Thorndyke, I think I will take a little stroll and survey the landscape. I haven’t got a medical jurist’s stomach.”
Thorndyke smiled, unsympathetically, but, nevertheless, offered him a light; and as he moved away, exhaling fragrant clouds, Polton approached the coffin with a formidable hooked knife and a pair of tinman’s shears.

“Do you want to see the whole of him, sir?” he asked, bestowing a crinkly smile on Mr. Pippet, “or do you think his head will be enough?”

“Well, Mr. Polton,” was the guarded reply, “perhaps his head will be enough—to begin with, anyway.”

Thereupon, Polton, with a few gentle taps of a hammer, drove the point of the knife through the soft lead and began to cut a line in a U shape round the head end of the shell. When he had extended it sufficiently, he prised up the end of the tongue-shaped piece enclosed by the incision and turned it back like a flap. We stood aside respectfully to allow Mr. Pippet to be the first to look upon the long-forgotten face of his ancestor; and he accordingly advanced and bent down over the dark opening. For an appreciable time he remained looking silently into the cavity, apparently overcome by the emotions natural to the occasion. But I must confess that I was somewhat startled when he gave expression to those emotions. For what he said—and he said it slowly and with the strongest emphasis—was:

“Well—I’m—damned!”

Now, when a gentleman so scrupulously correct in speech as was Mr. Pippet, makes use of such an expression, it is reasonable to assume that something unusual has occurred. As he withdrew his head from the opening, mine and Thorndyke’s met over it (and I am afraid mine was the harder). But in spite of the collision, I saw enough in a single glance to account for Mr. Pip pet’s exclamation. For what met that glance was no shrivelled, mummified human face, but the end of a slender roll of canvas embedded in time-discoloured sawdust.

“Now,” commented Miller, when he had made his inspection, “isn’t that just like a blinking crook! They are all fools, no matter how artful they may be. And they can’t imagine the possibility of anyone else being honest. Of course, Gimbler thought that the coffin story was all bunkum, so he pitched the old coffin away without troubling to open it and see what was really in it. If he had only left it alone, Mr. Pippet’s claim would have been as good as established.”

“It would certainly have been important evidence,” said I. “But, for that matter, it is still. The story of the bogus funeral is now proved beyond any possible doubt to be true. And, though the claim has lapsed for the moment, it lapsed only on a technical point. What do you say, Brodribb?” I asked as that gentleman, in the course of his perambulations, passed the vault at a respectful distance.

“What do I say to what?” he demanded, reasonably enough.

“We have opened the shell and we find that it does not contain a body.”

“What does it contain?” he asked.

“Something wrapped in canvas and packed in sawdust,” I replied.

“That is not a very complete account,” he objected, approaching cautiously to take a peep into the interior of the shell. “It certainly does not look like a body,” he admitted after a very brief inspection, “but it might be. A very small one.”

“It would be a very small one, indeed,” said Thorndyke. “But I agree with you Brodribb. We ought to ascertain exactly what the contents of the coffin are.”

On this, Polton re-inserted the hooked knife and prolonged the incision on one side to the foot of the shell and carried it across. Then he raised the long flap and turned it back, exposing the whole of the mass of sawdust and the long roll of canvas which was embedded in it. The latter, being lifted out and laid on the coffin-lid, was seen to be secured with three strands of twine or spun-yarn. These Polton carefully untied—they were fastened with reef-knots—and, having thus released the canvas, unrolled it and displayed its contents; which consisted of a small roll of sheet lead, a portion of a battered rain head and a flattened section of leaden stack-pipe.

“This is interesting,” said Brodribb. “It corresponds with the description more closely than I should have expected.”

“And you notice, sir,” Polton pointed out, “that the sheet lead is proper cast sheet, as the Doctor said it would be.”

“I take your word for it, Polton,” said Brodribb. “And that is a further agreement; which, I may add—since we are all friends—is not without its evidential significance.”

“That is the point that we were discussing,” said I. “The bearing of this discovery on Mr. Pippet’s claim.”

“I beg your pardon, Dr. Jervis,” Mr. Pippet interposed, “but there isn’t any claim. My sister and I agreed some time ago to drop the claim if we got a chance. And Dr. Thorndyke gave us a very fair chance, and we are very much obliged to him.”

“I am glad to hear that,” said Brodribb, “because this discovery does really confuse the issues rather badly. On this new evidence it would be possible to start a long and complicated law-suit.”

“That,” said Mr. Pippet, “is, I guess, what the Doctor meant when he asked me if I still wanted to know what was in the coffin. But a nod is as good as a wink to a blind horse; and I was that blind horse. I rather wish I had left that durned coffin alone and taken it for granted that Josiah was inside. Still, we have got the monopoly of the information. is there any reason why we should not keep it to ourselves? What do you say, Superintendent?”

“The fact,” replied Miller, “that there was no body in the coffin is of no importance to the prosecution, but I don’t see how it can be burked. We shall have to produce the original coffin—or prove its existence. We needn’t say that we have
opened it; but the question might be asked in cross-examination, and we should have to answer it. But what is the objection to the fact being known? You have dropped the claim, and you don’t intend to re-open it. Nobody will be any the worse.”

“But I am afraid somebody may be,” Mr. Pippet rejoined. He reflected a few moments and then continued: “We are all friends, as Mr. Brodribb has remarked, so I needn’t mind letting you see how the land lies—from my point of view. You see, I embarked on this claim under the impression that the estates were going begging. I knew nothing of any other claimant. But when my sister and I saw Mr. Giles and his mother, we were a little sorry that we had started the ball. However, we had started it, and, after all, there was my girl to consider. So we went on. But very soon it became evident that our two young people were uncommonly taken with each other; and then my sister and I were still more sorry, and we began to hope that our case might fall through. While matters were in suspense, however, Giles made no formal advances though there was no concealment of his feelings towards my girl. But in the evening of the day when the Doctor obligingly knocked the bottom right out of my case, and showed us who the genuine heir-presumptive was, Giles asked my daughter to marry him, and, naturally she said ‘yes.’

“And now you will see my point. Giles, with proper, manly pride, waited until he had something to offer besides his own very desirable person. He didn’t want to come as a suitor with empty hands. When the prize was practically his, he asked Jenifer to share it with him. And I should have liked to leave it at that. And that was why I wanted that coffin opened. I had taken it as a cinch that Josiah was inside; and if he had been, that would have settled the question for good. Instead of which I have only confused the issues, as Mr. Brodribb says.

“Now, see here. I want this affair kept dark if it possibly can be. I want Giles to feel that the title and estates that he asked Jenny to share with him are his own by right, and not by anyone’s favour. But that would be all spoiled if he got to know about this damned lead. For then he might reasonably suspect that I had voluntarily surrendered this claim for his benefit when I could, if I had pleased, have carried it to a successful issue. Of course, I couldn’t have done anything of the kind. But that is what he might think. And he mustn’t. There must be no fly in his ointment; and I look to you all to keep it out.”

It is needless to say that we all listened with the greatest sympathy to Mr. Pippet’s explanation, and we promised, so far as was possible, to suppress the fact that the coffin had been opened; which we were able to do with a clear conscience, since that fact was neither material nor even relevant to the charge of fraud against Gimbler.

“Naturally,” said Mr. Pippet, when he had thanked us, “you will say that I ought to have thought of all this before I asked to have the coffin opened, but I am not so long-sighted as the Doctor. If you would like to call me a fool I shan’t contradict you.”

“Thank you,” laughed Thorndyke; “but I don’t think I will avail myself of the permission. Still, I will remark that you allowed yourself to entertain a complete fallacy. You have spoken of my having knocked the bottom out of your case by my exposure of Gimbler’s fraud. But that was not the position at all. The coffin which Gimbler produced as Josiah’s coffin was not Josiah’s coffin. Therefore it had no relevance to the issue. It proved nothing, one way or the other, as to the condition of the real coffin. The effect of my evidence was purely negative. It simply rebutted Gimbler’s evidence and thus restored the status quo ante. The judge, if you remember, drew your attention to this fact when he reminded you that Josiah’s coffin had not been examined, and that the bogus funeral had been neither proved nor disproved.”

“Well,” said Mr. Pippet, “it has been proved now; and what I should like to know, just as a matter of curiosity, is what it really and truly means. Is it possible that the whole story was true, or was this just one of Josiah’s little jokes?”

“I am afraid you will never know now,” said Thorndyke.

“No,” Pippet agreed. “Josiah has got us guessing. Of course, it doesn’t matter now whether he was an earl or an inn-keeper, but if you have any opinion on the subject, I should like to hear it.”

“Mere speculative opinions,” said Thorndyke, “formed in the absence of real evidence, are not of much value. I really have nothing that one could call an opinion. All I can say is that, though the balance of probabilities for and against the truth of the story is nearly even, there seems to be a slight preponderance against, since, added to the general improbability of the story, is the very striking coincidence of Nathaniel Pippet of The Castle at Winsborough. But I am afraid we shall have to return an open verdict.”

“And keep it to ourselves,” added Pippet. “And now the practical question arises, what are we to do with this coffin?”

“I suggest,” said Thorndyke, “that Polton closes it up as neatly as possible and that we then put it, with Gimbler’s masterpiece, in the vault to which it properly belongs. We may hope that it may not be necessary to disturb that vault again; in which case no one need ever know that the coffin has been opened.”

This suggestion being generally approved, was duly carried out. The two coffins were placed, side by side, on the shelf, and then Miller locked the door and dropped the key into his pocket. This done, the procession moved out of the burial ground; and the incident was formally closed when Miller slammed the outer gate and turned the key in the rusty lock.

We went back in the same order as that in which we had come. Mr. Pippet and Brodribb travelled in the former’s car, and the rest of us occupied the roomy police car, Polton, at his own request, occupying the seat next to the driver where he could observe the mechanical arrangements and the operator’s methods.
XX. — THORNDYKE RESOLVES A MYSTERY

MODERN transport appliances have certain undeniable advantages, particularly to those who are principally concerned with rapidity of transit. But these advantages, like most of the gifts of "progress," have to be purchased by the sacrifice of certain other advantages. The Superintendent's car was, in respect of speed, incomparably superior to a horse carriage; but in the opportunity that it afforded for sustained conversation it compared very unfavourably with that obsolete type of vehicle. Thorndyke, however, not yet, perhaps, emancipated from the hansom cab habit, chose to disregard the inevitable interruption, and, as the car trundled smoothly westward, remarked to Miller:

"The subject of coffins, with which our minds are at present occupied, suggests, by an obvious analogy, that of a head in a box. I promised, a little while ago, to pass on to you any facts that I might unearth respecting the history of that head. I have looked into the matter and I think I now have all the material facts; and I may say that the affair turns out to be, in effect, what I had, almost from the first, supposed it to be."

"I didn't know," said Miller, "that you supposed it to be anything. I thought you were quite uninterested in the incident."

"Then," said Thorndyke, "you were mistaken. I watched the developments with the keenest interest. At first, when the head was discovered in the cloak room, I naturally assumed, as everyone did, that it was a case of murder and mutilation. But when I read the account of the inquest I began to suspect strongly that it was something quite different, and when I saw that photograph that you so kind as to send me, I had very little doubt of it. You remember that photograph, Jervis?"

"Indeed I do," I replied. "A most extraordinary and abnormal mug that fellow had. There seemed to me to be a suggestion of acromegaly."

"A suggestion!" Thorndyke exclaimed. "It was a perfect type. That photograph might have been used as the frontispiece of a monograph of acromegaly. Its appearance, together with the physical and anatomical facts disclosed at the inquest, seemed to me quite distinctive. I came to the conclusion that this head was no relic of a crime, but simply a museum specimen which had gone astray."

"Good Lord!" exclaimed Miller, gazing at Thorndyke in amazement. "I did not know that you supposed it to be anything. I remember that photograph, Jervis?"

"But," Miller continued, after a pause, "you might have given us the tip."

"My dear Miller," Thorndyke protested, "I had no tip to give. It was merely an opinion, and it might have been a wrong opinion. However, as I said, I watched developments most attentively, for there were at least two possibilities which might be foreseen; one by no means unlikely, the other almost fantastically improbable. The first was that some person might be accused of a murder which had never been committed; the other was that some real murderer might take advantage of the extraordinary opportunity that the circumstances offered. Curiously enough, it was the wildly improbable possibility that was actually realized."

"What was the opportunity that was offered?" Miller asked.

"It was the opportunity to commit a murder with almost perfect security from detection; with a whole set of false clues ready made; with the equivalent in time of a nearly watertight alibi."

"A murderer's chief difficulty," said Miller, "is usually in getting rid of the body. I don't see that the circumstances helped him in that."

"They helped him to the extent that he had no need to get rid of the body," Thorndyke replied. "Why does a murderer have to conceal the body? Because if it is found it will be recognized as the body of a particular person. Then the relations of the murderer to that person will be examined, with possibly fatal results. But supposing that a murderer could render the body of his victim totally unrecognizable. Then it would be the body of an unknown person; and all the persons related to it would be equally unknown. If he could go a step further and not only render the body unrecognizable but give it a false identity, he would be absolutely Secure; for the body would now be related to a set of circumstances with which he had no connexion."

"This is the kind of opportunity that was offered by the discovery of this head. Let us study the conditions in the light of what actually happened. On a certain day in August, Wicks deposited in the cloak room a human head. Now, obviously, since it was brought there by Wicks, it could not be Wicks's head. Equally obviously, it must have been the head of some person who had died while Wicks was still alive. Thus the death of that person was clearly dated in one direction; and since the head had been treated with preservatives, the date of death must have been some time anterior to that of its deposition in the cloak room. Again, obviously, there must be somewhere a headless body corresponding to this body-less head."

"Now, Bassett evidently intended to murder Wicks, for, as we saw, the murder was clearly premeditated. See, then, what a perfect opportunity was presented to him. If he could contrive to murder Wicks, to strip and decapitate the body and deposit it in a place where it would probably remain undiscovered for some time; when it was discovered, it would, quite naturally, be assumed to be the body belonging to the embalmed head. In other words, it would be assumed to be the body of some person who could not possibly be Wicks, and who had been murdered at some time when he, Bassett, was on the high seas. No slightest breath of suspicion could possibly fall on Bassett."
"But, as so constantly happens in the case of carefully planned crimes, one little point had been overlooked, or, rather, was unknown to the intending murderer. Strangely enough, it seems also to have been overlooked by everyone else, with the result that Bassett's scheme was within a hair's-breadth of working out exactly according to plan."

"As he was at the bottom of the dene-hole," remarked Miller, "it didn't matter much to him whether it did or not."

"Very true," Thorndyke agreed. "But we are considering the plan of the crime. Now, when I read the report of the finding of the headless body, I realized that the fantastic possibility that I had hardly ventured to entertain had actually come to pass."

"You assumed that the headless body was a fake," said Miller, "and not the body belonging to the cloak room head. Now, I wonder why you assumed that."

"I did not," replied Thorndyke. "There was no assumption. The excellent newspaper report made it perfectly clear that the body found by the Watling Street could not possibly be the body belonging to the embalmed head. That head, let me remind you, was the head of a person who suffered from acromegaly. The body of that person would have been distinguished by atrophied muscles and enormous, mis-shapen hands and feet. But our admirable reporter specially noted that the body was that of a muscular man with strong, well-shaped hands. Then he certainly was not suffering from acromegaly."

"You see what followed from this. If this body did not belong to the cloak room head, it must belong to some other head. And that head was probably not far away. For, as no one suspected its existence, there was no need for any elaborate measures to hide it. As I happened to be aware of the existence of a number of dene-holes in the immediate neighbourhood, it occurred to me that one of them probably contained the head and the clothes. Accordingly, I examined the six-inch map of the district, on which the dene-holes are shown, and there I found that one of them was within four hundred yards of the place where the body was discovered. To that dene-hole I paid a visit after attending the inquest, having provided myself with a compass, a suitable lamp and a pair of night-glasses. I was not able to see very much, but I saw enough to justify our expedition. You know the rest of that story."

"Yes," replied Miller, "and a very interesting story it is. And now I should like to hear about these new facts that you have unearthed."

"You shall have them all," said Thorndyke, "though it is only a case of filling in details. I have told you what I decided—correctly, as it turns out—as to the nature of the mysterious head; that it was simply a pathological specimen illustrating the rare disease known as acromegaly, which had got into the wrong hands."

"Now, when one thinks of acromegaly, the name of Septimus Bernstein almost inevitably comes into one's mind. Dr. Bernstein is a world-famous authority on gigantism, dwarfism, acromegaly and other affections and anomalies of growth connected with disorder of the pituitary body. He is an enthusiast in his subject and gives his whole time and energy to its study. But what was still more important to me was the fact that he has a private museum devoted to the illustration of these diseases and anomalies. I have seen that museum, and a very remarkable collection it is; but, when I visited it, although it contained several gigantic and acromegalous skulls, there was no specimen of a head in its complete state."

"Naturally, then, I was disposed to suspect some connexion between this stray specimen and Dr. Bernstein. But this was pure hypothesis until I heard Bunter's statement. That brought my hypothesis concerning the head into the region of fact. For Bunter's description of the passenger on the yacht was a fairly exact description of Dr. Bernstein; and, on the strength of it I was in a position to take the necessary measures to clear the matter up."

"Accordingly I called on Bernstein. I did not, in the first place, ask him any questions. I simply informed him that a preserved human head which he had imported, apparently from Holland, had been causing the police a good deal of trouble, and that it was for him to give a full and candid explanation of all the circumstances connected with it. The alternative was for the police to charge him with being in unlawful possession of certain human remains."

"My statement seemed to give him a severe shock—he is a nervous and rather timid man—but, though greatly alarmed, he seemed, in a way, relieved to have an opportunity to explain matters. Evidently, the affair had kept him in a state of constant apprehension and expectation of some new and horrible development, and he consented almost eagerly to make a full statement as to what had really happened. This is what his story amounts to:"

"He had for years been trying to get possession of the head of some person who had suffered from acromegaly; partly for the purpose of studying the pituitary body more thoroughly and partly for the enrichment of his museum with a specimen which completely illustrated the effects of the disease. What he especially wanted to do was to remove the pituitary body without injuring the head and mount it in a specimen jar to accompany the jar containing the head, so that the abnormal condition of the pituitary and its effects on the structure of the face could be studied together."

"By the way," Miller asked, "what is the pituitary body?"

"It is a small body," Thorndyke explained, "situated at the base of the brain and lodged in a cavity in the base of the skull. Its interest—for our present purpose—lies in the fact that it is one of the so-called ductless glands and produces certain internal secretions which contain substances called hormones which are absorbed into the blood and seem to control the processes of growth. If the pituitary—or, at least, its anterior part—becomes overgrown, it appears that it produces an excess of secretion, with the result that either the whole body becomes overgrown and the sufferer develops into a giant, or certain parts only of the body, particularly the face and the extremities, become gigantic while the rest of the body remains
of its normal size. That is a very rough account of it, just enough to make the matter intelligible.”

“I think I have taken in the idea,” said Miller, “and I’m glad you explained it. Now, I am able to feel a bit more sympathetic towards Dr. Bernstein. He isn’t such an unmitigated cannibal as I thought he was. But let us hear the rest of the story.”

“Well,” Thorndyke resumed, “a short time ago, Bernstein heard from a Dutch doctor of a set of specimens, the very description of which made his mouth water. It appeared that an unclaimed body had been delivered for dissection at a medical school in a certain town in Holland. Bernstein asked to be excused from giving the name of the town, and I did not press him. But, of course, if it is essential, he is prepared to disclose the further particulars. On examining this body, it was found to present the typical characters of acromegaly; whereupon the pathologist decided to annex the head and extremities for the hospital museum and return the remainder in the coffin. At the time when the information reached Bernstein, the specimens had not been put in the museum but were in the curator’s laboratory in course of preparation.

“Thereupon, Bernstein started off, hot-foot, to see if he could persuade the pathologist to let him have the head. And his mission was obviously successful. What methods of persuasion he used, and what was the nature of the deal, he preferred not to say; and I did not insist, as it is no particular concern of ours. It would seem as if it must have been slightly irregular. However, he obtained the head, and, having got it, embarked on the series of foolish proceedings about which Bunter told us. A bolder and more self-confident man would probably have had no serious difficulty. He would have travelled by an ordinary passenger ship and simply declared the head at the Customs as a pathological specimen. The Customs people might have communicated with the police, and there might have been some inquiries. But if there had been no secrecy there would have been no trouble.”

“No,” Miller agreed. “Secrecy was the stupidest thing possible under the circumstances. Why the deuce didn’t he notify us, when the thing was found in the cloak room? It would have saved us a world of trouble.”

“Of course that is what he ought to have done,” said Thorndyke; “but the discovery took him unawares, and, when he suddenly found himself involved in a murder mystery, he got in a panic and made things worse by trying to keep out of sight. He is in a mighty twitter now, I can assure you.”

“I expect he is,” said Miller; “and the question is, what is to be done? It’s a queer case, in a legal sense. Have you any suggestion to make?”

“Well,” said Thorndyke, “I think you should first consider what the legal position really is. You will admit that no crime has been committed.”

“Apparently not,” Miller agreed; “at any rate, not in British jurisdiction.”

“Furthermore,” pursued Thorndyke, “it is not clear to me that any offence against the law has been committed. Admittedly, Bernstein evaded the Customs; but, as a human head is not a customary commodity, there was no offence against the Revenue. And so with the rest of his proceedings; they were very improper, but they do not appear to amount to any definite legal offence.”

“So I take it,” said Miller, “that you think we might as well let the matter drop. I don’t quite like that, after all the fuss and outcry there has been.”

“I was hardly suggesting that,” said Thorndyke. “I certainly think that, for the credit of the Force, the mystery ought to be cleared up in a more or less public manner. But, since you invite me to make a suggestion, I will make one. Perhaps it may surprise you a little. But what I think would be the best way to bring the case to a satisfactory conclusion would be for you to disinter the specimen—which I believe was buried temporarily, in the case in which it was found, in the Tower Hamlets Cemetery—have it examined and reported on by some authorized persons, verify Bernstein’s statements so far as may be necessary, and, if you find everything correct, hand the specimen back to Bernstein.”

“My eye!” exclaimed Miller, “that’s a pretty large order! But how could we? The head is no lawfully his property. No one is entitled to the possession of human remains.”

“I am not sure that I can agree to that,” Thorndyke dissented; “not, at any rate, without certain reservations. The legal status of anatomical and pathological specimens in museums is rather obscure; and perhaps it has been wisely kept obscure. It is not covered by the Anatomy Act, which merely legalizes the temporary possession of a human body for the purpose of dissection. As you say, no one can establish a title to the possession of a human body, or part of one, as an ordinary chattel. But you know as well as I do, Miller, that sensible people turn a blind eye to this question on suitable occasions. Take the case of the Hunterian Museum of the Royal College of Surgeons. There, the anatomical and pathological collections are filled with human remains, all of which must have been acquired by methods which are not strictly legal. There are even the remains of entire individuals, some of whom are actually known by name. Now, if they were challenged, what title to the possession of those remains could the Council of the College establish? In practice, they are not challenged. Reasonable people tacitly assume a title.”

“And that is what you would do, yourself. Supposing that someone was to steal the skeleton of the late Corporal Byrne, or O’Brien, the Irish Giant, which is in that museum, and supposing you were able to recover it; what would you do? Why, of course, you would hand it back to the museum, title or no title.”

“Yes,” Miller admitted, “that is so. But Bernstein’s case is not quite the same. His is a private museum, and he wants this head as a personal chattel.”
“The principle is the same,” Thorndyke rejoined. “Bernstein is a proper person to possess this head; he wants it for a legitimate purpose—for the advancement of medical knowledge, which is for the benefit of all. I insist, Miller, that, as a matter of public policy, this specimen ought to be given back to Bernstein.”

Miller looked at me with an undissembled grin. “The Doctor can be mighty persuasive on occasion,” he remarked.

“Still,” I urged, “it is a perfectly reasonable proposition. You are concerned, primarily, with crime, but ultimately with the public welfare. Now, there hasn’t been any crime, or any criminal intent; and it is against the public welfare to put obstacles in the way of legitimate and useful medical research.”

“Well,” Miller rejoined, “the decision doesn’t rest with me. I must see what the Commissioner has to say. I will give him the facts, and you can depend on him to look at you and to put your case as strongly as I can. He is not out to make unnecessary trouble any more than I am. So we must leave it at that. I will let you know what he says. If he falls in with your view, he will probably want your assistance in fixing up the details of the examination and the inspection of the specimen. You may as well give me Bernstein’s address.”

Thorndyke wrote the name and address down on one of his own cards and handed it to the Superintendent. And this brought the business to an end. The latter part of the conversation had been carried on in the stationary car, which had been drawn up in King’s Bench Walk opposite our chambers. We now shook hands with Miller and got out; and, as the car turned away towards Crown Office Row, we entered the wide doorway and ascended the stairs to our own domain.

XXI. — JERVIS COMPLETES THE STORY

THE time has come for us to gather up the threads of this somewhat discursive history. They are but ends, and short ones at that; for, in effect, my tale is told. But even as the weaver’s work is judged by the quality of the selvedge, so the historian’s is apt to be judged by its freedom from loose ends and uncompleted episodes.

But since the mere bald narration of the few outstanding incidents would be but a dull affair, I shall venture (on the principle that the greater includes the less) to present an account of them all under cover of that which most definitely marked the completion of our labours; the establishment of the young Earl and his Countess in firm possession of the ancestral domain. For, however thrilling may have been the alarums and excursions that befell by the way, they were but by-products and side issues of the Winsborough Peerage Case. With the settlement of that case we could fairly say that our work was done; and, if disposed to tags or aphorisms, could take our choice between Nunc dimittis and Finis coronat opus.

It was a brilliant morning in that most joyous season of the year when late spring is merging into early summer; and the place was the spot upon the earth’s surface where that season develops its most perfect loveliness—the south-east corner of Kent; or, to be more precise, the great lawn at the rear of the unpretentious mansion “known as and being” Winsborough Castle. Thither Thorndyke and my wife and I, together with Brodrrib (who came also in his official capacity) had been invited to the house-warming on the return of the young Earl and Countess from their prolonged honeymoon. But we had not come as mere visitors, or even friends. The warm-hearted Jenifer had formally adopted us as members of the family, and as no one could ask for more delightful relatives, we had accepted the position gratefully.

As we strolled together across the sun-lit lawn, I glanced from time to time at the young couple with that sober pleasure which a middle-aged man feels in contemplating the too-rare spectacle of a pair of entirely satisfactory human beings. They were both far beyond the average in good looks; of splendid physique, gay and sprightly in temperament and gifted with the faultless manners that spring from natural kindliness and generosity coupled with quick intelligence. Looking at them, one could not but reflect pensively on the might-have-been; and think what a pleasant place the world would be if it could be peopled with their like.

“I wonder,” said Jenny, “what has become of Pap and Uncle John.” (“Uncle John” was Thorndyke)

“I don’t,” said Giles, “because I know, I saw them sneaking off together towards the churchyard. My impression is that they are trying to make a complete and exhaustive collection of ancestral Pippets.”

Jenny laughed delightedly. “Inquisitive old things!” she exclaimed. “But I don’t see why they need fuss themselves. There are no particular points about the ancestral Pippets. They never did anything worth speaking of excepting that they sold good beer—and, incidentally, they produced me.”

“Not incidentally,” Giles objected. “It was their crowning achievement. And I don’t know what more you would have. I call it a deuced good effort.”

The girl glanced at me with sparkling eyes. “Conceited young feller, isn’t he, Uncle Kit? He will persist in thinking that his goose is a swan.”

“He knows that she is,” retorted Giles. “But, I say, Jenny. You’ll have to keep an eye on Dad. What do you think he has done?”

She looked at him in mock alarm. “Break it gently,” she pleaded.

“To my certain knowledge,” said Giles, “he has taken over the lease of the Earl of Beaconsfield and he is having the sign changed back to The Castle Arms. What do you make of that?”
“My prophetic soul!” she exclaimed. “I see it all. He’s going to have ‘by C. Pippet’ written underneath the sign. If we don’t mind our eyes, we shall have him behind the bar before we can say ‘knife.’ What’s bred in the bone, you know.”

Giles laughed in his delightful school-boy fashion.

“My word, yes!” he agreed. “We shall have to take a strong hand. We are not going to spend our lives under the Upas shadow of the Fox & Grapes. But I must hook off. Mr. Brodribb has got the bailiff chappie here—Mr. Solly—and they are going to rub my nose on all the things that they say a land-owner ought to understand. Brodribb insists that there is no eye like the master’s eye, and I expect he is right, though I fancy I know an eye that is better still; to wit, the eye that adorns the countenance of the master’s Pa-in-law. What are you going to do?”

“I,” replied Jenny, “am going to extract a statement from Uncle Kit on the subject of the various happenings since we had Mr. Brodribb’s summary. I want to know how it all ended.”

“Good!” said Giles; “and when you have wormed all the facts out of him, you can pass them on to me. Now I’m off.”

With a flourish of his hat and a mock-ceremonial bow, he turned and strode away across the turf towards the old brick porch, the very type and embodiment of healthy, virile youth. Jenny followed him with her eyes until he disappeared into the porch; then she opened her cross-examination.

“Now, Uncle K., you’ve got to tell me all you know about everything.”

“Yes,” I agreed, “that seems to offer some scope for conversation. Would you like to begin anywhere in particular?”

“I want, first of all, to know just exactly what has happened to poor Mr. Gimbler.”

“Poor Mr. Gimbler!” I exclaimed. “You needn’t waste your sympathy on a rascal like that.”

“I know,” said she. “Of course he is a rascal. But he did manage things so bee-yutifully.”

Her tone jarred upon me slightly, and I think she must have observed something in my expression, for she continued:

“You think I am taking a purely selfish view of the case, and I must admit that, as events have turned out, I am the greatest gainer by what Giles calls ‘Mr. Gimbler’s gimblings.’ But I assure you, Uncle Kit, that Mr. Gimbler did the very best for us all. Pap loves him. He says he is going to give him a pension when he comes out of chokee—if that is where he is, I suppose it is.”

“Yes,” I replied. “Chokee is his present address,”

“I was afraid it was,” said she. “The benefactor of humanity is languishing in a dungeon, and you don’t care a hoot. You seem even to feel a callous satisfaction in his misfortunes. But see here, now, Uncle K., I want you to understand the benefits that he has showered on us. And, first of all, you’ve got to understand my father’s position. You have got to realize that he never wanted the earldom at all. Pap is a thorough-bred American. He had no use for titles of nobility; and he was very clear that he didn’t want to stand in the way of anyone else who had.

“But Auntie Arminella and I didn’t take that view at all. We were as keen as mustard on an English title and a beautiful English estate, and Auntie started to stir my father up. He didn’t take much stirring up. As soon as he realized that I wanted ‘this toy,’ as he called it, and had ascertained, as he thought, that the title and estates were lying derelict and unclaimed, he decided to go for them all out. And when Pap makes a decision, he usually gets a move on, right away.

“Now, the first shock that he got was when he discovered that there was another claimant. Then he met Giles and his mother, and he fell in love with them both at first sight, as Auntie and I did. He didn’t know how poor Giles was—he was actually working in a stockbroker’s office, if you will believe me—but he realized that the decision of the court meant a lot more to Giles than it did to him, and he would have liked to back out of the claim.”

“Why didn’t he?” I asked.

“He couldn’t. When once the claim had been raised, it had got to be settled. Giles didn’t want the earldom as a gift, and Mr. Brodribb wouldn’t have let the case drop, with the chance of its being re-opened in the future. So it had to go on. And now see what Mr. Gimbler did for us. Supposing he hadn’t changed the coffins; and supposing the real one had been found to be stuffed with lead. It might have been. That would have gone a long way towards establishing my father’s claim. Supposing the decision had gone in his favour. Then he would have been the Earl of Winsborough. And he would have hated it. Supposing I had married Giles—and I guess I should have had to ask him, myself, as he was a poor man and as proud as Lucifer—what would Pap’s position have been? He would have defeated his own plans. He would have got the title for himself, and he would have kept his daughter and her husband out of it during his lifetime. But now, thanks to Mr. Gimbler, we have all got what we wanted. Pap has escaped the title, and he has the satisfaction of seeing his girl Countess of Winsborough.”

I smiled at her quaint and somewhat wrong-headed Way of looking at the case. But I refrained from pointing out that “Mr. Gimbler’s gimblings” might easily have produced the undesired results but for Thorndyke’s intervention. It was a dangerous topic, with my knowledge of what was in the real coffin, So I held my peace; or rather, led the conversation away from possible shoals and quicksands.

“By the way,” I said, “if Giles had no money, who was going to pay his costs if he had lost the case?”

“I don’t know,” she replied. “We suspect dear old Brodribb. He told Giles and his mother that ‘there were funds
available,’ but he wouldn’t say what they were. Of course, it is all right now. But you haven’t told me what happened to Mr. Gimbler.”

“You will be relieved to hear that he was let off quite lightly. Three years. It might easily have been seven, or even fourteen. Probably it would have been if we had included the forgery in the charges against him.”

“I suppose it really was a forgery?”

“Yes, it was undoubtedly. For your father’s satisfaction, we tested it chemically—but not until after the conviction. The ink was a modern synthetic drawing-ink. But it was a wonderfully skilful forgery.”

“Pity,” Jenny commented. “He is a really clever and ingenious man. Why couldn’t he have run straight? But now tell me about the other people. There was an undertaker man, who made the coffin. What happened to him?”

“Joseph Wallis was his name. He also had better luck than he deserved, for he got only three months. It was originally proposed to charge him and Gimbler together with conspiracy. But there is this awkward peculiarity about an indictment for conspiracy in which only two persons are involved; if one of them is acquitted, the other is acquitted automatically. For a conspiracy is like a quarrel; it can’t be a single-handed job. A man can’t conspire with himself. So if, of two alleged conspirators, one is found innocent, it follows that there was no conspiracy, and the other man must be innocent, too.

“Now, Joseph pleaded that he had no knowledge of the purpose for which the coffin was required; thought it was a practical joke or a wager. And this plea was supported by Gimbler, who, in a statement to the police, declared that he never told Joseph what the coffin was really wanted for. Which seems likely enough. So the conspiracy charge against Joseph was dropped; and, of course, it had also to be dropped in respect to Gimbler.”

“I am glad,” said Jenny, “that The Slithy Tove, as Giles calls him, was man enough to clear his confederate.”

“Yes, it is something in his favour; though we must bear in mind that the Tove was a criminal lawyer—in more senses than one—and knew all about the law of conspiracy. Is there anything else that you want to know?”

“There was a man named Bunter; but I don’t think he was much concern of ours, was he?”

“He was an invaluable link in the chain of evidence,” I replied, “though he seems rather outside the picture. However, I can report favourably on his case, for he got off altogether. Nobody wanted his blood. The police accepted his explanation of his attempt to break into the yacht, Cormorant, for, though it was probably untrue, it was quite plausible. There remained only his complicity in the platinum robbery. But that had been committed outside British jurisdiction; and, as the platinum had been recovered and restored to its lawful owners, and as the principal robbers were dead, no one was inclined to move in the matter. Accordingly, Mr. Frederick Bunter was released and went on his way rejoicing, with only one or two slight stains on his otherwise spotless character. And I think that completes the list, unless you can think of anything more.”

“No,” she answered, “I think that finishes up the history of the Winsborough Peerage Case. A queer story it is, looking back on it, with its ups and downs, its hopes and anxieties, to say nothing of one or two ugly passages.”

“Yes,” I agreed, “there have been some anxious moments. But all’s well that ends well.”

“Very true,” said she. “And it has ended very well indeed; for me and for Giles, for our parents and for Arminella. We have all got what we wanted most, we are all happy and contented, and we are all tremendously pleased with one another. It couldn’t have ended better. And to think that we owe it all to poor Mr. Gimbler!”

I smiled, but I didn’t contradict her. It was a harmless delusion. Perhaps it was not a delusion at all. At any rate, one might fairly say of Mr. Horatio Gimbler that he builted better than he knew.

THE END
IT was about four o’clock on a summer afternoon when Andrew Barton, pipe in mouth and garden shears in hand, suspended for a moment his operations on the privet hedge in his front garden to glance down the lane at the postman, who had just turned into it from the road at the end. It was a glance of no special interest. He was not expecting any communication. But as there was no other house in the lane—which presently petered out into a foot-path across fields—it was obvious that his own residence was the goal of the postman’s peregrinations.

He observed the man’s approach intermittently, punctuating his observations with perfunctory snips at the hedge and speculating vaguely and incuriously on the source of the letter which the messenger was presumably coming to deliver. He was not particularly interested. Yet even a rural postman, though less portentous than the telegraph boy, embodies untold potentialities of good or evil, of joy or sorrow, of fortune or disaster. But Andrew was not particularly interested; and thus he watched, unmoved and unsuspecting, the approach of Fate’s special messenger, charged with a message the significance of which was only by degrees to be unfolded.

The man strode up to the gate with a letter in his hand and ran his eye critically over the half-cropped hedge. “I see you
are havin’ a bit of a tidy-up, sir,” he remarked as he handed the letter over the gate; “and none too soon. He was getting rare straggly. But Lord! How the stuff do grow this weather! ’Tis out of bounds almost afore you’ve done a-trimmin’ of it.”

As Andrew showed no sign of rising to this conversational bait, beyond a vague assent, the postman wished him “good afternoon”, took another glance at the hedge and turned back down the lane, a little disconcerted by Mr. Barton’s un wonted taciturnity. “Didn’t seem to like the look of that letter,” he mused as he swung along in his heavy, nailed boots. “Someone dunning him for money, maybe.”

It was a simple and reasonable explanation of the sudden change in Andrew’s expression as he read the address on the envelope and glanced at the postmark, and not so very wide of the truth. But “dunning” was not quite the right word, since that implies a demand for payment of a lawful debt. Of such demands Andrew Barton had no experience, being a scrupulously prompt paymaster. But a glance at the too-familiar handwriting prepared him for a demand of another kind, and the only question was, “How much does he want this time?” He tore the envelope open with angry impatience and read the answer to that question.

“16, Barleymow Street, Crompton-on-Sea. 21st August, 1928.

“*My dear Old Chappie,*

“What a time it is since I had the felicity of looking at your blessed old mug! Years and years! I am just pining for the sight of you; and no doubt you are equally pining for the sight of me. I hope so. Because I am going to satisfy my yearning and I should like to satisfy yours at the same time. In short, I propose to pop over this day week and shed the light of my countenance on you and Molly. I shall turn up to lunch.

“Your affectionate and devoted, though unfortunate cousin,

“RONALD.

“P.S. I have just got the offer of a top-hole job in the North. £300 a year and commission. But the fly in the ointment is that they want me to deposit £50, and I haven’t got it. I hope you will be able to help me to that extent, for it would be a thousand pities to miss a chance like this. Of course, I shall be able to let you have it back in a month or two, with five per cent interest if you like. Further particulars when we meet. By the way, if you should be writing to me, please address me as Mr. Walter Green. I am adopting that name temporarily, for business reasons. R.B.”

Andrew read the letter through twice, returned it to its envelope and put it away in his pocket-book. Then he resumed his operations on the hedge, with increased energy but diminished attention, whereby its symmetry was somewhat impaired but the job was more speedily completed. When the last savage snip had done its work, he hastily raked the cuttings together, conveyed them to the destructor in the back garden and deposited the shears and the rake in the tool-shed. Then he sauntered down to the studio which he had built at the bottom of the garden and let himself in with his key. A half-finished picture stood on the water-colour easel, the palette, brushes and water-dipper reposéd invitingly on the table alongside, and the Windsor chair seemed silently to offer its services. He sat down wearily. He even dipped a brush in the water. But it would not do. Painting is no occupation for a mentally preoccupied man. Finally he rose, and, leaving the studio, walked up to the house, where he scribbled a note to his wife and laid it on the hall table, (they kept no maid, and the daily “help” had gone after lunch,) put on his hat and went forth, turning to the right as he emerged from the gate and taking his way along the foot-path that led across the fields.

His cousin’s letter had given him matter for serious and somewhat difficult thought. As to the money, the nominal loan—which would certainly never be repaid—was an inconvenience to a man of his modest means. But it was not that which disturbed him. He was used to being “milked” periodically by this thriftless scallywag, who was always in low water and always on the point of making his fortune. But these transactions had been conducted through the post. They involved no personal contact. It was the threatened visit that was the cause of his trouble and that gave him so difficult a problem to solve. For on one point he was resolved; that visit must not be allowed to take place. And, furthermore, Molly must not become aware that it had been proposed. He would, if it must be, submit to the extortions of this wastrel, if not with pleasure, at least with resignation. But he would not have him in his house. And thereby hangs a tale which may as well be told now, to the end that the reader of this narrative may start with a clear understanding of all the circumstances.

Andrew Barton’s life lay under the shadow of a tragedy. The origin of that tragedy was insignificant even to triviality. But so it is in the affairs of men; from the merest trifles consequences develop which bear no reasonable proportion to their determining antecedents. The chance burrowing of a mole robbed a nation of its king; a trivial error of our most remote ancestress “Brought death into the world and all our woe.” The tragedy that darkened Andrew Barton’s life was due to nothing more impressive than a misplaced cricket ball.

But, on occasion, a cricket ball can be a formidable missile. This one, driven by a vigorous stroke of the bat, impinged with a terrific impact on Andrew’s face between the eyes, just below the level of the brows, and laid him on the field insensible and gory. Perhaps something in the way of plastic surgery might have been done; but, for a time, his condition was so critical as to occupy the whole of the doctor’s attention in the effort to save his life; and when at length his recovery
was assured it was too late. The fractured nasal bones had united firmly in their displaced position.

It was a tragedy indeed. The Andrew Barton who had gone to the cricket match was a rather strikingly handsome young man. The convalescent who came out of the hospital was one at whom the passing wayfarer cast one curious glance and then looked away. The fine Grecian nose was flattened level with the cheek-bones, excepting the uninjured tip, which jutted out from the face like a sparrow's beak.

The disfigurement alone was tragedy enough, especially to an artistic young man who had been accustomed to take an innocent pleasure in his own good looks. But his exaggerated disgust of his uncomely face and the self-consciousness that it engendered were not the worst results of the disaster. There was his wife. To do her justice, she made heroic efforts, in her pity and sympathy, to appear unaware of the change. But her efforts to seem not to notice the disfigurement were misinterpreted. To him, with his morbid conviction that he was a curiosity of hideousness, the fact that she seemed to avoid looking at his battered nose conveyed the impression that she could not bear the repulsive spectacle. In short, in respect of his personal appearance, Andrew suffered in an intense degree from what it is fashionable to call "an inferiority complex"; and that complex led him to take a perverted view of his relations with his wife.

The marriage had been a typical love-match; but, in its beginnings, very largely based on physical attraction. The beautiful girl and the handsome young man had fallen in love with each other's good looks; which, as they were both amiable, kindly and pleasant mannered, was not a bad start. But at that their relations had tended to remain. They continued to be lovers, mutually devoted; but the deeper comradeship of man and wife seemed slow to develop.

The fault was undoubtedly with Molly. Unconsciously, she made the fatal mistake of failing to enter into her husband's chief interest. Andrew was devoted to his art. She was aware of the fact and took it for granted, but she made no attempt to share his artistic interests. She admired his pictures, was pleased with the recognition that they received and praised them in somewhat inexpert terms; indeed, the rather naive and ignorant comments that she made jarred on him, so that he unobtrusively discouraged her from frequenting the studio. So she tended to live her woman's life apart, treating the studio and its activities as matters outside her province. The love and mutual admiration that had brought them together had continued unchanged and undiminished during their married life up to the time of the accident; nor was there, even then, any sign of a change. But still, they were little more than lovers.

Hence, it was not perhaps unnatural that, when the misfortune befell, Andrew should experience a certain sense of having failed to keep his covenant. Molly had married a handsome man and had given her beauty in exchange. And now the bargain was, on his side, unfulfilled. He still received, but had nothing to give. Still, he could delight in her loveliness and charm; but she must put up with a husband who was a monster of ugliness. It was rather unreasonable and perverse, and it was largely untrue. But that was what he felt. And he felt it bitterly.

But his fatal misadventure had yet another unfortunate effect; which brings us back to our story. Andrew had but one near relative—his cousin Ronald. Ronald, however, was a very near relative indeed. He was, in fact, a cousin twice over; for, not only was his father a brother of Andrew's father, but his mother was a sister of Andrew's mother. In view of this double relationship, it is not surprising that the two men were a good deal alike. Actually they were as much alike as a pair of twins. But the remarkable resemblance was masked to some extent by the one point of difference. Andrew's nose had been of the straight, or Grecian type; Ronald's was curved on the bridge—a definite Roman nose. Now, a Roman nose imparts a very distinctive character to a face, particularly in profile; and hence this really trifling difference served effectually to disguise the fact that these two men were almost identically alike.

Nor was the resemblance limited to the facial characteristics. As in the case of twins, it pervaded the whole personality. They were of much the same colouring, stature and figure. Their voices and intonations were recognizably similar; and even in those elusive muscular habits which express themselves in pose and gait, there was in each man a suggestion of the other.

Their mental similarity was less marked. But yet it was distinguishable. For Ronald was not devoid of artistic aptitude. He painted in a somewhat dilettante fashion, and could have done better if he had taken more trouble; and in other respects he showed a certain mental affinity to his cousin. But just as the almost uncanny physical resemblance was masked by a single salient dissimilarity, so, but in a much more marked degree, were the mental resemblances masked by a profound contrast in the moral qualities. It seemed as if, in Ronald, some "recessive" moral taint, which had lain dormant for a generation or two, had suddenly come to the surface. He was an undeniably "bad egg". To the precise, thrifty, conscientious Andrew, his thriftless, slippery cousin was an object of puzzled contempt, and, moreover, a source of constant anxiety. For Ronald Barton was an inveterate cadger, a confirmed borrower; and, as is the way of the habitual borrower, as soon as the loan had been obtained, the transaction was finished and the incident closed so far as he was concerned. Thus it happened that at the end of each year, Andrew found his bank balance substantially eaten into by the "trifling loans" that this plausible rascal had wheedled out of him.

But, as we have already hinted, it was not the drain on his resources that was troubling him now. He had accepted Ronald—his only near kinsman—as a sort of troublesome younger brother and was resigned to his extortions. What was disturbing him so profoundly was the fear that he might not be able to stave off the proposed visit. He loathed the very idea of having his cousin under his roof; and especially did he loathe the idea of any association between Ronald and Molly.

That was the real trouble. It was not that he was in general a jealous man or that he had the slightest mistrust of his wife. But he distrusted Ronald profoundly. Of that gentleman's mode of life he knew nothing; but he suspected a good deal. And he was very clearly convinced that this shabby knave was no fit associate for Molly. And there were certain special reasons
why he disliked the idea of their meeting.

They had met twice. The first time was shortly after the wedding, and, then, Andrew had been not displeased by Molly’s warm admiration of his cousin. For Ronald was an undeniably fine-looking young man, and he had been on his best behaviour.

But the second meeting had been a very different affair. The experience had been one of which Andrew could not bear to think. It had occurred soon after the accident, when the “inferiority complex” was at its worst, and Andrew had found himself constantly following Ronald with his eyes, noting with envy the strikingly handsome face and the swaggering, confident carriage, and contrasting them with his own hideousness and insignificance. And he suspected that Molly was making a like comparison, and he knew that Ronald was. For, on this occasion, that gentleman had been somewhat less discreet. Ostentatiously respectful, with a certain oily civility, he was nevertheless disposed to assert the privileges of cousinship with an insinuating familiarity that made Andrew squirm. And, beneath his deferential manner there seemed a sinister suggestion of a new consciousness of power; a suggestion that he had discovered a new way to put on the screw if the need should arise. Andrew had then and there determined that he should never come into the house again.

To that resolution he still held firmly. But the problem that he had to solve was how, decently, to evade the proposed visit. He could not write bluntly refusing it, and, even if he did, the thick-skinned Ronald would pretty certainly come, notwithstanding. In any case, there would be a letter in reply, which Molly would probably see; and then he would have to tell her of the proposal, and it would be difficult to explain his objection. But he wanted to keep the whole affair from her knowledge. In this he was, perhaps, unwise. It would certainly have been simpler to accept the visit and prepare Molly with a few words of advice and caution. But he could not do it. Deep down in his soul was a feeling that bade him keep Ronald completely out of her life.

Thus he turned his difficulties over and over as he strode along the foot-path through the fields. And gradually a plan shaped itself in his mind. It was quite a simple one. He would first send Ronald a postcard acknowledging his letter but making no comment. Then, on the day before that of the proposed visit he would send a letter stating that he had some business in Crompton—which was only thirty miles distant—and would call on Ronald to talk over the financial situation. There would be no time for an answer to his letter, and, if he agreed to the “loan”—which experience told him he probably would—the matter would be settled and the reason for the unwelcome visit would cease to exist.

There was only one detail at which he boggled. If he went to Crompton, he would be away from home all day, and he would have to give Molly some sort of explanation of his absence. And it could not be a true explanation. It seemed a small matter. But Andrew hated the making of a directly untrue statement at any time, and especially did he hate the idea of telling his wife a lie. However, it seemed that there was no choice. The only way in which his day’s absence from home could be simply and naturally explained would be by saying that he was going up to London to show some of his work to a dealer; and that was the course that he decided to adopt.

When he arrived home, he found, rather to his relief, that Molly had not yet returned. With his decision fresh in his mind, he went straight to the writing table in the sitting-room and wrote a brief note to Ronald, acknowledging his letter. Having sealed and stamped it, he dropped it into his pocket, ready for posting later, and then went into the little kitchen to make preparations for tea. But still, as he filled the kettle and set it on the gas ring, collected the tea-things and arranged them on the tray, his perplexities and the plans he had made to solve them continued to revolve in his mind as a sort of background to his present occupation. Impatiently, he tried to dismiss them. He had decided what to do, and further thought was but a useless, purposeless travelling back and forth over the same ground. But the emotional jar that Ronald’s letter had inflicted, with its vivid revival of unpleasant memories, had disturbed him profoundly; and, strive as he would to concentrate his attention on what he was doing, he could not silence the running accompaniment of futile reflection. Nevertheless, he carried out his task quite efficiently and with careful consideration of Molly’s very definite views on the niceties of the tea-table. The embroidered tea-cloth was spread on the table in the sitting-room in exactly the correct manner and garnished with little top-heavy flower glasses, artfully disposed so as to develop the maximum of inconvenience and liability to capsize. The tray, symmetrically set with its proper appointments—excepting the teapot and hot-water jug, which lurked in the kitchen awaiting the co-operation of the kettle—was placed at the head of the table. Biscuit box, cake basket, butterdish, jam and preserve jars and other minor articles of “family plate” were posted with the strictest regard to their customary stations (and with no regard at all to the fact that the biscuit box was empty and there was no cake). In Molly’s mind the “five o’clock tea” tradition still lingered, and the occasion was one of some ceremony.

When he had laid the table, Andrew surveyed his work critically, and, having decided that all was in order, proceeded to cut some wafery slices of brown bread and butter, which he adroitly rolled up into little sausage-like scrolls. Of these he prepared quite an imposing pile, in view of Molly’s partiality for them and of the fact that she usually returned from her expeditions in a state of ravenous hunger (she had gone over for an afternoon’s shopping to the little town of Bunsford, some two miles away).

At length he laid down his knife, and, having taken a glance at the kettle, went out to the garden gate and looked down the lane. His wife had just turned into it from the road and was now advancing briskly with an enormous parcel in either hand and a smaller one tucked under her arm. For a moment he was disposed to run and meet her and relieve her of her burdens, but, experience having taught him that Molly’s parcels usually ran to bulk rather than weight, he turned back into the house, leaving the garden gate and the front door ajar, and went to the kitchen to make the tea.

He had just placed the silver teapot and hot-water jug on the tray when he heard her coming up the garden path,
whistling cheerfully to announce her approach. He went out into the hall to welcome her, and, when she had held up her face for the customary kiss, she tenderly deposited her parcels on the hall table. “You seem to have been going it,” Andrew remarked, with an eye on the parcels.

“I have,” she admitted. “I’ve had a lovely time—a regular beano. They were simply giving the things away, so, of course, economy suggested that one should take the opportunity. And I did. I’ve bought no end of things. You shall see what I have brought with me, presently; the rest are being sent. Do I smell tea? I hope so, for I am simply starving.”

She entered the sitting-room and stood for a moment regarding the arrangements with smiling approval. “How nicely you’ve laid the table, Andy,” she exclaimed, “and, my word! what a heap of roly-poly’s you’ve cut.”

She picked one up and bit off half. Then she continued, with slightly impaired enunciation: “There are some pastries in a box on the hall table. Puffs and things. I hope I haven’t squashed them under my arm. I was nearly eating them in the train. Shopping does make you hungry.”

Andrew fetched in the box and transferred its contents—bilious little tarts and cakes and three-cornered puffs, apparently produced with the aid of a pair of bellows—to the cake-basket. Then he lifted Molly’s hat off—it came off quite easily, being of the coalscuttle-extinguisher type then in vogue—while she placidly poured out the tea with one hand and fed herself with the other, continuing her cheerful babbling, punctuated with mastication.

Andrew sat down at the table, and, as he sipped his tea, looked thoughtfully at his wife. Perhaps a little furtively, too, with an unpleasant and guilty consciousness of the letter in his pocket. But principally his mind was occupied, half-unconsciously, in admiring contemplation of his beautiful wife. Her charm seemed to him always new, as something freshly discovered. To look at her was a pleasure that never staled. It was not only that he was as much, or even more, in love with her as ever, but as an artist, and a figure-painter at that, he was peculiarly sensitive and appreciative of human beauty, and especially the beauty of women. “So you’ve had a good day’s sport,” said Andrew.

“Rather!” she replied, in a tone of deep satisfaction. “Of course, Bunsford is not like London, but there are quite a lot of good shops there. And didn’t I turn them upside down! And didn’t I make the money fly! You’ll have to hurry up and sell some more pictures or we shall be on the rocks.”

Andrew remarked, with an eye on the box. “There are some pastries in a box on the hall table. Puffs and things. I hope I haven’t squashed them under my arm. I was nearly eating them in the train. Shopping does make you hungry.”

Andrew fetched in the box and transferred its contents—bilious little tarts and cakes and three-cornered puffs, apparently produced with the aid of a pair of bellows—to the cake-basket. Then he lifted Molly’s hat off—it came off quite easily, being of the coalscuttle-extinguisher type then in vogue—while she placidly poured out the tea with one hand and fed herself with the other, continuing her cheerful babbling, punctuated with mastication.

Andrew sat down at the table, and, as he sipped his tea, looked thoughtfully at his wife. Perhaps a little furtively, too, with an unpleasant and guilty consciousness of the letter in his pocket. But principally his mind was occupied, half-unconsciously, in admiring contemplation of his beautiful wife. Her charm seemed to him always new, as something freshly discovered. To look at her was a pleasure that never staled. It was not only that he was as much, or even more, in love with her as ever, but as an artist, and a figure-painter at that, he was peculiarly sensitive and appreciative of human beauty, and especially the beauty of women. “So you’ve had a good day’s sport,” said Andrew.

“Rather!” she replied, in a tone of deep satisfaction. “Of course, Bunsford is not like London, but there are quite a lot of good shops there. And didn’t I turn them upside down! And didn’t I make the money fly! You’ll have to hurry up and sell some more pictures or we shall be on the rocks.”

Now, Andrew knew quite well that this was all nonsense. Molly’s little raids on the Bunsford shops were dissipations of the most inexpensive sort. She never nearly spent the hundred pounds a year that had come to her on her father’s death. Nevertheless, he seized the opportunity. “Yes,” said he, “it is about time I raked in some fresh supplies. There are one or two small things that I have got on hand, ready for the market. I must take them up to Montagu and turn them into cash.”

“You needn’t, Andy,” she said, with one of her delightful dimpling smiles. “I was only joking. I didn’t really spend much, and I’ve got quite a lot in the bank.”

“I know, dear,” he replied. “I wasn’t such a mug as to take you seriously. But still, I think I may as well take those things up to Monty. It’s no use keeping stuff in the studio cupboard. I think I will go up one day next week, probably Tuesday.”

She made no comment on this proposal, and their talk drifted into other channels. After tea she produced the two hats—the principal spoils of the raid—and exhibited them to Andrew; who looked at them as Lord Dundreary looked at the chimpanzee, with surprise and incomprehension. (The feminine hat is usually outside the scope of the masculine intellect, and the hats of that period were beyond belief as things intentionally created.) Then Molly went about her lawful domes occasions, and Andrew sneaked out to drop his letter into the post-box down in the village. It was a harmless letter, devoid of significance and committing him to nothing. Yet, as he held it in the slit of the post-box, he felt an unaccountable reluctance to let it go; and when at length he released it and heard it fall to the bottom of the box, he had the sense of having done something portentous and irrevocable.

II. — ALARUMS AND EXCURSIONS

THE days that followed slipped by slowly and wearily, charged for Andrew with anxiety and unhappiness. Unhappiness because he had, for the first time in his married life, a secret which he was withholding from Molly. And in his heart he felt that it was a discreditable secret, of which he would be ashamed if it should ever leak out. This was the chief occasion of his anxiety. For there was the chance that something might upset his plan; and, if it did, he would have to explain. But what could he say? To Molly it would appear as if he distrusted her, and who could say that she would be wrong? Was there not some distrust implied in her repugnance to his meeting Ronald? It was a dreadful thing to think of, for, hitherto, the most perfect confidence had existed between him and his wife; and no woman could be more irreprouachable in her conduct than Molly.

Still he went on making the few preparations that were necessary. From his bank at Bunsford he drew out fifty pounds in cash (paying in an equivalent cheque on his London bank) in case Ronald should be unable to deal with a cheque; and, to meet the alternative case, he drew a cheque on the London account to the order of Ronald Barton, Esq., and put it in the attache case that he kept in the studio cupboard. Then, with great care, he drafted the letter which he proposed to send to Ronald. He dated it the 26th of August—Sunday—and, in fact, he proposed to post it early on Monday, so that it should be delivered on Monday evening or by the first post on Tuesday morning—in either case in time to prevent Ronald from coming, but not in time to allow of a reply. It was but a short letter, and, in its final form, ran thus:
“Willow Cottage, Fairfield.
26th August, 1928.

My dear Ronald,

It happens by a fortunate chance that I have to run over to Crompton on business. I say ‘fortunate’ because we shall have certain matters of a rather private nature to discuss and we can do that better in your rooms than here.

“I don’t know quite how long my business will take, but I shall turn up at your diggings punctually at one o’clock, when we may, perhaps, go somewhere and get some lunch, before beginning our discussions.

“Yours ever,
“ANDREW.”

It was not without some qualms that he concocted this mendacious epistle, and when he had finished it and addressed and stamped the envelope, he hid it away securely in the attache case until the time should come for posting it. Finally, into the same receptacle he put one or two small and trivial paintings—little more than sketches—which he had hardly thought worth offering to his dealer. Of course, he was not going to offer them now. Their presence in the attache case was merely a concession to sentiment. He didn’t want to tell more lies than were absolutely necessary.

Now that he had made all his preparations, it would have seemed reasonable for him to dismiss the matter from his mind until the time for action should arrive. But this he was quite unable to do. The emotional upset, which was at the root of the whole rather foolish business, kept his mind unsettled and exaggerated the effect of his guilty consciousness of his secret and his anxiety lest some unforeseen hitch should occur. The result was that he found himself everlastingly revolving the details of his plan, considering what he should say to Ronald and what he should do if, by any disastrous chance, his scheme should miscarry and his deception should become known to Molly.

In order to be alone and free to think his futile thoughts, he spent much of his time in the studio. He tried to work. He had a rather important picture well started, and, in his normal state of mind, it would have been easy and pleasant to carry on. But after a single attempt he had to desist for fear of spoiling what he had already done.

In the evenings, his restlessness and a curious shyness of his wife’s society drove him out to stride impatiently across the fields or along the little-frequented road, chewing the cud of useless and purposeless reflection. He had better have stayed at home and listened to Molly’s cheerful gossip, for thereby he would have avoided a world of trouble. But no man can foresee the little surprises that Fate has in store for him; and so it was that Andrew, taking his way along the darkening road, walked straight into the ambush that chance had prepared.

The week had nearly run out, for it was the Monday evening, the evening before the appointed day of his visit to Crompton, when he set forth in his old studio jacket, hatless and unadorned by the spectacles that he wore in more populous places to mitigate the effects of his disfigurement, to tramp along the road and think out once again the details of his proceedings on the morrow. He had posted his letter to Ronald in time for the eleven o’clock collection and everything was ready for his journey. By this time to-morrow, he thought, his difficulties would be over. He would have paid out the money, have disposed of his wastrel cousin and would be free to take up again the normal course of his life.

Thus preoccupied he swung along, taking little note of his surroundings. At long intervals the head-lights of an approaching car started out of the gathering gloom, glared on him for a moment and were gone; or overtaking him, cast his attenuated shadow along the lighted surface of the road with increasing intensity until it culminated in an instant of dazzle, a whizz, a hum of mechanism and a dwindling red light fading into the darkness.

It was at the cross roads, known locally as Kibble’s Cross, that the incredible affair happened. Preoccupied as he was, a stationary car drawn up at the corner of the side road made little impression on him, though he saw it and could hear the engine running, and was dimly aware of two men lurking near the car. But wrapped in his own thoughts, he gave them but a passing, inattentive glance and straightway forgot their existence. A few moments later, a bright light streamed past him from behind, then a car came abreast of him and drew up abruptly with a shriek of the brakes and an irritable voice demanded: “Well, what is it?”

Andrew gazed in astonishment at the speaker—a hard-faced elderly man who appeared to be addressing him—and stepped up to the open window to ask what he meant. As he put his head in at the window, the light of an electric torch flashed full in his face; but in spite of the dazzling light he could see that the man had his other hand thrust into his hip pocket. He could also see a middle-aged woman grasping the driving wheel and staring at him with an expression of consternation. He was about to put his question—in fact he had begun to speak—when he felt both his wrists seized in a vice-like grip and held together behind his back. Simultaneously, a hand grasping a pistol was thrust over his shoulder and a voice from behind him commanded: “Put ‘em up. Both of you.”

Exactly what happened during the next few seconds Andrew never clearly knew. As he felt his wrists grasped, he struggled to turn round and became aware of two men whose faces were hidden by black masks. At the same moment, the man in the car made a quick movement with his farther hand. An instant later there was a double report with the sound of
shattering glass; a piercing scream from the woman, a grinding noise from the engine, and the car leaped forward. In another moment it had gathered speed and was receding swiftly into the darkness. As the reports rang out, Andrew felt his wrists released, and, turning quickly, he saw the two men running furiously towards their car and heard a whimpering voice exclaim: "You blasted fool! Couldn't you see it was the wrong man? And you've done him in."

Andrew stood, bewildered and half-stupefied, looking at the retreating bandits. They were still talking excitedly but he could not hear what they were saying. Soon, they reached their car, tumbled in hurriedly and slammed the door. Again, there was a grinding sound; the car started forward, turned up the side road, and was quickly lost to sight between the hedgerows. The hum of the engine, soon died away and Andrew was left standing alone in the silence of the deserted road.

He tried to collect his scattered wits and to realize what had happened. It was an astounding affair. The audacity of these ruffians in attempting a highway robbery in the presence of a witness seemed amazing. Yet, but for the circumstance that the passenger in the car had been armed, it might easily have been done. The presence of an unarmed stranger would have offered no hindrance to two armed and masked men.

But what had really happened? Was it true that that stern-faced elderly man had been "done in", or was this only a frightened man's conjecture? Almost certainly the latter, for there had been no time to ascertain the effects of the shot. Perhaps there was no harm done, after all, beyond the smashing of the wind-screen. Meanwhile, the question arose as to what he ought to do. At first he was disposed to hurry back to Fairfield and give information to the police; but on reflection, that seemed a futile thing to do, for, long before he could reach the village, the woman who was driving the car would have reported the outrage to the police at the next town. Moreover, there was no police station at Fairfield and only a police patrol who was sent out to the village from Bunsford. Finally, he decided to notify the police at Bunsford on the morrow, though even that would be of little use, seeing that he would be totally unable to identify either of the men or give any description of them.

While he had been turning these questions over in his mind, he had been retracing his steps along the road; for the shock that he had sustained had effectually diverted his thoughts from his domestic troubles and the solitary countryside ceased to attract him. Presently he came to a stile at the entrance to a foot-path which led in a nearly straight line to the village. Here he paused for a few moments and looked back along the road. In the far distance the head-lights of a car appeared as bright sparks of light on the dark background. He watched them, as he stood with one foot on the lower step of the stile, with a feeling of faint dislike. At the moment, the idea of a motor-car seemed to have unpleasant associations. After looking for a few seconds at the distant lights, which grew brighter as he looked, he mounted the stile, and, stepping down on to the foot-path, set forth on the short cut across the fields.

There was no lack of matter for conversation with Molly that night. As he poured out the thrilling story of his adventure, she almost lost interest in the hat, on which she was performing some kind of minor operation, in the wonder and horror of the tale. "But what impudence and bravado!" she exclaimed. "They seem to have gone on just as if you hadn't been there."

"I shouldn't have been much good in any case," said Andrew. "They were probably both armed. At any rate one of them was, and he was pretty ready with his pistol."

"Yes," said she, "I am glad you weren't able to interfere. You might have been lying dead at this moment. I wonder if that poor man in the car was really killed."

"I hope not," said Andrew, "but I am afraid he was hit. He could hardly fail to have been seeing that the muzzle of the pistol was within a foot of him. I suppose I had better drop in to-morrow morning at the police station at Bunsford and give my name and address in case they want to call me as a witness."

Molly laid down her work and looked at him anxiously. "Do you know, Andy," she said, "I don't think I would if I were you. Why say anything about it to anybody? You have got nothing to tell that would help the police. You wouldn't know the man again if you saw them. It is a horrible affair. There may have been murder done. Don't you think it would be better for you to keep right out of it? Nobody knows that you were there, and nobody need ever know."

"The woman in the car saw me, you know," said Andrew.

"Yes," retorted Molly, whisking about with that mental agility which is the peculiar gift of woman, "and she probably took you for one of the gang. And if she did, she will swear through thick and thin that you were. You know how positive women are when they have got an idea into their heads."

He did—Molly, herself, having contributed some striking instances; and he realized that she had put her finger on the one possible complication. Nevertheless, he did not like the idea of lying low when it was certain that inquiries would presently be made. "Well," she urged, when he pointed this out, "wait till they are made, and see what sort of inquiries they are. If the police advertise for the witness who saw the attack, you can come forward. In the meantime, keep your own counsel; and don't go out of the house without your spectacles."

The serious view that she took of the matter tended to transfer itself to him, though the conclusion of their talk still left the question unsettled in his mind. But as to the wisdom of her advice in regard to the spectacles he had no doubt. Until he announced himself, he had better remain unrecognized. And the spectacles were a very efficient disguise, having, in fact, been designed expressly for that purpose. The horn rims enclosed lenses which were virtually plain glass, to offer the least possible obstruction to Andrew's excellent vision. The part of them which really functioned was the bridge; which was
provided with a broad, saddle-shaped guard of flesh-coloured celluloid which occupied the hollow where the bridge of the nose should have been; and, to a great extent, concealed the deficiency. He almost invariably wore them out of doors; and it was due only to the failing light and his mentally disturbed state that he had gone out this evening without them.

The morning found him still undecided as to what he should do, though Molly renewed her admonitions during breakfast. But now the unpleasant business that he had in hand once more began to occupy his thoughts to the exclusion of everything else. The guilty consciousness of the deception that he was practising on his wife worried him intensely and made him impatient to be gone. Immediately after breakfast, he fetched his attache case-packed in readiness on the previous day—from the studio, put on his spectacles and made ready to depart. "I suppose, dear," said Molly, as she accompanied him to the outer door and gave him a farewell kiss, "you won't be very late home to-night?"

"I don't expect to be," he replied. "Still, you had better not stay up if I am not home by about ten."

With this he kissed her again, and, turning away, strode briskly down the path. At the gate he looked back and waved his hand. Then he started at a good pace towards the station, with a sense of relief at having got so far without a mishap. Only a few hours more, now, and he would be clear of his worries and would be his own man again. And once again as he swung along, he debated whether he should or should not call at Bunsford police station.

But the question was decided for him by circumstance. As the train on the little branch line from Fairfield drew up in Bunsford Station, he found that a train from London to Crompton was signalled and already in sight down the line. It was a full three-quarters of an hour earlier than the one that he had intended to travel by and would bring him to Crompton that much before his time. Nevertheless, in his impatience to get clear of his own neighbourhood, he welcomed it, and hurried across to the booking office. A couple of minutes later, the train drew up at the platform. It was only moderately full and he was able to secure a first-class smoking compartment to himself. While the train lingered in the station, he peered out anxiously, but no one came to disturb the solitude for which he yearned. At length, the guard's whistle sounded and the train began to move.

He heaved a deep sigh of relief, and as the train gathered speed he proceeded deliberately to fill his pipe. Then he took out Ronald's letter from his letter-case, read it through slowly from the address to the signature and tore it into minute fragments, which he allowed to flutter out of the window. Then he opened his attache case and carefully checked its contents; and when he had done this, he leaned back, relighted his pipe and once more began to revolve in his mind the problem of how he should deal with Ronald.

The money question did not trouble him appreciably. He had in the attache case, in two blank envelopes, a cheque for fifty pounds drawn to Ronald's order and a bundle of fifty pound notes. He took it for granted that one of those two envelopes would be transferred to Ronald—preferably the cheque; or, if it had to be the notes, he would tear up the cheque and cancel the counterfoil. That was all plain sailing, and, though it irked him to pour his earnings into the bottomless pocket of this worthless spendthrift, he would accept the loss with resignation. The real problem was how to keep Ronald away from Fairfield. Supposing that even after the money had been paid, he should persist in his intention of making the visit? What was to be done? Could Andrew tell him bluntly that his presence would not be acceptable? It would be very uncomfortable. And even so, Ronald was uncommonly thick-skinned.

He would not be easily put off if he wanted to come... It was a difficult problem; and Andrew had not solved it satisfactorily when the train rolled into the station at Crompton and came to rest at the platform.

III. — IN THE MIDST OF LIFE

ANDREW'S first proceeding on coming out of the station was to make inquiries at the baker's shop, which was also a post office, for the address of a picture dealer. Of course he knew that there would be no picture dealer, as he understood the term, in a town like Crompton; nor had he any expectation of transacting any business whatever. The inquiry, like the pictures in his attache case, was a mere concession to sentiment. He had told Ronald that he had business in Crompton, and he felt that he must make some pretence of business. It was mere foolish make-believe, and he knew it; but to a man habitually truthful, as he was, there is perhaps a shade of difference between a statement, true in the letter though false in the spirit, and one without even a foundation of truth. At any rate, that was how he felt about it. "A picture dealer," the woman in the shop repeated, reflectively, "I don't know of any regular picture dealer in Crompton. There's Mr. Cooper in the High Street, he sells pictures. He calls himself a carver and gilder. He's the only one I know of."

"I expect he will do," said Andrew, with literal truth this time, and, having thanked the woman, he went forth in search of the High Street and Mr. Cooper.

The former was found easily enough, and the latter after a very brief exploration. Andrew stood for a while outside the shop and examined the contents of the window. There were a few brushes and tubes of colour, several empty frames and half a dozen "original water colours". As the most ambitious of these was priced at eighteen shillings the pair, including the frames, the prospect of any business grew still more remote. Nevertheless, Andrew entered the shop, and, by way of breaking the matter gently, began with the request for a tube of Winsor and Newton's cobalt. When this had been handed to him, he laid his attache case on the counter and opened his "business". "Do you do anything in the way of buying pictures?" he asked.

Mr. Cooper was cautious. "I don't buy a lot," said he, "but I am always ready to look at samples. Have you got any with
you?"

Andrew opened his case and produced his “samples”, which the dealer took in his hands and looked at suspiciously. "Are these originals?" he asked. "They look like reproductions."

"No," replied Andrew, "they are originals; my own work."

Mr. Cooper examined them again with renewed interest. After a prolonged inspection, he inquired: "How much?"

"Five guineas each," Andrew replied.

The dealer stiffened and cast a startled glance at the artist. "Did you say five guineas each?" he demanded, incredulously.

Andrew repeated the statement, whereupon the dealer hastily deposited the paintings in the open attache case and shook his head sadly but emphatically. "I don’t say they may not be worth it," said he, "but I have to sell pictures cheap, and find the frames myself. Five shillings a drawing is my outside price."

Andrew was not surprised or disappointed. The interview had served its purpose. It had been a business transaction and had conferred a quality of literal truth on his statement to Ronald. Satisfied with this make-believe, he repacked his pictures and closed his attache case. Then, after a few minutes’ amicable chat with the dealer, he wished him "good morning" and took his leave.

His premature arrival at Crompton left him with a full hour to dispose of before keeping his tryst at Ronald’s lodgings. He was not inclined to call there before he was due, with the chance of finding his cousin absent and being brought into undesired contact with the landlady; and, moreover, he still had the foolish urge to consider over again what he would say to Ronald at the coming interview. Accordingly, he spent the time rambling up and down the streets, looking with rather wandering attention into the shop windows and examining the general features of the town.

First he proceeded to ascertain the whereabouts of the street in which his cousin lived, and, having found it, to locate approximately the number, 16. Barleymow Street was a respectable though rather shabby street, mostly consisting of private houses with a few shops. Near one end was an archway leading into a kind of alley, and, above the arch was a blue lamp bearing the words, “Police Station,” while, on the space of wall beside the arch was a large board covered with printed bills containing announcements of persons missing, wanted or found drowned, and other similar police notices. Here he lingered for a while, reading these rather gruesome advertisements and once more considering irresolutely whether he ought not to step in and make his report of the incident of the previous night.

It was a more momentous question than he realized; but, fortunately, he took the right decision, though whether that decision was due to Molly’s admonitions or his preoccupation with his present business it is impossible to say. At any rate, he decided to wait until he was back in his own neighbourhood and turned away in search of further objects of interest.

Such an object he found near the opposite end of the street, and the oddity of it diverted his attention for the moment from his immediate anxieties and preoccupations. It was in a large window—a sort of hybrid between a shop and a private house—and consisted of a hand-written placard executed in bold Roman capitals announcing that these premises were occupied by no less a person than Professor Booley, late of Boston, U.S.A. (popularly believed to be the hub of the universe). It set forth that the said Professor was a specialist in the beautification of the Human Countenance, and gave in emphatic and even dictatorial terms a number of items of advice coupled with reasoned suggestions. Thus:

**GOOD LOOKS ARE THE SUREST PASSPORTS TO SUCCESS.**

IF NATURE HASN’T GIVEN THEM TO YOU,

COME IN AND LET ME MAKE GOOD HER FAILURE.

WHY HAVE EYEBROWS ALL AWRY WHEN
THE SPECIALIST CAN SET THEM FAIR AND EVEN?

WHY HAVE A WRINKLED FACE? DON’T.
COME RIGHT IN AND HAVE YOUR SKIN
MADE AS SMOOTH AS A BABY’S.

WHY HAVE A CROOKED NOSE?
DON’T. LET ME STRAIGHTEN IT OUT.

DON’T BE CONTENT WITH A BACK SEAT
BECAUSE YOU WERE BORN HOMELY.

COME INTO MY PARLOR AND BE MADE FIT
FOR A PLACE IN THE FRONT ROW.

Andrew stood before the window, reading these adjurations and commands with a faint smile, in which, however, there was more of wistfulness than amusement. Doubtless, the Professor was a quack of the deepest dye; but he had set forth a truth of which no one could be more sensible than the spectacled reader who stood before the window. Dimly as he had realized the value of good looks when the precious gift was his, his loss had made it but too clear. What most men experience only with advancing years, he had experienced in the hey-day of his manhood.

He sauntered on, musing whimsically on the Professor’s procedure. How did that redoubtable operator go about
smoothing out wrinkles? A flat iron hardly seemed to meet the case. And how did he straighten out a crooked nose? The question evoked a ridiculous picture of the Professor tapping out the patient’s proboscis on an anvil, or bringing it to a straight line by means of a screw clamp. If only the Professor’s claims could be taken seriously! Though, to be sure, even Professor Booley had not claimed to be able to create a new nose on the foundations of one that had been battered out of existence.

Slowly his saunterings and shop-gazings consumed the time, as he noted by an occasional glance at his watch; and punctually at two minutes to one he turned again into Barleymow Street. There was no need for him to check the numbers afresh, for, at the middle of the street, where he had located number sixteen, his cousin was already waiting, slowly pacing up and down before his doorway, and at the moment with his back turned towards Andrew. Then he swung round, and, catching sight of his cousin, started forward briskly with a smile of recognition and greeting.

As the two men approached, they regarded each other critically, and Andrew noted with something like a pang of envy what a really fine-looking man his cousin was; such a man as he, himself, had been but a year or two ago. “Here you are, then,” said Ronald, grasping his hand effusively, “punctual to the minute as usual. You ought to have been a business man instead of an artist.”

“There is no reason why one should not be both,” said Andrew.

“Answered with your customary wisdom,” rejoined Ronald. “And, speaking of business, have you polished off the little affair that brought you to the unlikely region of Crompton-on-Sea?”

As he asked the question, Ronald’s face exhibited a faint smirk which brought an angry flush to his cousin’s cheek. Obviously, Ronald was slightly sceptical of the business appointment; but he might have kept his scepticism to himself.

“Yes,” Andrew replied, “it didn’t take more than a few minutes.”

“I hope you brought off the deal,” said Ronald.

“No,” replied Andrew, “there was nothing doing; at least, not at my price. Better luck next time, perhaps. Do you know of a likely place where we can get some lunch?”

“I know a place that will suit us exactly,” answered Ronald. “But you won’t want to lug that attaché case about with you all day. We shall probably go for a walk after lunch. Shall I plant it in my digs until you want it again?”

Andrew accepted the suggestion gladly, having already had enough of the case, and handed it to Ronald, who let himself into the house with a latchkey and disappeared for a few moments. When he reappeared, he linked his arm in Andrew’s and led him a way in the direction of the approved restaurant, which was situated at the farther end of the High Street and turned out to be a place of some pretensions. As they walked, Ronald chatted with the easy volubility of an accomplished salesman or cheap-jack on every subject but the one which was the occasion of their meeting, while Andrew listened half impatiently but with a certain grim amusement. He knew this trick of Ronald’s of old. That slippery gentleman could never be brought to make a plain statement of the circumstances which called for the particular loan which he happened to be seeking. Instead, he managed with really remarkable skill to keep up a sort of conversational solo on all kinds of indifferent topics, always discreetly avoiding the one concerned with the financial transaction.

On this occasion, he got an excellent start as they passed the arched opening that led to the police station; for, at that moment, a bare-headed policeman was engaged in sticking a new bill on the notice board. They had only a glimpse of it in passing, but they were able to see that it was headed in bold type: “Wanted for Murder.” That bill furnished Ronald with material for discourse—one could hardly call it conversation—until they reached the restaurant.

Andrew made no attempt to counter these manoeuvres. In a contemptuous way he was slightly amused by his cousin’s evasions; and he had no curiosity as to the “top hole opening” which was the nominal occasion of the need for fifty pounds. Probably it was a myth covering some gambling transaction. That was really of no consequence. He had brought the money with him and he knew that presently he would hand it over. The only thing that mattered was that there should be no arrangement for a visit to Fairfield.

The lunch was a complete success. Andrew, himself, was pretty sharp set and Ronald’s exploits suggested a recent period of abstemiousness. In fact, his concentration on alimentary activities hindered his conversation to an extent that enabled Andrew to get in a question or two on the subject of the “opening”. But Ronald was not to be drawn. “Yes, old chappie,” said he, “we shall have to talk things over presently, though it’s all pretty simple to a man of your business acumen. We might take a stroll in the country where we can talk at our ease. There’s some quite pleasant country along the north coast. Quiet, too. Most of the visitors seem to keep to the south. By the way, those spectacles of yours are an excellent idea. You hadn’t got them when I saw you last. I suppose you don’t really want them for your eyesight, but that wide bridge covers up the scar so that you look quite like your old self.”

Andrew noted the evasion with amused exasperation, but he made no further attempt to “get down to brass tacks”. He sipped his coffee and assented passively to Ronald’s suggestion of a green Chartreuse “to give the festivity a final kick”. Then he paid the bill and went forth with his companion to see what the country walk might bring in the way of explanations.

It brought what he had expected; an endless stream of talk on the most diverse topics with a discreet avoidance of any references to the golden opportunity. Only once was that subject approached, and then merely in respect of that aspect of the transaction which to Ronald was the only one that mattered. “By the way, old chappie,” he said when Andrew had put
out another feeler, “I suppose you have brought the rhino with you?”

“I have brought a cheque,” Andrew replied.

Ronald’s face fell. “That’s a bit awkward,” said he. “The fact is I haven’t got a banking account at the moment. Didn’t find my bank satisfactory and haven’t got a new one yet.”

Andrew made no comment; but a vision of the initials “R.D.” arose before “the eye of his mind”. Bankers are apt to develop an “unsatisfactory” attitude towards customers whose cheques have to be “referred to drawer”, which, as Andrew knew, had happened in Ronald’s case on more than one occasion. “You see,” Ronald continued, “it would hardly look well if I had to hand in your cheque for my deposit. They’d see that I had no banking account of my own, and that’s just what I don’t want them to know. I want to give the impression of a financially substantial person, as I shall have some of their money passing through my hands.”

Andrew noted mentally the appropriateness of the phrase, “passing through my hands,” and saw unpleasant possibilities looming in the future. He only hoped that “they”, whoever they were—supposing them to have any real objective existence —would make suitable arrangements for “their” own security.

Meanwhile he replied: “It is an open cheque; but if that doesn’t quite meet the case, I dare say I could manage to let you have cash. But I should like to know a little more about the business.”

“Of course you would,” Ronald agreed heartily, “though the essential fact is that I have to lay down fifty pounds as security before I can take up the appointment. Look at that jolly old windmill. What a pity they have taken the sails off! Makes it look such a ruinous affair. But they nearly always do, if they don’t pull the whole thing down. Soon there won’t be a complete windmill in the whole country.”

Here he broke off into a discourse on windmills in particular and the deterioration of the countryside in general, and, for the time being, the subject of the security lapsed. It being obvious that he did not mean to be drawn into any intelligible account of the business transaction, real or imaginary, Andrew resigned himself to the inevitable and accepted the conversational lead; with the reservation that no arrangements for a visit to Fairfield were entertained.

Apart from its unpleasant antecedents, the walk was agreeable enough. They had soon left the little town behind, and the country, though not romantically beautiful, offered a pleasant rural prospect. The cornfields, it is true, were denuded of their crops, which now, in the form of rows of ricks, lined the hedgerows at the bottom of the fields. But the stubble, now faded to a soft purplish grey, was enriched by the daisies that had sprung up since the harvest, and the groups of scarlet poppies. The only drawback to the landscape was the scarcity of trees and the lack of any relief from the glare of the hot afternoon sun. For, late as it was in the year, the summer continued with unabated heat and brilliancy. The sky was cloudless, a tremulous haze hung over the ground, and the sea, which was visible over the edge of the cliffs, was still of the clear summer blue. “It’s deuced hot,” said Ronald, taking off his hat to wipe his forehead. “How would it be to get down to the beach and have a stroll along the sands? It would be fresher than up here.”

“Can we get down?” asked Andrew.

“Yes,” replied Ronald. “There is a sunken road leading to a gap-way that opens out on to the beach. I found it by following a couple of seaweed carts, and I’ve been there once or twice since for a bathe. Nobody ever seems to come there, so you don’t have to bother about bathing suits.”

He turned off the road and led the way across a stubble field, and, after walking about a quarter of a mile, they came to a shallow sunken road, marked by deep ruts in its chalky surface made by the wheels of the heavily laden seaweed carts. Gradually the road sank deeper as it declined towards the sea level until it took on the character of a narrow gully enclosed by lofty walls of chalk. Down this gully the two men picked their way over the rough road in the deep, cool shadow until they reached the bottom of the slope and stood looking out on the sun-lit sands.

Ronald cast a glance at the two lofty headlands which enclosed the little bay and remarked: “We shan’t be able to walk very far along the beach. The tide is coming in, and it won’t be long before it is up to the cliffs where they jut out. We mustn’t get caught on the hop.”

“Well,” said Andrew, “there’s a good stretch of smooth sand in the bay. It will be quite pleasant to walk up and down by the sea without going out of the bay; and it will seem cooler by the water’s edge, even if it isn’t.”

“Yes,” Ronald agreed, “there is something cooling in the very sound of the waves breaking on the beach. But I don’t see why we need stop at the sound. A dip would be a good deal more refreshing. What do you say? The sea looks just perfect for a bathe.”

Andrew cast an approving glance at the calm blue sea and the lines of creamy white where the little surf broke with a gentle murmur on the shore. “It does look rather inviting,” he admitted; “but it seems a bit primitive—no bathing suits and no towels.”

“As to the suits,” said Ronald, beginning to slip off his jacket, “you can see for yourself that the place is as solitary as the Sahara; and what do you want with towels when you have got a roasting sun like this to dry you?”

He settled the question by backing into a shallow recess in the cliff and proceeding rapidly to divest himself of his clothes, when Andrew, after a moment’s hesitation, followed suit. As both men were rather scantily clad in the ubiquitous grey flannel suits that were then the vogue, the process was not a long one. In a couple of minutes they were scampering
across the sand towards the surf in a condition which Mr. Titmarsh would have described as “naked as a pair of Hottentots”, Ronald taking a certain satisfaction in the defiance of convention and Andrew slightly self-conscious.

The breach of the proprieties, however, was only potential, for Ronald’s description of the place was so far justified that the nearest approach to a spectator was a small fishing lugger with dark brown sails which was beating up the coast some three or four miles away. Meanwhile the two cousins swam up and down in the calm water outside the surf, with intervals of resting and wallowing in the shallows or basking in the sun on the dry sand before once more splashing into the water.

In these disports the best part of an hour passed. At length, Andrew suggested that it was time to be turning homeward, and they emerged for the last time, shaking themselves as they stepped out on to the wet sand, and took their way across the beach to the place where their clothes were deposited close under the cliff. Ronald led the way at a brisk run, and, on arrival at the “dressing station”, sat down and reclined at his ease on one of the heaps of clothes—it happened to be Andrew’s, and the similarity of the two suits may possibly have misled him; but the enjoyment with which he rubbed his wet body on the dry garments strongly suggested an intentional “mistake”. It would have been like Ronald. Andrew followed, shivering slightly, and sat down on the other heap in an upright posture, to catch as much of the sun’s heat as possible; for the afternoon was drawing out and the sun was now appreciably lower.

For some time neither of the two men spoke. Ronald lay stretched at full length with his eyes closed, enjoying the warmth of the sunlight which played on his rapidly drying skin, while Andrew sat absentmindedly watching the fishing lugger, now tacking out to sea and now going about to make a tack in-shore. At length, Ronald spoke, in a drowsy tone and without opening his eyes. “So you think you will be able to manage cash in place of that cheque? I hope you will. It will be a lot more convenient for me.”

“Well,” replied Andrew, “I’ll see what can be done. But you haven’t given me any particulars, you know.”

“What’s the good?” protested Ronald. “I don’t know much about it myself. It’s an insurance job. I shall have to rout out new clients and, when I get a bite, I shall have to take the first premium. That’s why they want a deposit. So that I shan’t mizzle with the takings. Isn’t that enough for you?”

As it was all the information he was likely to get, Andrew assented with a grunt and once more fixed his eyes on the distant lugger. Another interval of silence followed. Then Ronald inquired, sleepily: “Molly send me any message?”

“She doesn’t know I was going to see you; and I don’t want her to know anything about this transaction. She mightn’t be best pleased at my dropping money in this way.”

“Don’t you believe it, dear boy,” said Ronald, with a faint smile. “Molly is quite fond of her cousin. She would be only too delighted to help him out of a difficulty. She knows what an affection he has for her. And, by Jove! What a good-looking girl she is! I don’t know of any girl that I admire so much. You’re a lucky beggar. But I’ll remember that mum’s the word when I come over to see you.”

“I think,” Andrew said, huskily, “that it would be as well if you did not come over just at present. In fact, I would rather you did not.”

Ronald opened his eyes and looked curiously at his cousin. Then he shut them again and smiled a smile of deep cunning. “So that’s how you feel, is it?” said he. “I suspected something of the kind when you had this very opportune business appointment in Crompton. However, I can take a hint. I should be devilish obtuse if I couldn’t take one of that breadth.”

He spoke without anger but in a tone of undisguised contempt which brought the hot blood to Andrew’s cheeks and which made it clear that he grasped the position exactly. Andrew squirmed with shame and anger; shame of the paltry, unreasonable jealousy of which Ronald evidently suspected him, and anger at the suspicion. For a moment he looked down at the face of the man beside him, with its closed eyes and the sinister, cunning, insolent smile; and an impulse surged through him to batter it with his fists until it was even as his own. But he conquered the impulse and looked away, fixing his eyes once more on the lugger, which was now tacking in-shore and would soon be hidden by the projecting headland. He followed it with a dull interest as it drew nearer and nearer to the headland, idly watching for the moment when it should pass into eclipse, or should go about and head again out to sea.

Gradually the distance between the vessel’s bows and the jutting promontory contracted, and Andrew still watched with a strange, foolish eagerness to see whether she would vanish or turn about. At last the dwindling space dwindled to extinction and the boat’s bows and the dark brown mainsail began to slip out of sight behind the promontory; and at that moment, Andrew was startled by a heavy thud at his side, a rattle and clatter above and around him and a volley of falling fragments of chalk, one of which struck him a shrewd blow on the shoulder. With a cry of alarm, he scrambled to his feet and raced away for dear life across the sand, pausing only to look round when he had run a full thirty yards.

What he saw when he did at last look round, seemed to turn him to stone. Beside the place where he had been sitting was a litter of fragments of chalk and one great block which rested where Ronald’s head had been. Out of the litter the naked legs projected, moving with a slow, twitching, purposeless motion which was horrible to look on, and which, even as he looked, slowly died away and gave place to a dreadful limp stillness.

For some moments, Andrew stood gazing with starting eyes at this awful spectacle without conscious or intelligible thought. He was literally stunned. Presently, regaining some semblance of consciousness, he began to creep back towards the place where his cousin lay with some vague idea of help or rescue. But when he drew nearer, that idea faded from his mind. The way in which the great block sat on the flattened clothing, to say nothing of the gory oozings around it, told the
horrible story. That block, weighing perhaps a hundredweight, had come down on the smiling face with the closed eyes with the impact of a steam hammer. It was useless to think of trying to move it, even if that had been within the compass of one man’s strength. The head that had been there was a head no longer.

Still confused and bewildered by the suddenness of the catastrophe, Andrew stood with his eyes riveted on the great block, shaking like a man in the cold stage of an ague. He was aware of a dreadful feeling of faintness and nausea and of a cold sweat that had broken out on his face and trickled down in chilly drops. But, for a time, his power of thought seemed to be in total abeyance. He could only stand and stare vacantly at the great block and the naked, motionless legs.

Suddenly, he became conscious of his own nude condition; and with that consciousness his faculties awoke. With a nervous glance up the face of the cliff to the white patch which marked the spot from which the block had fallen, he ran to the heap of clothes, and, snatching them up, backed away from the cliff and began to huddle them on as quickly as his shaking limbs would permit. But still, his actions were those of an automaton, for, all the while, his eyes strayed continually to the motionless form under the litter of chalk fragments and the great block which rested where, but a few minutes ago, had been that comely head with the closed eyes and the sinister, insolent, smiling face.

When he had dressed himself, he looked around for his hat, but he could only see Ronald’s panama. His own hat must be somewhere under that gory heap, which he would not even dare to approach. With a shudder at the very thought, he picked up the panama and flung it on his head, careless of the fact that it came down nearly to his ears. Then, with a last look at the figure that reposed with such dreadful stillness at the foot of the cliff, he turned and walked away quickly towards the gap that opened on to the sunken road. As he entered the now sombre and gloomy gully, the dark silhouette of the lugger stole out from behind the headland and began to shape a course towards the bay.

IV. — THE SHADOW OF THE GALLOWS

ANDREW stumbled up the rough sunken road with an appearance of haste and speed which was in curious contrast with his actual lack of conscious purpose. Vaguely, there was in his mind an intention to give information to somebody of the terrible mishap, and a desire to get back to the town to that end. But he was still shaken by the horror of what he had seen, was still haunted by the vision of that great block of chalk resting so flatly where a head had been that there had seemed to be no space underneath it. Quickly as he went, his knees trembled weakly, the faintness and nausea were only beginning to subside and a chaotic whirl of thoughts surged through his mind. To the bearing on the future of the thing that had happened, he was as yet unable to give any consideration. His whole attention was focused on the dreadful disaster that had befallen in the twinkling of an eye; the heavy thud of the falling block, the rattling down of the fragments, and, above all, the sight of those horrible, twitching legs.

When the sunken road at length reached the surface, it strayed away across the fields as a rough, chalky cart-track which seemed to lead in the direction of a distant farm. As it was the only road visible, Andrew followed it automatically without giving any thought to its direction. At least, it led away from the sea and that terrible haunted bay. As to the whereabouts of the town he had only a confused idea; for during the walk out with Ronald, his mind had been so preoccupied that he had taken no note of the way they had come. Ronald had selected the route and he had followed Ronald. Now nothing impinged on his vision with any kind of familiarity. So, for a time, he walked on rather like one in a dream, clearly conscious of nothing and only dimly aware of a certain feeling of discomfort, particularly in his feet.

He had followed the cart-track for close upon a mile when it opened on to a road; a small by-road enclosed by dust-whitened hedgerows. The necessity of deciding which way he should turn aroused him from his dreamy, half-conscious state. He wanted to get to Crompton, but he had only the vaguest idea as to the direction in which it lay; and the sinuous road, curving away on either hand, gave little indication as to whither it eventually led. After a few moments of hesitation, he turned towards the right and once more set forth at a quick pace, spurred on to haste by the agitation of his mind rather than by any conscious purpose.

He hurried on along the road for more than half a mile before he met any human creature. Truly, Ronald had been right as to the scarcity of wayfarers in this part of the country. At length there appeared at a bend of the road a miller’s cart with its tarpaulin cover raised, in the old-fashioned way, on a sort of ridge-pole, and the driver dimly visible in the dark triangle underneath. As it came in sight, Andrew decided to hail the driver and ask for a direction to Crompton; and then, becoming aware for the first time that his spectacles were not on his face, he instinctively thrust his hand into the pocket in which he usually carried them. But they were not there. Instead, he brought out a cigarette case which was certainly not his.

For a few moments he stood staring foolishly at the case in his hand and wondering how it could have come into his pocket. Then his eye caught the wristband of the shirt which projected from the end of his sleeve; and he saw that the shirt also was not his. On this, with a sudden suspicion that something was amiss, he examined critically the clothes which he was wearing, including the shoes. Of them all, not a single item was his own. In his hurry and agitation, he had put on Ronald’s clothes; indeed, he could not have done otherwise, for his own were under that dreadful heap which he could never have brought himself to disturb.

The discovery gave him a shock which was somewhat disproportionate to the occasion. Naturally, he was surprised; but there was really nothing in the affair that need have disturbed him. The clothes were almost exactly like his own, and they fitted him well enough to pass without attracting notice. The error could be easily explained, and he would probably be
able to recover his own clothes, or at least the contents of the pockets. But the incident jarred on his already strained nerves as if there were something incriminating in it. Perhaps the need for explanation which would presently arise unnerved him; and certainly the loss of his spectacles and the necessity for going abroad with his hated disfigurement exposed affected him profoundly. So much so that he let the miller’s cart pass unhauled and started forward once more, trusting to chance to find the right direction.

By this time, his thought had become a little more coherent, and he began to look about him with some anxiety; for the afternoon was waning, and, at this time of year, the evenings begin to draw in. It was, therefore, with a sense of relief that he found himself approaching a cross-road and perceived at the crossing a four-armed finger-post. But, if he was relieved at the prospect of getting a reliable direction, he was rather disconcerted when he reached the post and read the inscription on the pointer; for it then became clear that he had been walking almost directly away from Crompton from the time when he emerged from the sunken road.

He turned away from the post and started on what appeared to be the direct road to the town, though even this was only a larger by-road. But its surface was better than that of the one on which he had been travelling, and he set forth at a swinging pace to cover the three miles that, according to the finger-post, lay between him and the town, regardless of the slight discomfort due to the strange shoes. In spite of the unpleasant surprise of finding himself in the wrong clothes, the halt and the necessity for thought had done him good by diverting his attention from the horrors of his late experience to his present condition and the question as to what he would be called upon to do. He had found a wrist-watch in one of the pockets of the coat, and, as he now strapped it on his wrist and noted the lateness of the hour, he turned this latter question over in his mind.

Someone would have to be informed of the accident, and, when he asked himself. Who? the obvious answer was, the police. He knew where to find the police station, and he decided to make straight for it as soon as he entered the town. The story that he had to tell was perfectly simple. There would be no need for any elaborate questioning on the part of the police. At least, he hoped not; for he was conscious of a very definite shrinking from any discussion of his relations with Ronald. Perhaps he might take the opportunity to mention the incident of the motor bandits. He considered this point, and, possibly influenced by Molly’s warning, eventually decided that he had better keep to the subject of the accident and say nothing of the other matter.

Presently another question intruded itself on his mind. At the time of the disaster, the tide was coming in and the margin of the advancing waters was not so very distant from the base of the cliffs. Would there be time for the body to be recovered? And, if there were not; if the corpse should be borne away by the waves and carried out to sea, how would that affect the position? He considered this point at some length and not without a shade of uneasiness, but could arrive at no conclusion, excepting that it would involve disagreeable explanations to Molly. But, in any case, he would have to account for his presence at Crompton.

So, as he strode along the road, his thoughts rambled from one to another of the innumerable consequences of the tragedy that came crowding into his consciousness. Mostly, they were unpleasant to contemplate; and if, in the dim background of his thoughts, there was some faint feeling of relief at the disappearance from his life of this troublesome parasite, he put it away from him with something like a sense of guilt.

When, at last, he entered the town the light was already failing. Nevertheless, he pulled his hat even further down over his face as he yearned for the protection of the lost spectacles, and looked about him furtively. At first, the place seemed to him completely unfamiliar; but, after wandering up one thoroughfare and down another, he came into the High Street and was then able to take his bearings. The police station, he knew, was at the end of Barleymow Street and thither he at once directed his steps. He found it without difficulty and turned into it gratefully out of the glare of the High Street with its illuminated shop windows. He crept along in the shade of the houses, glancing uncomfortably at Number 16 as he passed it, and thinking of the fine, manly figure that he had seen standing outside it when he arrived, and of the corpse around which the waves were perhaps already clamouring. But he hurried on and presently came to the archway that led into the passage or alley in which the station was situated.

Here he paused irresolutely, suddenly aware of an unaccountable feeling of nervousness and a reluctance to speak to strangers of the awful thing which he had witnessed. The lamp had been lit outside the arch and it cast its light brilliantly on the notice board and the various bills that were pasted or tacked on it. Conspicuous among these was the bill that he had seen the constable sticking up as he and Ronald had passed. Again his eye caught the heading, printed in bold type: “Wanted for Murder,” but he was too much preoccupied with his present business to feel any curiosity as to this crime, whatever it might be; in fact, he was on the point of turning away when two other words in large type arrested his attention. Half-way down the sheet, occupying an entire line, were the words, “KIBBLE’S CROSS”. Then there had been a murder; and he was a principal witness.

He turned back and rapidly ran his eye down the bill. Not the whole way though. After a brief and dry statement of the actual circumstances, the announcement went on: “It is believed that more than one man was concerned in the crime, but the only one who was seen was the man who actually fired the shot. He is described as a somewhat fair man with grey eyes, about thirty years of age and easily recognizable by reason of a remarkably deformed nose, which appears to have been broken and is completely flat excepting at the tip, which is rather prominent.”

He read no farther, but, backing away hastily from the area of light under the lamp, crept into the shadow of the houses and stole along the darkened street, trembling so violently that his legs seemed ready to double up beneath him. The
description in the bill had struck him with the force of a thunderbolt. For the moment, he was on the point of mental and physical collapse, conscious of nothing but an overwhelming terror and a horrible feeling of sickness; indeed, so near was he to actually fainting that he was fain to lean against the wall of a house and rest awhile on the low sill of a darkened window.

His terror was natural enough and not without ample cause. For, stunned as he was, the essential position presented itself clearly and unmistakably. There had been two persons in that car. One of them was dead—murdered; and the other, the woman, believed that she had seen him commit the murder. Even in his dazed condition, Molly’s words recurred to him; when a woman holds a belief, she knows no doubts. This woman would be ready to go into the witness-box and swear that she saw him fire the shot that had killed her companion. But what answer could there be to the testimony of an eye-witness? There could be none. Nor could there be any extenuation. It had been a cold-blooded murder without provocation or excuse of any kind. He had but to be caught to be set forthwith on the direct road to the gallows. And caught he would assuredly be. The woman had given a correct description of him and she would recognize him instantly and with certainty. And as to escape; how was a man to escape arrest whose face advertised his identity to any chance stranger?

He rose shakily from the window-sill and began once more to creep along the street in the shadow, pulling down his hat over his eyes and lowering his head when he came within the range of a street lamp. His state was pitiable. He was as one already condemned. Hope he had none. He saw the rope dangling before his eyes, the drop of the gallows yawning at his feet. Like some hunted animal, he looked around wildly for some place in which to hide. But where could he hide in this wilderness of men? where every stranger was a possible enemy? Supposing he should make his way back to the country and lurk in the unfrequented fields? To what purpose? Sooner or later he must be found. Someone would see him and report his meeting with the man with “the remarkably deformed nose”. He could not hide in the fields for ever. He must have food and drink; unless he could find some remote and obscure place where he could lie in hiding until he should die of starvation. It was a poor chance, though perhaps it was better than being hanged.

As his thoughts rambled on thus, he continued to creep cautiously along the street. In so far as his mind was capable of forming a decision, he had decided to make his way out of the town, and he began to look warily ahead and scan the corner of the street as he approached it; and at this moment he found himself passing a half-lighted window which he recognized by the still visible placards as that of the Beauty Specialist.

He paused and gazed at the placards. There was not enough light to read the inscriptions, but he had no need to read them. He remembered them quite clearly. And as he recalled those ridiculous promises and exhortations, a wild hope sprang up in his heart. Of course, the fellow was a mere quack. But was it possible that he could do something? It mattered not in the least what he did. An additional disfigurement even would answer the purpose if only his appearance could be in some way changed so that his face should cease to be the face which that woman had seen at the window of the car. It was a chance—the only chance that he could see of escape from the gallows.

He looked up and down the street. Not a living creature was in sight. He made an effort to pull himself together. The pallor of his face he could not control, but he could try to muster up some composure of manner. But even in that moment of agitated expectation, one cautionary idea stole into his mind. Supposing the Professor had seen the bill outside the police station! He must be prepared for that contingency. Nevertheless, he determined to take the risk. After another glance up and down the street, he approached the door, and, gripping the handle firmly to control the tremor of his hand, turned it deliberately, pushed open the door, entered and closed it after him. As he turned away from the door, he confronted a pleasant-faced elderly man in shirt-sleeves and a white apron, who was busily engaged in packing one or two large trunks, by the rather dim light of a single electric lamp.

At the sound of the closing door, the man looked up, and a shade of impatience or annoyance stole over his face. Andrew noted it with some misgiving as he inquired nervously: “Are you Professor Booley?”

“I am,” was the reply; “or, perhaps, I should say I was, as my professional career in this country has now come to an end. I am just putting my goods together ready for a start to-morrow morning. In twenty-four hours, I hope to be in Liverpool, if not actually on board ship. May I ask what you wanted with me?”

At the Professor’s announcement Andrew’s heart sank. For a few moments he was unable to answer; but, at length, recovering his outward composure with an effort, he replied: “I had come to ask for your professional help, and I hope you will not refuse to do what you can for me.

“I am afraid that is what I shall have to do,” the Professor rejoined in a tone of courteous regret. “You see how things are with me. I have finished up and am just making my preparations for departure. I thought I had fastened the door when I turned the lights out. I am real sorry not to be able to do your business, whatever it is. By the way, what was it that you wanted me to do for you?”

“If you will look at my face,” said Andrew, “I think that will answer your question; and I do hope you will try to help me if the thing is not absolutely impossible.”

The Professor looked at him a little curiously; then, suddenly, his attention sharpened and a somewhat startled expression appeared on his face; whereat Andrew experienced a spasm of alarm. Had this man seen the police bill, and was he recognizing “the man with the remarkably deformed nose?” His terror was not diminished when the Professor strode forward and fixed a look of intense scrutiny on that unfortunate member. But the next question reassured him to some extent. “You were not born like that?”
“No,” replied Andrew. “I once had a decent-looking nose. This is the result of a blow from a cricket-ball.”

“Ahh!” said the Professor, “nasty, dangerous things. You must have been a fairly good-looking fellow before you caught that biff.”

“I believe I was,” Andrew replied, modestly.

The Professor continued to scrutinize the injured nose with the most profound interest and attention. Then from inspection he proceeded to palpation. With an unmistakably expert finger and thumb he explored the sunken bridge, delicately tracing the edges of the flattened nasal bones and pinching up the loose skin which lay over them. “It’s an absolutely ideal case,” he murmured, rather with the manner of a man speaking to himself. “A good firm base of solid bone and a fair amount of spare skin, all free, without any adhesions to the bone underneath. It’s a case in a million.”

Recognizing these observations as being of the nature of a soliloquy, Andrew forbore to interrupt. But when the Professor, subsiding into silence, stepped back a pace and stood, still with his eyes riveted on the deformed feature, as if taking in the general effect in relation to the rest of the face, he ventured once more to urge his case. “I hope you are going to relent, Professor,” he pleaded, “and give me the benefit of your skill. It means a lot to me, as you can judge for yourself.”

How much it meant to him, the Professor was, naturally, unable to judge, having, apparently, not seen the police bill. But the hideous disfigurement of an otherwise comely young man must have seemed to him a matter of sufficient urgency, for he replied in a tone of kindly sympathy: “I can see it does, sonny; and I can’t find it in my heart to send you away like that when a bit of trouble on my part may make life a different thing for you. No, sir! We have our duties to one another; and my duty is to let the packing go to blazes and put all the skill and knowledge that I have at your disposal.”

Andrew drew a deep breath of relief, and, with a heart bursting with gratitude, he began to stammer out his thanks, when the Professor interrupted him. “Don’t be too previous,” said he. “When I tell you what I propose to do, perhaps you’ll think better of it. If I get busy, you won’t enjoy it a little bit. I tell you, it will hurt like blazes. It might be possible to use a local anaesthetic such as dentists use. I do sometimes, but I don’t want to in this case because it might easily happen that the anaesthetic would just turn the scale the wrong way and make the operation a failure. And I don’t want it to fail. But I give you fair warning. While I am working, you will feel as if you had molten lead running into your nose. And, mind you, you’ll have to stick it and not move a muscle or the whole thing will be a failure. Now, what do you say? Can you stick it? It’s up to you to decide.”

Andrew had no hesitation. What the Professor was going to do, and what the result would be, he had no idea. But whatever the result might be, if only it were to alter his appearance, he would be saved from his present horrible peril. “You can take it,” said he, “that I am prepared to put up with any pain that you have to inflict; and I promise you that I will keep absolutely still until you have finished.”

“Good!” said the Professor. “I take you at your word; and I think it will be worth your while. But there is one other warning that I ought to give you. There is just the possibility that something may go wrong after the operation. It isn’t at all likely, but it has happened in one or two cases, so I think it only right to mention it. Will you take the risk? It’s only a small one.”

Even to Andrew, the change in the Professor’s attitude was apparent. From reluctance to be disturbed in his preparations for his journey, it had changed into an evident eagerness to proceed with the operation, whatever that might be; and, when Andrew replied that he was fully prepared to accept the risk of subsequent failure and to hold the Professor unaccountable for any such failure, his answer was received with a grunt of satisfaction. “We won’t want to be disturbed,” said Booley, when this point had been settled, “so I will just lock up and switch out the light.”

He locked the front door and retired into an inner room where he switched on the light and invited his patient to enter. Then, having extinguished the light in the outer premises, he closed the inner door. “Now,” said he, “let me just explain in a general way what I propose to do. The method that I am going to employ is what is known as the subcutaneous wax method. I’ll show you.” He opened the drawer of a cabinet and took out a circular cake of a colourless, glassy-looking material, which he exhibited to his patient. “Now, see here,” said he, tapping the round mass with his knuckles, “this is paraffin wax; quite a hard substance, as you see, but not in the least brittle. Now, paraffin wax is a very remarkable material. It is one of the most inert substances known. It never changes of itself, it has practically no effect on any other substance, and it is not affected by contact with other materials. And it can be reduced to a liquid by heat—rather a lot of heat, unfortunately, in the case of hard wax like this. Now, what I am going to do is this: I shall melt some of this wax, and, when it is quite liquid, I shall inject a quantity of it into the space under the loose skin of your nose. That will produce a shapeless swelling over the place where the bridge ought to be. Then while the wax is still soft, I shall model that shapeless lump to the shape that you want your nose to be. And now you will see why I am telling you this. I have got to do all the modelling while the wax is soft enough to pinch up into shape. When once it has set solid, it is finished for better or worse. Nothing more can be done. And it is only a matter of seconds before it sets. Consequently, the success or failure is in your hands. No matter how much it hurts, it is up to you to keep quite still until I have finished the modelling. You realize that?”

“Quite,” replied Andrew; “and you can rely on me to stick it without moving, however bad it is.”

“I believe I can,” said the Professor. “You looked in a most almighty funk when you first came in; but, you seem to be your own man now. Which is rather singular. Most people are as bold as brass at first, but get the horrors when it comes to actual business.”
The Professor was quite correct in his observations; but he was not in possession of all the facts. What had revived Andrew's confidence was the information that, in any case, there would be some sort of hump over the sunken bridge of his nose. As to the shape of that hump he was not very much concerned. Any kind of hump would transform him so that the woman's description of him would be totally inapplicable. And the mere pain dismayed him not at all. Doubtless it would be extremely disagreeable; but it would be a good deal less disagreeable than being hanged.

Having delivered himself of the above admonitions, the Professor inducted the patient into a sort of modified dental chair and then proceeded to light the gas ring under a water-bath in which was a porcelain vessel containing a quantity of wax shavings. While the water was heating he made his other preparations, beginning by washing his hands very thoroughly in a lavatory basin and then laying out his instruments on a small swivel table such as dentists use. The most conspicuous of them was a hypodermic syringe of large size but fitted with a rather fine needle. From time to time he examined a chemical thermometer which he had placed in the vessel containing the wax, and, meanwhile, carried on encouraging conversation. "By the way," said he, "we haven't settled on the sort of nose that you would like me to build up. We must be quite clear on that point before we start. What was your nose like before that cricket-ball came bumbling along? Was it a straight nose, or was there a curve on the bridge?"

Even while the question was being propounded, Andrew had come to a decision, and a perfectly natural and reasonable one in the special circumstances. In his terror of the gallows, his one object was to shake off his identity—the identity of the man who was "wanted for murder". He would not go back even to what that man had been, if that had been possible. He wanted to break all connection with that man. "It was a slightly curved nose," he replied.

"I thought so," said the Professor; "a moderate Roman. And very becoming it must have been—and will be again. You'll think it cheap at the price of a few minutes' discomfort."

He bent down over the porcelain vessel and again inspected the thermometer. Apparently, the correct temperature had been reached, for he now turned out the gas and placed the water-bath on the little table, which he swung round close to the patient's head. Having lighted a spirit-lamp on the table, he held the needle of the syringe in the flame for a few seconds. Then, dipping the needle into the melted wax, he slowly filled the syringe, emptied it into the vessel, and very slowly and carefully re-filled it. "Now," said he, "get a grip on the arms of the chair and make up your mind to put up with a bit of pain. It will be over in less than a minute. Better shut your eyes."

The Professor had not exaggerated. It was an appalling experience. First, Andrew was aware of the prick of the needle in the loose skin over the nose. That was nothing to complain of. But it was followed immediately by the most horrible pain that he had ever experienced. The Professor's words exactly described it. He felt as if molten lead were being poured into his nose. In his agony, he held his breath and clutched the arms of the chair until his knuckles seemed to be bursting through the skin. His eyes were closed, but the tears welled up between the lids and trickled down his face in a little stream towards his ears. But, by a supreme effort, he resisted the natural impulse to shrink away from the torturing hand. Throughout the whole proceeding, he held his head rigidly still and uttered not a sound.

Meanwhile, the Professor, murmuring at intervals little phrases of sympathy and encouragement, went about his work with unhurried skill and concentrated attention, but yet with a certain air of suppressed excitement. Having completed the injection, he laid aside the syringe and made a critical inspection of the rounded, blister-like swelling which had arisen over the sunken bridge of the nose. After a few seconds, he began cautiously to manipulate it at the edges, persuading the liquid wax towards the middle line. Then, as the wax began to thicken, he proceeded quickly and deftly to model it to the desired shape, darting from one side of the chair to the other to view the growing member from its different aspects. Yet, in spite of his eagerness and excitement, his movements were quite deliberate and controlled. Evidently, in his mind, he had a perfectly clear picture of the state of the invisible wax, and, as its consistency increased and it gradually approached the solid condition, the touch of the flexible, sensitive fingers became firmer and more decisive.

It was, as he had said, only a matter of seconds, but to the unfortunate patient, sitting with the muscles of his neck contracted into tense cords and his hands holding the arms of the chair in a vice-like grip, it seemed hours before the Professor, straightening himself up with a gentle sigh, announced: "There, my son; that's finished. The wax is set solid, though it won't be quite hard for an hour or two. How is it feeling?"

"Not as bad as it did," Andrew replied, faintly, "but it still hurts a good deal."

"I've no doubt that it does," the Professor rejoined, sympathetically, "but it will soon be all right now. You've been a good lad. You stuck it like a Trojan."

"What does it look like?" Andrew asked, without much eagerness and with his eyes still shut.

"You shall see for yourself presently," the Professor replied in a tone of deep satisfaction, regarding his work with his head on one side. "But don't move just for a minute. I must touch up the colour a trifle so that it shan't be too noticeable. At present it's as red as a strawberry."

Having recourse once more to the inexhaustible cabinet, he produced therefrom a stick of yellowish grease-paint and a little jar of powder. With the former he laid a fairly thick tint of opaque yellowish white over the restored nose (to the patient's extreme discomfort), smoothing it out with the tip of his finger until the tint was perfectly even. Then, with a tiny puff, he covered the greasy surface with a thin coating of powder, finishing off with a few delicate touches of a ball of cotton wool. "There," he said, "I think that will do. It looks quite a natural colour now. When the irritation from the heat goes off and the redness dies away, it will look a bit queer and tallowy. Then you'll have to wash the paint off. And I need not warn
you that, although the wax will be quite hard and firm, you’ve got to be careful in the way you handle that nose. It will stand any ordinary treatment in reason; but you’ve got to remember that it’s only a lump of wax after all, and that if you knock it out of shape, it’s going to remain out of shape. It can’t be melted soft again.”

“Yes,” said Andrew, “I realize that; and you may take it that I shall keep out of the way of cricket-balls in the future. Can I see what it is like, now?”

“You can,” replied the Professor, who still showed a tendency to dodge about from side to side of the chair and take ecstatic glances at the new nose from various points of view. “I am going to show it to you this instant.”

As he spoke, he wheeled away the swivel table, and in its place wheeled up an appliance somewhat like a reading-stand with a largish mirror in the position usually occupied by the book-rest. Deliberately, he trundled it up to the side of the chair, arranged the mirror at exactly the correct angle, and then swung the brass arm round so as to bring the glass precisely opposite the patient’s face. “Now,” said he triumphantly, “tell me what you think of the result.”

V. — BLACK MAGIC

IN response to the Professor’s invitation, Andrew sat up in the chair and looked into the mirror. But, as his eyes were still full of water, he got but a blurred impression of what was before him. Even so, he was aware that the face which confronted him was not the face to which he had of late years become accustomed—the face of the “man with the remarkably deformed nose”.

He took out his handkerchief and carefully and thoroughly wiped away the still-exuding tears, while the Professor hovered around, watching him in a transport of delighted expectancy. When he had dried his eyes as completely as was possible in the circumstances, he looked again into the mirror. And then he sustained yet another shock. It is impossible to guess what he had expected—if he had expected anything. But most assuredly he had not expected what he saw. For the face that looked out at him from the mirror was the face of his cousin Ronald.

He stared at it in blank amazement with a bewildered sense of being in a dream, or suffering some sort of hallucination, or being the subject of some kind of wizardry or enchantment. And the Professor, watching him eagerly, rubbed his hands and smiled.

The thing was astounding, incredible. It was no mere resemblance or similarity. The face was Ronald’s face, Doubtless, if Ronald had been there to furnish a comparison, some difference might have been discoverable. But Andrew could perceive none; and when he moved his head from side to side, exhibiting the half-profile with a view of the Roman nose, the effect was even more impressive. For that was the view of Ronald’s face that he had always found most striking and characteristic.

The Professor, watching him with an expectant smile, noted his astonishment and was deeply gratified. Well might the patient be astonished at the miracle that had been wrought in the space of a few minutes. But his kindly soul yearned for something more than astonishment; and the joy that he had looked for did not seem to be there. “Well,” he asked, at length, “what do you think of it? Will it do?”

Andrew pulled himself together with an effort and came back to the realities of the situation. “I beg your pardon,” said he; “but I was so amazed at the result of your skill that I could find no words to thank you. I can’t even now. When I look into the mirror, I can’t believe my eyes.”

“Your eyes are all right,” said the Professor, “or will be when they have done watering. Meanwhile, you can trust mine; and I tell you that you have got a nose that any man might be proud of. And, if you don’t mind me saying so—I’m talking business, not paying compliments—you are an uncommonly good-looking young man.”

The compliment, which his own eyesight confirmed, fell pleasantly on Andrew’s ears even in the midst of his confusion. Why not? His repulsive ugliness had been the haunting trouble of his later life, and he had known the satisfaction of conscious good looks in the golden past. It was pleasant to realize that he would have no more to sneak about in spectacles and hide himself from the common gaze. But, furthermore, and especially, the change assured him that his main purpose was achieved. The deadly peril that had encompassed him was dissipated. He was saved. That woman might now shout from the house-tops her vivid description of the murderer. The more vivid and exact it was, the less would it apply to him. “The man with the remarkably deformed nose” had ceased to be. The police might search for him as they pleased; it was no concern of Andrew’s. “Naturally, I don’t mind your saying so,” he replied, “since the good looks—which I can see for myself—are your own creation. I only wish I could find words to thank you sufficiently. You can hardly imagine the misery of going about, an object of pity and disgust to every person whom one may meet, and the relief of having that disfigurement removed. I assure you that I am more grateful than I can tell you; and I do think it most generous of you to have put aside your own urgent affairs to render me this great service.”

“Not in the least,” said the Professor. “It has been a delight to me to exercise my art to such excellent purpose. We all like to succeed in what we try to do, and I feel that I have had a great success to-night, and I don’t mind admitting that I’m mighty pleased with myself.”

A less appreciative listener than Andrew might have felt a slight suspicion that the brilliant success was a somewhat novel experience for the Professor. But as the splendour of the achievement dawned on him by degrees and he realized its
beneficent consequences, Andrew had no room in his mind for anything but gratitude. “You have reason to be,” he replied. “It must be a glorious thing to wield the power to change for the better the whole course of a fellow creature’s life. I shall be your debtor to my dying day, and I shall never forget what I owe you. Which reminds me that, apart from the debt of gratitude, which I can never repay, I am in your debt in a pecuniary sense. May I ask what the amount is? I know in advance that whatever your fee is, it is quite inadequate to the value of the benefit bestowed.”

Even as he uttered the words, he experienced a sudden pang of alarm. For in that moment he remembered that he was not wearing his own clothes. He had not yet searched the pockets of the suit that he had put on in error, but, as they were those of his thriftless and chronically impecunious cousin, it was quite conceivable that they might not contain the wherewith for him to pay even a modest fee. Hurriedly, he thrust his hand into the breast pocket of the coat and brought out the small wallet that he felt there. When he opened it he discovered, to his intense relief, that it contained two pound notes. They might not be enough, but they would be better than nothing.

As a matter of fact, they were more than enough; for the Professor, glancing at the wallet and possibly noting its scanty contents, held up his hand. “Put it away, sonny,” said he. “There isn’t any fee. It has been a labour of love, and I am not going to spoil it for myself by taking money for it. Let me have the luxury of giving you a free and willing service.”

Andrew was disposed to demur, but the Professor would listen to no protests, and, as he was obviously in earnest, Andrew refrained from pressing him any further. “Very well,” said he. “I am so much in your debt that a little more makes no difference. But it would give me very great pleasure if you would come as my guest and let us celebrate your triumph and my resurrection with a little dinner—or perhaps we might call it supper. You won’t refuse me, will you?”

The Professor reflected, with a gloatting eye still fixed on his masterpiece. “I’d enjoy a little celebration,” he said, at length, “if only for the pleasure of looking at you. But it will have to be a short one as far as I am concerned, for I still have my packing to finish. Where did you propose to dine?”

“I leave that to you,” replied Andrew, “as you probably know the town better than I do.”

The Professor knew of a respectable Italian cafe in the High Street close by; and, when he had doffed his apron, turned down his shirt-sleeves and put on a coat and hat, they went forth together, the guest leading the way and the host submitting to be led and secretly hoping that the cafe would not turn out to be the one at which he had dined with Ronald. Not that it mattered much, since he had then been wearing his spectacles. But he was still under the influence of the police bill and accordingly anxious to avoid any connection with the man who was “wanted”.

It was not the same restaurant, but a more modest establishment of the familiar Italian type. It resembled the other, however, in one respect; its walls were lined with large mirrors, to the evident satisfaction of Professor Booley, who was thus enabled to inspect his masterpiece from several points of view; which he did with such persistence that he appeared to consume his food by a mere mechanical and half-conscious act of ingestion.

To Andrew that dinner was a most uncanny experience. His mind was still in a whirl of confusion from the crowding events and the repeated shocks that he had sustained, and, above all, from the glimpse of his cousin’s face looking out at him from the mirror. He had still the feeling of being in a dream or under some sort of spell of enchantment, of moving in a world of unrealities. The change that had been wrought in him had been too sudden and profound for complete realization. In the space of less than an hour he had become a different person. It was no mere matter of disguise. He was actually a different person. The Andrew Barton who had set forth from Fairfield that morning, had ceased to exist. In his place had been born an entirely new individual; and that individual was himself. It is not unnatural that an idea so opposed to all human experience should have been difficult to accept as a thing that had actually happened. It was not only amazing. It was incredible.

The sense of being in a dream or under some hallucination was intensified by the immediate circumstances. As he sat at the table he had a wall-mirror on either hand. By turning his head slightly in either direction, he was able to observe his cousin Ronald dining with Professor Booley. It was extremely uncanny. The first time he caught sight of that familiar figure, he started violently and looked away only to find that same apparition presented to his view in the mirror at his other hand. By degrees, however, his nervous tension relaxed and his mind became less confused, under the reviving influence of food and drink. He had, in fact, been badly in need of refreshment after his long walk, together with the repeated mental shocks finishing up with the severe pain of the operation; and though the latter had now subsided to a dull ache and a tenderness which made mastication slightly uncomfortable, he found distinct physical satisfaction in disposing of the carefully chosen dishes and the contents of a small bottle of claret.

He was but half-way through his meal when the Professor looked at his watch and stood up. “Don’t let me disturb you,” said he. “Make a good dinner and don’t eat too fast. But I must run away now and finish my packing. I am sorry that you did not come to me sooner, so that I could have seen a bit more of you. But I’m mighty glad that you came at last. I shall look back on this as a red-letter day. You’ve given me the greatest opportunity I ever had. No; don’t get up. Finish your dinner quietly, and, as I told you before, be careful how you handle that nose.”

The two men shook hands heartily, and, after cordial expressions of mutual good will, said a final “goodbye”, when the Professor bustled away, pausing only for an instant at the door for a last fond look at his masterpiece.

When he had gone, Andrew resumed his attack on the food with a growing sense of bodily well-being. He even ordered a coffee and liqueur, and, while these were being obtained, he stood up and stepped over to the mirror to view himself at close quarters; to the indulgent amusement of the elderly waiter, who wrote him down a vain young dog—but not without
Then the three fishermen and on which, he turned once more and slowly retraced this what was in the cart, but a few wisps of sea-wrack that clung to the spokes of the wheel told him that it was a seaweed-cart; on which, he turned once more and slowly retracted his steps.

The cart drew up opposite to the stretcher, which the policemen, one of whom was a sergeant, dragged close alongside. Then the three fishermen and the labourer proceeded to draw from the cart an elongated object wrapped in a boat sail...
which they carried to the stretcher and deposited thereon with elaborate care; notwithstanding which, the canvas became slightly displaced and a bare foot projected at the end. The sergeant, observing the foot, stooped and tenderly replaced the canvas covering. Then he turned back the canvas at the other end, glanced inside, ejaculated “Good God!” and hurriedly replaced it.

Meanwhile one of the fishermen had climbed into the cart and now descended with a bundle of clothing in his arms. “Here’s his clothes,” said he, addressing the sergeant. “You’ll want them to find out who he is.”

“Yes, by the Lord!” the sergeant agreed. “There won’t be much chance of identification otherwise. Bring them along.”

Andrew watched with profound interest as the fisherman handed the clothes, garment by garment, to the sergeant, who, as he received them, laid them over the shrouded figure on the stretcher, excepting the shoes and the crushed hat, which he tucked under his arm. “That seems to be the lot,” he remarked, as he took these last articles. “There was nothing else? No walking stick?”

“No; that’s the lot,” was the reply. “I suppose you don’t know what is in the pockets?”

“No,” the fisherman replied rather gruffly. “I wasn’t no business of ours. We just grabbed ‘em up and stowed ‘em in the boat. Another five minutes and they’d have been awash.”

“Well,” said the sergeant, “we will go through them when we get them inside. Do you mind lending a hand with the stretcher as I’ve got these things to carry?”

The fisherman took his place at the foot end between the handles as the constable took his at the head. The latter gave the word, when they both stooped, grasped the handles and lifted, and then the whole procession moved off under the arch and disappeared down the alley, excepting the carter, who remained in charge of the horse and was now engaged in adjusting the nosebag.

When he had seen the last of the procession, Andrew turned away and began to walk slowly up the street, his retreat being somewhat accelerated by signs of impending conversation on the part of the carter. It had been a strange experience and he was conscious of a certain surprise at his own state of mind. As the clothes—his own clothes—had been transferred, he had watched with a curiously detached interest, checking each garment and making a mental note of the contents of its pockets, not without a passing thought as to the information that they would convey to the observer who should presently turn them out. Yet he had felt no sense of proprietorship in them. Once they had been his; but now they belonged to the corpse on which they lay. They appertained to a past which had been blotted out and had no connection with the present—at least with his present. And his mental attitude towards the corpse, itself, also surprised him in a vague way. The thrill of horror which had affected him at the time of the catastrophe had now no counterpart. In the whirl of events which had followed it, the tragedy had dwindled to a mere incident, which concerned him only in respect of its consequences. And these consequences were what he would presently have to consider. But, for the moment, there was the immediately important question of the night’s lodging. When he arrived at the middle of the street, he perceived that there was now a light in the window of the ground-floor room of Number 16. This rather disconcerted him; but, since the thing had to be done sooner or later, he screwed up his courage to make the attempt forthwith. Taking the key out of his pocket, he crossed the road and walked boldly up to the door.

It was evidently the right key, for it entered and turned in the lock without difficulty. He pushed the door open softly and stepped into the hall. There was no light in it excepting what came through the open door of the room. He looked into the latter, which appeared to be a bed-sitting room, for it contained a bedstead, an easy-chair and a good-sized table. On the table was a shaded oil lamp and, what was of much more importance to him, his own attache case.

As there could be no doubt that this was Ronald’s room, he walked in confidently and was about to shut the door when a voice from somewhere upstairs called out: “Is that you, Mr. Green?”

He was on the point of replying “No,” when he fortunately remembered Ronald’s alias; whereupon he answered: “Yes.” “Oh!” said the voice, “so you have come back. I began to think you had gone for good.”

The voice did not impress Andrew as an amicable voice; and when it took visible shape as a rather slatternly-looking middle-aged woman, the impression was confirmed. “I thought that perhaps you’d hopped off,” she explained, standing in the doorway and regarding him with a truculent eye.

“Now, why should you think that?” he asked in a conciliatory tone and wondering what the deuce her name was.

“Well,” she replied, “you are not usually so late as this. Mighty punctual for your meals you are as a rule, and nearly a fortnight’s board and lodging owing, and no luggage to speak of excepting this”—indicating the attache case—“if it belongs to you. I haven’t seen it before.”

Andrew thought it best not to discuss this point; but the arrears (which did not surprise him in the least) had better be settled at once. The difficulty was that the money was in the case, and, as his ownership had been questioned, it might be a little awkward to produce it from that source in the lady’s presence. “I am sorry to be so behind hand,” he said, meekly, “but I can settle up now if you would be so kind as to let me have an account of what is owing.”

“I gave you my bill days ago,” said she. “You know I did.”

“Yes,” said Andrew, “but that was only for last week. I think I had better settle up for the fortnight. Would you mind
making out a fresh bill?"

“Up to Thursday, the day after to-morrow? That will be the fortnight.”

“Yes, I think that will be best.”

The lady thought so too, by the light of experience, and in a slightly mollified frame of mind retired, shutting the door after her.

As soon as she was gone, Andrew proceeded with some anxiety to open the case, which, fortunately in the circumstances, had no lock. But his anxiety was relieved by the first glance. Whatever the landlady’s shortcomings were, dishonesty was not one of them, for the contents of the case were exactly as he had left them. Hurriedly, he took ten of the pound-notes from the bundle and, having shut the case, bestowed the notes in his wallet. Then he began rapidly to consider his future movements.

There was no object in his remaining at Crompton and there was a very good reason why he should go up to London without delay. His main banking account was kept at the head office in Cornhill, and he was accustomed to keep a rather large balance there. The account at the Bunsford branch was only for local expenditure and he fed it with cheques on the London office. He had had to pay in a London cheque to get the fifty pound-notes.

Now, the cheque that he had drawn for Ronald was drawn on the London office, and there he would have to go to cash it. He did not know much about banking, but it occurred to him that if he was to cash that cheque, he must do so without delay. On the morrow at some time there would be a rumour of his death, and he presumed that with the death of the drawer the cheque would be unpayable at the bank; and he did not want to be referred to the executors. What he would do about the question of his death, was a matter that he would have to consider later. At that moment, it was vitally important that he should have that fifty pounds.

By which it will be seen that his power of coherent thinking was reviving and also that he was beginning, even if half-unconsciously, to realize the compelling force of events.

The landlady’s bill was not a masterpiece of calligraphy, but it supplied some indispensable information. It set forth that Mr. W. Green was indebted to Mrs. Sarah Baxter in the sum of four guineas, being two weeks' board residence at the rate of two guineas per week. It seemed a modest charge, and he suspected that Mrs. Baxter had not made an extravagant profit. He handed over the sum and, when the bill had been receipted, he dropped it into the attache case. “Shall you be staying on after Thursday?” Mrs. Baxter asked.

“Well, no,” he replied. “I have finished my business in Crompton and I have to go up to London to-morrow. Probably I shall have to stay there some time, so I shall take my luggage with me. If I should have occasion to come back, I will write to you.”

“I can’t keep the rooms vacant, you know,” said she.

“Of course you can’t,” he agreed. “I must take my chance. Do you know how the morning trains for London go?”

“There’s a fast train at eight-thirty-five,” she replied. “It’s the best train in the day; gets to London at a quarter to ten. I should go by that if I was you.”

“I think I will,” said he, “if my going so early will not inconvenience you.”

She looked at him with amused surprise. “You’re mighty considerate all of a sudden.” she remarked. “But, Lord bless you, I am up before six every morning. You’ll have your breakfast by seven o’clock and, if you’ll put your shoes outside the door, I’ll give them a brush. They look as if they wanted it.”

Andrew thanked her (but not too profusely, as she seemed unaccustomed to excessive manifestations of politeness) whereupon she wished him “good night” and retired.

When he was once more alone, he sat down in the easy-chair and tried to think out his position. But the fatigue and agitations of the day, combined with the effects of his recent meal, began to make themselves felt. A comfortable drowsiness stole over him. The cigarette which he had lighted, went out and fell from his fingers. His thoughts grew muddled, and he felt a growing desire for sleep. After nodding in his chair for half an hour he got up, searched for Ronald’s pyjamas and, having found them hidden under the bedclothes, undressed and turned into bed.

VI. — TWO INQUESTS

It was but a quarter of an hour after the time for opening when Andrew presented himself at the bank. He entered with a studiously assumed air of unconcern, but with a curious feeling of unreality and a distinct and unpleasant consciousness of the fact that he was falsely personating the payee of the cheque which he was about to present for payment. He knew the place well—his own bank, where he had kept an account for years and where he had at this moment some four hundred pounds to his credit—and most of the clerks and cashiers knew him well enough by sight. Yet he was entering in the guise of a stranger; for though some of the cashiers had seen Ronald, it was unlikely that any of them would remember him.

Nevertheless, he maintained a calm exterior and, selecting a cashier who was a stranger to him, laid his cheque on the counter and pushed it under the brass screen. He had already endorsed it with a copy from memory of the too-familiar
signature.

The cashier took up the cheque, looked at the signature, turned it over to see that it was endorsed, and then retired, presumably to compare it with the recorded signature in the book. But Andrew watched him with a shade of uneasiness lest there should be some other kind of investigation. He had not seen the morning paper and could not, therefore, judge whether his assumed death had yet become publicly known, or whether, if it had, the bank would take notice of it. Hence he waited in anxious suspense while the formalities were being disposed of; and he breathed a sigh of relief when the man, reappearing from behind a screen, approached the counter, laid the cheque on it and opened the drawer in evident preparation to pay. "How would you like it?" the cashier asked. "Five pound notes?"

"Thank you," said Andrew, "but I think pound-notes would be more convenient."

"Yes," the cashier agreed, "five pound Bank of England notes are not quite what they were when you could change them into gold."

He counted the notes out from a new bundle and passed them across the counter to Andrew; who counted them and bestowed them in his wallet. Then he wished the cashier "Good morning" and took his departure with a faint sense of having received yet another push from "circumstance" in a direction which was not that of his own choice. He had cashed Ronald's cheque, and thereby he had tacitly assumed the identity of the payee.

The sense of compulsion became more pronounced as he turned over once again the question of his immediate future. He had already decided that it was not practicable for him to go home at once. The identity of his clothes would have been already ascertained from the letters and visiting cards in the pockets, and, by this time, it was probable that the police had communicated with Molly. He might even find them at the house and become involved in the inquiries. But the very thought of any kind of contact with the police filled him with horror. The risk was not to be entertained for a moment.

But after the initial inquiries, there would be the inquest. Of course, Molly would have to attend; and she would have to identify the body. That consideration gave him pause, for it opened up fresh possibilities. He knew of no recognizable differences between Ronald and himself, apart from their respective faces; and as the body had, apparently, no recognizable face, comparison in that respect was impossible. But might it be that he had some bodily peculiarity which Ronald had not, whereby Molly would be able to decide that the body was not that of her husband? The thing was conceivable. It was not even so very improbable. And if she did so decide, or even express a doubt as to the identity of the corpse, matters would be greatly simplified for him in regard to his explanations to her, though a doubt as to the identity of the body would be an element of danger.

The conclusion which emerged was that he had better wait and see what happened at the inquest. Meanwhile, he had to make some arrangements for food and lodging. Hotels he dismissed on the score of expense and especially of publicity—for he still had an instinctive urge to keep out of sight as far as was possible. The alternative was a bed-sitting-room or furnished apartments; and, having decided on the latter, he bought a morning paper and betook himself to a tea-shop to study the advertisements over a cup of coffee.

His choice settled on three sets of apartments, all in the neighbourhood of Hampstead, a locality with which he had been familiar before he married. Having finished his coffee, he tucked the newspaper under his arm and made his way to the Broad Street terminus, where he took a ticket for the Heath Station and, selecting an empty compartment, opened the newspaper and searched its pages vainly for some notice of the Crompton tragedy. Apparently the news had not reached London when the paper went to press.

In the matter of lodgings he was fortunate, for his first essay brought him to a pleasant, old-fashioned house in a small close off the High Street, where he was offered a ground-floor room, with a bedroom over it, which seemed in every respect so desirable that he engaged them at once. Then, having paid a deposit to establish the tenancy, he returned to town to lunch and to collect his scanty luggage from the cloakroom at Cannon Street Station.

The latter part of the programme, however, he deferred until later in the day, for he had no object in returning to his lodgings before the evening, and he found some relief in walking about the crowded city streets while he turned over again and again the various possibilities of escape from the perplexities in which he was involved. He looked in, for a while, at the Guildhall Art Gallery and found some comfort in the companionship of the pictures. Then he had a late and leisurely tea, after which he repaired to Cannon Street Station, and, having redeemed his luggage—Ronald's suit-case and his own attache case—made his way to Broad Street Station. And here he had a most surprising and disturbing experience.

As he reached the top of the broad staircase, he observed that a train was waiting at the platform and he judged by the hiss of escaping steam that it was ready to start; an opinion that was confirmed by the ticket collector who urged him to "look sharp" as "she was just off". On this, he started forward at a run, threading his way as well as he could through a dense crowd of people who were waiting for the next train. But he nearly missed his passage, for, as he struggled towards the open door of an empty compartment, the engine-driver sounded his whistle and the train began to move. He barely managed to fling his luggage in at the open door and scramble up to the foot-board as the protesting guard rushed at him, pushed him in and slammed the door.

As soon as he was shut in, he turned and thrust his head out of the window to compare his wrist-watch with the station clock. But the comparison was never made; for at that moment he met the eyes of a woman at the edge of the crowd and then only a few feet away, who was gazing at him with a most singular expression. As their eyes met, she uttered an exclamation and started forward, making as if she were about to try to board the train. She did, in fact, run alongside for a
short distance until a porter, suspecting her intentions, firmly headed her off; and then Andrew, gazing at her in the utmost astonishment, saw her standing, still staring at him with that strange expression, until distance and a curve of the line hid her from his view.

It was an amazing affair. Who could she be? She was a total stranger to him—that is, to Andrew Barton. But he was Andrew Barton no longer. The reflection was a distinctly uncomfortable one. He had taken over the reversion of Ronald's nose. Might there be some other reversions of which he knew nothing? It seemed far from improbable, judging by the little that he knew of his late cousin's moral character and manner of life.

He tried to recall the woman's appearance. It was not difficult, for she was a somewhat unusual-looking woman; rather big, with a marked suggestion of energy and muscular strength and by no means uncomely. She had a good deal of hair of a coppery tint and eyes of a pale, bluish grey. Certainly not a woman whose appearance would be easily forgotten.

But what was the meaning of that singular expression? Astonishment undoubtedly. But the flushed face and the truculent grey eyes suggested emotions other than surprise. There was no denying that the woman's expression and manner had been definitely hostile. She was an unmistakably angry woman.

The incident, with its uncomfortable implications, supplied him with matter for thought until he reached his lodgings. And when he had unpacked the suit-case and went forth for a walk on the Heath, it continued to intrude itself as an added complication to the difficulties of his other problems.

But as he turned into the High Street on his way home, his attention was brought back to the main issues by the voice of a paper-boy announcing the contents of the late evening paper. As the boy came nearer, the generalized howl resolved itself into the words: "Kibble's Cross Murder: Inquest."

In an instant the woman was forgotten, blotted out by the picture of the lonely road, the car with its two occupants, and the figures of the flying bandits. With a thrill of mingled curiosity and terror, Andrew stopped the boy, bought a copy of the paper, and, having folded it and stowed it in an inner pocket, stole into his lodgings to read it in secret.

The report was complete to the inevitable verdict, for the inquest had been held in the morning and the proceedings had been comparatively brief. The deceased was a Mr. Oliver Hudson, the publisher of a technical journal, and the woman who was with him was his secretary. Miss Kate Booth. She, naturally, was the principal witness, and her evidence was taken first, and was to the following effect.

In the evening of Monday, the 27th of August, she was driving Mr. Hudson from his office to his home at Lenham. She was accustomed to drive him daily to and from his office and knew the road well. On the night of the murder, as they were approaching Kibble's Cross, she saw a closed car drawn up at the corner with its head pointing towards the side road. She thought she saw a man standing by it, but was not certain, as, owing to the speed at which she was driving—about forty miles an hour—she had to keep her attention fixed on the road. But someone must have made a signal of some kind for her car to stop, though she did not see it, for deceased exclaimed: "Confound them! Pull up and see what they want."

She put on the brakes and stopped the car. A man came to the window and deceased said: "Well, what is it?" and put his hand into the pocket in which he carried his revolver. The man said: "Put 'em up, both of you," and pointed a revolver at deceased, who, almost at the same moment, drew his revolver from his pocket.

She had only a rather confused recollection of what followed. Both revolvers seemed to go off almost at the same moment, and the bullet from one—she must have been Mr. Hudson's—made a hole through the wind-screen. Deceased uttered a cry and lurched up against her. When the revolvers were fired, she instinctively put down the accelerator pedal and the car jumped forward. She did not look back through the rear window as she had accelerated to over fifty miles an hour and she had to keep her eyes on the road.

At Padsworth, four miles farther on, she halted at the Welbeck Hotel and sent for a doctor and the police; but deceased was already dead. A police patrol came in a few minutes and she told him what had happened. "Can you describe the man whom you saw at the window?" the coroner asked.

"Yes," she replied, "I saw him very distinctly, because, as he appeared at the window, deceased threw the light of a torch full on his face, and it was a most extraordinary face—one that I could never forget. His nose appeared to have been broken; at any rate, it had no bridge. It was perfectly flat excepting at the tip, which was of the ordinary length and stuck out from his face like a bird's beak. He had grey eyes and I should say he was about thirty years of age."

"Could you see how he was dressed?"

"No; at least, I didn't notice anything about his clothing excepting that he had no hat on."

"Was he the only person present, or were there others?"

"I had an impression that there was someone behind him, but I did not actually see anyone. My eyes were fixed on the face that was lighted up by the torch."

"Are you quite sure that the man whom you have described is the man who fired the shot?"

"Yes, quite sure. There was no one else that I could see. And I saw the revolver pushed in over the edge of the window."

"Do you think you would recognize this man if you were to see him again?"
“I am certain that I should. It was a face that you could never forget.”

“Did deceased usually carry a revolver?”

“Only, I think, when he was motoring at night. Then he always did; and he declared that he meant to use it if he was stopped by an armed robber.”

“Do you know of any reason for this attack? Had you anything of value in the car?”

“No; there was nothing of any value in the car beyond the money in our pockets.”

“Did you notice if any cars overtook and passed you on the road?”

“Yes; several cars overtook us and passed ahead near London. I always drive at a very moderate speed until I am clear of the town and let the faster cars go by.”

“Do you remember any car in particular?”

“Yes, there was one which passed us at great speed just as we were approaching the open country road. Mr. Hudson remarked upon it as it flew past.”

That was the sum of the secretary’s evidence. It was followed by that of the medical witness; who deposed that death was due to a gun-shot wound penetrating the heart, and must have been practically instantaneous. Then came the patrol officer, who had not much to tell, and finally a detective-inspector with a remarkable gift for keeping his own counsel. But if somewhat elusive in regard to matters of fact, he was prepared to offer certain rather guarded opinions. Thus, when asked by the coroner if the circumstances of the attack were not very unusual and surprising, he agreed, and continued in explanation: “The police are inclined to believe that the whole affair was a mistake. There is reason for suspecting that it was a carefully planned robbery concerned with certain very valuable property which was being conveyed in a car along this road at about this time; but, at the last moment, the thieves got frizzled and attacked the wrong car. It is a pity,” the inspector added, “that deceased produced his revolver, because that probably flurried them still more, and led to the disaster.”

The coroner discreetly refrained from further questions on this subject, but, turning to another, asked: “With regard to the man who has been stated to have fired the fatal shot; is there any clue to his identity?”

Here, the inspector became once more distinctly elusive, but he was of opinion that, having regard to the man’s very unusual and distinctive appearance, there ought not to be much difficulty in finding him; and, once found, the witness, Miss Booth, would be able to identify him beyond any reasonable doubt.

This completed the evidence. If the police knew any more about the case, they were reserving their knowledge, and the coroner was wise enough to ask no questions that were not strictly relevant to the inquiry. There was no doubt as to how deceased had met his death, and the verdict of wilful murder by a person unknown was a foregone conclusion.

The reading of this report had no other effect upon Andrew than to confirm him in his resolve to abandon for ever his original personality. The guarded tone of the inspector’s evidence left him in little doubt that “the man with the deformed nose” had already been identified as Mr. Andrew Barton, and that the police were in hot pursuit. What would have happened if they had been able to run him to earth? The woman, Booth, was evidently prepared to swear that she saw him fire the fatal shot; and to this, the clear testimony of a competent eye-witness, there appeared to him no possible answer. Of course he was wrong; and in his peculiar state of mind, he was ignoring the strength of his defence. But even if he was mistaken as to his position if he were brought to trial, who can say that he was wrong in his choice of action? Who would accept the chances of a trial for murder—and an atrocious murder at that—when he could, by lying perdu, avoid even the accusation. In the character of Ronald Barton he lay under no suspicion whatever. His security was complete. If there were any incidental disadvantages, he had yet to discover them.

When he had finished the report, he turned over the leaves of the paper in search of some notice of the discovery of Ronald’s body. He found it near the bottom of the page, headed, “A mystery of the Sea,” and the brief account read as follows: “Yesterday afternoon, a party of fishermen, sailing along the coast near Crompton, made a strange and gruesome discovery. Looking shorewards, they saw what appeared to be a pair of nude human legs protruding from under a heap of chalk which seemed to have fallen recently from the cliff. On this, they ran their boat in-shore and landed to investigate, when they found the nude body of a man buried under a mass of chalk fragments. The largest of the fragments, a mass weighing fully a hundredweight, had fallen on his head and crushed it so completely as to render the face unrecognizable. The man had apparently been bathing, as a complete set of clothes was under the body, and from articles found in the pockets, it is inferred that the remains are those of Mr. Andrew Barton, of Fairfield near Bunsford. The inquest is to be held at Crompton to-morrow.”

He laid the newspaper aside and fell into a train of deep but uneasy thought. And once again, the sense of unreality, of illusion, which had never quite left him since Professor Booley had waved the magician’s wand to such amazing purpose, came over him with renewed intensity. He repeated the statement to himself: “The inquest is to be held to-morrow.” The inquest! The inquiry into his own death! And he, the deceased, would read the report of the proceedings! It was an incredible situation; and the more he thought of it, the more impossible and unbelievable did it appear.

Yet he knew that it was a reality; and presently, as his thoughts settled down into a more orderly train, he began to be aware of certain possibilities which might affect his future and influence his conduct most profoundly. At present the
position was that the body of Mr. Andrew Barton had been found on the shore. The identification by the clothing was not legally conclusive; but it would have occurred to nobody to doubt whose body it was. And the suggestion which had influenced others would doubtless take effect also on Molly. Her husband was missing; and here was a dead man—unrecognizable, but of similar age, size and general appearance—who had been wearing her husband's clothes. Would the idea that this might possibly be another man even enter her head? It was practically certain that it would not. She, like the others, would take the appearances at their obvious face value; unless—

He sat up with suddenly sharpened attention to consider the position more critically. Yes, undoubtedly there were counter possibilities that had to be reckoned with. A single item of positive evidence would shatter the whole illusion. It need be not the merest trifle; a mole, a wart, a scar, a tattoo mark; any permanent characteristic on that body, which was not on the body of Andrew Barton, would be enough to destroy the suggestion effect of the clothing. And when once the question of identity was raised, all the mysterious and abnormal circumstances would combine to confirm the suspicion of a substitution.

And how would that affect him? On the whole, favourably; for it would simplify his task when he sought to convince Molly of his changed identity. True, it would set the police once more searching for the man with the deformed nose. But that need cause him no concern. That man was dead. If he had not died at the foot of the cliffs, he had at least died in Professor Booley's "beauty parlour". And, mercifully, the Professor would be on the high seas before the inquest opened.

But when the report of the inquest appeared, it raised questions of a somewhat different kind from those which Andrew had anticipated. The evening paper of Thursday contained only the opening of the proceedings; but the Daily Telegraph of the following morning had a full report, given in considerable detail, and this Andrew studied with the closest attention.

The first witness was Samuel Sharpin, the skipper of the fishing lugger, who deposed as follows: "On Tuesday, the 28th of August, I was aboard my boat, the Sunflower. We was beating up for Meregate Cove, where we berths. About four o'clock in the afternoon we was opposite Hunstone Gap when I noticed that some of the cliff had fallen down and I remarked to my mate that it was a good job that no one was underneath when it came down. Then the apprentice, Joe Todd, said he thought someone had been underneath, because he seemed to see what looked like a pair of legs sticking out from under the heap of chalk. So I got my glass and looked; and then I saw a pair of naked legs sticking out. So we put the boat about and turned her head inshore; and, when we was near enough in, we dropped the anchor and pulled ashore in the dinghy. Then we saw a man lying under a heap of chalk with his legs sticking out. It wasn't a big fall. But one large lump of chalk, nearly half the size of a fish trunk, had come right down on the man's head; and there it sat, resting on his face, with the blood and stuff oozing out at the sides.

"My mate, who is a pretty hefty lad, hove the block of chalk off the man's face, though it must have weighed well over a hundredweight, and then we could see that his head was smashed as flat as a turbot and his face hadn't got no more features than a skate. It was an awful sight. Gave us all a reg'lar turn.

"We took up the body and carried it to the dinghy—it wasn't far to go, for the tide was up and beginning to wash round the corpse when we came ashore. Then we carefully collected the clothes and put them in the boat; and then we just had a look round before we went back aboard."

The coroner: "You had a look round. What were you looking for?"

Witness: "We wanted to see if the man had come to the place by himself. Because, as he was naked, and seemed to have been bathing and sitting on his clothes to dry himself, it seemed funny that he should have come there all by himself. So we had a look round."

"And what did you find?"

"We found that he hadn't. There was only a small strip of clear sand left opposite the Gap, but we could see quite plainly that there were two sets of footmarks coming down to the shore from the cart-track that leads down to the Gap, but there was only one set going up. So he must have come there with someone else."

Coroner: "This is very remarkable and very important. Are you quite sure about the two sets of footprints? I mean, are you sure that they were the footprints of two persons walking together and not merely the footprints of two persons who had come to the place separately?"

Witness: "No; they looked like the footprints of two persons who were walking together. So far as we could see them, they went on side by side, keeping at the same distance—about two foot apart.

"Well, when we had got the body on board, we up anchor and beat up for Meregate Cove. When we got there, we brought up at our berth and I sent Joe Todd up to Meregate Farm and told him to ask Farmer Blewitt for the loan of a seaweed cart to take the body into Crompton. So Mr. Blewitt he sends a man down with a cart and we brought the body into Crompton and handed it and the clothes over to the police."

The coroner thanked the witness for the clear way in which he had given his evidence and was about to dismiss him when Mrs. Barton, the wife of the deceased (if the identification is correct) asked to be allowed to put a question to him.

Coroner: "Certainly you may. What is it that you wish to ask?"

Mrs. Barton: "He has said that he saw two sets of footprints going down to the shore. I want to ask him if either of those two sets were the footprints of the—the deceased."
The coroner looked interrogatively at the witness, who replied: “Well, ma’am, I really can’t say. How would I know whether they were his footprints or no?”

Mrs. Barton: “You found the shoes with the body. Did you not compare those shoes with the footprints?”

Witness: “No, ma’am, I never thought of it, like a dam’ fool—begging your pardon.”

Coroner: “What makes you ask that question? Is there anything special in your mind?”

Mrs. Barton: “Yes. I find it impossible to believe that my husband came there of his own free will.”

Coroner: “We must consider that question presently. I think there is nothing more that we need ask this witness.”

The next witnesses were the rest of the crew of the Sunflower who, however, had nothing fresh to tell. They merely confirmed the evidence of the skipper. They were followed by Mrs. Barton, the dead man’s wife. As she took her place, the coroner expressed his sympathy and that of the jury, and his regret at having to subject her to the distress of giving evidence on so painful an occasion. He then proceeded with his examination. “You have seen the body of deceased. Do you recognize it as the body of your husband, Andrew Barton?”

“No. It might be his body, but the dreadful injuries make it impossible for me to recognize it.”

“Have you any doubt that it is the body of your husband?”

Here the witness was somewhat overcome but, after a pause, she replied: “No, I am afraid not. The clothes are his, and the things from the pockets are his; and the body might be his. There is nothing to suggest that it is not. But it is all very mysterious.”

“In what way mysterious?”

“That should be there at all, in that strange place. He left home in the morning to go to London on definite business, taking with him an attache case containing some of his paintings; and he is found here, miles away from home and from London, apparently behaving in a way in which I don’t believe he would ever have behaved—I mean bathing without bathing-clothes or towels—and accompanied by at least one unknown person. And the attache case seems to be missing. I think there is something very suspicious about the whole affair.”

“When you say ‘suspicious’, do you mean to suggest that your husband met with foul play?”

“That is what it looks like to me.”

“But do you think that the mode of death is compatible with such a suspicion?”

“I don’t know what to think. It is all so strange and unnatural.”

“We can quite understand your feeling about it. The circumstances are, in fact, very remarkable. But now, to pass on to another matter, can you give us a description of your husband?”

“He was just under thirty years of age, about five feet eleven in height, of medium complexion with grey eyes and darkish brown hair. His nose had been struck by a cricket-ball which broke the bridge and caused some little disfigurement.”

“I am sorry to have to refer to a subject that will be painful, but which is relevant to this inquiry. Are you aware that a man answering to the description of your husband has been accused of complicity in an attack on a motor-car when a Mr. Hudson was killed?”

“Yes. A police officer called on me to make inquiries and I told him all I knew about the affair. Of course, it is a mistake. The thing is ridiculous. My husband was a gentleman of reputation and of substantial means. He happened to be present when the attack was made. He told me all about it when he came home that night; and I repeated what he told me to the police officer.”

“When he came home that night, did he seem at all agitated?”

“Not in the least. Of course, he was rather excited, though, at that time, he did not know that any one had been killed.”

“And in the morning when he left home?”

“He was in his usual spirits. I understood that he proposed to call at the police station to report what he had seen.”

“And do you connect his disappearance with the circumstances of that crime?”

“Certainly not. There was no reason why he should run away. He had nothing to fear.”

“Is there anything more that you can tell us that would help the jury in arriving at their verdict?”

“No; I have told you all I know.”

“Then I think we need not trouble you any further. We thank you for the very clear way in which you have given your evidence in circumstances which must have been very painful to you, and we should wish once more to offer you our most sincere sympathy.”

The rest of the evidence was of little significance. The medical witness gave a brief description of the injuries and stated that death must have been practically instantaneous. The police superintendent described the reception of the body and the articles found in the pockets, by which the remains were identified in the first place, and mentioned as a curious
coincidence that a bill containing the description of the deceased was posted up outside the station when the body was brought in. He was the last witness; and, when he had given his evidence, the coroner proceeded to sum up the case for the jury to the following effect: "This inquiry is in some respects perfectly simple and in others rather obscure. Death was obviously caused by the fall of a heavy mass of chalk on the head of deceased; and it is difficult to see how the fall of that mass could be other than accidental. On the other hand, an element of obscurity is introduced into the case by the fact that deceased was apparently accompanied to the shore by some other person; that that person never reported the accident and has not come forward to give any information. There is no denying that the behaviour of that person to some extent justifies the suspicion that has been expressed by the wife of the deceased. If the cause of death were such as to admit of the idea of homicide, the conduct of that person would expose him to the gravest suspicion. As no such idea appears possible, his behaviour is quite incomprehensible.

"With regard to the strange conduct of deceased, the circumstances connected with the murder of Mr. Hudson may offer some explanation. The superintendent has told us that at the very moment when the body was brought to the station, there was a bill posted outside giving a description of deceased and stating that he was wanted for the murder. Such bills must have been posted outside all other police stations, and it may easily have happened that deceased had seen one. Then, even though he were innocent, he might have become seized by panic and fled to hide himself. It is rather an alarming thing to see one's description outside a police station and to learn that one is wanted for murder.

"That, however, is only a surmise. What we have to decide is when, where and by what means deceased met his death. You have heard the evidence, and on that you must form your decision."

The jury eventually returned an open verdict. They were not entirely satisfied, the foreman said, that it was a case of death by misadventure. The presence of an unknown person, who had absconded and made no sign, suggested that there might be more in the case than met the eye. And to this, after some demur, the coroner assented.

VII. — MOLLY

ANDREW had read the report of the inquest on his own supposed remains with profound interest but with rather mixed feelings. The possibilities which he had envisaged had not been realized, and certain facts which he had overlooked had come into view. The double set of footprints, for instance, introducing an undoubted element of suspicion, came to him as something quite unexpected. His attention had been so completely focused on the question of identity that he was unprepared for the new issues that had been raised.

Another matter of surprise to him was the shrewdness and strength of character displayed by his wife. It dawned on him that he had considerably under-rated her intelligence. In spite of the agitation that she must have suffered from the terrible circumstances in which she was suddenly placed, she had not only kept her wits unclouded but had shown a quick perception of the significance of the facts which had transpired. She had, indeed, accepted the identity of the corpse—no reason had been shown for doubting it—but, with her ready common sense, she had instantly detected the abnormal character of the whole set of circumstances, and refused to take them at their face value.

The conclusions, then, which emerged were these. First, Molly had no doubt that her husband was dead. Second, that she utterly refused to regard that death as due to a mere accident. She was clearly convinced that some unknown person or persons were implicated in it. In short, that there had been some sort of foul play. Incidentally, it was clear that she did not take the murder charge seriously. To her, it appeared simply as a ridiculous mistake which would be instantly disposed of when suitable explanations were given. That he could have taken fright at the accusation and gone into hiding would appear to her incredible.

These were the data which he had to consider in forming his decision as to what line of action he should adopt. Hitherto he had responded passively to the pressure of events. He had simply gone whither he had been driven. But he could drift passively no longer. He had got to make up his mind as to what course he would steer through the amazing complications with which he was encompassed. So, for the first time, he set himself fairly to face the realities and decide what it was possible to do.

But to all his cogitations, as he tramped along the secluded paths of the Heath where he could think uninterrupted, and turned over one plan after another, there was a permanent background. The tremendous shock that he had sustained from the police bill at Crompton had established in his mind an abiding horror—a sort of "gallows-phobia". And not, perhaps, quite unreasonably. Innocent men have been hanged on worse evidence than that which Miss Booth was prepared confidently to swear to. The man whom she had described had been identified as the artist, Andrew Barton; and since Andrew Barton was conveniently dead, dead he had got to remain. That was the undeniable postulate on which all his plans were based. There could be no resurrection of Andrew; for the instant he appeared, the police would pounce on him. But that postulate seemed to block every avenue of escape.

Thus, the idea of going home and taking up the old life was obviously unthinkable; for Molly's husband was dead, and he was a visibly different person. The explanation which would have made it possible could not be given; for that would bring Andrew to life—and death. Some other plan would have to be thought of—when he had made things clear to Molly. And the question was, how was that to be done?

His first idea was to write her a long letter telling her all that had happened, signing his own name and announcing his
intention to come home. She would recognize his handwriting, and that would make the story credible enough to prepare her for his changed appearance. But would she recognize his handwriting? It was not so very characteristic, and there was an awkward complication. It often happens that a similarity of handwriting runs in families; and his was a case in point. Ronald’s handwriting had borne a distinct resemblance to his. Molly had noticed it and remarked on it. Then the handwriting would not be conclusive, and the fantastic story would have to rest on its merits. Then there was the complication of Ronald’s character. Molly had admired Ronald, and had been indulgent in regard to his faults. Perhaps she liked him; but she had no delusions as to his character. She knew him to be a slippery rascal whose word was of no value whatever. She might—and probably would—reject the letter as an impudent imposture; an attempt on Ronald’s part to personate her dead husband. And when he appeared, miraculously transformed into the outward semblance of Ronald, her suspicions would be instantly confirmed, and she would probably refuse to let him enter the house or to listen to anything that he might wish to say.

But that was not the worst. Molly had expressed her suspicion that there had been foul play of some kind. Now, if he wrote such a letter, it would have to admit that he had been on the shore at the time of the catastrophe; in short, that one of the sets of footprints had been his. What more likely than that she should suspect him (in the character of Ronald) of having made away with her husband? And, once the suspicion of foul play was aroused, the letter, itself, would seem to supply the motive for the crime. It would suggest to her that Ronald, relying on his resemblance to her husband, had made away with Andrew with the deliberate purpose of stepping into Andrew’s shoes.

Then what would she do? There was very little doubt. Molly had certain very pronounced feminine characteristics; she was quick to decide, confident when she had decided, and quick to act on her decision. If she disbelieved the wildly improbable story and wrote the letter down as a fraudulent attempt on Ronald’s part to personate her husband, she would, without waiting for him to appear in person, at once communicate her suspicions to the police and show them the letter.

And what then? In spite of his anxieties, Andrew smiled grimly at the thought of the dilemma which would be created. He would stand to be accused of having murdered himself; and his own defence would be to prove his real identity—that of a person who was already accused of having murdered someone else.

Evidently, the letter would not do; nor would an unannounced visit, with verbal explanations, be much safer. The story that he had to tell was so preposterous that she would probably dismiss it off-hand as an imposture; and then there would be the same trouble as in the case of the letter.

So, once again, Andrew found himself shepherded by inexorable circumstance in the direction in which he did not want to go. For, in the end, he had to fall back on a compromise, and not a very good one at that. He decided, instead of committing himself either by letter or word of mouth, to feel his way cautiously and see if any opportunity offered. He would write to Molly, signing himself “Ronald”, and proposing to call on her. When he met her, he would be better able to judge what was possible. Perhaps it might be easier than it looked. It was actually possible that she might recognize him in spite of the disguise. He had examined himself repeatedly in the mirror and had thought he had detected some small differences between himself and Ronald. Perhaps, after all, they were not so much alike as he had thought; and there might be some little peculiarities in his own face and person of which he was not aware, but which might be familiar to her. At any rate, he would see what happened; and if he failed the first time, at least he would not be landed in the net of the police.

But he would not write for a day or two. He would give her time to settle down after the inquest. And then, of course, there was the funeral. The funeral! He had not thought of that before. Now the idea came upon him with devastating effect, imparting a horrible reality to the whole hideous farce. It was an appalling thing to think of his beloved wife standing in tears beside the grave of what was in effect a dummy corpse. It was an obscene outrage. But even in his anger, he realized how that dreadful farce seemed to set the seal of finality on his changed condition; what a formidable obstacle it raised to his attempts to dispel the illusion.

A couple of days later he dispatched the momentous letter; quite a short one, suggesting a call about tea-time on the following Wednesday; which elicited a still briefer reply agreeing to the date and time. Brief and rather colourless as it was, Andrew read it again and again. For it was Molly’s own writing; and though it was addressed to a fictitious person, yet it seemed to bring him, for the first time since the transformation, into some sort of touch with real life—his own real life.

The days passed in a fever of impatience mingled with anxiety; of longing to stand once more within his own house and to see and talk with the woman who had become to him the centre and focus of life; of anxiety lest he should, after all, fail to break the spell that circumstance had cast over him. And when at last the day of the visit came, he set forth on his adventure thrilling with the strangest mixture of emotions; with love and yearning for the woman who was at once his wife and his lover, with hope and apprehension and even a queer, irrational tinge of jealousy. For it was Ronald, and not he, who was going to meet and talk with Molly. Any tokens of kindliness or affection that she might bestow would be for Ronald, not for him. And thus his thoughts, swaying back and forth to the contending pull of two opposing sets of emotions, oscillated continually between the intense yearning to give expression to the love that was welling up in his heart and a jealous fear lest the rival whom he was impersonating should be received with undue warmth.

At Bunsford, he changed on to the branch line, and, alighting presently at the little wayside station of Fairfield, set forth to walk the familiar road that led to his home. It was a strange experience, that walk from the station. He had the feeling of a traveller, returning after a long absence, treading the well-remembered ways and looking on the familiar scenes of long ago. It seemed as if years had passed since he last turned into the lane. He found it unbelievable that it was but a week and
a day since he had kissed Molly at the door and waved his hand to her from the gate. Once more the sense of illusion and enchantment came over him; and, as he approached the cottage and his eyes were greeted by the fresh gashes that his hastily-wielded shears had made in the privet hedge, the conflict between his inner sensations and the visible and undeniable facts became positively bewildering.

Like a man in a dream, he opened the gate, stole unsteadily up the path, and plied the little knocker with a shaking hand. And all the while, he was trying confusedly to think what he should say to her, while in the background of his consciousness there lurked a dim hope that she might recognize him despite the transformation.

A few seconds passed. Then a light footstep in the hall, at the sound of which his heart seemed to stand still. The door opened and there she stood, his dearest Molly, his own beloved wife, garbed in a simple black dress, and looking pale and tired, but sweeter and more lovely than ever. At the sight of her, a flood of passionate love surged through him; a wild impulse to take her in his arms and kiss the roses back into her cheeks. It was but a momentary impulse, instantly checked, not only by reason but by something in the way in which she looked at him. She greeted him cordially enough, but yet there was in her manner something new to him; a quiet self-possession with, perhaps, just a shade of chilliness.

He took the proffered hand with a deep sense of anticlimax. She had not recognized him. Of course she had not. How could he have expected it? But the initial failure left him with all his difficulties before him. He could do no more than wait and see if any opening offered. “Go and sit down, Ronald, while I make the tea,” she said in a friendly, matter-of-fact tone, still with that faint suggestion of coolness, “I won’t be a minute. You know the way. No, you don’t, though. You have never been in this house before. It’s in here.”

She threw open the door of the dining-room and bustled away towards the kitchen, leaving him to enter alone. He stepped in through the open doorway and stood for a few seconds at the threshold, looking, with a lump in his throat, at the familiar room—his own room, where he had passed so many delightful hours, and where he now stood, a mere visitor, almost a stranger.

He ran his eye over the table, fondly taking in all the little, trivial details; the foolish little flower vases, the cake-basket, the biscuit-box, the jam-jars; all set out in correct array just as he, himself, had set them out on that dies irae in the irrevocable past when Fate, in the garb of a postman, had delivered his summons. And yet Fate had not been unkindly. For its messenger had forestalled another kind of summons, uttered in the King’s name to the jingling of hand-cuffs. The reflection came to him as an opportune reminder just as Molly entered with the teapot and hot-water jug on the little tray.

She took her seat at the head of the table and he drew up his chair; but as he did so, he noted that it was not his own particular chair, in which he had always been used to sit. That was drawn back against the wall. And the place that was “laid” for him was not his customary place, but was on the opposite side of the table. It was a small matter but it defined his position as a visitor. “It is nice of you to come and see me, Ronald,” she said, as she poured out the tea. “I couldn’t write to you because I didn’t know your address. I suppose you saw it in the papers?”

“Yes,” he replied. “It was a dreadful shock, even to me. I can’t bear to think of what it must have been to you.”

She made no comment on this, and he continued: “I would have written sooner but I thought it better to wait until the—er—the—”

“Yes,” she replied quietly, “I understand. It was on Saturday. In Fairfield churchyard. I brought him from Crompton. Everybody was awfully kind, especially the police.”

She finished a little unsteadily with a catch in her voice, and Andrew, deeply moved, stole a furtive glance at her, marvelling admiringly at her quiet dignity and self-restraint. She made no parade of grief nor showed any outward sign other than the pale, weary face, the set composure of which smote him to the heart.

For some time neither of them spoke. She sipped her tea mechanically, seeming to be wrapped in thought while he searched his mind frantically for some suitable words but could think of none. At length she asked: “When did you see him last?”

He started, and his gorge rose at the lie that he would have to tell. But he made it as near the truth as he could. “I think,” he faltered, “it was about two years ago, when I met him by chance in London.”

“I remember,” said she. “He told me he had met you. But I thought you might have seen him recently. I noticed that he had drawn a cheque for you—I am his executrix, you know—so I thought you might have met. He never mentioned the cheque to me.”

“No,” stammered Andrew, “I suppose he would not. It was a—a loan, you know, to enable me to—a—to pay a deposit. But I must refund it as soon as I can.”

“You needn’t worry, Ronald,” she replied. “I don’t suppose he intended you to repay it. At any rate, there is nothing to show that it was a loan, and if there were, I, as executrix, can use my own discretion in regard to debts. And I shall do what he would have wished me to do.”

“That is very good of you, Molly,” he said. “But things are different now. I ought to repay that loan when I am able to—though,” he added, with a sudden realization of his present plight, “I don’t know when that will be.”

“As to that, Ronald,” she said, in the same curiously quiet, level tone, “you know there is something to come to you when the will has been proved; or had you forgotten?”
He did know, of course; but he had completely forgotten until this moment. Now he gazed at her in dismay as she went on, without raising her eyes from her tea-cup: “There is a legacy of five hundred pounds. It was a separate insurance that he made in your favour in case he should die before you. He knew that his death would rob you of a faithful and generous friend, and this was to compensate you.”

Andrew was thunderstruck. Here was an appalling complication! This money would presently be paid to him. He could not refuse it without disclosing the whole deception. Yet to accept it was to commit a blatant fraud on the Insurance Society; a fraud for which, if it were discovered, he could be sent to penal servitude. And that was not all. There was the principal insurance, which would be paid to Molly with his connivance. The whole affair was plainly and grossly fraudulent.

He was so overwhelmed by this new complication that he could only mumble incoherent acknowledgments and then once more subside into silence. Molly, having given the explanation, let the subject drop; and, since he sat in dumb confusion, she made shift to keep up some sort of conversation, with long intervals of silence, avoiding, as far as possible, any references to the tragedy or her own immediate affairs. She spoke just in the colourless way in which she might have spoken to some chance stranger who had come to make a ceremonial call.

Meanwhile Andrew, returning such banal answers as fitted the indifferent, semi-formal character of the conversation, was inwardly fermenting with suppressed emotion; with surprise, bewilderment and exasperation. The position was preposterous. The woman who was making polite conversation and so obviously, though tactfully, holding him at arm’s length, was his wife! His own wife, whom he loved passionately and who loved him with answering passion! He was starving for her love, filled with a devouring desire to fold her in his arms, to cover her pale face with kisses and murmur into her ear those soft endearments that had always evoked such sweetly frank response. If only he could shake off this bewitchment, how gladly and with what lavish affection would she fall into his arms! He knew it; and yet he could only sit like a fool, talking commonplace drawing-room stuff and even doing that badly.

But he could see no way out. The opening for which he had hoped had failed to present itself. Not only had there been no glimmer of recognition, but, what was worse, she had accepted him as Ronald without a sign of doubt, or hesitation. And civil and even kindly as was her bearing towards him, she was evidently on her guard. He could see clearly that she did not trust cousin Ronald: and he realized that she had understood that gentleman’s character better than he had supposed.

But this wariness on her part was a complete bar to the revelation that he wanted to make. At the first word her suspicion would light up, and, as the preposterous tale unfolded, she would listen—if she listened at all—with angry impatience to what would seem like a mere crude, silly imposture. It was useless to think of making the attempt, for failure seemed inevitable; and the probable consequences of failure were too appalling to contemplate.

Nevertheless, he tried to pull himself together and at least find something to say. From time to time, as they had been talking, he had caught her looking at him with a rather curious expression; an expression of faint surprise, as if she were “sizing him up” and found something in his manner a little puzzling. This he put down to his deplorably bad acting, for assuredly the real Ronald—the voluble, ready talker, suave, genial and self-possessed—would not have sat mumchance at the table opposite his pretty cousin. He must rouse himself, and, if he could not be Andrew, then he must be a reasonably convincing Ronald. “I suppose,” he ventured, “you will shut up the studio now?”

“No,” she answered, “I have taken it as my sitting-room.”

He was slightly surprised. She had always left him in undisputed possession of the studio as a place that was entirely outside her province. “I have never seen this studio,” said he (reconciling the blatant untruth to his conscience by the fiction that he was speaking in the character of Ronald). “Would you let me have a look at it presently? Andrew’s pictures were always a great delight to me.”

“Were they?” she exclaimed, in evident surprise. “I didn’t know that you took any interest in them at all. Certainly, I will show you the studio. We will go down there as soon as we have finished tea. Can I give you another cup?”

“No, thank you,” he replied. “I have finished.”

“Then,” said she, rising, “we may as well go now; and I shall be able to show you one or two of his later works.”

As they made their way to the back door and down the garden path, Andrew was impressed by a distinct change in her manner. She was still grave and a trifle prim, but, ever since his reference to the pictures, a new note of cordiality had come into her voice. At the studio door, she produced her little key-wallet, and, taking from it the well-remembered Yale key, inserted it, turned it, and pushed the door open. “You see,” she said, as they entered, glancing at him for a moment with a wan smile, “I am keeping the nest warm.”

He looked round the place, choking with emotion. Everything in it hailed him in a familiar voice and called to him to come back. Nothing was changed—with one exception. Formerly, the walls had borne only a few sketches given him by brother artists, and one or two of their paintings which he had bought from Montagu. Now these had been removed, and every available space was occupied by his own work. Every finished picture of his that they possessed had been collected from the house—excepting those which he, himself, had hung in the drawing-room—and put on the wall; and a number of sketches from his portfolio had been affixed to the match-boarding with drawing-pins—carefully placed at the edges to avoid making holes in the paper—and he noted with surprise the judgment with which they had been selected. His workshop had become a one-man exhibition.
Otherwise the place was just as he had left it. The half-finished picture stood on the easel, protected by its paper dust-cover; the "models" that he had been using—an old wooden-faced clock, the dismembered remains of another clock and a number of tools and implements—were on a side table, together with the studies that he had made for the details of the picture. His big folding palette lay on the table beside the painting-chair with the brushes set out tidily on the rough wooden rack that he had made. Even the water dipper, he noticed, was full of clean water. "This is the picture he was at work on when he went away," said Molly, carefully turning back the dust-cover. "I think it was to be called 'The Clock-Jobber.' I don't know where he did the sketch for the interior, but the old man is our village cobbler. It is quite a good likeness, too."

Andrew looked at the picture with profound interest, trying vainly to realize that he had actually been working at it but little more than a week ago. The figure and part of the detail were nearly finished, but the background, the general lighting and colour scheme were only indicated. The most interesting part of the work was waiting to be done—waiting for him, who had completed the picture in his mind's eye. Would it wait for ever?

He made a few appreciative but critical comments on the picture, to which she listened respectfully, and then (still in the character of Ronald) said: "I suppose his pictures have always been a great interest and pleasure to you."

"No," she replied. "That is what I now look back on with astonishment and bitter self-reproach. I never interested myself in his work, though it meant so much to him. Somehow, I let it become a thing apart, outside my own life and personal interests. I used to let him go off to this studio to do his day's work, just as if he were going off to a bank or an office. I was satisfied to hear what he had done and to see the pictures when they were finished; and I feel that I didn't understand them or appreciate them a bit. They were just our livelihood; and I used to see them packed up to go to Mr. Montagu—the dealer, you know—without a pang of regret. It seems very strange now when I think of it. It was a great opportunity. I might have been his good comrade in what he cared for most. And I let it go."

As she concluded, her voice sank almost to a whisper and her eyes filled with tears. He looked at her with adoring sympathy, and a flood of affectionate yearning surged through him. The impulse to take her in his arms and kiss away her tears was almost irresistible. He could hardly restrain himself. And yet his reason held him back. He realized that this was no opportunity; that her very preoccupation with her lost husband would make her proof against the grotesque story that he had to tell.

But what an exasperating absurdity it was! She was his own wife, his sweet Molly, sweeter than ever and still more dear; and he was her husband for whom her poor heart was hungering. And here they stood, held apart by this preposterous make-believe! The thing was monstrous! "I suppose," she resumed, reflectively, "it was because he was so interesting in himself and so sympathetic; because he entered so keenly into all my little feminine pleasures and interests as if they were his own, that I never realized that he might want some sympathy from me in the work that he loved. And he never obtruded his own personal affairs on me. There was not a grain of egotism in his nature. And, oh! Ronald! he was such a perfect husband, such a dear companion! In all the years of our married life, never an unkind word passed between us."

"No," Andrew said, huskily, "I know how fond he was of you and how happy you made him. He would like to think of you living here with his pictures to keep you company."

"Yes," she said, "that is just what they do. When I look round at them, I feel that he isn't quite lost to me. Because each of them is, in a way, a part of himself. The little figures in them were his friends, his children. They are acting his thoughts, just as he used to express them in words. And the places—the rooms and gardens and inn-parlours—are places that he knew, because he built them up out of his own imaginings. They, too, are really part of him."

"Yes," said Andrew, "that is quite true. A picture is, in a way, a detached piece of the painter's personality, just as a book is a sort of spiritual bud or outgrowth from the mind of the man who wrote it. And I think you will find the pictures grow more friendly and intimate the longer you live with them."

"But I do!" she exclaimed. "Already, I am beginning to see them with a new eye. At first it was the little stories that they tell that impressed me most. But now I begin to see that the story was only the subject, the peg, as it were, on which the real picture was hung. And I try to see how he did them and what he was thinking about and aiming at as he worked."

"Yes," said Andrew, "that is the way to look at pictures. Try to see what the artist had in his mind, what he wanted to do and what he wanted you to see; especially the composition, the pattern of form and colour and light and shade—the effect of the picture as a whole."

"That is what I am trying to do," said she, "and I think I am getting on." She glanced fondly round at the walls and murmured: "The dear things! They grow on me from day to day."

When they had examined the unfinished painting, she brought out the portfolio and they looked through the collection of sketches and studies, one or two of which he picked out to replace some of those on the wall. She adopted his suggestions readily and listened attentively to his comments and criticisms. "I didn't realize, Ronald," she said, "that you knew so much about painting. I never heard you talk about it to Andrew."

From the subject of pictures the conversation turned to her own domestic affairs, directed thereto by Andrew. But she was not very expansive and, somehow, her new-born cordiality of manner seemed to fade somewhat, especially when he ventured to proffer his assistance in setting her affairs in order. And, indeed, he was conscious of the incongruity of such a
suggestion coming from the feckless, unthrifty Ronald. “I really don’t need any help,” she said. “Andrew had made such complete provision for me and left his affairs in such perfect order that there is hardly anything for me to do.”

“Well,” he said, “if I can’t give you any help in that way, I hope you will let me look you up from time to time. I think we ought to see more of each other in the future than we have in the past.”

She did not reply immediately, but he could see that the suggestion was not received enthusiastically, and that she was rather carefully considering her answer. At length in an earnestly apologetic tone, she replied: “Later, perhaps, Ronald, but not just at present. It was kind of you to come and I am glad you came. But it has been a painful experience. You are so dreadfully like Andrew. I had no idea you were so much alike. I suppose when I saw you together I only noticed the differences, but now everything about you reminds me of him, and I feel I can hardly bear it.”

“But,” he urged, “don’t you like to be reminded of him?”

“In some ways,” she replied. “In his pictures, for instance. But they are really himself. But this resemblance is different. There is something awful and uncanny about it, something ghostly and unreal. You’ve no idea, Ronald, how strangely like him you are. Even your face is his face.”

“I should have thought we were quite unlike in that respect,” he said.

“You are thinking of that dent on his nose,” said she, “that troubled him so much, poor boy. But he exaggerated the disfigurement. It was only an accidental mark. It really didn’t make any difference, at least to me. It was so wrong of me to let him worry me so much—principally on my account, I am afraid. And now, as I look at you, I see how little difference it did make. But you are like him in every way. You move like him, you write like him—your handwriting is his handwriting, and your voice! When you speak, I could shut my eyes and believe it was Andrew speaking.”

His heart leapt. She had recognized him, after all! True, she thought she had only recognized his ghost. She was deluded by the false circumstances. But he could explain them away. His opportunity had come. And as she continued, he tried to think how he should approach the revelation. “You mustn’t misunderstand me, Ronald. It is not that I am not your friend as I always was. Try to put yourself in my place. Remember what Andrew was to me—my dear husband, my faithful and loving friend, the very centre and focus of my life—and think what it must be to me to be in the presence of a counterfeit of him—now that he has gone for ever—mimicking his looks, his movements, the very tones of his dear voice. Don’t you understand how it wrings my heart?”

He listened, entranced and yet bewildered, still fumbling for the words which would enable him to open his revelation without setting up an immediate barrier of suspicion. “It is hard enough to bear,” she went on, “to know that I shall never see him again, without having it driven home by a presence which mocks at my grief—a presence which seems to be his and yet is not his. Forgive me if I am unreasonable, but I am a broken woman. I have been robbed of all that I cared for and I cannot endure it patiently. My soul is in revolt. I ask myself: Can there be a God of Justice if such horrible wickedness is permitted?”

Her sudden change of mood disconcerted him. “You mean,” he stammered feebly, “that dreadful, most deplorable accident?”

“Accident!” she repeated; and her voice, ringing out like a pistol-shot, made him start as if he had been struck. “No! I mean that crime. You don’t suppose it was an accident, do you?”

“That was what I understood,” he murmured uncomfortably. “I thought a block of chalk fell on him.”

“A block of chalk was found resting on his poor battered head, and they assumed that it fell on him by chance. But did it? I don’t believe it for a moment. A man—a good, kind fisherman—was able to lift it off by himself. Then another man could have lifted it on—to cover up the marks of murder. That is what happened. I am convinced of it.”

“Why are you?” he asked.

“Why!” she repeated. “Because everything about the horrible affair shouts of murder. You know he was not alone. The footprints prove that two sets going to the place and only one coming away. Somebody was with him. Who was it? Who was that secret wretch who sneaked away and hid himself like Cain? Nobody knows. But he shall be found. I will never rest, or let the police rest, until he is found. And when we find him, he shall pay his debt. He shall pay it to the uttermost farthing!”

Andrew looked at her in astonishment and dismay. This was a new Molly who confronted him with blazing eyes and hard-set mouth as she poured out her fierce denunciations. Never before had he seen her even ruffled; and he found it hard to realize that this stern-faced, resolute woman was his soft, gentle, girlish wife. But, as he gazed at her, all his new-born confidence and optimism melted away like snow before the sunshine. For he saw clearly that his opportunity—if there had ever been one—was gone. How, after what he had heard, could he tell her that he had been there? That those retreating footprints were his footprints? He dared not. As to the rest of his fantastic story, if she listened to it at all—which she probably would not—she would dismiss it with angry contempt, and denounce him to the police.

There was nothing more to say or do. His mission had failed; and, since he had received more than a hint that his presence was not acceptable, there was no reason for prolonging his visit. Silently and gloomily he followed his unconscious wife up the garden to the house and, without re-entering the dining-room, prepared to take his leave. “If I mustn’t come and see you, Molly,” he said, as he took up his hat and stick, “I hope you will let me write to you sometimes.
hate the idea of dropping out of your life.”

“Oh, I didn’t mean that, Ronald,” she replied. “Don’t think I want to cut you. Perhaps, later, when I have got more used to—to my new condition, I shall be able to see and talk with you without having this awful ghostly feeling. At any rate, there is no reason why you should not send me a letter now and again. I should like to hear how you are getting on.”

With this she opened the outer door and, apparently with some not unnatural feeling of compunction, shook his hand quite cordially, though her eyes remained averted from his face. He held her hand for a second or two, gazing, with a bursting heart, into the pale, sweet face that he was forbidden henceforth to look upon. Then, with a huskily murmured “Good-bye!” he turned away and plunged down the flagged path, pausing, by habit, at the gate to look back and wave his hand in the old familiar way.

It was a grievous journey to the station. All the well-remembered objects that had greeted his arrival, now seemed, as he passed them and left them behind, to give him a sad and solemn farewell; and, when he turned out of the homely little lane into the road, it was with something of the feeling of our earliest ancestors when they passed out through the gates of Paradise.

VIII. — THE DESERTED WIFE

It was in a mood of the deepest depression, combined with a sort of angry bewilderment, that Andrew reviewed his affairs as the train bore him back to London. To a permanent separation from Molly his mind refused assent as a thing to be seriously considered. He could not, and did not, for a moment entertain the idea of giving her up. Yet what could he do? For the time being, the barrier that she had placed between them seemed insurmountable. One plan only seemed possible; and for a few moments he was actually disposed to adopt it—the plan of going boldly to the police, proclaiming his identity, and taking the chances of his trial for the murder of Mr. Hudson.

But a very brief reflection convinced him of the futility of any such proceeding. For he was still obsessed with the infallibility of an eye-witness. There, at his trial, would be Miss Booth, who would swear that she actually saw him commit the murder. What answer could he give to that but a bare denial? And what weight would that denial have? It would have none. He would be found guilty and most certainly hanged.

No. There was no escape that way. He would have to put up with his false identity, even for Molly’s sake. For she was, at least, better off as the widow of a man who had possibly been murdered than as the widow of one who had certainly been hanged. So he must wait and hope that some other way of escape from his intolerable dilemma might present itself.

But it was a maddening situation. Apart from the hideous illusion which cut him off from his wife, were other incidental and subordinate perplexities. There was, for instance, the life insurance. If he allowed the money to be paid, he would be not merely a party but the principal in a most blatant fraud. Yet he could not prevent the payment without disclosing his identity. Again, there was the probate of the will. It must be a criminal offence to connive at the probate of the will of a living man.

It was all very bewildering. Little did Professor Booley foresee the intricate train of consequences that the stroke of his syringe had set in motion! Nor was it possible for Andrew, himself, to foresee what further links in this extraordinary chain of causation might presently come into view; and as he realized this; he was disposed to speculate very uncomfortably on the possible surprises that might yet be awaiting him in the incalculable future.

But at least one good result followed from his disappointing visit. The sight of his studio and his pictures had set his thoughts moving along the old, familiar channels. The artist in him had awakened. Once more, he was aware of the impulse to paint. And the impulse was not only artistic. He would have to earn his living somehow, and he knew that he could earn it by his brush. The painting would come, not only as a relief but as the necessary means of livelihood. Before he had reached the end of his journey, he had decided to set to work without delay.

Thus deeply preoccupied with his present difficulties and his plans for the future, he walked unguardedly into the first ambush that Fate had prepared for him. From Cannon Street he took his way through the fast-emptying streets to the terminus of the North London Railway, where he bought a first-class ticket for Hampstead Heath. Still wrapped in profound thought, he ascended the stairs to the platform and, worming his way through the throng of passengers, sought an empty compartment in the waiting train.

The guard was slamming the doors in preparation for departure as he reached the forward part of the train. Selecting one of several vacant compartments, he entered it and shut himself in. As he sat down, by a natural train of association, his thoughts reverted to the curious incident that had occurred on the last occasion when he had travelled on this line. He was even tempted to rise and look out of the window to see if that strange woman was by any chance on the platform.

But there was no need. At the very moment when the shrill screech of the guard’s whistle rang out and the train began to move, a woman darted at the door, wrenched it open, bounced into the carriage and slammed the door after her. Then she sat down in the seat opposite his and fixed her eyes on him with an unwinking, truculent stare.

He had recognized her in the first, instantaneous glance, and immediately averted his gaze to look out of the window. Not that he expected that manoeuvre to be of any avail. And it was not. There she sat, facing him with a stare as immovable as that of a waxwork figure. He avoided looking at her; but he was fully conscious of that basilisk stare, and it seemed to
stir the very marrow of his bones. As the train gathered speed, he waited in fearful expectation for the next development.

It came after some three minutes of appalling silence. "Well. Haven't you anything to say to me?"

The voice was not unmusical, but it had a peculiar suppressed, menacing quality, as if the speaker were restraining herself with difficulty from shouting. Andrew turned his head and met the gaze of the pale, truculent, wide-open eyes. "I think, madam," he replied, fully conscious of the futility of his answer, "that you must be mistaking me for some other person. I have no recollection of having had the honour of meeting you before."

The effect was very much what he had expected. She gave a shrill yelp of extremely mirthless laughter and then exclaimed: "Well, I'm damned! I really am, Tony! I knew you had the cheek of the devil, but this is a record performance, even for you. So you have no recollection of having had the honour of meeting your lawful wife before! Haven't you, indeed? Don't happen to remember meeting her at the prison gate at Wormwood Scrubs on Easter Sunday three years ago, when she wasn't too thin-skinned to ask for Mr. Septimus Neville, the swindler, then due for discharge? Eh? You recognized her quickly enough then, didn't you, when she took you home and gave you your first square meal? But now your memory has given out. You are looking pretty prosperous. Perhaps you have got another wife, with a bit of money. Hey? Have you?"

As she ran off this string of questions, Andrew looked at her with very mixed feelings. For himself, he was frankly terrified; but he would have given a great deal to be able to speak some comforting words to her. For, in spite of her harsh tones and fierce manner, there was a faint undertone of tenderness in her voice and a suggestion of wistfulness in the way she looked in his eyes. He was profoundly sorry for her, and it was with real regret that he repeated—unavoidably—his futile disclaimer. "I assure you, most solemnly, Mrs. Neville—if that is your name—"

"Oh, drop it, Tony!" she interrupted impatiently. "Don't be a fool! What's the use of this play-acting? There's nobody here but ourselves. Now, listen to me. If I had any sense, I should be only too glad to be quit of you. But I'm not. Women are fools, and I'm one of the biggest of them. You've been a regular bad egg. You had all my money and spent it—and you know how that money was got; you've given me the slip over and over again and left me to get my own living as best I could; you've gone off philandering with other women, and you may have one or two other wives for all I know. I ought to hate you but, as I said, I am a fool. I am ready now to forget it all if you will only come back to me."

As she paused, Andrew gazed at her helplessly, utterly at a loss what to say. He was deeply moved and would have offered consolation, but that, he realized, would only have enraged her. But his silence and the sympathy and pity that his looks expressed led only to further misunderstanding. The fierceness died out of her face and her eyes filled. "Come back to me, Tony," she urged in soft, coaxing tones, "and we will let bygones be bygones. I give you one more chance, and it is the last. Drop this foolery instantly and do as I said. The door is still open. But go on with this mumming for another instant and the door will slam. And, by God, it is not the only door that will slam. You know what I mean; and you know me well enough to be aware that when I start to fight, the gloves are off. Now, what do you say?"

"I can only say what I said before," he replied miserably. "If you would only try to believe—"

"That will do!" she interrupted furiously. "I've given you fair warning; and now it's a fight to a finish."

She flung herself back on her seat and for the short remainder of the journey sat silent, crimson-faced and scowling, perfectly still, but with a stillness suggestive of violence repressed to bursting-point. Andrew felt as if he were travelling with a Mills bomb.

As the train approached his destination, he watched her with furtive anxiety. His expectation was that when he got out, she would follow him to ascertain where he lived. But, to his surprise and relief, she did not. When the train stopped at Hampstead Heath station and he rose to alight, she made no move; and when he opened the door and wished her a civil "good evening," she gave him one quick glance of concentrated anger and hatred and then averted her face.

Nevertheless, he walked very slowly along the platform, lingering at the farther end to see the train start; and it was not until it was well on the move that he turned towards the exit. And, even then, he waited at the foot of the stairs to see her carriage pass, and caught a fleeting glimpse of her face at the window, now glaring out at him like the face of some avenging Fury.

He drew a deep breath when the guard's van passed out and left the station empty. At least she was fairly out of his neighbourhood—for the present—and he was at liberty to consider precautions to avoid any future meetings. But so deep was the impression that she had made on him that, on leaving the station, instead of making his way directly to the town, he took the foot-path that leads past the ponds and made a wide detour of the Heath, approaching the town—or "village"—
eventually from the Vale of Health. And as he strode across the open expanse of the Heath, with an occasional nervous glance behind him, and sneaked back towards his lodgings, he turned over in his mind the possible significance, as to the past and the future, of this ominous encounter; so ominous as, for the moment, to oust from his thoughts all his other difficulties and embarrassments.

Who was this woman?—this Mrs. Septimus Neville, if that was her name? He could have little doubt. She was Ronald’s wife; and, therefore, in the existing circumstances, his wife. It was a very awkward situation. As he reflected on the grim farce, he could not but be struck by the malignant perversity of Fate. From what insignificant causes do the most portentous consequences ensue! When Professor Booley had consulted him as to the type of nose that was to be created, he had hardly taken the question seriously. He had expected no more than a more or less shapeless lump; and all that he had desired in that moment of panic was to be made as unlike Andrew Barton, the missing murderer, as might be. And so he had asked for a curved nose—and had straightforwardly been transformed into the likeness of his cousin Ronald. It had turned out to be a fatal decision. If he had only asked for a straight nose, all would have been well. He would have ceased to be the murderer and yet he would have been no one else; merely a person with a good deal of resemblance to the late Andrew Barton. Then he would probably have had no difficulty with Molly; and with her help he could have lived, under an assumed name, in peace and security.

However, the deed was done and could not be undone. In slipping out of his own personality, he had slipped into that of another person; and thereby had taken over the reversion of that other person’s crop of wild oats. And it seemed that those wild oats were now ripe for the harvest. This woman certainly meant mischief; very naturally, as Andrew felt. And she was no contemptible antagonist. She was a fine woman, picturesque and rather handsome in a way, and obviously strong, energetic and resolute. Obviously, a woman of strong passions.

What was she planning to do? In his ignorance of her past—and his own, in his new character—he found her threats somewhat obscure. She had hinted darkly at some unlawful acts on his part, and had referred to the slamming of doors. What doors? The most probable answer was not a pleasant one.

His instinctive caution was not relaxed even when he approached his lodgings. On entering the little close, instead of going straight to the house in which he lived, he walked on to the extreme end that he might look back at the entrance and make sure that he had not been followed. And here he made a very welcome discovery. He had supposed that the close was a cul-de-sac with only one entrance. Now, he found at what he had thought to be the blind end, anarched opening like a doorway, giving entrance to a narrow alley. Following this, he emerged into a quiet by-street which presently brought him to Well Walk and so out on to the Heath. Having explored thus far, he retraced his steps, greatly encouraged; for here was almost complete security from the possibility of being followed, and tracked to his abode. He decided henceforth to adopt this approach to his lodgings and avoid the danger of entering the close from the High Street.

In the peace and security of his pleasant sitting-room he spent the evening in considering his position and making plans to meet the new complications that had arisen. Prudence suggested that he would be wise to migrate from Hampstead to some safer locality. But he was unwilling to move. His present quarters suited him perfectly. His landlady, Mrs. Pendlewick, was a delightful old woman with whom he was already on terms that were almost affectionate; and, in view of his intention to resume his painting, the little old house was quite a valuable asset. The old-world room in which he sat, with its picturesque bay window and antique furniture, gave him an ideal cottage interior which would supply the backgrounds for a dozen pictures. So he decided to stay where he was, at least for the present, and avoid, as far as possible, exposing himself to view in frequented places; and having reached this decision, he spent the rest of the evening in making out a list of the things which he would need to enable him to get to work.

On the following morning, with the list in his pocket, he set forth (after a cautious inspection of the close from his bay window) by way of the back exit and the alley and along the open Heath to the tram terminus; walking warily, like a Red Indian upon the warpath, with an alert and suspicious eye on every human being who came into sight, especially on those of the feminine gender. Arrived at the terminus, he took up a sheltered and retired position to watch the waiting tram and observe the passengers as they took their places; and only when it was on the point of starting did he enter and select a seat near the door, whence he could escape easily if the need should arise.

It was all very irksome and disturbing to the mind, this furtiveness and incessant watchfulness. As he sat in his corner with the feeling of a fugitive from justice, while the tram rumbled on its way southward, Andrew reflected almost incredulously that but a fortnight ago he had been a reputable gentleman, living an ordered, peaceful life without a single enemy in the world. However, as the journey passed without incident, his mind became gradually more at ease, and he alighted in the Hampstead Road opposite the premises of the artist’s colourman ready to give his attention to the business of the moment.

The outfit of a water-colour painter is a good deal more portable than that of a painter in oil, but as Andrew’s purchases amounted to the entire stock-in-trade, including a substantial folding easel, a stool, drawing-boards, palette, brushes, tubes of colour, a supply of paper and various other items, they resulted in two bulky and heavy parcels; burdened with which he went forth (having regretfully declined the salesman’s offer to send them, as that would have involved disclosing his address) and waited in some anxiety for the tram. The chances that his pursuer—as he assumed her to be—would happen to be on that tram were infinitesimal to the point of absurdity. Nevertheless, when the vehicle drew up in response to his hail, he scanned the faces of the female passengers nervously as he stepped up to the footboard.

Similarly, but with more reason, he looked about him apprehensively as he alighted at the terminus; and disregarding
the weight of his burden, struck out across the Heath with elaborate precaution and an occasional glance to the rear, before making the final turn into Well Walk. At the mouth of the alley he paused for a moment to make sure that the close contained no enemy and that no one was looking in from the High Street; and when, at length, he let himself in with his latchkey and closed the door, he experienced a sense of relief which he himself recognized as slightly ridiculous.

Having deposited his parcels in his sitting-room, he walked through to the back room, half-kitchen and half-parlour, to report his return and exchange a few-words with his landlady. And here he had a genuine stroke of luck. At intervals, amidst his distractions, he had been trying to think of a subject to fit into the background of his own room. Now, as he opened the door, after a perfunctory tap with his knuckles, behold a subject almost ready made. By the low, small-paned window sat Mrs. Pendlewick in a Windsor arm-chair with a little gate-leg table by her side and a lace pillow on her lap.

She looked up with a smile of welcome, viewing him over the tops of her spectacles as he stood in the doorway regarding her with delighted surprise. She made a charming picture. Figure, lighting and accessories made up just such an ensemble as the old “genre” painters would have loved; and Andrew, being a belated survivor of that school, felt a like enthusiasm. For a while he stood, taking in the effect of the group—the old-world figure with its silky-white hair and antique cap, the black pillow with its covering of lace and rows of bobbins, the simple, elegant chair and the ancient table—until the old lady became quite puzzled. “I am taking the liberty of admiring you, Mrs. Pendlewick,” he said at length.

“How do you call it bone lace?” he asked.

“It’s on account of these,” she explained, indicating the bewildering multitude of little bobbins that dangled by their threads from the edge of the work. “They were mostly made of bone, though sometimes they used horn or hard wood. But bone was the regular thing because it was easy to come by. The lads used to make ’em for their sweethearts; carved ’em out with their pocket knives, they did, and some of them were uncommonly pretty bits of work. There’s one that my grandfather made when he was courting my grandmother more than a hundred years ago; and it’s as good as new now.”

She picked out the historic bobbin—a little bone stick elaborately decorated with shallow carving—and held it up proudly for his inspection; and as he examined it she babbled on: “Yes, we’re all of a piece, me and my belongings. We are all getting on. This chair that I’m sitting in was made by my Uncle James. He was a chair maker at High Wycombe, and they used to work out in the open beech-woods. And this little table was made by my grandfather—him that made that bobbin. He was a wheelwright, but he used to make furniture in the winter when the wagons was laid up and work was slack.”

So she rambled on, but not to the hindrance of her work; for, as she talked, her fingers were busy with their task, the right hand managing the pins while the left manipulated the bobbins, and all with an effortless dexterity that was delightful to watch. Nor were her babblings of the old country life in the Vale of Aylesbury without interest; and Andrew, looking on and listening, found himself gathering the sentiment and atmosphere that he hoped presently to express in his picture.

After a spell of somewhat one-sided conversation, he ventured cautiously to approach the subject of that picture. But his caution was unnecessary, for Mrs. Pendlewick was all agog to “have her likeness drawn”, as she expressed it. “Not but what I should have thought,” she remarked, “that you might have found someone better worth drawing. Who wants to look at the likeness of an old woman like me?”

“You are too modest, Mrs. Pendlewick,” he replied. “You don’t appreciate your own beauty. Wait until you see my picture; you’ll be surprised to find how handsome you are.”

With this he retired—leaving her chuckling over her work—to unpack his parcels and to spend what was left of the morning in straining a sheet of paper on one of the boards and making one or two preliminary sketches to settle the composition and arrangement of the projected picture. Then, after the simple mid-day meal, he set up his easel in the kitchen, arranged the accessories, and, while Mrs. Pendlewick went about her household activities, he drew in the background—the interior of the room, the window and the furniture; finishing with a short sitting until it was time for the model to lay the pillow on the table, spread a handkerchief over her face, and compose herself for her afternoon nap.

The painting of that picture did Andrew a world of good. It kept him indoors during the daylight hours and enabled him partly to forget the Avenger who was on his track; and, as a normal and customary occupation, it brought him back out of the nightmare world in which he had been living, into the region of sane and ordinary human life. He worked with intense enjoyment. Painting was at all times the passion of his life; but now, to the pleasure that he always found in his work, was added a certain feeling of novelty, due to the nightmare interregnum. And, as the work progressed and he perceived with some surprise that he was painting “at the top of his form”, the discovery engendered a sense of power which was very pleasant in contrast to the sense of feebleness and futility by which he had been oppressed.

He worked steadily for four days, by which time the background was well advanced and the figure practically finished; and a most excellent portrait of the old lady it turned out, though he had not specially aimed at a likeness. They had been happy days, days of blessed relief from his troubles and distractions. But now, as the finishing work could be done at his
own time without the model's assistance, his thoughts turned to an out-door subject or a study which would serve as the background for a studio composition. By this time his terror of the mysterious woman had subsided to a great extent. After all, what was the risk of her shadowing him? She lived at Brondesbury and she had a job in the City. It was hardly possible that she could be haunting the neighbourhood of Hampstead.

Thus reassuring himself, and tempted out by a brilliant autumn morning, he set forth with his sketching kit to look for a subject. Sneaking out with his usual caution by the back way, he made for Well Walk and then struck out across the Heath to the Vale of Health. Here, on the high ground above the pond, he paused to look about him and consider which direction he should take, laying down his easel and stool the more conveniently to fill his pipe. But as he felt for his pouch, its lean and deflated condition reminded him that his stock of tobacco had run out.

It was very annoying, for his tobacconist's shop was at the lower end of High Street, a locality which he preferred to avoid by daylight. However, his stock would have to be replenished, and, as he habitually smoked as he worked, he decided to brave the terrors of the High Street rather than go on with an empty pouch. Accordingly he picked up his easel, and, turning his face westward, re-entered the village by way of Heath Street, walking quickly down that thoroughfare and the High Street and keeping a bright look-out for any suspicious figures of the feminine gender.

Having arrived safely at the tobacconist's and made his purchase, he began once more to turn over in his mind the most likely spots in which to look for a subject; and as the High Street and its northward continuations would, if he followed them, eventually bring him to the West Heath, he decided to explore that locality and particularly the neighbourhood of the Leg of Mutton Pond, in spite of the fact that this route involved the passage of close upon a mile of fairly frequented streets and roads. But the acute alarm which had affected him on the day following the encounter in the train had to a great extent subsided; notwithstanding which, as he strode along, pipe in mouth, he kept a wary eye ahead and around and even paused from time to time to look back and scrutinize such wayfarers as happened to be coming in the same direction. It was only when he had at length emerged from the village on to the rustic road known as Rotten Row, with the open Heath on all sides of him, that he was able to dismiss from his mind the idea of a possible "shadower" and give his attention to the search for a subject.

The search did not, in fact, take up very much time. He knew the place pretty well and was able to make his way almost at once to a suitable spot, which he found within a short distance from the pond. Here he spent a quarter of an hour circling round and trying various points of view with the aid of a little cardboard view-finder; and having, at length, decided on the most satisfactory composition, he set up his easel and stool, refilled his pipe and set to work with his open satchel hitched to the foot of the easel so that his materials were all conveniently within reach.

For upwards of an hour he worked away in uninterrupted peace, becoming more and more absorbed in his occupation as he proceeded from the preliminary drawing to the stage of colour. From time to time, solitary wayfarers had passed along the road below him and once a horseman had gone by at a canter. But although they all looked up at him as they passed, they had made no nearer approach. His pitch might have been in some remote country district rather than in a populous London suburb.

But his peace was not to remain entirely undisturbed. Pausing in his work to squeeze out on to his palette a fresh supply of colour from a tube, he became aware of a phenomenon familiar to out-door painters and designated in the slang of the craft a "snooper". The peculiarity of this type of onlooker is in his mode of approach. The simple rustic spectator regards the artist frankly as a public entertainer. He approaches boldly, takes up his position with an air of permanence and stares with undissembled wonder, sometimes at the painting but more usually at the painter. Not so the snooper. His approach is devious and unpredictable as to direction—excepting that it will inevitably bring him within a yard or so of the easel. He maintains an ostentatious unawareness of the painter's existence until, by some unforeseen chance, his sinuous advance (at a gradually diminishing speed) has brought him abreast of the easel; when he takes one long, hungry, side-long look and passes on.

As he squeezed out the little blob of pigment, Andrew observed a man approaching from the high ground above him, and, by the manner of his advance was able to make a provisional diagnosis. Not that he minded in the least. He had no prejudice against the snooper; who, after all, is actuated only by a reasonable curiosity tempered by good manners. It is only the unseasoned amateur who quilts at the snooper's approach.

The man drew nearer by degrees, meandering down the slope, and still profoundly unconscious of Andrew's existence, until he had reached the inevitable spot a yard or two from the artist's pitch; when he suddenly "unsnooped" (if I may use the expression) and became a normal spectator. "Mind my having a look?" he asked civily, with his eye on the painting.

"Not at all," Andrew replied; "but there isn't much to look at. I have only just begun."

With this permission, the man stepped forward and took up a position close beside the artist, making a show of examining the painting, though, in fact, he seemed more interested in the painter, judging by the frequent and somewhat furtive glances that he stole at Andrew's profile. "A lovely scene!" he remarked. "Don't you think so?"

"Well," replied Andrew, "I would rather say 'pleasant'. It is not romantically beautiful."

"No," the other agreed; "not romantic, but, as you say, very pleasant; extremely so. You are making a pretty big sketch, aren't you?"

"It isn't a sketch," Andrew explained; "it is going to be a rather detailed study, so it has to be a good size."
"I see. But there will be a lot of work in it, won’t there? If you are going to paint all the detail?"

"Yes," Andrew replied, "there will be plenty to do. But I rather like a subject with a fair amount of matter in it."

"But won’t it take a deuce of a time to do? I should think there will be a week’s work in it, at least."

"No," said Andrew, "not as much as that. I shall probably get it finished in three or four sittings."

"Will you, indeed? Three or four sittings? And how long do you generally work at a sitting?"

"As long as the light will let me," Andrew replied. "Three hours, at the outside. It doesn’t do to go on too long, or you get the light and shade all wrong."

Here Andrew paused rather definitely. He was a naturally polite and civil man, but he disliked interruptions of his work and he felt that the conversation had gone on long enough. Apparently, he had managed to convey a hint to this effect, for the man stepped back a pace and remarked apologetically: "I am afraid I am hindering you, and that won’t do. Perhaps I shall be passing this way again before you have finished your study. I should like to see the completed work. In the meantime I will wish you ‘Good morning’ and many thanks for letting me see it in its early stage."

With this he turned away and walked off towards the road; and Andrew, glancing at his retreating figure, was struck by the contrast between the brisk, purposive manner of his retirement and his aimless, sauntering approach. Apparently he was making up for the time that he had spent in the conversation; and Andrew, turning once more to his painting, proceeded to do likewise.

But in spite of his growing interest in his work as the picture progressed, the incident had left a slightly disagreeable impression. Perhaps it was natural that the disturbing and insecure circumstances in which he was living should cause him to view with a critical and suspicious eye any chance contacts with strangers. So he persuaded himself and tried to dismiss the matter from his thoughts. Nevertheless, he could not quite get rid of the impression. Little details of the incident tended obstinately to recur. He recalled the elaborate, leisurely, snooperesque manoeuvres by which the man had managed to establish the contact, and then the quick, definite way in which he had departed, with the air of having accomplished some specific object. Again there was the rather futile conversation. Obviously, the man neither knew nor cared anything about painting. Yet he had made a very evident pretext to open the conversation.

Then there was the appearance of the man. Once or twice as they were talking Andrew had looked in his face, and his artist’s eye had been quick to note certain slight anomalies. The hair was sleek and black and had somewhat the appearance of a wig; and the eyebrows were black and heavy, like little moustaches. But the eyes were pale blue and the skin was fair and slightly freckled. Now, the black-haired blond is a recognized type, and is not so very rare. Still, there was an anomaly; and to a man in Andrew’s circumstances, it tended to attract uneasy notice. Oddly enough, the one really significant point in the incident escaped him entirely. It was only by the light of subsequent events that he was able to perceive the relevancy of that apparently futile conversation.

He worked on for nearly an hour beyond his allotted time in order to get the painting well started; and, by degrees, as he became more and more engrossed in his task, the incident faded into the background of his mind. But the impression tended to revive when, the day’s work finished, he packed up his kit and started on his way home; manifesting itself in a long detour, punctuated by searching glances around, before the final plunge into Well Walk.
IX.—THE AXE FALLS

ANDREW’S forecast was so far correct that, by the end of the third sitting, his picture was virtually finished. Another short sitting to “pull it together” would see the work complete. He leaned back on his stool and viewed the painting critically and not without satisfaction. For the work of one who was not a professed landscape painter, it was quite a creditable performance; and, as the material for future studio subjects, it should be of some value.

He had sat thus for a minute or two, inspecting his work and comparing it with the landscape before him when he became conscious of someone standing behind him. Assuming that it was some stranger who had crept up to have a look at the painting, he took no notice and remained still, in the hope that the spectator would presently depart without attempting to open a conversation. But as the time ran on and the onlooker remained immovable, he began unostentatiously to put his kit together; for he had finished work, and certain internal sensations associated themselves pleasantly with the lamb cutlets which he happened to know would be awaiting him at his lodgings.

He disposed of his colours, put the brushes away tidily in their case, emptied the dipper and put it into its special pocket, and still the person behind him made no move. Finally, he took the pin-frame board, on which the painting was stretched, off the easel and slipped it into its compartment in the satchel. Then he stood up and turned round to face the spectator; and, instantly, he realized that some kind of mischief was brewing. There was not one spectator, but three; two tall, massive men and one shorter; and though the latter had close-cropped reddish hair and no eyebrows to speak of, Andrew had no difficulty in recognizing the “snooper” of two days ago.

The shorter man looked at him insolently and asked: “Well, have you quite finished?”

“I have finished work for to-day,” Andrew answered.

“Good!” the other rejoined. “Now we can get to business. I don’t think you spotted me a couple of days ago.”

“I did not,” Andrew replied, “and I don’t spot you now. Who are you?”

The man laughed, contemptuously. “Well, I’m damned. Tony!” he exclaimed. “Lizzie’s right. You’ve got the cheek of the devil. Pretending to my face that you don’t know who I am!”

“It is no pretence at all,” said Andrew. “You are a complete stranger to me.”

The man laughed again, more savagely, and was about to make some further rejoinder when one of the tall men interposed. “There’s no use in wasting time on talk,” said he. “Is this the man?”

“Yes,” was the reply. “This is the man.”

Thereupon the tall man took a pace forward, and, touching Andrew lightly on the arm, said:

“I am a police officer, and I arrest you, Anthony Kempster, on a charge of fraud and personation.”

“But,” protested Andrew, “my name is not Anthony Kempster.”

“That may be,” replied the officer, “but my information is that you are Anthony Kempster and I hold a warrant for your arrest. You can see it if you like.”

“There is no need,” said Andrew. “I am not disputing your authority to arrest Anthony Kempster. My point is that I am not Anthony Kempster. This gentleman has made a mistake.”

“Well, you know,” the officer replied, not uncivilly, “we can’t go into that here. You must come with me to the station. Then the Inspector will read the charge over to you and you can say anything that you want to say. I can’t listen to any statements. My duty is simply to arrest you and hand you over to the proper authorities. And you had better not say anything until you get to the station. May I take it that you are coming along quietly?”

Andrew smiled sourly. “It doesn’t seem as if I had much choice,” said he. “I’m certainly not going to make a scene, and I hope you are not going to.”

“No,” replied the officer, “you will not be subjected to any unnecessary indignities if you don’t give any trouble. We’ve got a car waiting down the road. We shan’t have to walk you through the streets. Are you ready?”

“I shall be when I have strapped my easel and stool together,” Andrew replied.

“Very well,” the officer agreed. “Be as quick as you can.”

Andrew folded up the easel and the stool and strapped them together. Then, grasping the handle of the strap, and slinging the satchel over his shoulder, he turned to the officer. “I am at your service now,” said he; whereupon the two officers placed themselves one on either side, and, as the informer walked on ahead down the slope, they followed in his wake. Looking forward in the direction which the red-headed man was taking, Andrew now saw, on the road below, just at the entrance to Rotten Row, a large car, and, a few yards ahead of it, a taxi-cab. As they bore down on the car, Andrew observed that the driver, who wore some kind of official uniform, had emerged from his place by the wheel and was standing by the door, which he was holding open; and, glancing at the taxi-cab, he could see, though not very distinctly the face of some person peering out through the rear window. But he had not much time for observation, for when they reached the car one of the officers immediately stepped in and directed him to follow, which he did. Then the other officer
entered and was shut in by the driver, who now walked round to the front and took his place at the wheel; and Andrew, glancing out through the front window, saw the redheaded man getting into the taxi, which started as he slammed the door. After a few seconds the car—the engine of which was already running—started forward and the mysterious and not very promising journey had commenced.

It was not in any sense an agreeable journey. Sitting jammed in between the two rather bulky officers, Andrew's bodily discomfort was swallowed up by his mental distress. For he could not view the immediate future without the gravest forebodings. He had disclaimed all knowledge of the red-headed man, but, as he recalled his features and his colouring, he was conscious of a distinct reminiscence of the woman who had threatened him with retribution. With those threats he naturally associated the present proceedings; and although the whole affair was founded on a mistake, he had grave misgivings as to the possibility of rectifying that mistake. "I take it," said he, "that that man who was with you is not a police officer?"

"No," was the reply, "he is a civilian. Name of Blake. Said you knew him."

"I don't know either the name or the man," said Andrew.

"Well," the officer rejoined, "he knew you—unless, as you say, he has made a mistake. However, we'd better not discuss that now; and if you take my advice you won't do any talking until we get to the station, because whatever you may say will be taken down in writing and used in evidence, and then, perhaps, you will wish you hadn't spoken."

Andrew thanked the officer for his advice, and in pursuance of it relapsed into silence. He had plenty to think about; but, oddly enough, his thoughts tended principally to concern themselves with Mrs. Pendlewick. At this moment she was probably laying aside her lace pillow and considering, with an eye on the old wooden-faced clock, whether it was yet time to commence operations on the lamb cutlets. His direct, physical interest in those cutlets had suddenly become extinct; but his thoughts turned wistfully to the peaceful little room, the table with its snowy cloth and immaculate china and the picturesque little brown jug which gave the beer an added flavour. He could see it all vividly in his mind's eye, and already he began to wonder gloomily when he should look on it again in the flesh.

But his chief concern was for Mrs. Pendlewick. He thought of her with all her preparations made for his entertainment, awaiting him, at first impatiently, then anxiously, and then, as the time ran on, and it became evident that something out of the ordinary had happened, in real alarm. He was very troubled about her and wondered vaguely what she would do when night came and still he did not return. Would she set inquiries on foot? And if so, how would she go about it? Perhaps she would apply to the police. He hoped not; because it was his intention, at present, not to disclose the whereabouts of his abode. He didn't want the police to get access to his rooms to rummage among his possessions and possibly establish a connection between Molly and the alleged Anthony Kempster. That would be intolerable in any case; but, if he should be unable to dispel the illusion as to his identity, it would be absolutely disastrous.

So his thoughts rambled on until the slowing down of the car in a rather narrow street recalled him suddenly to his present business. He had taken no note of the route that the car had followed and had no idea as to his present whereabouts; but when the car stopped opposite a building with a large doorway and a constable in the uniform of the City Police came forward to open the door, he realized that he must be somewhere in the City of London.

The senior officer stepped out and halted to wait for him, and he followed immediately with the other officer close on his heels. They entered through the wide doorway and passed into a large, bare room furnished with some benches and a few plain Windsor chairs. On two of the latter were seated the only occupants of the room; the red-headed man and the woman whom he had met in the train. The former greeted him with an insolent stare and a half-suppressed grin; the latter—to whom he bowed stiffly, raising his hat—gave him one swift glance and averted her face. It was evident to him that she was greatly distressed and agitated, for not only were there traces of tears on her pale and drawn face, but her hands, resting on her lap, trembled visibly. It was easy to see that already she was being torn by pangs of remorse.

The senior officer had gone out of the room immediately on their arrival. He now returned and took charge of Andrew, beckoning to the woman to follow. "Not you," he added, as the red-headed man rose from his chair. "You stay where you are. I'll send for you if I want you."

With this, he conducted Andrew out of the room, along a passage and into a large, barely furnished office where an inspector sat at a desk with a number of papers before him; a grave, scholarly-looking man with a bald head and a pair of round-eyed, horn-rimmed spectacles. As they entered, he motioned the woman to a chair and cast an inquisitive glance at Andrew. "Is this Kempster?" he asked.

"Yes, sir," was the reply.

"Has he made any statement?"

"No, sir, excepting that he denies that he is Anthony Kempster."

The inspector nodded, and, pulling out a drawer of the desk, selected a paper from a number of other documents and turned to Andrew. "You will want to know exactly what you are charged with. I will read out the charge and then hear if you have anything to say. It is that you, Anthony Kempster, did, on the 20th of April, 1919, and on divers other occasions, falsely personate one Francis Redwood deceased, for the purpose of effecting a fraudulent life insurance. That is the charge. Now, is there anything that you wish to say? You are not bound to say anything, but if you do, I have to caution you that anything that you may say will be taken down in writing and used in evidence."
“All that I have to say,” said Andrew, “is that I am not Anthony Kempster.”

The inspector looked round at the woman and asked: “What do you say to that, Mrs. Kempster? Is this man your husband or is he not?”

“I say that he is,” she replied in a low voice.

The inspector turned to Andrew. “Now,” said he, “what do you say to that? Do you say that this lady is making a false statement?”

“No, not at all,” Andrew replied earnestly. “I have not the least doubt that she is speaking in perfect good faith. But she is mistaken. She is, indeed. I can only suppose that I bear a remarkable resemblance to her husband, but I assure you that I never met her until a few days ago when she spoke to me in the train. I beg you, madam, to look at me again and see if you are not mistaken.”

As he spoke, he looked appealingly in the woman’s face; and as he did so, he saw that it had taken on a very curious expression—an expression of which he could make nothing. Whether it denoted doubt or hope or relief or merely bewilderment he was unable to judge. But it was a very singular expression: so singular that the inspector noticed it, for he remarked: “I suppose there isn’t any mistake? I don’t see how there could be, but still, we want to be sure. Are you sure, Mrs. Kempster?”

She hesitated for a few moments and then replied, doggedly: “Yes. He is Anthony Kempster.”

The inspector turned once more to Andrew and said in a patient, persuasive tone: “You hear that. What do you say now?”

“I say again that this lady is mistaken.”

“Very well,” said the inspector, in the same quiet, persuasive tone, “let us suppose that she is. Then, you see, if you are not Anthony Kempster, you must be someone else. You see that, don’t you?”

Andrew had to admit that the inspector’s logic was unimpeachable. “Then,” the inspector pursued, “all that you have got to do is to prove that you are someone else and we shall know that you can’t be Anthony Kempster. Come, now. Tell us who you are.”

Andrew was, naturally, not unprepared for this question, and had already decided on his reply. "I think," he said, “that, under the present circumstances, I would rather not give my real name.”

“Very well,” said the inspector, without the slightest trace of irritation, “then, for the present, we will call you Anthony Kempster. Any objection to telling us where you live?”

“I would rather not give any address, at present,” Andrew replied.

“Quite so,” said the inspector. “Not a very communicative gentleman. But if you won’t tell us anything about yourself, we shall have to find out as best we can. Perhaps you have got something in your pockets that will help us.”

He glanced significantly at the officer who was standing by; who immediately stepped forward and laid an expert hand on Andrew’s coat in the region of the right breast. “What’s this?” said he. “Feels like a pocket-book.”

He slipped his hand into the pocket and adroitly fished out a wallet, which he handed to the inspector; and, as Andrew saw it transferred, his heart sank. For it was Ronald’s wallet; the one which he had found in the pocket of the coat on that fatal day at Crompton. He had used it ever since, but merely as a receptacle for notes; and exactly what else it now contained he had no clear idea. There were one or two closed compartments, which he had opened and glanced into in case one of them should contain his own or any other letter which might have to be burned. But there were no letters; and the few scraps of crumpled paper that were in them he had carelessly left there unexamined. It was a singularly foolish thing to have done, as he now realized; and he watched the inspector’s proceedings with growing alarm. “Four pound-notes,” the latter remarked, laying them out on the desk. “Clean ones. Look as if they had come from a bank.” He looked into the open compartments, and, seeing that they were empty, went on to the two closed ones. Opening one, he apparently drew a blank, for he reclosed it and passed on to the other. From this he extracted three crumpled pieces of thin paper, one of which he smoothed out carefully and studied with evident interest. Turning to Mrs. Kempster, he asked: “Do you know the names Bailey and Warman?”

“Yes,” she replied. “They are wine merchants at Ipswich.”

“Did you ever live at Ipswich? And if so, at what address?”

“I lived at Ipswich with my husband at Number 23, Beckton Street.”

The inspector nodded. Then, taking up the piece of paper, he held it out towards Andrew for his inspection. “Just take a glance at that,” said he.

Andrew took a glance at it; and instantly realized that he was lost. It was a tradesman’s bill (“account rendered”), and it set forth that A. Kempster, Esq., 23, Beckton Street, was a debtor to Bailey and Warman, Wine and Spirit Merchants, Ipswich, in the sum of four pounds. “Well,” said the inspector, “that seems to dispose of the mistaken identity racket. I presume you agree with me?”

“I agree with you that it seems to,” Andrew replied. “But I still maintain that I am not Anthony Kempster.”
The inspector smiled sardonically. "You certainly know your own mind," said he; "but you have got to explain how you come to have a bill in your pocket addressed to A. Kempster, Esq. Can you explain that?"

"I am afraid I can’t," Andrew had to admit.

"No," said the inspector. "I don’t suppose you can. And that, I think, completes our business for the present. You will remember, Mrs. Kempster, that you are bound over to give evidence. You had better come back here about three o’clock. We shall take Kempster before the magistrate as soon as possible. Say a quarter to three."

While these directions were being given Andrew looked at his alleged wife. Her expression had changed and was more inscrutable to him than ever. There was nothing in it in the least suggestive of elation or triumph. Rather did it suggest disappointment and the most profound dejection. As the inspector finished speaking, she rose, and, without a glance at Andrew, turned away and walked slowly towards the door. Suddenly she snatched out her handkerchief and held it to her face; and there came to his ear the sound of muffled sobs.

The inspector followed her with an impassive, but not unkindly eye, and, as she disappeared, he proceeded to moralize. "Women," he remarked, "are kittle cattle. She started the ball, all agog to get it moving; and now she’d like to stop it. And she can’t. She doesn’t know her own mind as well as you do, Kempster."

He smoothed out the other pieces of paper, and, having glanced at them, attached them to certain other documents which he put away in a tray. Then he copied on a slip of paper the numbers of the notes, and, having put this slip with the other papers, replaced the notes in the wallet and handed the latter back to Andrew. "You may as well keep that for the present," he remarked. "You will be detained here until we are able to bring you before the magistrate, which we shall do this afternoon."

With this, he drew his chair up to the desk and resumed the studious pursuits in which he had been “discovered”, as the playwrights express it, and Andrew reverted to the custody of the attendant officer, who proceeded to pilot him out of the room, and presently to transfer him to the care of a uniformed constable; who conducted him to a passage in which were a couple of rows of black-painted doors, each distinguished by a number. One of these doors the constable unlocked and opened; and, having thrust in his head and sniffed, shut it again and passed on to the next. Here, the result being apparently satisfactory, he threw the door wide open and invited Andrew to enter. "I may as well relieve you of your kit," he remarked, assisting his charge to remove the satchel from his shoulder and taking possession of the easel and stool. "The things will be taken care of and given back to you at the proper time. And I must just see what you have got in your pockets. It is only a formality; but there are certain things that you are not allowed to have about you while you are in custody. Just put them out on the table and let me look through them."

Andrew emptied his pockets, laying the various objects on the little fixed table. These the constable glanced through, and, having satisfied himself that the pockets had been really emptied, selected from the collection a pocket knife and a small bundle of string. "You can put the rest back for the present," said he, "and I hope you’ll be able to keep them and have the others back. And now, what about grub? When did you have your last meal?"

"About eight o’clock this morning," Andrew replied. "But I don’t really feel as if I could manage any food."

The constable shook his head. "That won’t do," said he. "Mustn’t give way. You’ll be going before the magistrate presently, and you’d better not go on an empty stomach. Take my advice and get a square meal while you can. You’ll feel better after it. You have got some money, and you can have anything in reason that you want. Better let me send out for something."

Andrew accepted the well-meant and obviously sensible advice, handing over the modest sum that his custodian suggested as sufficient. Then the constable retired, locking the door and leaving him to his own reflections. Those reflections were, naturally, not of the most agreeable kind and were singularly confused. The attitude of the constable impressed him with mild surprise. He might have been a nurse or attendant in some Erewhonian convalescent home for moral invalids, so solicitous did he seem for the welfare of his charge. And even the dry, impersonal civility of the other officers was not what he would have expected.

But, once more, his thoughts reverted to Mrs. Pendlewick. By this time, the lamb cutlets were ruined beyond redemption, but she would not have given him up. He pictured her sitting, working automatically at her lace, looking up from time to time at the clock and painfully aware of the aroma of the half-cremated cutlets.

His meditations were interrupted by the arrival of his meal; and, acting on the further exhortations of the constable, he made a determined and moderately successful effort to dispose of it, with the result foreseen by that experienced officer. He felt better in a bodily sense. The physical depression left him, and even his mental state seemed to be improved.

But his mind was still in a state of utter confusion. Presently he would be brought before a magistrate and charged with a crime that he knew nothing about. What was he to say? Of course, he would declare his innocence, and he would continue to deny that he was the person charged. That he must do, since it was the actual truth. But he realized the utter futility of it. The wine merchant’s bill had labelled him Anthony Kempster, and to that “attribution” he had no answer. It was even doubtful whether he would not further prejudice his case by saying anything at all.

At any rate, there was nothing that he could do. When the time came, he would have to stand passively and watch this tragedy of errors working itself out to its illogical conclusion. He felt like a swimmer in some swift stream, borne along by the irresistible force of the torrent. Ahead of him the rapids were roaring; but he could do no more than drift passively to
his destruction.

X. — GAOL

As Andrew took his place in the dock at the police court, he looked around him with a sort of dull, impersonal curiosity. He had never been in a police court before and had but a vague idea as to the nature of the proceedings that were conducted in such places. First, he noted the persons present. Of those whom he knew, the one who instantly caught his eye was his accuser, Mrs. Kempster; and as he looked commiseratingly at her pale, haggard face and the restless hands that were incessantly clasping and unclasping themselves, he realized the truth of the inspector's remarks. It was easy to see that she would have given a good deal to be able to undo the knot that she had tied.

Sitting beside her on the same bench was the redheaded man; and, now that he saw them together, the likeness between them which he had detected at the morning's meeting was still more noticeable. From them his eyes wandered to the inspector and the two officers who had arrested him and, passing quickly over the background of mostly squalid strangers who had loafed in to look on, he looked lastly at the magistrate, a wooden-faced elderly man of a pronounced legal type.

The proceedings were opened by a senior police officer, apparently a superintendent. He began by intimating that he was proposing only to produce evidence of arrest and identification and that he would ask for a remand to enable the necessary evidence to be obtained and the witnesses notified. Then he went on to give a general outline of the case; to which Andrew listened with profound interest, having, up to this time only the most obscure notion as to what he was accused of. “This,” said the superintendent, “is a prosecution under the False Personation Act. The prosecutors are the Griffin Insurance Society, but it has not been possible for them to be represented on this occasion. The facts of the case are, in broad outline, as follows:

"In February, 1919, the accused, Anthony Kempster, came to live as a boarder with Mr and Mrs. Francis Redwood at Colchester. Francis Redwood was a retired builder who had given up his business on account of bad health. He was more or less an invalid, and, in addition, he suffered from an aneurism, from which it appeared certain that he would die in the course of a year or two. He had saved a little money, on which he lived, but his means were very small and he took a boarder to eke them out. In view of his bad health, and especially of the aneurism, he had some time previously made a will, leaving the little property that he had to his wife and making her sole executrix.

"When the accused had been living with them about a month, he began to urge Mrs. Redwood to insure her husband's life, pointing out how very little provision there was for her under the will. But, of course, Redwood was uninsurable by reason of his aneurism, as she explained to him, the question of insurance having been already considered. Then Kempster suggested to her that he thought he could manage the insurance if she left the business to him, but stipulated that nothing should be said about the matter to her husband. She did not at all clearly understand what it was that he proposed to do, but, as he assured her that he would take the whole responsibility, she agreed and promised to keep the affair secret from her husband.

"Then Kempster left Colchester for a time and went to live at Dartford under the name of Francis Redwood. There he consulted a Dr. Croft about his health—which was quite good—and mentioned that he was thinking of insuring his life. Now, Dr. Croft was the local examiner for the Griffin Insurance Society, and he naturally recommended his office and, at Kempster's request, gave him a proposal form. This Kempster filled up—in the name of Francis Redwood—giving the name of Dr. Croft as his ordinary medical attendant. Then he went up to the London office for the medical examination and in the end managed to effect an insurance in the sum of two thousand pounds.

"As soon as the business was concluded, he went back to Colchester and took up residence with the Redwoods. After a month or two, he notified the Insurance Company of his change of address, still in the name of Francis Redwood, although he had by now resumed his own name of Anthony Kempster, imitating Redwood's signature as he had done on the proposal form.

"In April, 1921, shortly after the second premium had been paid, Francis Redwood died. But he did not die of the aneurism. He died of pneumonia following influenza, and a death certificate was given to that effect. Accordingly, as there was nothing unusual in the circumstances of the death, no inquiries were made but when the will was proved, the two thousand pounds were paid to the executrix in the ordinary way.

"About six months after the death of Francis Redwood, Kempster proposed marriage to the widow, Elizabeth Redwood, and was accepted. They were married at Ipswich and went to live there, having sold the Colchester house. After the marriage, Kempster managed to persuade his wife to allow him to put all their money into his bank with a view to making some investments. But those investments were never made. What became of the money, Mrs. Kempster never knew. In some way it disappeared; and then Kempster himself disappeared; and from that time until a week or two ago she never set eyes on him again.

"Then one day she got a passing glimpse of him getting into a train and was subsequently able, with the assistance of her brother, Joseph Blake, to locate him as living in the neighbourhood of Hampstead. There he was arrested this morning by Detective Sergeant Morton. On his arrest, he stated that his name was not Anthony Kempster and that he had never heard of such a person. At the police station he was confronted with Mrs. Kempster, who identified him as her husband, Anthony Kempster, but he still denied that that was his name and insisted that she was mistaken him for someone else.”
“Apart from the identification by Mrs. Kempster,” said the magistrate, “is there any evidence that he is Anthony Kempster?”

“Yes, your worship,” replied the superintendent. “As he refused to give any name or address or any sort of account of himself, it was necessary to search him. Then there was found in his pocket a bill addressed to A. Kempster; but he still denied that that was his name. That is a summary of the case, your worship, and I shall now call the witnesses to prove the arrest and the identity.”

The first witness was Detective Sergeant Roger Morton who deposed that, acting on information received, he had that morning proceeded to Hampstead Heath where he had arrested the accused, who was then engaged in making a sketch of the Heath, in execution of a warrant. He had administered the usual caution and the accused had made no statement beyond a flat denial that he was the person named in the warrant. Accused had not, however, resisted arrest.

The next witness was Inspector Frank Butt. He deposed that the accused had been brought to the station by the last witness at 1.45 pm. He (the inspector) had read the charge to him and administered the usual caution. The accused was then confronted with Elizabeth Kempster, who identified him as her husband, Anthony Kempster. The accused declared that she was mistaken and that he was not Kempster, but he would not say who he was or give any address or any account of himself whatever. He was then searched and there was found in his pocket a wine merchant’s bill (produced and handed to the magistrate), addressed to A. Kempster. He could not account for his having this bill in his pocket, but he still maintained that the charge was a mistake and that he was not Kempster.

When the inspector had retired, the superintendent intimated that that was all the evidence that he was producing on this occasion; that he was asking for a remand to enable him to produce the other evidence and summon the witnesses, and that, as the accused refused to give any account of himself and his place of abode was unknown, he opposed bail.

The magistrate looked curiously at Andrew for a few moments and then said: “You have heard the evidence that has been given. Do you wish to say anything? You are not bound to. But—“ and here followed the inevitable caution.

“I don’t wish to say anything at present,” Andrew replied, “excepting that my name is not Anthony Kempster and that Mrs. Kempster is mistaken in believing me to be her husband.”

“What do you say that your name is?” the magistrate asked.

“I prefer not to give my name, at present.” Andrew answered.

“Nor your address or occupation?”

“No, your worship.”

“Then,” said the magistrate, in the calm, impersonal tones to which Andrew was becoming accustomed, “you will have to be remanded in custody. You are remanded for seven days.”

Thereupon Andrew was taken in custody by two constables and removed from the court. But he was not taken back to the police cells. Instead, he was conducted out of the building by a side passage and, on emerging into the street, found a prison van drawn up at the kerb. Passing—like a wedding guest, but with certain differences—between two rows of spectators, he was conducted to the van and assisted up the back steps into the dim and rather malodorous interior.

He had often wondered what the inside of a prison van was like. Now his curiosity was satisfied. It consisted of a dark and narrow passage with a row of doors on either side. Each door was furnished with a keyhole and a small grated window like the inspection trap in a convent gate. When one of the doors was opened, it disclosed a narrow compartment suggesting something between a sentry box and an extremely ascetic sedan chair, with a fixed seat, polished by friction with the persons of dynasties of-disreputable occupants, and a small space in front of it to accommodate the feet of the sitter. On this uncommodious seat Andrew sat down gingerly, not without some uncomfortable speculations as to the characteristics and personal habits of the last occupant; and as soon as he was seated, the door was closed and locked.

It was a strange experience and far from an agreeable one. On the closing of the door, he seemed to be plunged into almost total darkness, excepting a faint glimmer from a ventilator over his head and the little square of twilight before him which indicated the position of the tiny grated window. For the back door of this criminal omnibus, when it was closed, admitted no more light than what was able to struggle through a very moderate-sized grated opening, and even this was largely obscured by the person of the “conductor”.

But any deficiency in the matter of light was more than made up in smell. The whole vehicle was pervaded by the peculiar and distinctive odour of unwashed humanity; and, as the van proceeded on its round, picking up from time to time fresh consignments (which were fresh only in a limited sense), the flavour of the “imperfect ablutioner” became ever more pronounced. Yet these halts were not altogether unwelcome; for then, for a few moments, the back door was flung open and the depressing darkness was relieved by a flood of light, by which Andrew, peering out through the little grating, could get a glimpse of the new arrivals and could observe that the few other gratings which were within the range of his vision were each occupied by an eye similarly engaged in inspecting the new tenants.

But even the round of a prison van comes at last to an end. The termination of this journey was indicated to Andrew by a slowing down of the vehicle, a sudden increase of darkness, and then, as the van stopped, a clang from the rear as of the shutting of a heavy gate. After a brief interval there came a sound from the front like the opening of another gate; the van moved on, the light reappeared, the gate—now behind—clanged to and its closure was immediately followed by the click of
a large lock. Finally, the van stopped once more, the back door was opened, the doors of the respective cells were unlocked, and the process of unloading began.

As he took his place in the queue that filed in at the prison gate, Andrew glanced curiously at his fellow sufferers. Assuming with more probability than charity that they were mostly criminals, their appearance was no advertisement for crime as a profession. Nor did it suggest that the profession was favoured by the elite of mankind. Manifest poverty and physical unclean-ness were the distinguishing characteristics of the immense majority and, taken as a random sample of the population, even this small group was noticeably below the average both in physique and in the outward signs of intelligence. It looked as if crime were not a “paying proposition”, though, to be sure, it might be argued that the present assembly represented only the unsuccessful practitioners.

Meditating this question as he followed the shuffling crowd, Andrew was yet again impressed by the civil and tolerant attitude of the officials. In the reception ward, the officer who presided over the ceremonies instructed him quite kindly in the necessary preparations; and the doctor who examined him might have been the medical referee of an insurance office. Nevertheless, the general atmosphere of the place was unspeakably grim and forbidding. Never for a moment was the inmate allowed to forget that he was a prisoner in the custody of the law. As he followed the warder from “Receptions” to his final resting-place in a faraway gallery, every one of the innumerable light iron gates which they passed had to be unlocked to admit them and was immediately locked behind them; and when, tramping along the iron-floored gallery, they came to a door bearing a number corresponding to that on the label which had been attached to his coat, that door had to be unlocked to admit him to his cell, though being furnished with a spring lock, it fastened him in without the aid of a key. But before it was closed the warder, having gathered that he was a “green hand”, lingered to give him a few general instructions to explain the use of the bell by which an attendant could be summoned and to caution him against the improper use of this important appliance. Then he retired from the cell; the heavy door slammed, the spring lock snapped audibly, and the sounds from the galleries without suddenly became muffled and remote.

When Andrew was left alone he proceeded to do what every man probably does when he finds himself in prison for the first time; he made a tour of inspection of his apartment and examined its furniture and appointments. There was little of the picturesque dungeon in the appearance of the cell. It was just a small, bare room with whitewashed walls and a fair-sized iron-framed window with very small panes. The furniture consisted of a small fixed table, a solid stool and a plank bed, with the bedding—mattress, pillow, blanket, sheets, rug and pillow-slip—neatly rolled up into a cylindrical bundle, not without regard to the decorative possibilities of the variously-coloured items. There was a tin jug, filled with water, a drinking vessel (officially known as a “pint”), a tin plate, a salt cellar and a wooden spoon. Other conveniences included a tin basin, a comb and brush, a dust pan, a queer little sweeping brush like a tiny besom without a handle, and a slate with a stump of pencil attached by a length of string. A bell push communicated with the warder’s room and actuated a sort of semaphore outside the cell; and, lastly, the massive door was furnished with a tiny round window of thick glass covered by a sliding shutter—but the shutter was outside and beyond the prisoner’s control.

Having made his inspection, he looked round for other objects of interest. The slate did not attract him. As a writing or drawing medium it was a poor substitute for the excellent paper to which he was accustomed; and the stump of pencil was worn to a shapeless end which repelled him. He would have liked to sharpen it, but his knife had been taken from him. Then he transferred his attention to the walls of the cell. In one respect they conformed to the traditional ideas of a dungeon, for they were covered with the comments and lamentations inscribed by former tenants; and, as these were written in lead pencil, it was obvious that they were the work of “remands” like himself. He wandered round idly reading them and filled with an ever-increasing wonder at their amazing puérility and the almost incredibly low intelligence that they suggested. He was surprised, too, to notice the almost complete absence of any tendency to obscenity in them. They seemed to be just the harmless outpourings of perfectly vacant minds. Most of them might have been the work of backward children of eight or nine.

Some were mere pathetic expressions of self-pity, such as “Poor old Blower”, repeated more than a dozen times on different parts of the walls. Others gave baleful particulars of their offences with rough estimates of their expectations. Thus, “Joe Viney from Wood Green expects a stretch for stabbing”; “Moley from Upper Rathbone Place, Oxford St. W. Committed for trial North London Sessions for a Bye”; “Noble in for a bust”; “Jim Brads from Rathbone Place fullied for a bust”; “T. Savage from Chapel St expects 6 wks.”; “J. Williams expects 3 years”; and so on. Others made complaints or accusations; as “Charles Kemp was put away for deserting by Mr. Goldstein of Hackney road”, or “Jackson is the one. Hurry up and catch HIM. Jackson you have ruined me. Jackson will get 300 years”; while yet others merely recorded names, as “Mikey from the Boro.”, written in reverse in six places with several unfinished attempts, and “Hymey from Brick Lane and Ginger Jim”.

Andrew studied these curious memorials gravely and with deep interest. They were certainly quaint, and to some they might have been amusing. But not to Andrew. To him their significance was too sinister. They labelled their writers the refuse, the “throw-outs”, of humanity. And what was he but one of them? He drew the stool up against the wall to provide a back, and, seating himself, fell into a train of vague reflection on the dismal prospects that were opening out before him. His feeling was one of utter helplessness. He was the victim of a whole complex of illusions, and he did not in the least see how those illusions could be dispelled. Perhaps some ideas might come to him later. There was plenty of time to think over matters—seven days before he had to make his next appearance before the magistrate. And so his mind rambled off to other subjects, to thoughts of Molly and especially to Mrs. Pendlewick.

His reflections were interrupted by the arrival of his supper; a hunk of brown bread and a mug of cocoa, both excellent
and very welcome. Refreshed by his meal, he took a little exercise pacing up and down his cell. Finally, having laid his mattress and made his bed, he took off his shoes and some of his clothes and laid himself down on his not very resilient couch.

Naturally, in the early part of the night, he slept little if at all. The day’s excitements and the unusual surroundings tended to keep him awake, as did the lack of the customary darkness; for, when the daylight faded, the cell was lighted by a square of ground glass illuminated by a lamp outside the cell, which threw in its unwelcome rays throughout the night. And then there was the “Judas”—the little round spy-hole in the door. To Andrew that was the most disturbing influence of all. He found himself continually watching it with expectant nervousness and straining his ears to catch the foot-falls of the warder on his rounds and to be ready to see it open. Later he learned that the night warders wear shoes with soft soles, which explained why, on each occasion, the uncanny, secret “blink” of the Judas-like the opening and closing of a bird’s eye-startled him by occurring silently and without warning. And each time it left him more nervous and more profoundly humiliated.

But even a prisoner’s night is not endless. He heard midnight strike on some clock in the world of freedom without, and then he knew no more until he was roused to clean up his cell and get ready for breakfast. And so began a day which was like all the succeeding days. He washed himself in the tin basin and even brushed his hair gingerly with the official brush. When he was summoned out for exercise, he tidied himself up as well as he could, and, having taken his number label, or badge, down from the hook on which it hung when he was “in residence”, he attached it to his coat in the prescribed manner and was ready to take his place in the ranks of the other occupants of the gallery and be marched off to the prison yard.

The process of taking exercise was doubtless beneficial, but it was not exhilarating. The surroundings of the exercise ground of a local prison are hardly romantic. Still, to Andrew, on his first morning, the experience had the charm of novelty. He found himself embedded in a long and squalid procession trudging interminably at a quick, mechanical stride along narrow, sinuous paved paths just wide enough to accommodate the single file that moved along them; supervised by a number of warders, each of whom stood, statue-like, on a low stone pedestal, from which he could look over the heads of the exercisers. Nominally, the march was conducted in absolute silence. Actually, there was a more or less continuous hum of conversation of a very curious ventrilquial quality due to the fact that the “old hand” can talk without moving his face. From time to time a warder would call out sternly to the converstationists to “stop that talking”; but still the mumble went on. Even the most experienced officer is baffled by a talker who stares straight at him. Even the most experienced officer is baffled by a talker who stares straight at him.

The experiences of this first day included two that were not repeated. The first was connected with the prison photographer; who, having looked him over critically, proceeded to execute a couple of portraits of him, one full face and one in profile. The other brought him within the province of the officer who took the finger-prints of His Majesty’s guests and entered their descriptions and other “particulars” on the prescribed form for deposit at the Criminal Record Office; to all of which procedure Andrew submitted without demur, although, as an unconvicted, and therefore nominally innocent man, he was entitled to object. But he saw no reason for objecting; indeed, he was fast settling down into a state of dull fatalism, apprehensive of the future but hopeless of any means of controlling it.

This fatalistic attitude was viewed with deep disapproval by the fatherly middle-aged officer who looked after him by day. Andrew, as we have said, was a naturally polite man, instinctively suave and courteous in manner, with the obvious appearance and habits of a gentleman, circumstances which commended him to Officer Bolton, who had been in the army and had something of the old soldier’s social exclusiveness. Moreover, Andrew gave no trouble. He obeyed the rules, accepted the discipline, made no complaints as to his food or otherwise, and was in all respects a model prisoner, and, as such, was duly appreciated by the staff who had to deal with him.

But his passive attitude, apparently taking no measures for his defence, caused the good-natured warder great concern; and, in the course of his official visitations, he took the opportunity to offer advice and admonitions which became more urgent as the days passed. “Look here, Kempster,” he said, “you ought to have legal assistance. Get a decent solicitor, tell him all about it and let him make out the best case he can.”

“I don’t see what he could do for me,” replied Andrew, “as I don’t choose to give my real name.”

“I can understand that,” said Bolton (who, to Andrew’s astonishment, seemed quite prepared to entertain his innocence). “But it’s no use being thin-skinned. The name is bound to come out, sooner or later, if you get sent to prison. You know, you are not taking this affair seriously enough. You are charged with personation. Now, that’s a felony; and the magistrate can’t deal with it. He will commit you for trial at the Old Bailey if you can’t make a proper defence, and you may get a nasty sentence. Don’t wait for that. Get a solicitor and tell him the whole truth. Don’t you see, my lad, it’s no use your going into court and telling them that you didn’t commit the crime and they’ve arrested the wrong man. That’s what every accused man says, and nobody takes any notice. You’ve got to get someone who knows the ropes to manage your little business. And you’ve got to look sharp about it. Time’s running on. In three days more the remand expires, and then you’ll be up before the magistrate for the second hearing; and, if you haven’t got something definite to say, you’ll be fullied as the crooks call it—committed for trial. Now, you think over what I’ve said, and don’t take too long thinking over it.”

Accordingly, Andrew did think over it; but his thinking brought him no more forward. Once more he considered the advisability of boldly proclaiming his real identity. But the plan did not commend itself for two reasons. First, it would be useless. No one would believe him. There was Elizabeth Kempster, ready to swear to him as her husband and probably there would be other witnesses who would swear to his identity as Anthony Kempster. And what evidence could he
produce in support of his statement that he was the late Andrew Barton? To call Molly would be obviously useless. Her manner towards him when he had visited her had shown evident mistrust. She would certainly scout his claim to be her dead husband as a transparent and impudent fraud. The only witness who would be of any use—Professor Booley—was on the high seas or in some inaccessible part of the United States.

But even if he were able to prove his real identity; how would that help him? He would merely prove that instead of Anthony Kempster, charged with personation, he was Andrew Barton, charged with murder. It was the old dilemma; and, so far as he could see, there was no way out.

So, once more, he was thrown back on his original position. Fate had him fast in its clutches. He had no choice but to accept whatever might befall. And in this frame of mind he waited in dull expectation for the second hearing; waited to see what Fate really had in store for him.

The second hearing impressed him as something compounded of a nightmare and a chapter from The Arabian Nights. In spite of Bolton's exhortations, he was unrepresented by a lawyer. As he did not mean to disclose his identity, he had nothing to tell the solicitor, and he could make his bald denial without legal aid.

But it was a strange and bewildering experience. Standing in the dock, he listened to the evidence with a feeling of stupefaction. He heard a gentleman from the insurance office read out the proposal form for the insurance of Francis Redwood and give the particulars of the transaction, including the payment of £2,000. He heard the doctor from Dartford identify him as the man whom he had treated under the name of Francis Redwood, to whom he had given a proposal form made out in the same name; whom he had examined in connection with the said proposal form and whom he had, in the character of the proposer's usual medical attendant, certified as a first class life, still under the name of Francis Redwood. He heard a person of the name of Baines, who appeared to be Redwood's successor in the business, describe the late Francis Redwood, whom he had known long and intimately, as a feeble, sickly man, extremely unlike the accused, and further declare most positively that the accused was certainly not Francis Redwood but was one Anthony Kempster, well known to him as a man who had lodged in Redwood's house.

And so on. It was a most conclusive and convincing mass of evidence, and the mere fact that it was all totally untrue was known to Andrew alone, and could not be communicated by him to anyone else excepting in the unconvincing form of a comprehensive denial. But it was all rolled out with exhaustive and tedious thoroughness. Each deposition was taken down verbatim by the clerk, read over to the witness and signed by him as well as by the magistrate. And even that was not the end of it; for when the whole of the evidence had been given, the depositions of all the witnesses were solemnly read over again for Andrew's special benefit. Then the magistrate addressed him in the usual formal terms. “Having heard the evidence, do you wish to say anything in answer to the charge? You are not obliged to say anything unless you desire to do so; but whatever you say will be taken down in writing and may be given in evidence upon your trial. And you are also clearly to understand that you have nothing to hope from any promise of favour, and nothing to fear from any threat which may have been held out to you to induce you to make any admission or confession of your guilt; but whatever you now say may be given in evidence against you upon your trial, notwithstanding such promise or threat.”

“All I wish to say,” replied Andrew, with a perfect recognition of the fatuousness of his reply, “is that I am not Anthony Kempster, and that the evidence which has been given does not apply to me.”

The magistrate wrote this down and then asked: “Do you wish to say who you are?”

“Not on this occasion,” Andrew answered.

“Nor to give any account of yourself?”

“No,” was the hopeless reply; on which the magistrate, having written down the answers and signed them, informed the accused that he stood committed for trial at the Central Criminal Court, and he was forthwith removed from the dock and taken back “to the place from whence he had come”.

XI. — THE LAST STRAW

As Andrew sat in his cell, recalling again and again the incredible proceedings of the police court, he was conscious of the first stirrings of revolt against the malignity of Fate. The wild absurdity of the whole affair tended to dispel his apathy and rouse a spirit of resistance.

After all, the final blow had not fallen. He was not condemned; he was only committed for trial. There was still time for him to set up a defence; and Bolton's indelicately broad hints as to what he might expect from the judge if he made no reasonable defence spurred him on to reconsider his tactics. It was no question, the worthy officer pointed out, of a few months in prison. The crime of false personation is a felony and may carry a substantial term of penal servitude. That was an appalling prospect. It meant several years cut out of the best part of his life, to say nothing of the misery of those years; and at the end of it he would be no better off. For he would come out of prison with the label of Anthony Kempster affixed to him immovably and for ever.

Something would have to be done. But the question was, what? Perhaps there was something in Bolton's idea after all. To a reputable solicitor he could safely tell his story, for a lawyer is entitled to hold sacred the secrets of his client. But when he had told his story, what then? His lawyer would be involved in the old dilemma. His client was either Anthony
Kempster or Andrew Barton. If he was Kempster, he was guilty of personation; if he was Barton, he was guilty of the murder of Oliver Hudson. It was a hopeless position, and he did not see how any amount of legal acumen could steer a course between the two impossible alternatives.

So, ineffectively, he struggled to find a way out of the labyrinth of perplexities in which he had become involved. How long he would have continued to struggle and what he would eventually have done, it is impossible to say. For the problem of Anthony Kempster suddenly receded into the background. Fate had another little selection from its repertoire to offer for his consideration and a new problem to submit for solution.

It was the second day after the police court hearing, early in the afternoon, when the door of his cell was thrown open, disclosing his usual custodian and a couple of gentlemen standing in the gallery outside, one of whom he recognized as Inspector Butt and the other as Superintendent Barnes, the officer who had opened the case against him at the first hearing. The two men entered the cell and the warden retired into the gallery, leaving the door ajar. It was the superintendent who addressed him. “We have come here,” said he, “to discharge a disagreeable duty; to convey to you the information that you are charged with murder.”

“With murder!” Andrew exclaimed, gazing at the officer in amazement. He could hardly believe his ears.

It seemed incredible that even the police should have penetrated his disguise. This was the very last thing that he had expected or even been prepared for. “The charge is,” the officer continued, “that on the 28th of August, 1928, at a place called Hunstone Gap, you, Ronald Barton, alias Anthony Kempster, alias Walter Green, feloniously did kill and murder one Andrew Barton. That is the charge. I don’t know whether you wish to say anything, but it is my duty to caution you that anything you may say will be taken down in writing and used in evidence at your trial.”

As the superintendent read out the charge, Andrew’s feelings underwent a curious revulsion. Somehow, he experienced a sense of relief, almost of amusement. For the thing was so utterly preposterous. He was actually accused of having murdered himself! “May I ask,” he said, “what reasons there are for supposing that I murdered Andrew Barton?”

“A summary of the evidence against you,” the superintendent replied, “will be supplied for your use or that of your lawyers, if you obtain legal assistance, as I suppose you will, and as you certainly ought to; but I will give you the main facts that are in the possession of the police.

“First, on the day of Andrew Barton’s death, you were seen in his company, and you appear to have been the last person who saw him alive, as you were seen walking with him in the direction of Hunstone Gap.

“Second, there was found in your possession, in your lodgings at Hampstead, an attache case containing ninety pounds in money and certain valuable property. This case, and the property in it, has been identified as the property of the deceased Andrew Barton, which he had with him on the day of his death. It has also been ascertained that this case was seen in your possession, in your lodgings at Crompton on the evening of that same day.

“Third, it is known that, on the day following the death of deceased, you cashed a cheque at deceased’s London bank, which cheque was either in the case or on the person of deceased when he left home. Those are the principal points in the evidence at present available; and I now ask you if you wish to make any statement, bearing in mind the caution that I have just given you.”

Andrew reflected rapidly. He was not disposed to make any statement until he had given some thought to the new developments. But there was one thing which instantly struck him. The case must have been identified by Molly; and, if that were so, she would be called to give evidence as to its identity at his trial. But the idea was so repugnant to him that he was prepared to compromise himself to some extent if by so doing he could prevent her from being called. “May I ask who identified the case?” he inquired.

“Mrs. Barton, the wife of the deceased,” was the reply; “and she is prepared to swear that the case was in deceased’s possession when he left home on the morning of his death.”

“Yes,” said Andrew. “It will be very disagreeable for her to appear as a witness. Would it simplify matters if I were to admit that the case is the property of Andrew Barton? Would that render it unnecessary for her to be called?”

“It might,” the superintendent replied, “but I can give no promise or make any kind of conditions. Do I understand that you admit that the case that was found in your lodgings at Hampstead was the property of the late Andrew Barton?”

Again Andrew reflected, with a new mental alertness. He could not accept the superintendent’s wording but yet he did not wish to alter it conspicuously until he had considered his course of action. Eventually he said: “I admit that the case which you found in my rooms at Hampstead is the case which Andrew Barton was carrying when he left home on the morning of the 28th of August. Will you write that down?”

The superintendent, with a look of obvious surprise, wrote the statement down in his note-book and then asked: “Do you wish to state how the case came into your possession?”

“No,” Andrew replied, “I do not wish to make any further statement.”

“Very well,” said the superintendent, “then I will ask you to read the statement and, if you find it correct, to sign your name underneath.”

He handed the book and his fountain pen to Andrew, who read the statement and, finding it faithfully set down in his
appearances are so prejudice if you apply to the Governor of the prison, and you will be brought before the magistrate as soon as possible. You are sure you don’t want to make any further statement?”

“Quite sure,” Andrew replied; whereupon the two officers retired, and Bolton, with a wistful look into the cell, slammed the door and left the prisoner to his own thoughts.

The immediate effect of this bolt which had fallen, not, indeed, out of the blue, but out of an uncommonly stormy sky, was to bring Andrew abruptly to his senses. Curiously enough, he was not particularly alarmed by this new charge. He was still under the influence of Miss Booth’s accusation and was more afraid of being charged with the murder of Mr. Hudson than with that of Andrew Barton. Nevertheless, he realized that this was a charge of murder and that, if he made no effective answer to it, he stood to be hanged. And to being hanged he had as great an objection as ever. To a term of imprisonment he might have resigned himself if there had been no way of avoiding it. But to the rope he could not resign himself at all. Some effective defence he would have to set up, though at the moment he could think of none, seeing that the evidence that the superintendent had recited was all true in fact; but already he was beginning dimly to recognize that he was receiving yet another shove from circumstance; that Miss Booth’s accusation notwithstanding, he would be forced to make an effort to recover his own identity.

Indeed, the more he reflected on the matter the more did the motor crime tend to recede into a second place. A bird in the hand is worth two in the bush. The murder of Andrew Barton was a criminal charge that was very much in the hand, whereas the Hudson murder was still in the bush, even though that bush was uncomfortably near. Moreover, as he compared the two cases, he began to see that the new charge was the more formidable of the two. For the first time, he realized that Miss Booth’s accusation was opposed to all reasonable probabilities and that he really had something weighty and material to offer in reply. In fact, with the clarity of vision that the new danger had produced, he began to suspect that he might have exaggerated the former danger.

On the other hand, the more he considered the new charge, the more did its formidable character tend to make itself felt. For here all the probabilities were against him. The absurdity of the charge was beside the mark; indeed, it was an added element of danger when the incredible nature of his own story was taken into consideration. Now that it had been ascertained that he had been present at Hunstone Gap when the death occurred and that he had “sneaked away like Cain”, as Molly had expressed it, he could see that his subsequent conduct in keeping out of sight and offering no word of explanation was in the highest degree suspicious.

These cogitations led him to the inevitable conclusion. He would have to proclaim his real identity and he would have to tell the whole of his preposterous story. He would tell it to a lawyer and trust to his capacity to present it to the court in as plausible and credible a form as was possible. But the difficulty was that the lawyer would, at least in his own mind, reject it as a mere silly fable. It was even possible that a reputable lawyer might refuse to undertake a defence which was based on such a mass of absurdities, while the type of lawyer who would be ready to undertake any kind of case, good or bad, would probably have neither the skill nor the personal credit which would be necessary to give so unconvincing a case a fair chance. And there was the further difficulty that he knew no lawyers excepting his family solicitor, Mr. Wakefield; a respectable provincial practitioner who had no experience of criminal practice and who would probably certainly flatly refuse to have anything to do with a man whom he would regard as his late client’s murderer.

Eventually, he decided, as a preliminary measure, to discuss the position with Bolton. But it presently appeared that that kindly and conscientious officer, in his anxieties at the new position, had made representations in higher quarters. The fact transpired when the Medical Officer made one of his periodical visits to inspect his charge and inquire if there were “any complaints”. When he had finished his professional business, instead of bustling away in his usual fashion, he lingered with a somewhat hesitating air and a thoughtful eye on his patient, and at length opened the subject that was in his mind. “I don’t want to meddle in your affairs, Barton—you name is Barton, isn’t it?”

“Yes,” Andrew replied, “my name is Barton.”

“Well,” said the doctor, “as I said, I don’t want to meddle, but your day officer, Bolton, is rather concerned about you, and he has spoken to me, suggesting that I might have a few words with you. He thinks that you have not given yourself a chance, so far; that you have had no legal assistance and taken no measures for your defence. Now, if that is so, it is a serious matter. Judges and magistrates will do all they can to see that you get fair play, but they can’t conduct your defence. You have got to help them by giving them the facts on your side; facts which are known only to you. But perhaps you would rather that I did not interfere.”

“I am most grateful to you, and would thankfully accept your advice if you are not compromising yourself officially by giving it.”

“Good Lord!” exclaimed the doctor, “of course I am not. Everyone wants you to have a fair trial. Even the police don’t want a conviction against an innocent man; and as to me, it is perfectly correct for me, or any other prison official, to advise a prisoner if he wants advice.”

“I am glad of that,” said Andrew, “because I want advice very badly. I realize that I ought to have legal assistance, but appearances are so hopelessly against me that I doubt if a lawyer could help me.”

“But,” the doctor protested, “the more appearances are against you, the more do you need the help of a lawyer. I take it
that you are not going to plead guilty?"

"Certainly not. I am absolutely innocent of both of the charges against me."

"Then," said the doctor, "if you are innocent, there must be facts producible which would form an answer to the charges."

"There are," said Andrew, "but they are known only to me; and they are so extraordinary and incredible that no one would believe them. That is my difficulty. I have a perfectly complete and consistent story; but if I should tell that story to a lawyer, he would think I was merely romancing."

"Your lawyer isn't going to try you," the doctor remarked, adding with a queer, one-sided smile, "and you mustn't misunderstand his position. The function of an advocate is not to experience belief in his own person but to be the occasion of belief in others."

"Still," Andrew persisted, "it is rather hopeless to be defended by a lawyer who believes one to be guilty. I should have liked to convince him that, at least, I might possibly be innocent."

"Naturally, and very properly. But why not? The truth of those facts which are known to you must be susceptible of proof or disproof. If they are true, it is for your lawyer to ascertain and demonstrate their truth." He paused for a moment and then, speaking with marked emphasis, said: "Now tell me, Barton, supposing a competent lawyer should undertake your defence, would you be prepared to give him all the facts in your possession—to tell him everything that you know, truthfully and without any reservation whatever?"

"Certainly," Andrew replied. "I would promise to hide nothing from him."

The doctor reflected for a few moments. Then he asked: "Have you any lawyer in your mind whom you would like to consult?"

"No," Andrew answered. "I know of no lawyer. That is a point on which I was going to ask for your advice. Is there anyone whom you can recommend to me to apply to?"

"I think there is," the doctor replied, "but I am not quite sure whether all the circumstances are suitable. When I was a student I had the good fortune to be the pupil of a very great man. His name is Dr. John Thorndyke—perhaps you may have heard of him."

"I seem to have heard the name," said Andrew, "but I know nothing about him. I take it that he is a doctor, not a lawyer."

"He is both, and he was our lecturer on Medical Jurisprudence—that is the legal aspect of medicine or the medical aspect of law. He practices as a barrister but he is not an advocate in the sense in which I was speaking just now. His speciality is the examination and analysis of evidence, and it seems to me that your case might interest him. You see, Barton, that I am taking your statement at its face value; I am assuming that you are an innocent man who is the victim of misleading appearances."

"That," said Andrew, "I swear most solemnly is the absolute truth."

"I hope it is, and I accept your statement. Now, would you like me to see Dr. Thorndyke and explain your position and find out whether he would be prepared to consider the question of his conducting your defence?"

"I should be profoundly grateful if you would. But do you think he would believe my story?"

The doctor smiled his queer, lop-sided smile. "I don't think, Barton. I know. He wouldn't. But neither would he disbelieve it. He would just treat it as material for investigation. He would pick out the alleged facts which were capable of being verified or disproved and he would proceed to verify or disprove them. If he found your statements to be true, he would go on with the case. If he found them untrue, he would decline the brief and pass you on to a counsel who would conduct the defence without prejudice as to his personal convictions."

"That seems to me a very reasonable and proper method," said Andrew. "I ask for nothing more. But I don't see how he is going to find out whether my story is true or false."

"You can leave that to him," the doctor replied. "But," he added, emphatically, "understand once and for all, Barton, I am assuming that your story, whatever it is, is a true story. If it isn't, don't send me on a fool's errand. I assure you that it is impossible to bluff Thorndyke. If he starts on the case, he will have you turned inside out in a twinkling; and if you tell him anything that isn't true, you'll be bowled out first ball. Now, Barton, what do you say? Would you like me to put the case to him?"

"If you would be so very kind," replied Andrew. "It seems to me that Dr. Thorndyke is exactly the kind of lawyer that I want."

"I am glad to hear you say that," the doctor rejoined, with obvious satisfaction. "Then I will call on him without delay and use what persuasion I can. But I shall want a written authority from you to offer him the brief. A leaf of my note-book will do to write it on. He won't be unduly critical of the stationery in the special circumstances."

With this and a trace of his quaint smile, he produced his note-book and a fountain pen; and when Andrew had drawn up the stool to the little fixed table and seated himself, he dictated a brief authorization which Andrew wrote and signed "Ronald Barton", enclosing the signature between quotation marks. Then he turned the book and pen to their owner who glanced through the few lines of writing and then looked up sharply. "Why have you put your signature between inverted
commas?” he asked. “Because I am signing as a prisoner in my prison name, which is not my real name. I am not Ronald Barton.”

“Oh, aren’t you?” said the doctor, in a tone of surprise and looking at Andrew a little dubiously. “I thought you said your name was Barton.”

“So it is,” replied Andrew, “but not Ronald.”

The doctor continued for some seconds to look at him with a puzzled and somewhat dissatisfied expression. At length he said, as he put away the note-book: “Well, the facts of the case are no concern of mine; but I hope you will be able to make them clear to Dr. Thorndyke, if he is willing to listen to them.”

With this parting remark, of which the dry and even dubious tone was not lost on Andrew, the doctor pushed open the door, which had (necessarily since there was no inside keyhole) stood ajar during the interview, and, stepping out, closed it behind him.

The clang of the closing door and the snap of the lock suddenly put Andrew back in his place, from which the brief spell of civilized conversation seemed for the time to have liberated him; even as the loop of key-chain that peeped below the hem of the doctor’s coat as he retired, served to remind him that this kindly gentleman was, after all, a prison officer, one of whose duties was to hold the captive in secure custody.

XII. — DR. THORNDYKE

The visible results of the doctor’s mission appeared early in the afternoon of the following day when the door of Andrew’s cell was thrown open and Bolton looked in on his charge. “Your lawyer is waiting down below,” said he. “Just tidy yourself up a bit and come along with me. And look sharp.”

There was not much to be done, since razors were forbidden by the regulations. Andrew gave his hair a perfunctory brush, extended the operation to his coat and announced that he was ready. “You’ve forgotten your badge,” said the officer; and Andrew, with a grim smile, took it down from its hook and fastened it to his coat, remarking that “one might as well look the part.” Then they set forth on their journey by innumerable iron staircases and through a long succession of iron gates, each of which had to be unlocked to give them passage and locked again when they had passed. Eventually, they reached their destination, a smallish, very bare room with one door, of which the upper half consisted of a single panel of plate glass through which the warden, posted outside, could keep the prisoner under observation without intruding on the conference. Here, Bolton delivered his charge and shut him in.

There were two persons in the room. One was the doctor and the other was a tall stranger, at whom Andrew looked with deep interest and a certain amount of awe. For this stranger was a very impressive person with a distinctly imposing presence, due not alone to the stature, the upright, dignified carriage and the suggestion of physical strength. In the handsome, intellectual face was a subtle quality that instantly conveyed the impression of power; an impression that was reinforced by a singularly quiet, contained, reposeful and unemotional bearing. His hair was tinged with grey, but the calm, unlined face was almost that of a young man. “Well, Barton,” the Medical Officer said as Andrew entered, “Dr. Thorndyke is willing to listen to your story, or as much of it as may be necessary to make clear the nature of the defence; and, as I have done my part by inducing him to come, I will take myself off and leave you to your consultation.”

With this he took his departure, carefully shutting the door after him and pausing to say a few words to the warden who was posted outside. Then Dr. Thorndyke drew one of the two chairs up to the table, and, indicating the other, said: “Pray be seated, Mr. Barton.” (Andrew noted the “Mr.” appreciatively), “and draw your chair close to the table so that we need not raise our voices.” He opened a case which looked like a small suit-case, and, taking out a block of ruled paper, placed it on the table before him and continued: “Dr. Blackford, your Medical Officer, has indicated to me in very general terms the nature of your difficulties, and I understand from him that you have a remarkable and rather incredible story to tell me. We must have that story in detail presently; but before we begin, there is one point which I should like to have cleared up. In this authorization which you gave Dr. Blackford,—here he laid it on the table—“you have signed your name, Ronald Barton, between inverted commas; and the doctor quoted you as having explained this on the ground that Ronald Barton is not your name. Is that correct?”

“Quite correct, sir. My name is not Ronald Barton.”

“Then,” said Dr. Thorndyke, “let us start fair with the genuine name.”

“My name,” replied Andrew, a little hesitatingly and in uncommon trepidation now that the climax was reached, abruptly and all unprepared, “my name is Andrew Barton.”

Dr. Thorndyke looked slightly surprised. “Your name, then,” said he, “is the same as that of the man whom you are accused of having murdered.”

“Not only the same name, sir,” said Andrew, with his heart in his mouth. “The same person. I am Andrew Barton. The man who was killed was Ronald Barton.”

On receiving this statement, Dr. Thorndyke laid down his pen, leaned back in his chair and regarded Andrew with an expression that made his flesh creep. “I read the report of the inquest at Crompton,” he said, in quiet, level tones, “and I
filed it. Last night, after seeing Dr. Blackford, I read it again with great care. I noted that Andrew Barton was described—by his wife—as a man whose nose had been injured by an accident, with the result that the bridge was broken and rendered completely flat. I need not point out that that description does not apply to you.”

“No, it does not,” Andrew admitted, “and that is the cause of all the confusion and error.”

“Then you still maintain,” said Dr. Thorndyke, “in spite of the total disagreement between your appearance and the description, that you are Andrew Barton, the husband of the woman who gave that description.”

“I do,” replied Andrew, “because it is the literal truth.”

“And are you proposing to offer a reasonable explanation of this extraordinary discrepancy between the description and the visible facts?”

“Certainly I am,” Andrew replied. “It is the essence of my defence. Shall I give you the explanation first, or shall I take it in its proper place in my story?”

“I think,” said Thorndyke, “that, as your statement appears to postulate an impossibility, no useful purpose would be served by going into any other matters until this apparent contradiction in facts has been disposed of. Let us begin with the explanation.”

Accordingly Andrew launched out into a detailed account of his dealings with Professor Booley, beginning with his panic on reading the description of himself in the police notice and finishing with the shock that he sustained on looking at his reflection in the mirror. To this account Dr. Thorndyke listened with the closest attention, jotting down an occasional note on his pad but uttering no word until the whole story was told. Then he put one or two questions, including the exact whereabouts of Professor Booley’s premises, and wrote down the answers, finally requesting Andrew to put his finger on the spot at which the Professor had inserted the needle. “That,” said he, “is a very remarkable story. Before we go any further, I should like to make a preliminary examination of your nose. You understand that I am a doctor of medicine as well as a lawyer?”

He opened the case on the table and took from it a small electric lamp, and, by the light of this, and with the aid of a pocket lens, he made a minute examination of the bridge of Andrew’s nose, especially in the region in which the entry of the needle had been indicated. Then, laying the edge of his open hand on the bridge of the nose, he brought the lamp close to one side while he scrutinized the other. Finally, he put the lamp on the table and proceeded to explore the nose with the tips of his fingers, winding up by taking the base of the bridge between his finger and thumb (a proceeding that was observed with profound astonishment by the warder on duty outside).

Having made his examination, Dr. Thorndyke went back to his chair and made one or two brief notes. Then he looked up; and Andrew, catching his eye, was sensible of a subtle change of expression. And he thought he detected a similarly subtle change of tone when Dr. Thorndyke said: “And now let us have the story.”

Andrew hesitated in some slight embarrassment. “I hardly know where to begin,” said he. “It is rather a long story.”

“You had better begin,” said Thorndyke, “with the first event which had any causal bearing on your present predicament. What took you to Crompton?”

“I went to see my cousin about a letter that he had written to me.”

“Then begin with that letter. And never mind the length of the story. We have got to have it all, either now or in instalments. But I want now at least an outline of the whole set of circumstances.”

Thus encouraged, Andrew embarked on the strange history of his misadventures from the moment when the fatal letter had been put into his hands. As before, Dr. Thorndyke listened without comment or question but making numerous notes—in shorthand, as Andrew subsequently learned. Only twice did he interrupt the narration. The first time was shortly after it had started and was in the nature of a general instruction. “Don’t epitomize, Mr. Barton,” said he. “Tell the story in detail, and don’t be afraid of being prolix. The details may be more significant than they appear to you.”

The second interruption occurred when Andrew was recounting the meeting in the train with Elizabeth Kempster. “She was very angry and indignant,” he was saying, “and reproached me for my ingratitude for all that she had done for me—”

It was at this point that Thorndyke held up his hand. “That won’t do, Mr. Barton,” he exclaimed. “I want the conversation verbatim; the very words that were spoken by you and by her—especially by her. You must try to recall them, fully and accurately.”

Andrew had little difficulty in doing so, for that terrible interview had burned itself into his memory, though he felt some qualms in relating to another that unfortunate woman’s emotional outpourings. But Dr. Thorndyke had no such qualms, for he took down a verbatim report of the entire conversation with a care and minuteness that seemed to Andrew beyond the merits of the matter.

When the narrative came to an end with the narrator’s committal for trial. Dr. Thorndyke remarked: “A very strange story, Mr. Barton; and I certainly agree with you that it is not one to put to a jury in its raw state. And not such a very long story; but we will now proceed to amplify it a little.”

With this he glanced over his notes and then opened a cross-examination, taking the narrative point by point from the beginning. And a very curious cross-examination Andrew thought it. For, to him, it appeared that Dr. Thorndyke passed
over all the important points and dredged deep for the most exhaustive details of things which did not matter at all. To the murder of Mr. Hudson he made no reference whatever, nor did he show any special interest in the tragic events that befell at Hunstone Gap. But his interest in the history and relationships of the Barton family was so profound that, having elicited all that Andrew knew, he not only wrote it down but illustrated it with a sketched pedigree.

Then he was strangely inquisitive as to Andrew's professional career, and especially as to the details of his dealings with Mr. Montagu; and his interest in Mrs. Pendlewick and her bone lace and the sittings she had given him for his picture filled Andrew with astonishment. What on earth could Mrs. Pendlewick have to do with the alleged murder at Hunstone Gap? Nevertheless, he answered the questions with conscientious completeness; and if he was puzzled by their apparent irrelevance to the great issue, he never had a moment's doubt that some good purpose, invisible to him, lay behind them.

When the cross-examination was finished and Thorndyke, having collected his notes, stood up, Andrew plucked up courage to inquire: “You have now heard my story, sir. May I ask if you find it possible to believe that it is a true story?”

Thorndyke looked at him for a few moments without speaking; and for the first time, his impassive, rather severe face relaxed into a faint smile which seemed to let some inner, unsuspected kindliness show for a moment on the surface. "I am not going to let you cross-examine me, Mr. Barton," said he. "And I am not committing myself to any opinions until I have checked and verified certain facts affirmed in your statement. You have told me a complete and consistent story and I have at present no reason to disbelieve it. But remember that, even if my investigations convince me of its truth, that is only a beginning. The problem it to transfer my conviction to those who will have to make the decision."

It was a cautious statement, but, somehow, Andrew was not discouraged by its tone of caution. And as to the checking of his alleged facts, since he had told nothing but the truth, they were all in his favour. "Before I go," said Thorndyke, "I must ask you to sign one or two little documents. I want your written authority to conduct your defence, if I decide to do so, and to make all arrangements to that end at my sole discretion. Then I want your authority to take custody of any of your property at present held by the police, if necessary and if they consent; and I want a similar authority in respect of property of yours in Mrs. Pendlewick's possession. The arrangements for the defence will include the selection of a solicitor. In this case it is a mere formality, but the usage in English practice is that a counsel must be instructed by a solicitor. I will arrange with a friend to instruct me, in a technical sense."

He wrote out the three documents and presented them to Andrew for his signature. When he had signed them, Andrew ventured to raise another question. "We have said nothing about the financial arrangements," said he, and was about to enlarge on the unsatisfactory nature of his resources when Thorndyke interrupted him. "We had better leave those matters for the present," he suggested. "I shall take it for granted that you will discharge your liabilities if you are in a position to do so. But the costs are really a side issue. And now I must be off. I shall proceed at once with the necessary verification of your statements and when I see you again I shall be able to tell you exactly how we stand."

With this he picked up his case and, being released by the warden, took his departure; and Andrew was, in due course, conducted back to his apartment, where he presently consumed his evening meal of brown bread and cocoa with unwonted relish and thereafter spent the short remainder of the prison day in curious tranquillity of spirit.

This state of mental relief, with a new-born feeling of hope and security, was surprising even to himself. To what was it due? Certainly, he had at last unbosomed himself of his preposterous story and had not been denounced as a liar and an impostor. He had been given a hearing and promised an investigation. That was all to the good. But that did not account for the strange manner in which his fears and his anxieties seemed suddenly to have gone to rest. What was it? And when he asked himself the question, the answer that came to him was—Dr. Thorndyke.

And yet it was strange. Nothing could have been more unemotional than the bearing of this calm, quiet, self-contained man. Not a word of sympathy or encouragement he had uttered. By no hair's breadth had he deviated from the most strictly judicial attitude. There he had sat with a face like a mask of stone, listening impassively without sign of belief or disbelief, speaking only to put some searching question or to check some statement. Only one when, for a moment, that faint smile had lighted up his face with a gleam of kindliness, had he manifested any trace of human feeling. And yet, in some mysterious way, some virtue had come out of him and communicated itself to Andrew. Behind that immovable calm, he had had a sense of power, of energy and of incorruptible justice; of justice that would try him impartially in the balance; of power to enforce it, if he was not found wanting.

This restful feeling of having, in a sense, passed on his troubles and responsibilities to another, remained in the days that followed. In the results of Dr. Thorndyke's investigations he had perfect confidence, for he knew that they must, of necessity, confirm the truth of his story. So, as the time passed, he waited patiently with sustained courage for the next developments. But it was not until the fifth day that his patience was rewarded by the announcement of Thorndyke's decision.

On entering the room in which the previous interview had taken place, he found Dr. Thorndyke in company with another tall and athletic-looking gentleman who was introduced to him as Dr. Jervis. Both men shook hands with him and Dr. Thorndyke proceeded to state the position. "I have checked such of your statements as it was possible to check and have been able to confirm them and am now satisfied that the story you told me is a true story. Accordingly, I am prepared to undertake your defence and I have, in fact, made all the necessary arrangements. My friend, Mr. Marchmont, a very experienced solicitor, has agreed to act for you and I have asked him to call here and make your acquaintance. So everything is now in order. I suppose you have not thought of anything else that you wish to tell me? No additions to or amplifications of your statement?"
“No,” replied Andrew; “I think you squeezed me pretty dry last time.”

“Well,” said Thorndyke, “I have no questions to ask, but perhaps Mr. Marchmont may want some detail filled in. A solicitor sees a case from a slightly different angle and has his own special experiences. And here, I think, he is.”

As he spoke, the footsteps of two persons were heard approaching down the corridor, and the warder on guard threw open the glazed door; through which another usher ushered the visitor and then retired after shutting him in.

Mr. Marchmont was an elderly gentleman, prim, precise but suave in manner and a lawyer to the finger-tips. When the introductions had been effected and a few civilities exchanged, he turned to Thorndyke. “I have read your summary,” said he, “and note that my role is that of a figure-head, as it usually is when I act with you. But there are one or two points on which I want more information. First, as to procedure. I presume that the preliminary investigation will take place before the justices at Crompton and the trial at the Maidstone Assizes. Is that so?”

“No,” replied Thorndyke. “The case has been transferred to the Central Criminal Court—”

“By a writ of certiorari?”

“No. Under the new procedure provided for in the Criminal Justice Act of 1925.”

“Ah!” said Marchmont, “I had overlooked that. Criminal practice is rather out of my province. And as to the preliminary investigation?”

“There isn’t going to be any. I am informed that the Director of Public Prosecutions intends to present a voluntary bill to the Grand Jury.”

“But that is rather unusual, isn’t it?” said Marchmont.

“It will save a great deal of time and trouble and expense,” replied Thorndyke, “and I, certainly, shall not complain. It extricates us from quite an awkward dilemma.”

“What dilemma?” asked Marchmont.

“My difficulty,” Thorndyke replied, “was this: If there had been an investigation before a magistrate, I should have had either to produce all my evidence, which I should not want to do, or to reserve my defence, which I should not have been justified in doing and could not, in fact, have done.”

Dr. Jervis chuckled softly and, glancing at Marchmont, remarked: “It is a let-off from Thorndyke’s point of view. Can’t you imagine how he would have hated letting the cat out of the bag prematurely?”

Marchmont laughed in a dry, forensic fashion. “Yes,” he agreed, “it wouldn’t have suited his tactics; for when once the cat is out, she is out. You can’t put her back and repeat the performance. But the effect of this move on the Director’s part is that the trial may begin quite soon. However, I shall receive due notice of the date. And now, having made our client’s acquaintance and gleaned these particulars, I will take myself off and leave you to your occupations, whatever they may be.”

He shook hands with them all round, and as the warder, observing this sign of farewell, opened the door, he bustled out and was taken in tow by the other officer. He had hardly disappeared when yet another official arrived with a message for Thorndyke to the effect that “Dr. Blackford sends his compliments and the room is now available.”

Andrew looked inquiringly at Thorndyke, who explained briefly: “The doctor has kindly given us facilities for certain experiments which may help us. You will hear all about them later if their bearing is not apparent at the moment.” Then, addressing the officer, he asked: “Do we come with you?”

“If you please, sir,” was the reply; and the procession, having formed up, was personally conducted by the officer on a tour of the prison, coming to a halt at last in the neighbourhood of the infirmary where Dr. Blackford was awaiting them. “I have had all your traps put into this room,” he said, opening a door as he spoke. “If you should want me, I shall be close at hand.”

“ Aren’t you coming in with us?” asked Jervis. “No,” replied the doctor. “I should like to, for I am devoured with curiosity as to what the deuce you are going to be up to. But I am not sure that it would be quite in order. And, besides, it is just as well for me not to know too much about Barton’s affairs.”

This was evidently Thorndyke’s view for, without comment beyond a few words of thanks, he led Andrew into the room and, when Jervis had followed, shut the door.

It was a rather small room, apparently some kind of annexe to the infirmary, to judge by its appointments; which included a plain deal table and a bare, ascetic-looking couch with a distinct suggestion of surgery in its appearance. Looking about him curiously, Andrew noted that the table bore a pile of about a dozen large black envelopes and that at the head of the couch was reared a formidable-looking apparatus of which he could make nothing (scientific knowledge was not his strong point), but which aroused a faint and rather uncomfortable reminiscence of Professor Booley.

He watched, with the rather vague interest of the entirely non-scientific person, while his two friends busied themselves with various preparations and adjustments of the apparatus, speculating a trifle uneasily on the nature of the experiment which was about to be performed and of which it seemed that he was to be the subject. He saw Dr. Thorndyke take two of the black paper envelopes from the table and place them carefully on a slab of wood that lay near the head of the couch,
and he noted that the envelopes were rigid as if they contained plates of metal or some hard substance. Then he saw him adjust the position of a rather odd-looking electric lamp-bulb, which was fixed on a movable arm, placing it with great care immediately above the black envelopes. At length it appeared that all the preparations were complete, for Thorndyke, stepping back from the couch and taking a last fond look at the apparatus, announced: "I think we are all ready now, and I suggest that we begin with you, Jervis. What do you say?"

"Yes," replied Jervis. "It is always wise to begin by trying it on the dog. And Barton can watch the procedure."

He took a small rug from the foot of the couch and, folding it, laid it on the black envelopes. Then he lay down on the couch, resting his head on the folded rug. Thorndyke raised the corner of the rug, apparently to ascertain the position of the head on the envelopes, and once more made a slight adjustment of the lamp overhead. "Ready?" said he, with his hand on a switch, and as Jervis responded, he turned the switch with a snap. Instantly the apparatus emitted a growl which rapidly rose up the scale until it settled into a high-pitched droning like the piping of a giant mosquito. At the same moment the lamp began to glow with a green light at the centre of which appeared a bright spot of red. "Keep perfectly still, Barton," said Thorndyke, who stood rigid as a statue with his watch in his hand. "It is most important that there should not be the slightest vibration."

Andrew stood, resting with one hand on the table, listening to the curious high-pitched hum of the apparatus, wondering what these mysterious rites and ceremonies might have to do with a charge of murder and sensible of a perverse desire to change his position. At length Thorndyke put away his watch and turned the switch; whereupon the light of the lamp faded out, the whine of the apparatus swept down an octave or two until it died away in a low growl, and Jervis rose from the couch. "Quite a harmless proceeding, you see, Barton," said he. "Nothing of the Booley touch about us."

He took the two envelopes from the couch and, having written his name with a pencil on each, added his signature and the date and handed them to Thorndyke, who counter-signed them and placed them apart on the table, while Jervis took another two of the envelopes and, having placed them in position on the couch laid the folded rug on them. "Now, Barton," said Thorndyke, "you saw what Dr. Jervis did. Go thou and do likewise. And remember that you have to keep perfectly still; to which end, you must settle yourself comfortably in a position which you can maintain without effort."

Accordingly Andrew laid himself down on the couch in as restful a pose as he could manage; and when Thorndyke had made some slight alteration in the placing of the head, the switch was turned, the apparatus uttered its plaintive whine, the mysterious green light glowed afresh, and the previous proceedings were repeated. "You heard what we were saying to Mr. Marchmont," said Thorndyke, when Andrew had risen from the couch and the envelopes had been signed and put away. "The trial may open quite soon; and in the meanwhile, I would urge you to be very careful to keep your own counsel. Give no information to anybody either as to what we have been doing here or as to anything in any way connected with your case. The special arrangements for presenting the bill of indictment direct to the Grand Jury give us the advantage of going into court without having disclosed the details of the defence. Let us keep that advantage. There may be nothing in it. But it is usually good tactics to let the enemy bring his heavy guns to bear on the place that you don’t need to defend. So I say again, don’t discuss your case with anybody, no matter how friendly."

Andrew promised to bear this caution in mind, adding: "I suppose I shall get due notice of the date of the trial."

"Certainly," replied Thorndyke. "You will be kept informed of everything that you ought to know; and if you should want to confer with me or Dr. Jervis or Mr. Marchmont, you have only to send one of us a line to that effect. Is there anything that you would like to be advised upon now?"

"Yes," Andrew replied, "there is one rather important question that does not seem to have been raised. It is concerned with the Hudson case. When Andrew Barton disappeared, he had been accused of having committed that murder. If he should reappear, it would seem that that accusation will be revived. Isn’t that so?"

"No," Thorndyke replied promptly. "You can dismiss the Hudson case from your mind, and you need never have taken the charge seriously. At first, the police, naturally enough, took Miss Booth’s statement at its face value. But as soon as they began to make inquiries they realized that she had made a mistake—the common mistake of confusing what she had seen with what she had inferred. She saw a face at the window and she saw a revolver; and she inferred that the revolver and the face appertained to the same person. But when the police ascertained that the face was that of Mr. Andrew Barton, and when they had heard his wife’s account of the affair, they were satisfied that he was merely a chance spectator of the crime. As a matter of fact, they had some fairly definite information as to who the perpetrators really were. So Andrew Barton’s connection with the case will be no more than that of a witness."

Andrew breathed a sigh of relief. "You have lifted a great weight off my mind," said he. "It may have been unreasonable of me, but I think I was more afraid of that accusation than of the charge that has actually been brought against me. It is an immense relief to know that I am free of it."

"I can easily understand that," said Jervis. "One doesn’t want to step down from the dock after a triumphant acquittal, to fall into the arms of a detective-sergeant with a fresh warrant. And that isn’t going to happen, Barton. When you are acquitted, you will be acquitted completely. Both indictments, murder and personation; for the greater includes the less and our evidence covers both. So keep a good heart and don’t be discouraged or alarmed by any signs of preparation, such as identification parades or other movements of the enemy."

"You speak," said Andrew, "as if you were quite confident of an acquittal."
“I am,” said Jervis, “and so, I think, is my learned senior. Aren’t you, Thorndyke?”

“I certainly expect an acquittal,” replied Thorndyke. “The case for the prosecution can’t be a strong one, in any event. In fact,” he added, with a smile, “my principal anxiety is lest the Grand Jury should throw out the bill.”

“That would be rather an anti-climax,” said Jervis, “and would grab a most promising defence. But still, it would be, in effect, equivalent to an acquittal.”

“Not altogether,” Thorndyke dissented, “for it would not cover the personation charge. But you see, Jervis, that a mere acquittal would not be enough for us. We are concerned with something more than the alleged murder. You remember the old schoolboy verses, Pistor erat quondam, which were, I think, rendered: ‘There was a baker heretofore, with labour and great pain, Did break his neck and break his neck and break his neck again.’

“Now that is what Barton has done. He has gone on piling illusions and false appearances on top of one another until he has got himself charged with his own murder; and we, like the baker’s medical attendant, have got to deal with the whole series. We have got to reduce, not only the final fracture, but all the others as well. And the defence to the murder charge will give us the opportunity we want.”

“Then,” said Jervis, picking up the signed envelopes and bestowing them tenderly in a suit-case, “let us hope the Grand Jury will not be too critical in respect of the evidence for the prosecution.”

XIII. — PRISONER AT THE BAR

THE sands of time, which trickle out grudgingly enough within the prison walls alike for the just and the unjust, had run through the glass to the last grain; and it was Jervis’s hopes rather than Thorndyke’s fears that had been justified by circumstances. For the Grand Jury had returned a true bill, and Andrew Barton stood in the dock at the Central Criminal Court to answer the charge of Wilful Murder.

His state of mind was very peculiar for that of a prisoner arraigned on such a charge. He realized it, himself, and was faintly surprised at it, particularly when he contrasted the abject panic of the terror-stricken wretch who had staggered away from the police bill at Crompton with the serenity of the prisoner at the bar who stood waiting to watch the throw of the dice in the game which was presently to be played between Thorndyke and his accusers; a game of which his life was the stake. The bare possibility that this thing might happen had then paralysed him with horror; and now that the reality was upon him, he seemed to face the terrible chances almost unmoved.

He looked about the court with somewhat of the interest of a spectator. He had never before been in a criminal court and the various objects and persons and the solemn procedure all had the attraction of novelty. He inspected the scarlet-robed judge approvingly, excepting as to his wig, which he found disappointing. Like most uninformd persons, he had supposed that judges wore full-bottomed wigs when they sat in court. He observed the Clerk of the Court sitting in wig and gown behind his desk below the judge’s dais; he counted the jury, who were waiting to be sworn, and noted that two of them were women. Then his eye roamed along the counsel’s seats, where Dr. Thorndyke sat placidly looking over his brief, and he endeavoured to pick out Sir Oliver Blizzard, who, he had been informed, was to lead for the prosecution; eventually fixing—correctly, as it turned out—upon a clerical-looking gentleman with a monocle firmly jammed in his eye unsecured by any cord or other support.

But all the time he was imperfectly conscious of his actual position. The old feeling of unreality still possessed him; the sense of being in a dream or under some sort of spell, which had first come on him when he looked into Professor Booley’s mirror and saw the face of his cousin Ronald looking out at him. Only at intervals, by some special occurrence—as, for instance, when a woman juror asked to be excused from serving, on the grounds that she objected to capital punishment—was he startled out of his curious mental lethargy into a vivid realization of his actual position.

At length his wandering thoughts were interrupted by the Clerk of the Court, who had risen and was addressing him, apparently in the words of a document which lay before him on his desk. “Ronald Barton, you are charged with the murder of Andrew Barton on the twenty-eighth of August, nineteen twenty-eight. Are you guilty or not guilty?”

“Not guilty,” Andrew replied.

The Clerk noted the answer and then once more addressed him. “Prisoner at the Bar, if you wish to object to any of the persons whose names I am about to call to form the jury to try you, you must do so as they severally come to the book to be sworn, and before they are sworn, and you will be heard.”

There being obviously nothing to say to this, Andrew bowed to the Clerk and resumed his reflections, but in a somewhat more disturbed frame of mind. For there was something deadly realistic in the wording of the charge, and the address which had followed brought home to him vividly that the men and women whose names were now being called out would presently hold his life in the hollow of their hands. They were to be his judges who would decide whether he was or was not guilty of the crime with which he was charged. On their intelligence and capacity to understand evidence, even on their individual temperaments, would depend the decision whether he should go forth a free man or should be hauled away to the gallows. It was not a very comfortable thought. As each juror “came to the book”, Andrew scanned his or her face anxiously for indications of stupidity, or, still worse, of obstinacy. One man or woman who “knew his or her own mind” might turn the scale against him.
Thus he was reflecting when the process of swearing in came to an end. The jury were then counted and asked by the Clerk of the Court if they were all sworn. When these formalities had been completed, an official of the Court (the Bailliff and Crier) rose and proclaimed in resonant tones and with profound gravity of manner: “If any one can inform my Lords the King's Justices, or the King's Attorney General, ere this Inquest be taken between our Sovereign Lord the King and the Prisoner at the Bar, of any Treasons, Murders, Felonies, or Misdemeanours, done or committed by the Prisoner at the Bar, let him come forth, and he shall be heard, for the Prisoner now stands at the Bar on his deliverance. And all persons who are bound by recognizance to prosecute or give evidence against the Prisoner at the Bar, let them come forth, prosecute and give evidence, or they shall forfeit their recognizances. God save the King!”

To this proclamation Andrew listened with profound interest tempered with a slightly uncomfortable feeling of awe. For the old world dignity and solemnity of the phrasing served but to emphasize and intensify the tone of menace that ran through it, and to bring home to “the Prisoner at the Bar” the dreadful reality of his position.

Almost as the tones of the Crier’s voice died away, the witnesses filed into the Court and took their places in the seats reserved for them. And at this point he was really startled by the appearance of Molly, who had just entered and was being ushered across to her seat. For some reason, he had assumed that she would avoid being present at his trial, and he had admitted the ownership of the attache case to the express end that she might not have to be called as a witness; and he now speculated anxiously as to what had brought her there and whether she would have to give evidence against him. Apparently she would, since she had come in with the other witnesses; and, as she walked across the floor of the Court, he followed her wistfully with his eyes. As she sat down, she took one quick glance at him and looked away. But brief as was the moment in which their eyes met, the expression in hers was unmistakable. There was no gleam of pity or compunction. Her pale face was grave and stern and hard as a mask of stone.

He was pondering on her state of mind and how it would be affected by the evidence which he was presently to give when his thoughts were interrupted by the voice of the Clerk of the Court; who had risen, and, turning towards the jury, proceeded to “give the Prisoner in charge” to them. “Members of the jury, the Prisoner at the Bar is charged with the murder of Andrew Barton on the 28th August, 1928. To this indictment he has pleaded ‘Not Guilty’ and it is your charge to inquire, having heard the evidence, whether he be guilty or not.”

This was the end of the preliminaries. The Clerk sat down behind his desk and the judge, who had inspected the prisoner narrowly from time to time, now turned towards the counsels’ bench, and, with a little formal bow, invited the leader for the Crown to open his case. Thereupon, Sir Oliver Blizzard rose, and, having fixed his monocle securely in position, looked steadily across at the jury and began: “The case, my Lord and members of the jury, which you are about to try has certain unusual features to which I wish to draw your attention before entering into any details. In the majority of cases of murder, the fact of the homicide is obvious and undeniable; and the matter in issue is the connection of the accused person with that homicide. A body is found, or a person is known to have died, and the condition of the body is such that it is obvious that the death was caused by the act of some person; and the question that the jury have to decide is whether the prisoner is, or is not, the person who committed or did that act.

“But in the case which you are going to try, the conditions are exactly the converse of those which I have described. Here, there is no question as to the connection of the prisoner with the death of the deceased Andrew Barton. If Andrew Barton was murdered, there can be no reasonable doubt that he was murdered by the prisoner. The matter in issue, the question on which you have to form a decision, is whether Andrew Barton did, in fact, meet his death by the homicidal act of some person or whether that death was due to what old-fashioned people call ‘the act of God’, that is, to some natural accident.

“To this question, which is the crucial question in the case, the medical witness can give no decisive answer. He can tell us that Andrew Barton died a violent death; but there is nothing in the appearance of the body that enables him to decide whether the violence was due to human or to natural agencies. Either is equally possible; from which it follows that the question of murder, on the one hand, or a natural accident on the other, will have to be decided by you from a most careful consideration of all the attendant conditions. You will have to examine the strange circumstances in which Andrew Barton met his death; and you will have to consider the conduct of the prisoner at the time of that death and subsequently, and ask yourselves whether such conduct is or is not consistent with his innocence.

“I have put the position before you at the start so that you may realize that your decision is to be formed on all the facts taken together; and I shall now proceed to put you in possession of those facts, first as relating to the deceased Andrew Barton and then as relating to the prisoner. I think it better to take them separately in the first place, as we shall thus get a clearer impression of the sequence of events.

“We begin, then, by following the movements of Andrew Barton on that fatal day at the end of August. And at the very outset, we are confronted by a mystery which we have no means of solving. For on the morning of that day, this unfortunate man set forth from his home on a definite mission and with a specific purpose which he never attempted to accomplish. The object of his journey, as he informed his wife, was to take some pictures to his dealer in London. But instead of taking the train to London, he took one to Crompton-on-Sea. Why he made this curious change in his plans we shall probably never know. Whether something unforeseen happened after he had left home, or whether he had, for some reason, deliberately misinformed his wife, we can only speculate. But he certainly had the paintings in the attache case which he carried with him, and his wife will tell you that he was, in general, a most scrupulously truthful man. At any rate, he set out from home carrying an attache case in which were not only the paintings but, as we now know, a cheque for fifty pounds drawn in favour of his cousin, Ronald Barton, and a bundle of fifty pound-notes. The suggestion certainly is that he
expected to meet his cousin, but, as I have said, we shall never know; and the point is, in fact, more curious than important.

“His movements on arriving at Crompton are also rather mysterious, for he appears to have made his way direct to the shop of a frame-maker named Cooper, where he made a small purchase and then offered his paintings for Cooper’s inspection; which was a very singular proceeding if we remember that a Bond Street dealer was prepared to take the whole of his work and pay high prices for it. But again, this mystery has no direct bearing on the question which you have to decide. The real importance of the incident is that Mr. Cooper, having had some conversation with deceased, was able later to identify him and to give a most weighty piece of evidence.

“Our next view of Andrew Barton is at the Excelsior Restaurant, where he lunched in company with the prisoner. The waiter, Albert Wood, who waited on the two men, will describe their appearance to you, and evidence will be given that he picked the prisoner out without hesitation from a row of over twenty. Both he and Mr. Cooper noticed the deceased particularly on account of the rather peculiar spectacles that he wore. I may mention in passing that Andrew Barton had suffered an injury to his nose which resulted in considerable disfigurement, concerning which he was rather sensitive, and these spectacles were specially made to cover up the disfigurement by means of an extra broad bridge.

“On leaving the restaurant, the two men, the prisoner and deceased, appear to have gone for a walk in the country, along a road which leads to Hunstone Gap, a place of which you will hear more presently. It is here that Mr. Cooper’s evidence is of such vital importance. For this gentleman happened to have some business at the outskirts of the town; and just as he came out into the street after finishing his business, he saw the two men passing on the opposite side of the road. He recognized Andrew Barton instantly, and his attention was attracted to the other man by the curious resemblance between the two men, which was noticeable in spite of the spectacles. When they had passed and he got a back view of them, the resemblance was so remarkable that he walked some distance after them the better to observe it. These two men were not only dressed almost exactly alike, and of the same height, colour and figure, but they seemed to him to have precisely the same gait or manner of walking. This similarity in the two men is of no special interest for us, excepting in that it attracted the attention of this witness and caused him to make some further observations which are of the most vital interest. For, following them to observe their gait and gestures, he saw that they took the road which leads out into the country and to Hunstone Gap; and, at the corner of the road, he stood watching them until they disappeared round a bend. And thus, members of the jury, did Andrew Barton pass for ever out of human ken. Thereafter, no eye, save that of the prisoner, looked upon him as a living man. The next eye that looked on him saw, not a young man in the very prime of life, full of vitality and manly strength, but a battered corpse, lying in a dreadful solitude at the foot of a cliff in a remote little bay called Hunstone Gap.

“The discovery was made late in the afternoon by the master of a fishing lugger called the Sunflower. Sailing past the Gap, he noticed that there had been a fall of chalk from the cliff; and when he came to examine the place through his glass, he saw a pair of naked legs protruding from under the heap of fragments. Thereupon he steered his craft inshore, and, when she was near enough, he put out the boat and rowed ashore. And there, at the foot of the cliff, he saw the nude body of a man lying on the beach, partly covered with fragments of chalk and with one large block resting on the face. They removed the fragments and then the mate of the lugger, William Cox, lifted the great block off the face, when it was seen that the dead man’s head was so horribly battered that it was practically flat. They carried the body to the boat and they then collected the clothing—the dead man had apparently been bathing—and they put the body and the clothes on board the lugger. But before he returned on board, the skipper, Samuel Sharpin by name, and a most intelligent man, had the good sense to examine the beach to see if the dead man had come there alone, or whether he had had any companions. There was only a small space of sand left, for the tide was rising and had already covered the greater part of the beach. But the little patch that was still left uncovered was quite smooth, and on that smooth surface were clearly visible two tracks of human feet. One track consisted of the footprints of two persons, walking side by side and advancing from the sunken road which led down to the beach towards the sea; the other track consisted of the footprints of one person only, and that person was returning across the beach towards the sunken road.

“Now, whose footprints were these? Since there were no others, it is evident that one set of them must have been the footprints of Andrew Barton; and, since he never came away from that fatal place, it is obvious that the returning footprints could not have been his. Two men walked down together into the Gap and one of them returned from the Gap alone. One of those two men was certainly Andrew Barton. Who was the other—the one who came away alone? Can there possibly be a moment’s doubt? When Andrew Barton was last seen alive, he was seen walking towards Hunstone Gap in company with the prisoner. I affirm that it is certain, in so far as certainty is possible in human affairs, that the person who walked down into the Gap with Andrew Barton and who afterwards stole away alone, was the prisoner, Ronald Barton.

“We have followed Andrew Barton to the place where he met his death. There is little more to tell. The body was conveyed by these good fishermen to the place where they berthed the lugger and there they put it ashore. Then they borrowed a seaweed cart and in this they carried the corpse into the town and delivered it to the police together with the clothing. And by the police it was deposited in the mortuary.

“And now let us, in the same manner, follow the movements of the prisoner on that fatal day and thereafter. His first appearance in this tragic history is at the Excelsior Restaurant where the waiter, Albert Wood, saw him as I have described, lunching with the deceased. Then we see him again, as described by Mr. Cooper, walking with deceased towards Hunstone Gap. After this, there is an interval of several hours, for it is not until late in the evening, about nine o’clock, that we hear of him again. At this time, he was seen by one Frederick Barnard, a waiter at Mason’s Restaurant, to enter that establishment
and take his seat at a table. Now, however, he was not alone. He was accompanied by an American who was known to Barnard by sight but not by name but who has since been identified as a beauty specialist who described himself as Professor Booley. Unfortunately, this person is not available as a witness as it has been ascertained that he left Crompton on the following morning for Liverpool, where he embarked to return to America.

“The connection of the prisoner with this man Booley is rather mysterious, but there is some suggestion that he may have received some sort of treatment from this charlatan. Barnard observed that the American was the prisoner’s guest and that he seemed to take a remarkable interest in the prisoner’s appearance, for he watched him almost continuously and with a curious air of satisfaction. Moreover, after the American had left—which he did quite early—Barnard saw the prisoner rise from his chair, walk up to a large mirror and examine himself in it with extraordinary interest and attention.

“However, as I have said, the connection between the prisoner and Booley remains somewhat of a mystery. Presently we shall consider whether it has any bearing on the problem which you have to solve. Of more interest to us are certain other observations made by the observant Barnard. Thus, he noticed instantly when the prisoner entered that he looked ill and distressed and showed evident signs of fatigue; that he hardly spoke a word to his guest; that he improved remarkably in appearance after a substantial meal and a small bottle of wine; and that after dinner, while he was taking his coffee and a liqueur, he seemed to be wrapped in deep and anxious thought.

“The next appearance of the prisoner is most surprising and significant. For it seems that, on leaving the restaurant, he must have made his way directly to the police station. At any rate, there he was seen by no less than four persons and in the most astonishing circumstances. We have seen that the fishermen brought the body of Andrew Barton to the town in a seaweed cart and delivered it to the police. But the skipper, Samuel Sharpin, hurried on in advance to give notice of what had happened and of the approach of the cart with its tragic burden. On receiving this notice, the sergeant procured a stretcher which he and a constable, accompanied by Sharpin, carried out and laid in readiness on the pavement. And there, incredible as it may appear, they found the prisoner, ostensibly reading the notices on the wall, but apparently waiting for the arrival of the cart. For, as the cart turned into the street and the rumble of the wheels became audible, the prisoner turned and looked directly up the street; in fact, he walked part of the way as if to meet it, turning about when he met it and walking with it to its halting-place. And there, members of the jury, he stood, placidly watching while the body of his cousin was lifted from the cart and placed on the stretcher; noting the several garments as they were handed out, each of which he must have recognised; and making no sign and speaking no word. Indeed, when the poor remains had been carried away and the carter who stood by the horse approached to talk to him, he turned away and walked up the street.

“The account sounds incredible, but it is true. This secret watcher was seen by four persons, each of whom has since identified him without hesitation. There can be no doubt that this astonishing thing really happened. It is vouched for by the evidence of Sharpin, of Sergeant Steel, of Constable Willis and of the carter, Walter Hood.

“From the police station, the prisoner seems to have gone straight to his lodgings, which were in the same street, and where he was living under the name of Walter Green. And here also some very significant events befell. His landlady, Mrs. Baxter, will tell you that at this time, Mr. Walter Green was nearly a fortnight in arrear in his rent. She had made several applications for payment, but her lodger was, at the moment, not in a position to pay the very modest sum that he owed. When he came in on this evening, she reminded him of the debt. But now his attitude was entirely different. He seemed to be hard up no longer; for not only was he ready to pay what was owing, but he offered to pay in advance for the remainder of the fortnight; an offer which she discreetly accepted and was duly paid with clean, new Treasury notes.

“Now, this sudden change from penury to comparative affluence would in itself be remarkable. But much more so are the accompanying circumstances. It was on this occasion that Mrs. Baxter noticed for the first time an attaché case in the prisoner’s possession. She had never seen it before, and when she mentioned the fact to him and asked if it was his, he returned no answer. But the answer to her question can be given to us by Andrew Barton’s banker. Those clean, new notes with which Mr. Green paid his rent were selections from a bundle of fifty pound-notes which had been paid to Andrew Barton by his banker at Bumsford. They were a consecutive series the numbers of which had been noted and their issue to customers recorded; and the police have since been able to trace the four pound-notes paid by the prisoner to Mrs. Baxter.

“From this witness we also learn that the prisoner suddenly changed his plans. He decided to leave his lodgings on the following morning and go to London; and he was very anxious to catch an early train. That he did catch that train we have other evidence; for, on the following morning, the 29th of August, he presented himself at the London office of Andrew Barton’s bank in Cornhill shortly after the doors had been opened. He endorsed and presented an open cheque drawn in favour of Ronald Barton, Esq., for the sum of fifty pounds and signed Andrew Barton; and, having received that sum in Treasury notes, he left the bank.

“From thence he seems to have gone straight to Hampstead, where he engaged lodgings at a house in Vineyard Place occupied by a Mrs. Martha Pendlewick; and there he was living up to the time of his arrest. But, before coming to this closing scene, we have to note one more incident which, if it is of no great importance, is of considerable interest. This was his visit to his cousin’s widow. He wrote to her from Hampstead proposing to call, and on Wednesday, the 6th of September, he made his appearance at her house.

“We need not go into details of what passed at that visit. But there are two incidents which we may notice. The first is that, when Mrs. Barton asked him when he had last seen her husband, he considered for a while and then mentioned a date about two years previously. Thus, in effect, he denied having met him at Crompton. The other incident occurred shortly before he left. He then suggested that he should repeat his visit at an early date, and expressed the hope that they
would see more of each other than they had done in the past. To which Mrs. Barton replied quite frankly that she would rather that he did not repeat his visit, at least for a considerable time. The reason that she gave for this wish on her part was that his remarkable resemblance to her dead husband made his presence painful to her. That is what she said, and what she still says, and it is quite understandable; but members of the jury may feel, as I confess I do, that there may have been something more subtle in her dislike to having this man in her presence.

“We now come to his arrest; and concerning the circumstances in which that arrest took place it would not be proper for me to say more than that he was arrested when he was engaged calmly in making a sketch on Hampstead Heath. And now, having followed his movements from the moment when he was first seen in company with Andrew Barton, to that when he was taken into custody, we are in a position to take a general view of the whole set of circumstances and consider their significance in relation to the charge which has been brought against him. The prisoner is accused of having murdered his cousin, Andrew Barton, at Hunstone Gap, and the question that you have to decide is: Do all these circumstances, taken together, lead convincingly to the conclusion that he is guilty of that crime, or do they not? If you decide that they do, it will be your duty to return a verdict to that effect. If, on the other hand, you feel any reasonable doubt as to whether he did commit that crime, it will be your duty to give him the benefit of that doubt and pronounce him Not Guilty. Let us now examine these circumstances and see what conclusion emerges from them.

“We have seen that Andrew Barton met his death by violence; but the medical witness cannot tell us with certainty whether that violence was inflicted by natural agencies or by the murderous act of some person. Either is possible, and both are equally consistent with the appearance of the body as observed by the medical examiner. Then, since the most expert examination cannot furnish a decision as to whether death was due to accident or homicide, we must consider what light is thrown on the question from other directions.

“First there is the conduct of the prisoner. Was it that of an innocent or of a guilty man? Remember that when Andrew Barton met his death, the prisoner was present. Of that there can be no doubt. If Andrew Barton’s death was due to an accident the prisoner saw that accident happen. If Andrew Barton was murdered, he was murdered by the prisoner. Now I ask: What was the behaviour of the prisoner on that terrible occasion? Was it the behaviour of a man who has witnessed a dreadful accident? Or was it that of a man who has committed a crime?

“How would a man behave in these respective circumstances? Let us take the case of an accident. Supposing, that the prisoner had seen that great block of chalk fall with a crash on his cousin’s head. What would it have been natural for him to do? Would he not have hurried away in search of help, or at least have given notice of the dreadful thing that had happened? Why should he not? No one would have suspected him of being in any way to blame. Indeed, no suspicion did arise in this case until it was engendered by the prisoner’s own conduct. We may say with confidence that if the prisoner had gone at once to the police station and given information, this charge would never have been brought against him.

“But suppose that the prisoner had murdered Andrew Barton. How would he have behaved? Doubtless, if he had been a man of sufficient nerve and sufficient judgment, he would have gone and reported an alleged accident. But that is not usually the way of those who commit crimes. The instinct of the criminal is to keep out of sight; to avoid the appearance of any connection with the crime.

“Now let us observe the prisoner’s behaviour. With his cousin’s battered corpse lying under the cliff, he steals away secretly and is lost to sight for several hours. He makes no communication to anyone. The tide is rising, and presently the waves will be washing round that corpse. But he takes no measures for its recovery before it shall be borne out to sea. He just steals away alone and hides himself.

“He next comes into view several hours later at Mason’s Restaurant; and at once we are impressed by certain remarkable and significant facts. First, his appearance as described by the waiter, Barnard, is that of a man who has been exposed to some unusual strain. He shows signs of fatigue and exhaustion. He looks ill and seems to be suffering from mental distress, but he revives under the influence of food and wine. Then he is accompanied by a stranger who turns out to be what is called a ‘beauty doctor’; and Barnard’s evidence suggests in the strongest manner that there had been some professional transactions between this man Booley, and the prisoner. Booley appeared to be intensely interested in the prisoner’s face. He kept his eyes riveted on it to the neglect of his own food. But it was not the beauty doctor only who was interested in the prisoner’s face. When Booley had gone, the prisoner was seen to walk up to the mirror and make a minute inspection of his own countenance.

“Now what can this mean? The suggestion is, as I have said, that Booley had done something to the prisoner’s face. But what could he have done? If you will look at the prisoner, you will see that he has no need of the services of a beauty doctor. What, then, could it be that Booley had done to the prisoner’s face? Could it be that the tragedy that had been enacted at Hunstone Gap had left its traces on the prisoner’s face? That those tell-tale marks had prevented him from giving information of the catastrophe? And that he had invoked the aid of the beauty doctor—skilled in the art of make-up—to paint out, or otherwise obliterate those incriminating marks? That, I submit, is the inference which instantly arises in the mind of any reasonable person. Andrew Barton was a young and strong man and, unless he had been taken completely by surprise, he would assuredly have left some marks of the conflict on his assailant. Admittedly, this is only an inference. But it is a reasonable inference; and the facts seem to admit of no other explanation.

“I pass over the further fact that, after Booley had left, the prisoner remained wrapped in profound thought; for he had matter enough for reflection if no murder had been committed. Let us proceed to the amazing, the appalling incident described by Sergeant Steel and the others in connection with the arrival of the body in the seaweed cart. I have told you
what happened; and no comment seems adequate or necessary. You have to think of this man standing there, a calm and unmoved spectator, while the mutilated corpse of his cousin is lifted from the cart and borne away to the mortuary; looking on with the detached interest of a chance stranger and keeping his knowledge of the dead man's identity locked in his own breast. Think of this amazing callousness and secrecy, and ask yourselves what can be the explanation of it. Is this the conduct of a man who has seen his kinsman killed by a natural accident? Or is it that of one whose guilty knowledge bids him hold his peace? Is it, in short, the conduct of an innocent man? Or is it that of a murderer who is looking on the corpse of his victim?

"When he has seen his cousin's body disposed of, he goes home to his lodgings and forthwith proceeds to take possession of the dead man's property. Andrew Barton's attache case is already on his table. When or how it came there we do not know; but we do know that, within a few minutes of his return, even while the unburdened seaweed cart was rumbling back up the street, he had possessed himself of some of its contents. For it was with Andrew Barton's money that he paid his debt to the landlady. The cheque we may admit to have been his lawful property; but the cheque had not been cashed. The money with which Mrs. Baxter's bill was paid was money that had been stolen from the dead. And again I ask: Is this calm and callous appropriation of the dead man's money the act of an innocent man?

"But the same eager greed is apparent in the actions which followed. As soon as he had paid the landlady, he came to the sudden decision to go to London early on the following morning. For the cheque had to be cashed before the tidings of Andrew Barton's death reached his bank. Otherwise it would have been returned to the payee endorsed 'Drawer deceased'. And, once out of the neighbourhood, he decided to stay out. Regardless of his cousin's corpse, lying in the mortuary, and of the poor wife, waiting for the husband whose voice she was never to hear again, he goes off to Hampstead, there to lie in hiding until things had settled down and all danger might be considered to be over.

"The sordid avidity for money that we have noted on the part of the prisoner leads us to another point. The will of Andrew Barton contains a clause bequeathing to the prisoner the sum of five hundred pounds. The widow, who is the executrix, will tell you that her husband had been in the constant habit of making loans to the prisoner; loans which, it may be remarked, were never repaid and never expected to be repaid. Now, it seems that Andrew Barton, having regard to the fact that, in his opinion, this cousin's body should die, these gifts would necessarily cease, decided to make a provision for his cousin. Accordingly, he effected a separate insurance on behalf of his cousin in the sum of five hundred pounds and in his will directed that this sum should be paid to the prisoner. Thus the prisoner, who was aware of the provision, knew that he stood to benefit by the death of Andrew Barton to the extent of five hundred pounds; a fact which, when we consider his avaricious seizure of his dead cousin's money, we cannot but find profoundly significant.

"And now, to sum up in a few words: Taking the prisoner's conduct as a whole, is it that of an innocent man who has nothing on his conscience, or is it that of a man who has a burden of guilt on his conscience and is harbouring in his soul a guilty secret? Did Andrew Barton die by the chance fall on him of a block of chalk? Or was that block used by murderous hands as a terrible weapon to cover the traces, and perhaps complete the work, of some other weapon? The body has no decisive message for us. We must decide from the conduct of the prisoner. And I submit that the prisoner's conduct answers the question conclusively, especially when considered in connection with the substantial sum of money which he stood to gain by his cousin's death. He had a motive—a strong motive to an avaricious man; he was present when the death occurred—he had the opportunity to commit murder; and when the death had occurred, he stole away and instantly laid hands on the dead man's property, thereafter not only hiding himself but denying to his cousin's widow that he had seen that dead man for many months. I repeat, he had a motive to commit the crime, he had the opportunity to commit it, and his subsequent conduct has been, in a striking degree, that of a man who has committed a crime.

"Accordingly, I submit that you can come to no other conclusion but that he did, in fact, commit that crime, and that it will be your duty to return a verdict of 'Guilty'.
XIV. — THE EVIDENCE FOR THE PROSECUTION

THE conclusion of Sir Oliver’s opening speech was succeeded by a brief pause before the calling of the witnesses, during which Andrew reflected in a dull, bewildered fashion on what he had heard. It was all surprisingly plausible, even convincing, and the speaker had contrived, in spite of a studied moderation, to convey the feeling that he, himself, was convinced of the prisoner’s guilt. Of course, it was all quite unreal; but no one besides himself—and perhaps Thorndyke—knew the real facts. Sir Oliver had in no respect exaggerated or distorted the known facts, and the conclusion that he had suggested as inferable from those facts was a fair, reasonable and logical conclusion.

And now the witnesses would be called; and Andrew knew in advance what they would say. They would fully bear out the counsel’s statement; and what they would say would be the truth which no cross-examination would shake. It did not look promising, but yet Dr. Thorndyke (who knew all that the prosecution knew) had seemed to be quite confident. But at this point, his reflections were broken in upon by a voice, calling the name of Mary Barton. His eyes had been resting almost continuously on her, and he now saw her rise from her seat and walk resolutely towards the witness-box. He noted that she was pale and haggard and obviously distressed, but her face was set in an expression of hard, stern resolution that he found it difficult to connect with the gentle, kindly Molly whom he had known in the days of his happy and peaceful married life.

Her evidence, as elicited by the “examination in chief”, followed the lines of Sir Oliver’s opening. There was a brief reference to the Hudson murder and to a visit on the 28th of August of a certain Inspector Sands, who had come to make inquiries as to the personal appearance, habits and occupation of her husband, and whom she had referred to her husband’s banker in London and to Mr. Montagu, his agent and dealer. Then there was the more tragic reference to another visit from the inspector on the following morning, to inform her of the finding of a body believed to be that of her husband, and to request her to go to Crompton to confirm the identification; and her dreadful experiences in the Crompton mortuary when she was confronted with that terrible corpse.

The examination was conducted with the utmost delicacy and consideration that was possible; and Molly rose bravely to the occasion, though now and again there came a break in the clear voice, and her steady answer petered out into something very like a sob. But the counsel passed as quickly as he could over the most distressing incidents, and, when he proceeded to the prisoner’s visit to Fairfield, she recovered her self-possession completely. “When the prisoner came to see you,” said Sir Oliver, “did he mention when he had last seen your husband?”

“Yes, I asked him. At first he seemed not to remember, but afterwards he said that he had not seen him for about two years.”

“With reference to the benefit which the prisoner receives under your husband’s will; was anything said about that?”

“Yes. I reminded him of the special life insurance that my husband had effected on his behalf.”

“You say you reminded him. That seems to imply that he knew that the arrangement had been made. Can you say, of your own knowledge, that he was aware of it?”

“Yes. When my husband took out the policy and made his will, he wrote to his cousin, Ronald, and told him exactly what he had done. I saw the letter and read it.”

“In that letter, was the amount mentioned?”

“Yes. It was clearly stated that, in the event of my husband dying before Ronald, the latter would receive five hundred pounds free of legacy duty.”

“In the course of your interview with the prisoner on this occasion on the 6th of September—was anything said about future visits?”

“Yes. He said that he should come and see me again soon, and that he thought we ought to see more of each other than we had done in the past.”

“And what did you reply to that?”

“I told him that I would rather that he did not come to see me again just at present, as I found that his great resemblance to my husband made his presence painful to me.”

“You found it painful to be in his society?”

“Yes. His likeness to my husband got on my nerves. I felt that I could not bear to have him in the house.”

“Are you sure that it was the likeness only that caused this feeling of repulsion? Was there nothing else in your mind?”

“I know of nothing else. He seemed unconsciously to be mimicking my husband, and I felt that I could not bear it.”

On receiving this reply, Sir Oliver paused to take a glance at his brief. Then he reached down below the bench and produced an attache case which he handed to an attendant who conveyed it to the witness. “Can you tell us anything about the case which has just been handed to you?” the counsel asked.

“It belonged to my husband,” was the reply. “He was carrying it when he left home on the morning of the 28th of
August.

“You have no doubt that it was your husband’s case?”

“None whatever. The letters stamped on the lid are his initials, A. B. He stamped them himself with book-binder’s letters. I have the tools here, and you can see that they fit the stamped initials.”

She produced from a hand-bag three brass “handled letters”, an A, a B, and a stop, which were taken by the attendant, with the attache case, and passed round for inspection by the judge and jury. “Can you tell us,” Sir Oliver continued, “what the case contained when your husband left home?”

“I understood that it contained one or two small water colours, but I did not see them. Of the other contents I know nothing.”

The case and the tools made their round, being eventually deposited as “exhibits”. Meanwhile, Sir Oliver took another glance at his brief, and finding, apparently, that he had exhausted his matter, sat down; whereupon Dr. Thorndyke rose to cross-examine. “You have told us,” he began, “that on the 29th of August, you went to Crompton mortuary for the purpose of inspecting and, if possible, identifying a body which was lying there and which was believed to be the body of your husband, Andrew Barton. I deeply regret the necessity of recalling to your memory what must have been a very terrible experience, but it is essential that we should be quite clear as to the facts. Were you able to identify that body?”

“No,” Molly replied, with a visible shudder. “It was quite unrecognizable. But the clothes were my husband’s clothes.”

“Yes,” said Thorndyke. “You identified the clothes as your husband’s; but, apart from the clothes, were you able to form any opinion as to whether the body was or was not that of your husband?”

“No,” Molly replied. “I was not. I said so.”

“So far as you know, was any evidence as to the identity of the body, apart from the clothing, given at the inquest?”

“No. The identity of the body was established by means of the clothing.”

“You referred just now to a severe injury to the nose from which your husband had suffered. Did the medical witness at the inquest mention having found any traces of that injury?”

“No. I don’t think he knew about it when he made his examination. At any rate, he said nothing about it.”

“Did you ever learn what was the exact nature of that injury?”

“Yes. The surgeon at the hospital gave me a certificate for the insurance office. It described the injury as a depressed and comminuted fracture of the nasal bones.”

“You have spoken of your alarm when your husband did not come home on the night of the 28th of August. May we take it that he was not in the habit of staying away from home without notice?”

“He never stayed away from home without notice,” Molly replied, emphatically. “He hardly ever stayed away at all.”

“Did he ever stay away from home, and away from you, for a considerable period; say for more than a month?”

“Never. We used, occasionally, to go away together, but he never went away by himself for longer than a week-end.”

“Now, Mrs. Barton,” Thorndyke said in a persuasive tone, “I want you to try to give me a statement of your husband’s whereabouts on a particular date. Can you remember where he was on Good Friday in the year 1925?”

Molly looked at him in evident surprise, but replied, after a few moments’ thought: “I believe he was at home; at any rate, I have no recollection of our having been away at that time.”

Thorndyke was manifestly dissatisfied with the reply and pressed for a more precise answer. “Take a little time to think,” he urged, “and see if you cannot recall the circumstances. It is only three years ago, and Good Friday is a very distinctive date. You will surely be able to remember where you spent your Easter.”

Again she reflected with knitted brows. Suddenly she exclaimed: “Oh, yes, I remember. He was at home.”

“Something has recalled it to your memory,” he suggested.

“Yes. In that year I undertook to decorate the parish church, and my husband helped me. In fact, he did most of the decoration.”

Thorndyke paused to make a note of the answer and then proceeded: “With reference to the prisoner’s visit to you on the 6th of September; you have said that his resemblance to your husband was so close as to cause you great distress. In what respect did he appear to resemble your husband?”

“In every respect,” Molly replied, “excepting, of course, that his nose was different. Otherwise, he seemed exactly like my husband; even in the face, in spite of the difference in the shape of the nose. And his figure was the same and he had the same tricks of movement with his hands and the same rather unusual way of picking up his tea-cup without using the handle.”

“And what about the voice?”

“That was the worst of all. It was exactly like my husband’s. If I had shut my eyes, I could have thought that it was my
"To what extent had you been acquainted with Ronald Barton? Had you previously seen much of him?"

"No. I had met him only twice, when he came to see us. The second occasion was a little over two years ago."

"When you were in his society on that occasion, were you greatly impressed by his resemblance to your husband?"

"Not so much. I could see, of course, they they were very much alike, but the resemblance did not strike me as so very extraordinary when I saw them together and could compare them."

"When the prisoner came to see you in September, did his great resemblance to your husband come upon you in any way as a surprise?"

"Yes, very much so. I had no idea that the two men were so much alike. It was quite a shock to me."

"Did it appear to you that he was in any respects different from the Ronald Barton whom you remembered? Did he seem to have changed in any way?"

"Yes, he did seem to have changed in some respects. He was quieter in manner; less boisterous. In fact, he was not boisterous at all, as he used to be. But I put that down to the sad circumstances in which his visit was made. It was only a few days after the funeral."

"Did you notice any other differences from what you remembered of him previously?"

"There was one thing that surprised me. He seemed to know so much more about pictures and painting than I had supposed he did; and he was so much more interested in them. On the previous occasions, he had not seemed to be interested at all in my husband's work or in painting in general."

"Then, taking your impressions as a whole, would it be correct to say that the Ronald Barton who came to see you in September did not seem to be quite the same kind of person as the Ronald Barton whom you remembered having met formerly?"

"Yes, I think that would be correct."

"And would it further be correct to say that such changes as seemed to have occurred, increased his resemblance to your husband?"

"Yes, I think that is so."

On receiving this answer, Thorndyke sat down; and Andrew took a deep breath. He was beginning to understand his counsel's tactics. But he was the only person present who did. Throughout the cross-examination, the judge had listened attentively with an obviously puzzled expression, and Sir Oliver and his junior, Mr. Horace Black, had looked frankly bewildered. Even Molly, though she answered readily and with conscientious care, was evidently surprised at the apparent irrelevancy of the questions. There was no re-examination, the two prosecuting counsel being clearly of the opinion that no point had been made and that there was nothing to contest. Accordingly, Molly was released from the witness-box and went back to her seat.

The next witness was Mr. Cooper, the carver and gilder, whose evidence repeated in detail the account which had been given by Sir Oliver in his opening address. Having regard to the importance and damaging character of that evidence, it was obviously a matter of surprise to the judge and the prosecuting counsel that Thorndyke allowed the witness to leave the box without any attempt at cross-examination. He was followed by Albert Wood, the waiter at the Excelsior Restaurant, whose evidence was also ignored by Thorndyke. Then the name of Samuel Sharpin was called, and a copper-faced elderly man in a stiff suit of blue cloth, rolled into the witness-box and fixed a seafaring blue eye on Sir Oliver's monocle. In much the same terms as he had used at the inquest, he described the circumstances in which he had observed the body through his glass, had put inshore and salved it and had conveyed it in the seaweed cart to the police station at Crompton. When the narrative was completed, Sir Oliver, having taken out his monocle, wiped it with his handkerchief and refixed it securely, addressed the witness in quiet but impressive tones, pointing his hand towards the dock. "Look attentively at the prisoner and tell me if you have ever seen him before."

The witness turned slowly and with seeming reluctance and cast a commiserating glance at the prisoner. "Yes," he said. "I've seen him before."

"Where did you see him?" Sir Oliver demanded, with something of a dramatic flourish.

"I see him," replied Sharpin, "in the prison yard, yonder, along of a lot of other fellows in a row. I was told to see if I could pick him out."

"And could you?" asked Sir Oliver, making the best of the slight anti-climax.

"Easily," replied Sharpin. "He was the only decent-looking man there."

"And where and when had you seen him before that?"

"I see him the night we brought the dead man in from Hunstone Gap. He was a-standing on the pavement outside the police station, a-watching of us as we unloaded the dead man out of the cart and set him on the stretcher."
“Yes,” Sharpin replied doggedly. “He’s the man.”
“Do you swear that he is the man whom you saw there on that night?”
“I ain’t much given to swearing,” said Sharpin. “Don’t hold with it. I’ve said he is the man, and he is the man.”
“Did that man speak to anybody when you were moving the body?”
“Never spoke a word to nobody,” was the slightly ambiguous reply.
“Did he seem agitated or upset in any way?”
“He didn’t seem to be, but I didn’t notice him very much. I was attending to what I was doing.”
Having noted this reply, Sir Oliver relinquished his prey and Thorndyke rose. “When you came ashore and saw the block of chalk resting on the dead man’s head, did you look up to see where the block had come from?”
“Yes, I did, in case there might be some more coming down. You could see where the block had broken out. Left a sort of square hole.”
“And did you notice whether that hole was straight over the body, or whether it was to one or other side?”
“It was straight overhead; and I kept an eye on the place while we was a-moving of the body.”
“You said that your mate, William Cox, lifted the rock off the dead man’s head. Should you describe Cox as a strong man?”
“Ay. Will Cox is an uncommon beefy lad.”
“Should you say that he is an unusually strong man?”
“Yes, strong as a young elephant he is. I gives him all the heavy jobs to do, and he don’t never turn a hair and he don’t never grumble.”
“You seem to be fortunate in your mate,” Thorndyke remarked with a smile.
“I am that,” agreed Sharpin. “Worth his weight in gold is Will Cox; and he turns the scale at fourteen stun.”
This completed Samuel Sharpin’s evidence and on his retirement he was succeeded by his much-appreciated mate; a good-looking young giant with a mahogany complexion, bright blue eyes and a mop of curly hair. His skipper’s commendations, which he had necessarily overheard, seemed to have covered him with confusion, for he swung shyly into the witness-box and, having taken up a negligent pose, greeted the judge with an embarrassed grin and then fixed an expectant eye on Sir Oliver; being, apparently, like his skipper, fascinated by the learned counsel’s “dead-light”.
But whatever might have been his worth to his commander, he was of little to the prosecution; and when they observed the way in which Thorndyke pounced on him, they may have regretted the necessity for calling him. His evidence merely confirmed and amplified that of the previous witness; and after a brief and matter-of-fact examination, Sir Oliver resigned him to the defence. “You have said,” Thorndyke began, “that you lifted the block of chalk off the dead man’s head. Did you find it easy to lift?”
“No, I did not,” replied Cox, with a shake of his curly head. “’Twas most uncommon awkward to lift. Heavy, too, it was.”
“You are accustomed, I suppose, to lifting heavy weights? Fish-trunks, for instance?”
“Ay, but, d’ye see, fish-trunks is fitted with rope beckets for to catch hold of. They are easy enough for to hoist. ’Tis only a matter of weight. But this here block of chalk wasn’t no sort of shape. There wasn’t nothing for to lay hold of or to hook your fingers under.”
“What are the usual weights of fish-trunks?”
“They runs five, seven, eight or ten stone.”
“And a stone, in your trade, is how many pounds?”
“Fourteen pounds goes to a stone of fish.”
“What should you say was the weight of that block of chalk?”
“Somewhere between eight and nine stone, as near as I can judge.”
“And how near can you judge a weight of this kind; say a fish-trunk?”
“I can judge the weight of a trunk of fish within two or three pounds.”
“You say that you found that block difficult to lift. How high did you lift it from the ground?”
“Only an inch or two. I just hoisted it clear and dropped it alongside.”
“Could you have lifted it higher, so far as you could judge? Say two or three feet above the ground?”
“I might have been able to, but I shouldn’t have liked to try. Not more than a foot, anyway. He was mighty slippery and difficult to hold, and you don’t want eight or nine stone of chalk on your toe.”
“Do you find any difficulty in lifting a ten stone trunk?”
“Lord, no sir! Wouldn’t be much good in our trade if I did. But, as I was telling you, a trunk has got beackets—rope handles, you know—and if you’ve got hold of them, the trunk can’t slip.”

“So you can lift ten stone—a hundred and forty pounds—without difficulty?”

“Yes, and a tidy bit more if need be and if I’d got a proper hand-grip.”

Having received and noted this answer, Thorndyke sat down and Sir Oliver rose to re-examine. “Does it require a specially strong man to lift an ordinary fish-trunk?”

“No, I suppose he could lift it if he put his back into it. But he’d find it a tidy weight if he wasn’t used to hoisting.”

Apparently, Sir Oliver judged it wise to let well alone for, having got this qualified assent to his question, he sat down. Then William Cox descended from the witness-box and the name of Frederick Barnard was called.

Frederick Barnard, having been sworn, deposed that he was the senior waiter at Mason’s Restaurant, Crompton-on-Sea. He had identified the prisoner among a number of other men at the prison. He recognized him as a man who had come to the restaurant at about half-past eight in the evening of the 28th of August. He had noticed him particularly because he looked pale and ill and had a drawn expression as if he were in pain or in some serious trouble. He also looked very tired. Seemed “dead beat”. His manner was peculiar. He had a companion with him but hardly spoke a word to him. He improved very much when he had taken some food and wine, but he ate very slowly and carefully, as a man might who had a tender tooth, and he used his napkin as if he was afraid of hurting his mouth.

His companion was an American gentleman whom witness knew well by sight as he had frequently come to the restaurant, sometimes alone and sometimes with a friend. Witness did not, at that time, know the American gentleman’s name, but he had since ascertained from the friend who used to come with him that he was a Professor Booley, who described himself as a beauty specialist.

“Do you know what Professor Booley did for a living?”

“I only know what his friend told me; that his work consisted principally in making up ladies’ faces; touching up their complexion and eyebrows and covering up any blemishes.”

“Did you notice anything peculiar in Booley’s behaviour?”

“Yes, his manner was very peculiar. He ate very little, but very fast, and he hardly talked at all. But he sat looking at the prisoner’s face as if he couldn’t take his eyes off it. It was most singular. Sometimes he would lean back or move his head sideways to get a different view; and sometimes he would look in the big mirror on the wall and then back at the prisoner’s face as if he was comparing the reflection in the glass with the original. And he seemed to be extraordinarily pleased with both of them and quite excited about them.”

“And did the prisoner show any special interest in his face?”

“Yes, I saw him looking at himself in the glass from time to time and, after Mr. Booley had gone—which he did before the prisoner had finished his dinner—he got up from the table and walked up to the mirror and stood there looking at himself for quite a long time.”

“And what did he do after that?”

“He sat for close on half an hour over his coffee and a green Chartreuse. He looked quite natural by this time, but he seemed to have something on his mind; at least, he looked as if he was thinking very hard about something.”

“Did you see anything about the prisoner’s face that might have accounted for the interest that he and Professor Booley seemed to take in it?”

“I didn’t then. I just thought that he was a good-looking young man who was rather pleased with himself. I didn’t know who Professor Booley was, then. But since I’ve known what his trade was, I’ve been disposed to suspect that—”

“Oh!” Sir Oliver interrupted, “but you mustn’t tell us what you suspect, though I daresay you may be right. We are dealing with the facts that are known to you. We must not go beyond what you saw or heard.”

“Well,” said Barnard, slightly crestfallen and even huffy, “I’ve told you all I saw and heard. I can’t remember anything more.”

Thereupon Sir Oliver sat down and proceeded thoughtfully to polish his eye-glass. The judge cast an inquiring glance towards Thorndyke, but as the latter made no sign, the witness was released and the name of Thomas Steel was called.

The new witness was a sergeant in the Crompton police force and he gave his evidence with professional tidiness and precision. But it did not amount to very much. He had picked the prisoner out of a row of twenty men, and he identified him as the man who had stood outside the police station watching the removal of the body from the seaweed cart. That man had made no sign of recognizing the body and had not spoken to anyone. Did not appear in any way agitated or greatly concerned. Had seemed to be just an ordinary spectator. Witness was quite sure prisoner was the man. Was used to
recognizing persons, and prisoner was a rather striking person who would be easy to remember and recognize.

From this incident Sir Oliver turned his attention to Professor Booley, referring to the evidence of Frederick Barnard. “Do you know anything about this man Booley?”

“I knew him by name and by sight,” the sergeant replied, “and I knew his premises in Barleymow Street. He described himself as a beauty specialist and he had a big card in his window setting forth what he could do. I took a photograph of it to keep in case any question of fraud or false pretences should be raised.”

“Have you got a copy of that photograph?”

“Yes. I have here an enlarged copy from the small negative.” He produced from an attache case a whole-plate photograph which was passed across to Sir Oliver, who took out his eye-glass to read it, and then, with an indulgent smile, returned it to the usher who passed it up to the judge. From his lordship it was conveyed to the jury, who studied it with broad and appreciative grins, and back to the Counsels’ bench, finding its way eventually to the Clerk’s table, where it remained. “Have you any knowledge,” Sir Oliver asked, “as to the success of the Professor’s methods? Have you, for instance, met anyone who had had a crooked nose straightened out by him?”

The sergeant admitted, amidst a murmur of merriment, that he had not. “But,” he added, “I know that he was very clever at painting out black eyes.”

“Did you ever see a specimen of his skill?”

“Yes. Our court missionary got a black eye when he was trying to separate two drunken sailors. It was such a bad one that he didn’t like to show his face out of doors. But one of our constables took him round to Booley’s to have it painted out with grease-paint, and when he came back you couldn’t see a trace of the discolouration. It looked perfectly natural.”

“So far as you know, did Booley get much work of this kind?”

“I have no personal knowledge beyond this one case. The constable told me that Booley did an extensive trade in painting out black eyes and bruises and pimples and blotches, but I can’t verify his statement from my own knowledge.”

This concluded the examination in chief. When Sir Oliver sat down, Thorndyke rose to cross-examine. “You have said that when you came out of the police station with the stretcher, you found the prisoner waiting there and making a show of reading a bill that was affixed to the notice board. Do you recall anything remarkable about that bill?”

“Yes. By a most extraordinary coincidence, that bill contained a description of the man whose body was in the seaweed cart.”

“What was the heading of that bill?”

“It was headed, ‘Wanted for Murder.’”

“And who was it that was wanted for murder?”

“The dead man; Andrew Barton.”

“For the murder of whom was he wanted?”

“For the murder of Mr. Hudson at Kibble’s Cross.”

“Can you remember the exact terms of the description?”

“I cannot remember the exact wording, but I could give you the substance of it.”

“I will read you a portion of the bill and you shall tell me whether what I have read is correct. This is the passage:

“‘It is believed that more than one man was concerned in the crime, but the only one who was seen was the man who actually fired the shot. He is described as somewhat fair man with grey eyes, about thirty years of age and easily recognizable by reason of a remarkably deformed nose, which appears to have been broken and is completely flat excepting at the tip, which is rather prominent.’

“Is that a correct quotation from the bill?”

“To the best of my recollection and belief it is quite correct.”

“You say that the description in the bill was that of the dead man, Andrew Barton. When did you first learn that the man described in the bill was Andrew Barton?”

“On the following morning, the 28th. A telephone message came through from Bunsford directing us to take down the bill and call in any copies that we had circulated. I took the telephone call.”

“Was any reason given for the withdrawal of the bill?”

“Not officially. But I had a few words with the officer at the other end and was informed by him that inquiries had been made and that it appeared that there had been some mistake. It turned out that the man described in the bill was not concerned in the murder at all. I then reported the finding of the body of Andrew Barton of Fairfield, and the officer at Bunsford then informed me that Andrew Barton of Fairfield was the man described in the bill.”

“So far as you know, was any public announcement made by the police that the accusation of Andrew Barton was a
The evidence of Mrs. Baxter was followed by that of the cashier at the London Bank, and, when this had been disposed of, Sir Oliver proceeded to bring up his big gun. And a very big gun it was; and, to tell the truth, the gunner seemed just a shade Oliverish about “letting it off”. For—to drop metaphor—the new witness was no less a person than Sir Artemus Pope, M.D., F.R.S., the eminent pathologist; and the evidence of Sir Artemus Pope was the foundation on which the whole superstructure of the prosecution rested. And the counsel’s opening address had made it clear that Sir Artemus was neither an enthusiastic nor a pliable witness. It was certain in advance that he would not budge a hair’s-breadth from bald, literal, demonstrable fact.

Sir Oliver approached him cautiously with the introductory questions. “You have made an examination of the body of the deceased, Andrew Barton, whose death is the subject of the present proceedings. Is that so?”

“Yes,” replied Sir Artemus. “On the 6th of November, acting on instructions from the Home Office, I conducted an exhumation at Fairfield Churchyard of the body of Andrew Barton and made a careful examination of the said body.”

“What was the object of the examination?”

“To check the findings of the medical witness at the inquest and to determine, if possible, the cause of death, particularly in connection with the present proceedings.”

“Were you given full particulars of the circumstances in which the death occurred?”

“Yes, including the depositions taken at the inquest.”

“What were the conditions that your examination revealed?”

“I found extensive multiple fractures of the skull and the bones of the face. Practically all the bones were broken and the head appeared to have been crushed flat. The injuries were of such a kind as would have been produced by an extremely heavy blow from some hard and ponderous object, delivered when the head was lying on the ground, face upwards.”

“What conclusions did you reach as to the cause of death?”
“If the man were alive at the moment when the blow took effect, it would certainly have killed him instantly. As there was nothing to suggest that he was not alive at that moment, I concluded that the blow was the cause of death.”

“Would the very gross injuries which you have described be sufficient to cover up and obliterate the traces of any lesser injuries which might have been previously inflicted?”

“That would depend on the nature of the previous injuries. If they had been inflicted with a sharp instrument, such as an axe, the incised wounds would be recognizable even after the subsequent smashing. But if they had been inflicted with a blunt implement, all traces of them would probably have been obliterated by the blow which flattened the skull.”

“Is it possible that such previous injuries may actually have been inflicted and their traces destroyed by the major injuries?”

“It is possible,” Sir Artemus replied, with distinct emphasis on the final word.

“From your examination did you form any opinion as to whether the injuries were due to accident or homicide?”

“The examination informed me only of the nature of the injuries. I have no personal knowledge of the circumstances in which they were inflicted. The information supplied to me set forth that they were produced by a block of chalk, weighing about a hundredweight, which had fallen from the cliff. If it had fallen on to the head of deceased when he was lying face upwards, it would have produced injuries such as those which I found. And in that ease, death would be due to accident.”

“Precisely,” said Sir Oliver. “That is one possibility. Now let us consider another. Suppose that the block had already fallen and was lying on the beach. Suppose that deceased had been killed or rendered insensible by a blow on the head with a heavy stone or some other blunt instrument. Suppose, then, that his assailant picked up the block of chalk and dropped it on his head as he lay. In that case, would the appearances be such as you found?”

“No,” replied Sir Artemus. “A man could not lift such a block more than two or three feet, and a fall from that height would not smash the skull into fragments as I found it to be smashed.”

“Not with one single blow. But suppose the blow to have been repeated several times?”

“In that case, it is possible that the skull might ultimately have been completely crushed.”

“And would it then have presented the appearance which you observed when you examined it?”

“Probably it would, so far as I can judge. But that is merely an opinion. I cannot say definitely that it would.”

“Is it possible that the injuries which you found could have been produced by homicidal violence?”

“It is physically possible that they might have been.”

“You agree that the appearances which you observed were consistent with the theory that the death of the deceased was due to homicidal violence?”

Sir Artemus did not appear to like the form of the question, but eventually gave a grudging assent; on which Sir Oliver, having got the utmost agreement that he was likely to get, promptly sat down, and Thorndyke rose to cross-examine. “You have said that the injuries which you found were such as would have been produced if the block of chalk had fallen on the head of deceased when he was lying face upwards. Did you find anything that was in the least degree inconsistent with the belief that death was caused in that way?”

“I did not,” Sir Artemus replied, promptly.

“It has been suggested that death or insensibility may have been caused by a blow, or blows, with a blunt instrument. Did you find any traces or any appearances of any kind which led you to believe that such blow, or blows, might have been inflicted?”

“I did not.”

“Did you observe anything which suggested to you that the injuries had been produced by human agency rather than by the accidental fall of the block?”

“I did not.”

“Did you observe anything, or ascertain any fact, which offered a positive suggestion that death might have been due to homicide?”

“I did not.”

“Would it be correct to say that the conditions which you found were entirely consistent with death by accident?”

“It would.”

“And that your examination disclosed no positive evidence or any suggestion of any kind that death was due to homicide?”

“Yes. That would be quite correct.”

Thorndyke, having squeezed the witness dry (and he had not seemed unwilling to be squeezed), noted the replies and then proceeded: “Were you supplied with a description of the person of deceased?”
“I was given a copy of the depositions taken at the inquest. They contained a description of the person of deceased.”

“Had you any instructions to verify the identity of deceased?”

“No. My instructions were to ascertain the cause of death and consider the possible alternatives of accident or homicide. The question of identity was not raised. The body which I examined was described to me as the body of Andrew Barton, and such I assumed it to be.”

“But you had a description of the person of Andrew Barton. Now, when you made your examination, did you find that the body which you were examining corresponded completely with that description?”

The question seemed to put Sir Artemus on the alert, and he gave himself a few seconds to consider it. But he was not the only person who roused at the question. The judge seemed to have found a possible clue to the mystery that had been puzzling him, for he leaned forward with eager interest to catch the reply. The prisoner in the dock, too, perceived a ray of light from an unexpected quarter, and, glancing at Molly, he saw that she had fixed a startled eye on the questioner. “What do you say, Sir Artemus?” Thorndyke inquired, placidly.

“The deceased,” Sir Artemus replied cautiously, “was personally unknown to me, so I was dependent on the description. There did appear to me to be a slight discrepancy between that description and the body which I was examining. The description set forth that deceased had suffered from a severe injury to the nose resulting in complete flattening of the bridge. The conditions which I found were not exactly what I should have expected from that description.”

“You have heard the evidence which was given by Mrs. Barton that the surgeon’s certificate described the injury as a depressed and comminuted fracture of the nasal bones?”

“Yes, I heard that evidence. It agrees with the description that was given to me.”

“Did you make a careful examination of the nasal bones of deceased?”

“I did. They were both fractured, but not very extensively. They had been driven bodily into the nasal cavity.”

“In a case of comminuted fracture with a depression which remained permanently, what conditions would you expect to find?”

“As the fragments must have united in a false position, I should expect to find the bones distorted in shape and associated with a good deal of callus or new bone.”

“What did you actually find?”

“The bones were fractured, as I have said. But when the fragments were put together, they did not appear to be in any way abnormal. I was not able to recognize any callus or traces of repair.”

“What conclusions did your observations suggest?”

“I concluded that the original injury could not have been as great as had been supposed; that there must have been some exaggeration, due to error.”

“Does that conclusion seem to you to be supported by the evidence which you have heard to-day?”

“I am hardly prepared to pronounce an opinion on that question. My examination was not concerned with the issue of identity, which you seem to be raising, and I did not give it sufficient attention to enable me to make a perfectly definite statement.”

“Are you prepared to admit that, if the description given to you of the person of Andrew Barton was a true and faithfully correct description, the body which you examined could not have been the body of Andrew Barton?”

“That seems rather sweeping,” the witness objected. “I don’t think I can commit myself to that. But I will admit that, if the description was correct, there were disagreements between that description and the visible facts which I am unable to account for.”

As this amounted, in effect, to an affirmative answer to the question, Thorndyke pushed the cross-examination no farther. As he resumed his seat, Sir Oliver rose to re-examine; and as he could evidently make nothing of Thorndyke’s later questions, he set himself to mitigate the effects of the earlier ones. “You have said, Sir Artemus, that you found no positive indications of homicide. Did you find any positive indications that excluded homicide?”

“I did not,” was the reply.

“Can you say whether Andrew Barton met his death by accident or by homicide?”

“I cannot. I have said that either is physically possible. I have no means of comparing the probabilities.”

Sir Oliver noted the reply. Then, turning towards the judge, he informed the court that “that was his case”. Thereupon Thorndyke rose and announced: “I call witnesses.” and a few seconds later the name of Ronald Barton was called, and the prisoner was conducted from the dock to the witness-box.

XV. — THE WITNESSES FOR THE DEFENCE
As Andrew made his short journey across the court from the ignominy of the dock to the comparative respectability of the witness-box, he was aware of a curious and unexpected sense of confidence. For now, at last, he was about to make his long-dreaded revelation; to tell, before judge and jury and the crowded court, his preposterous story with all its outrageous improbabilities. And yet, to his surprise, he did not shrink from the ordeal. What had once seemed almost an impossibility had now come within the compass of the possible.

But his surprise was unwarranted, as he himself partially realized. For there is all the difference in the world between making an astounding revelation to an audience that is utterly unprepared for it and making the same revelation to hearers who are already waiting for the solution of a puzzle. And that was his position now. By his skilfully conducted cross-examination, Thorndyke had thoroughly prepared the way for Andrew’s statement; ignoring the apparently important issues and building up a fabric of evidence which would immediately drop into its place as soon as Andrew began to tell his story. And when he stood up and faced his witness, it was not the judge alone who leaned forward all agog to hear what the defence really was. “You are indicted,” he began, “in the name of Ronald Barton for the murder of Andrew Barton. Is your name Ronald Barton?”

“No,” replied Andrew, “it is not.”

“What is your real name?”

“My name is Andrew Barton.”

As the answer was given, a startled cry mingled with the universal murmur of astonishment. Glancing quickly at Molly, Andrew could see that she had swung round on her seat and was gazing at him with an expression of the wildest amazement. The judge, after a quick glance towards the interrupter, fixed a look of critical scrutiny on the witness. “Is this a coincidence in names?” he asked, “or do you mean that you are the Andrew Barton whom you are accused of having murdered?”

“I am that Andrew Barton, my lord,” was the reply.

“The same Andrew Barton whose description has been read out to us from the police bill?”

“The same, my lord.”

The judge continued to look at him for two or three seconds. Then, with a slight shrug, he bowed to Thorndyke with a manner that seemed to invite him to “get on with it”. Meanwhile the jury, suddenly reminded of the police bill, looked first at the prisoner and then at another, some with frank incredulity and others with undisguised grins. Unperturbed by those grins, Thorndyke proceeded: “The evidence relating to the alleged crime of which you are accused covers a certain period of time and a certain succession of events. What is the starting-point of that series of events?”

“They began with a letter which I received from my cousin Ronald. It was dated the 21st of August and reached me on the 23rd. Its principal purpose was to ask for a loan of fifty pounds, but it also announced his intention to pay me a visit on the 28th.” Andrew then went on, urged by Thorndyke, to give the minutest details, even to the cutting of the privet hedge, of the circumstances connected with the letter and his difficulties in staving off Ronald’s visit.

“What was your objection to this visit?”

“From what I knew and suspected of my cousin’s mode of life, I did not consider him a suitable person to associate with my wife; and I had also found his manner towards her distinctly objectionable.”

“Why did you not tell your wife about this letter?”

“I was afraid that she would misunderstand my motives in objecting to Ronald’s visit; that she might feel that I had not complete confidence in her discretion in dealing with him.”

“Had you any such fear as to her discretion?”

“Not the least. I had perfect confidence in her. But I thought she did not quite realize what kind of man Ronald was, and might not be completely on her guard if he should try to establish relations of a kind that I considered undesirable.”

When the arrangements for the pretended visit to London had been described, Thorndyke proceeded to the incident of the murder of Mr. Hudson and led Andrew through it in the closest detail. “When you went home after the attack, were you at all alarmed or uneasy as to your connection with the affair?”

“No at all. I did not know that any murder had been committed and, of course, I was only a spectator. I told my wife exactly what had occurred and we discussed what I had better do. I was inclined to go over to Bunsford and give information at once. But my wife thought that, as I could not tell the police anything that they did not know already, I had better wait until some inquiries were made. But I intended to call on the police on the following day and tell them what I knew; and I should have done so had not the train come in sooner than I had expected.”

There followed a description of the visit to Crompton in the same minute detail, including the inspection of Professor Booley’s window and the remarkable announcements on his advertisement card; of which Andrew was able to remember nearly the whole, and the recital of which was received with murmurs of amusement. “When you read the list of Professor Booley’s accomplishments, did it occur to you to give him a trial and see if you could not dispense with the spectacles which you have described to us?”
“No. I did not take his claims seriously. I thought he was merely an advertising quack.”

The account of the day’s doings, almost from minute to minute, was continued until the incident of the seabathing at Hunstone Gap was reached. Then Thorndyke pressed for even more exhaustive details. “You say that your cousin ran up before you to the place where your clothes were lying and that he took possession of the heap that belonged to you. Is it not remarkable that he should have mistaken your clothes for his own?”

“I don’t think so. The outer clothes were almost exactly alike in the two suits. But I don’t think that it was really a mistake on his part. I think it was a practical joke. It was just the kind of joke that I should have expected from him.”

“What makes you think that it was a joke?”

“I have since remembered that, before sitting down, he turned the clothes over, putting the coat on top. And then he proceeded to wipe himself on my coat.”

“Can you account for the circumstance that you did not notice that you were sitting down on the wrong clothes?”

“As I have said, the two suits were almost exactly alike. They were both ordinary grey flannels. But apart from that, I was in a very disturbed state of mind. I was trying to think how I could decently put him off the visit to Fairfield, which he still seemed to be bent on.”

The account now approached the tragic incident of the falling block of chalk. The silence in the court was profound; and still Thorndyke insisted on tracing events from moment to moment. “Did you actually see the block fall?”

“No. I was much agitated by the unpleasant turn the conversation had taken and was avoiding looking at my cousin. I was watching a fishing lugger which was beating up the bay. When the chalk came rattling down, I jumped up and ran away from the cliff. When I stopped and looked round, Ronald was lying in the same place, covered with small lumps of chalk and with the large block resting on his head.”

“Was he already dead?”

“He must have been; but his legs were moving slightly with a sort of twitching movement. They continued to move for nearly half a minute.”

“Can you explain how it happened that you did not notice that you were putting on the wrong clothes?”

“There was not much to notice. The clothes were almost identical with my own, and they fitted me. But I was so shaken and horrified by what had just happened that I hardly knew what I was doing. As I was dressing, I still had my eyes on the corpse. The only thing that I noticed was the hat, and I did not stop to ask myself how it happened that Ronald was lying on mine.”

Andrew then described how he had hurried away from the Gap intending to seek assistance or give information, and how he had missed the road and wandered about in the country, reaching Crompton only after night had fallen, and how he had made his way straight to the police station and had encountered the police notice.

“Did you stop to read the bill?”

“No. I was feeling very confused and shaken and I stopped to think over what I had to tell, and how I should explain my presence in Crompton, and also whether I ought to say anything about the affair of the motor bandits. Then, as I was standing opposite the bill, my eye caught the words, ‘Kibble’s Cross,’ and I glanced quickly through the notice to see what had happened. Then I saw the heading, ‘Wanted for Murder,’ and reading down further, I read the description of myself and the statement that I had been seen to fire the shot.”

“You read the notice which directly accused you of having committed the murder. Were you particularly alarmed?”

“I was terrified. For the notice not only accused me but stated, on the evidence of an eye-witness, that I had been seen to fire the shot that had killed the man.”

“Did you think that you were likely to be convicted of this murder?”

“I thought that I was certain to be. This lady was prepared to swear that she had seen me fire the shot, and I had no answer but a bare denial. I thought that if I was caught I was bound to be condemned.”

“And did you think it likely that you would be caught?”

“I considered it a certainty that I should be, as the disfigurement of my nose, which was described on the bill, made me so very easy to recognize. Anyone who had read the bill who should see me would know instantly who I was. And my spectacles, which were the only marks of any sort of disguise, were in the pocket of the clothes that had been under the body of my cousin.”

The account went on to relate how Andrew had sneaked up the dark street, keeping in the deepest shadow and avoiding the street lamps, and how he had stumbled on the premises of Professor Booley and had then had the sudden idea that the Professor might be able to produce some sort of disguise. “Had you anything definite in your mind when you decided to apply to Professor Booley?”

“No. I realized that the disfigurement of my nose was the great source of danger as I could not cover it up and anyone would notice it at the first glance. I thought it possible that Professor Booley might be able to do something—even a
temporary disguise—which would give me a chance to escape.”

“So you decided to see if he could do anything for you. Now tell us exactly what happened.”

Andrew proceeded with the description of his interview with the Professor, brought up repeatedly by Thorndyke for the filling in of some apparently trivial detail. He spoke confidently and clearly; and, as he told that strange story, the entire court, judge, jury and spectators alike, listened in breathless silence. He described the Professor’s reluctance, changing suddenly into enthusiasm and even eagerness; the consulting-room with its chair and instruments and the cake of wax that had been shown to him and the various preparations for the operation, the operation itself, his agonies in the operating-chair, and the climax, when the Professor bade him look in the mirror. “And when you looked in the mirror, what did you see?”

“I saw the face of my cousin Ronald.”

“You mean that your face now resembled the face of your cousin?”

“That, I suppose, is the fact. It must have been. But the resemblance was so complete that it seemed like some magical illusion. What I saw was not my own face but Ronald’s. I could hardly believe my eyes.”

“No. Since I have had time to think it over, I have realized that it was quite natural. Ronald and I were extraordinarily alike in every respect but our noses. Ronald had a Roman nose and my nose was straight; and after my accident, the difference was much more striking. But Professor Booley, in filling up the notch in my nose, happened to model the patch which he put in so that the repaired bridge was almost exactly the shape of Ronald’s. The result was that the only appreciable difference between us was done away with. If Ronald had been alive, he and I would have looked like a pair of twins.”

“Professor Booley’s magic has had some rather embarrassing effects. What did you do when you recovered from the operation?”

Andrew described the visit to the restaurant and his examination of himself in the mirror, and explained how the complete transformation in his appearance made it impossible for him to go home; how the necessity for recovering his attache case compelled him to go to Ronald’s lodgings, and how, while waiting for an opportunity to enter unobserved, he had halted at the police station to read the bill and had thus been present when the cart arrived bearing his cousin’s body. With occasional assistance from Thorndyke in explaining and elucidating the incidents and emphasizing their significance, he continued the narrative, including his life at Hampstead, his visit to Molly, his meeting with Mrs. Kempster and so on up to the moment of his arrest and his committal for trial on the charge of fraud and personation.

When the examination in chief had thus brought the story up to his consignment to prison, Thorndyke sat down and Sir Oliver rose to cross-examine; and Andrew realized that the period of plain sailing was over. He had to brace himself up for some difficult questions. The learned counsel discreetly refrained from challenging statements of fact and attacked the evidence from the psychological side. “Your explanation of the mystery that was made about the visit to Crompton is difficult to follow. What prevented you from giving your wife a straightforward statement of what you intended to do?”

“Nothing but my own stupidity,” replied Andrew. “There was not the least necessity for any deception.”

“You have described your state of extreme panic on reading the police notice. But what occasion was there for panic? You would surely know that a charge of this kind could not be entertained in the case of a man of good position and known respectability?”

“I did not know it. I supposed that the sworn evidence of a respectable eye-witness would be conclusive. This lady said that she saw me kill Mr. Hudson. There seemed no answer to that!”

“Can you explain why, in all this time, you made no attempt to communicate with your wife?”

“Seeing that I was wanted for murder, I did not dare to disclose my identity. I felt sure that, if I told this story to her, she would reject it as an attempt at imposture and communicate with the police; and I could not risk any dealings with them.”

“Again, you actually state that you had an interview with your wife and that she did not recognize you, though she noticed your resemblance to her husband. It seems perfectly incredible that she should have failed to recognize her own husband. But allowing that she did, what prevented you from simply telling her who you were?”

“In the first place, she evidently recognized me as Ronald, and she appeared to be distinctly distrustful of Ronald. Then she believed that she had seen the dead body of her husband, and she had attended his funeral only a few days before. Moreover, I found that she was convinced that the person who was with him at Hunstone had murdered him. But I should have had to begin by telling her that I was one of the two persons who were at Hunstone. I thought, and still think, that she would have gone straight out and informed the police.”

“There is then the case of the woman, Elizabeth Kempster. You admit that she, having seen and talked with you, was firmly convinced that you were her husband, Anthony Kempster. You admit that there can be no doubt that Anthony Kempster and Ronald Barton are one and the same person. You admit that this woman still believes that you are her husband, Ronald Barton. See, then, what it is that you are asking us to believe. On the one hand, you assert that you had a long interview with your own wife and that she never even suspected that you were her husband. On the other hand, you
had an interview of some length with Elizabeth Kempster and she was then convinced, and still remains convinced, that you are her husband. And both these women are convinced that you are Ronald Barton. Do you still maintain and ask the jury to believe that you are not Ronald Barton, which both of these women are convinced that you are, and that you are Andrew Barton, which Andrew Barton’s wife is convinced that you are not?”

“I have declared on oath, and I repeat, that I am Andrew Barton.”

The learned counsel raised his eyebrows (whereby it became necessary for him to catch his eyeglass as it dropped from his eye; which he did with an expertness born of long practice), and, after a pause to give effect to that gesture of incredulity, continued his cross-examination, skilfully picking out all the improbabilities and apparent contradictions. It was cleverly done and it served, at least, to save the face of the prosecution. But it was all very inconclusive since it left all the evidence on the main questions of fact untouched. Those questions Sir Oliver was too wise to attack. His long experience in the courts would have taught him that technical evidence from Dr. John Thorndyke was best left alone. Moreover, he probably suspected that Thorndyke had not played his last card.

And so it turned out when the long cross-examination was ended. For the next witness whose name was called was Dr. Christopher Jervis; and it soon appeared that Dr. Jervis belonged to the heavy division of the defence’s artillery. Having elicited his name and qualifications, Thorndyke began: “Can you tell us anything about the block of chalk which was found on the body of the dead man who has been described as Andrew Barton?”

“Yes. On the 13th of November I went to Hunstone Gap with the witness, William Cox. He showed me the place where the body was found and the position of the head, which was marked by some splashes of blood which had soaked into the chalk at the foot of the cliff. He also showed me the block of chalk, which was still lying where he had dropped it. Looking up the cliff, I could see the spot from which the block had broken away. It was quite clearly distinguishable as a squarish cavity. I measured, with a sextant, the height of this cavity above the beach and found it to be sixty-three feet. I tested, with a plumb-line, the position of this cavity in relation to the blood-mark at the foot of the cliff and found that they were both exactly in the same vertical line. The head of the deceased must, therefore, have been exactly on the spot on to which the block would have fallen. I tested the weight of the block by lifting it. With great difficulty, I was able to lift it a few inches from the ground, but was able to hold it for only a very few seconds owing to the absence of anything for the fingers to grasp.”

“Could you have lifted it two or three feet?”

“No, certainly not.”

“Are you a fairly strong man?”

“Yes. I am rather above the average of strength for a man of my size. I am just under six feet two inches in height.”

“You have heard the suggestions of the prosecution as to the method employed in committing this alleged murder. Do you consider, judging by your experience of the block, that the method suggested is physically practicable?”

“No. I am certain that it would be impossible for even a strong man to lift that block two or three feet from the ground several times in succession.”

“Were you present when Sir Artemus Pope made his examination of the body which is alleged to be that of Andrew Barton?”

“Yes; and I was authorized to make any independent examination that I considered necessary.”

“What observations did you make?”

“I paid particular attention to the condition of the nasal bones. The description of Andrew Barton made it clear that he had suffered from a severe depressed fracture of the nasal bones, caused by a blow from a cricket-ball. I searched carefully for traces of that fracture and the callus thrown up in the processes of bone repair. I could find no such traces. The bones were fractured in several places, but these were new fractures. There was not a sign that the bones had ever been fractured before. I carefully separated out the broken pieces and fitted them together on a wax support. I had no authority to bring them away to produce in evidence but I made a plaster cast of the joined fragments on the wax. I produce the cast for inspection; and I have also brought a normal skull for comparison. The cast shows clearly the new fractures in the bones, but it also shows clearly that there are no traces whatever of any old fractures or of any callus or signs of repair. The bones in the cast are perfectly normal, as can be seen by comparing them with the uninjured bones of the skull.”

“What do you infer from this?”

“I infer that it is quite impossible that the body which I examined could have been the body of Andrew Barton.”

“Are you quite certain that it was not the body of Andrew Barton?”

“I am quite certain that it was not. It is a physical impossibility that his nasal bones could have been perfectly normal in appearance as the bones are seen to be in the cast.”

On receiving this answer, Thorndyke paused for a few moments to complete his notes and then proceeded: “Have you made any examination of the prisoner?”

“Yes. I have examined his nose with the naked eye, with ordinary electric light and with X-rays and also by the sense of
touch. To the naked eye it appears to be a completely normal nose of the Roman type with a rather high bridge. To the sense of touch it is hard and smooth in the upper part with some irregular masses at the base. I was unable to feel the lower edges of the nasal bones or the median cartilage. On examination with electric light or sunlight, it is seen that the bridge of the nose is not composed of bone but of some translucent substance which I believe to be paraffin wax.

“What are your reasons for believing it to be paraffin wax?”

“It has all the properties of paraffin wax and no other substance is known to me which could be introduced into that situation and formed into that shape.”

“What methods did you use in respect of the X-rays?”

“I took an X-ray photograph of the prisoner and another of myself for comparison as our noses are somewhat alike in shape. I produce those photographs. Each is signed by me and countersigned by John Thorndyke and I swear that they are the photographs of the persons whose names are written on them. On the one of myself it can be seen that the nasal bones are clearly visible occupying the bridge of the nose and corresponding to its outline. In the photograph of the prisoner the outline of the bridge is faintly seen but there are no nasal bones there. At the base is an irregular mass of bone which corresponds to no normal structure. It looks like an old depressed fracture of which the fragments are cemented together with callus, or new bone.”

“What conclusions do you draw from these photographs?”

“The photograph of the prisoner shows a condition which exactly agrees with the description of Andrew Barton, plus the shadowy indication of the mass of wax forming the bridge. Disregarding the wax, which is really a foreign body and no part of the prisoner’s person, the photograph is that of a man who is identical in appearance with Andrew Barton, according to the various descriptions of him which have been given in evidence, including the surgeon’s certificate referred to by Mrs. Barton.”

This completed the examination in chief. As Thorndyke sat down, Mr. Horace Black, Sir Oliver’s junior, rose to cross-examine. But he had a thankless task, for Jervis’s evidence dealt almost entirely with observed facts which could not be disputed or even questioned; and when the learned counsel mildly hinted at errors of observation or mistaken inferences, Jervis blandly offered him the cast or the photographs, which the counsel smilingly waved away as matters outside the province of a mere lawyer.

The next witness came as a surprise to most of the persons present, including Andrew; for the name that was called was that of Elizabeth Kempster. As the lady stepped into the box and looked nervously at Thorndyke, a certain redness around the eyes and a handkerchief held in the hand suggested that the occasion was, for her, not a happy one. When the preliminaries had been disposed of, Thorndyke opened his examination with the request: “Will you kindly look at the prisoner, Mrs. Kempster, and tell us whether you recognize him?”

The witness cast a deprecating glance at Andrew and replied: “Yes, I recognize him.”

“Can you tell us who he is?”

“I don’t think I can,” she replied. “He looks like my husband, Anthony Kempster, but from what I have just heard, he can’t be.”

“But, disregarding the evidence that you have heard, who do you say he is?”

“Well, he looks exactly like my husband.”

“Have you previously identified him on oath as your husband?”

“Yes. I swore to him as my husband at the police station and in the police court. But,” she added with a catch in her voice and an application of her handkerchief to her eyes, “I didn’t know that I was letting him in for this.”

“When you identified him at the police court, had you at any time any doubt that he was really your husband?”

“Yes. I did think, just for a moment or two, that I might have made a mistake. But then they found in his pocket-book a tradesman’s bill addressed to A. Kempster, Esq., and that convinced me that I was not mistaken.”

“What was it that caused you that momentary doubt?”

“It was the way he spoke and behaved. He was quite polite to me, and he didn’t reproach me for having given information against him. That was not at all like my husband. He was accustomed to talk loud and bluster when he was put out.”

“And what about the voice? Was it exactly like your husband’s?”

“No, it was rather like, but not exactly. I noticed then that it seemed a little different from what I remembered, and I noticed it again when he was giving evidence.”

“I need not ask you whether your husband was in the habit of absenting himself from home, but I should be glad if you could give us some information as to a particular date. Do you know where your husband was on Good Friday in the year 1925?”

“Yes, I remember very well. He was in Wormwood Scrubbs Prison. He came out on Easter Sunday.”
Here the judge interposed, though without any great emphasis. "It is hardly necessary for me to remind learned counsel that it is not admissible to refer to previous convictions or delinquencies of the prisoner until the jury have given their verdict."

"That is so, my lord," Thorndyke agreed. "But the submission is that the prisoner is not the person named in the indictment and that the previous convictions of that person do not, therefore, affect him. And I may say that the point which I am trying to elicit is highly material to the defence."

"If you say that the point is material to the defence," the judge rejoined, "I must allow the questions to be put."

Whereupon Thorndyke resumed his examination. "Do you know how long your husband had been in prison?"

"Yes. Six months. I had notice when he was going to be discharged and I went and met him at the prison gate."

"Have you any doubt that the man whom you met at the prison gate was your husband?"

"No, none whatever. I recognized him and he recognized me, and I took him home and gave him a good dinner. Besides I had been present in the police court when he got his sentence."

"At the police court and in the prison, was he known by the name of Anthony Kempster?"

"No. When he was arrested, he gave the name of Septimus Neville, and he stuck to it. They never knew his real name."

"You speak of his real name. Do you know what his real name was, or is?"

"I am not sure. He married me under the name of Anthony Kempster, but I sometimes suspected that that was not his real name. He was very much in the habit of changing his name."

"Did you ever meet with the name of Barton in connection with him?"

"Yes. I think he had a cousin of that name. He was very secret about his letters, as a rule; but I happened to see one that he had left in the pocket of a coat that I had to mend for him, and I saw that it was signed: 'Your affectionate cousin, Andrew Barton.' But, of course, I didn't know that his name was the same as his cousin's."

This concluded Thorndyke's examination; and, as the prosecution had no inkling of the bearing of this witness's evidence on the issue, the cross-examination was tentative and brief. When it was finished and Mrs. Kempster left the box, with a commiserating glance at the prisoner and a final wipe of her eyes, the court, and Andrew, had another surprise; for the witness who followed her was no less a person than Andrew's old friend, Mr. Samuel Montagu.

The new witness, having given his name, deposed that he was a dealer in works of art and that his premises were in New Bond Street. He was a good judge of pictures—he had to be—and his own personal preference was for water-colour paintings, especially interiors and subject pictures of high finish and fine execution. When he had got so far, Thorndyke produced from under his bench a framed and glazed water-colour painting which was conveyed to the witness-box, and handed to the witness; who examined it with profound attention and evident interest. "Have you ever seen that picture before, Mr. Montagu?" Thorndyke asked.

"I have not," was the reply.

"There is, as you see, no signature to the picture. Can you give any opinion as to who the painter was?"

"I can. This picture was painted by Andrew Barton."

"You speak quite positively, as if you were certain."

"I am certain. I was for many years Andrew Barton's agent and dealer. Nearly all of his work passed through my hands, and I have always had a great admiration for it. I have two of his paintings in my permanent gallery and three of them in my private house."

"You feel that you can say quite definitely that this picture was painted by Andrew Barton?"

"Yes. Quite definitely. I have not the shadow of a doubt."

At this point, Thorndyke sat down and Mr. Horace Black rose to cross-examine. At his request, the picture was passed across to him and he examined it critically for a while before beginning. At length, he opened fire on the witness.

"You have stated, as if it were a fact known to you, that this picture was painted by Andrew Barton. Are you not offering us a mere conjecture as a statement of fact?"

"It is not a conjecture," replied Montagu. "It is an expert opinion, and a very expert opinion considering my great experience of Andrew Barton's work. And I feel perfectly certain that it is a correct opinion."

"You are extremely confident. But, looking at this picture, it seems to me that there is nothing very highly distinctive about it. It seems to me to be a picture of the kind that is sometimes called photographic, such as could be produced by any skilful draughtsman."

"The people," said Montagu, "who call highly finished paintings photographic are people who don't know much about either painting or photography. There is no analogy between a work of imagination and a photograph."

"Still, I submit that a simple, realistic style like this could be easily imitated by any competent painter."

"The people," said Montagu, "who call highly finished paintings photographic are people who don't know much about either painting or photography. There is no analogy between a work of imagination and a photograph."

"Yes. Quite definitely. I have not the shadow of a doubt."

At this point, Thorndyke sat down and Mr. Horace Black rose to cross-examine. At his request, the picture was passed across to him and he examined it critically for a while before beginning. At length, he opened fire on the witness.

"You have stated, as if it were a fact known to you, that this picture was painted by Andrew Barton. Are you not offering us a mere conjecture as a statement of fact?"

"It is not a conjecture," replied Montagu. "It is an expert opinion, and a very expert opinion considering my great experience of Andrew Barton's work. And I feel perfectly certain that it is a correct opinion."

"You are extremely confident. But, looking at this picture, it seems to me that there is nothing very highly distinctive about it. It seems to me to be a picture of the kind that is sometimes called photographic, such as could be produced by any skilful draughtsman."

"The people," said Montagu, "who call highly finished paintings photographic are people who don't know much about either painting or photography. There is no analogy between a work of imagination and a photograph."

"Still, I submit that a simple, realistic style like this could be easily imitated by any competent painter."
“That is not so,” said Montagu. “A first-class professional copyist might be able to make a copy of this picture which would deceive any person but an expert. But imitation is quite a different matter from copying. To begin with, every artist has his own manner of thinking and working. Now the imitator would have to drop his own manner—which he couldn’t do—and adopt, not only the technique but the mental and emotional character of the man he was imitating. And then, if he was trying to imitate a first-class artist like Andrew Barton, he would have to be a first-class artist, himself. But if he were, he wouldn’t want to imitate anybody; and what’s more, he couldn’t do it, because he would have an unmistakable style of his own.”

“And do you say that this simple, literal representation of an old woman making lace shows an unmistakable style which nobody could possibly imitate?”

“I do. I say that any genuine expert could pick out Andrew Barton’s work at a glance. Of course, he was not like some of the present-day painters who play monkey tricks to give the art critics something to write about. It was genuine, honest painting done as well as he could do it; and nobody could do it better.”

“We are straying away from the issue,” said the counsel. “I am not contesting the quality of the work. My point is that you have sworn that this picture was painted by Andrew Barton, a fact which cannot possibly be within your knowledge since you admit that you never saw the picture before. Do you still swear that it was painted by Andrew Barton?”

“I said I felt certain, and I do feel certain; and I am ready to buy it for fifty pounds with the certainty of being able to sell it at a profit.”

Here the counsel smilingly abandoned the contest and sat down. The picture was handed up to the judge, who inspected it with deep interest, and Mr. Montagu retired triumphantly from the box.

The next name called was less of a surprise to Andrew, who had been following closely the drift of the evidence; and the name of Martha Pendlewick associated itself naturally with the picture. The old lady stepped up into the box with a bland smile on her face and, having curtsied to the judge—who graciously acknowledged the salutation—turned and saluted the prisoner in the same deferential manner. “I want you, Mrs. Pendlewick,” said Thorndyke, “to look at the prisoner and tell us whether you recognize him.”

“Lord bless you, yes, sir,” said Mrs. Pendlewick. “The poor young gentleman was lodging with me at the very time that the police arrested him. And a nicer and more considerate lodger no one could wish for.”

As the old lady was speaking, the judge repeatedly glanced from her to the picture, which he was still holding, and back, apparently comparing the real with the painted figure; and meanwhile he listened attentively to the evidence. Then, at Thorndyke’s request, the picture was handed down and presented to the witness, who nodded at it with a smile of friendly recognition. “Have you ever seen that picture before?” Thorndyke asked.

“To be sure I have,” she replied with a surprised air. “Why ‘tis a likeness of myself a-making bone lace in my own kitchen.”

“Do you know who painted that picture?”

“Certainly I do. ‘Twas the young gentleman, himself, Mr. Barton.”

“Can you tell us when he painted it?”

“He took several days over it. I can’t give you the exact date, but he finished it only a few days before the police made that unfortunate mistake.”

“Can you say positively that you saw him paint the whole of it from beginning to end?”

“Yes. I saw him begin it on the white paper and draw it with a lead pencil. And then he put on the colours. It took him the best part of a week and he finished it, as I said, a few days before he was took away to prison.”

Mrs. Pendlewick’s evidence was listened to with intense interest by the Court and spectators alike. But its effect on Mr. Montagu was most remarkable. From his place among the “witnesses in waiting” he craned forward with bulging eyes to stare, first at Mrs. Pendlewick and then at the prisoner. Evidently, he was in a state of complete mental bewilderment. He had sworn that the picture could have been painted by no one but Andrew Barton. But clearly it had been painted since Andrew Barton’s death; and it had been painted by the Roman-nosed gentleman in the dock. He could make nothing of it.

His bewilderment did not escape the notice of Thorndyke who, even while he was questioning the witnesses, kept a sharp eye, not only on the jury but also on the spectators. For long experience had taught him that, in practice, the final test of evidence is its effect on the non-expert listener. Now, Mr. Montagu was in a dilemma. The evidence of his eyesight told him that the picture had been painted by Andrew Barton. But it also told him that the man in the dock was not the Andrew Barton whom he had known. Yet there seemed no escape from Mrs. Pendlewick’s evidence that the picture had been painted by the man in the dock. It was a puzzle to which he could find no solution.

Thorndyke then noted Mr. Montagu’s state of mind and congratulated himself on having taken the precaution to put Montagu in the box before Mrs. Pendlewick; for, evidently, if he had gone into the box after her, his evidence would have been worth nothing. He would never have sworn to the authorship of the picture. The observation, therefore, of Montagu’s apparent immunity to the evidence of the change of personality came as a very useful reminder that that evidence had still to be driven home to the jury, and further, that it must be driven home to them through the evidence of their own eyesight.
Fortunately, the next witness gave him the opportunity.

That witness was a quiet, resolute-looking gentleman who gave the name of Martin Burwood and stated that he was an Inspector in the Criminal Investigation Department of the Metropolitan Police. His duties were connected with the keeping of Criminal Records at Scotland Yard and especially with the Finger-print Department. "When the prisoner was arrested," said Thorndyke, "were his finger-prints taken?"

"They were," replied the inspector.

"Were those finger-prints already known to you?"

"They were not. On receiving them from the prison, I examined them and I then searched the files to see whether we had any duplicates. I found that there were no duplicates in the files."

"What does that prove?"

"It proves that the prisoner has never previously been convicted of any offence."

"Have you in your records any relating to a man named Septimus Neville? And, if so, of what do those records consist?"

"We have the records of Septimus Neville in the files. They consist of descriptive and other particulars, a complete set of finger-prints and two photographs, one in profile and one full face."

"Have you compared the finger-prints of Septimus Neville with those of the prisoner?"

"I have. They are not the same finger-prints."

"Are you quite sure that they are not the same?"

"I am perfectly sure. There is not even any resemblance."

"Is it possible that Septimus Neville and the prisoner can be one and the same person?"

"It is quite impossible."

"Have you compared the record photographs of Septimus Neville with those of the prisoner?"

"I have."

"Do you find anything remarkable about them?"

"I do. The photographs show that the two men are extraordinarily alike. They are so much alike that it is hardly possible to distinguish one from the other. I produce the photographs of both men."

He did so, and they were passed up to the judge, who inspected them with amused surprise. They were then handed round to the jury who, in their turn, viewed them with undisguised astonishment. "You have shown us," said Thorndyke, when he had examined them and passed them on to the other counsel, "four photographs, two of each of these men. They appear exactly alike, but you say that they are the photographs of two different men. Do you swear that they cannot be four photographs of the same man?"

"I do. The finger-prints, which were taken at the same time as the photographs, prove conclusively that they must be two different men."

Thereupon Thorndyke sat down; and Mr. Black, with more valour than discretion, rose to cross-examine. But it was quite futile; for the evidence was unshakeable and the officer was a seasoned and experienced witness. The usual questions were asked as to the possible fallibility of finger-prints, and received the usual answers. As a wind-up, the counsel asked: "Do you swear that it is impossible for two men to have the same, or similar, finger-prints?"

"I swear that it is quite impossible," was the withering reply.

"And I suppose," the judge interposed dryly, "that we may assume it to be impossible for one man to have two different sets of finger-prints?"

The witness grinned and agreed that it was impossible; and the learned counsel, hiding his blushes under an appreciative smile, hurriedly sat down.

Then Thorndyke rose and, having announced that all the witnesses for the defence had now been heard, prepared to address the jury.

XVI. — THORNDYKE’S ADDRESS TO THE JURY

"IN view," Thorndyke began, "of the mass of evidence that has been produced and of its remarkable and convincing character, it seemed almost unnecessary that I should address you. But this is a trial on a capital charge and the prisoner’s life is forfeit if it should be held to have been proved against him. I cannot, therefore, take any risks of a miscarriage. I shall, however, occupy as little time as possible. You are sworn to give a true verdict according to the evidence; and I shall confine myself to an examination of that evidence and to pointing out what has actually been proved. The prisoner is indicted in the name of Ronald Barton for the murder of Andrew Barton. The words of the indictment, therefore, contain four affirmative propositions:
"I. That a murder has been committed. 2. That the person who was murdered was Andrew Barton. 3. That he was murdered by Ronald Barton. 4. That the prisoner is Ronald Barton.

"Now, in order that a verdict of guilty should be returned against the prisoner, it is necessary that each and all of those propositions should be proved to be true. If any one of them should be proved to be untrue, the case against the prisoner would fall to the ground. I am not referring to any legal questions which might arise in respect of defects in the indictment; on which subject His Lordship will give you the necessary direction. I shall deal with the plain and simple issue, whether the prisoner is or is not guilty of the crime with which he is charged. To enable you to decide on that question, I shall ask you to examine critically those four propositions.

"First, has it been proved that a murder was, in fact, committed? So far as direct evidence is concerned, I can dismiss that question quite summarily; for no direct evidence was produced. You heard Sir Artemus Pope declare definitely that, not only did he find no positive evidence that deceased met his death by homicide, but that he found nothing that tended to suggest or raise any suspicion of homicide. There is, therefore, no direct evidence that any murder was, in fact, committed; and I submit that on that alone, the prisoner is entitled to a verdict of Not Guilty.

"We now come to the indirect evidence; which consists in certain considerations of motive and conduct. The motives that are suggested for the alleged murder are, first, that Ronald Barton stood to gain five hundred pounds by the death of Andrew Barton and, second, that Andrew Barton had in his possession certain valuable property which Ronald coveted and subsequently stole, and which was found in the prisoner’s possession when he was arrested. It is further suggested that the conduct of the prisoner was such as to lead to the belief that he had murdered the man whose body was found at Hunstone Gap.

"And now we see the importance of the other three propositions. For if the person whose body was found was not Andrew Barton, then no insurance was payable, and the suggested motive ceases to exist. Again, if the prisoner is not Ronald Barton, he is entitled to no benefit under Andrew’s will; and again the motive disappears. Further, if the prisoner is proved to be Andrew Barton, the property found in his possession is his own lawful property, and the other motive disappears.

"Thus, you will see that the issue that you are trying is really the issue of personal identity. The questions which you have to decide are; first, who was the person whose body was found at the foot of the cliff at Hunstone Gap? and, second, who is the prisoner? I will take these questions in their order.

"First, who was the dead man? Now, we have the evidence of Mr. Cooper that two men were seen walking towards Hunstone Gap, and we may accept it as certain that the body which was found there was the body of one of these two men. For with that body was found the clothing of a man who corresponds exactly in appearance to one of them and who is known to have been in Crompton on that day and to have worn similar clothing.

"Of those two men, one had a broken nose and wore spectacles to conceal the disfigurement. The other had a normal and well-shaped Roman nose. The clothing was that of the man with the broken nose. But was the body also his? That is what you have to decide. Now I wish to impress on you the fact, which seems to have been somewhat overlooked, that that body was never identified. Mrs. Barton saw it and was unable to say whether it was or was not the body of her husband, and there was no one else who was competent to give an opinion. The clothes which were found with it were the clothes of Andrew Barton. Of that there can be no doubt. And from that fact the reasonable inference was drawn that the body was that of Andrew Barton. But I repeat that the body itself was not identified.

"Later, that body was re-examined by Sir Artemus Pope and by Dr. Jervis. Sir Artemus was naturally unwilling to pronounce on the identity of the body since his examination was not concerned with that question. But he admitted that the conditions which he found seemed to be irreconcilable with the personal description of Andrew Barton. On the other hand, Dr. Jervis, who examined the body with the express purpose of ascertaining its identity, gave a clear, definite and emphatic statement that the body was that of a man with a normal and uninjured nose; and furthermore, he produced a plaster cast of the dead man’s nasal bones, which was shown to you and from which, by comparison with the normal skull which was also shown to you, it was quite evident that the nasal bones of the deceased had never been broken until the chalk block fell on them. On these facts, Dr. Jervis declared positively that the body could not possibly be the body of Andrew Barton. The evidence before you, therefore, of your own eyesight, confirmed by the testimony of an expert witness, is that the body found at Hunstone Gap could not possibly have been the body of Andrew Barton.

"But, so far, we have decided only who he was not. We have now to consider the question, who he was. And here you will see that I am not depending on the prisoner’s evidence to decide questions of fact. That evidence is, of course, entitled to the same credit as that of the other witnesses; but I think you will agree with me that it will be more satisfactory if I can show you that the facts can be proved by independent evidence, reserving that of the prisoner to co-ordinate and explain facts that are otherwise difficult to understand.

"Now who was this dead man? We have agreed that he was one of the two men who were seen walking towards Hunstone Gap. All the known facts support this belief. Two men had been bathing in the Gap, for we find the nude body of one and the clothes of the other. The clothes were Andrew Barton’s but the body was not his body. Then, since there were no other clothes, it is clear that Andrew must have gone off in the other man’s clothes. That he could hardly have done so by deliberate choice but presumably by mistake, suggests that those clothes were, in size and appearance similar to his own. But the two men who were seen together were extremely similar in size and figure and were dressed in almost exactly similar clothes. Thus everything goes to prove that the body was that of one of these two men.
"Now of these two men, one is known, and has been proved to have been Andrew Barton. Who was the other? From the evidence of the only two witnesses who saw the two men, Mr. Cooper and the waiter, Albert Smith, we know that the other man—Andrew Barton's companion—was extraordinarily like the prisoner; so like that both these witnesses instantly identified the prisoner and swore that he was the man whom they had seen. But the prisoner is indistinguishably like Ronald Barton. So like that Mrs. Barton, when he visited her at her house, had no doubt that he was Ronald Barton, and still had no doubt when she was giving evidence in this court.

"The unavoidable conclusion is that the man who was seen with Andrew Barton must have been Ronald Barton. And this conclusion is strongly supported by the fact that Ronald and Andrew were cousins. It was a natural and probable circumstance that Andrew's companion should be his cousin Ronald.

"But if the body that was found was that of Andrew's companion, then it was the body of Ronald Barton; in which case it is unnecessary to point out that the prisoner cannot be Ronald Barton, but must be some other person.

"And now let us approach this question from another direction. The prisoner was arrested, in the first place, in the name of Anthony Kempster on an information sworn by Elizabeth Kempster, who identified him as her husband, Anthony Kempster, and swore to his identity as such. It is, therefore, obvious that the prisoner is either Anthony Kempster or someone who is indistinguishably like him. But who is Anthony Kempster? He is someone who is the indistinguishable double of the prisoner. But the prisoner is indistinguishably like Ronald Barton. Then it follows that Kempster must also be indistinguishably like Ronald Barton. As such indistinguishable likenesses are excessively rare, there is an obvious probability that these three men, Kempster, Ronald and the prisoner, are one and the same person; namely, Ronald Barton. And the fact that Kempster had a cousin named Andrew Barton confirms this probability so far that we may conclude confidently that Kempster was, or is, Ronald Barton.

"The question that we now have to decide is whether or not the prisoner is Anthony Kempster. For if we agree that Kempster is Ronald and the prisoner is Kempster, then the prisoner must be Ronald Barton. But we have evidence that Anthony Kempster served a term of imprisonment under the name of Septimus Neville. There is no doubt that Septimus Neville and Anthony Kempster are one and the same person, for we have the evidence of Kempster's wife to that effect. But we have the evidence of the officer from the Fingerprint Department that Neville and the prisoner cannot possibly be the same person. The prison photographs show these two men were extraordinarily alike; so much so that it would have been hardly possible to distinguish one from the other. But their finger-prints are totally different. It is therefore certain that the prisoner cannot possibly be Septimus Neville. But since Neville and Kempster are one and the same person, the prisoner cannot be Anthony Kempster; and since Kempster is Ronald Barton, the prisoner cannot be Ronald Barton.

"So far, we have answered the question, Who is the prisoner? from the negative side. We have shown who he cannot be. He cannot be the person in whose name he stands indicted. Now let us approach the question from the positive side. Who can the prisoner be? Who is it possible for him to be?

"He is not Ronald Barton; but he is someone so like Ronald that those who knew Ronald well, including his wife, have mistaken him for Ronald. The prisoner and Ronald have that curious resemblance that is usually associated with what are called 'identical twins'. Now there is only one person who is known to us who has this strange resemblance to Ronald—his cousin, Andrew. The only possible inference seems, therefore, to be that the prisoner is Andrew Barton. For, if he is not, then he must be some third person who is indistinguishably like the other two. But this is against all reasonable probabilities. It is a sufficiently strange coincidence that we should have this pair of identical twins. It would be outrageous to turn them into identical triplets by postulating the existence of a hypothetical third person who is indistinguishably like them both.

"But we have still more convincing evidence that the prisoner must be Andrew Barton. We know that Andrew suffered from a depressed fracture of the nasal bones. Now, to the eye, the prisoner appears to have a well-shaped Roman nose. But the X-ray photograph shows that he has suffered, and still suffers, from a depressed fracture of the nasal bones; that the symmetrical appearance of the nose is due to a filling of a translucent substance, which must be paraffin wax since there is no other known substance which it can be, which fills up the deep notch caused by the injury and has restored the bridge of the nose. In short, the X-ray photograph shows us a condition of the nasal bones which is known to have existed in Andrew Barton; which was peculiar to him, and by which he could be distinguished from all other human beings. Even alone, it would be enough to identify him as Andrew Barton.

"Thus you see that, without referring to the prisoner's evidence, the case against him has been completely disproved. With that evidence I do not propose to deal. It would be useless for me to occupy your time by flogging a dead horse. You heard his evidence and it will be fresh in your memories. All that it is necessary for me to do is to point out to you that, strange as was the story that he told you, it was an entirely consistent story and that you have every reason to believe that it was a true story. It did not conflict in any way with any other evidence that you have heard. On the contrary, its truth has been confirmed in the most striking manner by the evidence of all the other witnesses; not only of the witnesses for the defence, but also of those for the prosecution, and even by the able opening address of my learned friend, the counsel for the Crown. I shall, therefore, conclude by reminding you briefly of the facts which have been proved.

"The charge against the prisoner is that he, Ronald Barton, murdered his cousin, Andrew Barton. What has been proved is:

"First, that there is not the slightest reason to believe that any murder was committed by anybody.
“Second, that the body which was found was not the body of Andrew Barton.

“Third, that the prisoner is not Ronald Barton.

“Fourth, that he is Andrew Barton, the person whom he is accused of having murdered.

“Thus the charge set forth in the indictment has been disproved at every point and in every detail. It has been made abundantly and convincingly clear that the prisoner is innocent of the crime named in that charge; and I, accordingly, claim for him a verdict of Not Guilty.”

— XVII. — THE VERDICT

As Thorndyke sat down, a low murmur pervaded the court, and the judge glanced furtively and a little wistfully towards the jury. After a brief interval, Sir Oliver rose without alacrity and proceeded to polish his eyeglass with a thoughtful and somewhat hesitating air. As Thorndyke had really left him nothing to say, his reply could be little more than an empty formality, and he was apparently considering how he could best dispatch it when the foreman of the jury came to his relief with the intimation that the jury had heard as much as they considered necessary for their purpose. Thereupon, the Clerk of the court rose and inquired whether they had agreed on their verdict; to which the foreman replied that they had. The Clerk then put the momentous question: “Do you find the prisoner Guilty or Not Guilty?”

“Not Guilty,” was the reply, delivered with some emphasis; and even as the words were spoken, the court resounded with thunders of applause and Molly buried her face in her handkerchief. After a few moments, the judge held up his hand and the applause instantly died away, giving place to a profound silence. Then His Lordship leaned back in his chair and, regarding Andrew with a quizzical smile, addressed him thus:

“Mr. Barton—I can safely address you by that name, though I will not venture to be more particular—the jury have found you to be Not Guilty of the crime with which you were charged. I consider it a very proper verdict and I concur unreservedly. You are accordingly discharged and are free to go your ways; and I hope that your troubles are now at an end. There are a few loose strands which you will have to gather up with the Insurance Society, and perhaps with the Probate Court; but they will probably present no serious difficulties. But, before you depart, I will counsel you most earnestly, the next time you are accused of murder or any other crime, to seek legal assistance rather more promptly than you did on the last occasion.”

He concluded with a smile and a friendly nod; the gate of the dock was thrown open; the officer at Andrew’s side wished him “good luck”, and the prisoner stepped down to the floor of the court where Molly was waiting for him. While the judge had been speaking, she had risen and stolen across to the dock; and now, as he stepped down, she raised her eyes to his and silently held out her hands. Both were too overwhelmed for speech, or even to be conscious of the multitude of inquisitive eyes that were eagerly watching them. Passively, they allowed themselves to be shepherded by the discreet Jervis—who was acutely conscious of the curious though sympathetic spectators—out of the court and into a small room that opened off from the great corridor. Only then, when Jervis had slipped away with an excuse, did Molly trust herself to speak. “Oh, Andy!” she exclaimed shakily, “is it really you? Can it really be you, or is this only a tantalizing dream?”

“It isn’t a dream, Molly dear,” he replied. “It is an awakening from a nightmare; a nightmare of my own creating. I am the very prince of idiots. Say your husband is a fool, Molly.”

She laughed a little hysterically. “Shall I?” she said. “Then I will. Andy, you have, really and truly, behaved like a—perfect—old—DONKEY! But never mind that, darling. Only a few hours ago, I was a miserable widow. And now—”

She broke off with a sob and, laying her head on his shoulder, wept quietly and happily.

At this moment the door opened and Jervis entered, accompanied by Thorndyke, bearing the attache case and the picture and followed by Mrs. Kempster. The latter, still red-eyed and somewhat emotional, advanced shyly and addressed herself to Andrew: “I have come,” said she, “to ask for your forgiveness for all the mischief I have made. I never supposed —”

“Forgiveness!” interrupted Molly, seizing both her hands impulsively. “Why, you dear creature, you have been our good angel! It was you who broke the spell and brought us all back to realities. We can never be grateful enough to you. And don’t forget that you are our cousin.”

Here the door opened again to admit two more visitors; none other than Sir Oliver and his junior, Mr. Black. They both shook Andrew’s hand heartily, and Sir Oliver, having carefully inserted his eyeglass, spoke for them both. “We congratulate you most warmly, Mr. Barton. You have given us a magnificent entertainment and we glory in our defeat. Your champion has displayed his usual invincible form; and we, the Philistines, have been smitten hip and thigh. But NOT with the jawbone of an ass.”

THE END
I have been asked to make my contribution to the curious history of the disappearance of Mr. Daniel Penrose, and I accordingly do so; but not without reluctance and a feeling that my contribution is but a retailing of the smallest of small beer. For the truth is that of that strange disappearance I knew nothing at the time, and, even now, my knowledge is limited to what I have learned from those who were directly concerned in the investigation. Still, I am assured that little that I have to tell will elucidate the accounts which the investigators will presently render of the affair, and I shall, therefore, with the above disclaimer, proceed with my somewhat trivial narrative.

Whenever my thoughts turn to that extraordinary case, there rises before me the picture of a certain antique shop in a by-street of Soho. And quite naturally; for it was in that shop that I first set eyes on Daniel Penrose, and it was in connection with that that my not very intimate relations with Penrose existed.

It was a queer little shop; an antique shop in both senses. For not only were the goods that it contained one and all survivors from the past, but the shop was an antique in itself. Indeed, it was probably a more genuine museum piece than anything in its varied and venerable stock, with its small-paned window bulging in a double curve—as shop-fitters could make them in the eighteenth century—and glazed with the original crown glass, greenish in tone and faintly streaked, like an oyster-shell, with concentric lines. I dated the shop at the first half of the eighteenth century, basing my estimate on a pedimented stone tablet at the corner of the street; which set forth the name, “Nassau Street in Whetten’s Buildings,” and the date, 1734. It was a pleasant and friendly shop, though dingy; dignified and reticent, too, for the fascia above the window bore only, in dull gilt letters, the name of the proprietor, “D. Parrott.”

For some time I remained under the belief that this superscription referred to some former incumbent of the premises whose name was retained for the sake of continuity, since the only persons whom I encountered in my early visits were Mrs. Pettigrew, who appeared to manage the business, and, more rarely, her daughter, Joan, a strikingly good-looking girl of about twenty; a very modern young lady, frank, friendly and self-possessed, quite well informed on the subject of antiques, though openly contemptuous of the whole genus.

Presently, however, I discovered that Parrott, so far from being a mere disembodied name, was a very real person. He was, in fact, the mainspring of the establishment, for he was not only the buyer—and an uncommonly good buyer—but he had quite a genius for converting mere dismembered carcasses into hale and hearty pieces of furniture. Somewhere in the regions behind the shop he had a workshop where, with the aid of an incredibly aged cabinet-maker named Tims, he carried out the necessary restorations. And they were real restorations, not fakes; honest repairs carried out for structural reasons and left open and undisguised. I came to have a great respect for Mr. Parrott.

My first visit was undoubtedly due to the ancient shop-front. But when I crossed the narrow street to examine it and discovered in the window a court cupboard and a couple of Jacobean chairs, I decided to avail myself of the courteous invitation, written on a card, to enter and inspect and indulge a mild passion for ancient furniture.

There were three persons in the shop; a comely woman of about fifty, who greeted me with a smile and a little bow, and thereafter took no further notice of me; a stout, jovial, rather foxy-looking gentleman who was inspecting a trayful of old silver; and a small clerical-looking gentleman who appeared to be disembowelling a bloated verge watch and prying into its interior through a watchmaker’s eye-glass, which stuck miraculously in his eye, giving him somewhat the appearance of a one-eyed lobster.

“Now,” said the stout gentleman, “that’s quite an elegant little milk-jug, in my opinion. Don’t you agree with me, Mrs. Pettigrew?”

I looked at him in some surprise. For the thing was not a milk-jug. It was a coffee-pot. However, Mrs. Pettigrew did not contest the description. She merely agreed that the shape was pleasant and graceful.

“I am glad, Mrs. Pettigrew,” said the stout gentleman, regarding the coffee-pot with his head on one side, “that you regard the laciferous receptacle with favour. I am encouraged and confirmed. The next question is that of the date of its birthday. I am reluctant to interrupt the erudite Mr. Polton in his studies of the internal anatomy of the Carolean warming-pan, but I have no skill in galactophorous genealogies. May I venture?”

He held out the coffee-pot engagingly towards the small gentleman, who thereupon laid the watch down tenderly, removed the eye-glass from his eye and smiled. And I found Mr. Polton’s smile almost as astonishing as the other gentleman’s vocabulary. It was the most amazingly wrinkly smile that I have ever seen, but yet singularly genial and pleasant. And here I may remark that this amiable little gentleman was for some time a profound mystery to me. I could make nothing of him. I could not place him socially or otherwise. By his appearance, he might—in different raiment—have been a dignitary of the Church. His deferential manner suggested some superlative kind of manservant, but his hands and his comprehensive and inexhaustible knowledge of the products of the ancient crafts hinted at the dealer or expert collector. It was only after I had known him some months that the mystery was resolved through the medium of a legal friend, as will be related in due course. To return to the present incident, Mr. Polton took the coffee-pot in his curiously prehensile hands, beamed on it approvingly, and, having stuck his eye-glass in his eye, examined the hall-mark and the maker’s “touch.”
"It was made," he reported, "in 1765 by a man named John Hammond, who had a shop in Water Lane, Fleet Street. And an excellent tradesman he must have been."

"There, now!" exclaimed the stout gentleman. "Just listen to that! It's my belief that Mr. Polton carries in his head a complete directory of all the artful craftsmen and crafty artists who ever made anything, with the dates of every piece they made. Don't you agree, Mrs. Pettigrew?"

"Yes, indeed!" she replied. "His knowledge is perfectly wonderful. Perhaps," she added, addressing Mr. Polton, "you can tell us something about that watch. It is said to have belonged to Prince Charlie, and, of course, that would add to its value if it were really the fact. What do you think, Mr. Polton?"

"Well, ma'am," was the cautious reply. "I see no reason why it should not have belonged to him, if he was not a very punctual gentleman. It was made in Edinburgh in 1735, and there is a crucifix engraved inside the outer case. I don't know what the significance of that may be."

"Neither do I," said the lady. "What do you think, Mr. Penrose?"

"I should say," replied the stout gentleman, "that the evidence is conclusive. Charles Edward, being a Scotchman, would have a Scottish watch; and being a papistical Romanist would naturally have a crucifix engraved in it. Q.E.D."

Mrs. Pettigrew smiled indulgently, and, as Mr. Penrose had indicated his adoption of the coffee-pot, she proceeded to swathe it in tissue-paper and make it up into a presentable parcel; and, meanwhile, I browsed round the premises and inspected those specimens of the stock which were more particularly within my province. But it was not a very peaceful inspection, for Mr. Penrose persisted in accompanying me and expounding and commenting upon the various pieces in terms which I found rather distracting. For Mr. Penrose, as the reader has probably observed, was a wag, and his waggery took the form of calling things by quaintly erroneous names and of using odd and facetious circumlocutions; which was all very well at first and was even mildly amusing, but it very soon became tiresome. A constant effort was necessary to arrive at what he really meant.

However, in the end, I lighted upon a bible-box of dark-brown oak, pleasantly carved and bearing the incised date, 1653, and, as the little chest rather took my fancy and the price marked on the attached ticket seemed less than its value, I closed with Mrs. Pettigrew, and, having paid for my purchase and given the address to which it was to be sent, took my departure. And, as I strolled at a leisurely pace in the direction of Wardour Street, I reflected idly on my late experience, and especially on the three rather unusual persons whose acquaintance I had just made. I am not in general a curious man, but I found in each of these three persons matter for speculation. There was Mrs. Pettigrew, for instance. Admirably as she played her part in the economy of the shop, she did not completely fit her surroundings. One is accustomed nowadays to finding women of a very superior class serving in shops. But not quite of Mrs. Pettigrew's type. She gave me the impression of being very definitely a lady; and I found myself speculating on the turn of the wheel of Fortune that had brought her there.

Then there was the enigmatical Mr. Polton with his strangely prehensile hands and his astonishing memory for hallmarks. And there was the facetious Penrose. And at this point, being then about halfway along Gerrard Street, the subject of my reflections overtook me and announced himself characteristically by expressing the hope that I was pleased with my bacon cupboard. I replied that I was quite pleased with my purchase and had thought it decidedly cheap.

"So did I," he said. "But our psittacoid friend has the wisdom to temper the breeze to the shorn collector."

"Our psittacoid friend?" I repeated.

"I refer to the tropic bird who presides over the museum of domestic archaeology," he explained, and, as I still looked at him questioningly, he added, by way of elucidation: "The proprietor of the treasure-house of antiquities in which you discovered the repository of ancestral piety."

"Oh!" I exclaimed. "You mean Mr. Parrott."

"Certainly!" he replied. "Did I not say so?"

"Perhaps you did," I admitted, with a slightly sour laugh; at which he smiled his peculiar, foxy smile, looking at me out of the corners of his eyes, and evidently pleased at having "stumped" me. It was a pleasure that he must have enjoyed pretty often.

"I take it," he resumed, after a short pause, "that you, like myself, are a devotee of St. Margaret Pie?"

I considered this fresh puzzle and decided that the solution was "maggie"; and apparently I was right as he did not correct me.

"No," I replied, "there is nothing of the maggie about me. I don't accumulate old things for the sake of forming a collection. I buy old furniture and use it. One must have furniture of some kind, old or new, and I prefer the old. It was made by men who knew all about it and who enjoyed making it and took their time. It is much more companionable to live with than new machine-made stuff, turned out by the thousand by people who don't care a straw what it is like. But my object is quite utilitarian. I am no collector."

"Ah!" said he, "that isn't my case. I am a convinced disciple of the great John Daw, a snapper-up of unconsidered trifles, a hoarder of miscellaneous treasure. Nothing comes amiss to me, from a blue diamond to a Staffordshire dog."

"Have you no special fancy?" I asked.
“I have a special fancy for any relic of the past that I can lay hands on,” he replied. “But perhaps, like the burglars, I have a particular leaning towards precious stones—those and the other kind of stones—the siliceous variety—with which our impolite forefathers used to fracture one another’s craniums.”

“Your collection must take up a lot of space,” I remarked.

“It does,” said he. “That’s the trouble. John Daw’s nest has a tendency to overflow. And still they come. I’m always finding fresh treasures.”

“By the way,” said I, “where do you find the stuff?”

“Oh, call it not stuff,” he protested, regarding me with a foxy smile. “I spoke of treasures. As to where I discover them; well, well, surely there is a mine for silver and a place for gold where they refine it; a place also—many places, mostly cottage parlours, that no bird of prey knoweth, neither hath the travelling dealer’s eye seen them, where may be found ancestral Wrotham pots and Staffordshire figures, to say nothing of venerable tickers and crocks from far Cathay. These the wise collector makes a note of—and locks up the note.”

I was half amused and half exasperated by his evasive verbiage and his unabashed, and quite unnecessary caution. A mighty secretive gentleman, this, I reflected; and proceeded to fire a return shot.

“In effect,” said I, “you go rooting about in cottage parlours, snapping up rustic heirlooms, probably at a fraction of their value.”

“Undoubtedly,” he agreed, with a snigger. “That is the essence of the sport. I once, in a labourer’s cottage, picked up a genuine ‘Vicar and Moses’ by Ralph Wood for five shillings. But that was a windfall.”

“It wasn’t much of a windfall for the owner,” I remarked.

“He was quite satisfied,” said Penrose, “and so was I. What more would you have? But windfalls are not frequent, and when they fail I fall back on the popinjay.”

“The pop—Oh, you mean Mr. Parrott?”

“Exactly,” said he. “Our friend Monsieur le Perroquet. Actually, I let him do most of the rootling about. He knows all the ropes, and, as we agreed, he doesn’t demand payment through the proboscis.”

“No,” said I, “he doesn’t appear to be grasping, to judge by the price of my own purchase; and I gather that you have got most of your stuff—I beg pardon; treasure—from him.”

“Oh, I wouldn’t say that,” he replied. “Mere purchase from a dealer is a dull affair, though necessary. But one wants the sport as well, the pleasure of the chase, not to mention those of the pick and shovel.”

“The pick and shovel!” I repeated. “That sounds as if you did a little in the resurrection line. You are not a tomb-robber, I trust?”

I was, of course, only jesting, but he took me up quite seriously.

“But why not? We may grant the impropriety of disturbing the repose of the freeholders in Finchley Cemetery. Besides, they have nothing but their bones, which, at present, are not collector’s pieces. But our rude forefathers had a foolish—but, for us, convenient—habit of taking their goods and chattels to bed with them, so to speak. Now, a man’s title to his goods, after his decease, does not extend to an indefinite period. When a deceased gentleman has enjoyed the possession of his chattels for a couple of thousand years or more, I think he ought to be satisfied. His title has lapsed by the effluxion of time; and my title, by right of discovery, has come into being. The expression ‘tomb-robber’ is not applicable to an archaeological excavator. Don’t you agree?”

I admitted that excavation for scientific purposes seemed to be a permissible proceeding, though I had secret doubts as to whether the expression was properly applicable to his activities. He did not impress me as a scientific investigator.

“But,” I asked, “what sort of things do you turn up when you go a-digging?”

“All sorts of things,” he replied. “ Mostly preposterous stone substitutes for cutlery, decayed and fragmentary pots and pans, with an occasional—very occasional—torque or brooch and portions of the deceased proprietor. But I leave those. I don’t collect proprietors.”

“And I suppose,” said I, “that when you find a gold or silver ornament you notify the coroner of the discovery of treasure trove?”

“That,” he replied with his queer, foxy smile, “is indispensable. But you seem to be interested in my miscellaneous gleanings. I wonder if you would care to cast a supercilious eye on my little hoard. I don’t often display my treasures because your regular collector is usually a man of one idea—indefinately repeated—and he is disappointed to find that I am not. But you, like myself, are more eclectic in taste and I should have great pleasure in introducing you to Aladdin’s Cave, if you would care to inspect its contents.”

I was not, really, particularly interested, but yet I was faintly curious as to the nature of his “hoard.” It sounded like a very queer collection, and might include some objects of real interest. Besides which, the man, himself, despite his exasperating verbosity and obscurities of speech, rather attracted me. Accordingly, I accepted his invitation, and, when we had exchanged visiting cards and arranged the day and hour of my visit, we separated; he shaping a course in a westerly
direction and I bearing east, towards my chambers in Lincoln’s Inn.

II. — ALADDIN’S CAVE

Mr. Penrose’s residence or John Daw’s Nest, as he would have called it, was situated in Queen Square, Bloomsbury, and, what is more, it was one of the few remaining original houses, dating back to the time when residents could look out of their windows through the open end of the square, across the meadows to the heights of Highgate. Appropriately to the house of a collector of antiquities, its door was garnished with a pair of link-extinguishers, as well as with a fine brass knocker and an old-fashioned bell-handle.

A flourish on the knocker, reinforced by a hearty tug at the bell-pull, resulted in the opening of the door and the appearance thereat of an elderly man of depressed and nephritic aspect, with puffy eyelids and a complexion like that of a suet pudding. He received the announcement of my identity with resignation, and, having admitted me, took my hat and stick and silently introduced me to a small room, the window of which commanded a view of the leaden statue of Her late Majesty, Queen Anne. At this window I had taken up a position from which I could contemplate that rather neglected example of an extinct art when the door opened briskly and Mr. Penrose entered.

“Ha!” said he, “I see you are admiring the mimic rendering of our proverbially deceased twenty-shilling Lady.”

“I am afraid,” said I, as we shook hands, “that your paraphrase fails in precision. You would have to pay thirty shillings to-day to buy a sovereign, if you could find one.”

“There,” he retorted, “is exemplified the pedantic accuracy of the legal mind. But I spoke in terms of the past. The aureous reality is now as dead as madame herself. But what think you of that masterpiece of the plumber’s art? I rather like it; and it is the genuine metal. I have tried it with my pocket-knife. To tell you a little secret, I had thought of making an offer for it.”

“But what on earth could you do with a leaden statue?” I protested.

“You can take it,” said I, “that it would not. Why, the thing must weigh tons. Besides, it is much better in the place that it was made to occupy and which it does really adorn in its rather mouldy way.”

“Put it in my gallery,” he replied, “if the floor would stand it.”

“I don’t think you mean,” I exclaimed, “to put it in your gallery, but in your house.”

“Put it in my gallery,” he retorted, “if the floor would stand it.”

“Do you mean,” I exclaimed, “that you want to buy it?”

“If it should come into the market,” he replied. “Unfortunately it has not, up to the present.”

“But what on earth could you do with a leaden statue?” I protested.

“Put it in my gallery,” he replied, “if the floor would stand it.”

“Put it in my gallery,” I retorted, “if the floor would stand it.”

“You can take it,” said I, “that it would not. Why, the thing must weigh tons. Besides, it is much better in the place that it was made to occupy and which it does really adorn in its rather mouldy way.”

“In short,” said he, “you think me a bit of a vandal” (which was the literal truth). “Well, you needn’t be alarmed. It is safe from my acquisitive instincts for the present.”

He turned to a nondescript piece of furniture, half cupboard and half armoire, and, opening a door, took out a decanter and two glasses, which he placed on the table.

“Before we venture into Aladdin’s Cave,” said he, taking out the stopper of the decanter, “shall we fortify ourselves with a morsel of cake?”

He looked at me interrogatively as he picked up the decanter. Of course, there was no cake visible; but my growing skill in interpreting his verbal puzzles enabled me to diagnose the dark-brown wine as Madeira.

Without giving me time to refuse, he filled the two glasses, and, having handed me one, proceeded in a very deliberate and workmanlike fashion to empty the other.

“The vintages of the Fortunate Isles,” said he, as he refilled his glass, “have always commended themselves to me, rivalled only in my affection by the product of the vines of Xeres” (he pronounced the name in the Spanish manner, “Hereth,” as a slight additional precaution against being too readily understood), “preferably the elderly and fuscous variety.”

I noted the fact—while he filled his third glass—as explaining the vinous aroma which I had noticed in Parrott’s shop as apparently exhaling from his person. It turned out later to be not without significance. Madeira and old brown sherry by no means share the innocuousness of what Penrose would probably have called “the celestial herb.”

When I had resolutely declined a refill, he reluctantly returned the decanter to its abiding-place and locked the door thereof.

“And now,” said he, “we shall proceed to explore the secret recesses of the cavern.”

He conducted me out into the fine, spacious hall, from which a noble staircase gave access to the upper floors. In one swift glance I noted that the appointments were not worthy of the architecture, for the furniture—of which there was a good deal too much—consisted of undeniable “dentist’s oak,” and there were one or two shabby-looking busts, the obvious plaster of which had been varnished by some optimist in the hope that they might thereby be mistaken for bronze. But I had little opportunity for detailed inspection, for my host threw open, with something of a flourish, an adjacent door and motioned to me to enter; which I did, and found myself in one of a pair of great, lofty communicating rooms, and forthwith began my tour of inspection.
I had expected to find Mr. Penrose’s collection something of an oddity, but the reality far exceeded my expectations. It was an amazing hoard. Like, in respect of matter and manner, it was astonishing and bewildering. Of the ordinary collector’s fastidious selection, prim tidiness and orderly arrangement there was no trace. The things that jostled one another on the crowded shelves and tables were in every respect incongruous; for, on the one hand, rare and valuable pieces, such as the “Vicar and Moses” and a fine slip-ware tyg, stood jowly with common, worthless oddments, and, on the other, the objects themselves were devoid of any sort of kinship or relation. The “Vicar,” for instance, was accompanied by a broken Roman pot, a few worthless fragments of Samian ware, a dried crab covered with acorn barnacles and half a dozen horse-brasses; while the tyg had as its immediate neighbour a Sheffield coffee-pot, a Tunbridge-ware wafer-box, a pewter candlestick and one or two flint implements.

The confusion and disorder that prevailed were perfectly astounding. These fine old rooms, with such splendid possibilities, suggested nothing more or less than the store of some curio dealer or the premises of an auctioneer on the day preceding a sale of miscellaneous property. I ventured tentatively to comment on the lack of arrangement.

“You have certainly got a very remarkable collection,” said I, “but don’t you think that its interest would be increased if you adopted some sort of classification? Here, for instance, is a wine-glass, a Jacobite glass, apparently.”

“So he did, as ‘his nose doth show’ in the portraits. But why put this glass next to that barbaric-looking pot? There is no relation whatever between the two things.”

“There is the relation of unlikeness,” he replied. “And don’t disparage that rare and precious pot. It is extremely ancient. Prehistoric. Neolithic, I believe, is the correct word.”

“But why not put all the prehistoric pots together instead of mixing them up with table-glass and Scandinavian carvings?”

“That would seem a dull arrangement,” said he. “You would lose the effect of variety, the thrill of unexpectedness. How delightful, for instance, after considering this book of hours and this highly ornate sternutatorium”—he indicated a handsome tortoise-shell snuff-box—“to come upon these siliceous relics of the childhood of the race—also neolithic, I believe—the products of my own fossatory activities.”

The “relics” referred to consisted of half a dozen rough flint nodules which looked as if they might have been gathered from a road-mender’s heap. They may have been genuine flint implements, but they were certainly not neolithic. No one with the most elementary knowledge of stone implements could have supposed that they were. But my host’s easy-going acceptance of them, and his indifference as to the actual facts, brought home to me a state of mind at which I wondered more and more as I examined this amazing collection.

For, in the first place, Mr. Penrose displayed the most complete and comprehensive ignorance of “antiques” of every kind. He knew no more of them than their names, and he frequently got those wrong. But not only was he ignorant. He was quite indifferent. He seemed to be totally devoid of interest in the individual things which he had accumulated; and the question that I asked myself was what earthly object he could have had in making this enormous and miscellaneous collection. Apparently, he was possessed by an insatiable acquisitiveness, with no other motive behind it. Mere possession seemed to be the object of his desire; and with mere possession he appeared to be satisfied. Not without reason had he likened himself to “The Great John Daw.”

My long tour of inspection came at last to an end. I had examined the collection very thoroughly, not only to please my host—though he was evidently gratified and flattered by the interest that I displayed in his “hoard”—but because it contained, mingled with a good deal of rubbish, many curious and beautiful objects that invited examination. The last piece that I inspected was an ancient gold brooch, richly decorated with gilt filigree work and set with garnets. I lifted it tenderly from the dusty scrap of paper (marked in pencil with the number 963) on which it rested and carried it to the window to look at it in a better light.

“This is a very fine piece of work, Mr. Penrose,” I remarked.

“Ha!” said he, “the papistical fibula commends itself. I am glad you like it.”

“A Roman fibula!” I exclaimed in surprise. “I should have taken it for a Saxon brooch.”

“You may be right,” he admitted; “in fact, I am inclined to think that you are. At any rate, it is one or the other.”

“But,” I protested, “surely you keep some sort of record. I see that the pieces are numbered. Haven’t you a catalogue?”

“To be sure I have,” he replied. “Excellent idea! We’ll get out the Domesday Book and see which of us is right.”

He pulled out the drawer of a table and produced therefrom a manuscript book which he opened and began to turn over the leaves. Still holding the brooch, I stepped across to him and looked over his shoulder. And then I got a fresh surprise, though I ought to have been prepared for something unusual. For if the collection was eccentric, the catalogue was positively fantastic. It seemed to be (and probably was) expressly designed to be as completely unintelligible as possible. The brief entries, scribbled ilegibly in pencil, were apparently worded in Mr. Penrose’s peculiar, cryptic dialect, and, for the most part, I could make nothing of them. Running my eye down the pages, I deciphered with difficulty such entries as: “Up +. Mudlarks,” “Sammy. Pot sand. Sinbad,” “Funereal flower-pot, Julie-Polly,” “Carver, Jul. Pop.”
I stood gazing in speechless astonishment at this amazing record while Penrose slowly turned the leaves, glancing slyly at me from time to time, apparently to see how I took it. At length—at unnecessary length—Number 963 was found; but it was not very illuminating—to me—for it consisted only of the laconic statement, “Sweeney’s resurrection.” Apparently, however, it conveyed something to him, for he said, “Yes, you are right. I recollect now.” But he did not enter into any particulars.

I laid the brooch down on its slip of paper and began to think of departing; and meanwhile he looked at me with a very odd expression; an expression of mingled anxiety and hesitation.

“I have to thank you, Mr. Penrose,” said I, “for a very pleasant and profitable afternoon. It was very good of you to let me see all your treasures. I have seen them all, I suppose?”

He did not reply for a few moments, but continued to look at me in that queer, anxious, irresolute fashion. Suddenly, his hesitation gave way and he burst out in low, impressive tones, in a manner of the deepest secrecy:

“The fact is that you haven’t. There is another little hoard, which I don’t show to any one, but just float over in secret. I don’t even mention its existence. But, somehow I feel tempted to make an exception in your case. What do you say? Would you like to have a peep at the contents of Bluebeard’s chamber?”

“This sounds rather alarming,” said I. “Were there not certain penalties for undue curiosity?”

“I hold you immune from those,” he replied. “Only I stipulate that this private view shall be a really private view, to be spoken of to nobody. I can rely on you to keep my secret?”

I did not much like this. Like most lawyers, I am a cautious man, and cautious men do not care to be made the unprivileged repositories of other people’s secrets. But I could hardly refuse; and when I had, rather reluctantly, given the required undertaking, he moved off towards a door in a corner of the room and I followed, wondering anxiously what he was going to show me and whether it would commit me to any unlawful knowledge.

The room into which he led me—and of which he closed and bolted the door—was a smallish apartment, at one end of which was a massive mahogany cupboard or armoire. When he had unlocked this and thrown open the doors, there was revealed the steel front of a large safe or small strong-room. Apparently the safe-key was not in his bunch, for he returned the latter to his pocket and then, retiring a few paces, stood with his back to me while he divined into some secret recesses of his clothing. In a few moments he turned round, rather red from his exertions, and stepped up to the safe with the key in his hand, while I watched with growing curiosity.

The lock clicked softly, a turn of the handle withdrew the bolts and the ponderous door swung open, disclosing a range of shallow drawers which occupied the whole of the interior. My host, first withdrawing the key and slipping it into his waistcoat pocket, proceeded to pull out the top drawer and carry it to a table under the window. And then I breathed a sigh of relief. There was nothing incriminating, after all. The drawer was simply filled with jewellry, looking, indeed, like a tray from a jeweller’s window. My host’s secrecy was naturally and reasonably explained by the value of his treasures and their highly portable and negotiable character.

I looked over the contents of the drawer with keen interest, for I am rather fond of gems, though I have no special knowledge of them. My host, too, showed a pleasure and enthusiasm in regard to the things, themselves, which contrasted strikingly with the indifference that he had displayed towards the general collection.

Yet, even here, there was no glimmer of connoisseur-ship. His manner suggested mere miserly gloating; and his ignorance of these beautiful baubles astonished me. It was suggested by the absence of any classification, by the way in which totally unrelated stones were jumbled together, and the suggestion was confirmed by his comments. For instance, in this first drawer were two cat’s-eyes placed side by side; but they belonged to totally different categories. One, a dark yellowish-green stone with a bright band of bluish light, was a cymophane or true cat’s-eye—a chrysoberyl. The other, a charming stone of the hue known as “honey yellow,” was a quartz cat’s-eye and should have been placed with the other quartz gems. I ventured to comment on the fact, referring to the cymophane as a chrysoberyl, but he interrupted me with the protest:

“Chrysoberyl! Violin-bows, my dear sir! Gall not the optic of the fair Tabitha a chrysoberyl.”

As he obviously knew—and cared—nothing of the actual characters of precious stones, I did not pursue the question, but continued my inspection of the really interesting and remarkable collection. The admiration that I expressed evidently gave him considerable pleasure and he also made admiring comments from time to time, though without much appearance of taste or discrimination. But his enthusiasm did really wake up when he brought forth the third drawer, which was devoted entirely to opals, and as these beautiful gems are special favourites of mine, we examined them with sympathetic pleasure.

It was a really magnificent collection, and what rather surprised me (considering the collector’s comprehensive ignorance) was its genuinely representative character. There were specimens of every variety of the gem. Of the noble, or precious, opal a long range of examples was shown, of all the varied rainbow hues and of various sizes up to nearly an inch in diameter; some in plain mounts but most of them encircled with borders of rose diamonds or brilliants. There were harlequin opals, Mexican fire opals, glowing like blazing coals, black opals, a large series of the common, non-prismatic form, of various hues, and one or two examples of the dark, pitchy “root” or matrix streaked and speckled with points of prismatic colour.
But the gem of the collection, in interest if not in beauty, was a cameo, cut in a disc of precious opal embedded in its dark matrix. The oval slab of matrix, carrying the glowing cameo, was worked into a pendant with a broad border of small rose diamonds and coloured stones forming the design of a rose, a thistle and a central star, while, at the bottom, worked in tiny diamonds, was the word "Fiat"; which, with the engraved portrait of a middle-aged gentleman in a wig, gave a clue to the significance of the jewel.

As I pored over this curious memorial, Penrose watched me with a smile of evident gratification.

"My favourite child," he remarked, taking it out of its compartment and handing it to me, together with a magnifying glass. "Just look at the detail of the face."

I examined it through the lens and was greatly impressed by the perfection of the modelling on so minute a scale.

"Yes," I said, "it is quite a wonderful piece of work. One gets the impression that it might be a really good portrait. And now I know," I added, as I returned the jewel to him, "why you swore me to secrecy."

He paused with the trinket in his hand, looking at me with a distinctly startled expression.

"What do you mean?" he demanded.

"Well," I replied, "you must admit that it is a rather incriminating object to have in your possession."

He gazed at me uneasily, almost with an appearance of alarm, and rejoined: "I don't understand you. How, incriminating?"

I chuckled with mischievous satisfaction. For an inveterate joker, he seemed decidedly "slow in the uptake."

"Doesn't it occur to you," I replied, "that a portrait of James Francis Edward, the King over the water, cherished secretly by a presumably loyal subject of His Majesty George the Fifth, tends to suggest highly improper political sentiments? I call it rank sedition."

"Oh, I see what you mean," said he, with an uneasy laugh, apparently relieved—and slightly annoyed—at my schoolboy jest, "but sedition of that kind is a trifle threadbare in these days."

He returned the jewel to its place in the drawer and carried the latter back to the safe. As he slid it in, he remarked:

"That's the last of the gem collection. The other drawers contain coins. You may as well see them, too."

I went through the coin collection and was rather surprised at its range, for it included ancient coins, Greek, Roman, Gaulish and British and English coins from the Middle Ages down to the late spade guineas. But all that remains in my memory concerning them is that the different periods seemed to be mixed up, with an almost total lack of order, and that there appeared to be an abnormal proportion of gold coins. When the last of the drawers had been examined and returned and the safe and its enclosing cupboard had been closed and locked, I began once more to think of taking my leave. But my host pressed me to stay and take a cup of tea with him, and, when I had accepted his invitation, he conducted me back through the large gallery to the room into which I had first been shown. Here, the melancholy manservant—who answered to the name of Kickweed—presently brought us tea and drew a couple of arm-chairs up to the table.

"This collection of yours," I remarked, as my host poured out the tea, "must represent a large amount of sunk capital."

"I hardly regard it as sunk," he replied, "seeing that I have the use and enjoyment of my treasures; but the collection is worth a lot of money—at least, I hope it is. It has cost a lot."

"So I should suppose," said I; "and it must cost you something quite substantial in the matter of insurance."

"Ah!" said he, "I am glad you raised that question. For the fact is that the collection is not insured at all. I have intended to go into the matter, but there are certain difficulties that have put me off. Now, I dare say you know a good deal about insurance."

"I know something about the legal aspects," I replied, "and such knowledge as I possess is at your disposal. You certainly ought to be secured against what might be a very heavy loss. What are the difficulties that you refer to?"

"Well," he answered in a low voice, leaning across the table, "I don't want to go about proclaiming myself as the owner of a priceless collection. Might arouse interest in the wrong quarter, you see. And as to the gems, as I told you, they are a secret hoard the existence of which I disclose to nobody excepting yourself. You are the only person to whom I have shown them."

"But," I protested, "somebody must have sold them to you and must be aware that you have them."

"They know that I have—or had—the individual jewels that they sold me, but they don't know that I have a great and valuable collection. And I don't want them to know; but that is the difficulty about the insurance. Before I could insure the collection, I should have to get it valued; and the valuer would have to see the gems; and then the cat would be out of the bag. At least, that is what I suppose. Perhaps I am wrong. Could I effect an insurance for a certain definite sum without calling in a valuer?"

"You mean," I replied, "on a declaration that you had certain property of a certain value? No. I think a Company would want evidence that the property insured actually existed and was of the value alleged; and in the event of a fire or a burglary, they certainly would not pay on property alleged to have been lost but which had never been proved to exist. But I
think you are raising imaginary difficulties. You could stipulate that the valuation should be a strictly confidential transaction. Remember that the company’s interests are the same as your own. If they insure you against burglary, they won’t want you to be burgled.”

“No, that is true,” he admitted. “And you think I could rely on the secrecy of the valuer?”

“I have no doubt of it,” I replied, “particularly if you made clear your reasons for insisting on secrecy.”

“I am glad you think that,” said he, “and I shall act on your advice without delay. I will put the case to the manager of the Society which has insured this house.”

“I think you ought to do so at once,” I urged. “There must be many thousands of pounds’ worth of property in your collections and a fire or a burglary might sweep away the bulk of it in a night.”

He repeated, with emphasis, his intention to attend to the matter without further delay, and the subject then dropped. After a little more desultory conversation, I rose to take my leave; and the lugubrious Kickweed, having presented me with my hat and stick, let me out at the street door with the air of admitting me to the family vault.

As I wended homewards I found ample matter for reflection in the incidents of my visit; but chiefly my thoughts concerned themselves with my eccentric host. Mr. Penrose was certainly a very strange man, and the more I thought about him, the less did I feel able to understand him. He had so many oddities, and each of them suggested problems to which I could find no solution. There was the collection, for instance. Including the gems and coins, it must have been of very great value, and its accumulation must have entailed a vast expenditure of time and effort, to say nothing of the prodigious sums of money that must have been spent. But with what object? He had none of the ordinary collector’s expertise and enthusiasm. He had no special knowledge of any single class of objects, not even of the gems for which he professed so much affection. The motive force that impelled him to collect seemed to be simple acquisitiveness, the mere cupiditas habendi.

But the outstanding feature of his character was secretiveness. He was a secret man of the very deepest dye. His invertebrate habit of secrecy coloured every word and action. The ridiculous jargon that he used, his silly circumlocutions and ellipses and paraphrases, were but phases of the tendency, as if he grudged to disclose the whole of his meaning. Even the preposterous document revealed the same trait, for, while it seemed to have been made deliberately unintelligible, it was clear that the absurd entries held some hidden meaning which was intelligible to him.

It was not an endearing trait. None of us likes a secret man. And very naturally. For secrecy implies distrust; and, moreover, we are apt—again very naturally—to assume some reason for the secrecy, and to suspect that it is a discreditable reason. Thus it was with me in the present case; and my general dislike of the secret habit of mind was aggravated by the fact that I had become involved in the secrecy. The promise that had been exacted from me in regard to the gems recurred to me with a certain distaste and resentment. I was committed to the concealment of a fact which was no concern of mine and of the bearings of which I knew nothing. The explanations that Penrose had given for keeping secret his precious hoard were not unreasonable. But suppose there were other reasons. The thing was possible. Some collectors are not over-scrupulous; and I recalled not for the first time, the singular, startled expression with which he had looked at me when I made my foolish joke about the Jacobite jewel.

In short, I was not quite comfortable about that promise. There is something a little disturbing about a secret hoard of valuable gems; and, but for the fact that Penrose was obviously a man of ample means, my professional experiences might have caused me to ask myself whether this very odd collection might not cover some activities of a more questionable kind.

III. — EXIT MR. PENROSE

I did not see Penrose again for about a fortnight. Then, having occasion to call at Parrott’s shop to inquire after a gate-leg table which I had purchased and which was undergoing some necessary restorations, I encountered him, standing opposite to a lantern clock which had been fixed on a temporary bracket and was ticking cheerfully with every sign of robust health. Noting his evident interest in the venerable timepiece, I stopped to discuss it with him.

“You are looking at that clock, Mr. Penrose,” said I, “as if you contemplated making an investment.”

“I don’t contemplate,” he replied. “I investigated in it some time ago. It is a poor thing, but mine own.”

“I shouldn’t call it a poor thing,” said I. “It is quite a good clock and it looks to me as if it were absolutely intact and in its original condition. Which is unusual in the case of lantern clocks. People will tinker at them and spoil them. You were lucky to find an untouched specimen.”

“I didn’t,” said he. “When it came to me—through the usual psittacoid channel—it was a mere wreck. Some misbegotten Daedalus had eviscerated it and wrought havoc with its entrails. Thereupon I sought medicinal advice for the invalid and had it put under treatment.”

“You sent it to a clockmaker?” I suggested.

“I did not,” he replied. “It had had too much clockmaker already. I consulted the erudite and podophthalmate horologer, and behold!—it has renewed its youth like the eagle.”
I must confess that this stumped me for the moment, until a flash of supernormal intelligence associated the word “podophthalmate” with Mr. Polton’s protuberant eye-glass.

“I didn’t know that Mr. Polton was a practical mechanic,” I remarked.

“Oh, don’t call him that!” Penrose protested. “He is a magician, a wizard, a worker of miracles. By the way, Mrs. Pettigrew, I rather expected to find him here. He promised to see this clock safely established in my gallery.”

“He is here,” replied Mrs. Pettigrew. “He is in the workshop, doing something to Mr. Tims’s lathe. Would you like to walk across and let him know that you have arrived? You know the way. And perhaps, Mr. Lockhart, you would like to go and inspect your table? I think Tims wants you to see it.”

I accepted the invitation and, following Penrose, passed out at the back of the shop and crossed a small paved yard to a wide doorway. Passing through this, I entered a roomy workshop, lighted by a skylight and littered with articles of ancient furniture in all stages of decay and dismemberment. There were three persons in the workshop. First, there was Mr. Tims, a tall, aged man, frail and decrepit of aspect—until he picked up a tool; when he seemed suddenly to develop fresh strength and vitality. Next, there was Mr. Polton in shirt-sleeves and an apron (which appeared by its length to have been borrowed from Tims), engaged at the moment in fixing the head-stock of a wood-turner’s lathe. The third person was Mr. Parrott, as I learned when Penrose greeted him; and, as this was the first time that I had encountered him in the flesh, I looked at him with some curiosity.

“Monsieur le Perroquet” was a somewhat unusual-looking man and not at all the type of a shopkeeper. Dark, clean-shaven and blue-jowled, he had rather the appearance of an actor; and this suggestion was heightened by a certain precision of speech and clearness of enunciation, and especially by a tendency to the use of studied and appropriate gestures. Obviously, he was not only an educated man but what one would call a gentleman; easy and pleasant in manner, with that combination of deference and dignity that is attainable only by a well-bred man.

When I had introduced myself, Mr. Tims produced the dismembered table and exhibited the repairs on the damaged leg.

“You see, sir,” he explained, “I’ve cut out the worm-eaten part and let in a patch of sound oak. Do you think he’ll do?”

“Do you propose to stain the patch?” I inquired.

“That’s as you please,” replied Tims. “I wouldn’t. A mend’s a mend, but a stained mend looks like a fake.”

“I think Tims is right,” said Parrott. “Better leave the patch to darken naturally.”

To this I assented, and thereupon Mr. Tims proceeded to assemble the separated parts while Parrott and I looked on, and Penrose divided his attention between the table and Mr. Polton’s operations on the lathe.

“By the way, Mr. Penrose,” said I, suddenly remembering our last conversation, “how goes the insurance scheme? Have you solved the difficulty of the valuer?”

Penrose turned to me quickly with a look of annoyance, so that I was sorry I had spoken.

“There is nothing to report at present,” he replied with unwonted shortness of manner; and, as if to close the subject, he stepped across to the lathe and manifested a sudden and not very intelligent interest in its mechanism. However, Mr. Polton’s job was apparently completed, for, when he had replaced the band on the pulley, tested the centres and given the fly-wheel a trial spin, he proceeded to shed the apron and put on his coat, and was forthwith spirited away by Penrose.

I had noticed that when I spoke of the insurance Mr. Parrott had seemed to prick up his ears (which, perhaps, explained the annoyance of the secretive Penrose). But he made no remark while the latter was present, though he had evidently heard and noted what had been said, for, when Penrose had gone, he asked:

“Do I understand that Mr. Penrose has actually decided to insure his collection? I have repeatedly urged him to, but he has always agreed with me and then let the matter slide.”

“I am afraid,” said I, “that my experience is the same as yours. I advised him to insure without delay, but you heard what he said.”

“I heard what he said,” Parrott replied, “but it didn’t convey much to me, excepting that he is still putting the business off. Which is rather foolish of him. His collection is of no great value, as collections go, but still, it represents a good deal of money, and he would suffer a substantial loss if he had a fire.”

“Or a burglary,” I suggested.

“There is not much risk of that,” said he. “Burglars wouldn’t be tempted by a collection of miscellaneous bric-a-brac, most of it identifiable and none of any considerable value. Burglars like more portable goods and things that are intrinsically valuable, such as precious metals and jewellery.”

“You have seen his collection, of course?” said I.

“Yes. As a matter of fact, I supplied the greater part of it. And I gather that you have seen it, too?”

“Yes. He was good enough to show me his treasures. That was how I came to advise him about the insurance. It seemed to me very unsafe for valuable property like that to be quite unprotected.”

“I shouldn’t have called it very valuable property,” said he. “But perhaps he has some things that I haven’t seen. It would
be like Mr. Penrose to keep his court-cards up his sleeve. Did he show you any really valuable pieces?"

Now, here was the very difficulty that I had foreseen. Obviously, Parrott was unaware of the existence of the hoard of jewels and coins, but he evidently suspected Penrose of possessing something more than he had disclosed. It was very unpleasant, but my promise of secrecy left me no choice. I must either lie or prevaricate.

"It is difficult for me to estimate values," said I, adopting the less objectionable alternative, "but some of the things that I saw must have been worth a good deal of money. There was a Saxon gold ornament, for instance. Wouldn't that be rather valuable?"

"Oh, certainly," he agreed, "but only in a modest way. I don't know what such a thing would fetch, say, at Christie's. But I think you said he was employing a valuer, and having some difficulty with him, apparently?"

"No," I replied. "His difficulty is that a regular valuation would have to be made, which would involve an inspection of his goods and the making of an inventory. He seems to object to having a valuer nosing round his premises."

"He would, naturally," said Parrott. "I have never met such an extraordinarily secretive man. But really, the valuer would not be necessary. I could draw up an estimate that would satisfy the Company—that is, if the property to be insured is only what I have seen. But, as I said, he may have some other things which he has not disclosed to me. Do you think he has?"

Here I must needs prevaricate again; but I kept as near to the truth as I could.

"It is impossible for me to guess what property he has," I said. "You know the man. I know only what he showed me."

Parrott looked dissatisfied with my answer, which was, indeed, pretty obviously evasive, and he seemed disposed to press the matter further; but, at this point, Mr. Tims, having completed the assembling of the parts of the table, offered the completed work for my inspection and approval. I looked it over quickly, and, having pronounced it satisfactory, took the opportunity to make my escape before Parrott should have time to propound any more questions.

As I re-entered the shop from the yard, Penrose and Polton were just passing out at the front door, the latter carrying the body of the clock and the former bearing a large parcel, which presumably contained the weights, the pendulum and the bracket. I went to the door and watched them receding down the street until they reached the corner, when Penrose, happening to glance back, observed me and greeted me with a flourish of his free hand. Then they turned the corner and disappeared from my sight; and thus, though I little guessed it at the time, did Mr. Penrose pass out of my ken for ever.

For I never saw him again. A few days later, I joined the South-Eastern circuit, and thenceforth, for the next few months, passed most of my time in the county towns in which the assizes were held; and when I came back, Mr. Penrose had disappeared.

The fact was communicated to me by Mrs. Pettigrew, who, in her kindly and discreet fashion, tried to minimise the abnormal features of the affair.

"Do you mean, Mrs. Pettigrew," I exclaimed, "that he has gone away from his home and left no address or indication as to where he is to be found?"

"So I understand," she replied, "but I don't really know any of the particulars."

"But," said I, "it is a very extraordinary affair."

"It would be," said she, "in the case of any ordinary man. But you know what Mr. Penrose is. It would be quite like him, if he had occasion, say, to go abroad, to keep and own his court-counsel as to where he had gone to. I believe he has done it before, though not for so long a time. I understand that on more than one occasion he has gone out in his car and driven away into the country without saying anything to his servant as to his intentions—just gone out and returned after a few days, saying nothing to anybody as to where he had been."

"Amazing!" said I. "He can't be quite in his right mind. But this affair seems rather different from the other escapades. You say he has been gone for a couple of months. It looks very much as if he had gone for good."

"It does," she agreed; and then, after a pause, she continued: "It has been a great blow to Mr. Parrott, for Mr. Penrose was by far our best customer. He was really the mainstay of the business; and now that he has gone and that we have lost poor Mr. Tims, it is very doubtful if we can carry on."

"Why, what has happened to Tims?" I asked.

"He is dead, poor old thing," she replied. "He got influenza and went out like the snuff of a candle. He was very old and frail, you know. But he was invaluable to Mr. Parrott. He was such a wonderful workman."

"Still," I said, "I suppose he can be replaced."

"Mr. Parrott thinks not," said she, "and I am afraid he is right. It is very difficult to find a real cabinet-maker in these days. The few that are left are mostly old men, and even they don't understand old furniture as Mr. Tims did. But, without a skilled restorer, we can't get on at all. Mr. Parrott is an excellent judge, but he is no workman."

In short, what the absent Penrose would have called "the psittacoid emporium" was in a bad way. It had never been a very prosperous concern, I gathered, and indeed, I had seldom seen a stranger in the shop; but with the aid of Penrose's numerous purchases (or "investigations," as he would have described them) and the prestige of Tims's skilful restorations, it had just managed to keep afloat.
“I do hope,” Mrs. Pettigrew said, rather dismally, “that we shall be able to struggle on. It will be an awful disaster for poor Joan and me if the business collapses. Of course, Mr. Parrott has not been in a position to pay me much of a salary, but Joan and I have the use of the rooms over the shop, and with her earnings as a secretary we have rubbed along quite comfortably. But it will be very different if I am earning nothing and we have only her little salary to live on, and rent to pay as well. And it will be so unfair to the poor girl, who ought to be considering her own future, to have to carry the burden of a superannuated mother.”

I was very sorry for Mrs. Pettigrew and I tried to present a more hopeful picture of the financial possibilities. I also reminded her that she had my address and that it was the address of a friend. And so we parted. A little way down the street—but on the opposite side—I met Miss Joan wending homewards and observed her with a new interest. With her short hair and short skirts, her horn-rimmed spectacles and her attache case, she was the typical Miss Twentieth Century. But as she swung along manfully, she conveyed a pleasant impression of pluck and energy and buoyant spirits, with mighty little of the “poor girl” in her aspect or bearing; and, raising my hat in response to her friendly nod, I hoped that the gathering clouds might pass over her harmlessly.

But, when I next visited London the blow had fallen. I made my way to the dingy little street, only to find a gang of painters disfiguring the empty shop with garish adornments. The Tropic Bird had flown. The Popinjay was no more. The vacant window greeted me with a dull, unwelcoming stare. The pleasant little rendezvous had gone out, like poor Mr. Tims, with hardly a final flicker; and Mrs. Pettigrew and Joan and Penrose and the mysterious Mr. Polton seemed to have faded out of my life like the actors in a play when the curtain has fallen.
BOOK II. — NARRATED BY CHRISTOPHER JERVIS, M.D.

IV. — THE BURGLARY AT QUEEN SQUARE

My introduction to the strange and puzzling circumstances connected with the disappearance of Mr. Daniel Penrose occurred in a rather casual, almost accidental fashion. On a certain evening, at the close of the day's work in the Law Courts, I had walked up with my colleague, Dr. John Thorndyke, to New Square, Lincoln's Inn, to restore to our old friend, Mr. Brodribb, some documents which it had been necessary to produce in Court. Finding Mr. Brodribb in his office, apparently up to his eyes in business, we handed the documents to him, and, when he had checked them, were about to depart when our friend laid down his pen, took off his spectacles and held up his hand to detain us.

"One moment, Thorndyke," said he. "Before you go, there is a little matter that I should like to take your opinion on. I'll just pop on my hat and walk with you to the corner of the Square. It is quite a trifling affair—at least—well, I'll tell you about it as we go." He rose and, putting on the immaculate top hat which he invariably wore in defiance of modern fashions, stepped through into the outer office.

"I shall be back in a few minutes, Jarrett," said he, addressing his managing clerk, and with that he led the way out.

"The matter," he began, as we emerged on to the broad pavement of the Square, "relates to a burglary, or attempted burglary, at the house of a man whom I may call my client; a man named Daniel Penrose, though, actually, I am being consulted by his executor, a Mr. Horridge."

"Penrose, then, I take it, is deceased," said Thorndyke.

"No. Penrose is alive, but he is absent from his home and no one knows where he is at the moment. So Horridge is assuming that his position as executor authorises him to take action in the absence of the testator."

"That doesn't seem a very sound position," Thorndyke remarked. "But what action does he propose to take?"

"I had better explain the circumstances," said Brodribb. "In the first place, the man Penrose, who has a biggish house in Queen Square, is the owner of a collection; a very miscellaneous collection, I understand; all sorts of trash from old clocks to china dogs. This stuff is kept in two large rooms on the ground floor, but adjoining the main rooms is a small room which contains nothing but a table, a chair and a large cupboard or armoire. This room is usually kept locked, but, by a fortunate chance, when Penrose went away he left the key in the door, and the butler, a man named Kickweed, finding it there, very properly took possession of it.

"Now, the alleged burglary occurred about ten days ago. It seems that Kickweed, making his morning round of the premises, unlocked the door of the small room to go in and inspect, when, to his astonishment, he found it bolted on the inside. Thereupon he took a pair of library steps round to the side of the house where the window of the small room looks on a narrow uncovered passage. On climbing up the steps he found the window unfastened and was able to slide it up and step over into the room. There he confirmed the fact that the door was bolted on the inside, but that, and the unfastened window, were the only signs of anything out of the ordinary. The cupboard was perfectly intact, with no traces whatever of its having been tampered with; and, although there were some scratches on the table by the window, as if some hard objects had been put on it and moved about, there was nothing to show when those marks had been made."

"The cupboard, I presume, was locked?" said Thorndyke.

"Yes, and with a Chubb lock."

"And what was in the cupboard?"

"Ah!" said Brodribb, "that is the problem. No one knows what it contained or whether it contained anything. But, having regard to the facts that Penrose is a collector, that he always kept this room locked and that the cupboard was fitted with a Chubb lock, the reasonable assumption is that it contained something of value."

"Yes," Thorndyke agreed, "that seems probable. But what does Mr. Horridge propose to do?"

"He would like, with my consent—I am co-executor—to have the lock picked and explore the inside of the cupboard."

"That plan seems to present difficulties," said Thorndyke. "To say nothing of the fact that a Chubb lock takes a good deal of picking, there is the objection that, as you don't know what was in the cupboard, you couldn't judge whether anything had been taken. Suppose you find it empty; you don't know that it was not empty previously. Suppose you find valuable property in it; you still don't know that nothing has been taken, and, by having forced the lock, you assume a slightly uncomfortable responsibility for the safety of the contents. Why not just seal the cupboard and let Penrose do the investigating when he returns?"

"Yes," said Brodribb, with a rather dissatisfied air, as he halted at the corner of the Square and looked up at the clock above the library. "But suppose he doesn't return?" He paused for a few moments and then burst out: "The fact is, Thorndyke, that this burglary is only an incident in a most complicated and puzzling affair. There is no time to go into it now, but I should very much like, some time when you have an hour or so to spare, to put the whole case before you and hear what you have to suggest."
“I shall have an hour or so to spare—for you—this evening,” said Thorndyke, “if that will suit you.”

Brodribb brightened visibly. “It will suit me admirably,” said he. “I will get a bit of dinner and then I will trot along to King’s Bench Walk.”

“You needn’t do that,” said Thorndyke. “Jervis and I are dining at our chambers this evening. Come along and join us. Then we shall be able to get into our conversational stride with the aid of food and a glass of wine.”

Brodribb accepted gleefully, and, when we had settled the time for him to arrive, he turned away towards his office. But suddenly he stopped, searching frantically in a bulging pocket-book.

“Here,” said he, holding out a small piece of paper, “is something to occupy your mighty brains until we meet at dinner, when I will ask you to let me have it back.”

As Thorndyke took the paper from him, he broke out into a broad smile, and, turning away once more, hurried off to relieve the waiting Jarrett. My colleague looked at the paper, considered for a few moments, turned it over to glance at the back, held it up to the light and passed it to me without comment. It was a small scrap of paper—about three inches square—apparently cut off a sheet with a paper-knife, and it bore three words untidily scribbled on it with a hard pencil: “Lobster (Hortus petasatus).”

“Well,” I exclaimed, gazing at the paper with mild astonishment, “I suppose this has some meaning, but I’m hunged if I can make any sense of it. Can you?”

He shook his head, and, taking the little document from me, put it away carefully in his wallet.

“Do you suppose it is some sort of clue?” I asked.

“I don’t suppose anything,” he replied. “Let us wait and hear what Brodribb has to say about it. His expression suggested what school-boys call a leg-pull. But I suspect that he has something quite interesting to tell us about the absent Penrose.”

Thorndyke’s suspicion turned out to be correct, for, when Mr. Brodribb arrived at our chambers, dressed immaculately and accompanied by a clerk carrying a brown-paper parcel, he gave us to understand that he had some rather surprising facts to communicate.

“But,” he added, “I haven’t come here just to eat your dinner and waste your time with idle talk. I want you to regard this as a professional consultation.”

“We will consider that question later,” said Thorndyke. “Our immediate purpose is to dine, but, meanwhile, I will return your rather cryptic document. I have kept a copy of it in case it may have a bearing on anything, and Jervis has made a minute study of its ostensible meaning.”

“I am glad you say ‘ostensible,’” chuckled Brodribb, as he stowed the document away in his pocket-book. “And what conclusions has the learned Jervis arrived at?”

“My conclusions,” said I, “are not very illuminating. Broadly speaking, the inscription is damned nonsense.”

“I am with you there,” said Brodribb.

“Then, as to the ostensible meaning, I take it that the word ‘Lobster’ means—well, it means lobster—”

“I’ll take my bible oath it doesn’t,” Brodribb interposed.

“And as to the Latin words, hortus, of course, is a garden and petasatus according to the erudite Dr. William Smith, means ‘having on a travelling cap’ or, alternatively, in more general terms, ‘dressed in readiness for a journey.’ Which doesn’t make any sort of sense. You can’t imagine a garden wearing a travelling-cap or being dressed in readiness for a journey.”

“Perhaps it was the lobster that wore the cap,” Thorndyke suggested, regardless of syntax. “But what is the significance of this document? I presume that it has some connection with the burglary.”

“Yes, it has,” Brodribb replied; “and if we could only find out what the devil it means, it might be quite an important clue. The paper was found by Kickweed, when he was examining the small room, under the table by the window. He thinks that it came from inside the cupboard; and if he is right, it furnishes evidence that the cupboard had been opened. And if we could only make any sense of the damned thing, it might give us a hint as to what had been taken.”

“Yes,” Thorndyke agreed, “but this is all very hypothetical. There is no evidence as to when the paper was dropped. It is quite possible that it may have been dropped by Penrose, himself. But as to this cryptic inscription. As Jervis says, it probably has some meaning. Does it convey anything at all to you?”

“As to meaning, most emphatically NO. But,” Brodribb continued, grasping his wine-glass fiercely, “it impresses on me what I have always thought; that Daniel Penrose is an exasperating ass!”

At this outburst, Polton (our laboratory assistant and general factotum), who had just removed the covers and was in the act of re-filling Brodribb’s glass, looked at the speaker with an expression of surprised interest. He even seemed disposed to linger; but as there was no excuse for his doing so, he retired slowly as if reluctant to go.

“Perhaps,” Thorndyke suggested when Polton had withdrawn, “that statement might be amplified and its bearings explained. You seem to imply that the cryptic inscription was written by Penrose.”
“Undoubtedly it was,” Brodribb replied. “It is typical of the man. Let me explain to you what sort of fellow Penrose is; and I want you to bear his peculiarities in mind when I come to tell you my story, because they probably have an important bearing on it. Now, Penrose has two outstanding oddities of character. In the first place, he is an inveterate joker. He seems incapable of speaking seriously; and the form that his facetiousness takes is in calling everything by its wrong name. The tendency seems to have grown on him until it has become a fixed habit and now his conversation is a sort of everlasting cross-word puzzle. You have to cudgel your brains when he is speaking, to guess what he really means, and the only certainty that you have is that whatever he says, you know that he means something else.”

“It sounds a bit confusing,” I said. “But I suppose there is some method in his madness. Could you give us an illustrative example?”

“His method,” replied Brodribb, “consists in using allusive phrases, equivalents in sound or sense, or distortions or perversions of words. He would not invest his money: he would investigate it. He would not call our friend John Thornydyke; he would probably describe him as Giovanni Brambleditch.”

“I must bear that name in mind,” said I, “for use on suitable occasions. But I think I grasp the principle. It is a sort of mixture of puns and metaphors.”

“Yes,” agreed Brodribb, “that is roughly what it amounts to. And now as to his other eccentricity. Penrose is an extraordinarily secret man. I use the word ‘extraordinarily’ advisedly. We are all, as lawyers, in the habit of keeping our own counsel. But we don’t make secrets of our common and simple doings. If Thornydyke wants to go to the Law Courts, he doesn’t sneak out on tip-toe when there is nobody about and leave no information as to where he has gone. But that is what Penrose would do. His habit of secrecy is as inveterate as his habit of facetiousness. He has been known to set forth from his house in his car without giving any notice to his butler or anybody else, to drive away into the country and stay away for several days—probably rooting about for bargains for his collection—and come back without a word of explanation as to where he had been. I assure you that when I had to draft his will I had the greatest difficulty in extracting from him any intelligible particulars of the property that was to be disposed of.”

“It is rather remarkable,” said Thornydyke, “that he should have made a will at all.”

“It is,” agreed Brodribb. “Men of that type usually die intestate. And thereby hangs another part of the tale that I have to tell. But I repeat that it is most necessary to bear these oddities of character in mind in connection with what has happened. And now, I will drop Penrose for the present and let you finish your dinners in peace.”

I think that Brodribb’s resolution to change the subject occasioned some disappointment to Polton; for that cunning artificer developed an unprecedented degree of attentiveness, which caused him to make frequent incursions into the room for the ostensible purpose of filling wine-glasses and performing other unnecessary services. His obvious interest in our rather trivial conversation caused me some slight surprise at the time. But later events explained his curiosity.

When we had finished dinner, and before removing the debris, he drew the three easy chairs up to the fire, placed a small table by that which was assigned to Brodribb and deposited on it the invariable decanter of port and three wine-glasses. Then he proceeded to clear the table by small instalments and by methods strikingly at variance with his usual swift economy of time and labour. But his procrastination was all in vain; for not until the table was cleared to the last vestige and Polton had made his final and reluctant disappearance, did Brodribb make the slightest allusion to the subject of our consultation.

Then, when the door had closed, the glasses had been filled and Thornydyke and I had produced our pipes, he extracted a slip of paper from his pocket-book and laid it on the table by his side, fortified himself with a sip of wine and opened the proceedings.

V. — MR. BRODRIBB PROPOUNDS A PROBLEM

“The circumstances connected with Penrose’s disappearance,” Mr. Brodribb began, “are so complicated that I hardly know in what order I should present them.”

“Probably,” suggested Thornydyke, “the simplest plan would be to deal with the events in their chronological sequence.”

“Yes,” Brodribb agreed, “that would probably be the best way. I can refer back to previous occurrences if necessary. Then we will begin with the seventeenth of last October, roughly three months ago. On that day, in the early afternoon, he started out from home in his car and, contrary to his usual practice, he told Kickweed that he did not expect to be back until rather late. He directed that no one should sit up for him, but that a cold supper should be left in the dining-room. As to where he was going or on what business, he naturally gave no hint, but we are justified in assuming that he started forth with the intention of returning that night. But he did not return; and, so far as we know, he was never seen again by anybody who was acquainted with him.”

“Your description,” said Thornydyke, “seems to suggest that he is a bachelor.”

“Yes,” replied Brodribb, “he is a bachelor, and, with the exception of an aged father, to whom I shall refer presently, he seems to have no very near relations. Horridge, his executor, is a somewhat distant cousin and a good deal younger man. Well, then, to repeat; on the day that I have mentioned, having given this very vague information to his butler, he went off to his garage, got his car out, closed up the garage and departed. Kickweed saw him drive away past the house; and that
was the last that was seen of him by any person who knew him.

"His next appearance was in very remarkable circumstances. At midnight on that same day, or in the early hours of the next, a gentleman, a resident of Gravesend, who was returning home from Chatham in his car, saw a man lying face downwards on a heap of gravel by the roadside. The gentleman pulled up and got out to see what had happened; and as the man seemed to be either dead or unconscious, and there was nobody about excepting a rather squiffy labourer, he carefully lifted the man, with the labourer’s assistance, put him into his car and conveyed him to the hospital at Gravesend, which was about a mile and a half from the place where he picked him up. At the hospital it was found that the man was alive though insensible, and on this the gentleman, a Mr. Barnaby, went away, leaving the hospital authorities to give information to the police.

"The injured man appeared to be suffering from concussion. He had evidently fallen on the gravel with great violence, for his face was a mass of bruises and both his eyes were completely closed by the swelling due to the contusions. There was a deep, ragged wound across his right eyebrow in which the house surgeon had to put a couple of stitches; and there were various other bruises about his person, suggesting that he had been knocked down by some passing vehicle, but there appeared to be no broken bones or other severe injuries. The visiting surgeon, however, seems to have suspected the existence of a fracture of the base of the skull, and, on this account, directed that the patient should be kept very quiet and not questioned or disturbed in any way.

"The next day he still appeared to be unconscious, or nearly so, though he took the small amount of nourishment that was offered. But he answered no questions, and, by reason of the suspected fracture, no particular attempts were made to rouse him. And so the day passed. On the following day, the nineteenth, he remained in much the same condition; speechless and somnolent, lying nearly motionless, taking no notice of anything that was occurring around him and giving no answers to questions.

"But about eight o’clock at night he roused quite suddenly and very completely, for he seemed at once to be in full possession of his senses. But what is more, he proceeded to get out of bed, and demanded his clothes, declaring that he was quite well and intended to leave the hospital and go about his business. As you may suppose, there was a mighty hubbub.

"The house surgeon absolutely forbade the patient to leave the hospital and at first refused to let him have his clothes. But the man persisted that he was going, clothes or no clothes. Well, of course, they had no power to detain him, so the end of it was that they produced his clothes, and when he had dressed himself they gave him a light meal and took the particulars of his name and address and what little he could tell them of the circumstances of his accident. But of this he knew practically nothing. All he could tell them was that some vehicle had come on him from behind and knocked him down, and he remembered no more.

"When he had finished his meal and made his statement, such as it was, he asked for his overcoat. But there was no overcoat with his clothes, though the ward sister remembered that he was wearing one when he was brought in. Apparently, a patient who had been discharged earlier in the evening must have taken it by mistake, for there was a spare overcoat of the same kind—the ordinary raincoat, such as you may see by the dozen in any street; and it was suggested that he should take this in exchange for his own. But he would not agree to this, and eventually, as it was a mild night, he was allowed to go as he was.

"Now, he had not been gone more than an hour when the man who had taken the wrong coat brought it back. He had discovered his mistake by finding in the pocket a motorist’s driving licence. But the odd thing was that the name and address on the licence did not agree with those that the departed patient had given. And yet there seemed to be no doubt that it was the missing coat, for the night nurse remembered the daubs of mud that she had noticed on it when she had undressed the patient. Moreover, she now recalled that the collar which she had taken off him had borne the initials ‘D.P.,’ in Roman capitals, apparently written with a marking-ink pencil.

"But there was an evident discrepancy. The patient had given the name of Joseph Blewitt, with an address somewhere in Camden Town; but the name on the licence was Daniel Penrose and the address was his address in Queen Square.

"It was certainly a facer. The coat had to be returned to its owner. But who was its owner? The secretary decided that it was not his business to solve that problem; and, moreover, as there seemed to be something a trifle queer about the affair, he thought it best to communicate with the police. But as it was rather late and there seemed to be no urgency in the matter, he put it off until the following morning; and when the morning came, the police saved him the trouble by calling to make inquiries. And then something still more queer came to light.

"That morning, early, a patrol had discovered an abandoned car backed into the bushes at the bottom of an unfrequented lane leading down to the marshes a mile or so outside Gravesend. On making inquiries, he learned that it had been there all the previous day, for it had been seen by some boys who had gone down to the marshes on their probably unlawful occasions. They had taken no special notice of it, assuming that the owner had gone off on some business into the village in the irresponsible way that motorists have of leaving their cars unattended. But the boys could not say when it had arrived, as they had not been to the marshes on the day before. However, when the patrol pushed his inquiries in the village, he heard of the accident and of the man who had been picked up on the road not very far away. Thereupon, he took possession of the car and brought it into the town, lodging it, for the time being, in the garage belonging to the police station. And then he came on to the hospital to interview the injured man. But the bird had flown and only the coat with the driving licence remained."
“And then, once more, the plot thickened. For the name on the insurance certificate which was found in the car was the same as that on the licence; and if—as seemed nearly certain—the coat belonged to the departed patient, then that patient had given a false name and address. And this turned out to be the fact. No such person as Joseph Blewitt was known at the Camden Town address; and on inquiring at Daniel Penrose’s house, it was ascertained that the said Daniel had left home in his car in the early afternoon of the day on which the injured man had been brought into the hospital and had not since been seen or heard of.

“As to what had become of that injured man, all that they could discover was that he—or, at least, a man with two black eyes and generally answering to the description—had taken a first-class ticket to London shortly after the time at which the patient had left the hospital, and that a man, apparently the same, had got out at New Cross. But they could get no farther. From the time when he passed the barrier at New Cross all trace of him was lost.”

“Did the police make any efforts to follow him up?” Thorndyke asked.

“At the moment, I don’t think they did. Why should they? So far as they then knew, the man had committed no offence. He was no business of theirs. If he chose to vamoose, he was quite entitled to.”

“I need not ask if you know of any reason that he may have had for disappearing?”

“Ah!” said Brodribb, “now we come to the inwardsness of the affair. I have told the story in the actual order of events, and, at the time when he bolted from the hospital, there seemed no reason for his sneaking off and hiding himself. But, a day or two later, some other facts transpired which threw an entirely new light on his behaviour.

“It appeared that early in the morning of the eighteenth, the day after that on which he left home—and, incidentally, was picked up on the road—the dead body of an old woman was found in a dry ditch at the side of a by-road leading to the main road from Ashford to Maidstone. From the condition of the body as to rigor mortis and temperature, the police surgeon inferred that she had been dead about six hours; which, as the body was discovered at about five o’clock in the morning, roughly fixes the time of her death at eleven o’clock on the previous night. Of the cause of death there seemed to be no doubt. She had been knocked down by a motor, the driver of which had either been unaware of what had happened or had cleared off to avoid trouble. The latter seemed the more probable, for, not only must the force of the impact have been terrific to fling the poor old creature right across the grass verge into the ditch, but the tracks of a car, which were plainly visible in the lane, showed it to have been zigzagging wildly and to have actually struck the grass verge at the point where the accident must have occurred.

“At first, it looked as if the motorist had got away without leaving a recognisable trace. But when the police came to make inquiries, they picked up some important information from the attendant at a filling station at Maidstone. He recalled that, a little after eleven o’clock on the night of the old woman’s death, a car had come to his establishment for a refill of petrol. It was apparently travelling from the direction of Ashford; and there were certain circumstances connected with the car and the driver which had attracted his attention. He had noticed, for instance, that the near-side mudguard was badly bent, and there was earth on the wheels, as if the car had been run over a ploughed field. He had also observed that the driver—who was alone in the car—looked rather pale and shaken, and seemed to be excited or agitated. Moreover, he smelt strongly of drink; and the man was of opinion that the liquor was not whisky, but smelt more like ‘sherry wine.’ These facts, taken together, made him suspect that the motorist had been in trouble and he very wisely made a note of the number of the car and had a good look at the driver. His description of the man is not very illuminating, excepting that he noticed the muddy state of the raincoat, which the nurse had mentioned. But the number of the car gave all the necessary information. It was that of Daniel Penrose’s car; and, sure enough, in confirmation of the identity, was the fact that the left mud-guard of Penrose’s car was badly bent and there was a quantity of earth on the wheels. And there is a bit of further evidence, for it appears that Penrose was stopped by a police patrol on the top of Bluebell Hill, on the Maidstone-Rochester Road, and asked to show his licence; which explains how the licence came to be in his raincoat pocket. When you consider the devil of a hurry that he was in, you can understand that he would just shove it into the nearest pocket.

“Well, the final phase of the affair—so far—was the inquest on the old woman. Naturally, when they had heard the evidence of the police and the man from the petrol-filling station, the jury found a verdict of manslaughter against some person unknown.”

“Unknown!” I repeated. “Then they did not mention Penrose by name?”

“No,” replied Brodribb. “The coroner knew his business better than many coroners do. He directed the jury to confine their finding to the facts that had been definitely proved and leave the identification of the offender to the police. But I need not say that the police are keeping a bright look-out for Daniel Penrose.

“So there, you see, we have an explanation of the initial disappearance. Perhaps, not a very reasonable one; but then Penrose is not a very reasonable man. But that explanation does not quite clear up the mystery. He disappeared about three months ago and since then has made no sign. Now, we can understand his bolting off in a panic, but it is less easy to understand his remaining in hiding. On reflection he must have seen that he was really in no great danger, even if he did actually knock the poor old woman down, which is by no means certainly the case. There were no witnesses of the accident. If he chose to deny that he was in any way concerned in it, it would be impossible to prove that he was. He might even have denied that he was ever on that particular road at all.”

“You mentioned,” said Thorndyke, “that there were distinct tracks of motor tyres. Probably they would be identifiable.”
“That would not be conclusive,” Brodribb replied. “It would only prove that the tyres were of the same make. But, even if he admitted that he had caused the old woman’s death, still, in the absence of witnesses, he could give any account that he pleased of the disaster. Carelessness on the part of the pedestrian is usually quite satisfactory to a coroner or his jury.”

“I don’t think the matter is as simple as that,” Thorndyke objected. “I agree with you that there has been a most amazing indifference to the value of human life since the coming of the motor car. But this was an exceptionally bad case. The man had been drinking; he must have known that he had knocked the woman down, but yet he drove on callously, leaving her to die uncared for, and did not even report the accident. Whatever the coroner’s verdict might have been, the police would certainly have prosecuted, and the man would almost inevitably have been committed for trial. But at the assizes he would have had to deal with a judge; and judges, as a rule—to which there are, I admit, one or two remarkable exceptions—take a reasonable and legal view of the killing of a human being.”

“Well, even so,” Brodribb rejoined, “what does it amount to? Supposing he had been convicted of manslaughter? It might have been a matter of six months’ hard labour, or even twelve. It could hardly have been more. Killing with a motor car is accepted as something different from any other kind of killing.”

“But,” said I, “he would not be particularly keen on twelve months’ imprisonment with hard labour.”

“No,” Brodribb agreed, “but what is the alternative? To say nothing of the fact that he is pretty certain to be caught, sooner or later, what is his present condition? He—a well-to-do man, accustomed to every luxury, is a wanderer and a fugitive, hiding in obscure places by day and sneaking out in terror by night. It must be a dreadful existence; and how the devil he is living and what he is living on, is beyond my powers to imagine, seeing that, when he went off, he had, presumably, nothing more about him than the few pounds that he would ordinarily carry in his pockets.”

“I suppose,” Thorndyke said, reflectively, “it has not occurred to you to connect that fact with the burglary?”

Brodribb looked at him in evident surprise.

“I don’t think,” said he, “that I quite understand what you mean. What connection could there be?”

“I am only throwing out the suggestion,” replied Thorndyke, “as a bare possibility. But the house seems undoubtedly to have been entered, and entered by a person who appears to have been acquainted with it. The entry was made into the small room; and that room was clearly the objective, as is proved by the fact that the door was bolted on the inside. Then the person who entered apparently knew what was in that room. But, so far as we know, the contents of that room were known only to Penrose. If the cupboard was opened, it was opened with a key; for it is practically impossible to pick a Chubb lock, and a burglar would not have tried. He would have used his jemmy and forced the door.”

“By Jove, Thorndyke!” Brodribb exclaimed, slapping the table, at the risk of spilling the wine, “you have solved the mystery! It never occurred to me that the burglar might be Penrose, himself. But your suggestion fits the case to a T. Here is poor old Penrose, penniless and perhaps starving. He knows that in that cupboard is portable property of very substantial value. He has the key of the cupboard in his pocket and he knows that he can get into the room easily by just slipping back the catch of the window with a knife. Of course it was Penrose. I was a damned blockhead not to have thought of it before. But you see, Thorndyke, I haven’t got your criminal mind.”

But Thorndyke, having made the suggestion, proceeded to sprinkle a little cold water on Brodribb’s enthusiasm.

“It isn’t a certainty,” said he, “and we mustn’t treat it as one. It is a reasonable and probable hypothesis, but we may think of others when we consider the matter further. However, the immediate question is what you want me to do.”

“You can guess that,” chuckled Brodribb, as I refilled his glass. “What do I always want you to do when I come here taking up your valuable time and drinking your excellent port? I want you to perform miracles and do impossibilities. It seems a pretty large order, I admit, even for you, seeing that the police are unable to locate Penrose, but I am going to ask you to exercise your remarkable power of resolving insoluble riddles and just tell us where he is.”

“But why trouble to hunt him up?” Thorndyke objected. “He probably knows his own business best.”

“I am not so sure that he does,” Brodribb retorted. “But, in any case, it is not his business that is specially agitating me. There are some other people whose interests are affected and one of them is keeping me very effectively stirred up. However, I suppose I mustn’t inflict on you details of the purely civil aspects of the case.”

It was easy to gather from the apologetic tone of the concluding sentence and the wistful glance that he cast at Thorndyke, that he wanted very much to inflict those details, and I was not surprised when my colleague replied:

“It wouldn’t be an infliction, Brodribb. On the contrary, it would be both interesting and helpful to have a complete picture of the case.”

“I suspect,” said Brodribb, “that you are only being beastly polite, but I will take you at your word. After all, the civil aspects are part of the problem and they may be more relevant than I realise. So here goes.

“I spoke just now of Daniel Penrose’s aged father and I mentioned that there were no other near relations. Now, Penrose Senior, Oliver by name, is a very remarkable old gentleman. He is over ninety years of age, but surprisingly well preserved. Up to a week or two ago, he was, mentally and physically, the equal of an ordinary man of sixty. That was his condition at the time of Daniel’s disappearance; lively and active, apparently going strong for his hundredth birthday.

“But, within the last fortnight, the old man has been taken ill—a slight touch of influenza. It appeared at first, that
seemed to offer no particular cause for anxiety. But you know what these hale and robust nonagenarians are. They dodder along peacefully, looking as if they were going to live for ever, until, one fine day, something gives them a shake up and puts them out of their stride; and then they just quietly fade away. Well, that is what is happening to old Penrose. He doesn’t seem particularly ill. But he shows no sign of recovering. Suddenly, the weight of his years seems to have descended on him and he is gradually fading out. It is practically certain that he will die within the next few weeks; and, when he does die, some very curious complications are going to arise.

“Oliver Penrose is what we humble professional people would call a rather rich man. Nothing on the commercial scale of wealth. Nothing of the millionaire order. But there will be an estate, mostly personal, of over a hundred and fifty thousand pounds. And, so far as we know, that estate is not disposed of by will. The old man was rather obstinate about it, though there was some reason in his contention that it was a waste of trouble to make a will leaving the estate to the next of kin, who would inherit without a will. However, that question is of no importance, for, in any case, Penrose Junior would come into the property. If there is a will, he will be the principal beneficiary, and if there is no will, he is the next of kin, and, being the only child, will take the bulk of the estate.

“And now you see the difficulty. Daniel has made a will leaving a considerable proportion of his property to his cousin, Francis Horridge, who is also one of the executors and the residuary legatee. Daniel is not as rich as his father, but they are a well-to-do family and he has some fifty thousand pounds of his own. So Horridge will not do so badly if he should survive Daniel, which he is likely to do, as he is over twenty years younger. But he wants to do better. On the old man’s death, the bulk of his property will, as I said, come to Daniel; and, as Daniel’s will at present stands, it will fall into the residue of the estate and thus, eventually, come to Horridge.

“But there is a snag. Daniel has disappeared, but the old man is still alive. Now, suppose that Daniel elects to disappear for good. The thing is possible. He may have some resources that are unknown to us. It would be like him to have a secret banking account in a false name; and he may be in such a funk of criminal prosecution that he may never dare to come to the surface again. Well, suppose he remains in hiding. Suppose he has gone abroad or into some entirely new surroundings and has the means to go on living there; just see what a hideous mess will be created. In the first place, there will be an indefinite delay in distributing the old man’s estate. Daniel is the next of kin (or else the principal beneficiary, if there should be a will). But his share cannot be allotted until it is proved that he is alive, and it cannot be otherwise disposed of until he is either proved or presumed to be dead. And, similarly, his own will cannot be administered so long as he is presumably alive.”

“If he remains absent long enough,” Thorndyke remarked, “the interested parties will probably apply for permission to presume his death.”

“Well,” retorted Brodribb, “they certainly wouldn’t get it at present, or for a long time to come. If Daniel remains in hiding, the whole business may be hung up for years. But, even if they do, later, succeed in getting his death presumed, another and still worse complication will have to be dealt with. For, of course, the question of survivorship will be raised. Oliver’s next of kin will naturally contend that Daniel died before the old man and that he could, therefore, not have inherited the old man’s property; in which case, Horridge stands to lose the best part of a hundred and fifty thousand pounds. And that, I may say, is where I come in. Horridge is in a most frightful twitter for fear Daniel should slip away for good and perhaps die somewhere under a false name. He wants to find Daniel, or at least ascertain that he is alive; and he is prepared to spend untold gold on the search. He has tried to ginger up the police and induce them to set up a hue and cry, regardless of poor old Daniel’s feelings. But the police are not enthusiastic, as they have no conclusive evidence against him, even if they were able to locate him. So he has fallen back on me, and I have fallen back on you. And now the question is, are you prepared to take up the case?”

I had expected that Thorndyke would return a prompt refusal, for there seemed absolutely nothing to go on. To my surprise, he replied with a qualified acceptance, though he was careful to point out the difficulties.

“It is not very clear to me,” said he, “that I can give you much help. You must see for yourself that this is really a police case. For the tracing of a missing man, the police have all the facilities as well as the necessary knowledge and experience. I have no facilities at all. Any inquiries that I may wish to make I must make through them.”

“Yes, I see that,” said Brodribb, “and, of course, I am not really asking you to perform miracles. I don’t expect you to go outside and put your nose down on the pavement and forthwith make a bee-line for Daniel’s hiding-place. But it occurs to me that you may be able to approach the matter from a different direction and by different methods from those of the police.”

“That is possible,” Thorndyke admitted, “but even a medico-legal investigator cannot get on without evidence of some kind, and there seems to be practically nothing to lay hold of. Do you know where the car is?”

“In Daniel’s garage. It was taken there and locked up as soon as the police had made their examination of it.”

“Do you know whether anything was found in it?”

“I have heard of nothing excepting a large empty flask which had, apparently, once contained brown sherry.”

“Do you know whether the car has been cleaned since it was returned?”

“I am pretty sure that it has not. Penrose was his own chauffeur and did all the cleaning himself.”

“Then you spoke of a raincoat. What has become of that?”
“It is in the parcel that I brought with me and which I put on the table in the lobby. It was delivered at Daniel’s house by the police when they had looked it over, and Kickweed handed it to Horridge, who at once locked it up, and later, at my request, transferred it to me. I knew you would want to see it.”

“Was anything found in the pockets?”

“There was the driving licence, as I told you. Beyond that there was nothing but the stump of a lead pencil, a wooden cigarette-holder and what looked like a fragment of a broken flower-pot. And I may say that those things are still in the pockets. So far as I know, the coat is in exactly the condition in which it was found.”

“We will have a look at it presently,” said Thorndyke, “though it doesn’t seem likely that we shall extract much information from it.”

“It certainly does not,” I agreed, heartily, “and the little information it may yield can hardly have much bearing on what we want to know. It won’t tell us what Penrose’s intentions may have been, or where he is now.”

“Oh, don’t say that!” exclaimed Brodribb. “I had hoped that Thorndyke would practise some of his wizardry on that coat and make it tell us all that we want to know about Daniel. And I hope so still, notwithstanding your pessimism. At any rate,” he added, glancing at my colleague, “you are going to give us a run for our money? You agree to that?”

“Yes,” Thorndyke replied, “just as a forlorn hope. It is nothing more, and it is unlikely that I shall have more success than the police. Still, I will sort out the facts, such as they are, and see if they offer us any kind of opening for an investigation. I suppose I can see the car?”

“Certainly, you can. I will tell Kickweed to let you have the key of the garage and to give you any help that you may ask for. Is there anything that you will want me to do?”

“I think,” replied Thorndyke, “that, as Penrose is quite unknown to me, I had better have a description of his person, and it should be as minute and exhaustive as possible; and if a photograph of him is available, I should like to have that, too.”

“Very well,” said Brodribb, “I will get a description of Daniel from Horridge and Kickweed, separately, and write out another from my own observations. I will let you have the three, so that you can compare them, and I will try to get you a photograph. And that,” he concluded, emptying his glass with relish, and rising, “is all, for the present; and I may say that, despite Jervis’s pessimism, you have taken a load of anxiety off my shoulders. Experience has taught me that when John Thorndyke starts an investigation, the problem is as good as solved.”

VI. — THORNDYKE EXAMINATES THE RELICS

As we returned from the landing, to which we had escorted Mr. Brodribb, I took up the parcel from the lobby table and conveyed it to the sitting-room.

“Well, Thorndyke,” I remarked, as I deposited it on the table under the electric light, “you seem to have let yourself in for a proper wild-goose chase.”

He paused in the act of digging out his pipe to regard me with an approving smile.

“That is rather happily expressed, Jervis,” said he, “having regard to the personal peculiarities of our quarry. But we are not actually committed to chasing him.”

“I can’t imagine why you undertook the case,” I continued. “There is absolutely nothing to go on.”

“That is how it strikes me,” he agreed placidly, blowing through the pipe preparatory to refilling. “But we couldn’t refuse Brodribb.”

“The few facts that we have,” I went on doggedly, “are all totally irrelevant. Our information stops short exactly at the point where the problem begins. Take this coat, for instance. Here is a fool—and a frightened, artful, secretive fool at that—who does a bolt and leaves his coat behind; and we are offered that coat as a guide to the particular bolt-hole that he has gone down. The thing is ridiculous. If it had been a question of where he had come from, the coat might have told us something. But obviously it can bear no traces of the place that he intended to go to.”

“That is perfectly true,” Thorndyke admitted, “but it might be worth while to find out whence he had come, if that were possible.”

“I don’t see why,” I objected, adding hurriedly, to anticipate the inevitable reply: “Of course you will say that the significance of a fact cannot be judged until the fact is known; but still, I really cannot see any possible connection between the place whence he came and the place whither he went, especially as the circumstances had changed in the interval.”

“Nor can I,” said Thorndyke. “But yet it is possible that there may be some connection. It is evident that Penrose started out with a definite objective. He was going to a particular place with some defined purpose; and it seems to me at least conceivable that if we could discover whither he went and on what business, that knowledge might be helpful. Of course, it probably would not; but seeing that we knew nothing of the habits and mode of life of this curious, eccentric and secretive man, our only course is to pick up any stray facts concerning him that may come within our reach.”

“Yes,” I agreed, without much conviction, “and I take it that what is in your mind is that when he bolted he probably
made for some place that was known to him and where he believed that he could hide in safety.”

“Exactly,” Thorndyke agreed. “If we could discover some of his haunts, we might have a clue to a possible hiding-place.”

“It may be so,” I rejoined, “and if that is your view, I suppose you will begin by seeing what you can glean from this coat”; and with this I proceeded to untie the string and open the parcel.

The coat, when I lifted it out and unrolled it, was seen to be amazingly dirty. It was not merely splashed with mud. On the sleeves and around the bottom of the skirt were great daubs of thick dirt mingled with a number of whitish marks such as might have been produced by contact with wet chalk.

“It is extraordinary,” I said, holding the coat up for Thorndyke’s inspection. “The fellow seems to have been positively wallowing in the mire.”

“Not exactly in the mire,” said Thorndyke, looking closely at the great daubs. “This is not road dirt. It is earth; and the earth seems to have been mixed with particles of chalk. Perhaps we had better empty the pockets before we proceed with the examination of the coat.”

I thrust my hand into the two pockets and drew out from one the driving licence, crumpled, smeared, and marked with the prints of dirty fingers, and from the other a stump of lead pencil, a cigarette-holder and what looked like a fragment of a broken tile. But it was so encrusted with earth that it was difficult to see exactly what it was.

“Brodribb’s description,” said I, as I handed it to Thorndyke, “doesn’t seem to fit. This is certainly not a fragment of a flower-pot. It is too dark in colour. It looks to me more like part of a tile.”

Thorndyke took it from me and examined it closely in the bright light of the electric lamp.

“I don’t think it is a tile, Jervis,” said he, “but we shall see better when we get it clean. The interesting point about it is that the earth in which it is embedded seems to be similar to that on the coat; a mixture of loam and small fragments of chalk—a sort of chalk rubble. We will brush off the earth when we have looked over the other things.”

He laid it in a small cardboard tray and put it aside on the mantel-shelf. Then he turned his attention to the cigarette-tube which I held in my hand.

“There,” said I, handing it to him, “is another example of excellent but quite irrelevant clues.”

“How irrelevant?” he asked. “And irrelevant to what?”

“To the subject of our inquiry,” I replied. “Here is a highly distinctive object, for it was certainly never bought at a shop. As evidence in a case of doubtful identity, it would be quite valuable. But it is of no use to us. It gives us no hint as to where its owner is at present hiding.”

Thorndyke smiled indulgently. “We mustn’t expect too much, Jervis,” said he; “in fact, we have no reason to expect anything. We are just looking over this jetsam as a matter of routine to note any facts that it may seem to suggest, without regard to their apparent relevancy or irrelevancy to our inquiry. You cannot judge the relevancy of an isolated fact. Experience has taught me, and must have taught you, that the most trivial, commonplace and seemingly irrelevant facts have a way of suddenly assuming a crucial importance by connecting, explaining or filling in the detail of later discoveries.

“Take this cigarette-tube, for instance. It appears to be the property of Daniel Penrose. But how did he come by it? As you say, it was certainly not bought in the ordinary way at a shop. There is no suggestion of mass-production about it. It is an individual thing made by a particular person, and probably there is not another like it in the world. But if we look at it attentively, we can form some idea of the kind of person who made it and can even suggest the probable circumstances in which it was made. Thus, it is composed of a very hard, heavy, black wood, much like ebony in character but with a slight brownish tinge instead of the characteristic dead black. Probably it is African ebony. It is competently turned but with no special display of skill. The mouthpiece has been shaped with a chisel, whereas you or I would have used a file on such a very hard material. The suggestion is that the chisel was a tool to which the maker was accustomed and which he used with facility. Then the rather artless but quite pleasant decoration consists of a pattern of circular white spots, each an eighth of an inch in diameter, made, apparently, by boring holes probably with a Morse drill—right through the half finished piece and driving into them little dowels of holly or some other white hardwood, which would be cut off flush when the work was finished in the lathe. Then there is the suggestion that the tube was made from odd scrap of wood, left over from some larger work.”

“How do you arrive at that?” I asked.

“I think,” he replied, “it is suggested by this little streak of sapwood. It is a distinct blemish, and one feels that it would have been avoided if a larger piece of wood had been available. So you see that the impression we get is of a workman who was handy with a paring-chisel but also had some skill as a turner; possibly a joiner or cabinet-maker who had a lathe in his workshop.”

“Yes,” I agreed, “he may have been, and, on the other hand, he may not. I don’t see that it matters. He is not our pigeon. What seems to me of more interest—though mighty little at that—is that there is a good-sized stump of a cigarette still in the tube. It looks as if Penrose had dropped the holder in his pocket with the cigarette still alight; and if he did that—in a motor car, with plenty of petrol vapour about—he must have been either drunk or frightened out of his wits.

“What is the next proceeding?”
“I think,” said he, as he deposited the licence, the cigarette-tube and the stump of pencil provisionally in a cardboard box, “we had better collect as much earth as we can get off the coat to examine at our leisure. We shall want one or two photographic dishes, a clean toothbrush, a glass funnel, a wide-mouthed jar and a few filter-papers. Do you mind getting them while I damp the coat?”

I ran up to the laboratory and collected these articles, and when I returned with them I found Thorndyke with the coat spread out on the table, cautiously damping the larger mud-stains with a sponge; and we at once fell to work on the rather dirty and not very thrilling task of transferring the mud from the coat to one of the dishes, which I had partly filled with water. But the quantity that we collected by scraping with a paper-knife and brushing off into the water was quite surprising; and when, from the state of liquid mud in the dish, it was transformed into wet earth on a filter-paper, it at once took on the character of a definite and recognisable type of soil.

“That,” said Thorndyke as he carefully removed the filter-paper from the funnel and set it on a blotting-pad to drain, “we can examine later and, if necessary, with the aid of an expert geological opinion. It appears to be a rather fine reddish loam a little like the Thanet sands, with a few minute white particles, apparently chalk. But we shall see. And now let us take a look at Brodribb’s alleged flower-pot.”

He brought the tray from the mantelpiece and, taking out the fragment, cautiously wetted its surface. Then, having first carefully washed the toothbrush, he proceeded to brush the earth from the pottery fragment into a small dish until it was completely clean, and, having dried its surface with blotting-paper and his handkerchief, put it aside while he collected the detached earth—on a filter-paper.

“You notice, Jervis,” said he as he opened out the filter-paper on the blotting-pad, “that it seems to be the same soil as that on the coat. There are more chalk particles and they are larger; but that is what we should expect, as the larger particles would have less tendency to adhere to the coat. And now let us have your considered opinion on this fragment.”

I took it from him and examined it with a decent pretence of interest (and an inward conviction that it didn’t matter tuppence what it was).

“I still think,” said I, “that it looks like a piece of tile. The material is as coarse as brick and it has a slight curvature like that of an old hand-made tile. But I don’t quite understand what those marks are. They are evidently not accidental.”

“No,” he agreed, “and I think they exclude your diagnosis, and so does the definite thickening at the edge. But let us proceed systematically. I find it a help to a thorough examination of an object to describe it in detail as if one were preparing an entry in a museum catalogue.”

I agreed warmly and invited him to go ahead.

“Very well,” said he, “if you feel unequal to the effort, the task devolves upon me. We will take the physical properties in regular order, beginning with the general character.

“This is a fragment of pottery of excessively coarse and crude quality, consisting of a reddish buff matrix in which are embedded numerous angular white particles which have the appearance of burnt flint. The texture is somewhat porous and there is no trace of a glaze on either surface. On taking it in the hand, and allowing for the fact that it is wet, we find it noticeably heavy.

“Size and shape. The fragment forms an irregular oblong, approximately an inch and a half long by three-quarters wide. Of the four sides, three are fractured—recently, you notice—and the fourth—one of the long sides—is thickened into a definite flange or rim, roughly T-shaped in section. The thickness, as shown by the calliper gauge, varies from five thirty-seconds of an inch at the thinnest broken edge to eleven thirty-seconds on the thick unbroken edge.

“On the thick edge are five indented marks such as might have been made with a blunt knife on the soft clay, roughly a quarter of an inch apart; and on the convex surface, next to the long broken edge, are four similar linear indentations, roughly half an inch apart and at right angles to the thickened edge.

“The fragment is curved in both diameters, rather irregularly, but still quite definitely. Let us see, approximately, what those curvatures amount to.”

He took a sheet of writing-paper and placed the fragment on it, standing up on its thick edge, and, with a sharp pencil, carefully traced the outline. The tracing showed the curvature very distinctly; and it became still more obvious when he placed a straightedge against the concave side and connected the two ends with a ruled line. Then he produced a pair of compasses furnished with a pencil, and, setting the pencil-point on one end of the ruled line, was able, after one or two trials, to strike an arc which passed through both ends of the line and followed the curve of the tracing. On measuring the distance from the centre to the arc, it was found to be three inches and an eighth.

“We see, then,” said he, “that the curve has a radius of three inches and an eighth, so that it seems to be part of a circle, six inches and a quarter in diameter. Now, let us try the other curvature.”

He stood the fragment up on one of its short ends and made a tracing as before. Measurement of this showed a curve with a radius of two inches and three-quarters.

“We can’t take this last measurement very seriously,” said he, “as the curve is so very short and irregular. But you see that we now have the material for a fairly reliable reconstruction of the object of which this fragment formed a part. It appears to have been an earthenware vessel of the very coarsest and crudest type, with curved sides—some kind of bowl or
VII. — A VISIT OF INSPECTION

The dubious and slightly bewildered state of mind to which I have referred induced me to observe Thorndyke's proceedings with a little closer attention than was usual with me. Not that there was really any occasion, for Thorndyke appeared to go out of his way to make me a party to any doings connected with the Penrose case; which tended to increase my suspicion that I had missed some point of evidential importance.

It was some two or three days after Brodribb's visit to us, when we seemed to have a few hours at our disposal, that Thorndyke suggested a call at Queen Square to examine Penrose's car. I had been expecting this suggestion, and, with the hope of getting some new light on the purpose of his investigations, assented cheerfully. Accordingly, when Thorndyke had slipped a good-sized note-book and some other small necessaries into his pocket, we set forth on our quest.

I have always liked Queen Square, and have watched, regretfully, its gradual deterioration—or "improvement," as the optimistic modern phrase has it. When I first knew the place, it was nearly intact, with its satellites, Great Ormond Street, The Foundling Hospital and the group of other pleasant old squares adjacent. As we walked towards it we discussed the changes that the years had wrought. Thorndyke, as an old Londoner, sympathised warmly with my regrets.

"Yes," he agreed, "the works of man tell us more about him than we can gather from volumes of history. Every
generation leaves, in the products of its activities, a faithful picture of its capabilities, its standard of taste and its outlook on life. The people who conceived and created these delightful, dignified haunts of peace and quiet, had never heard of town-planning and did not talk much about architecture. But they planned towns by instinctive taste and they built charming houses, the dismembered fragments of which we can now study in our museums. There is a beautiful wooden portico at South Kensington which I used to admire when it stood in Great Ormond Street.”

“I remember it,” said I. “But in the museum they have scraped off the paint and gilding to show the construction; which is all very interesting and instructive, but is not quite what the architect had in view when he designed it. It is rather as if one should offer the anatomical exhibits in the Hunterian museum as illustrations of the beauty of the human figure. They might have restored the painting and gilding so that visitors could see what a fine London door-way was like in the time of Good Queen Anne.”

As we spoke, we turned out of Great Ormond Street and crossed the square, passing the ancient pump with its surrounding lantern and its encircling posts, and directing our steps towards Penrose’s house, which had been described as nearly opposite the statue of Queen Anne. As we approached the latter, Thorndyke remarked, continuing our discussion:

“There is another example of what is practically a lost art. It seems to me a pity that leadwork should have been allowed to fall into such a state of decay. Lead may not be an ideal material for statues, but it is imperishable, it is cheap and it is easy to work. In the eighteenth century, the Piccadilly foundries, from which this statue probably came, turned out thousands of works—urns and vases, shepherds and shepherdesses and other rustic figures for use in parks and formal gardens or as architectural ornaments. But they have nearly all gone; melted down, I suppose, to form sheet lead or water pipes. This looks like the house, and a fine old house it is; one of the last survivors of its family.”

We ascended to the broad door-step, enclosed by forged railings bearing a pair of link-extinguishers and the standard for an oil lamp, gave a tug at the old-fashioned bell-pull and executed a flourish on the handsome brass knocker. After a decent interval, the door was opened by a smart-looking maid-servant to whom Thorndyke communicated the purpose of our visit.

“We have called to see Mr. Kickweed on certain legal business. I think he is expecting a visit from me. I am Dr. Thorndyke.”

On this the maid opened the door wide, and, inviting us to enter, conducted us to a small room adjacent to the hall, where she requested us to wait while she inquired Mr. Kickweed of our arrival. When she had gone, I cast an inquisitive glance round the room, which contained a table, two chairs and a piece of furniture which might have been regarded either as a cupboard or as some kind of sideboard.

“This can hardly be the room in which the burglary took place,” said I, “though it fits the description to some extent, but the window seems in the wrong place.”

“Very much so,” said Thorndyke, “as it looks out on the square and is over the area. And it is the wrong sort of cupboard with the wrong sort of lock. No, this is not the mysterious chamber.”

Here the door opened slowly and discreetly to admit a pale-faced, rather unwholesome-looking elderly man who bowed deferentially and introduced himself by name as Mr. Kickweed; though the introduction was hardly necessary, for he might have served, in a museum of social anthropology, as a type specimen of the genus, upper manservant.

“Mr. Brodribb wrote to me, sir,” he continued in a melancholy tone, “to say that you would probably call and instructing me to give you any assistance that I could. In what way can I have the pleasure of carrying out those instructions?”

“My immediate object,” replied Thorndyke, “is to inspect Mr. Penrose’s car. Has anything been done to it since it came back?”

“Nothing whatever, sir,” Kickweed replied. “I suppose it ought to be cleaned, but I know nothing about cars. Mr. Penrose always attended to it himself excepting when it went out for repairs, and he always kept the garage locked up. In fact, it was locked when they brought the car back.”

“Then how did you get the car in?” Thorndyke asked.

“The police officer, sir, who came with the car, fortunately had a few odd keys with him, and one of them happened to fit the lock. He was good enough to leave it with me, so I shall be able to let you in. If you would like to go round there now I will just get my hat and show you the way.”

“Thank you,” said Thorndyke. “If it is not troubling you—”

“It is no trouble at all, sir,” interrupted Kickweed, and thereupon he stole out of the room with the light, noiseless tread that seems to be almost characteristic of heavy, bulky men. A few minutes later he reappeared in correct morning dress, including a slightly rusty top hat, and we set forth together. The garage was not far away, being situated in a sort of mews, approached from Guilford Street. As we halted at the door and Kickweed produced the key, I noticed that Thorndyke cast an inquisitive glance at it, and I guessed what was in his mind, because it was also in mine. But we were both wrong. The key was not of the filed or skeleton variety but was just a normal warded key of a simple type. However, it turned in the lock, after a good deal of persuasion, and, the doors being flung open, we entered.

It was a roomy place and fairly well lighted by a wide window above the doors. The car stood in the middle, leaving ample space on either side and still more at the end, where a rough bench had been placed, with a vice and a number of
rather rusty tools together with various oddments in the way of bolts, nuts and miscellaneous scrap.

"I take it," said Thorndyke, glancing at the littered bench, "that Mr. Penrose is not a skilled mechanic."

"No, sir," Kickweed admitted. "I don't think he is much of a workman. And yet he used to spend a good deal of time here. I don't know what he would have been doing."

"You did not assist him, then?"

"No, sir. I have only been in here once or twice, and then only for a few minutes with Mr. Penrose. I never came here by myself, nor, I think, did anybody else. There was only one key, until I got this one, and Mr. Penrose kept that himself, and has it still."

"I suppose you don't know of any reason why he should have objected to your coming here alone?"

"No, sir. And I don't think there was any. It was just his way. He has rather a habit of making secrets of nothing."

"So I have understood," said Thorndyke, "and a very bad habit it is, leading to all sorts of unnecessary suspicions and surmises. However, we came here primarily to inspect the car, so perhaps we had better get on with that."

Accordingly, he proceeded to make a systematic and detailed survey of the vehicle, beginning with the bent mudguard, the leading edge of which he examined minutely with the aid of a lens. But, if there had ever been any fibres or other traces of the collision, they had been removed by the police. He then transferred his attention to the wheels, and, after a preliminary glance at them, produced one or two envelopes from his pocket and laid them on the bench.

"The dirt on the face of the tyres," he remarked, "is of no interest to us, as it will have changed from moment to moment. But that on the inside and on the rims of the wheels is more significant. Its presence there suggests that, at one time, the car had been driven over quite soft earth; and that earth was a natural soil, not a road material; a reddish loam similar to that on the coat."

"Yes," I agreed, "it is evident that the wheels sank in pretty deep by the quantity of soil on the rims. And I think," I added, stooping low to look under the car, "that I can see a leaf sticking to the rim of the wheel."

With some difficulty I managed to reach in and pick it off together with the lump of dry loam in which it was embedded.

"A dead leaf," Thorndyke pronounced when I handed it to him; "I mean a last year's leaf, and it looks like a hornbeam. But we shall see better when we wet it and flatten it out."

He deposited the leaf and earth in an envelope, on which he wrote a brief memorandum of the source of the specimen, and then continued his examination. But there was nothing more to be seen from the outside excepting a general dirtiness, suggestive of a not very fastidious owner. Nor was there anything very significant to be seen when I opened the door. The interior showed no signs of anything unusual. The floor was moderately clean excepting that under the driver's seat, which was thickly plastered with loam. But this was what we should have expected; and the evidence that it furnished that there was almost certainly only one person in the car during that last drive, merely confirmed what we already knew. There were no loose articles in any of the pockets or receptacles other than the insurance certificate and the rather scanty outfit of tools. In fact, the only discovery—and a very modest one at that—was another dead leaf, apparently also hornbeam, trodden flat into the dirt by the driver's seat.

Having finished with the car, Thorndyke once more glanced round the garage and I could see that he was making a mental inventory of the various objects that it contained. But his next question reverted to the car.

"I understood," said he, "that the police found an empty flask in the car."

"Yes," replied Kickweed. "I took that away to wash it and polish it up. It is a silver flask and it seemed a pity to leave it in the dirty state in which it was found. I have cleaned it thoroughly and put it away among the plate. Did you wish to see it?"

"No," replied Thorndyke, "but I should like a few particulars. About how much does it hold?"

"It holds the best part of a bottle. About an imperial pint."

"That is a large flask," Thorndyke remarked. "Did Mr. Penrose usually carry it in the car?"

"Do you know, sir, I really can't say. I have only seen it once before. That was about two years ago when I happened to be brushing Mr. Penrose's overcoat and found it in the pocket. But I have the impression that he usually carried it with him when he went away from home. He would be likely to because he is rather fastidious about his wine. He drinks nothing but Madeira and old brown sherry; and you can't get good Madeira or brown sherry at roadside inns."

"And as to quantity? It has been stated that when he was last seen he appeared to be under the influence of liquor. Was that at all usual?"

Kickweed shook his head emphatically. "No, sir," he replied. "That must have been a mistake. He may have smelt of sherry. He often does. But sherry has a very strong aroma and a little of it goes a long way in the matter of smell. But in all the years that I have known Mr. Penrose, I have never seen him in the slightest degree the worse for drink. He does certainly take a good deal, as I can judge by the wine merchant's deliveries and the empty bottles, but then he takes no beer or spirits or any other kind of wine. They must have been misled by the odour."
"That seems quite likely," said Thorndyke. "By the way, I notice a couple of hazel twigs hanging up there under that hat. Do you happen to know whether Mr. Penrose is a dowser?"

"A dowser, sir?" Kickweed repeated with mystified air.

"A water-finder," Thorndyke explained. "That is what those forked twigs are used for." He took the hat from the peg and laid it on the bench, and, taking down one of the twigs, held it by its two ends and continued: "The specially gifted persons—known as dowsers—who search for underground streams or springs, hold the twig in this way and walk to and fro over the land where they expect to find water; and when they pass over a hidden spring—so it is stated—they become aware of the presence of underground water by a movement of the twig in their hands. It looks as if Mr. Penrose had practised the dowser's art.

"Ah!" exclaimed Kickweed, "I remember now that Mr. Penrose once showed me one of these things and told me about it. But I thought it was one of his little jokes; for it was not water that he professed to be able to find with it. He said that it was an infallible guide to buried treasure. It would show the treasure-seeker exactly where to dig. But I never supposed that he was speaking seriously. You see, sir, Mr. Penrose is rather a jocular gentleman and it is sometimes a little difficult to be quite sure what he really does mean."

"So I understand," said Thorndyke, "and he may have been joking in this case. But the idea of digging seems to have been in his mind. Now, so far as you know, did he ever engage in any sort of digging activities in his search for antiquities?"

"Well, sir," replied Kickweed, "it is rather difficult to say. He is so very facetious. But I have known him to bring home certain articles—lumps of flint and bits of crockery, they looked like to me—which were covered with earth and which I have helped him to scrub clean at the scullery sink. I supposed that he must have dug them up somewhere as he referred to them as 'Treasure Trove' and 'the resurrectionist's loot' and other similar expressions."

"Yes," Thorndyke agreed, "those expressions and the condition of the objects certainly suggest something in the way of excavations. But I don't see any tools suitable for the purpose; and I should suppose that if he had had any he would have kept them here. Do you happen to remember having seen any picks, shovels or similar tools here or elsewhere?"

Mr. Kickweed reflected as he ran an inquiring glance round the walls. "As I said, sir," he replied, "I have only been in here once or twice before Mr. Penrose went away. But I seem to remember a sort of pick—I think it is called a trenching tool—which I don't see now. And there was a small spade, pointed like the ace of hearts, with a leather case for the blade. But I don't see that either. It hung, I think, on one of those pegs. But that was over a year ago."

"It looks," I suggested, remembering the pottery fragment, "as if Mr. Penrose may have taken them with him when he left home. They were not in the car when it was found, but it had then been lying unattended for a couple of days. Loose property has rather a way of disappearing from derelict cars."

"It is quite possible," said Thorndyke; and he then appeared to dismiss the subject, for he replaced the hazel twig on its peg and picked up the hat to return that also, but paused, looking with a faint smile into its dusty and decayed interior.

"Mr. Penrose," he remarked, "seems to have attached undue value to this relic. But perhaps the marking was done when it was in a more presentable condition."

He exhibited the interior of the hat, on the crown of which the name "D. Penrose" had been carefully printed with a rubber stamp.

"Yes, sir," said Kickweed, "the name was probably stamped when the hat was new. Not that that would have made any difference, for Mr. Penrose stamped his name on everything that he possessed; not only on his underclothing and handkerchiefs and the things that are usually marked, but his hats, shoes, books, paper-knives—everything that was movable. It always seemed to me a little inconsistent."

"How inconsistent?" I asked.

"I mean," replied Kickweed, "he is in general a very secret gentleman. He makes a secret of the most simple and ordinary things. And yet he prints his full name, not just his initials as most men do, inside his hat and his shoes and his waistcoat lining, and even on his pocket-knife. Now, if a stranger asked him his name he would probably avoid telling him; but yet, as soon as he takes his hat off, he discloses his identity to all the world."

"I take it," said Thorndyke, "that he usually does the stamping himself?"

"Lord bless you, yes, sir! That rubber stamp has always been kept under lock and key as if it had been the Koh-i-noor, or as if it could have been used for forging his signature. I have never even seen it. But, of course, that signifies nothing. It is just his way."

"Yes," said Thorndyke, "and you are a wise man, to accept his harmless oddities and not let them worry you." He hung the hat on its peg and then, turning to Kickweed, opened a fresh subject.

"Mr. Brodribb consulted me about a burglary that occurred in your house a short time ago. There was a question of calling in the police and getting the cupboard opened. How does that suggestion strike you?"

"It strikes me," Kickweed replied severely, "as an improper and a foolish suggestion. It would be improper to tamper with Mr. Penrose's property in his absence and without his consent, sir, and it would be foolish because we should be none the wiser when we had opened the cupboard as we don't know what it contained, or whether it contained anything."
Here I interposed rather rashly.

"The suggestion has been made that it is just possible that the person who entered the room may have been Mr. Penrose himself."

Kickweed looked, and professed to be, deeply shocked. But I had, nevertheless, a strong suspicion that that was his own opinion.

"But, you know, Mr. Kickweed," said I, "there is nothing immoral or even improper in a gentleman's entering his own house to take his own property if he happens to have need of it. Most men, it is true, would prefer to enter by the front door. But Mr. Penrose was not like most men; and if he preferred the window, he was entirely within his rights. It was his own window."

I had the feeling that my observations were received with approval and even with some relief. But Mr. Kickweed, if he secretly concurred, as I believed that he did, was not committing himself.

"No doubt, sir," said he, "you are perfectly right. But I couldn't imagine Mr. Penrose doing anything so undignified, especially as he had the key of the front door in his pocket. And," he added, with a pensive smile, "it was his own front door."

"You were saying just now," said Thorndyke, "that nothing is known as to the contents of that cupboard. Have you no idea at all as to what it contained, or contains?"

"I said knowledge, sir," replied Kickweed. "I know nothing at all as to what is, or has been, in that cupboard."

He spoke with an emphasis that gave us clearly to understand that he was not going beyond his actual knowledge. He was going to hazard no opinions.

"And it is the fact, Mr. Kickweed," Thorndyke pursued, "that there is no one in the world who knows, or could form any reasonable judgement as to what that cupboard did, does or might contain?"

Mr. Kickweed reflected, a trifle uneasily, I thought. But Thorndyke's question admitted of no evasion, and he at length replied with some reluctance:

"Well, sir, I wouldn't say that, for there is one person who may possibly know. I have not spoken of him to any one hitherto, because Mr. Penrose was very secret about that room, and he is my employer and it is my duty to abide by his wishes, whether expressed or not. But you ask me a definite question and I suppose you are entitled to an answer. I think it possible that Mr. Penrose may have confided his secret to a certain friend of his; a gentleman named Lockhart."

"What makes you think that Mr. Lockhart may know what is or was, in the cupboard?" Thorndyke asked.

"The discovery—if it was one—" Kickweed replied, "was quite accidental. Mr. Lockhart came to the house by appointment to look over the collection, and Mr. Penrose took him into the great gallery. When they had been there some considerable time, I ventured to look in to ask if I should bring them up some tea. But when I entered the big gallery they were not there; but I could hear them talking, and the voices seemed to come from the small room, though the door of that room was shut. But they must have been in there because there was no other room that opened out of the great gallery. Now the small room contained nothing but the cupboard, so that if Mr. Penrose took Mr. Lockhart into that room, it could only have been to show him what was in the cupboard. And I did, in fact, hear sounds of movement in the room as if drawers were being pulled out. But, of course, as soon as I realised what was happening, I went away.

"But there was another circumstance that made me think that Mr. Penrose might have let Mr. Lockhart into the secret of the small room. When they had finished with the collection they went into the morning-room—the little front room that you went into—and I took them up some tea; and there they were for quite a long time before Mr. Lockhart went away. Afterwards I learned from Mr. Penrose, himself, that Mr. Lockhart had been advising him about insuring the collection, which made it seem likely that Mr. Lockhart had been shown all that there was to insure."

"Yes," said Thorndyke, "that seems a reasonable inference. Is Mr. Lockhart connected with insurance business?"

"No, sir. He is a legal gentleman, a barrister."

"Ah!" said Thorndyke. "Lockhart. Now I wonder if that would be—you don't happen to know what inn he belongs to?"

"Yes, sir. He belongs to Lincoln's Inn, at least, that is his address. I happen to know by having seen a card of his which Mr. Penrose left on his dressing-table."

"Is Mr. Lockhart an intimate friend of Mr. Penrose?"

"No, sir. Quite a recent acquaintance, I believe, though Mr. Penrose seemed to take to him more than he usually does to strangers. Still, I was rather surprised at his taking him into the small room. I have never known him to do such a thing before."

Thorndyke made no immediate rejoinder, but stood apparently considering this last statement and letting his glance travel about the place as if searching for some further objects of interest. But it seemed that he had squeezed both the garage and Mr. Kickweed dry, for he said, at length:

"Well, I think we have learned all that there is to learn here; and I must thank you, Mr. Kickweed, for having been so extremely helpful."
Kickweed smiled a somewhat dreaary smile. “I hope I have not been too much so, sir,” said he. “I am not a willing helper, though I feel bound to carry out Mr. Brodribb’s instructions. I understand from him that you are trying to find out where Mr. Penrose has gone to; and, if you will pardon me for saying so, I hope you won’t succeed.”

Thorndyke smiled appreciatively. “Now, why do you say that?” he asked.

“But, sir,” Kickweed replied earnestly, “I feel that this pursuit is not justifiable. Mr. Penrose, as I understand, has had a little mishap and thinks it best to keep out of sight for a time. But if he thinks so, it is his own affair, and I don’t consider it just or proper that other people, for their own purposes, should hunt him up and perhaps get him into difficulties.”

I must confess that I sympathised heartily with Mr. Kickweed’s sentiments, and so, apparently, did Thorndyke, for he replied:

“That is precisely what I pointed out to Mr. Brodribb. But there are legal reasons for ascertaining Mr. Penrose’s whereabouts, though there are none for disclosing them to others. You may take it from me, Mr. Kickweed, that nothing which may come to my knowledge will be used in any way to his disadvantage.”

“I am very relieved to hear you say that, sir,” Kickweed rejoined with evident sincerity, “because I have felt that there are others who take a different view. Mr. Horridge, for instance, has, to my knowledge, been in communication with the police.”

“Well,” I said, as we retired from the garage and Kickweed locked the door, “I don’t suppose he has done any harm if he has no more to tell them than we have been told.”

As our way home led through Queen Square, we walked thither with Mr. Kickweed, and Thorndyke took the opportunity to ask a few questions concerning Mr. Penrose’s collection.

“I don’t know much about the things,” said Kickweed, “excepting that there is a rare lot of them and that they take a terrible amount of dusting. I do most of it with a pair of bellows when Mr. Penrose is not about. But if you feel any interest in them, why not step in, as you are here, and have a look at them yourself?”

Now I have no doubt whatever that this was precisely what Thorndyke had intended to do, but, in his queer, secretive way, had preferred that the inspection should seem to occur by chance. At any rate, he accepted the invitation, and we followed Kickweed to the door of the house and were by him admitted to the hall.

---

VIII. — MR. HORRIDGE

Mr. Kickweed, as has been mentioned, had a light tread, and his movements in general tended to be silent. Thus our entry into the hall of the old house and the subsequent closing of the door were almost noiseless. Nevertheless, our arrival was not unobserved; for, even as Kickweed was pocketing his latch-key, the door of the morning-room opened slowly and quietly and a large, distinctly fat gentleman appeared framed in the doorway.

There was something slightly odd and even ridiculous in the sudden and silent manner in which he became visible, and in the sly, inquisitive glance that he turned on us; as if he had been a plain-clothes officer and we a surprised party of burglars.

“How did you know I was here, Kickweed?” he demanded.

“I didn’t, sir,” was the reply.

“Oh,” rejoined the other, “I thought these gentlemen might have come on some business with me.”

“No, sir. They have been inspecting the car. They are Dr. Thorndyke and Dr. Jervis.”

The fat man bowed stiffly. “Ah!” said he, “they have inspected the car. And now?”

“Dr. Thorndyke thought he would like to take a look at the collection,” Kickweed replied frigidly, evidently resentful of the other man’s manner, “so I invited him to step in and look over it.”

“Ha!” said the fat gentleman. “You thought it quite in order to do that? Well, if Dr. Thorndyke wants to see the collection, there is no reason why he should not. I will show him round the gallery, myself. My name,” he added, turning to us, “is Horridge. You have probably heard of me. I am Mr. Penrose’s executor, and, in his absence, am keeping an eye on his property.”

Now, the tone of his remarks filled me with a burning desire to kick Mr. Horridge; but that being impracticable, I should certainly, if left to myself, have told him to go to the devil and forthwith walked out of the house. Thorndyke, however, was completely unruffled; and having once more thanked Kickweed, who was slinking away in dudgeon, he accepted the invitation with a suavity bordering on meekness (whereby I judged that he had definite reasons for wishing to see the collection).

“So,” said Mr. Horridge, as he conducted us along the hall, “you have been examining the car. Now, what did you expect to find out from the car?”

“I did not expect anything,” Thorndyke replied.
Horr ridge giggled. "And did your examination answer your expectations?" he inquired.

"Substantially," replied Thorndyke, "I may say that it did."

Horr ridge giggled again, and, throwing open a door which opened from the hall, invited us to enter. We accordingly passed in and found ourselves in an immense and lofty room communicating with another of similarly magnificent proportions by an opening from which the original folding doors had been removed.

I looked around me with surprise and extreme distaste, for the noble apartments had been degraded to the status of a mere lumber-room. Of the trim and orderly character of a museum there was not a trace. The walls were occupied by interminable ranges of open shelves and the floor was crowded with plain deal tables, coarsely stained and varnished to disguise their humble material; and shelves and tables were littered with a chaos of miscellaneous objects, all exposed baldly to the air and dust. There was not a single glazed case in the room and the only article of comely furniture was a lantern clock, perched on a bracket, which ticked sedately and actually showed the approximately correct time.

"This is a very singular collection," Thorndyke remarked, casting a puzzled glance over the shelves and tables. "One doesn’t quite see what its purpose is; what it is intended to illustrate."

Horr ridge giggled again in his unpleasant way. "Whatever the intention is," said he, "it illustrates very perfectly poor old Pen’s usual state of mind—muddle. But may I ask what is the object of this inspection? Is it just a matter of curiosity or is it connected with the inquiry into Pen’s disappearance? Because I don’t see how the inspection is going to help you."

"It is not very obvious, certainly," Thorndyke admitted. "But one never knows what light chance facts may throw on the problem. I think it will be worth while for me to see what things Mr. Penrose has collected and where he obtained them."

Horr ridge grinned—and the explanation of the grin was presently forthcoming. Meanwhile he rejoined:

"Well, cast your eye over the oddments and see what takes your fancy. Then you can go into the question of where they came from. What would you like to start with?"

Thorndyke glanced once more along the shelves and then announced his choice.

"I see there is a good deal of ancient pottery, mixed up with other exhibits. Perhaps it would be well to sort that out and see where the pieces were found. Now, here is a little dish of Gaulish red ware. The slip of paper that it rests on bears the number, 201. That, I presume, refers to a catalogue."

"It does," replied Horridge, giggling delightedly. "I will get you the catalogue and then you will be able to find out all about the specimen."

He went to a table near the end of the room and pulled out a drawer from which he extracted a stout quarto volume. This he brought to Thorndyke and, having handed it to him with something of a flourish, stood looking at him and giggling like a fool. But the reason for his merriment became apparent when Thorndyke opened the book and turned to the number. Observing the slow smile which spread over my colleague’s face, I looked over his shoulder and read the entry, scrawled, not very legibly, in pencil:

"This is not very illuminating," Thorndyke remarked; on which Horridge burst into a roar of laughter.

"Oh, don’t say that!" he gurgled. "I understood from old Brodribb that you could see through a brick wall. Well, here’s your chance. The whole catalogue is written in the same damn silly sort of jargon. Of course, Pen knows what it means, but he doesn’t intend that any one else shall. Perhaps you would like to note down a few samples to think over at your leisure."

Thorndyke instantly grasped the opportunity.

"Thank you," said he. "A most excellent suggestion. If you will be so very kind as to show Dr. Jervis the collection, I will make a few notes on the pottery and extract the entries from the catalogue. If we could identify some of the localities, we might get quite a useful hint."

This suggestion did not at all meet the views of Mr. Horridge, who was evidently as curious as to Thorndyke’s proceedings as I was, myself. But he could not very well refuse; for Thorndyke, seeing a chance of carrying out his investigations—whatever they might be—uninterrupted by Horridge’s chatter and free from his inquisitive observation, was quietly persistent and, of course, had his way, as he usually did.

"Very well," Horridge at length agreed, with a rather bad grace, "then I’ll just take Dr. Jervis round the shelves and show him the curios. But I don’t know much about them, and I don’t suppose he cares much."

Accordingly, we set forth on a voyage of exploration round the crowded, disorderly shelves; and, realising that my function was to keep Horridge’s attention distracted from Thorndyke’s activities, I pied him with questions about the exhibits and commented on their interest and beauty with the utmost prolixity and tediousness at my command. But it was a wretched make-believe on both sides; for, while Horridge was answering my questions (usually quite ignorantly and all wrong, as even I knew) he kept one eye cocked in Thorndyke’s direction, and my own attention was similarly occupied.

But Thorndyke gave us but a poor entertainment. Drawing a chair up to a table near the window, he seated himself with his back to us and the catalogue before him. This he pored over for some time, making occasional entries in his note-book. Then he rose, and, having taken a survey of the shelves, began to select pieces of pottery, each of which he took in turn to
the table where he examined it critically, compared it with the entry in the catalogue and copied the latter into his notebook. He began with the Roman pottery, but, from long acquaintance with his habits and methods, I suspected that this was only a tactical move to conceal from Horridge his actual purpose. For I knew that it was his invariable habit, when he had to work in the presence of inquisitive observers, to confuse the issues in their minds by actions which had no bearing on the matter in hand.

As to his real purpose, I had no doubt that it was in some way connected with the fragment which we had examined; and as Horridge conducted me round the loaded shelves, I kept a sharp look-out for pottery exhibits which might correspond to the hypothetical vessel which Thorndyke had sketched in his reconstruction. There were two pieces (in different places and among totally unrelated objects) which, so far as I could see without close inspection, answered the description; one, a largish, rather shallow bowl of which a large part was missing, and the other a deeper pot which had been broken and rather unskilfully mended and which was complete save for a small part of the rim. This pot corresponded very closely both in shape and size with Thorndyke’s reconstruction, and it seemed to me, even, that the piece which was missing from the rim was about the size of our fragment. Accordingly, I gave that pot my special attention.

One after another Thorndyke gravely examined specimens of Roman, Saxon and Iron Age pottery in which I felt sure he could have no interest whatever. At last, after circling round, so to speak, he arrived at this pot, picked it up, and with a glance at the number on its paper, bore it over to the table. As he set it down and seated himself, I saw him take something from his pocket, but as his back was towards us I could not see what it was, or what he did with it. I assumed, however, that it was some measuring instrument and that he was ascertaining the dimensions of the piece that was missing. At any rate, his examination was quite brief, and, when he had copied the entry in the catalogue, he carried the pot back to its place and proceeded to look about for further objects for study.

By this time, however, Horridge had begun to be rather bored and was disposed to make no secret of the fact.

“I should think,” said he, with an undisguised yawn, “that you’ve got enough material to occupy you for a month or two; and I’ll wager that you don’t make any sense of it then.”

Thorndyke looked thoughtfully at his open notebook. “Perhaps you are right,” he agreed. “These entries will take a good deal of deciphering and probably will yield no information, after all. I don’t think we need trespass on your patience any longer.”

“Oh, that’s all right,” said Horridge, “but, before you go—if you’ve seen all that you want to see—perhaps you might as well have a look at the small room—the one that was broken into, you know. You heard about that burglary, I think? Old Brodribb said he was going to consult you about it.”

“Mr. Brodribb did consult me,” Thorndyke replied, “on the question of opening the cupboard by force or otherwise. I advised him that, in the absence of Mr. Penrose, it would not be proper to force the cupboard and that, as the contents of the cupboard were unknown, the proceeding would be useless as well as improper.”

“But what about calling in the police?” Horridge suggested.

“I don’t think the police would force a cupboard, without the owner’s knowledge or consent, if it were locked and showed no signs of having been tampered with.”

“Well,” Horridge grumbled, “it’s very unsatisfactory. Some one may have got away with a whole lot of valuable property and able to dispose of it at their leisure. However—if you have finished with the catalogue, do you mind putting it back in its drawer?”

As Thorndyke complied with this rather odd request, our host walked quickly up the long room to a door in the corner, and I had the impression that he inserted a key and turned it. But, as he stood half turned towards us and in front of the handle and keyhole, I could not see distinctly, nor did I give the matter any particular attention.

“It is odd,” he remarked, still standing before the door, grasping the handle, “that Pen should have left the key in this door when he went away. He was always so deadly secret about Bluebeard’s chamber, as he called it in his silly way. He never let me see into it. I always thought he had something very precious in it; and I’m inclined to think so still.”

With this, he opened the door and we all entered the mysterious chamber; a smallish room and very bare of furniture, for it contained only a single chair, a mahogany table, placed under the window, and a massive cupboard, also of mahogany, with a pair of doors like a wardrobe.

“So this is the famous cupboard,” said Thorndyke, standing before it and looking it over critically; “the repository of hidden treasure, as you believe. Well, looking at it, one would say that whatever precious things were once in it, are in it still. But one might be wrong.”

Having made this rather ambiguous pronouncement, he proceeded to a more particular inspection. The escutcheon of the Chubb lock was examined with the aid of a lens, and the interior of the keyhole with the tiny electric lamp that he always carried. From the lock he transferred his attention to the cupboard itself, closely examining the sides, standing on the chair to inspect the top, and, finally, setting his shoulder to one corner and his foot against the skirting of the wall, tried to test its weight by tilting it. But beyond eliciting a complaining creak, he could make no impression on it. “I’ve tried that,” said Horridge. “It’s like shoving against the Eddystone lighthouse. The thing is a most ungodly weight, unless it is screwed to the floor. It can hardly be the stuff inside.”
“Unless,” I suggested, “Mr. Penrose indulged in the hobby of collecting gold ingots. But even a collection of plate can be pretty heavy if there is enough of it.”

“At any rate,” said Thorndyke, “one thing is clear. That cupboard has not been opened unless it was opened with its own key.”

“Don’t think the lock could have been picked?” said Horridge.

Thorndyke shook his head. “Burglars don’t try to pick Chubb locks,” said he. “They use the jemmy, or else cut the lock out with centre-bits.”

Horridge grunted and then amplified the grunt with the remark:

“Looks a bit as if our friend Kick had raised a false alarm.”

“That can hardly be,” Thorndyke objected. “I understood that he found the door bolted on the inside and had to enter through the window.”

“Yes, that was what he said,” Horridge admitted grudgingly in a tone that seemed to imply some scepticism as to the statement.

“It is conceivable,” Thorndyke suggested, “that the visitor may have been disturbed, or that he gave up the attempt when he found it impossible to pick the lock. You see, there is no evidence that he was a skilled burglar. No difficulties were overcome. He simply opened the window and stepped in. The really astonishing thing is that Penrose should have left the place so insecure—that is, assuming that there actually was some valuable property here. The window, as you can see, has no shutters, or even screws or stops, and it looks on to an alley which I understand is invisible from the street. Let us see what that alley is like.”

He moved the table away from the window, glancing at a number of parallel scratches on its polished surface, slid up the window and looked out.

“It is quite remarkable,” said he. “The window is only a few feet from the ground and the alley is closed by a small wooden gate which has no bolt or latch and seems to be secured only by a lock; which is probably a simple builder’s lock which could be easily opened with a skeleton key or a common pick-lock. There is no security whatever. That stout bolt on the room door is, of course, useless, as it is on the inside; and the lock is probably a simple affair.”

As he spoke, he opened the door and plucked out the key, which he held out for our inspection.

“You see?” he said. “Just a plain warded lock which a skilled operator could turn with a bit of stiff wire. Penrose seems to have pinned his faith to the Chubb lock; and perhaps events have justified him.”

He slipped the key back into the lock; and this seemed to bring the proceedings to an end. After a few perfunctory expressions of hope that our visit had satisfied us and that we had seen all that we wished to see, our host escorted us through the great gallery and the hall and finally launched us into the street.

IX.—THORNDYKE TESTS A THEORY

As we took our way homeward I tried to arrange in my mind the rather confusing experiences of the last hour or two. Those hours, it seemed to me, had been virtually wasted, for we had learned nothing new that bore directly on our problem. This view I ventured to propound to Thorndyke, beginning, naturally, with Mr. Horridge, who had made a deep and disagreeable impression on me.

“Yes,” Thorndyke agreed, “he is not a prepossessing person. A bad-mannered man and distinctly sly and suspicious. You probably noted his mental attitude towards Kickweed.”

“Yes, distinctly hostile; and I gathered that he is inclined to suspect him of having faked that burglary for his own ends. I suppose, by the way, that it is not possible that he may be right?”

“It is not actually impossible,” Thorndyke replied, “but there is nothing to support such a suspicion. Kickweed impressed me very favourably, especially by his loyalty to Penrose. If he is not a liar, the position with regard to the small room is this: some one entered that room; that some one either knew or thought he knew what it contained. He either failed to open that cupboard or he opened it with its own key. The only evidence that he did open it is the piece of paper that was found, which, you notice, was similar to the slips of paper under the specimens in the gallery, excepting that it bore no catalogue number but had an inscription similar to those in the catalogue. That paper strongly suggests that the cupboard had been opened, but is not conclusive, since it might have been dropped by Penrose on some other occasion. But, as I said, its presence is strongly suggestive of a hurried opening of the cupboard at night. There were one or two other points that probably did not escape you.”

“You mean the extraordinary weight of the cupboard? That certainly impressed me as significant though I am not quite clear as to what it signifies. It might be due to some ponderous contents, but it seemed to me to suggest an iron safe inside.”

“Yes,” said Thorndyke, “that is undoubtedly the explanation. The cupboard is a mere wooden case enclosing a large iron safe. That was quite clear from the construction, which is very much like that of an organ case. The sides and top are fixed
in position by large screws instead of being keyed in with proper cabinet-maker's joints. The wooden case was built on after the safe had been placed in position.”

“Then,” said I, “the Chubb lock is a mere hollow pretence.”

“Exactly. The wooden case could have been taken off with a common screw-driver. You noticed the scratches on the table?”

“Yes. But, of course, there is no evidence as to when they were made.”

“No,” he agreed. “Probably they were made at various times. But they are of interest in relation to the arrangement of the cupboard. You must have noticed that they were in two groups, roughly two feet six inches apart and all approximately parallel. They looked like the scratches that would be made by the runners of drawers of that width; and comparing them with the cupboard, one saw that, allowing for the space taken up by the wooden case, there would just be room for a range of drawers of that width. The reasonable inference is that the iron safe houses a range of largish drawers and that these have been taken out from time to time and placed on the table so that their contents could be looked at by the light from the window.”

I agreed that this appeared to be the case, but I could not see that it mattered very much whether it was so or not.

“It seems to me,” I added, “that we are acquiring a lot of oddments of information none of which has the slightest bearing on the one question that we are asked to answer: Where is Penrose hiding at the present moment?”

“It would be safer,” said he, “to say, ‘seems to have’. I am picking up all the information that I can in the hope that some of it may turn out to have a bearing on our problem.”

“By the way,” said I, “why were you so keen on seeing the collection? You were, you know, or you would not have put up with Horridge's insolence. You had some definite point to clear up respecting that pottery fragment. What was it?”

“The point,” he replied, “was this. To an archaeologist, that fragment alone would have been an object of interest, since, as you saw, it was possible to make from it a rough, but quite reliable reconstruction. But Penrose is not an archaeologist. He is, as we understood, a mere collector of curios. To such a man, a tiny fragment would be of no interest by itself.

“On the other hand, to an archaeologist, a broken pot is, practically, of the same scientific value as a complete pot. But to the mere collector, or curio-monger, the completeness of a specimen is a matter of cardinal importance. If he has an incomplete specimen, he will spare no trouble or expense to make it complete. He is not concerned with its scientific interest but with its value as a curio.

“Knowing, then, what we did of Penrose, it occurred to me as a bare possibility that this apparently worthless fragment that we found in his pocket might be the product of a definite search ad hoc. That he might have re-visited some place from which he had obtained an incomplete specimen with the express purpose of searching for the fragment which would make it complete. The edges of the fragment were freshly fractured. It had been broken off the pot in the course of digging it out. Therefore, the missing piece of the pot was still in the place where the digging had taken place and was certainly recoverable, It was just a speculative possibility, but it was worth testing as we are so short of data, so I decided to look over the collection when I got a chance.”

“And I gather,” said I, “that you obtained confirmation of your very ingenious theory?”

“I am hoping that I did,” he replied; “but we shall see when we get home. If I have, we shall have some sort of a clue to the place from which that disastrous homeward journey started.”

I forbore to remark that it did not seem to me to matter two straws where it started from, since it was evident that he thought the information worth acquiring. So I merely asked what the clue amounted to.

“Unfortunately,” he replied, “it amounts to very little. This is the entry in the catalogue corresponding to the pot which I examined.”

He indicated the entry in his note-book, and I read:

“Moulin a vent. Julie (Polly).”

“What a perfect and complete ass the fellow must be,” I exclaimed, returning the note-book in disgust, “to write meaningless twaddle like that in what purports to be a museum catalogue!”

“I agree with you most warmly,” he replied. “But the man's oddities are an element in our problem. And, of course, these preposterous entries in the catalogue are not meaningless. They have a meaning which is deliberately concealed and which we have got to extract.”

“In the case of this one?” I asked, “can you make any sense of it? Can you, for instance, discover any connection between an earthen pot and a windmill?”

“Yes,” he replied, “I think that is fairly clear, though it doesn’t help us much. There is a place in Wiltshire, near Avebury, known as Windmill Hill, where a certain distinctive kind of neolithic pottery has been found and which has been named the Windmill Hill type. Probably, this pot is an example of that type, but that is a question that we can easily settle, though it doesn’t seem to be an important one. The information that we want is probably contained in the other two words; and, at present, I can make nothing of them.”
“No,” I agreed, “they are pretty obscure. Who is Julie? What is she? And likewise: Who is Polly? Good God! What damned nonsense it is!”

He smiled at my exasperation. “You are quite right, Jervis,” said he. “It is monstrous that two learned medical jurists should have to expend their time and intellect in solving a set of silly puzzles. But it is part of our present job.”

“Do you find any method in this fellow’s madness?” I asked. “I noticed you copying out a lot of this balderdash.”

“There is a little method,” he replied. “Not much. But this entry, relating to that little embossed red ware dish that you saw, will illustrate Penrose’s method. You see, it reads: ‘Sammy. Pot Sand. Sinbad.’ Now, this Gaulish red ware is usually described as Samian ware, so we may take it that ‘Sammy’ means ‘Samian.’ The interpretation of ‘Pot Sand’ is also fairly obvious. There is a shoal in the Thames Estuary off Whitstable on which it is believed that a Roman ship, laden with pottery, went aground and broke up. From time immemorial, oyster dredgers working over that shoal have brought up quantities of Roman pottery, including Samian ware, whence the shoal has been named The Pan Sand, and is so marked on the Admiralty charts. Penrose’s ‘Pot Sand’ is therefore, presumably The Pan Sand; and as to Sinbad, we may assume him to have been a sailor, probably an oyster dredger or a whelk fisher.”

“I have no doubt that you are right,” said I, “but it is difficult to consider such childish twaddle with patience. I should like to kick the fellow.”

“I should be delighted if you could,” said he, “for, since you would have to catch him before you could kick him, that would mean that our problem would be solved. By the way, we shall have to contrive, somehow, to make the acquaintance of Mr. Lockhart. I wonder if Brodribb knows him.”

“You think he could tell us what was in that small room. But I doubt if he would. Penrose would probably have sworn him to secrecy, and, in any case, it would be a matter of professional confidence. But it seems to me that the burglary is a side issue, though I know you will say that we can’t judge which issues are side issues.”

“At any rate,” he retorted, “the burglary is not one. It is very material. For, if Penrose was the burglar, he must be in possession of property which he intends to dispose of, by which, if we knew what it was, we might be able to trace him. And if the burglar was not Penrose, we should very much like to know who he was.”

I did not quite see why; but, as our discussion had now brought us to our doorstep, there was no opportunity to pursue the question; for, as I had expected, Thorndyke made straight for the laboratory, and I followed, with mild curiosity as to the test that I assumed to be in view. As we entered, the sound of Polton’s lathe in the adjacent workshop informed us that he had some job on hand there, but his quick ear had noted our arrival and he came in at once to see if his services were required.

“I need not disturb you, Polton,” said Thorndyke. “It is only a matter of a small plaster mould.”

“You are not disturbing me, sir,” replied Polton. “I am just turning up a few spare tool handles to pass the time. You would like the quick-setting plaster, I suppose?”

“If you please,” Thorndyke replied; and as Polton retired to fetch the materials, he produced from his pocket a small tin box from which he tenderly shook out into his hand a slab of moulding wax. Looking at it as it lay on his palm, I saw that it was a “squeeze” of the edge of the pot, the gap in the broken rim being represented by a wart-like swelling of the shape of the missing piece. Noting the exact correspondence, I remarked:

“You hardly want the plaster. The shape of the squeeze is exact enough for comparison.”

“Yes,” he agreed, “but an actual measurement is always better than a judgement of resemblance.”

Here, Polton returned with ajar of the special plaster, a rubber bowl, a jug of water and the other necessaries for the operation. Unobtrusively, but firmly taking possession of the squeeze, he laid it in one of the little paper trays that he used for making small moulds or casts, brushed it over lightly with a camel-hair brush containing a trace of oil, and then proceeded to mix the plaster. This had to be done quickly, since the special plaster set solid in about five minutes; and I could not but admire the calm, unhurried way in which Polton carried the process through its various stages. At exactly the right moment, the plaster was dropped on to the squeeze, blown with the breath into all the interstices, and then the remainder poured on until the little tray was full to the brim; and even as the last drops were being persuaded out of the bowl with a spoon, the change began which transformed the creamy liquid into a white solid like the “icing” on a wedding cake.

At this point Thorndyke retired to fetch the fragment, and Polton and I took the opportunity to clean the bowl and spoon and spread on the bench a sheet of newspaper to receive the inevitable crumbs and scrapings; a most necessary precaution, for plaster, in spite of its delicate whiteness, is one of the dirtiest of materials. The particles which detach themselves from a cast seem to spread themselves over a whole room, with a special predilection for the soles of shoes, whence they distribute impressions on stairs and passages in the most surprising and unexpected fashion. But a sheet of paper collects the particles and enables them to be removed tidily before they have the opportunity to develop their diabolical tendencies.

When Thorndyke returned our labours were completed, and the little tray reposed on the paper with the plaster tools beside it.

“Is it hard enough to open?” Thorndyke asked.
Polton tested with his finger-nail the smooth, white mass that bulged up from the tray, and, having reported that it was “set as hard as stone,” proceeded carefully to shell it out of the paper container. Then he scraped away the projecting edges until the wax was free all round. A little cautious persuading with the thumb induced the squeeze to separate from the plaster, when Polton laid them down side by side and looked expectantly at Thorndyke. The cast was now clearly recognisable as the replica of a portion of the outside surface of the pot, including the rim and the gap where a piece of the rim had been broken away.

Thorndyke now produced the fragment of pottery, and, holding it delicately between his finger and thumb—for the plaster was still moist and tender—very carefully inserted it into the gap; and as it dropped in, exactly filling the space, with a perfect fit at every point, he remarked:

“I think that settles the question of identity. This fragment is the piece that is missing from the museum pot.”

“Yes,” I agreed. “The proof is absolutely conclusive. What is not quite obvious to me is the importance of the fact which is proved. I see that it strongly supports your theory that the fragment was the product of a definite search, but it is not clear to me that even the confirmation of your theory has any particular value.”

“It has now very little value,” he replied. “The importance of the fact which this experiment has established is that it carries us out of the region of the unknown into that of the known. If this fragment was part of the museum pot, then the place from which that pot came is the place from which this fragment came.”

“Yes,” said I, “that is clear enough. And it is fair to assume that the place whence this fragment came is the place from which Penrose started on his homeward journey. But, as we don’t know where the pot came from, I can’t see that we have got so very far from the unknown. We have simply connected one unknown with another unknown.”

Thorndyke smiled indulgently. “You are a proper pessimist, Jervis,” said he. “But you will, at least, admit that we have narrowed the unknown down to a very small area. We have got to find out where that pot came from; and I don’t think we shall have very much difficulty. Probably the catalogue entry embodies some clue.”

“But,” I persisted, “even if you discover that, I don’t see that you will be any further advanced. You will know where Penrose came from, but that knowledge will not help you to discover where he has gone to. At least, that is how it appears to me. But perhaps there is some point that I have overlooked.”

“My impression is,” Thorndyke replied, “that you have not given any serious consideration to this curious and puzzling case. If you would turn it over in your mind carefully and try to see the connections between the various facts that are known to us, you would realise that we have got to begin by re-tracing that last journey to its starting-point.”

With this, he picked up the cast with the embedded fragment of pottery to put them into the box with the other “exhibits”; and, as he retired, Polton (who had been listening with a curious intentness to our conversation) gathered up the newspaper and the plaster appliances and went back to his lathe.

X. — INTRODUCES MR. CRABBE

Thorndyke’s rather cryptic observation gave me considerable food for thought. But it was not very nourishing food, for no conclusion emerged. He was quite right in believing that I had given little serious consideration to the case of Daniel Penrose. It had not greatly interested me, and I had seen no practical method by which the problem could be approached. Nor did I now; and the only result of my cogitations was to confirm my previous opinion that I had missed some crucial point in the evidence and to make me suspect that there was in this case something more than met the eye.

This latter suspicion deepened when I reflected on Thorndyke’s concluding statement: “You would realise that we have got to begin by re-tracing that last journey to its starting-point.” But I did not realise anything of the sort. The problem, as I understood it, was to discover the present whereabouts of Daniel Penrose; and to this problem, the starting-point of his last known journey seemed completely irrelevant. But in that I knew that I must be wrong; a conviction which merely brought me back to the unsatisfactory conclusion that I had failed to take account of some vital element in the case.

But it was not only in respect of that disastrous return journey that I was puzzled by Thorndyke’s proceedings. There was his unaccountable interest in the burglary at Queen Square. Apparently, he believed the burglar to have been Penrose himself; and in this I was disposed to concur. But suppose that we were able to establish the fact with certainty; what help would it give us in tracing Penrose to his hiding-place? So far as I could see, it would not help us at all; and Thorndyke’s keenness in regard to the burglary only increased my bewilderment.

Naturally, then, I was all agog when, a few days later, Thorndyke announced that Mr. Lockhart was coming in to smoke a pipe with us on the following evening; for here seemed to be a chance of getting some fresh light on the subject. Lockhart was being lured to our chambers to be pumped, little as he probably suspected it, and if I listened attentively, I might catch some of the drippings.

“You haven’t forgotten,” said I, “that Miller is likely to call to-morrow evening?”

“No,” he replied, “but we have no appointment so he may choose some other time. At any rate, we must take our chance; and it won’t matter so very much if he does drop in.”

It seemed to me that the superintendent would be very much in the way and I sincerely hoped that he would choose
some other evening for his visit. But Thorndyke presumably knew his own business.

“How did you get hold of Lockhart?” I asked. “Did Brodribb know him?”

“I didn’t ask him,” Thorndyke replied. “I saw Lockhart’s name in the list of cases at the Central Criminal Court so I dropped in there and introduced myself. When I told him that I was looking into Penrose’s affairs, he was very ready to come in and hear all about the case.”

I laughed aloud. “So,” said I, “this poor deluded gentleman is coming with the belief that he is going to be the recipient of information. It is a rank imposition.”

“No,” Thorndyke agreed, “though sherry and Madeira are strong wines. What specially amused and delighted me was the masterly tactical approach to the cross-examination which I felt pretty sure was to follow. Thorndyke’s perfectly open and unreserved narrative, treating the whole affair as one generally known, in respect of which there was not the slightest occasion for secrecy, was an admirable preparation for a few discreet questions. It would be difficult for Lockhart to adopt a reticent attitude after being treated with such complete confidence.

“Well,” said Lockhart, when the story was told, “it is a queer affair, but, as I remarked, Penrose is a queer fellow. Still, there are some points that rather surprise me.”

“For instance?” Thorndyke suggested.

“It is a small matter,” replied Lockhart, “and I may be mistaken in the man, but I shouldn’t have expected him to be the worse for liquor. You seemed to imply that he was definitely squiffy.”

“It is only hearsay,” Thorndyke reminded him, “and an inexpert opinion at that. The report may have been exaggerated. But, in your experience of him, should you say that he is a strictly temperate man?”

“I wouldn’t go so far as that,” said Lockhart. “He is most uncommonly fond of what he calls ‘the vintages of the Fortunate Isles’ and the ‘elderly and fuscous wine of Jerez,’ and I should think that he gets through a fair amount of them, But he impressed me as a man who would take a glass, or two or three glasses, of sherry or Madeira pretty often, but not a great quantity at once. Your regular nipper, especially of wine, doesn’t often get drunk.”

“No,” Thorndyke agreed, “though sherry and Madeira are strong wines. What were the other points?”

“Well,” replied Lockhart, “doesn’t it strike you that the actions of Penrose are rather disproportional to the cause? He seems to have been abnormally funky. After all, it was only a motor accident, and there isn’t any clear evidence that it was his car. He could have denied that he was there. And, in any case, it doesn’t seem worth his while to bolt off and abandon his home and all his worldly possessions. If he had committed a murder or arson or something really serious, it would have been different.”
“It was manslaughter,” I remarked; “and a rather bad case. And the vintages of the Fortunate Isles didn’t make it any less culpable. He might have got a longish term of hard labour, even if he escaped penal servitude.”

“I don’t think it was as bad as that,” said Lockhart. “At any rate, if I had been in his place, I would have stayed and faced the music; and I would have left it to the prosecution to prove that I was on that road.”

“That,” said Thorndyke, “is a matter of temperament. From your knowledge of Penrose, should you have taken him for a nervous, panicky man?”

Lockhart reflected for a few moments. “You speak,” said he, “of my knowledge of Penrose. But, really, I hardly know him at all. I made his acquaintance quite recently, and I have not met him half a dozen times.”

“You don’t know his people, then?”

“No. I know nothing about his family affairs. Our acquaintance arose out of a chance meeting at a curio shop in Soho. We walked away from the shop together, discussing collecting and antiques, and he then invited me to go and inspect his treasures. Which I did; and that is the only occasion on which I was ever in his house. But I must say that it was a memorable experience.”

“In what way?” Thorndyke asked.

“Well,” replied Lockhart, “there was the man, himself; one of the oddest fishes that I have ever encountered. But I dare say you have heard about his peculiarities.”

“I understand that he is a most inconveniently secretive gentleman, and also that he has an inveterate habit of calling things by their wrong names.”

“Yes,” said Lockhart, “that is what I mean. He speaks, not in parables, but in a sort of cross-word puzzles, leaving you to make out his meaning by the exercise of your wits. You can imagine what it was like to be shown round a collection by a man who called all the specimens by utterly and ridiculously inappropriate names.”

“Yes,” said Thorndyke; “rather confusing, I should suppose. But you did see the collection; and perhaps he showed you the catalogue too?”

“He did. In fact, he made a point of letting me see it in order, I think, to enjoy my astonishment. What an amazing document it is! If ever he should have to plead insanity, I should think that the production of that catalogue would make medical testimony unnecessary. I take it that you have seen it and the collection, too?”

“Yes,” said Thorndyke, “I examined the catalogue and made a few extracts with notes of the pieces to which they referred. And I was shown round the collection by Mr. Horridge, Penrose’s executor. But I have an idea that he did not show us the whole collection. We saw only the collection in the great gallery; but probably you were more favoured, as you were shown round by the proprietor?”

The question was very adroitly thrown out; but, at this point, Mr. Lockhart, as I had expected, developed a sudden evasiveness.

“It is impossible for me to say,” he replied; “as I don’t know what the whole collection consisted of. I assumed that he had shown me all that there was to see.”

“Probably you were right,” said Thorndyke; and then, coming boldly to the real issue, he asked: “Did he show you the contents of the small room?”

For some moments Lockhart did not reply, but sat looking profoundly uncomfortable. At length, he answered in an apologetic tone: “It’s a ridiculous situation, but you know what sort of man Penrose is. The fact is that when he showed me his collection, he made it a condition that I should regard the transaction as a strictly confidential one and that I should not discuss his possessions or communicate their nature or amount to any person whatsoever. It is an absurd condition, but I accepted it and consequently I am not in a position to tell you what he did actually show me. But I don’t suppose that it is of any consequence. I take it that you have no special interest in his collection.”

“On the contrary,” said Thorndyke, “we have a very special interest in the collection, and particularly that part of it which was kept in the small room. Since Penrose went away, there has been a burglary—or a suspected burglary—at his house. The small room was undoubtedly entered one night, and there is a suspicion that the big cupboard was opened. But, if it was, it was opened with a key, as there was no trace of any injury to the doors. On the other hand, it is possible that the burglar failed to pick the lock and was disturbed. But Penrose has the only key of the cupboard, so there are no means of ascertaining, without picking the lock or forcing the door, whether there has or has not been a robbery; and we have decided that it would not be admissible to do either in Penrose’s absence. Nevertheless, it is important for us to know what was in that cupboard.”

“I don’t see why,” said Lockhart. “If it is not admissible to force the door—and I entirely agree with you that it is not—I don’t see that it would help you to know what was in the cupboard—or whether it contained anything at all. Supposing that it had certain contents, you cannot ascertain, without opening it, whether those contents are still there or whether they have been stolen. But, if you say that the lock has not been picked nor the door forced, and Penrose has the only key, doesn’t that prove pretty conclusively that no burglary has taken place?”

At this moment, a familiar sound came to justify my fears of an interruption. I had taken the precaution to shut the outer
oak door when Lockhart had entered. But the light from our windows must have been visible from without. At any rate, the well known six taps with a walking-stick—in three pairs, like the strokes of a ship’s bell—spelled out the name of the visitor who stood on our threshold. Accordingly, I rose and threw open the doors, closing them again as the superintendent walked in.

"Now, don't let me disturb any one," exclaimed Miller, observing that, at his entrance, Lockhart had risen with the air of taking his departure. "I am only a bird of passage. I have just dropped in to collect those documents and hear if the doctor has any remarks to make on them."

Thorndyke walked over to a cabinet, and, unlocking it, took out a small bundle of papers which he handed to the superintendent.

"I can't give a very decided opinion on them," said he. "It is really a case for a handwriting expert. All that I can say is that there are none of the regular signs of forgery; no indications of tracing or of very deliberate writing. The separate words seem to have been written quickly and freely. But I got the impression—it is only an impression—that there is a slight lack of continuity, as if each word had been executed as a separate act."

"I don't quite follow that," said Miller.

"I mean," Thorndyke explained, "that—as assuming it, for the moment, to be a forgery—the forger's method might have been, instead of copying words continuously from an original, to take one word, copy it two or three times so as to get to know it thoroughly, then write it quickly on the document and go on to the next word. Written in that way, the words would not form such completely continuous lines as if the whole were written at a single operation. But you had better get the opinion of a first-class expert."

"Very well," said Miller, "I will; and I will tell him what you have suggested. And now, I had better take myself off and leave you to your conference."

"You need not run away, Miller," Thorndyke protested, very much to my surprise. "There is no conference. Fill up a glass of grog and light a cigar like a Christian."

He indicated the whisky decanter and siphon and the box of cigars, which had been offered to, and declined by, Lockhart, and drew up a chair.

"Well," said Miller, seating himself and selecting a cigar, "if you are sure that I am not breaking in on a consultation, I shall be delighted to spend half an hour or so in your intellectual society." He thoughtfully mixed himself a temperate whisky and soda, and then, with a quizzical glance at Thorndyke inquired:

"Was there any little item of information that you were requiring?"

"Really, Miller," Thorndyke protested, "you under-estimate your personal charms. When I ask for the pleasure of your society, need you look for an ulterior motive?"

Miller regarded me with a crafty smile and solemnly closed one eye.

"I'm not looking for one," he replied. "I merely asked a question."

"And I am glad you did," said Thorndyke, "because you have reminded me that there was a little matter that I wanted to ask you about."

Miller grinned at me again. "Ah," he chuckled. "Now we are coming to it. What was the question?"

"It was concerned with a man named Crabbe. Jonathan Crabbe of Hatton Garden. Do you know him?"

"He is not a personal friend," Miller replied. "And he is not Mr. Crabbe of Hatton Garden just at present. He is Mr. Crabbe of Maidstone jail. What did you want to know about him?"

"Anything that you can tell me. And you needn't mind Mr. Lockhart. He is one of the Devil's own, like the rest of us."

"I know Mr. Lockhart very well by sight and by reputation," said the superintendent. "Now, with regard to this man Crabbe. He had a place, as you say, in Hatton Garden where he professed to carry on the business of a diamond broker and dealer in precious stones. I don't know anything about the diamond brokery, but he was a dealer in precious stones all right. That's why he is at Maidstone. He got two years for receiving."

"Do you remember when he was convicted?"

"I can't give you the exact date off hand," replied Miller. "It wasn't my case. I was only an interested onlooker. But it was somewhere about the end of last September. Is that near enough?"

"Quite near enough for my purpose," Thorndyke replied. "Do you know anything more about him? Is he an old hand?"

"There," replied Miller, "you are asking me a question that I can't answer with certainty. There were no previous convictions against him, but it was clear that he had been carrying on as a fence for a considerable time. There was definite evidence of that. But there was another little affair which never got beyond suspicion. I looked into that myself; and I may say that I was half inclined then to collar the worthy Jonathan. But when we came to talk the case over, we came to the conclusion that there was not enough evidence and no chance of getting any more. So we put our notes of the case into cold storage in the hope that something fresh might turn up some day. And I still hope that it may, for it was an important case.
and we got considerable discredit for not being able to spot the chappies who did the job."

"Is there any reason why you should not tell us about the case?" Thorndyke asked.

"Well, you know," Miller replied, "it was only a case of suspicion, though, in my own mind, I feel pretty cock-sure that our suspicions were justified. Still, I don't think there would be any harm in my just giving you an outline of the case, on the understanding that this is in strict confidence."

"I think you can take that for granted," said Thorndyke. "We are all lawyers and used to keeping our own counsel."

"Then," said Miller, "I will give you a sketch of the case; what we know and what I think. It's just possible that you may remember the case as it made a good deal of stir at the time. The papers referred to it as 'The Billington Jewel Robbery.'"

"I have just a faint recollection of the affair," Thorndyke replied; "but I can't recall any of the details."

"It was a remarkable case in some respects," Miller proceeded, "and the most remarkable feature was the ridiculous softness of the job. Billington was a silly fool. He had an important collection of jewellery, which is a stupid thing in itself. No man ought to keep in a private house a collection of property of such value—and portable property, too—as to offer a continual temptation to the criminal class. But he did; and what is more, he kept the whole lot of jewels in a set of mahogany cabinets that you could have opened with a pen-knife. It is astonishing that he went on so long without a burglary.

"However, he got what he deserved at last. He had gone across to Paris, to buy some more of the stuff, I believe, when, some fine night, some cracksmen dropped in and did the job. It was perfectly simple. They just let themselves in, prised the drawers open with a jemmy, cleared them out and went off quietly with the whole collection. Nobody knew anything about it until the servants came down in the morning and found the drawers all gaping open.

"Then, of course, there was a rare philaloo. The police were called in and our people made a careful inspection of the premises. But it had been such an easy job that anybody might have done it. There was nothing that was characteristic of any known burglar. But, on taking impressions of the jemmy-marks and a few other trifles, we were inclined to connect it with one or two or other jobs of a similar type in which jewels had been taken. But we had not been able to fix those cases on any particular crooks, though we had a growing suspicion of two men who were also suspected of receiving. Of those two men, one was Jonathan Crabbe and the other was a man named Wingate. So we kept those two gentlemen under pretty close observation and made a few discreet inquiries. But it was a long time before we could get anything definite; and when, at last, we did manage to drop on Mr. Crabbe, it was only on a charge of receiving. The Billington job still remained in the air. And that's where it is still."

"And what about Wingate?" asked Thorndyke.

"Oh, he disappeared. Apparently, he rumbled the fact that he was getting a bit of attention from the police, and didn't like it. So he cut his connection with Crabbe and went away."

"And have you lost sight of him?" Thorndyke asked.

"Yes. You see, we never had anything against him but his association with Crabbe, and that may have been a perfectly innocent business connection. And our inquiries seemed to show that he belonged to quite a respectable family, and the man, himself, was of a decidedly superior type; a smart, dressy sort of fellow with a waxed moustache and an eye-glass. Quite a toff, in fact. The only thing about him that seemed at all fishy was the fact that he was using an assumed name. But there was not so very much even in that, for we ascertained that he had been on the stage for a time, and he had probably taken the name of Wingate in preference to his family name, which was rather an odd one—Deodatus Pettigrew."

"You never traced any of the proceeds of the robbery?" Thorndyke suggested.

"No. Of course, jewellery is often difficult to trace if the stones are taken out of their settings and the mounts melted down. But these jewels of Billington's ought to have been easier than most to trace, as a good many of them were quite unusual and could only have been disguised by re-cutting, which would have brought down their value a lot. And there was one that couldn't have been disguised at all. I remember the description of it quite well. It was rather a famous piece, known as the Jacobite Jewel. It consisted principally of a lump of black opal matrix with a fire opal in the centre, and on this fire opal was carved a portrait of the Old Pretender, who called himself James the Third. I believe there was quite a little history attached to it. But the whole collection was rather famous. Billington was particularly keen on opals, and I believe that his collection of them was one of the finest known."

"Had you any inkling as to what had become of this loot?" Thorndyke asked. "The thieves could hardly have been able to afford to put the whole of it away into storage for an indefinite time."

"No," agreed Miller. "They would have had to get rid of the stuff somehow. We thought it just possible that there might be some collector behind the affair."

"But," I objected, "a collector would probably know all about the specimens in other collections and particularly a famous piece like this Jacobite Jewel. And he would be almost certain to have heard of the robbery. It would be a matter of special interest to him."

"Yes, I know," said Miller. "But collectors are queer people. Some of them are mighty unscrupulous. When a man has got the itch to possess, there is no saying what he will not do to gratify it. Some of the rich Americans who have made their
fortunes by pretty sharp practice, are not above a little sharp practice in spending them. And your millionaire collector is dead keen on getting something that is unique; something of which he can say that it is the only one of its kind in the world. And if it has a history attached to it, so much the better. I shouldn’t be at all surprised if that Jacobite Jewel had been smuggled out of the country together with the great collection of opals. It is even possible that Crabbe had negotiated the sale before the robbery was committed; but, of course, it is also possible that I may be mistaken and that Crabbe may have had nothing to do with the robbery. We are all liable to make mistakes.”

Here the superintendent, having come to the end of his story, emptied his glass, re-lit his cigar and looked at his watch.

“Dear me!” he exclaimed, “how the time does go when you are enjoying intellectual conversation—especially if it is your own. It’s time I made a move. No thank you; not another drop. But, well, yes, I will take another of these excellent cigars. You have listened very attentively to my yarn, and I hope you have picked up something useful from my chatter.”

“I always pick up something useful from your chatter, as you call it,” replied Thorndyke, rising as the superintendent rose to depart; “but on this occasion you have given me quite a lot to think about.”

He walked to the door with Miller and even escorted him out on to the landing; and meanwhile, I occupied myself in restraining, with exaggerated hospitality, a strong tendency on the part of our guest to rise and follow the superintendent. For I could not let him go until I had seen what Thorndyke’s next move was to be.

The superintendent’s narrative had given me a very curious experience, in respect of its effect on Lockhart. At first, he had listened with lively interest, probably comparing the Billington collection with that of Penrose. But presently he began to look distinctly uncomfortable and to steal furtive glances at Thorndyke and me. I kept him unobtrusively under observation, and Thorndyke, I know, was watching him narrowly, though no one who did not know him would have suspected it, and we both observed the change of manner. But when Miller mentioned the Jacobite Jewel and went on to describe its appearance, the expression on Lockhart’s face was unmistakable. It was that of a man who has suffered a severe shock.

Having seen the last of the superintendent, Thorndyke closed both the doors and went back to his chair.

“That was a queer story of Miller’s,” he remarked, addressing Lockhart. “One does not often hear of a receiver including burglary in his accomplishments. I am disposed to think that Miller’s surmise as to the destination of the swag from the Billington robbery is about correct. What do you think, Lockhart?”

“You mean,” the latter replied, “that it was smuggled out of the country.”

“No,” said Thorndyke, “I don’t mean that, Lockhart, and you know I don’t. What I am suggesting is that the Billington opals, including the Jacobite Jewel, are, or were, in Penrose’s possession; that they were in the cupboard in the small room and that you saw them there.”

Lockhart flushed hotly, but he kept his temper, replying with mild facetiousness:

“Now, you know, Thorndyke, it’s of no use for you to try the suggesting dodge on me. I am a practising barrister, and I have used it too often myself. I have told you that I gave an undertaking to Penrose not to discuss his collection with anybody; and I intend to honour that undertaking to the letter and in the spirit.”

“Very well, Lockhart,” Thorndyke rejoined, “we will leave it at that. Probably, I should adopt the same attitude if I were in your position, though I doubt if I should have given the undertaking. We will let the collection go, unless you would consider it admissible to discuss the source of some of the things in the big room, which we all saw. The question as to where he got some of those things has a direct bearing on the further question as to where he is lurking at the present moment.”

“I don’t see the connection,” said Lockhart, “but if you do, that is all that matters. What is it that you want to know?”

“I should like to know,” Thorndyke replied, “what his methods of collection are. Has he been in the habit of attending farmhouse auctions, or prowling about in labourer’s cottages? Or did he get his pieces through regular dealers?”

“As to that,” said Lockhart, “I can only tell you what he told me. He professed to have discovered many of his treasures in cottage parlours and in country inns and elsewhere, and to have practised on quite an extensive scale what he called ‘resurrectionist activities,’ but he was mighty secret about the actual localities. My impression is that his explorations were largely bunkum. I suspect that the bulk of his collection came from the dealers, and particularly from the antique shop that I mentioned to you. In fact, he almost admitted as much, for he told me that when his explorations drew a blank, he was accustomed to fall back on the Popinjay.”

“The Popinjay?” I repeated.

“The proprietor of the antique shop was a man named Parrott, but I need not say that Penrose never referred to him by that name. He was always ‘our psittacoind friend,’ or ‘Monsieur le Perroquet’ or ‘the Popinjay.’ You will even find him referred to in those terms in the catalogue.”

“That is useful to know,” said Thorndyke. “I met with some entries containing the words, ‘Psitt, ’le Perro’ and ‘Pop’ and could make nothing of them. Now I realise that they represented purchases from Mr. Parrott. And there was an entry, ‘Sweeney’s resurrection.’ That, I suppose, had a similar meaning. Do you know who Sweeney is?”

Lockhart laughed as he replied: “No, I have never heard of him, though I remember the entry. The only thing that I feel
Sure of is that his name is not Sweeney. Possibly it is Todd; and he is probably a dealer in antiquities. The piece, I remember, is an Anglo-Saxon brooch; and we may guess that Mr. Sweeney Todd got it from a Saxon burial ground in the course of some unauthorised excavations."

"That seems likely," said Thorndyke. "I must look up the list of dealers in antiquities in the directory and see if I can find out who he is."

"But does it matter who he is?" asked Lockhart. "If you are trying to discover the whereabouts of our elusive friend, I don't quite follow your methods."

"My dear Lockhart," Thorndyke replied, "my methods are of the utmost simplicity. I know practically nothing about Penrose, his habits and his customs, and I am out to pick up any items of information on the subject that I can gather, in the hope that some of them may prove to have some bearing on my quest. After all, it is only the ordinary legal method which you yourself, are in the habit of practising."

"I suppose it is," Lockhart admitted. "But, fortunately for me, I have never had a problem of this kind to deal with. I can't imagine a more hopeless task than trying to find a very artful, secretive man who doesn't mean to be found."

At this moment, I heard the sound of a key being inserted in the outer door. Then the inner door opened and Polton entered with an apologetic crinkle.

"I have just looked in, sir," he announced, "to see if there is anything that you wanted before I go out. I shall be away about a couple of hours."

"Thank you, Polton," Thorndyke replied. "No, there is nothing that I shall want that I can't get for myself."

As Thorndyke spoke, Lockhart looked round quickly and then stood up, holding out his hand.

"This is a very unexpected pleasure, Mr. Polton," said he. "I didn't know that you were a denizen of the Temple; and I was afraid that I had lost sight of you for good, now that Parrott's is no more." He shook hands heartily with our ingenious friend and explained to us: "Mr. Polton and I are quite old acquaintances. He also, was a frequenter of Parrott's establishment, and the leading authority on clocks, watches, hallmarks and other recondite matters."

"You speak of Parrott's shop," said Thorndyke, "as a thing of the past. Is our psittacoid friend deceased, or has he gone out of business?"

"Parrott is still to the good, so far as I know," replied Lockhart, "but the business is defunct. I suspect that it was never more than a hobby. Then poor Parrott had a double misfortune. Penrose, who was by far his best customer, disappeared; and then his cabinetmaker—a remarkably clever old man named Tim—died and could not be replaced. So there was no one left to do the restorations which were the mainstay of the business. I was sorry to find the shop closed when I came back from my travels on circuit. It was quite a loss, wasn't it, Mr. Polton?"

"It was to me," replied Polton, regretfully. "Many a pleasant and profitable hour have I spent in the workshop. To a man who uses his hands, it was a liberal education to watch Mr. Tim at work. I have never seen any man use wood-working tools as he did."

With this, Polton wished our guest "Good evening!" and took himself off. As the outer door closed, Lockhart asked:

"If it is not an impertinent question, what is Mr. Polton's connection with this establishment? He has always been rather a mystery to me."

"He is rather a mystery to me," Thorndyke replied, with a laugh. "He says that he is my servant. I say that he is my faithful friend and Jervis's. Nominally, he is our laboratory assistant and artificer. Actually, since he can do or make anything and insists on doing everything that is to be done, he is a sort of universal fairy godmother to us both. And, I can assure you that he is not unappreciated."

"I am glad to know that," said Lockhart. "We all—the frequenter of Parrott's, I mean—held him in the greatest respect, and none more so than Penrose."

"Oh, he knew Penrose, did he?" said I, suddenly enlightened as to Polton's interest in our conversations respecting the missing man. "He has never mentioned the fact."

"Perhaps you have never given him an opening," Lockhart suggested, not unreasonably. "But they were quite well acquainted; in fact, the very last time that I saw Penrose, he and Mr. Polton were walking away from the shop together, carrying a lantern clock that Mr. Polton had been restoring."

We continued for some time to discuss Polton's remarkable personality and his versatile gifts and abilities, in which Lockhart appeared to be deeply interested. At length the latter glanced at his watch and rose.

"I have made an unconsaciously long visit," said he, as he prepared to depart; "but it is your fault for making the time pass so agreeably."

"You certainly have not out-stayed your welcome," Thorndyke replied, "and I hope you will stay longer next time."

With this exchange of civilities, we escorted our guest out to the landing, and, having wished him "Good night!" returned to our chamber to discuss the events of the evening.
XI. — RE-ENTER MR. KICKWEED

When I had closed the door and drifted back towards my chair, I cast an expectant glance at Thorndyke; but, as he maintained a placidly reflective air, and thoughtfully re-filled his pipe in silence, I ventured to open the inevitable discussion.

"May I take it that my reverend senior is satisfied with the evening's entertainment?"

"Eminently so," he replied; "in fact, considerably beyond my most sanguine expectations. We have made appreciable progress."

"In what direction?" I asked. "Does Miller's story throw any light on the case?"

"I think so," he answered. "What he told us, in conjunction with what Lockhart refused to tell us, seems to help us to this extent; that it appears to disclose a motive for the burglary, or the attempt."

"Do you mean that it establishes the probability that there was something there worth stealing and that somebody besides Penrose knew of it?"

"No," he replied, "though that also is true. But, what is in my mind is this: When Penrose disappeared, either for good or for some considerable time, there arose the probability that, sooner or later, the cupboard in the small room would be opened for inspection by Horridge or some other person claiming authority. But if that cupboard contained—as I have no doubt it did—a quantity of stolen property, the identifiable proceeds of a known robbery, a very awkward situation would be created."

"Yes," I agreed, "it would be awkward for Penrose when Miller caught the scent. There would be a hue and cry with a vengeance. And it might be unpleasant for Mr. Crabbe if any connection could be traced between him and Penrose. I suppose there can be no doubt that the stuff was really there?"

"It is only an inference," Thorndyke replied, "but I am convinced that the Billington jewels were in that cupboard and that Lockhart saw them there. Everything points to that conclusion. You saw how intensely uncomfortable Lockhart looked when Miller described the stolen jewels; and you must have noticed that he was perfectly willing to discuss the general collection. From which we may reasonably infer that his promise of secrecy referred only to the contents of the small room. Besides, if the stolen jewels had not been there, or he had not seen them, he would certainly have said so when I challenged him. The denial would have been no breach of his promise."

"No," I agreed, "I think you are right in assuming that he saw them, though how Penrose could have been such an idiot as to show them at all is beyond my comprehension—that is, if he knew that they were stolen goods, which I gather is your opinion."

"It is not by any means certain that he did," said Thorndyke. "Evidently he is quite ignorant of the things that he collects. The promise may have been only a manifestation of his habitual secrecy, accentuated by the knowledge that he had acquired the jewels from some rather shady dealer. The evidence seems a little contradictory."

"At any rate," said I, "it was a lucky chance that Miller happened to drop in this evening. Or wasn't it a chance at all? There was just a suspicion of arrangement in the way things fell out. Did you know that Miller would select this evening for his call?"

"In effect, I may say that I did. I had good reason to believe that he would call this evening, and, as you suggest, I made my arrangements accordingly. But those arrangements did not work out according to plan, for I knew nothing of the Billington robbery. Miller's disclosure was a windfall and it made the rest of my plan unnecessary."

"Then what had you proposed to do?"

"My intention was," Thorndyke replied, "to demonstrate to Lockhart that there had been transactions between Crabbe and Penrose. Of course, I could have done this without Miller's help, but I thought that if he heard of Crabbe's misdeeds from a police officer he would be more impressed and, therefore, more amenable to questions. But, as I said, Miller's story did all that was necessary."

"Then," said I, "there was a connection between Crabbe and Penrose, and that connection was known to you. How did you find that out? And, by the way, how did you come by your knowledge of Mr. Crabbe? I had never heard of him until you mentioned his name."

Thorndyke chuckled in his exasperating way. "My learned friend is forgetting," said he. "Are we not decipherers of crossword puzzles and interpreters of dark sayings?"

"I am not," said I. "So you may as well come straight to the point."

"You have not forgotten the scrap of paper with the cryptic inscription which was found in the small room?"

"Ha!" I exclaimed, suddenly recalling the ridiculous inscription, "I begin, as Miller would say, to rumble you. But not very completely. The inscription read: 'Lobster: hortus petasatus.' But I still don't see how you arrived at it. Crabs are not the only crustaceans—besides lobsters."

"Very true, Jervis," said he. "Lobster is ambiguous as to its possible alternatives. Evidently, the more specific character
was contained in the other term, 'hortus petasatus.' Now, the learned Dr. Smith translates petasatus as ‘wearing, or having on, a travelling-cap; ready for a journey.’ But the word ‘petasus’ means either a cap or a hat, so the adjective, petasatus, may be rendered as 'hatted' or 'having a hat on.'

“Yes, I see,” said I, with a sour grin. “So hortus petasatus would be a hat on garden. But what puerile balderdash it is. That man, Penrose, ought to be certified.”

“Still,” said Thorndyke, “you see that it was worth while to study his jargon, for, when I had deciphered the inscription so far, the rest of the inquiry was perfectly simple. I looked up Hatton Garden in the directory and ran through the names of occupants in search of one that seemed related to the term ‘lobster.’ Among them I found the name of Jonathan Crabbe (the only one, in fact, who answered the description); and as he was described as a diamond broker and dealer in precious stones, I decided that he was probably the man referred to by Penrose. Accordingly, I paid a visit to Hatton Garden and made a few discreet inquiries, which elicited the fact that Mr. Crabbe was absent from his premises and was in some sort of trouble in connection with a charge of receiving. Whereupon I made arrangements to give Lockhart a shock.”

“And very completely you succeeded,” said I. “He is in a deuce of a twitter, and well he may be, knowing quite well that he is making himself an accessory after the fact.”

“Yes,” Thorndyke agreed, “he is in a very unpleasant dilemma. But I don’t think we can interfere, at least for the present. He is a lawyer and knows exactly what his position is; and, meanwhile, his reticence suits us well enough. I don’t want a premature hue and cry raised.”

Here the discussion appeared to have petered out; but it seemed that the evening’s experiences were not yet finished, for, in the silence which followed Thorndyke’s rejoinder, there came to my ear the sound of soft and rather stealthy footsteps ascending the stairs, and at the same moment I suddenly remembered that I had not shut the outer door when we came in after seeing Lockhart off.

The steps continued slowly to ascend. Then they crossed the landing and paused opposite our door. There was a brief interval followed by a very elaborate flourish, softly and skilfully executed, on the little brass knocker of the inner door, very much in the style of the old-fashioned footman’s knock, I rose, and, striding across the room, threw open the door, when my astonished gaze encountered no less a person than Mr. Kickweed. He broke out at once into profuse apologies for disturbing us at so untimely an hour. “But,” he explained, “the matter seemed to me of some importance, and I thought it best not to call in the daytime in case you might not wish my visit to become known.”

This sounded rather mysterious, so, in accordance with his hint, I closed both the doors before ushering him across the room to the chair lately vacated by Miller.

“You needn’t be apologetic, Mr. Kickweed,” said Thorndyke, as he shook his visitor’s hand. “It is very good of you to turn out at night to come and see us. Sit down and mix yourself a whisky and soda. Will you light a cigar as an aid to business discussion?”

Kickweed declined the refreshments but was obviously gratified by the manner of his reception; and, having expressed his thanks, he came at once to the object of his visit.

“I am the bearer of news, sir, which I think you will be glad to hear. I have received a letter from Mr. Penrose.”

There did not, to me, appear to be anything particularly surprising in this statement. But it was evidently otherwise with Thorndyke, for he received the announcement with more astonishment than I had ever known him to show; though, even so, it needed my expert and accustomed eye to detect his surprise.

“When did you receive the letter?” he asked.

“It came by the first post this morning,” Kickweed replied. “I thought you would like to know about it, and, perhaps, like to see it, so I have brought it along for your inspection.”

He produced from his pocket a bulging letter-case from which he extracted a letter in its envelope and handed it to Thorndyke, who took out the letter, opened it and read it through. When he had finished the reading, he proceeded, according to his invariable custom when dealing with strange letters, to scrutinise its various parts, especially the signature and the date, to examine the paper, holding it up to the light, and, finally, to make a minute inspection of the envelope.

“The letter, I see,” said he, “is dated with yesterday’s date but gives no address; but the postmark is Canterbury and is dated yesterday afternoon. Do you suppose Mr. Penrose is staying at Canterbury?”

“Well, no, sir,” replied Kickweed. “I do not, though he used rather frequently to stay there. But, from my knowledge of Mr. Penrose, I don’t think he would have posted the letter in the town where he was staying. Still, he can hardly be far away from there. I think he knows that neighbourhood rather well.”

“Does any one else know about this letter?”

“No, sir. I took it from the letter-box myself, and I have not spoken of it to anybody.”

“I think,” said Thorndyke, “that Mr. Brodribb ought to be told. In fact I think that the letter ought—with your consent—to be handed to him for safe keeping. You probably realise that it may become of considerable legal importance.”

“Yes, sir, I realise that and that it ought to be taken great care of. What I proposed was to hand it to you, if you will take
custody of it. Of course, you will dispose of it as you think best, but I brought it to you because you seemed to take a more sympathetic view of poor Mr. Penrose than any one else has done. And I may say, sir, that I should be more happy if you would keep it in your possession for the present. I shouldn't like it to be used to help the police to worry Mr. Penrose by searching in his neighbourhood."

"Very well, Mr. Kickweed," said Thorndyke. "I will keep the letter for the present on the understanding that it shall be produced only if circumstances should arise which would make its production necessary in the interests of justice. Do you agree to that?"

"Oh, certainly, sir," replied Kickweed. "You will, of course, make any use of it that you think proper and necessary, other than the one I mentioned."

"You may take it," said Thorndyke, "that no attempt will be made by me, or with my connivance, to harass Mr. Penrose, and that you may safely leave the letter in my custody. And I may say that I am greatly obliged to you for letting me have it and for having taken the trouble to report the matter to me."

Kickweed mildly deprecated these acknowledgments, and Thorndyke continued: "On reading this letter I am struck by certain peculiarities on which I should like to hear your opinion. It is a rather odd letter."

"It is," Kickweed admitted, "but then you know, sir, Mr. Penrose is a rather odd man, if I may venture to say so."

Here Thorndyke handed me the document and I rapidly read it through. It was certainly a very odd letter. Secretly, I pronounced it the letter of a born fool or a lunatic, but I made no audible comments. Its precious contents were as follows:

"26th March, 1935."

"CERASTIUM VULGATUM, ESQ,

"RESPECTED CER,

"These presents are to inform you that, some time after my departure from Her Deceased Majesty’s Equilateral Rectangle, I dish-covered that the key of the small room was not in my pocket. Thereupon I reflected, and after profound cogitation decided that it must be somewhere else. Peradventure, when I sauntered forth on that infelicitous occasion, I may have left it in the door, where it may have presented itself to your penetrating vision and been taken into protective custard. This is my surmise; and if I have reason and you are now seized or possessed of the said key, I will ask you to convey the same to my bank and deliver it into the hand of the manager, in my name, to have and to hold until such time as I shall demand it from him. But first, fasten the window and lock the door. The room contains nothing but a few unconsidered trifles of merely sentimental value, but I wish it to remain undisturbed until I shall return carrying my sheaves and ready to do justice to the obese calf.

"Hoping that you are in your usual boisterous spirits

"Yours in saecula saeculorum,

"DANIEL PENROSE."

"You will agree with me, Jervis," said Thorndyke, when I returned the document, "that this is a very odd letter?"

I agreed with him in the most emphatic and unmistakable terms.

"We are all, by now," he continued, "accustomed to Mr. Penrose’s oddities of speech. But this seems to go rather beyond even his usual eccentricity. What do you think, Mr. Kickweed?"

"I am disposed to think you are right, sir," replied Kickweed, a little to my surprise; for the letter contained just the sort of twaddle that I should have expected from Penrose.

"I think," said Thorndyke, "that you mentioned, when we last met, having noticed a gradual change in Mr. Penrose; a growing tendency to oddity and obscurity of speech."

"I think I did say," replied Kickweed, "that the habit of jocularity had been growing and becoming more confirmed. But habits usually do tend to grow, and I don’t know that he was changed in any other respect. And as to this letter, we must bear the circumstances in mind. He is probably very much upset and he may have been a little more facetious than usual by way of keeping up his spirits."

"Yes," said Thorndyke, "that has to be considered. But a tendency to increasing eccentricity is a very significant thing, especially in the case of a man who has rather unaccountably disappeared. Any recent change in Mr. Penrose’s mental condition might have an important bearing on his recent conduct, and I am inclined to believe that there has been some such change. Now, take this letter. Is it the kind of letter that you have been in the habit of receiving from him?"

"Well, no, sir," Kickweed admitted. "He did not often have occasion to write to me, and when he did, his letters were usually quite short and to the point. They were not written in a jocular vein."

"In this letter," Thorndyke continued, "he addresses you by the style and title of Cerastium Vulgatum, Esq. Has he ever done that before?"

"No, sir; and it doesn’t convey much to me now."

"Cerastium vulgatum," said Thorndyke, "is the botanical name of the common chickweed."
“Oh, indeed,” said Kickweed, with a sad and rather disapproving smile. “I supposed it was some kind of a joke, but I did not connect it with my somewhat unfortunate name.”

“Has Mr. Penrose ever before made any kind of joke on your surname?” Thorndyke asked.

“No, sir,” Kickweed replied, promptly and emphatically. “Mr. Penrose has his oddities, but he is a gentleman, and in all his dealings with me he has always been scrupulously correct and courteous. I am almost disposed to think that you may be right, sir, after all, in believing that his troubles have affected his mind.”

Evidently, the botanical joke had produced a profoundly unfavourable impression.

“By the way,” said Thorndyke, “have you delivered the key to the bank manager?”

“No,” said Thorndyke, “it is a bad and unsafe arrangement. I suppose you have kept the key in your own possession?”

“Always,” was the reply, “excepting on one occasion when I let Mr. Horridge have it for a few minutes to examine the window of the room. I was just going out to post a letter when he asked for it, and he gave it back to me when I returned from the post.”

“I certainly think,” said Thorndyke, “that you ought to have the means of access to that room. Do you happen to have the key about you?”

By way of reply, Kickweed thrust his fingers into his waistcoat pocket and withdrew them holding a key, which he held out to Thorndyke, who took it from him and inspected it.

“An extraordinarily simple key,” he remarked, “for the lock of so important a room. It looks very like the key of my office cupboard. Would you mind if I tried it in the lock?”

“Not in the least,” replied Kickweed; whereupon Thorndyke bore the key away to the office, the door of which he closed after him; a proceeding that somehow associated itself in my mind with the idea of moulding wax. In a couple of minutes he returned, and, handing the key back to Kickweed, announced:

“It fits the lock quite fairly; which is not surprising as it is of quite a common pattern. But it is a fortunate circumstance, for now, if the need should arise, I could supply you with a key that would open the small room door.”

“That is very kind of you, sir,” said Kickweed, “and I will bear your offer in mind. And now I mustn’t detain you any longer. It is exceedingly good of you to have given me so much of your time.”

With this he rose, and once more declining our offer of refreshment, took up his hat and stick and was duly escorted out on to the landing. When he had gone, and we were once more within closed doors, I delivered myself of a matter that had rather puzzled me.

“There seems to be something a little queer about that key. You haven’t forgotten that Horridge had it—or a duplicate—in his possession when he showed us the small room?”

“I remember that he had a key,” replied Thorndyke; “and the feeble and clumsy efforts that he made to keep it out of sight made me suspect that it was a duplicate. Now we know that it was.”

“I presume that you took a squeeze of Kickweed’s key?”

“Yes,” he replied, “and I shall ask Polton to make a key from the pattern. If it is good enough for Horridge to have a duplicate, it is good enough for us to have one, too.”

“Why do you suppose Horridge had his made?”

“It is difficult to say. Horridge, as you observed, is convinced that the mysterious cupboard contains something of enormous value—which it undoubtedly did at one time, and may still—and he is highly suspicious of Kickweed. He may want to try the cupboard lock at his leisure, or he may simply want to see that Kickweed does not. I doubt whether he has any very definite purpose.”

“You seem,” said I, “to be pretty confident that the Billington jewels were in that cupboard and that they are not there now. Have you formed an opinion as to who the burglar was?”

“We haven’t much to go on,” he replied. “We know that Crabbe could not have been the man, as he was in prison when the burglary occurred; and we know—or may fairly assume—that the Chubb key was in Penrose’s possession. Those are all the facts that we have, and they lead to no certain conclusion. But now we have another problem to consider.”

“You mean that idiot Penrose’s letter. But what is its importance, apart from the internal evidence that the writer is certainly a fool and possibly a lunatic?”

“That is precisely what we have to discover. How important is it? Perhaps we had better begin with the obituary columns of The Times.”

We did not keep a complete file of The Times on account of its enormous bulk, but it was our custom to retain our copies for three months, which usually answered our purpose. And it did on this occasion; for, on opening the file and scanning
the obituary columns, we presently came upon a notice announcing that Oliver Penrose passed away peacefully in his sleep on the 16th of March, a few days before his ninetieth birthday.

“There,” said Thorndyke, carefully replacing the papers and closing the file, “you have the answer to our question. Penrose’s letter is dated—and was posted—ten days after his father’s death. That is a fact of cardinal importance. It anticipates any possible question of survivorship. If Penrose should never be heard of again; if he should die and neither the time nor place of his death should ever be known, this letter could be produced as decisive proof that he was alive ten days after his father’s death. Its immediate effect is to enable Brodribb to deal with Oliver’s estate. If there is a will, it can be proved and administered; if there is no will, the intestacy proceedings can be set going.”

“Yes,” I said, “it is a mighty important letter in spite of its ridiculous contents, and its arrival will be hailed with profound relief by Brodribb. But it is a remarkably opportune letter, too. Doesn’t it strike you as rather singularly opportune?”

“It does,” he replied. “That is what immediately impresses one. So much so that one asks oneself whether its arrival can be no more than a coincidence.”

“To me,” said I, “it suggests that Penrose is not such a fool as his letter would imply. He has been keeping his eye on the obituary columns of The Times; and, when he read the notice of the old gentleman’s death, he made a pretext to write to Kickeed and thus put it on record that he was alive. That is how it strikes me. And that view is supported by the letter, itself. It was a perfectly unnecessary letter. Kickeed had had the key for months and there was no reason why he should not have continued to keep it, and every reason why he should. It looks as if the key had been a mere pretext for writing a letter. Don’t you agree with me?”

“I do,” he replied, “so far as the character of the letter is concerned. But we have to remember that when Penrose went away, his father was quite well, so that there was no need for him to watch the obituary columns. However, this is all rather speculative. The material fact is that the letter has arrived, and that fact will have to be communicated to Brodribb. I shall take the letter round and show it to him to-morrow morning.”

XII. — MR. ELMHURST

Between Thorndyke and me there existed a rather queer convention, which the reader of this narrative may have noticed. In the cases on which we worked together, he was always most scrupulous in keeping me informed as to the facts, and making me, if possible, a partner in the investigation by which they were ascertained. But he expected me to make my own inferences. Any attempt of mine to elicit from him a statement of opinion, or of his interpretation of the facts that were known to us both, met with the inevitable response: “My dear fellow, you know as much about the case as I do, and you have only to make use of your excellent reasoning faculties to extract the significance of what is known to us.” The convention had been established when I first joined Thorndyke as his partner or understudy, as part of my training in the art and science of medico-legal investigation. But, apparently, my education was to continue indefinitely, for Thorndyke’s attitude continued unchanged. He would tell me everything that he knew, but he was uncommunicative, even to secretiveness, as to what he thought.

But a habit of secretiveness sets up certain natural reactions. If Thorndyke would not tell me what he thought, it was admissible for me to find out, if I could; and I occasionally got quite a useful hint by observing the books that he was reading. For, unlike most lawyers, he dealt comparatively little in legal literature. His peculiar type of practice demanded a wide range of knowledge other than legal; and frequently it happened that his knowledge required amplification on some particular point. But, by observing the direction in which he was seeking to enlarge his knowledge, I was able, at least, to judge which of the facts seemed to him the most significant.

Now, I had noticed, of late, the appearance in our chambers of a number of books on prehistoric archaeology, a subject in which, so far as I knew, Thorndyke was not specially interested. There was, for instance, Jessup’s Archeology of Kent, into which I dipped light; and there was a copy of the Archaeological Journal, containing a paper by Stuart Piggott on the “Neolithic Pottery of the British Isles.” In this a slip of paper had been inserted as a book-mark, and, on opening it, I found that it was marked at the section headed “Pottery of the Windmill Hill Type,” and opposite, a page of drawings representing the characteristic forms of vessels and their decorative markings. And there were others of different characters, but all agreeing in giving descriptions and illustrations of neolithic pottery.

From these facts it was evident to me that Thorndyke’s attention was still occupied by the ridiculous fragment of pottery that we had found in the pocket of Penrose’s raincoat; and the object of his researches was, I had no doubt, the discovery of some likely place from which that fragment might have come. But why he wished to discover that place or what light it would throw, if found, on the present whereabouts of Daniel Penrose, I was utterly unable to imagine. That the question was one of importance I did not doubt for a moment. Thorndyke was not in the least addicted to the finding of mares’ nests or the pursuit of that interesting phenomenon, the Will-of-the-Wisp. He wanted to discover the place which had been the starting-point of that wild journey in the motor car. Therefore, the identity of that place had some profound significance; and for several days I continued, at intervals, to cudgel my brains in a vain effort to reason out its bearing on our quest.

About a week after the receipt of the mysterious letter from Mr. Penrose, our inquiry entered on a new stage. Hitherto, Thorndyke’s attitude had been mainly that of a passive observer. The visit to Queen Square, the examination of the coat and the pottery fragment, and the unearthing of Mr. Crabbe were the only instances of anything like active investigation.
Otherwise, he had listened to the reports from Brodribb, Miller and Lockhart, and, while he had, no doubt, turned them over thoroughly in his mind, had made no positive move. But now he showed signs of a kind of activity which I associated, by the light of experience, with a definite objective.

I became aware of the change when, on a certain evening, coming home after a long day's work, I found a visitor seated by the fire, apparently in close consultation with Thorndyke. A glance at the little table with the decanter, wine glasses and box of cigars told me that he was certainly a welcome and probably an invited guest; and a sheet of the six-inch ordnance map, on which lay the pottery fragment, hinted at the nature of the consultation.

The visitor, who rose, was a young man of grave and studious aspect, whose face—adorned with an impressive pair of tortoise-shell rimmed spectacles—seemed familiar, but yet I could not place him until Thorndyke came to my aid.

“You haven't forgotten Mr. Elmhurst, surely, Jervis?” said he.

“Of course, I haven't,” I replied, as we shook hands. “You are the dene hole gentleman and the discoverer of headless corpses.”

Mr. Elmhurst did not repudiate the dene hole, but protested that he had not actually made a habit of discovering headless corpses, at least in the recent state. “The corpses that come my way,” he explained, “are usually prehistoric corpses, in which the presence or absence of the head is of no special significance.”

“In short,” said Thorndyke, “Mr. Elmhurst is an archaeologist who is kindly allowing us to benefit by his special knowledge, as we did in the case of the dene hole.”

“That,” said Elmhurst, “is very nicely put, but it gives me undeserved credit. I am not an altruist at all. I am agreeing to do something that I have long wanted to do, but have been deterred by the cost. But now Dr. Thorndyke wants this thing done and is prepared to bear the expense, or at least part of it. You see, it is a case of enlightened self-interest on both sides.”

“And what is this job?” I asked. “Something in the resurrection line, I suspect.”

“Yes,” said Elmhurst, “it is an excavation. The doctor has here a fragment of what seems to have been a neolithic pot of the Windmill Hill type, as it is usually described. He thinks it possible that this fragment was found in a certain long barrow in Kent. I don't know why he thinks so, but it is not improbable that he is right. At any rate, if that barrow contains any pottery, it is pretty certain to be of this type.”

“That doesn't carry you very far,” said I. “Supposing you found some pottery of this kind in the barrow, would that enable you to say that this fragment must have come from that barrow?”

“No,” he replied. “It would only enable one to say that this fragment was of the same type as that found in the barrow.”

“But you know that already,” said I.

“Believe,” Elmhurst corrected.

“You said it was pretty certain to be of this type; and if you would repeat that on oath in the witness-box, I should think it would be sufficient. The excavation seems to be unnecessary.”

“Oh, don't say that!” exclaimed Elmhurst. “You would degrade me from the rank of an investigator to that of a mere expert witness.”

“My learned friend,” said Thorndyke, “in spite of his great experience in court, seems to fail to appreciate the vast difference, in their effects on a jury, between an expert opinion—and a qualified one at that—and a pair of exhibits which the expert can declare, and the jury can see for themselves, are identically similar.”

“Still,” I persisted, “even if you could prove them to be identically similar, that would not be evidence that they came from the same barrow. You admit that, Elmhurst?”

“I admit nothing,” he replied. “You know more about evidence than I do. But Dr. Thorndyke wants that barrow excavated and I want to do the excavation. And I may say that all the necessary preliminaries have been arranged. As the barrow is scheduled as an ancient monument, I have had to apply for, and have been granted by the Office of Works, a permit authorising me to excavate and examine the interior of the tumulus situated by the river Stour near Chilham in Kent and commonly known as Julliberrie's Grave.”

“Whose grave?” I demanded with suddenly-aroused interest; for as he pronounced the name there flashed instantly into my mind the words of Penrose's ridiculous entry: “Moulin-a-vent; Julie: Polly.”

Elmhurst cast a quick, inquisitive glance at me and then proceeded to explain:

“Julliberrie's. There is a local tradition that the mound is the burial-place of a more or less mythical person named Jul Laber, or Julaber, said to have been either a witch or a giant. If he was a giant we may be able to confirm that tradition, but I am afraid that a witch—in the fossil state—would defy diagnosis.”

“And has this mound never been excavated, so far as you know?” I asked.

“It was excavated tentatively,” he replied, “in 1702 by Heneage Finch, whose report is extant; but it appears that nothing
was found beyond a few animal bones. Then an aerial photograph, taken only a week or two ago, shows signs of some more recent disturbance of the surface. Apparently some one has been doing a little unauthorised digging, which may account for this fragment of the doctor’s. But still, we hope to find the burial chamber intact.”

I reflected on the possible means by which Thorndyke had managed to locate this barrow and once more speculated on his inexplicable interest in this locality. And then suddenly I recalled Penrose’s mysterious letter and the postmark on it.

“You say,” said I, “that this mound is near Chilham. Isn’t that somewhere in the Canterbury district?”

“Yes,” he replied. “Quite near. Not more than half a dozen miles from Canterbury.”

This began to be a little more understandable, though I was still unable to make out exactly what was in Thorndyke’s mind. But I now had something like a clue which I could consider at my leisure; and meanwhile I returned to the subject of the excavation.

“I gather,” said I, “that you are practically ready to begin operations. Is the date of the expedition fixed?”

“That is what we were discussing when you came in,” replied Elmhurst. “Of course, there is no need for the doctor or you to attend the function. I can let you know if any pottery is found, and produce it for your inspection. But I hope you will both be able to come at least once while the work is in progress. One doesn’t often get the chance of seeing a complete excavation of a virtually intact long barrow. If you can only make one visit, I would recommend you to wait until we are ready to expose the burial chamber. That is the most thrilling moment.”

“It sounds like quite a big job,” I remarked. “How long do you think it will take?”

“I should say from three to four weeks,” he replied.

“My word!” I exclaimed. “Four weeks! Why, it will cost a small fortune. Of course, you will have to employ a gang of labourers.”

“We shall want five men,” said he, “in addition to the volunteers, and I reckon that sixty pounds will cover it easily.”

I whistled. “I suspect, Thorndyke,” said I, “that you will have to find that sixty pounds yourself. You won’t get Brodribb to include archaeological researches in the costs. But do you tell me, Elmhurst, that this colossal work is necessary just to find out what sort of pottery there is in the barrow?”

“Perhaps not,” he replied. “But, you see, the position is this: Julliberrie’s Grave is scheduled as an Ancient Monument. So no one may—lawfully—disturb it without a permit from the Office of Works. Now, they are perfectly willing to grant a permit to genuine archaeologists who are known to them as such, but subject to very rigorous conditions. They won’t grant permits for mere casual digging. Their conditions are that, if you want to excavate, you must excavate completely and exhaustively so that the mound need never be touched again. All finds must be preserved and labelled and a detailed account of the excavation must be published; and when the work is finished, the barrow must be restored completely to its original condition. I explained all this to the doctor.”

I must confess that I was staggered. The means seemed to be so disproportionate to the end. But Thorndyke seemed quite satisfied to pay sixty pounds for a few specimens of pottery and Elmhurst made no secret of his unholy joy at the prospect of a first-class “dig.”

“Are you proposing to take part in this super-resurrection, Thorndyke?” I asked sourly.

“I am not proposing to join the diggers,” he replied, “but I shall take the opportunity to see how a thorough excavation is done. I want to see the burial chamber opened, but I am also rather curious to see how the work is begun, and what the barrow looks like when the turf is removed and the mound exposed as it appeared when it was newly made. When do you reckon that you will have the barrow uncovered?”

“I expect,” Elmhurst replied, “that we shall begin skinning off the turf on Thursday. We start operations, as I told you, on Tuesday morning, and there will be a full two days’ work on the preliminaries—pegging out the site, putting up an enclosing fence and preparing the dumps. I think, if you come down on Thursday—not too early—I can promise you that you will see the barrow as its builders saw it. I could, if you liked, meet you at Maidstone or Canterbury and personally conduct you to the scene of the operations.”

“That isn’t necessary,” said Thorndyke. “We have the map, and you will want to be early at work. Moreover, I think I shall take the opportunity to do some prospecting on my way and I may be a little late in arriving at the barrow.”

“That will be all to the good,” said Elmhurst. “The later you arrive the more we shall have ready to show you.”

This brought the discussion on ways and means to an end; and shortly afterwards our guest, having a train to catch, rose and took his leave.

During the week that intervened, very little was said either by Thorndyke or me on the subject of the expedition. Not that I was not keenly interested; for Thorndyke’s reference to his “prospecting” intentions made it clear to me that he had something in his mind beyond the mere search for pottery. It seemed that now, for the first time, he was going to take some active measures to locate the elusive Penrose. But I asked no questions. I was going to take part in the prospecting operations and I hoped that their nature would throw some light on the methods by which Thorndyke proposed to attempt what looked like an impossibility.
One discovery I made, however; which was that Polton had in some way managed to attach himself to the expeditionary force. The fact was revealed to me when I found him in the act of pasting a couple of sheets of the six-inch ordnance map on thin mounting board. Observing that one of them included Chilham and our tumulus on Julliberrie Downs, I ventured to make inquiries.

"Why are you mounting them, Polton?" I asked. "You are not proposing to frame them and hang them on the wall?"

"No, sir," he replied. "When they are dry, I am going to cut them up into sections nine inches by six, that is four sections to a sheet. Then I shall number them and make a case to carry them in. You see, sir, a map is awkward to carry, even if you fold it, and most inconvenient to use out of doors if there is any wind. But by this method you can just take out the one or two sections that you are using, and the whole lot will go easily into my poacher's pocket, or the doctor's either, for that matter. I'm getting them ready for our little trip next Thursday."

"Oh!" said I, "you are coming with us, are you?"

"Yes, sir," he replied, with a complacent crinkle. "The doctor mentioned to me that he was going down into Kent on some sort of exploring job, so I persuaded him to let me come and lend a hand. I understood him to say that they were going to dig up that old grave that is marked on the map—Julliberrie's Grave."

"That is quite correct, Polton," I assured him.

"Ah!" said he, with a crinkle of ghoulish satisfaction. "That will be very interesting. Do you happen to know when the party was buried?"

"I understand," I replied, "that the burial took place at some time from four to ten thousand years ago."

"Good gracious!" exclaimed Polton. "Ten thousand years! Well, well! I should have thought that if he has been there as long as that they might have let him stay there. There can't be much of him left."

"That is what we are going to find out," said I; and with this I retired, leaving him to his pasting and his reflections.
IN the course of my long association with Thorndyke, I had often been impressed by the number of things that he appeared to carry in his pockets. He reminded me somewhat of The White Knight. But there was this essential difference; that whereas that unstable equestrian was visibly encumbered with a raffle of things that he could never possibly want, Thorndyke was invisibly provided with the things that he did want. If the need arose for any instrument, appliance or material, forthwith the desiderated object was produced from his pocket even as the parlour magician produces the required guinea-pig or goldfish. So, after all, the appearances may have been illusory; they may have been due, not to the gross quantity of things carried, but to an accurate prevision of the probable requirements.

The matter is recalled to my mind by the astonishing stowage capacity that Polton developed on the morning of our expedition to Chilham. Not only did the special outfit for the day's work—six-inch map, one-inch map, prismatic compass, telescope, surveyor's tape and other odlments, laid out for Thorndyke's inspection—vanish into unsuspected pockets, but to an accurate prevision of the probable requirements.

The details of our travels on that day I have but a confused recollection. It was all very well for Thorndyke, who had apparently transferred the six-inch map bodily to his consciousness; he knew exactly where he was at any given moment. But to me, when once we had left the plain high road, all sense of direction was lost and I was aware only of a bewildering succession of abominably steep lanes, cart-tracks and footpaths, which we scrambled up or stumbled down until we became finally and hopelessly submerged in a wood.

However, I will make an effort to give an intelligible account of this "prospecting" expedition, with apologies in advance for the somewhat nebulous topography. From Charing Cross we proceeded uneventfully to Ashford, where we got out of the train and took our places in a motor omnibus which was lurking in the vicinity and which was bound for Canterbury. Apparently it had been awaiting the arrival of the train, for as soon as we and one or two other train passengers had settled ourselves, the conductor, having taken a last fond look at the station, gave the signal to the driver, who thereupon started the vehicle with a triumphant hoot.

We rumbled along the main road for about six miles (as I afterwards ascertained) and then, shortly after crossing a small river, drew up at a village which the conductor announced as Godmersham. Here we got out and walked forward until we came to the cross-roads beyond the village, where Thorndyke turned to the right and led the way along the by-road. Presently we passed under a railway line and then, as the road made a sharp turn to the right, followed it along the bottom of a valley nearly parallel to the railway. About half a mile farther on, another by-road led off to the left, and, as Thorndyke turned off into it, my sense of direction began to get somewhat confused. It was quite a good road and fairly level, but its windings made it difficult to keep a "dead reckoning," and when, half a mile along it, yet another by-road led off from it to the left at right angles—into which Thorndyke turned confidently—and then made a right-angle turn to the right, I abandoned all attempts to keep count of our direction.

Along this road we trudged for three-quarters of a mile, still keeping fairly on the level, but then the ground began to rise sharply and the road zig-zagged more than ever. A mile or so farther on we passed through a village, and I found myself casting a slightly wistful glance at a couple of rustics who were seated on a bench outside the inn, sustaining themselves with beer and conversation. But Thorndyke plodded on relentlessly, and when, a few hundred yards beyond the village, we came to yet another cross-roads, he finished me off by taking the turning to the left.

"I suppose, Thorndyke," said I, when we had toiled up this road for about half a mile and he halted to look around, "you know where you are."

"Oh, yes," he replied. "That village that we passed through just now is Sole Street. I will show you on the map where we are. Let us have the six-inch, Polton."

The latter dived into the interior of his clothing, whence he produced the case of mounted sections and handed it to his principal.

"Here we are," said Thorndyke, when he had picked out the appropriate card. "That is the village at the bottom and this is the road we are on. You see that it peters out, more or less, when it enters the wood."

I compared the section of map with the visible objects and was able to identify a farm-house across the fields on our right and a considerable wood which we were approaching.

"Yes," I said, "it is clear enough so far, though it doesn't mean much to me. What is the significance of that pencilled cross by the roadside?"

"That," he replied, "marks the spot, as nearly as I could locate it from the evidence at the inquest, where the old woman was killed."

"Indeed!" I exclaimed. "So this is where the chapter of accidents began, or, at least, a few yards farther up. Then I may assume that the purpose of this prospecting expedition is to retrace the route of Penrose's car?"

"That is so," he admitted; "and presently we must begin to look for traces. At the moment, we don't need them, as there seems to be no doubt that the car came down this road. It was seen—or, at least, a car was seen—to come flying round the
corner into the village and past the inn. Of course, it may not have been Penrose’s car. But the time, the outrageous speed, and the wild manner in which it was being driven, all seem to connect it with the disaster.”

“But,” I objected, “even if it was the car that killed the woman, that is no evidence that it was Penrose’s car. It seems to me that the argument against Penrose moves in a circle. Penrose is proved to have killed the old woman by the fact that he was on the road where she was killed; and he is proved to have been on that road by the fact that he killed the old woman. I respectfully suggest that my learned senior may probably be tracing, laboriously and with characteristic skill, the movements of a motor car in which we are not interested at all.”

Thornndyke chuckled appreciatively. “Admirably argued, Jervis; and the point that you make is clearly realised by the police. There is very little doubt that it was Penrose’s car, but there is no positive evidence that it was. And the police know, and we know, that you can’t secure a conviction on mere probabilities. That is a further purpose of the prospecting expedition; not only to ascertain which way, and from whence, the car was travelling, but also, if possible, to establish what car it was.”

As we continued to toil upwards towards the wood, I cogitated on this statement with considerable surprise. It seemed inconsistent with what I had supposed to be Thornndyke’s object and especially with his assurance to Kickweed that no action was contemplated which might compromise Penrose or menace his safety. Yet here he was, by his own admission, industriously searching for the one missing item of evidence which could secure Penrose’s conviction. Unless, indeed, he had any reason to believe that the wrong car had been identified; which his words did not in the least suggest. Incidentally, I was utterly unable to imagine how he proposed to identify a car which had passed down the road months ago, or even pick up its tracks. The road was extraordinarily unfrequented. We had met not a single car, and only one farm cart, since we had passed under the railway. But still it was a metalled road, showing only slight traces of the carts and wagons that had passed over it; and obviously none of those traces had anything to tell us.

When we entered the wood, I noticed that Thornndyke kept a close watch on the borders of the road though he did not slacken his pace.

“I presume,” said I, “that you are looking for the tracks of the car. But isn’t that rather hopeless, seeing that it is about six months since Penrose passed down this road—if he ever did actually pass down it?”

“Of course,” he replied, “it would be futile to look for tracks on the road, or even on the margins. But what I am looking for—though I don’t expect to find it here—is some sign of a car having driven or backed off the road into the wood and along one of the footpaths. The marks made by a car entering the wood over the soft soil would be deep and they would remain visible for years. Moreover, they would be unique. They would not be confused with other tracks, as in the case of any kind of road.”

“You have reasons, then, for believing that Penrose backed his car into the wood?”

“We have reasons, Jervis,” he replied. “You saw the car and the dead leaves and earth on the wheels; and you will remember that the earth was of the same type as the surface soil here; a loam of the Thanet Sands type. Besides, there is the fact that, if Penrose was engaged, as the evidence suggests, in digging in the barrow, he must have left the car somewhere. But it appeared at the inquest that nobody had seen the car until it passed through Sole Street.”

“There isn’t much in that,” said I. “We seem to have this tract of country all to ourselves. A car might remain parked by the side of this road for hours without being noticed.”

He admitted the truth of this, “but,” he added, “don’t forget the state of the car, or the fact that Penrose was engaged in an unlawful act.”

“And have you any idea,” I asked, “where the car was probably left?”

“I have settled on a spot which seems likely,” he replied. “But it is little more than a guess; and if I am wrong we shall have to give up the quest. We can’t search the whole area of woodland.”

Half a mile farther on, we came to a fork in the road, the left-hand branch being little more than a cart-track. Into this Thornndyke turned unhesitatingly; and by the care with which he scrutinised the margins, I judged that we were approaching the “likely spot.” But the issue was rather confused by the fact that the rough, unmetalled road was fairly deeply rutted, having evidently been used by various carts and wagons. This road, however, after crossing a considerable open space, took a sharp, right-angle turn to the left opposite a pair of cottages, but its original direction was continued by a broad footpath. Thornndyke first followed the road in its new direction where it entered and crossed a narrow strip of wood, but, after a careful examination of the ruts in the wood, he came back and explored the footpath. And here it was that we struck the first trace of what might have been a car-track.

The footpath passed along the front of the cottages, still in the open, but presently it skirted the edge of the wood. It was an old path, never disturbed by the plough, and its surface was trodden down hard by years of use. Moreover, its margins showed faint impressions of wheels, which had been nearly obliterated by the feet of the wayfarers who had walked over them.

“They don’t look to me like the tracks of a car,” I remarked as we all stooped to examine them.

“No,” he agreed, taking a rough measurement with his stick. “The gauge is much too wide. Probably they are the tracks of some woodman’s cart or timber-carriage. But a hard path like this would scarcely show an impression of a pneumatic tire
excepting after heavy rain.”

We continued our progress slowly for another hundred yards, keeping a close watch on the faint ruts beside the path. Then we all halted simultaneously. For here we could see the faint, but clearly distinguishable, tracks of some wheeled vehicle which had turned off the path on to the rough turf of the open field.

“This looks more likely,” I remarked; and Polton supported me with the opinion that “the Doctor’s got him this time, as I knew he would.”

Thorndyke made no comment but, producing from his pocket a steel tape, carefully measured the space between the wheel-marks.

“The measurement is correct,” he announced, “but that is only an agreement. It would apply to thousands of other cars. However, we will see whither these tracks lead us.”

We followed the tracks, not without difficulty, across the wide meadow until we readied another belt of woodland. Here the tracks entered the wood by a footpath and were easy enough to follow on the soft earth. The path continued for about a furlong and then emerged into the open, where it crossed a small grass-covered space; and, following it, we were still able to distinguish the wheel-tracks by its sides. When it reached the edge of the wood, the footpath turned sharply to the right, keeping in the open. But here the tracks left the path and plunged straight into the wood, which was fairly free from undergrowth. Following the comparatively deep ruts which the wheels had made in the soft leaf-mould, we advanced by a rather tortuous route about a couple of hundred yards into the wood. And then, once more, we halted; for we had apparently come to the end of the tracks.

There seemed to be no doubt about it; but, as the last year’s leaves lay here more deeply, and the undergrowth had suddenly grown denser, I went on a few yards to make sure that the tracks did not reappear beyond the place where they had seemed to end. With difficulty I forced my way through the bushes and was further impeded by the brambles and spreading roots; and I had not gone more than a few yards when my foot was caught by some hard, angular object—obviously not a root or a bramble—whereby, after staggering forward a pace or two, I fell sprawling among the tangle of vegetation.

At the sound of the fall, and the accompanying pious ejaculations, Thorndyke hurried towards me to see what had happened. I picked myself up, and, having wiped my hand, proceeded to search for the object which had tripped me up. Cautiously probing with my foot in a clump of nettles, I brought to light what looked like the haft of an axe; but, when I seized it and drew it out, it proved to be a trenching tool.

It was at this moment, as I stood with it in my hand, trying to connect it with some vague stirring of memory, that Thorndyke appeared through the bushes.

“I hope you are not hurt, Jervis,” he said, anxiously. “That would be a nasty thing to fall upon.”

I assured him that I had come to no harm beyond a few scratches. “But,” I added, “I am not quite clear about the significance of this thing. I have a vague idea that something was said by somebody about a trenching tool, but I can’t remember what or who it was.”

“The somebody,” he replied, “was Kickweed. Don’t you remember our interview in the garage when he told us, among other items, that he had a vague recollection of having seen a trenching tool there?”

“Yes, of course, I remember now. Then it is quite possible that this is the very tool he was speaking of?”

By way of answer, he took the tool from me, and, having run his eye along the handle and turned it over, placed his finger on a spot near to the blade and held it out to me. Looking at it closely, I was able to make out in very faded lettering the name “D. Penrose,” apparently printed with a rubber stamp.

I must confess that I was profoundly impressed. Once more Thorndyke had achieved what had seemed to me an impossibility. Not only had he traced the route that the car had followed, but he had clearly established the identity of the car. Moreover, he had settled the place from which the car started in a country which he had never seen, working by inference and aided only by the map. It was a remarkable performance even for Thorndyke.

But here my reflections were interrupted by a hail from Polton in a tone of high excitement. For he, too, had been “prospecting”; and as we returned to the end of the track, he met us, fairly bubbling with exultation and carrying his treasure trove in the form of a small spade and a leather case.

“Here is an astonishing thing, sir!” he exclaimed. “I found these in the bushes, and they’ve both got Mr. Penrose’s name stamped on them. I could hardly believe my eyes. But there,” he added, “I don’t suppose, sir, that you are surprised at all. I expect you knew they were there before we started from home.”

Thorndyke smilingly disclaimed the omniscience with which his admiring henchman credited him (though, in fact, Polton was not so very wide of the mark), and taking from him the spade and case, looked them over and verified the marks of ownership.

“You notice, Jervis,” said he, “that these things correspond exactly with Kickweed’s description; a small, light spade, pointed at the end, and a leather sheath or case to protect the point. The spade and the trenching tool appear to have been Penrose’s equipment for his clandestine digging expeditions.”
“Yes,” I said, “and their presence here demonstrates that you were right in your inference as to the place where he parked his car. By the way, how did you arrive at it?”

“I can hardly say that I arrived at it,” he replied. “As I said, it was little more than a guess. I started with the hypothesis—a very well-supported one—that Penrose went forth that day with the intention of digging in Jullibberrie’s Grave, and that he did dig there. If that were so, he would park his car as near to the place as possible; and the more so since he knew that he was committing an unlawful act and might have to clear out of the neighbourhood in a hurry. For the same reason he would wish to leave his car where it would not be seen. But examination of the map showed this excellent place of concealment, less than half a mile from the barrow.”

“Yes,” I said, “it looks perfectly simple and obvious now that you have explained matters. But these tools, thrown away into the bushes, seem to suggest that the contingency that you mentioned did actually arise. Apparently, he did have to clear out of the neighbourhood in a hurry. Probably he was spotted in the act of digging and had to do a bolt, which would account for his having got rid of the incriminating tools. At any rate, it looks as if the panic had started here and not after the accident.”

“Exactly,” Thorndyke agreed. “The killing of the old woman was not the cause but the consequence of the panic. And now, as we have finished this part of our quest, we may as well move on and see how Elmhurst is progressing—unless there is anything more that you would like to see.”

“There is,” I replied with emphasis. “What I should like to see, above all other things in the world, is a good hospitable pub with oceans of beer and mountains of bread and cheese. As you seem to have memorised the whole neighbourhood, perhaps you know where one is to be found.”

“I am afraid,” said Thorndyke, “that there is nothing nearer than the Wool-pack at Chilham.”

But here Polton, crinkling ecstatically, proceeded to unbutton his coat.

“No need for a pub, sir,” said he. “We’re provided. And we can do something better than bread and cheese and beer.”

With this he fished out of his inexhaustible pockets a flat parcel—found to contain a veal and ham pie—a large flask of sherry, a nest of three aluminium drinking-cups and a shoe-maker’s knife in a leather sheath wherewith to carve the pie. There were no forks, but the need of them was not felt as the thickness of the flat pie had been thoughtfully adapted to the dimensions of a moderately-opened human mouth. Joyfully, we selected a place as free as possible from brambles and nettles and there seated ourselves on the ground; and while Polton, by his unerrining craftsman’s eye, divided the pie into three equal parts, Thorndyke and I filled our cups and toasted the giver of the feast.

When the banquet was finished and the empty flask, the cups and the knife had vanished into the receptacles whence they came, Polton thriftily utilised the wrapping-paper to disguise the naked form of the trenching tool. Then, with the aid of the compass, Thorndyke led the way through the wood and presently brought us out on to a stretch of rough pasture where, some three hundred yards away, we could see the excavators at work.

XIV. — JULLIBERRIE’S GRAVE

The scene on which I looked as we came out of the wood rather took me by surprise; though, to be sure, Elmhurst’s lucid and detailed account of the proposed operations ought to have prepared me. But to an uninformed person like myself, excavation is just a matter of digging, and I had hardly taken in the elaborate preliminaries that exact scientific procedure demands.

Looking along the brow of the steep hill-side, one could see the barrow—a long, oval, grassy mound about fifty yards in length—standing out plainly against a background of trees that were just about to burst into leaf. Past it, to the left, down in the river valley, rose the tall white shape of Chilham Mill, while farther to the left and more distant was the town or village of Chilham. At ordinary times it must have been a rather desolate and solitary place, for no habitation was visible nearer than the distant mill, but now it was a scene of strenuous activity, peopled by busy workers.

The preparatory operations had apparently been nearly completed. The barrow was surrounded by a substantial spike fence—evidently new—which marked off a rectangular enclosure. Inside this, two rows of surveying pegs had been driven into the ground and a theodolite stand set up over one of them suggested a survey in progress. Outside the enclosure was a methodically spread dump of turf, and a trackway of planks was being laid to another spot, apparently the site of a dump for the chalk and earth which would be removed from the mound as the excavation proceeded. There was also a stack of half a dozen metal wheelbarrows, and, hard by, a small shepherd’s hut, in which a stoutly-built gentleman, apparently the surveyor, was at the moment depositing what looked like a theodolite case; which he did carefully, with a proper respect for the instrument, and then, having shut the door of the hut, strode away briskly down the hill towards the village.

We seemed to have timed our arrival rather fortunately, for the work of uncovering the barrow had already commenced. Within the fenced enclosure two parties of workers were engaged, from opposite sides, in cutting out strips of turf and rolling them up like lengths of stair carpet. Of the two parties, one consisted of four labourers, who went about their work with the leisurely ease born of long experience, while the other party was, with the exception of one labourer, evidently composed of volunteers, among whom I distinguished, with some difficulty, our friend Elmhurst, transformed into the likeness of a coal-miner with leanings towards tennis.
We halted near the edge of the wood to observe the procedure without interrupting the work. Presently Elmhurst, having accumulated a goodly heap of turf-rolls, loaded them into a wheelbarrow, which was promptly seized by one of his two assistants—a fair-haired young viking in a blue jersey and a pair of the most magnificent orange-red trousers of the kind known by fishermen as “fear-noughts”—who trundled it off through an opening in the fence and unloaded it neatly on to the turf dump on top of the already considerable stack that occupied it. Then he returned at a brisk trot, and, having set down the empty wheel-barrow, picked up his spade and fell to work again on the cutting out of a fresh load.

It was at this moment that Elmhurst, happening to glance in our direction, not only observed our presence but evidently recognised us, for he laid down his spade and began to walk towards us; whereupon we hurried forward to meet him. As we approached, I noticed that he cast an inquisitive eye on the tools which Polton was carrying, and, as soon as we had exchanged greetings, he inquired:

“Are you proposing to take an active part in the proceedings? I see that you are provided with the necessary implements.”

“The appearance is illusory,” Thorndyke replied. “We did not bring these tools with us. They are the products of our prospecting activities in the wood hard by. And they are not going to be used on this occasion. It seems advisable to preserve them in the condition in which they were found.”

Elmhurst regarded the tools with intelligent interest and, I thought, with some disfavour.

“I see,” he said reflectively; “you connect those tools with the piece of pottery that you showed me?”

Thorndyke admitted that the connection seemed to be a reasonable one.

“Yes,” said Elmhurst. “A pick and a spade do certainly seem to connect themselves with traces of unlawful digging in the neighbourhood. And they are quite workmanlike tools, especially the spade. I only hope that your friends have not been too workmanlike. In one respect they certainly have not. They have made a very poor job of replacing the turf.”

“Yes,” was the reply. “There is no doubt whatever. But they seem only to have made a short, irregular trench, and, as they were nowhere near the burial chamber, I am still hopeful of finding that intact. But we shall see better how far they went when we get the turf off. As you see, we have got all the margin unturfed and we are just starting on the mound itself. We shall soon get that done with eight workers besides myself; and, meanwhile, I can take you round and show you the arrangements for excavating a barrow.”

“You mustn’t let us waste your time,” said Thorndyke, “and leave your colleagues to do all the work; though I must say, they seem to enjoy it.”

“Yes, by Jove!” I agreed. “They are proper enthusiasts. I have been watching that sea rover in the decorative trousers and wondering what those labourers think of him. But perhaps they are not Union men.”

Elmhurst smiled a cryptic smile but expressed complete satisfaction both with the labourers and his volunteer assistants.

“I think,” he added, “that my friends would like to make the acquaintance of the benefactor who has given us this very great pleasure.”

Accordingly we proceeded towards the fenced enclosure and entered it by one of the openings left for the wheelbarrows to pass in and out.

“You notice,” said Elmhurst, “that we have driven in a row of pegs all round the tumulus to define its edges. Those are for use in marking our plan and to guide us when we come to rebuild the mound. It has to be restored exactly to its original shape and size.”

“You speak of rebuilding the mound,” said I. “You don’t mean that you are going to move the entire structure?”

“Certainly we are,” he replied. “The essence of a complete excavation is in the thorough examination of every part of it. The whole of it will be moved excepting a narrow longitudinal wall, or spine, along the middle, which has to be left to preserve the contour and serve as a guide to build up to. We shall move one half at a time and the earth—or chalk rubble, as it will be in this case—that we take out will be carefully deposited in one of those dumps. Each dump will have a revetment of chalk blocks to prevent the piled earth from slipping away and getting scattered.”

“Yes,” said Thorndyke, “it is all very thorough and methodical; a very different thing from the slovenly methods of the casual digger. By the way, which side do you propose to begin with?”

“The right-hand side,” replied Elmhurst. “That is the side on which your friends operated, and we are rather anxious to settle once for all what they really did in the way of excavation and how much damage they have done. My colleagues are now beginning to peep off the turf from that side of the mound.”

As he spoke, we rounded the end of the barrow and came in sight of the two volunteers and the labourer, all busily engaged in cutting lines in the turf with implements like cheese-cutters set on long handles. As we approached, the owner of the fear-noughts looked up and rather disconcerted me by disclosing an extremely comely feminine countenance; which accounted for Elmhurst’s cryptic smile and caused me hurriedly to re-examine the other “gentleman,” only to discover that the breeches which I had innocently accepted as diagnostic of masculinity, appertained to a lady.
The introductions, effected by Elmhurst with a ceremonious bow and a grin of malicious satisfaction, informed us that the two ladies were, respectively, Miss Stirling—the wearer of the nautical garments—and Miss Bidborough, and that both were qualified and enthusiastic archaeologists (this was Elmhurst’s statement, and neither denied it on behalf of the other); and that both were profoundly grateful to Thorndyke.

“IT is the chance of a life-time,” said Miss Stirling, “to carry out a complete excavation of a neolithic barrow; and such a famous one, too. I have often come here and looked at Julliberrie’s Grave and thought how interesting it would be to turn it out thoroughly and see what it really contained. But we are in an awful twitter about those tomb-robbers who have been hacking at the mound. It will be a tragedy if they have reached the important part of the barrow.”

“Yes,” Miss Bidborough agreed, severely. “These clandestine diggers are the bane of scientific archaeology. They confuse all the issues by disturbating the stratification, they break or damage valuable relics, and, worst of all, they sneek off secretly with things of priceless scientific value and never record what they have found. Do you happen to know who these people were, Dr. Thorndyke, who broke into this barrow?”

“The only person,” replied Thorndyke, “known to me as being under suspicion is an amateur—a very amateur—collector of antiques.”

“They usually are,” said Elmhurst, gloomily; “and this fellow must have been worse than usual. Just look at the way he put the turf back!”

He pointed indignantly to an irregular area on the side of the mound in which even my inexpert eye could detect the ragged lines which marked the untidy replacement. From my knowledge of the man (and my distinct prejudice against him) it was just what I should have expected; and I was indiscreet enough to say so.

“By the way,” said Miss Bidborough, addressing Elmhurst, “I am in hopes that we shall have a visit from Theophilus. He has to come down to Canterbury to-day, and I think he intends to come on here and see how we are getting on with the work. I hope he will. I know he would like to meet Dr. Thorndyke.”

Thorndyke looked inquiringly at Elmhurst. “Do I know Mr. Theophilus?” he asked.

“His name isn’t really Theophilus,” Elmhurst explained. “That is only a term of affection among his friends. He is actually Professor Templeton.”

“Then I do know him, at least by repute,” said Thorndyke. “And now I suggest that we move on and let these ladies proceed with their work and see what enormities the unauthorised diggers have committed.”

With this we bowed to the fair excavators, and as they picked up their cheese-cutters to renew their assault on the turf, we resumed our personally conducted tour, passing round the head of the mound (where Elmhurst pointed out to us the probable position of the burial chamber) to inspect the works on the other side. As we came out on to the lower side, whence we could see the whole hill-side and the river valley below, we observed a figure in the distance striding up the steep ascent with a purposeful air suggesting a definite objective.

“Here is Theophilus, himself,” remarked Elmhurst (whose power of recognising distant persons did credit to his spectacles). “We may as well go down and meet him and get the introductions over before we come to the scene of the operations.”

Accordingly, we proceeded down the hill-side, but at a leisurely pace, as we had to come up again, and, in due course, came within hail of the visitor, who viewed us with undisguised interest; which, indeed, was mutual; for a man who gets called by an affectionate nickname by his juniors probably merits respectful consideration. And this gentleman—a tall, athletic, eminently good-looking man, very unlike the popular conception of a professor—made a definitely pleasant impression.

When we at length met, he shook hands cordially with Elmhurst and then looked at Thorndyke.

“I think,” said he, “that I can diagnose the giver of this archaeological feast. You are Dr. Thorndyke, aren’t you?”

Thorndyke admitted his identity, but protested:

“I am really getting a great deal of undeserved credit for this excavation. Actually, I am greatly indebted to Elmhurst for all the trouble that he is taking, since I am hoping to get some useful information from the opening of the barrow.”

Professor Templeton looked at him somewhat curiously.

“Of course,” said he, “you know your own business—uncommonly well, as I understand—but I can’t imagine what information you expect to get by the excavation that we couldn’t have given you without it.”

“Probably you are right,” Thorndyke admitted, “at least in a scientific sense. But in legal practice, and in relation to a particular set of circumstances, an ascertained fact is usually of more weight than even the most authoritative opinion.”

“Yes,” said the professor, “I appreciate that. But when Elmhurst told me about the project, I wondered—and am still wondering—whether there might not be some—what shall we say?—some arriere-pensee, some expectation that the digging operations might yield some extra-archaeological facts. You see, your reputation has preceded you.”

He smiled genially, and Thorndyke was evidently in no wise disconcerted by the implied suspicions; and I was just beginning to wonder, for my part, whether there might not be some justice in those suspicions when my colleague
addressed Elmhurst.

“I think,” said he, “your presence is required at the diggings. Some rather urgent signals are being made.”

We all looked up towards the barrow, and there, sure enough, was a picturesque, red-trousered figure standing on the summit of the mound, beckoning excitedly; and, even as we looked, a labourer came down the hill at a heavy trot, and, when he had arrived within earshot, announced that Miss Stirling asked Mr. Elmhurst to return at once.

In compliance with this unmistakably urgent summons, Elmhurst immediately started up the hill at something between a walk and a trot, and we turned and followed at a more convenient pace.

“Those girls have apparently found something out of the common,” the professor remarked. “I wonder what it can be. They can’t have struck the burial chamber, for they have only begun peeling the turf off; and you don’t look for anything important so near the surface.”

We watched Elmhurst run round the end of the mound, where he disappeared for the moment. But in a very short time he reappeared, hurrying in our direction; and, as we, thereupon, quickened our pace, we met within a short distance of the mound.

“My colleagues,” he announced in his usual sedate, self-contained manner, though a little breathlessly, “have found something. Doctor, which is rather more in your line than in ours.Apparently, there is some one buried just under the surface in the place where the unauthorised digging has been carried out.”

“You say ‘apparently,’” said Thorndyke. “Then I take it that you have not uncovered a body?”

“No,” replied Elmhurst, as we turned to accompany him back. “What happened was this: Miss Stirling was rolling up a strip of turf when she saw what looked like the toe of a boot showing through the surface soil! So she scraped away some of the soil with her spade and I uncovered the greater part of a boot; and then the toe of a second boot came into view; whereupon she ran up the mound and signalled for me to come.”

“You are sure that they are not just a pair of empty boots?” Thorndyke asked.

“Quite sure,” was the reply. “I scraped away the earth enough to see the bottoms of a pair of trousers and then came on to report. But there is no doubt that there are feet in those boots.”

Nothing more was said as we walked quickly up the hill, but I caught a significant glance from the professor’s eye, and I noticed that Polton had developed a new and lively interest in the proceedings. As to Thorndyke, it was impossible to judge whether the discovery had occasioned him any surprise; but I suspected—and so, evidently did the professor—that the possibility had been in his mind. Indeed, I began to ask myself if this gruesome “find” did not represent the actual purpose of the excavation.

On arriving at the barrow, we passed round the foot end and came in sight of the scene of the discovery, where a broad patch of the chalky soil had been uncovered by the removal of the turf. The two ladies stood close by it, backed by the gang of labourers who had been attracted to the spot by the report of the discovery; and the eyes of them all were rivetted on a shallow depression at the bottom of which a pair of whitened boots projected through the chalk rubble.

“Would you like me to get the body out?” Thorndyke asked. “As you said, it is more in my line than yours.”

“I didn’t mean that,” replied Elmhurst. “I’ll dig it out. But, as I have had no experience of the exhumation of recent remains, you had better see that I go about it in the right way.”

With this, he selected a suitable pick and spade, and, having placed a wheelbarrow close by to receive the soil, fell to work.

We watched him cautiously and skillfully pick away the clammy chalk rubble in which the corpse was embedded, and, as each new part became disclosed, attention and curiosity quickened. First the legs, looking almost as if modelled in chalk, then the skirt of a rain-coat, and one whitened, repulsive-looking hand. Then, partly covered by the body, an object was seen, the nature of which was not at first obvious; but when Elmhurst had carefully disengaged it from the soil and drawn it out, it appeared as the whitened and shapeless remains of a felt hat, which was at once handed to Thorndyke; who restored it, as far as possible, to a recognisable shape, wiped its exterior with a bunch of turf, glanced into its interior, and then put it down on the side of the mound.

Gradually the corpse was uncovered and disengaged from its chalky bed until, at length, it lay revealed as the body of a stoutish man who, so far as could be judged, was on the shady side of middle age. Naturally, six months of burial in the clammy chalk had left uncomely traces and obscured the characteristics of the face; but when Thorndyke had gently cleaned the latter with a wisp of turf, the chalk-smearèd, sodden features still retained enough of their original character to render identification possible by one who had known the man. In fact, it was not only possible. It was actually achieved. For, as Thorndyke stood up and threw away the wisp of turf, Polton, who had watched the procedure with fascinated eyes, suddenly stooped and gazed with the utmost astonishment into the dead man’s face.

“Why!” he exclaimed, “it looks like Mr. Penrose!”

“You think it does?” said Thorndyke, without the slightest trace of surprise.

“Of course, sir,” replied Polton, “I couldn’t be positive. He’s so very much changed. But he looks to me like Mr. Penrose;
and I feel pretty certain that that is who he is."

"I have no doubt that you are right, Polton," said Thorndyke. "The hat is certainly his hat; and the fact that you recognised the body seems to settle the question of identity. And now another question arises. How is the body to be disposed of? The correct procedure would be to leave it where it is and notify the police. What do you say to that, Elmhurst?"

"You know best what the legal position is," was the reply. "But it won’t be very comfortable carrying on the work with that gruesome object staring us in the face. Is there any legal objection to its being moved?"

"No, I think not," replied Thorndyke. "There are competent witnesses as to the circumstances of the discovery, and the soil is going to be thoroughly examined, so that any objects connected with the body are certain to be found."

"Quite certain," said Elmhurst. "The soil will not only be examined. That from this part will be sifted. And, of course, any objects found will be carefully preserved and reported. Still, we don’t want to do anything irregular."

"I will take the responsibility for moving the body," said Thorndyke, "if you will find the means. But I think it would be as well to send a messenger in advance to the police so that they may be prepared."

"Very well," Elmhurst agreed. "Then I will send a man off at once and, if Mr. Polton will come and lend me a hand, we can rig up an extemporised stretcher from some of the spare fencing material."

With this he went off, accompanied by Polton, in search of the necessary material; the ladies migrated to the farther end of the mound, where they resumed their turf-cutting operations, and the labourers returned to their tasks.

When we were alone, the professor stood for a while looking thoughtfully at the ghastly figure, lying at the bottom of its trench. Presently he turned to Thorndyke and asked:

"Has it occurred to you, Doctor—I expect it has—that the person who buried this poor creature showed very considerable foresight?"

"You mean in selecting a scheduled monument as a burial-place?"

"Yes—but I see that you have considered the point. It is rather subtle. According to ordinary probabilities, a scheduled tumulus should be the safest of all places in which to dispose of a dead body. It is actually secured by law against any disturbance of the soil. But for your intervention, this place might have remained untouched for a century."

"Very true," Thorndyke agreed, "but, of course, there is the converse aspect. If suspicion arises in respect of a given locality, the very security of a barrow from chance disturbance makes it the likeliest place for a suspected burial."

"I suppose," the professor ventured, "that an ordinary exhumation order would not have answered your purpose?"

"It would not have been practicable," Thorndyke replied. "I did not know that the body was here. I did not even know for certain that there was a dead body; and I don’t suppose that either the Home Office or the Office of Works would have agreed to the excavation of a scheduled tumulus to search for corpse whose existence was purely hypothetical. The only practicable method was a regular excavation by competent archaeologists; which would not only settle the question whether the body was there or not, but, in the event of a negative result, would not have raised any troublesome issues or disclosed any suspicions which might possibly turn out to be unfounded."

"Yes," the professor agreed. "I admire your tact and discretion. You have done valuable service to archaeology and you have managed very neatly to harness the unsuspecting Elmhurst to your legal chariot."

"I am not sure," said I, "that Elmhurst was quite so unsuspecting as you think. But he also is a discreet gentleman. He wanted to excavate the barrow and was willing to do it and ask no questions. But I fancy that he expected to find something more significant than neolithic pottery."

Here our discussion was brought to an end by the arrival of Elmhurst and Polton, bearing a sort of elongated hurdle formed very neatly by lashing together a number of stout rods. This they deposited opposite the place where the body was lying in readiness to receive its melancholy burden.

"I think, Jervis," said Thorndyke, "that the next proceeding devolves upon us. Will you lend us a hand, Polton? The body ought to be lifted as evenly as possible to avoid any disturbance of the joints."

Accordingly, we placed ourselves by the side of the trench, Thorndyke taking the head and shoulders, I taking the middle, while Polton supported the legs and feet. At the word from Thorndyke, we all very carefully lifted the limp, sagging figure and carried it to the hurdle on which we gently lowered it. As we rose and stood looking down at the poor shabby heap of mortality, Polton, who appeared to be deeply moved, moralised sadly.

"Dear, dear!" he exclaimed, "what a dreadful and grievous thing it is. To think that that miserable, dirty mass of rags and carrion is all that is left of a fine, jovial, happy gentleman, full of energy and enjoying every moment of his life. There is a heavy debt against somebody, and I hope, sir, that you will see that it is paid to the uttermost farthing."

"I hope so, too, Polton," said Thorndyke. "That, you know, is what we are here for. Can we find anything to cover the body? It is a rather gruesome object to carry down into the village."

As he spoke, the four labourers who had volunteered as bearers approached carrying a bundle of sacks; and with these, laid across the hurdle, the wretched, unseemly remains were decently covered up. Then the four men lifted the hurdle
(which, with its wasted burden, must have been quite light) and moved away round the foot of the barrow, watched, not without evident relief, by Elmhurst and his two colleagues.

“I suppose,” said Elmhurst, as we prepared to follow, “you won’t be coming back here?”

“Not to-day,” replied Thorndyke. “But we shall have to attend the inquest, either as witnesses or to watch the proceedings, so we shall have an opportunity to see your work in a more advanced stage. Don’t think that our interest in it is extinct because we are no longer concerned with neolithic pottery.”

With this we took leave of our friends and, starting off down the hill-side, soon overtook and passed the bearers and made our way to the foot-bridge over the river near the mill. A few yards farther on, we met our messenger returning in company with a police sergeant, and halted to give the latter the necessary particulars.

“I suppose,” he remarked, “you ought, properly, to have left the body where it was and reported to us. Still, as you say, there’s nothing in it as the witnesses are available. I’ll just note your addresses and those of any other persons that you know of who may be wanted at the inquest.”

We accordingly gave our own names and addresses (at which I noticed that the sergeant seemed to prickle up his ears), and Thorndyke gave those of Brodribb, Horridge and Kickweed. And this concluded the day’s business. Of the spade and the trenching tool Thorndyke said nothing, evidently intending to examine them at his leisure before handing them over to the police.

I may say that the discovery had given me one of the greatest surprises of my life. The idea that Penrose might be dead had never occurred to me. And yet, as soon as the discovery had been made, I began to realize how all the facts that were known to us pointed in this direction, and I also began to see the drift of the many hints that Thorndyke had given me. But, although, over a very substantial tea at the Wool-pack Inn, we discussed the various and stirring events of the day, I did not think it expedient to enter into the details of the case in Polton’s presence. Not that, in these days, we had many secrets from Polton. But there were certain other matters, as yet undisclosed, that it seemed better to reserve for discussion when we should be alone.

XV. — WHAT BEFELL AT THE WOOL-PACK

The inquest on the body of Daniel Penrose yielded nothing that was new to us. The coroner had been provided by Thorndyke with a brief synopsis of the known facts of the case (which my colleague had, apparently, prepared in advance) to serve as a guide in conducting the inquiry; but he was a discreet man who understood his business and avoided extending the proceedings beyond the proper scope of a coroner’s inquest. Nor had we been able to increase our knowledge of the case; for neither the spade nor the trenching tool furnished any information whatever. All our attempts to develop finger-prints failed utterly, and the most minute examination of the tools for traces of hair or blood was equally fruitless. Which was not surprising; for even if such traces had originally existed, six months exposure to the weather would naturally have dissipated them.

But if the coroner was not disposed to go beyond the facts connected with the discovery, there was another person who was. We had put up for the night at the Wool-pack in Chilham in order to be present at the post-mortem (by the coroner’s invitation), and were just finishing a leisurely breakfast when the coffee-room door opened to admit no less a person than Mr. Superintendent Miller. He had come down by an early train for the express purpose of getting an outline of the case from Thorndyke to assist him in following the proceedings at the inquest.

“Well, Doctor,” he said, cheerfully, seating himself without ceremony at our table, “here we are, and both on the same errand, I take it.”

“We are,” Thorndyke replied, “if you have come to attend the inquest on poor Penrose.”

“Exactly,” rejoined Miller. “We have a common purpose—which isn’t always the case. Lord, Doctor! What a pleasure it is to find myself, for once in a way, on the same side of the board with you, playing the same game against the same opponent! You won’t mind if I ask you a few questions?”

“Not at all,” replied Thorndyke. “But the first question is, have you had breakfast?”

“Well, I have, you know,” said Miller, “but it was a long time ago. I think I could pick a morsel, since you mention the matter.”

Accordingly, Thorndyke rang the bell, and, having given an order for a morsel in the form of a gammon rasher and a pot of coffee, prepared himself for the superintendent’s assault.

“Now, Doctor,” the latter began, in his best cross-examining manner, “it is perfectly clear to me that you know all about this case.”

“I wish it were as clear to me,” said Thorndyke.

“There, now, Dr. Jervis,” exclaimed Miller, “just listen to that. Isn’t he an aggravating man? He has got all the facts of the case up his sleeve, as he usually has, and now he is going to pretend—as he usually does—that he doesn’t know anything about it. But it won’t do, Doctor. The facts speak for themselves. Here were our men trapezing up and down the country,
looking for Daniel Penrose to execute a warrant on him, and all the time you knew perfectly well that he was safely tucked away in a barrow—though why the deuce they call the thing a barrow when it is obviously just a mound of earth, I can’t imagine."

“That is a wild exaggeration, you know, Miller,” Thorndyke protested. “After six months’ study of the case, I came to the conclusion that Penrose was probably buried in this barrow. But I was so far from certainty that I had to take this roundabout way of settling the question whether I was or was not mistaken. It happened that my conclusion was correct.”

“It usually does,” said Miller. “And I expect you have formed some conclusions as to who planted that body in the barrow. And I expect those conclusions will happen to be right, too. And I should very much like to know what they are.”

“Really, Miller,” I exclaimed, “I am surprised at you. Have you known Thorndyke all these years without discovering that he never lets the cat out of the bag until he can let her right out? No protruding heads or tails for him. But, when everything is finished and the course is clear, out she comes.”

“Yes, I know,” said Miller, gloomily, “I know his beastly secret ways. I think that, in some previous state of existence, he must have been an oyster. Still, doctor, you needn’t be so close with an old friend.”

“But my dear Miller,” protested Thorndyke, “you are entirely mistaken. I am withholding nothing that could properly tell you. What Jervis has said, though crudely put, is the strict truth. If I knew who had committed this crime, of course I should tell you. But I don’t know. And if I have any half-formed suspicions, I am going to keep them to myself until I am able to test them. In short, Miller, I will tell you all I know. But I tell nobody what I think. So now ask me any questions you please.”

I must admit that it was not very encouraging for Miller. My experience of Thorndyke was fairly expressed in what he had just said. He would tell you all the facts (which you usually knew already and which were more or less common property) but the general truths which were implicit in those facts he would leave you to discover for yourself; which you never did until the final conclusions emerged; when it was surprising how obvious they were.

“Well, to begin with,” said Miller. “There was that chappie at the hospital whom we all supposed to be Penrose. Have you any idea who he really was? You obviously spotted the fact that he was not Penrose.”

“No,” replied Thorndyke, “I have no idea who he was. My suspicion that he was not Penrose was based on his behaviour, especially on the fact that he appeared particularly anxious to avoid being seen or recognised by any one who knew Penrose. As a matter of fact, he was not then recognisable at all, and nobody knows what he was really like. But I don’t think that there is any utility in going into details of the case at that stage. Remember that my investigations were then concerned with the questions: Is Penrose alive or dead? And if he is dead, what has become of his body? Now, I have settled those questions and their solution has evolved the further questions: Was he murdered? And, if so who murdered him? The first question will be answered at the inquest—pretty certainly in the affirmative; and we shall then address ourselves to the second. And as you say, we have a common purpose and shall try to be mutually helpful.

“Now, I have given the coroner a synopsis of the case from the beginning, and I have a copy of it which I am going to hand to you. I suggest that you study it, and then, if anything occurs to you in connection with it, and you like to ask me any questions on matters of fact, I will give you all the information that I possess. How will that do for you?”

I suspected that it was not at all what Miller would have liked; but he saw clearly, as I did, that Thorndyke was not going to disclose any theories that he might have formed as to where we might look for the possible murderer. Accordingly, he accepted the position with as good a grace as he could; and, when he had finished a very substantial breakfast, he demanded the synopsis, which Thorndyke fetched from his room and placed in his hands.

"Are you coming to watch the post-mortem, Jervis?" my colleague asked.

“No,” I replied. “I shall hear all about it at the inquest; so I think I shall improve the shining hour by taking a walk up to the barrow to see how the work is progressing.”

“Ha!” said Miller. “Then perhaps you wouldn’t mind my walking with you. I have never seen a barrow. Never heard of one until I read the report in the paper.”

Of course, I had to agree; not unwillingly, in fact, for liked our old friend. But I knew quite well what the proposal meant. As nothing was to be got out of Thorndyke, Miller intended to apply a gentle squeeze to me. And to this also I had no objection, for I was still in the dark as to how Thorndyke had reached his very definite conclusions and was quite willing to have my memories of the investigation stirred up.

The process began as soon as we were fairly outside the inn.

“Now, look here, Dr. Jervis,” said the superintendent, “it’s all very well for the doctor to pretend that he hasn’t anything to go on, but there are certain obvious questions that arise when a well-to-do man like Penrose gets murdered. The first is: Who benefits by its death?”

“The answer to that,” I replied, “is quite simple. Penrose made a will by which practically the whole of his property goes to a man named Horridge.”

“Then,” said Miller, “it will be worth while to give a little attention to Mr. Horridge. Do you know anything about him?”

“Not very much,” I replied. “But I know this much; that he is about the most unlikely man in the world to have murdered
Besides, I am personally life-preserver. Perhaps I which was bearded head of the classical type which I assumed to assented, but continued to watch the never!

"And is the old man still alive?"

"No. He died quite recently."

"Ha!" said Miller. "Then somebody else benefits by Penrose’s death. Do you happen to know who that will be?"

"No," I replied. "I understand, but do not know for certain, that the old man died intestate. In that case, the next of kin will benefit. They will benefit very considerably, as their expectations would have been quite small if Penrose had been alive when his father died. But I have no idea who they are."

"Well, we shall have to find that out," said Miller. "It seems that somebody had a perfectly understandable motive for getting rid of Penrose while the old man was still alive."

As Miller continued his interrogations, asking uncommonly shrewd questions and making equally shrewd comments, I began to feel an unwonted sympathy with Thorndyke in respect of his habitual reticence and secretiveness. For his approach to a criminal problem was quite different from Miller’s, and there might easily arise some conflict between the two. Miller was evidently on the look-out for a suspect, and was considering the problem in terms of persons; whereas Thorndyke’s practice was to watch, unseen and unsuspected, while he collected and sifted the evidence, and above all, to avoid alarming the suspected persons until he was ready to make the final move.

But our arrival at the top of Juliberrie Downs put an end, for the time being, to Miller’s bombardment; for here we came in sight of the barrow, now stripped of its turf and presenting the smooth, white, rounded shape on which its builders had looked a couple of thousand years or more before the coming of the Romans. I explained its nature and its great antiquity to Miller, who was deeply impressed, but who, nevertheless, showed a strong inclination to “cut the cackle and get back to the case.” But as we approached, the eagle-eyed Elmhurst observed us and came forward to do the honours of the excavation.

Under his guidance we went round to the farther side of the mound which was in the process of being cut away like a gigantic cheese, and the chalk rubble, stored in the dump, was mounting to the magnitude of a considerable hill. At this point, the superintendent’s interest in the barrow awakened surprisingly, for an excavation was more or less in his line, and he took the opportunity to pick up a few technical tips. He was particularly impressed by a builder’s sieve which had been set up at the dump.

“I see,” he remarked to Elmhurst, “that you don’t mean to miss anything. I shall bear your methods in mind the next time I have to direct a search. And speaking of a search, have you turned up anything that seems to be connected with the body that you found?”

“Yes,” replied Elmhurst. “We found, near the place where the body was lying, quite an interesting thing, and, I should say, decidedly connected with that body—a small bronze pestle, apparently belonging to an ancient drug-mortar. I’ll show it to you. Miss Stirling, have you got that pestle?”

As the lady addressed turned round and greeted me with a friendly nod, the superintendent whispered to me in an awe-stricken tone:

“Good gracious! That young person in the fisherman’s trousers is a female! And I believe the other one is, too. Well, I never!”

“You would hardly expect them to wear evening dress for a job like this,” I remarked; to which the superintendent assented, but continued to watch the ladies furtively and with fascinated eyes.

The pestle was presently produced from the shepherd’s hut and offered for our inspection; a smallish pestle of bronze—now covered with a thick green patina—with a bulbous end and a rather elaborately decorated handle surmounted by a bearded head of the classical type which I assumed to represent Esculapius. Attached to it was a small tie-on label on which was written a note of its precise “find-spot” in the mound.

Miller took it in his hand and executed a warlike flourish with it, by way of testing its weight.

“It’s of no great size,” he remarked, “but it is quite a formidable weapon. Uncommonly handy, too, and as portable as a life-preserver. Perhaps I had better take charge of it.”

He was about to slip it into his pocket when Elmhurst interposed firmly.

“I think I must keep it for the present. I am summoned to give evidence at the inquest and I shall have to produce this. Besides, I am personally responsible to the Office of Works for all objects found during the excavation.”

With this he quietly resumed possession of the pestle, which Miller reluctantly surrendered, and as the latter had no
further interest in the excavation, and made no secret of the fact, we presently took our leave and resumed our perambulations, with a running accompaniment of interrogation on the part of the superintendent which caused me to hail the luncheon hour with a certain sense of relief.

The superintendent, of course, lunched with us, and when at the table he continued his quest for knowledge, beginning, naturally, with inquiries as to the result of the post-mortem.

"The cause of death is obvious enough," said Thorndyke. "There is a depressed fracture of the skull at the left side and towards the back; not very large, but deep, and suggesting a very violent blow. The shape of the depression—a fairly regular oval concavity—implies a blunt weapon of a smooth, rounded shape."

"Such as a pestle, for instance," Miller suggested.

"Yes," Thorndyke replied, "a pestle would agree with the conditions. But why do you suggest a pestle?"

"Because your excavating friends have found one; a bronze pestle; quite a handy little weapon, and portable enough to go quite easily into an ordinary pocket."

Here he gave a very excellent and concise description of the weapon, to which Thorndyke listened with deep interest.

"So you see," Miller concluded, "that it is a thing that ought to be quite easy to identify by any one who had ever seen it. Dr. Jervis thinks that it would not be likely to be the property of a chemist or apothecary. What do you say to that?"

"I agree with him," Thorndyke replied. "That is to say, it does not definitely suggest an apothecary as would have been the case if it had been a Wedgewood pestle. Bronze mortars and pestles are not now in general use; and this is pretty evidently an ancient pestle."

"A sort of curio, in fact," said Miller, "and rather suggestive of a collector or curio monger?"

Thorndyke agreed that this was so, but he made no further comment, though the connection of a curio with the late Daniel Penrose was fairly significant. But my recent experiences of Miller's eager and persistent cross-examinations enabled me to understand the sort of defensive reticence that they tended to engender. Moreover, the connection, though significant, was not very clear as to its bearing. It would have been more obvious if Penrose had been the murderer.

The inquest was held in a large room at the inn, normally reserved for gatherings of a more festive character, and when we entered and took our places the preliminaries of swearing in the jury and viewing the body had already been disposed of. I looked round the room and noted that in the seats set apart for the witnesses, not only Elmhurst and his two coadjutors were present but also Kickweed and Horridge. Both of the latter showed evident signs of distress, but more especially Horridge. Which rather surprised me. The grief of the lugubrious, red-eyed Kickweed was understandable enough; for not only had he manifested a genuine affection and loyalty towards his dead master, but the death of Penrose was a very material loss to him. But I could not reconcile Horridge's condition with the callous selfishness that he had shown previously. It is true that the apparent date of the death put an end to his hopes of inheriting the fortune of the lately deceased Penrose senior, but, on the other hand, he stood to gain forthwith the very respectable sum of fifty thousand pounds, for which he might reasonably have expected to wait for years. Nevertheless, he was obviously extremely upset, and it was evident from his pale, haggard face and his restless movements, that this sudden, unforeseen catastrophe had come on him as an overwhelming shock.

The first witness called was Miss Stirling, who gave a brief, matter-of-fact description of her discovery, to which the jury listened with absorbed interest. She was followed by Elmhurst, who amplified her statement and described his disinterment of the body and the appearance and position of the latter. He also explained the methods of excavation and the procedure after the body had been removed.

"In the soil which was taken away after the removal of the body," the coroner inquired, "did you find any objects that seemed to be connected with it?"

"Yes," replied Elmhurst. "I found this pestle, which could certainly not have been among the original contents of the barrow."

Here he produced the pestle wrapped in a handkerchief, and, having removed the latter, handed the "find" to the coroner, who inspected it curiously and then passed it on to the foreman of the jury.

"This," he remarked, "does not look like a modern pestle. As you are an authority on antiquities, Mr. Elmhurst, perhaps you can tell us something about it."

"I am not much of an authority on recent antiquities," Elmhurst disclaimed modestly, "but I should judge that this pestle belonged to a bronze drug-mortar of the kind that was in use in the seventeenth or early eighteenth century."

"You would not regard it as probably part of the outfit of a chemist's shop?"

"No," replied Elmhurst. "I understand that, since the introduction of grinding machinery, the practice of grinding hard drugs in metal mortars is quite extinct."

"Can you form any idea how long this object has been buried?"

"I could not judge the exact time; but, assuming it to have been bright, or at least clean, when it was buried, I should say that it must have been lying in the ground for several months."
That concluded Elmhurst’s evidence, and, as he retired to his seat, the name of the medical witness was called.

“You have made an examination of the body of the deceased?” the coroner began, when the preliminaries had been disposed of. “Can you give any opinion as to how long deceased has been dead?”

“My examination,” the witness replied, “led me to the belief that he had been dead at least six months.”

“Did you arrive at any conclusion as to the cause of death?”

“The cause of death was an injury to the brain occasioned by a heavy blow on the head. There is a small but deep depressed fracture of the skull on the left side just above and behind the ear, which appears to have been produced by a blunt, smooth weapon with a rounded end.”

“Please look at this pestle, which you have heard was found near the place where the body had been lying. Could the injuries which you found have been produced by this?”

The doctor examined the pestle and gave it as his opinion that it corresponded completely with the shape of the fracture. “I suppose that it is a mere formality to ask whether the injuries could have been self-inflicted or due to an accident?” the coroner suggested.

“They certainly could not have been self-inflicted,” the witness replied. “As to an accident, one doesn’t like to use the word impossible, but I cannot imagine my kind of accident which would have produced the injuries that were found.”

This completed the medical evidence proper, but Thorndyke was called to give confirmatory testimony.

“You have heard the evidence of the doctor. Have you any observations to make on it?”

“No,” replied Thorndyke. “I am in complete agreement with everything that my colleague has said.”

“We may take it,” said the coroner, “that you know more about this affair than anybody else. Can you throw any light on the actual circumstances in which the tragedy occurred?”

“No,” Thorndyke replied. “My investigations have been concerned with the question whether Daniel Penrose was alive or dead; and, if he was dead, when and where his death occurred. I can make no suggestion as to the identity of the person who killed him.”

“As to the date of his death; have you arrived at any conclusion on that point?”

“Yes. I have no doubt that deceased met his death at some time in the evening of the seventeenth of last October. I base that conclusion principally on the fact that his car was seen coming away from the neighbourhood of the place where his body was found, and that it was evidently being driven by some other person.”

“And have you formed any opinion as to who that other person may have been?”

“I have not. At present I have no evidence pointing to any particular person.”

“Well,” said the coroner. “I hope you will now take up this further question, and that your efforts will be as successful in this as in the problem which you have solved in such a remarkable manner. Is there any question that any member of the jury would like to ask?”

Apparently there was not. Accordingly Thorndyke returned to his seat and the name of Francis Horridge was called. And, as he walked up to the table, I was once more impressed by his extraordinarily agitated and shaken condition. It was noticed also by the coroner, who, before beginning his examination, offered a few words of sympathy.

“This, Mr. Horridge,” said he, “must be a very painful and distressing experience for you, as an intimate friend of the deceased.”

“It is,” replied Horridge. “I had not the faintest suspicion that my old friend was not alive and well. It has been a terrible shock.”

“It must have been,” the coroner agreed, “and I am sorry to have to trouble you with questions. But we have to solve this dreadful mystery if we can, or at least find out as much as possible about it. You have seen the body of deceased. Could you identify it?”

“Yes. It is the body of Daniel Penrose.”

“Yes,” said the coroner, “there seems to be no doubt as to the identity of the body. Now, Mr. Horridge, the medical evidence makes it clear that deceased met his death by the act of some unknown person. It is very necessary to discover, if possible, who that person is. You were an intimate friend of deceased and must know a good deal about his personal affairs. Do you know of anything that might throw any light on the circumstances surrounding his death?”

“No,” was the reply. “But I did not know so very much about his personal habits or his friends and acquaintances.”

“I understand that deceased had made a will. Do you know anything about that?”

“Yes. I am the executor of his will.”

“Then you can tell us whether there was anything in connection with it which might give rise to trouble or enmity. In rough, general terms what are the provisions of the will?”
“They are quite simple. There is a handsome, but well-deserved legacy to his butler, Kickweed, amounting to two thousand pounds. Beyond that, the bulk of the property is devised and bequeathed to me.”

“So you and Mr. Kickweed are the persons who benefit most in a pecuniary sense by the death of deceased?”

“Yes; and I am sure we should both very gladly forgo the benefit to have our friend back again.”

“I am sure you would,” said the coroner. “But can you tell us if there are any other persons who would benefit materially in any way by the death of deceased?”

“Yes, there are,” replied Horridge. “Quite recently, deceased's father died and left a considerable fortune. If deceased had been alive at that time, the bulk of that fortune would have come to him. As it is, it will be distributed among his next of kin. Consequently, those persons will benefit very considerably by deceased’s death if that death occurred on the date given by Dr. Thorndyke. I do not know who they are; and, of course, I do not suspect any of them of being concerned in this crime.”

“Certainly not,” the coroner agreed. “But one naturally looks round for some persons who might have had a motive for making away with deceased. But you know of no such persons? You do not know of any one with whom deceased was on terms of enmity or who had any sort of grudge against him?”

“No. So far as I know, he had no enemies whatever. He was not likely to have any. He was a kindly man and on pleasant terms with every one with whom he came in contact.”

“May the same be said of us all when our time comes,” the coroner moralised. “But there is another motive that we ought to consider. That of robbery. Do you know whether deceased was in the habit of carrying about with him—on his person I mean—property of any considerable value?”

“I have no idea,” replied Horridge. “He must have done so at times, for he was a great collector and was in the habit of going about the country making purchases. I had supposed that his last journey was made with that object, and I am disposed to think so still. He used to come down to this neighbourhood to visit a dealer named Todd who has a shop at Canterbury.”

“You say that he was a collector. What kind of things did he collect?”

“It was a very miscellaneous collection, but I have always believed that, in addition to the oddments that were displayed in the main gallery, he had a collection of jewels of much more considerable value which were kept in a small room. That room was always kept locked, and deceased would never say definitely what it contained.”

Here Horridge gave a description of the small room as we had seen it on the occasion of our visit of inspection, and he also gave an account of the supposed burglary, to which the coroner—and Superintendent Miller—listened with profound interest.

“This,” said the former, “seems to be a matter of some importance. What is the precise date on which the supposed burglary took place?”

“The second of last January.”

“That,” said the coroner, “would be nearly three months after the death of deceased, if Dr. Thorndyke is correct as to the date on which that death occurred. And you say that, if the cupboard was opened, it must have been opened with its own proper key, since the lock is unpickable and the cupboard had not been broken open. Is there any reason to believe that the cupboard was actually opened?”

“I think there is,” replied Horridge. “It is certain that some one entered the room on that night, and it is practically certain that he entered the premises by the side gate, as there is no other way of approaching the window. But that gate was always kept locked, and it was found to be locked on the morning after the supposed burglary. So it seems that the burglar must have had the key of the gate, at least.”

“And who usually had possession of that key?”

“Mr. Penrose. It seems that he sometimes used that gate and he kept the key in his own possession. There was no duplicate.”

“When you went to the mortuary to identify the body, did you look over the effects of deceased which had been taken from the pockets?”

“No; but I asked the coroner's officer if any keys had been found and he told me that there had not.”

The coroner nodded gravely and Miller remarked to me in a whisper that we were beginning to see daylight.

“It is unfortunate,” the former observed, “that we have no clear evidence as to whether a burglary did or did not take place. However, that is really a matter for the police. But the question is highly significant in relation to the problem of the motive for killing deceased. Do you know whether, apart from this burglary, there were any attempts to rob deceased?”

“Yes,” replied Horridge; “but I think it was only a chance affair. Deceased told me on one occasion that his car had been stopped on a rather solitary road by a gang of men who were armed with revolvers and who made him deliver up what money he had about him. But, apparently, his loss was only trifling as he had nothing of value with him at the time.”
This concluded Horridge’s evidence; and when the coroner’s officer, who turned out to be the police sergeant whom I had met, had deposed to having examined the contents of deceased’s pockets and found no keys among them, the name of Edward Kickweed was called.

XVI. — MR. KICKWEED SURPRISES THE CORONER

The evidence given by our friend, Horridge, had been listened to with keen interest, not only by the coroner and the jury, but especially by Superintendent Miller. For, though it comprised nothing that we did not already know, it had elicited the important fact that the body of Penrose had apparently been rifled of his keys. But striking and significant as this fact was, it was left to Kickweed to contribute the really sensational item of evidence.

But this came later. The early part of his evidence seemed to be little more than a series of formalities, confirming what had already been proved. When he took his place at the table, his lugubrious aspect drew from the coroner a kindly expression of sympathy similar to that with which he had greeted Horridge, after which he proceeded with his examination.

“You have seen the body which is lying in the mortuary, Mr. Kickweed. Were you able to identify it?”

“Yes,” groaned Kickweed. “It is the body of my esteemed and beloved employer, Mr. Daniel Penrose.”

“How long had you known deceased?”

“I have known him practically all his life. I was in his father’s service and when he grew up and took a house of his own, he asked me to come to him as butler. So I came gladly, and have been with him ever since.”

“Then you probably know a good deal about his manner of life and the people he knew. Can you tell us whether there was any one who might have had any feelings of enmity towards him?”

“There was not,” Kickweed replied confidently. “Deceased was a rather self-contained man, but he was a kind, courteous and generous man and I am sure that he had not an enemy in the world.”

“You confirm Mr. Horridge’s estimate,” said the coroner, “and a very satisfactory one it is; and it seems to dispose of revenge or malice as the motive for killing him. By the way, it is not of much consequence, but do you recognise these objects?”

Here he took from behind his chair the spade and trenching tool which we had found in the wood and laid them on the table for Kickweed’s inspection.

“Yes,” said the witness, “they belonged to deceased. He used to keep them in the garage. I am not quite sure what he used them for, but I know that he occasionally took them with him when he went out in the country in his car.”

“Were you aware that he had taken them with him when he last left home?”

“I was not. But afterwards, when I saw that they were not in their usual place, I assumed that he had taken them with him.”

The coroner entered this not very illuminating statement in the depositions, and then, noting that the witness’s eyes were fixed on the pestle which lay on the table, he picked it up, and, holding it towards him, said:

“I suppose it is needless to ask you if you recognise this object?”

“I do,” was the totally unexpected reply. “It belongs to a small bronze mortar which forms part of Mr. Penrose’s collection.”

“This is very extraordinary!” the coroner exclaimed. “You are sure that you recognise it?”

“Perfectly sure,” replied Kickweed. “The pestle and mortar stood together on a shelf in the great gallery and I have often, when dusting the things in the collection, given this pestle and the mortar a rub with the cloth. I know it very well indeed.”

“Well,” the coroner exclaimed, “this is indeed a surprise! The weapon is actually the property of the deceased!”

There was a short interval of silence, in which I could hear Miller cursing softly under his breath.

“There,” he muttered, “is another promising clue gone west!”

Then the coroner, recovering from his astonishment, resumed his examination of the witness.

“Can you explain by what extraordinary chance deceased came to have this thing with him on the day when he was killed?”

“Yes. It was his usual custom, when he went out in his car and was likely to be on the road late, to slip the pestle in his pocket before he started. The custom arose after he had been stopped on the road by robbers, as Mr. Horridge has mentioned. I urged him to get a revolver or some other means of defending himself. But he had a great dislike of fire-arms, so I suggested a life-preserver. But then he happened to see me polishing this pestle, and it occurred to him that it would do as well as the life-preserver, and, as he said, would be a more interesting thing to carry. So he used to take it with him, and he did on this occasion, as I discovered a few days after he had gone, when I saw the mortar on the shelf without the
"Well," said the coroner, "there is evidently no doubt that this pestle really belonged to deceased, and that fact may have a rather important bearing on the case."

He paused, and, having entered Kickweed's last statement in the depositions, turned to him once more.

"Apparently, Mr. Kickweed, of all the persons who knew deceased, you are the one who last saw him alive. Can you recall the circumstances of his departure from his home?"

"Yes," the witness replied, "very clearly. At lunch-time on the seventeenth of last October, deceased informed me that he should presently be starting for a run in the country in his car. He was not sure about the time when he would return, but he thought he might be rather late; and he directed that no one should sit up for him, but that a cold supper should be left for him in the dining-room. He left the house a little before three to go to the garage, and, about a quarter of an hour later, I saw him drive past the house in his car. That would be about three o'clock."

"And after that, did you ever see him again?"

"I never saw him again. I sat up until past midnight, but, of course, he never came home."

"Did you then suspect that any mischance had befallen him?"

"I was rather uneasy," Kickweed replied, "because he had apparently intended to come home. Otherwise, I should not have been, as he often stayed away from home without notice."

"When did you first learn that there was something wrong?"

"It was in the afternoon of the twentieth of October. Mr. Horridge had called to see him, and we were just discussing the possible reasons for his staying away when a police officer arrived, carrying deceased's raincoat, and told us that deceased had apparently absconded from the hospital at Gravesend. And that was all that I ever knew of the matter until I heard Dr. Thorndyke's evidence."

"Then," said the coroner, "to repeat; you saw him drive away on the seventeenth of October and you never saw him, or had any knowledge of him, again. Is that not so?"

"I never saw him again. But as to having any further knowledge of him, I am rather doubtful. I received a letter from him."

"You received a letter from him!" the coroner repeated in evident surprise. "When did you receive that letter?"

"It was delivered on the morning of the twenty-seventh of last March." A murmur of astonishment arose from the jury and the coroner exclaimed in a tone of amazement:

"Last March! Why, the man had been dead for months!"

"So it appears," Kickweed admitted; "and I am glad to believe that the letter was not really written by him."

"Why do you say that?"

"Because," Kickweed replied, "it was not a very creditable letter for a gentleman of Mr. Penrose's character. It was a foolish letter and not as polite as it should have been."

"Have you that letter about you?"

"No. I handed it to Dr. Thorndyke, and I believe he has it still. But I can remember the substance of its contents. It directed me to lock up the small room and deposit the key at Mr. Penrose's bank."

"And did you do so?"

"Certainly, I did, though Dr. Thorndyke seemed rather opposed to my doing so. But, at the time, I supposed it to be a genuine letter from my employer and, of course, I had no choice but to carry out his instructions."

"Have you formed any opinion as to who might have written that letter?"

"No, I have not the faintest idea. Until I heard Dr. Thorndyke's evidence, I still supposed it to be a genuine letter from deceased."

"Well," said the coroner, "it is a most extraordinary affair. I, think we had better recall Dr. Thorndyke and hear what he can tell us about it."

Accordingly, as Kickweed had apparently given all the information that he had to give, and no one wished to ask him any questions, he was allowed to return to his seat and Thorndyke was recalled.

"Will you tell us what you know about this very remarkable letter that Mr. Kickweed received?" the coroner asked.

"I first heard of that letter when Mr. Kickweed called at my chambers late in the evening of the twenty-seventh of last March. He then informed me that he had received that letter and gave it to me to read. I read and examined it and at once came to the conclusion that it was a forgery. I took a photograph of it—of which I have a copy here—and carried the original to Mr. Brodribb, deceased's solicitor, to whom I handed it for safe custody and to whom I stated my opinion that it was a forgery."
“You decided at once that the letter was a forgery. What led you to that decision?”

“My decision was based on the circumstances and on the character of the letter itself. As to the circumstances, I had by that time formed the very definite opinion that Daniel Penrose was dead and that he had died on the seventeenth of the previous October. The letter itself presented several suspicious features. The matter of it was quite unreasonable and inadequate. The room was already locked up and the key was in the very safe custody of deceased’s trusted and responsible servant, and had been for months. The directions in the letter appeared to be merely a pretext for writing and suggested some ulterior purpose. Then the manner of the letter was quite out of character with that of the supposed writer—a gentleman addressing his confidential servant. It was written in a tone of coarse, jocular familiarity with a most ill-managed caricature of Mr. Kickweed’s name. It impressed me as a grotesque, overdone attempt to imitate deceased’s habitually facetious manner of speech. And, on questioning Mr. Kickweed, who was obviously hurt and surprised by the rudeness of this letter, I learned that deceased had always been in the habit of addressing him in a strictly correct and courteous fashion.”

“Apart from these inferences, was there anything visible that marked this letter as a forgery?”

“I did not discover anything. Of the handwriting I could not judge as I was not familiar with deceased’s writing. But there were no signs of tracing or other gross indications of forgery. But I may say that Mr. Brodribb was of opinion that the writing did not look, to him, like that of deceased.”

“You say that the matter of the letter suggested to you that a mere pretext had been made for writing and that there was some ulterior purpose. Can you suggest what that ulterior purpose might have been?”

“I suggest that its purpose was to make it appear that deceased was alive.”

“That seems to imply that the unknown writer of the letter knew that he was dead, though no one but yourself had any suspicion that he was not still alive. There would seem to be no object in trying to prove that a man was alive when nobody supposed that he was dead. Don’t you agree?”

“Yes,” replied Thorndyke; “that seems to be the natural inference.”

“I suppose you cannot offer any suggestion as to who the writer of the letter may have been?”

“I cannot. It seems clear that whoever he may have been, he must have been well acquainted with deceased, for the phraseology of the letter, although greatly exaggerated, was a recognisable imitation of deceased’s rather odd manner of expressing himself. But I cannot give him a name.”

“There was one matter that we overlooked when you were giving your evidence. You ascertained in some mysterious manner that deceased was buried in Julliberrie’s Grave. But is that the place where he met his death, or was his body brought from some other place?”

“I should say that there is no doubt that he was killed close to the place where his body was found. The implements which we found in the wood and which have been identified as his property suggest very strongly that he came to Julliberrie’s Grave of his own accord with the intention of searching for antiquities for his collection. Probably he had actually done some excavation in the mound and the cavity that he had dug offered the facilities for disposing of his body. And the finding of the weapon with which he was apparently killed, near to the body, supports this view.”

“Yes,” said the coroner, “I think you have made it clear that the death occurred in the neighbourhood of the barrow and that the body was not brought there from a distance. And that, I think, gives us all the evidence that we need.”

He bowed to Thorndyke, and, as the latter returned to his seat, he began a brief and very sensible summing up.

“The disappearance of Mr. Daniel Penrose involves a long and complicated story. But with that story we are not concerned. This is a coroner’s inquest; and the function of such an inquiry is to answer certain questions relating to a dead body which has been found within our jurisdiction. Those questions are: Who is the dead person? and where, when and by what means did deceased meet with his death? We are not concerned with the person, if any, who caused the death of deceased unless such person should be plainly and evidently in view. We have to decide whether or not a crime has been committed, but it is not our function to bring that crime home to any particular person. That duty appertains to the police.

“Now, in respect of those questions which I have mentioned, we have no difficulty. The evidence which we have heard enables us to answer them quite confidently. The body has been identified as that of a gentleman named Daniel Penrose; and it has been clearly proved that he met his death at a place called Julliberrie’s Grave on the seventeenth of last October and that his death was caused by violence inflicted by some unknown person. These are matters of fact which have been proved; and the only question which you have to decide is that of the nature of the act by which the death was caused. Deceased was killed by a heavy blow on the head inflicted with a bronze pestle. The person who struck that blow killed deceased and, therefore, undeniably committed an act of homicide. But there are many kinds of homicide, varying in their degree of culpability. A man may justifiably kill another in defence of his own life. Then there is no crime. Or he may kill another quite accidentally, when, again, there is no crime. Or he may kill another in the course of a struggle, by violence which was not intended to cause death. Here the act of homicide amounts only to manslaughter; and the degree of criminality will depend on the particular circumstances. Again, a man may kill another with the deliberate and considered intention of killing him—that is with what the law calls malice. Such deliberate and premeditated killing constitutes wilful murder.
“Now, in the present case, we have to consider the circumstances in which the death of deceased occurred; and of those circumstances we have very imperfect knowledge. A striking fact is that the weapon with which deceased was killed was his own property and must, apparently, have been brought to the place by himself. We have learned, also, that he habitually carried this weapon for the purpose of self-defence. There is thus the suggestion that he may have so used it on the occasion when he was killed. That is to say, there is a distinct suggestion of a struggle, and the actual possibility that deceased may have been the aggressor, killed by the unknown in self-defence.

“On the other hand, the unknown, having killed deceased, buried the body secretly and hurried away from the place—incidentally killing another person on his way—and has since given no information and made no sign, unless we assume that the very mysterious letter that Mr. Kickweed received emanated from him. And it is, perhaps, worth while to give that letter a brief consideration, as it seems to have some bearing on the question which we are trying to decide.

“Who was the writer of that letter and for what purpose was the letter written? From Dr. Thorndyke we learn that the writer must have been some person who was well acquainted with deceased. That is an important matter, but we are not concerned with the actual identity of the writer. We are concerned with his connection with the death of deceased; and that connection seems to be suggested by the purpose of the letter. That purpose seems to be indicated quite clearly by Dr. Thorndyke. It was to create the belief that deceased was still alive. But nobody—excepting the doctor—had any doubt that he was alive. No suggestion had been made by anybody that he might be dead. Then why should the writer of this letter have sought to create a belief which was already universally held? The only possible answer seems to be that he, himself, knew that deceased was dead and he wished, in the interests of his own safety, to forestall any suspicions that might arise that deceased might be dead.

“Thus the consideration of this letter suggests to us, first, that the writer knew that deceased was dead, and, second, that he had reasons for desiring that the fact of the death should not become known or suspected. But the fact of the death could have been known only to the person who killed deceased; and his anxiety to conceal the fact suggests strongly that he had no reasonable defence if he should be charged with the murder of deceased.

“That, I think, is all that I need say. Deceased was evidently killed by some unknown person; and it is for you to decide whether the circumstances, so far as they are known to us, suggest excusable homicide, accidental homicide, manslaughter, or wilful murder.”

On the conclusion of the summing up, the jury consulted together for a few minutes. Then the foreman announced that they had agreed on their finding.

“And what decision have you arrived at?” the coroner asked.

“We find that the deceased was murdered by some person unknown.”

“Yes,” said the coroner, “I think that it is the only reasonable conclusion at which you could have arrived. I will record a verdict of wilful murder by some person unknown, and we may hope that the police will presently be able to discover who that unknown person is and bring him to justice.”

He entered the verdict in the depositions and this brought the proceedings to an end.

XVII. — THORNDYKE RETRACES THE TRAIL

As the court rose and we all stood up, Miller turned on me fiercely.

“You never told me about that letter,” he exclaimed; “and there was not a word about it in the synopsis that the doctor gave me.”

“As to me,” said I, “there is no question of reservations. I did not refer to it because I had not regarded it as having any particular bearing on the case.”

“No bearing!” exclaimed Miller. “Why, it hits you in the face. But if you think it has no bearing, I'll warrant that is not the doctor's view.”

“Naturally,” I replied, “I don't know what his views are, but he is here and can answer for himself.”

“Well,” said Miller, “what about it, Doctor? You knew about that letter and you must know quite well who wrote it and why he wrote it.”

“Now, Miller,” said Thorndyke, “don't let us misuse words. We don't know who wrote that letter. We may have our opinions, and they may be right—or wrong. But in any case they will be pretty difficult to turn into evidence.”

“I suspect you have done that already,” grumbled Miller, “and you are keeping that evidence to yourself.”

“You are quite wrong,” Thorndyke replied. “I have no evidence beyond the facts which are known to you. Actually, I have given very little attention to the letter. It threw no light on the problem which I was trying to solve; whether Penrose was alive or dead, and, if he was dead, where we might look for his body.”

“I should have thought it was highly relevant.” Miller objected. “If it was good enough for some one to forge a letter to prove that Penrose was alive, when nobody supposed otherwise, that would suggest pretty strongly that the forger knew he was dead.”
“So it would,” Thorndyke agreed, “but that was of no use to me. I was not out for opinions or beliefs but for demonstrable facts.”

“Well,” said Miller, “you have produced your demonstrable facts all right, and you have solved your problem. And now, I suppose, you are going on to the next problem: Who murdered Daniel Penrose? And the solution of that problem is to be found in that letter; and as we are both working to the same end, I think you ought to put me in possession of any facts that are known to you.”

“But, my dear Miller,” Thorndyke protested, “I have no facts respecting this letter that are not known to you. I will hand you the photograph, and you can have an enlargement if you want to employ handwriting experts, or you can have the original. That is all I can do for you.”

He produced his letter-case, and, taking the photograph of the forged letter from it, handed it to Miller, who slipped it into his wallet and buried the latter in the depths of an internal pocket. As he did so he looked round sharply and exclaimed:

“What is the matter, Mr. Horridge? Are you not feeling well, sir?”

I looked at our friend, who seemed to be groping his way towards the door, and certainly the inquiry was justified. His aspect was ghastly. His face was blanched to a tallowy white, his hands trembled visibly, and he had the dazed, bewildered appearance suggestive of a severe mental shock.

“No,” he replied unsteadily. “I am not feeling at all well. This awful affair has been too much for me. It was all so horrible and so unexpected.”

“Yes,” Miller agreed sympathetically. “I expect it has given you a bad shake-up. Better come along with me to the bar and have a good stiff whisky. Don’t you think so, Doctor?”

“I think,” replied Thorndyke, “that a hot meal and a glass of wine would be better, if Mr. Horridge is returning to town this evening.”

“I am,” said Horridge, “but I couldn’t look at food just now. Besides, my train is due in less than half an hour.”

“Well, then,” urged Miller, “come along to the bar and have a good stiff drink. That will pick you up and fit you for the journey home. I happen to be going by that train, myself, so I can see you safely to Charing Cross, and into a cab if necessary.”

I think Horridge would sooner have been without the proffered escort, but Miller left him no choice, and accordingly allowed himself passively to be led away in the direction of the bar.

Thorndyke watched the two men disapprovingly as they passed out, and when they had disappeared, he remarked:

“I am afraid Miller is going to be a nuisance to us. His activity is premature.”

“Yes,” I agreed, “he is in full cry after Horridge and he thinks that he is on a hot trail. Obviously, he is convinced that Horridge wrote that letter, and I think he is right.”

“I have no doubt that he is,” said Thorndyke. “The obvious purpose of that letter was to create evidence that Penrose was alive after Oliver’s death, and so would inherit his property. But it would be impossible to prove that Horridge wrote it.”

“So it may be,” said I. “But Miller has got him at a disadvantage, and he is going to push his opportunity for all that it is worth. If he lets on that he is a police officer, Horridge will probably collapse altogether. He is in a fearful state of panic.”

“And well he may be,” Thorndyke rejoined, “if he wrote that letter. For, quite apart from the suggestion of guilty knowledge that it offers, the mere writing and uttering of that letter is a serious crime. It is a forgery in the fullest sense. It was done with intent to deceive, and the purpose of the deception was grossly fraudulent. If Miller can frighten him into an admission of having written the letter, he will be absolutely certain of securing a conviction.”

“On the charge of forgery,” said I. “But that is not Miller’s objective. You heard what he said. He is all out on the capital charge.”

“Yes, I realise that,” said Thorndyke. “Which is why I say that he is going to be a nuisance to us. Because he won’t be able to prove his case and he will have set up a disturbance just at the moment when what is needed is a little masterly inactivity combined with careful observation. It is a pity that Miller will not trust us more. He will butt in when the case is not ready for police methods. However, I am glad he is not travelling up with us. His eagerness to acquire knowledge becomes rather fatiguing.”

“We are not going up by that train, then?”

“No. We may as well have a little early dinner and take the motor omnibus to Canterbury.”

We adopted this plan, and, after a comfortable and restful meal, caught the omnibus and were duly deposited in the main street of Canterbury, not far from the cathedral. As we proceeded thence towards the station, we noticed an “antique” shop, the fascia of which bore the single word “Todd.”

“This,” I remarked, halting to glance at the antiquities—mostly of the prehistoric type—which were displayed in the window, “seems to be the shop that Horridge referred to as a favourite resort of poor Penrose. Probably some of the things
that we saw in the collection came from here.”

“One of them almost certainly did,” said Thorndyke. “Don’t you remember that Saxon brooch? The entry in the catalogue noted its origin as ‘Sweeney’s Resurrection.’”

“I remember the entry, now you mention it. Lockhart suggested that ‘Sweeney’ probably meant Todd, and apparently he was right.”

We went on our way, discussing the late Daniel Penrose and his harmless oddities, of which I had been so intolerant, and eventually reached the station in time to select our compartment at our leisure. There were few passengers besides ourselves, so that we were able to secure a first-class smoking-compartment of which we were the sole occupants, a matter to which I attended with some anxiety. For the train ran through to Charing Cross without a stop, and the long, uninterrupted journey would afford an opportunity for certain explanations which I felt were now overdue. With this view Thorndyke apparently agreed, for, when I presently opened my examination with a tentative question, he replied quite freely, without a sign of his customary reticence and evasiveness.

“Of course,” I began, “when Penrose’s body was found, I realised at once, in general terms, how I had managed to miss the essential points of the case. The possibility that Penrose might be dead never occurred to me; and it ought. It looks obvious enough now. But still I don’t quite see how you contrived to establish the fact of his death—which you evidently did—and locate the place of his burial.”

“It was all very hypothetical,” he replied, “even up to the last stage. Until Elmhurst reported the discovery I was not certain that my theory of the course of events might not contain some fallacy that I had overlooked. Hence my rather elaborate provisions to cover up a possible failure. But to come back to your own case; the initial mistake that you made was in disregarding the good old Spencerian principle that when certain facts are presented as proving a particular thesis, we should consider, not only that which is presented, but that, also, which is not presented. In other words, we should at once separate fact from inference.

“Now, when Brodribb gave us his narrative of the disappearance of Penrose, he honestly believed that his story was a recital of facts; whereas it was really a mixture of fact and inference. It had not occurred to him that the hospital patient might be some person other than Penrose, and he accordingly presented that patient as Penrose. And you accepted that presentation as a statement of fact, whereas it was only an inference. Hence you made a false start and got on the wrong track from the beginning.”

“I was fortunate enough to avoid this pitfall; for even while Brodribb was telling us his story, I made a mental note that the identity of the patient had been taken for granted, and that it would have to be considered, before any action could be taken. But as soon as I began to consider the question, it became clear to me that the balance of probability was against the patient’s being Penrose.”

“Did it really?” I exclaimed. “Now, I should have said that all the known facts pointed to his being Penrose. And so it seems to me still.”

“Then,” said Thorndyke, “let us argue the question. We will take two hypotheses: A, that the patient was Penrose; and B, that he was some other person, and examine the evidence in support of each.

“Let us begin with hypothesis A. What evidence was there that the patient was Daniel Penrose?

“There were five principal items of evidence. 1. The car was certainly Penrose’s car. 2. The patient had been in possession of that car. 3. The coat, which was undeniably the patient’s coat, had Penrose’s driving licence in its pocket. 4. The initials on the patient’s collar were Penrose’s initials. 5. A fragment of an ancient object was found in the pocket of the patient’s coat. But Penrose was a collector of antiquities and there was reason to believe that he had gone out that day for the purpose of acquiring some such objects.

“Now, you will notice that the first three items are what we may call extrinsic. They afford no evidence of personal identity. They merely prove that the patient was in possession of Penrose’s property, and they are thus of very little weight. The other two items we may call intrinsic. They are connected with the actual personality of the patient.

“Of these, the initials on the collar furnished by far the more weighty evidence of identity.”

“I should have assumed them to be quite conclusive,” said I.

“Then you would have been wrong,” he replied, “for you would have been assuming that Penrose was the only man in the world whose initials were D. P. Still, the fact that the patient’s initials were D. P. established a very high probability that he was Daniel Penrose.”

“I should have put it higher than that,” said I. “It would have seemed to me nearly possible a certainty. For if he were not Penrose the coincidence would be, as it was, such an amazing one.”

“I think you exaggerate the abnormality,” he rejoined. “It was a very remarkable coincidence; but there are two things that we should bear in mind. First, the adverse chances were not so enormous as you seem to imply. There are great numbers of men whose initials are D. P. And, secondly, that the laws of probability relate to large numbers. They must be applied with great caution to particular cases. The tendency to assume that because a thing is improbable, it will not happen, is a mistake. Improbabilities and coincidences are constantly occurring, and we have to allow for that fact.
“Nevertheless, it had to be admitted that those initials made it, in a very high degree, probable that the patient was Daniel Penrose. But now let us take the alternative hypothesis and see what the probabilities were on the other side. And first, consider the conduct of the patient. Owing to his black eyes and confused face, he was completely unrecognisable. Nobody could form any idea what he was like. But when his injuries cleared up he would have been recognisable; and the extraordinary and determined way in which he abscended from the hospital at a carefully-chosen time, is very suggestive. Evidently, during his simulated unconsciousness, he had been watching for an opportunity to get away at night when his odd appearance would be less observed. His behaviour was like that of a man who sought to escape before recognition should be possible.

“Then, there was the man’s previous behaviour. Apparently he had abandoned his car. But a car which is abandoned is usually a stolen car. Again, the car which killed the old woman was being driven wildly and furiously. We knew then of no reason why Penrose should have been driving in that manner. But a stranger in unlawful possession of a car would probably have sufficient reasons; and in fact, persons who steal cars usually do drive furiously. Then, if Penrose had knocked down the old woman he would probably have stopped and reported the accident. He was a responsible, decent gentleman and there was no reason why he should not have stopped. But a stranger, in possession of a stolen car—in effect, a fugitive—could not afford to stop and be interviewed.

“Furthermore, if this man had been in unlawful possession of a car, something must have happened to the owner of that car at some place. The stranger would have good reasons for getting away from that neighbourhood as quickly as possible. Thus, the furious driving both before and after the accident would be sufficiently explained.

“So, looking at the case as a whole, you will see that, on the assumption that the patient was Penrose, his conduct was utterly unreasonable and inexplicable; on the assumption that he was not Penrose, his behaviour was in every respect exactly what we should have expected it to be. For if he was not Penrose, he was under strong suspicion of having made away with Penrose, for the reasons: 1. That Penrose had unaccountably disappeared, and; 2. That the stranger was in possession of Penrose’s car and his driving licence. Taking all the facts together, I came to the conclusion that, in spite of the initials, the balance of probability was against his being Penrose.

“Nevertheless, those initials presented a formidable objection to the view that I was disposed to adopt, and I decided that the question whether they were Penrose’s initials or those of some other person must be settled before any further investigation would be worth while. It was not a difficult question to dispose of, and it turned out to be easier than I had expected. You remember how we obtained the answer?”

“Indeed, I don’t,” I replied. “I never knew that the question had been raised.”

“You never followed this case very closely, for some reason,” said Thorndyke, “but if you will recall our visit to the garage, you will remember that I was able, quite easily, to extract a statement from Kickweed which settled the question definitely.

“We learned from him that Penrose was in the habit of marking all his portable property, including his collars and handkerchiefs, with his name, D. Penrose, by means of a rubber stamp.”

I grinned rather sheepishly. “I remember quite well now you mention it, but I am afraid that, at the time, I merely wondered, like a fool, why you were going into such trivialities at such length.”

“Well,” said Thorndyke, “you will now see that our conversation with Kickweed cleared up all our difficulties. Penrose’s collars were marked ‘D. Penrose’ with a rubber stamp; the patient’s collar was marked ‘D. P.’ with a marking-ink pencil. Therefore, the evidence of the collar supported all the other evidence; it went to prove that the patient was not Penrose.

“Then, at once, arose two other questions: If he was not Penrose, who was he? And what had become of Penrose? The first question had to be left until we had answered the second. Penrose had disappeared. What had happened to him? Was he alive or dead?

“Now, having regard to the strange and sinister circumstances; the disappearance of one man, the appearance of another man in possession of his property and the anxiety of that other man to escape without being identified, there was only one reasonable conclusion that we could come to. The overwhelming probability was that Penrose was dead and that his body had been concealed by burial or otherwise.

“Adopting this view, as I did, the next questions were: Where did Penrose meet his death? And where was his body concealed? The latter question was the more important, but the answer to both was probably the same. And both questions were contained in the further question: From what place did the car start on that wild journey home?”

“Now, in regard to this problem—the starting-point of the car’s journey—we had two clues, and they were both very imperfect. The place where the woman was killed was in the Canterbury district and the car was travelling via Maidstone towards Gravesend. But the speed at which it was travelling made it difficult to judge how far it might have come, especially as we had no exact information as to the time at which it started. All that we knew was that the car advanced towards the Canterbury-Ashford road from some place to the south and east.

“The other clue was the very distinctive pottery fragment. But this also was a very ambiguous clue. The pocket in which we found it was not Penrose’s pocket; and we did not know how long it had been in that pocket. However, when we came to examine these difficulties, they did not appear insuperable. Thus, notwithstanding that the fragment was in another man’s possession, I was disposed to associate it with Penrose for two reasons; first, that Penrose was a collector of antiquities, and, second, that, when he started from home, he took with him—as we learned from Kickweed—two digging tools and
was, apparently, intending to do some sort of excavation. As to the second difficulty, the earth in which the fragment was embedded was of the same kind as that which we scraped from the coat and that which we found later on the car. So it appeared practically certain that the fragment was the product of that day's digging.

“The next question was: Whence had that fragment come? That was a vitally important question; for there could be little doubt that the place where that fragment was dug up was the place where Penrose had met his death and where his body was concealed. But how was that question to be answered? It seemed that the only possible method was that which I had adopted in regard to the other questions; to form a working hypothesis and see whither it led. Now, the broken edges of the fragment showed fresh fractures. It had been broken off the pot at the time of the excavation; and as the digging had probably been done after dark, by a very imperfect light, the fragment had apparently been overlooked, the new fracture of the pot being mistaken for an ancient one. It followed that, somewhere, there was a broken pot with a space in it corresponding to this fragment, by which it could infallibly be recognised. If we could find that pot it would—probably be possible to ascertain where it had been dug up.

“But where were we to look for that pot? The only possible place known to us was Penrose's collection; and circumstances created an initial probability that it was there. But, further, I had a theory, as I mentioned to you, that the expedition on which Penrose had embarked that day possibly had the express purpose of recovering this fragment to make the imperfect pot complete. Accordingly, I took an opportunity of inspecting the collection, and I took with me my invaluable box of moulding wax.

“You know the result. The pot was there, easily recognisable at sight and conclusively identified by the wax squeeze. There was also a catalogue entry, presumably describing the piece and recording the source whence it had been obtained. But the wording of the entry was so obscure as to present a fresh puzzle. Nevertheless, it was a great advance; for the information was there, if we could only extract the meanings of the words.

“Those words were, you will remember: 'Moulin a vent; Julie, Polly.' Now, the first term was obvious enough; the piece was a 'Windmill Hill' pot. By the study of other entries in the catalogue, I reached the conclusion that 'Julie' probably represented the locality, and 'Polly' the person from whom the pot was obtained. Accordingly, the first thing to be done was to ascertain, if possible, the meaning of the word 'Julie.'

“To this end, I procured and read various works dealing with neolithic pottery; and, since our pot had almost certainly been dug out of a long barrow, I gave attention to those also. But the result, for a time, was very disappointing. I read through quite a large number of books and papers on barrows and pottery without meeting with any name resembling “Julie.” At last, I struck the clue in Jessup's Archeology of Kent. There, in the chapter dealing with neolithic remains, I found a reference to a long barrow known as Julliberrie's Grave, in the neighbourhood of Chilham. Looking it up on the ordnance map, I saw at once that its situation fitted the circumstances exactly, for it was quite close to the known track of the car. Thereupon I decided that Julliberrie's Grave was almost certainly the place for which I had been searching, the starting-point of the car's wild career and the place in which the body of Daniel Penrose was probably reposing.

“The question then arose: What was to be done? I had not a particle of definite evidence to support my belief. My whole case was just a train of hypothetical reasoning—guess-work, if you will; and guess-work was not good enough either for the Home Office or the Office of Works. Besides, as you acutely observed, I didn't want to let the cat out of the bag prematurely. Yet it was impossible to get any further in the investigation until the barrow had been explored.

“There was only one thing to do—to organise a scientific excavation of the barrow by skilled and trained archaeologists. That would ensure an absolutely exhaustive exploration without injury to the barrow and without any disclosure of my suspicions if they should prove to be unfounded. Accordingly, I looked up our invaluable friend, Elmhurst, and, to my great satisfaction, found that he had both the means and the will to carry out the excavation if we were prepared to finance the work.

“You know the rest. Everything went according to plan and the first stage of our investigation was brought to a triumphant conclusion. I only hope that the second stage will go as well. I ought to; for we have now a solid foundation of established fact to build on.”

“Yes,” I agreed. “We know that Penrose is dead and that somebody killed him. But I don't see much of a lead towards the conclusion as to who that somebody may have been. But I expect that you do. Perhaps the word 'Polly' in that ridiculous catalogue entry, suggests something to you. Apparently, it refers to a person, though it is hardly safe to say even that. The only thing that is certain is that it doesn't mean Polly.'

“The meaning of that word,” he replied, “really belongs to the second stage of our inquiry, on which we are now embarking; the identification of the person whom we may call 'the murderer'—though the fact of murder is not established. Penrose was killed with his own weapon, which, as the coronor justly observed, suggests a struggle or conflict. But as to the identity of that person, I have not yet formed a definite opinion. There is one essential question that has to be settled before we begin to theorise. We have got to know whether the alleged burglary at Queen Square was an actual burglary and whether the cupboard in the small room was actually opened.”

“You mean,” said I, “that, if the cupboard was opened, it must have been opened with Penrose's keys, as you have always maintained, and that, therefore, the person who opened it must have been the murderer.”

“I would hardly go as far as that,” he replied. “If some person did actually enter that room and open the cupboard, he must have opened it with Penrose's keys or with duplicates made from them. That would suggest that he was either the
murderer or in league with the murderer. But even if he opened the cupboard, that would not be conclusive evidence that he stole the jewels. He might have found the cupboard empty. That is not probable, but it has to be borne in mind. And then we have to remember that the only evidence of the room's having been entered is the unsupported statement of one person."

"Yes," said I, "and not an entirely unsuspected person. Our friend, Horridge, seems to have had considerable misgivings as to the discreet and melancholy Kickweed; but I didn’t think that you had any suspicions in that direction."

"I don’t say that I have," replied Thorndyke, "or that I entertain seriously the various possibilities that I have mentioned. I am merely pointing out that we have got a good many eggs in our basket. A sensible man keeps in his mind all the possibilities, no matter how remote; but he also gives his special attention, in the first place, to those that are least remote. And, meanwhile, we have got to begin our quest by settling definitely whether that cupboard has or has not been opened. We have very little doubt as to what was in it when Penrose was alive, and Lockhart will now have to make an explicit statement. If the things are not there, we shall have a definite fact and can consider what follows from it; and if we find the collection intact—well, I shall be very much surprised."

XVIII. — THE OPENING OF THE SAFE

On suitable occasions, Thorndyke could lie remarkably low and exhibit a most masterly inactivity.

But also, on suitable occasions he could act with surprising promptitude. And the matter of the alleged burglary at Queen Square presented such an occasion. Armed with an authority from Mr. Brodrribb, as joint executor, he proceeded to call on Chubbs and make all necessary arrangements for the opening of the safe in the small room; and then, as I gathered, he had an interview with Lockhart. What passed at that interview I did not learn, but I suspect that there was some rather plain speaking. Not that it should have been necessary, for Lockhart was a lawyer and knew in what a very questionable position he stood. But whatever passed on that occasion, he was quite amenable. He frankly admitted that he had seen in the small room a collection of jewels which were almost certainly the Billington jewels, and he gave Thorndyke a written statement to that effect. Further, he wrote a letter to Miller, in somewhat ambiguous terms, referring him to Thorndyke for fuller particulars, and agreed to be present when the safe was opened.

Naturally, this letter brought Miller, hotfoot, to our chambers, and a preliminary discussion was unavoidable in spite of Thorndyke’s efforts to stave it off.

"Now, Doctor," the superintendent began a little truculently, "this is the sort of thing that I was complaining of. You knew those jewels were there, but you didn’t let on the faintest hint to me."

"I did not know," Thorndyke protested. "I only suspected; and I don’t profess to communicate mere suspicions."

"Well," rejoined Miller, "there they were, at any rate, and we can take it as a certainty that they are not there now."

"I expect you are right," said Thorndyke, "but why not leave the discussion until we know?"

"For all practical purposes, we do know," replied Miller. "We can take it that there was either a real or a pretended burglary, and in either case the stuff is pretty certainly gone; and the question is, who lifted it?"

"You remember," said Thorndyke, "that the keys were stolen from Penrose’s body. Presumably, they were taken for the purpose of being used; and they could have been used only by entering the premises. Moreover, if the cupboard was opened, it could have been opened only with Penrose’s keys."

"Yes, that’s a fact," Miller agreed. "But suppose the murderer did enter the premises, how do we know that he found the stuff there? Or, for that matter, how do we know that the place was ever entered? We have got only one man’s word for it. And, to an experienced eye, it looks a bit like an indoor job."

"I don’t quite see what is in your mind," said Thorndyke. "You are not letting your thoughts run on Horridge?"

Miller grinned sourly. "No," he replied, "though I must admit that I did suspect him very considerably in connection with the murder. But I have squeezed him pretty dry—and I can tell you he didn’t like being squeezed. But in the end, he was able to produce an undeniable alibi—a club dinner that he attended on the seventeenth of October at which all the members signed their names. So Horridge is now out of the picture."

"He was never in," said Thorndyke. "The proceedings at the inquest made that perfectly clear."

"What proceedings do you mean?" Miller demanded.

"I am referring to Kickweed’s evidence," Thorndyke replied. "If you had not been so preoccupied with the forged letter, you would have seen that it excluded Horridge from any possible suspicion in regard to the murder. Kickweed deposed that on the twentieth of October, three days after the murder, and the very day after the flight of the presumed murderer from Gravesend Hospital, Horridge called at Queen Square to see Penrose; and the two of them, Horridge and Kickweed, interviewed a police officer who had come to bring the coat that was assumed to belong to Penrose. Now, if Horridge had been the murderer, he must also have been the hospital patient. But the patient had two very bad black eyes and a severe wound across his right eyebrow. Obviously, he would have been in no condition for paying calls; and you will remember that the police officer was looking for a man with two black eyes and a cut across his right eyebrow."
"Yes," Miller admitted, "I had overlooked that. But it did look as if Horridge had written that letter. Have you any idea who did write it? We have got to find that out."

"My dear Miller," Thorndyke said, a little impatiently, "you had better forget that letter. It is a criminal matter, but it has no bearing on the crime which we are investigating. But if you have dropped Horridge, what do you mean by suggesting that this burglary may have been an indoor job?"

"Well, you know," replied Miller, "this burglary rests on the story told by Mr. Kickweed; and Mr. Kickweed strikes me as a decidedly downy bird."

"He couldn't have been the murderer, you know," said Thorndyke. "But it was presumably the murderer who had the keys."

"I know," rejoined Miller. "But he was in the house; and there is such a thing as wax."

"You can take it," said Thorndyke, "that Penrose was not in the habit of leaving his keys about."

"No, probably not," Miller agreed, "but I suppose he had a bath sometimes, and I don't suppose he took his clothes into the bathroom with him."

Thorndyke smiled indulgently at the superintendant and admonished him in mock solemn tones:

"Now, my dear Miller, let me urge you to beware of obsessions. At the inquest you allowed yourself to become letter-minded, and so you missed a vitally important item of evidence. And now you seem inclined to let yourself become Kickweed-minded. Why not leave Kickweed alone and address yourself to the more obvious lines of inquiry?"

"Still, you know, Doctor," Miller persisted, "somebody must have known that those jewels were there."

"There is not a particle of evidence that Kickweed did. You must remember that Penrose kept their existence absolutely secret from everybody excepting Lockhart; and he swore him to secrecy before he showed them. So far as we know, their existence was known only to two persons; Lockhart, and the man, whoever he was, who supplied them."

"Yes," said Miller, "the chappie who supplied them to Penrose certainly knew that they were there. It would be interesting, quite apart from the murder business, to know who he was. Wonder if it could have been Crabbe, after all?"

"You needn't wonder, Miller," said Thorndyke. "It was Crabbe. I think there can be no doubt about that."

Miller sat up in his chair and turned a rather startled face to my colleague.

"Hallo, Doctor!" he exclaimed. "You seem to know a mighty lot about it. And how did you manage to dig up Mr. Crabbe? I've been wondering about that ever since that evening when you asked me about him."

"There was a document," replied Thorndyke; "a scrap of paper, apparently a descriptive label, which was found in the small room, on the morning after the alleged burglary. That was what enabled me to connect Crabbe with Penrose's collection."

"Then," Miller exclaimed excitedly, "we have got actual, tangible evidence against Crabbe. Who has got that scrap of paper?"

"Brodrribb has the original, but I kept a copy. You shall see it;" and, with this, he rose and went to the cabinet in which the Penrose dossier was kept. Taking out from the collection of notes and papers the copy of Mr. Penrose's cryptogram, he brought it over and gravely handed it to Miller, who stared at it aghast while I watched him with unholy glee.

"I can't make anything of this," the superintendent grumbled. "'Lobster: hortus petasatus.' It doesn't make sense. Besides, a lobster isn't a crab; and what in creation is a hortus petasatus?"

Thorndyke expounded the meaning of the inscription, explaining the late Mr. Penrose's peculiarities of speech, and Miller listened with incredulous astonishment.

"Well, Doctor," he commented. "I take off my hat to you. That thing would have conveyed nothing to me. It's like some dam' silly puzzle game. And you might have passed it all round the C.I.D. and no one would have been an atom the wiser. But I am afraid it wouldn't do as evidence in a court of law."

"Possibly not," Thorndyke admitted; "but I am not concerned with the robbery charge against Crabbe. I am investigating the murder of Daniel Penrose; and I am assuming that there was a burglary, that the burglar was in possession of Penrose's keys and that he knew what the cupboard in the small room contained. Of course, if we find the jewels still in the cupboard, we shall know that those assumptions were wrong."

"Yes," Miller agreed, "but we shan't. Burglary or no burglary, those jewels have been pinched. I'd lay my bottom dollar to that. But you realise, Doctor, that, even if there was a burglary, the burglar couldn't have been Crabbe. He was in chokey at the time when it was supposed to have occurred."

"Yes," said Thorndyke, "I had noted that fact; so we shall have to look round for some other person who knew that the jewels were there. And no such person is actually known to us, if we except Lockhart, and I suppose we can hardly suspect him."

Miller grinned faintly at the suggestion and then became thoughtful. After a few moments of profound reflection he remarked:
“Those locksmiths will make hay with poor old Penrose's safe. Are you going to be present to see how the job is done?”

I was instantly struck by this abrupt change of subject and I could see that it was also noticed by Thorndyke, who, however, followed the superintendent's lead.

“No,” he replied. “I shall not turn up until they have had time to get the job finished. But Polton will be there to watch the proceedings and pick up a few tips on the correct method of opening a safe.”

“Ah!” said Miller, “I shall have to keep an eye on Mr. Polton if he is going to qualify as an expert safe-breaker. He is mighty handy already in the matter of locks and skeleton keys and house-breaker's tools.”

He pursued this facetious and quite irrelevant topic at considerable length and with no tendency whatever to revert to the subject of the Queen Square burglary. And then he pulled out his watch and, having bestowed on it a single startled glance, sprang up, declaring that, if he didn't look sharp, he would be late for an important appointment. And with this he took his departure hurriedly and with a distinctly purposive air.

“Miller has got a bright idea of some kind.” I remarked when he had gone.

“Yes,” Thorndyke agreed, “and he thinks he has got it all to himself. You noticed his sudden anxiety to switch the conversation off the subject of Mr. Penrose. Well, it is all to the good if he doesn't get busy prematurely. I suppose you are coming to swell the multitude at Queen Square to-morrow?”

“If there is room,” I replied, “I should like to see the fateful question decided. But it will be a bit of an anti-climax if the stuff is there after all, though I don't suppose Horridge will complain.”

“He will have a bad disappointment,” said Thorndyke, “if we find the jewels there and he is then told that they are stolen property. However, there is no use in speculating. To-morrow we shall know whether they were or were not stolen, and until we know that, neither Miller nor I can decide on the next move.”

When, on the following morning, we arrived at the house in Queen Square and were admitted by Kickweed, we learned from him that the locksmiths had started their work on the safe about an hour previously and that the operations were still in progress. Our friend shook his head despondently as he showed us into the morning-room and remarked that it was a dreadful business and very disturbing.

“Would you like to wait here until they are ready,” he asked, “or will you join the—er—assembly in the great gallery?”

We elected to join the assembly, whereupon he ushered us into the gallery, announcing us with due solemnity as he threw open the door. The word “assembly” appeared to represent Mr. Kickweed's state of mind rather than the actual facts, for there were only three persons present: Lockhart, Miller and Horridge, the latter very subdued, care-worn and decidedly gloomy. The cause of his depressed state was made evident presently when he took us apart, leaving Lockhart and Miller amicably discussing the legal position of an accessory after the fact.

“This is a nice state of affairs,” Horridge complained. “Do you know that this detective fellow actually accused me, in so many words, of having murdered poor old Pen? Me, his old and trusted friend and an executor of his will! And, if I hadn't had a conclusive alibi, I believe he would have run me in. And now he tells me that even if we find the jewels intact, it will be of no advantage to me because they are all stolen property; which I don't believe. I ask you, is it likely that a man of Pen's character would have been guilty of trafficking in stolen goods?”

“I should, say, certainly not,” replied Thorndyke, “if he knew that the goods were stolen. But the point is hardly worth discussing if the goods in question have disappeared.”

Here our conversation was interrupted by Polton who entered to announce that the work on the lock was completed and that the safe door was free and ready to be opened. Thereupon we followed him into the small room where we found two very superior artificers standing on guard over the remains of a large iron safe, the massive door of which was disclosed by the opening of the wooden case. Miller's prognostications had certainly not over-stated the results of the locksmith's activities. To say nothing of the wooden door with its shattered detector lock, those artificers had undoubtedly “made hay with” the safe, itself.

“Now, Mr. Horridge,” said Miller, “you, as executor, are the proper person to open the safe.”

Horridge, however, deputed his functions to one of the workmen who accordingly took hold of the battered door and swung it wide open, disclosing a range of shallow drawers like those of an entomological cabinet.

“Are these drawers in the condition in which you saw them when Mr. Penrose showed you his collection?” Thorndyke asked.

“Yes, so far as I can see,” Lockhart replied. “He took them out, one by one, in their proper order from above downwards, and carried each over to that table by the window so that we could see the contents better.”

“Then,” said Thorndyke, “we had better do the same.”

But it was not necessary; for when the top drawer was pulled out it was seen to be undeniably empty. Horridge exhibited its vacant interior to the assembled company, turned it upside-down and shook it, and glumly returned it to its place. The case was the same with the second drawer and also with the third, excepting that when it was inverted some small object was heard to fall out on to the floor. Miller picked it up and exhibited it in the palm of his hand, when it was seen to be a
small opal and was dropped back into the drawer. But that little opal was the solitary occupant of the cabinet. Apart from it and a plentiful covering of dust, the whole range of drawers from top to bottom was empty.

“That burglars,” Lockhart commented as the last of the drawers was slid back into its place, “was pretty thorough in his methods. He made a clean sweep of the whole collection; not only the gems but the coins as well. And he must have been fairly heavily laden when he went away, for most of the coins were gold and I should say there were some hundreds of them.”

“I don’t fancy those coins were gold,” said Miller. “I think I know where they came from, and, if I am right, they were electros—copper, gilt. Still, even copper electros weigh something. But it’s surprising what a lot of coins and jewellery you can stow away about your person if you have the right sort of pockets. And it’s pretty certain that he had an overcoat as well.”

“Do you remember, Lockhart,” Thorndyke asked, “whether, when you saw the jewels, there were any labels attached to them?”

“No attached,” Lockhart replied. “There were no fixed labels; only slips of paper like those on the shelves of the gallery.”

“I don’t notice what was written on those slips of paper? Were they descriptive labels?”

Thorndyke grinned. “You know what Penrose’s descriptions were like,” he replied, “and you have seen the catalogue. So far as I could make out, the descriptions on the labels were similar to those in the catalogue; apparently, unintelligible nonsense.”

“You can’t recall any of them?” Thorndyke asked.

“I remember one, because I tried to puzzle out what it could mean, and failed utterly. It was ‘Decapod; jardin a chapeau’. Does that convey anything to you?”

“It does to me, thanks to the doctor’s explanations,” said Miller, who had been listening eagerly to the questions and answers. “I don’t know what a decapod is but I’ve got enough French to infer that jardin de chapeau is much the same as hortus petasatus. And the doctor can tell you what that means.”

“What does it mean?” Lockhart demanded; and Thorndyke—not very willingly, I thought—gave the required explanation.

“Yes,” Lockhart chuckled, “I see now, though I hadn’t your ingenuity. Poor old Penrose! What nonsense he did write and speak! But I think I also see the point of your questions.”

“And an uncommonly good point it is,” said Miller. “That chappie was careful to take away the labels as well as the goods, and if he hadn’t dropped one of them we should know a good deal less than we do. It’s a very significant point, indeed.”

“And now,” said Thorndyke, “as we have done what we came to do, perhaps we had better leave Mr. Horridge to discuss the question of repairs. Are you walking in our direction, Miller?”

The superintendent was not. He was proposing, he said, to make a slight survey of the premises to elucidate the circumstances of the burglary, but I suspected that he was unwilling to run the risk of an interrogation by Thorndyke. So we left him to his survey, and, having once more consoled with Horridge, we set forth in company with Lockhart, leaving Polton to spy on the superintendent and worm out any trifles in the way of technical tips and trade secrets that he could from the locksmiths.

XIX. — THORNDYKE’S DILEMMA

I HAVE REFERRED MORE THAN once to Thorndyke’s habitual unwillingness to discuss uncompleted cases, excepting in relation to questions of fact, or to disclose any opinions or theories that he had built on the facts which were known to us both. I had come to accept this reticence as a condition of our friendship and usually refrained from any attempts to discover what lines his thoughts were pursuing or what inferences he had drawn. But when we met at our chambers in the evening after our visit to Queen Square, I found him in a mood of unwonted expansiveness, apparently ready to discuss our present case without any reservations.

The discussion opened with a question that I put tentatively, half expecting the usual invitation to exercise my own admirable faculty of deduction.

“I noticed that you and Miller seemed to attach great importance to the circumstance that the burglar had carefully removed all the labels from the drawers. I don’t quite see why. Would not a burglar ordinarily take away any labels that might furnish a clue to what had been stolen?”

“I don’t see why he should,” Thorndyke replied. “An ordinary burglar would assume that the contents of the drawers were known, so that the labels would give no additional information. But these were not ordinary descriptive labels. They gave very definite information as to the person who had supplied the jewels; and as those jewels were the proceeds of a robbery which was known to the police, the information would be very dangerous to the person named. But that would not concern an ordinary burglar. The labels would furnish no clue to his identity. Of course, we know that he was not an
ordinary, casual burglar, since he had Penrose’s keys. But the point is that, whoever he was, he seemed to consider it a matter of importance that the identity of the person who sold the jewels to Penrose should not become known.”

“But the jewels were sold to Penrose by Crabbe.”

“Yes.”

“But Crabbe could not have been the burglar. He was in prison at the time.”

“Exactly,” Thorndyke rejoined. “That is the importance of the discovery. The labels implicated Crabbe. But Crabbe could not have been the burglar. It seems to follow that they implicated some one besides Crabbe; and as the burglar was in possession of Penrose’s keys and would thus appear to have been either the murderer or an accessory to the murder, it would be very interesting to know whom those labels could have implicated. I fancy that Miller has a very definite opinion on the subject; and I am disposed to think that he is right.”

“The deuce you are!” I exclaimed. “Then it seems to me that you have got the investigation much farther advanced than I had imagined. I had supposed that the search for the murderer had still to be begun. But it seems that there is already a definite suspect. Is that so?”

He reflected for a few moments and then replied:

“The word ‘suspect’ is perhaps a little too strong. My conclusions as to the possible identity of the murderer are at present on an entirely hypothetical plane. I have considered the whole complex of circumstances connected with the murder and have noted the persons who seem to have made any sort of contact with those circumstances; and I have considered each of those persons in relation to the questions whether he could possibly be the murderer and whether his known characteristics agree with those of the murderer.”

“But,” I demanded, “what do we know of the characteristics of the murderer?”

“Very little,” he replied, “but still enough to enable us to apply at least a negative test in conjunction with the other considerations. Thus we can exclude Kickweed and Horridge because, although they make certain contacts, neither could have been present at the place and time of the murder. But let us take a glance at the positive aspects.

“We begin with the justifiable assumption that the hospital patient was the murderer. Now, what do we know about him? Of his personal characteristics we have no description whatever. All that we know is that his collar bore the letters D.P., which were presumably the initial letters of his name, and that he had a deep wound crossing his right eyebrow which must have left a rather conspicuous permanent scar. So you see that, little as we know, we have the means of excluding or accepting any given individual. If his characteristics agree with those of the patient, he is a possible suspect; if they do not agree, he is not possible.”

“And do you know of any person whose characteristics do agree with those of the patient?”

“Up to a certain point,” he replied. “The ascertainment of the scar would involve a personal examination. That will have to come later as a final test. For the present, we must be content with agreement so far as is known.”

“But you have some such person in view?”

Again he reflected for a few moments. At length, he replied:

“I am in a rather odd dilemma. I have two theoretically possible suspects and I can make no sort of choice between them.”

“And do the names of both of them begin with D.P.?” I asked, imagining that I was putting a poser.

“But,” he exclaimed, “that is the extraordinary thing. They do. There is a coincidence for you if you like. It was a striking coincidence that the murderer should have the same initials as the victim. But this is more than striking. It is almost incredible.”

“I suppose we name no names,” I suggested humbly.

“I don’t know why not,” he replied. “We keep our own counsel until we can turn hypothesis into proof. Well, my two possible suspects are Deodatus Pettigrew and David Parrott.”

“Parrott!” I exclaimed in astonishment. “I don’t see where he comes into it; or Pettigrew either for that matter.”

“It is just a question of the contacts that they make with the circumstances of the murder,” he replied. “Let us take them separately and see what those contacts are. The odd and confusing thing is that their contacts are entirely separate and from different sides.”

“Is it possible that they were both concerned in the murder?” I suggested; “that they may have been confederates?”

“I have considered that,” he answered. “It is possible, but, I think, unlikely. The crime has all the appearances of a one-man job. Moreover, I can find no evidence of any contact between these two men. So far as I know, they were strangers to each other and they persistently remain completely separate. So we will consider them separately.

“Now, as to Parrott. The hospital patient had in his pocket a fragment of pottery which almost certainly came from Julliberrie’s Grave. That fragment had been broken off a pot which was in Penrose’s museum and which had come from Julliberrie’s Grave. The entry in the catalogue relating to that pot consisted of the usual three terms; the description of the
However, I will sit down for a morning the room, threw open the door; whereupon Mr. Brodribb I must say that I have the strongest feeling separate and that both men have been greatly mistaken, the superintendent is in full cry really a definite case of the murderer.

I have assigned to the burglar, and we time, that that association put him under suspicion, and Pettigrew did or did not take part in the robbery, we don’t know. But we do know that he was associated with Crabbe at the time, that that association put him under suspicion, and that if Crabbe should be proved guilty, he, Crabbe’s associate, would certainly be implicated. You see, therefore, that Pettigrew agrees completely with the special characteristics that we have assigned to the burglar, and we know of no one else who does.

But that burglar was in possession of Penrose’s keys and was, therefore, either the murderer himself or a confederate of the murderer.

Yes,” I agreed, “it is a very complete case so far as it goes. But it is only a string of hypotheses, after all.”

“Not entirely,” he replied. “The association of Crabbe and Pettigrew is a fact, if we accept Miller’s statement. There is really a definite case of suspicion against Pettigrew, at least that is my opinion; and it is certainly Miller’s. If I am not greatly mistaken, the superintendent is in full cry after Deodatus. But you see the curious dilemma that we are in. Here are two men each of whom agrees in certain respects with the characters of the murderer. But the characters with which they agree are not the same. Parrott is connected with Julliberrie’s Grave but seems to have no connection with the burglary. Pettigrew is connected with the burglary but seems to have no connection with Julliberrie’s Grave. But the murderer must have been connected with both.”

“It almost seems,” said I, “that you will have to accept—at least provisionally—the idea of confederacy. The assumption that both men were concerned in the murder would release you from your dilemma.”

“That is quite true,” he replied. “But it would be a gratuitous assumption. There is nothing to support it. The two men are separate and there is no apparent connection between them; nothing to suggest that they were even acquainted. And again I must say that I have the strongest feeling that the murder was the work of one man absolutely alone.”

“It certainly has that appearance,” I admitted, “but still—”

I paused as the sound of footsteps on our landing caught my ear. A moment later, an old-fashioned flourish on the little brass knocker of our inner door at once announced the arrival of a visitor and declared his identity. I rose, and, crossing the room, threw open the door; whereupon Mr. Brodribb bounced in, looking, with his glossy silk hat and his faultless morning dress, as if he had just jumped out of a hand-box.

“Now,” said he, holding up his hand, “don’t let me create any disturbance. I am only a bird of passage. Off again in two or three minutes.”

“But why?” said Thorndyke. “Polton will be bringing in our dinner by that time. Why not stay and season the feast with your illustrious presence?”

“Very good of you,” replied Brodribb, “and very nicely put. I should love to. But I have got a confounded engagement. However, I will sit down for a minute or two and say what I have to say. It isn’t very important.”

He placed his hat tenderly on the table and then continued:
My principal object in calling, I don’t mind admitting, is to bespeak the good offices of the incomparable Polton. I’ve got a fine old bracket clock—belonged to my grandfather; made for him by Earnshaw, and I set considerable store by it. Now, something has gone wrong with its strike and I don’t like to trust it to a common clock-jobber. So I thought I would ask Polton to have a look at it. Probably he can do all that is necessary, and, if he can’t, he will be able to give me the name of one of his Clerkenwell friends who is equal to dealing with a fine bracket clock.”

“Very well,” said Thorndyke, “I will undertake the commission on his behalf. He will be delighted, I am sure, to do what he can for pure love of a good clock, to say nothing of his love of the owner.”

“Does he love me?” asked Brodribb. “Well, I hope he does, for I have the greatest admiration and regard for him. Then that is settled. And now to the other matter. I thought you would be interested to know that I have got the intestacy proceedings in re Penrose well under way.”

“You haven’t lost much time,” I remarked in some surprise.

“Oh, I don’t mean that I have got it settled,” said he. “That will be a work of months, at least. But I have got the essentials in train. As soon as I got your note informing me that Daniel Penrose was dead and that he died on the seventeenth of October, I set the machinery going. Seemed a bit callous, with the body still above ground, but I don’t believe in wasting time. None of the law’s delay for me if I can help it. So I put out the necessary advertisements at once. You see, it was pretty clear that I had a copy of the Penrose pedigree. That told me at once who the principal next of kin were, though, of course, I didn’t know where to find them. But I was able to give names and particulars which were likely to catch the attention of interested parties. And they did. As a matter of fact, there are only two persons who matter and I have got into touch with them both. They are descendants of a certain Elizabeth Penrose, an aunt of Oliver’s, who married a man named John Pettigrew. Their exact relationship is to each other, I have forgotten, but they are both named Pettigrew. One of them is a young lady named Joan; a nice girl, poor as a church mouse but very independent and industrious. Works for her living and supports her mother—secretary to some professor fellow. And the mother is quite a nice lady. She had a job as manageress of some sort of antique shop, but the proprietor went bust and she lost the billet. It is pleasant to think of these two worthy ladies coming in for a bit of luck.”

“You have seen them, apparently,” said Thorndyke.

“Yes, they turned up two days after the advertisement appeared, and I liked the look of both of them. The girl, Joan, is very much on the spot and very modern—short skirts, head like a mop, you know the sort of thing. But I like her. She’s a good girl and she has evidently been a good daughter.”

“And the other person?” Thorndyke asked.

“The other is a man, Deodatus Pettigrew. Quaint name, isn’t it? I hope he will justify it, but I have my doubts. Joan and her mother knew him, but they were mighty reticent about him. Rather evasive, in fact. Made me suspect that he might be a sheep of the brunette type. But we shall see. In any case, his personal character is no concern of mine.”

“You haven’t met him yet?” Thorndyke suggested.

“No. He didn’t seem keen on an interview. Joan and her mother turned up in person, but he just wrote and seemed to want to do the whole business by correspondence. Of course, I couldn’t have that in the case of a big estate like this. Must know the people I am dealing with.”

“What do you reckon these two persons are likely to receive?” Thorndyke asked.

“The whole estate is about a hundred and fifty thousand pounds, and, as there are practically no other claimants, they can hardly get less than fifty thousand a piece.”

“Fifty thousand pounds,” I remarked, “ought to be worth the trouble of an interview.”

“So I told him,” said Brodribb, “and, in effect, he agreed. So he is coming up to see me to-morrow.”

“At what time?” Thorndyke asked.

“The appointment is for twelve o’clock, noon, sharp. But why do you ask that?”

“Because I rather want to see Mr. Pettigrew.”

“Ho, ha!” said Brodribb. “So you know something about him.”

“Not very much,” replied Thorndyke. “I am interested. I should like to have a look at him in a good light to see if he agrees with a description that I had of a person of that name. Can you manage that?”

“I can and I will. Would you like an introduction?”

“No,” replied Thorndyke. “I don’t want to know him and I don’t wish him to know who I am. I just want to have a good look at his face.”

“Ha!” exclaimed Brodribb. “I scent a mystery. But I ask no questions. You will bear me out in that, Jervis. I ask no questions though I am bursting with curiosity. I just do what I am asked to do. I shall arrange for you to be shown into the waiting-room—where, by the way, the clock is. Pettigrew will come to the clerk’s office, but when he goes away I shall let him out through the waiting-room. So, if you sit or stand close to the outer door, which is by the window, you will have a good view of him in an excellent light. I wonder why the devil you want to see him. But I don’t ask. No, not at all. I know
my place.”

Here Brodribb consulted a fat gold watch. Then, as he sprang up and seized his hat, he concluded:

"Now I must really be off. To-morrow at noon; and don't forget to tell Polton about the clock.”

When he had gone, I reopened our previous discussion with the inevitable comment.

“This communication of Brodribb's throws a fresh and lurid light on the case and lets you out of your dilemma. It looks as if Parrott might be dismissed from the role of suspect.”

"It does," Thorndyke agreed. "But we mustn't exaggerate the significance of these new facts. Because a man stands to benefit by another man's death, it doesn't follow that he is prepared to murder that other man.”

"True," I replied. "But that is not quite the position. It is not merely a case of a man standing to benefit by the death of another. The benefit was actually created by the murder. If Penrose had not been murdered, he would have taken practically the whole estate and the others would have received nothing. There is no blinking the fact that the murder of Daniel Penrose was worth fifty thousand pounds to Pettigrew, and that without the murder he would have got nothing. I should say that you might pretty safely forget Parrott.”

"You may be right, Jervis," he rejoined. "You are, certainly, in regard to the reality of the motive. But that motive is no answer to the positive evidence that seems to implicate Parrott.”

Here Polton stole silently into the room (having let himself in with his key), bearing the advance guard of the materials for dinner, and the discussion was necessarily suspended. Thorndyke lapsed into silence, and, as his invaluable henchman laid the table in his quietly efficient fashion, he watched him thoughtfully, as if noting his noiseless, unhurried dexterity. As Polton retired to fetch a fresh consignment, he rose, and, stepping over to the cabinet, pulled out a drawer and took from it the cardboard box in which the pottery fragment and its mould and the other objects from the pocket of the hospital patient had been deposited. From the box he picked out the cigarette-tube—the existence of which I had forgotten—turned it over in his fingers, looking at it curiously, and replaced the box in the drawer. Then he walked over to the table, and, having laid the tube on the white cloth, went back to his chair.

I watched the proceeding with a good deal of curiosity but I made no comment. For the immediate purpose was plain enough and it remained only to await the further developments. And I had not long to wait. Presently Polton returned with the remainder of the materials for our meal on a tray. The latter he set down on the table and was about to begin unloading it when the cigarette-tube caught his eye. He looked at it very hard and with evident surprise for a few moments and then picked it up and turned it over as Thorndyke had done, examining every part of it with the minutest scrutiny.

"Well, Polton," said Thorndyke, “what do you think of it?”

Polton looked at him with a cunning and crinkly smile and replied comprehensively in a single word:

"Tims.”

"Tims," I repeated. "What on earth are Tims?"

"Mr. Tims, sir," he explained, “now deceased. Mr. Parrott's cabinet-maker.”

"You think it once belonged to Mr. Tims?" Thorndyke suggested.

"I don't think," Polton replied. "I know. I saw him make it. The way it came about was this; there was a little cabinet of African ebony sent to the workshop for some repairs, and the owner of it sent with it a piece of the same wood that he had managed to get hold of—queer-looking stuff of a sort of brownish-black, rather like a lump of pitch, with a streak of grey sap-wood running through it.

“Well, Tims did the repairs and he was mighty economical with the wood because there was none too much of it. However, when the job was finished, there was a small bit left over, mostly sap-wood. But Tims cut most of that away and then put the piece in the lathe and turned up this tube, finishing the mouthpiece with a paring chisel; and he made these white dots by-drilling holes and driving little holly-wood dowels into them before he finished the turning. He was quite pleased with it when it was done.”

"Did he keep it for his own use?" Thorndyke asked, "or did he sell it?"

"That I can't say, sir. But he would hardly have kept it, because he didn't smoke cigarettes. I supposed at the time that he had made it to give to Mr. Parrott, who smoked cigarettes a lot and always used a tube; and the one that he had was burned to a stump. Still, Tims may have given it or sold it to some one else. Might I ask, sir, how it came into your hands?”

"We found it," Thorndyke replied, “in the pocket of a raincoat that was left by the unknown man who was in possession of Mr. Penrose's car.”

"Oh, dear!” said Polton. "Then I am afraid it has been in bad company.”

He laid it down on the table and resumed the business of unloading the tray. Then, having removed the covers, he made a little bow to intimate that dinner was served, and retired, apparently wrapped in profound thought.

"There, Jervis," said Thorndyke, picking up the tube and restoring it to its abiding-place, "you see how the evidence oscillates back and forth and still keeps a rough balance. Here we are, back in the old dilemma. First comes Brodribb and
weights the balance heavily against Pettigrew; so heavily that you are disposed to drop Parrott overboard. But then comes Polton and weights the balance heavily against Parrott—and, by the way, I think he has his own suspicions of the Popinjay. He looked mighty thoughtful after I had answered his question.

“Yes,” said I, “it seemed to me that your answer had given him something to think about. But with regard to this tube. There is not a particle of evidence that it was ever in Parrott’s possession.”

“Not of direct evidence,” he admitted. “But just look at the prima facie appearances as a whole. Here was a man who was evidently intimately acquainted with Penrose, for they had been digging together in the barrow. He had in his pocket an object which had been dug up in that barrow and which was part of another object, dug up from the same barrow, and almost certainly dug up by Parrott and sold by him to Penrose. That, at least, suggests the possibility—even a probability—that the man was Parrott. Now we find in that same man’s pocket an object that was certainly made in Parrott’s workshop. That is a very striking fact. It makes, at least, another connection between Parrott and the hospital patient. And then there is the very strong probability that Tims made the thing as a gift to his employer; that it was actually Parrott’s property. By the ordinary rules of circumstantial evidence, all these agreements create a very definite probability that the man was Parrott.”

I had to admit the truth of this. “But,” I objected, “this suspicion of Parrott is no answer to the positive evidence against Pettigrew. If you refuse to entertain the idea of a joint crime by two confederates—which still seems to me the only way out—you are left in a hopeless dilemma. You have got evidence suggesting that Tweedledum is the guilty party and evidence that Tweedledum committed the crime; and yet—on your one-man theory—they can’t both be guilty. I don’t quite see how you are going to resolve the puzzle.”

“But don’t forget, Jervis,” said he, “that there are certain final tests which, if we can only apply them, will carry us out of the region of inference into that of demonstrable fact. If our inferences are correct, one of these men is pretty certainly in possession of the Billington jewels. And there are other confirmatory tests equally conclusive. The purpose of our hypothetical reasoning is to discover the persons to whom the tests may be applied.”

XX. — THE DILEMMA RESOLVED

It wanted some minutes to the appointed time when Thorndyke and I, accompanied by Polton and a burgherious-looking handbag, arrived at Mr. Brodribb’s premises in New Square, Lincoln’s Inn. The visitor, we learned from the chief clerk, had not yet made his appearance, and we were shown at once into the private office, where we found Brodribb seated at his writing-table sorting out a heap of letters and documents. He rose as we were announced, and, taking off his spectacles, proceeded to the business on which we had come.

“You had better come out into the ante-room at once,” said he, “as Pettigrew will come in through the clerks’ office. I don’t think you will have so very long to wait. The interview needn’t be a very protracted affair as there isn’t much to discuss. It is really only a matter of my making his acquaintance.”

He opened a small, light door and ushered us through into the ante-room, a rather long, narrow chamber, lighted by a large window at one end which was close to the door of exit. A large office table occupied a good deal of the floor space and extended to the neighbourhood of the window, leaving a space just sufficient for a couple of chairs.

“There,” said Brodribb, indicating the latter, “if you take those chairs you will be close to the window and the door. He will have to pass quite near to you and you will be able to inspect him in an excellent light. And I think this table will do for you, Polton. There is your patient on the mantelpiece. He is ticking away all right but, when he tries to strike, he makes a most ungodly noise.”

Polton walked round to the mantelpiece and surveyed the clock with a friendly and appreciative crinkle.

“It’s a noble old timepiece,” said he. “They don’t make clocks like that nowadays. Don’t want ‘em, I suppose, now that you can get the time by counting the hicups from a loud-speaker.”

He listened for a few moments, with his ear close to the dial and then lifted the clock, cautiously and with loving care, on to the table. The keys were in the front and back doors, and, when he had unlocked and opened them, he placed his bag on the table and began to discharge its cargo of tools and appliances. First, he took out a roll of clean, white paper, which he spread on the table, weighting it with one or two tools and a couple of lignum-vitae bowls. Then he started the strike, which was accompanied by the most horrid asthmatical wheezing, and having listened critically to these abnormal sounds, he took off the pendulum and fell to work with a screwdriver to such effect that, in a jiffy, the clock was out of its case and lying on its back on the sheet of paper.

At this point a clerk appeared at the door of the private office and announced that Mr. Pettigrew had arrived, whereupon Mr. Brodribb directed him to show the visitor in, and, after a last, anxious glance at the clock, went back into his office and shut the communicating door.

But the latter, as I have said, was by no means a massive structure, and, in fact, hardly seemed to meet the requirements of a lawyer’s office in the matter of privacy. Brodribb’s voice, indeed, was hardly audible, but I heard quite distinctly the visitor’s reply: “Yes, sir. I am Mr. Pettigrew.”

But I was not the only person who heard that reply. As Pettigrew spoke, I noticed that Polton seemed to pause for an
instant in his operations and listened with a rather odd expression of interest and attention. And so, as the interview proceeded, each time that Pettigrew spoke, Polton’s movements were arrested and he sat with his mouth slightly open, listening, without any disguise, to the voice that penetrated the door.

It was a rather peculiar voice, resonant, penetrating and clear; and its quality was reinforced by the deliberate manner and distinct enunciation. The disjointed sentences that came through the door might have been spoken by an actor or by a man making a set speech. But I think that Brodribb must have done most of the talking, for the sounds that came through took the form, generally, of an indistinct rumble which certainly did not proceed from Pettigrew.

The interview was not a long one, but to me the inaction, coupled with an ill-defined expectancy, made the time pass slowly and tediously. Thorndyke relieved the tedium of waiting by following Polton’s operations and discussing—in almost in a whisper—the construction of the striking mechanism and the symptoms of its disorder. The latter did not appear to be very serious, for, presently, Polton began to reassemble the dismembered parts of the movement, applying here and there, with a pointed style, a delicate touch of oil.

He had got the greater part of the striking movement together when the sound, from the private office, of a chair being drawn back seemed to herald the termination of the interview. Thereupon Thorndyke went back to his chair and Polton, softly laying down a pair of flat-nosed pliers, suddenly became immobile and watchful. Then the door opened an inch or two and Brodribb’s voice became audible.

“Very well, Mr. Pettigrew,” he said, “you shall not be troubled with unnecessary journeys. I shall let you know, from time to time, how matters are progressing and not ask for your personal attendance unless it is absolutely necessary.”

With this he threw open the door and ushered his client into the ante-room, filling up the doorway with his own rather bulky person as if to prevent any retreat. I glanced with natural curiosity at Pettigrew and saw a rather large man, dark-complexioned and wearing a full beard and moustache, the latter turned up fiercely at the ends in a fashion slightly suggestive of wax. Apparently, he had supposed the room to be empty, for he looked round with quick, uneasy surprise. And then his glance fell on Polton; and I could see at once that he recognised him and was rather disconcerted by the recognition. But he made no sign after the first startled glance, walking straight up the room in the narrow space between the table and the fireplace, looking neither to the right nor left. But just as he had advanced midway, Polton rose suddenly and exclaimed:

“Why, it’s Mr. Parrott! Bless me, sir, I hardly knew you with that beard.”

Pettigrew cast a malignant glance at the speaker and replied, gruffly:

“My name is Pettigrew.”

“Ah!” said Polton, “I suppose Parrott was the business name.”

Pettigrew made no reply, but stalked up the room until he passed between our chairs and the table to reach the door. And then he suddenly clapped on his hat. But not soon enough. For I had already noted—and so certainly had Thorndyke—an irregular, rather recent, scar crossing his right eyebrow. And when I saw that, I realised what Thorndyke had meant by “the final tests.”

As Pettigrew grasped the handle of the door, he cast a swift, apprehensive glance at my colleague. Then he opened the door quickly, and, when he had passed out, shut it after him. Instantly, Thorndyke rose and followed him, and, of course, I followed Thorndyke; and so we came out in a sort of procession into the Square.

As we emerged from the house, I became aware of a man loitering on the pavement at its northern end. He was a stranger to me, but I diagnosed him at once as a plain-clothes police officer. So, perhaps had Pettigrew, for he turned in the other direction, towards the Searle Street gate. But that path also was guarded, and by no less a person than Superintendent Miller. When I first saw him, he was standing in the middle of the pavement, apparently studying a document. But as we turned in his direction, Thorndyke took off his hat; whereupon Miller hastily pocketed the paper and awaited the approach of his quarry.

It was evident that Pettigrew viewed the superintendent with suspicion for he turned and crossed the road to the railings of the garden; and when the superintendent also crossed the road, with the evident purpose of intercepting him, the position was unmistakable. Pettigrew paused for a moment irresolutely, thrusting his hand into his pocket. Then, as Miller rushed towards him, he drew out a revolver and fired at him nearly point blank. The superintendent staggered back a couple of paces but did not fall; and when Pettigrew, having fired his shot, dodged across to the pavement and broke into a run, he clapped his hand to his thigh and followed as well as he could.

The swift succession of events has left an indelible impression on my memory. Even now I can see vividly with my mind’s eye that strange picture of hurry and confusion that disturbed the peace and repose of New Square: the terrified fugitive, racing furiously down the pavement with Thorndyke and me in hot pursuit; the plain-clothes man clattering noisily behind; and the superintendent hobbling after us with a blood-stained hand grasping his thigh.

But it was a short chase. For hardly had Pettigrew—running like a hare and gaining on us all—covered half the distance to the gate when suddenly he halted, flung away his revolver and sank to the ground, rolling over on to his back and then lying motionless. When we reached him and looked down at the prostrate figure, his aspect—wretch as he was—could not but evoke some feelings of pity and compunction. The ghastly face, the staring, terrified eyes, the retracted lips, and the hands, clutching at the breast, presented the typical picture of angina pectoris.
But this, too, was but a passing phase. Before any measures of relief could be thought of, it was over. The staring eyes relaxed, the mouth fell open, and the hands slipped from the breast and dropped limply to the ground.

The superintendent, hobbling up, still grasping his wounded thigh, looked down gloomily at his prisoner.

“Well,” he commented, “he made a game try, and he has given us the slip, sure enough. It’s a pity, but it’s no one’s fault. We couldn’t have got him any sooner. Hadn’t we better move him indoors before a crowd collects?”

It did seem desirable; for the pistol shot and the sounds of hurrying feet had brought startled faces to office windows and now began to bring curious spectators from office doorways.

“Do you mind if we carry him into your anteroom?” Thorndyke asked, turning to Brodribb, who had just come up with Polton.

“No, no,” Brodribb replied. “Take the poor creature in, of course. Is he badly hurt?”

“He is dead,” Thorndyke announced as I hastened with the assistance of the plain-clothes officer to lift the body.

“Dead!” exclaimed Brodribb, turning as pale as his complexion would permit. “Good God! What a shocking thing! Just as he was coming into a fortune too. How perfectly appalling!”

He followed the gruesome procession as the officer and I, now aided by Thorndyke, bore the corpse back along the pavement to the doorway from which we had emerged but a minute or two previously and finally laid it down on the ante-room floor; and he stole softly into the room and shrank away with a horrified glance at the ghastly figure. And his agitation was natural enough. There was something very dreadful in the suddenness of the catastrophe. I was sensible of it myself as I rose from laying down the corpse and my glance lighted on the clock and the litter of tools on the table, lying just as the dead man had seen them when he passed to the door.

“I think,” said Thorndyke, “that we had better telephone for an ambulance to take away the body and convey the superintendent to the hospital. Where is he?” he added anxiously.

The question was answered by Miller in person, who limped into the room, his gory hand still grasping his wound and a trickle of blood running across his boot.

“My God, Miller!” exclaimed Brodribb, gazing at him in consternation, “you too! But aren’t you going to do something for him, Thorndyke?”

“We had better see what the damage is,” said I, “and at least control the bleeding.”

“I don’t think it is anything that matters,” said Miller, “excepting to Mr. Brodribb’s carpet. However, you may as well have a look at it.”

I made a rapid examination of the wound and was relieved to find that his estimate was correct. The bullet had passed through the outer side of the thigh leaving an almost imperceptible entrance wound but a rather ragged wound of exit which was bleeding somewhat freely.

“You haven’t any bandages or dressing material, I suppose?” said I.

“I have not,” replied Brodribb, “but I can produce some clean handkerchiefs, if they will do. But bring him into my private office. I can’t bear the sight of that poor creature lying on the floor.”

We accordingly moved off to the private office where, with Brodribb’s handkerchiefs, I contrived a temporary dressing which restrained the bleeding.

“There,” said I, “that will serve until the ambulance comes. Some one has telephoned, I suppose?”

“Yes,” replied Brodribb, “the police officer sent a message. And now tell me what it is all about. I heard a pistol shot. Who was it that fired?”

“Pettigrew,” Thorndyke answered. “The position is this: the superintendent came here on my information to arrest Pettigrew and charge him with the murder of Daniel Penrose, and Pettigrew fired at Miller in the hope of getting away.”

Brodribb was horrified. “You astound me, Thorndyke!” he exclaimed. “I have actually been conferring with poor Penrose’s murderer. And not only that. I have been aiding and abetting him in getting possession of the plunder. But I don’t understand how he comes to be dead. What killed him?”

“It was a heart attack,” Thorndyke replied, “Angina, brought about by the excitement and the intense physical effort. But I think I hear the ambulance men in the ante-room. That sounded like a stretcher being put down.”

He opened the door and we looked out. At the table Polton was seated, apparently engrossed in his work upon the clock and watched with grim amusement by the plain-clothes officer, while the ambulance men, having lifted the body on to the stretcher, were preparing to carry it away. I was about to help Miller to rise from his chair when Thorndyke interposed.

“Before you go, Miller,” said he, “there is one little matter to be attended to. You had better get Pettigrew’s address from Mr. Brodribb; and you had better lose no time in sending some capable officer there with a search warrant. You understand what I mean?”

“Perfectly,” replied Miller. “But there isn’t going to be any sending. I shall make that search myself, if I have to go down
in an ambulance.”

“Very well, Miller,” Thorndyke rejoined. “But remember that you have got only two legs and that you can’t afford to part with either of them.”

With this warning he assisted the superintendent to rise; and when the latter had received and carefully pocketed the slip of paper on which Brodribb had written Pettigrew’s address, we escorted him out to the ambulance and saw him duly dispatched en route for Charing Cross Hospital.

As we turned to re-enter the house, our ears were saluted by the cheerful striking of a clock; and passing into the anteroom, we found Polton, still seated at the table, surveying with an admiring and crinkly smile the venerable timepiece, now completely reconstructed and restored to its case.

“He’s all right now, sir,” he announced triumphantly. “Just listen to his strike.” He moved the minute hand round, and, having paused a moment for the “warning,” set it at the hour and listened ecstatically as the hammer struck out six silvery notes.

“Clear as the day he was born,” he remarked complacently; and forthwith moved the hand round to the next hour.

“You must stop that noise,” exclaimed Brodribb. “I can’t bear it. Have you no sense of decency, to be making that uproar in the house of death, you—you callous, indifferent little villain?”

Polton regarded him with a surprised and apologetic crinkle (and moved the hand round to the next hour).

“But, sir,” he protested, “you can’t set a striking clock to time any other way, unless you take the gong off. Shall I do that?”

“No, no,” replied Brodribb. “I’ll go outside until you’ve finished. And I apologise for calling you a villain. My nerves are rather upset.”

We accompanied him out into the Square and walked up and down the pavement for a few minutes giving him some further explanations of the recent events. Presently Polton made his appearance, carrying his bag, and announced that the clock was now set to time and established in its place on the mantelpiece. Brodribb thanked him profusely and apologised still more profusely for his outburst.

“You must forgive me, Polton,” he said. “My nerves are not equal to this sort of thing. You understand, don’t you?”

“I understand, sir,” replied Polton, “and I suppose I was callous. But he was a bad man, not worth troubling about, and the world is the better without him. I never liked him and I always suspected him of fleecing poor Mr. Penrose.”

“Probably you were right,” rejoined Brodribb, “but we must talk about that when I am more myself. And now I will get back to my business and try to forget these horrors.”

He shook hands with us and retired into his entry while we turned away and set a course for the Temple.

“I suppose, Thorndyke,” I said presently, “you were not surprised by our friend’s recognition of Parrott. I am judging by the fact that you took the opportunity of having Polton with us.”

“No,” he replied, “I was not. The assumption that Parrott and Pettigrew were one and the same person seemed to offer the only way out of my dilemma if I rejected—as I certainly did—the idea of confederacy. There were the two men, making separate appearances. Each of them seemed, by the evidence, to be the murderer. But there was only one murderer. The only solution of the problem was the assumption that they were the same man. That was a perfectly reasonable assumption and there was nothing against it.”

“Nothing at all,” I admitted. “In fact, it is rather obvious—when once it is suggested. But I have found this case rather confusing from the first; it has seemed to me a bewildering mass of disjointed facts.”

“That is a mistake, Jervis,” he said. “The facts form a perfectly coherent sequence. Some time, we will go over the ground again, and then I think you will see that your confusion was principally due to your having made a false start.”

XXI. — AFTERTHOUGHTS

“It seems to me,” Lockhart suggested, “that this case is, to a certain extent, left in the air. The essential facts, in a legal sense, are perfectly clear. But there is a lot that we don’t know, and, I suppose, never shall know.”

The remark—which fairly expressed my own view—was made on the occasion of a little dinner-party at our chambers, arranged partly to celebrate the completion of the case, and partly to enable Lockhart—who had developed unexpected archaeological sympathies—to make the acquaintance of Elmhurst. The dinner was supplied by the staff of a neighbouring tavern, an arrangement which not only relieved Polton of culinary labours but included him in the festivities; for he was enabled thereby to entertain, in his own apartments adjacent to the laboratory, no less a person than Mr. Kickweed.

Both of our guests had been, in a sense, parties to the case; but each had made contact with it at only a single point. It was natural, then, that when the meal had reached its more leisurely and less manducatory stage, the desultory conversation should have subsided into a more definite discussion, with a demand from both for a complete exposition of the investigation. And it was then, when Thorndyke readily complied with the demand, that I was able, for the first time, to
realise how clearly he had grasped the essentials of the problem from the very beginning and how steadily and directly he had proceeded, point by point, to unravel the tangle of false appearances.

I need not report his exposition. It contained nothing but what is recorded in the foregoing narrative of the events. It consisted, in fact, of a condensed summary of that narrative with the events presented in their actual sequence with a running accompaniment of argument demonstrating their logical connections. When he had come to the end of the story with an account of its tragic climax, he paused to push round the decanters and then proceeded reflectively to fill his pipe; and it was then that Lockhart made the observation which I have recorded above.

“That is quite true,” Thorndyke agreed. “For legal purposes—for the purpose of framing an indictment and securing a conviction—the case was as complete as it could well be. But the death of Pettigrew has left us in the dark on a number of points on which we should probably have been enlightened if he had been brought to trial and had made a statement in his defence. At present, the circumstances surrounding the murder—if it was a murder—and the motive—if there was a clear-cut motive—are more or less wrapped in mystery.”

“Are they?” Elmhurst exclaimed in evident surprise. “To me it looks like a simple murder, deliberately planned in cold blood, for the plain purpose of getting possession of a very large sum of money. Fifty thousand pounds would seem to furnish a very sufficient motive to a man of Pettigrew’s type. But you don’t take that view?”

“No,” replied Thorndyke, “I do not. I am even inclined to doubt whether the money was a factor in the case at all. We must not lose sight of the conditions prevailing at the time. When Penrose left home, that is to say on the day of his death, his father was alive and well and the question of the disposition of his property had not arisen. At that time, the only persons who knew the state of affairs were Penrose, Horridge and Brodribb; and even they knew it very imperfectly. Brodribb, himself, was not certain whether there was or was not a will. As to Pettigrew, there is no evidence, or any reason for believing, that he had any knowledge, or even suspicion, that Oliver’s estate was not duly disposed of by a will.”

“Penrose knew, more or less, how matters stood,” said Lockhart, “and he may have ‘let on’ to Pettigrew.”

“That is possible,” Thorndyke admitted, “though it would be rather unlike the secretive Penrose to babble about his private affairs to a comparative stranger. For it seems pretty certain that he had no idea as to who Parrott was. Mrs. Pettigrew almost certainly knew who he was, but she must have been sworn to secrecy, and she kept the secret loyally. Still, we must admit the possibility of Penrose having made some unguarded statements to Parrott, unlikely as it seems.”

“Then,” said Lockhart, “if you reject the money as the impelling motive, what is there left? What other motive do you suggest?”

“I am not in a position to make any definite suggestion,” replied Thorndyke, “but I have a vague feeling that there may have been a motive of another kind; a motive that would fit in better with the circumstances of the murder—or homicide—in so far as they are known to us.”

“I am not sure that I quite follow you,” said Lockhart.

“I mean,” Thorndyke explained, “that the money theory of motive would imply a deliberate, planned, unconditional murder with carefully prepared means of execution; and the method would involve the necessary detail of taking the victim unaware and forestalling any possibility of resistance. But that is not what happened. The weapon with which Penrose was killed was not brought there by his assailant. It was his own weapon. So that the method of homicide actually used must have been improvised. And Penrose must have been either on the defensive or offensive. There was an encounter. But it was a deadly encounter, as we can judge by the formidable weapon used, not a mere chance ‘scrap’. And the deadliness of that encounter implies something more than a sudden disagreement. There is a suggestion of something involving a fierce and bitter enmity. Perhaps it is possible to imagine some cause of deadly strife between these two men. But I knew very little of either of them; and before I offer even a tentative suggestion, I would ask you, Lockhart, who at least knew them better than I did, if anything occurs to you.”

“They were both practically strangers to me,” said Lockhart. “I knew nothing of their relations except as buyer and seller. But could you put your question a little more definitely?”

“I will put it quite definitely,” Thorndyke replied. “Looking back on your relations with these two men, and considering them by the light of what we now know, does it appear to you that there was anything that might have been the occasion of enmity between them or that might have caused one of them to go in fear of the other?”

Lockhart looked at Thorndyke in evident surprise, but he did not reply immediately. He appeared to be turning the question over in his mind and considering its bearing. And then a little frown appeared on his brow as if some new and rather surprising idea had occurred to him.

“I think I see what is in your mind, Thorndyke,” he replied, at length; “and I am not sure that you aren’t right. The idea had never occurred to me before; but now, looking back as you say, by the light of what we know, I am disposed to think that there may have been some occasion of enmity, and especially of fear. But you don’t want my opinions. I had better relate the actual experiences that I am thinking of.

“I have told you about my visit to Penrose when he showed me his collection of jewels, which we now know to have been the stolen Billington collection.”

“Do you think,” Thorndyke asked, “that Penrose knew they were stolen property?”
“I can hardly think that,” Lockhart replied, “or he would surely never have let me see them. But I do think that he had some uneasy suspicions that there may have been something a little fishy about them. I have told you how startled he seemed when I jocosely suggested that the Jacobite Jewel was a rather incriminating possession. My impression is that he may have got the collection comparatively cheap, on the condition that no questions were to be asked.”

“Which,” I remarked, “usually means that the goods are stolen property.”

“Yes,” Lockhart admitted, “that is so. But I am afraid that your really acquisitive collector is not always extremely scrupulous. However, there the things were, obviously property of considerable value, and I naturally raised the question of insurance. Penrose was quite alive to the desirability of insuring the jewels. But he was in a difficulty. Before they could be insured, they would have to be valued; and he had an apparently unaccountable objection to their being seen by a valuer. I put this down to his inveterate habit of secrecy. Now, of course, we know that he was doubtful of the safety of letting a stranger—and an expert stranger, too—see what they were. But he agreed in principle and promised to think over the problem of the valuer.

“Now, on the only occasion when I met Parrott in the flesh, it happened that Penrose was present. The meeting occurred in Parrott’s workshop when I was waiting for a table that poor Tims had been repairing and Penrose was waiting for Mr. Polton. By way of making conversation, I rather foolishly asked Penrose what he was doing about the valuer. I saw instantly that I had made a faux pas in referring to the matter before Parrott, for Penrose—usually a most suave and amiable man—snapped out a very short answer and was obviously extremely annoyed.

“At the moment, Parrott made no comment and seemed not to have noticed what had passed. But as soon as Penrose had gone, he opened the subject of the insurance and the valuer; and as I, having been sworn to secrecy, was necessarily evasive in my answers, he pressed the matter more closely and went on to question me in the most searching and persistent fashion as to what I had seen and whether Penrose had shown me anything more than the contents of the large gallery. It was very awkward as I could not give him a straight answer, and eventually I had to cut the interrogation short by making a hasty retreat.

“Looking back on this interview, I now see a new significance in it. Parrott was undoubtedly angry. He was quiet and restrained, but I detected an undecurrent of deep resentment, the occasion of which I entirely misunderstood, putting it down to mere pique on his part that Penrose should have contemplated employing a strange valuer when he, Parrott, could have managed the business quite competently. And I also misunderstood the drift of his questions, for I assumed that he knew nothing of the jewels and was merely curious as to whether Penrose had any things of value which had been obtained through some other dealer. Now I see that he suspected Penrose of having shown me the jewels and was trying to find out definitely whether he had or had not. And I think that my evasive answers must have convinced him I had seen the jewels.”

“Yes,” said Thorndyke, “I think you are right. And what do you infer from that?”

“Well,” replied Lockhart, “by the light of what we now know, certain conclusions seem to emerge. The jewels were sold to Penrose by Crabbe, but I think we are agreed that Parrott—I will still call him Parrott as that is the name by which I knew him—was the go-between who actually negotiated the deal. Now, as these jewels were a complete collection, instantly identifiable by any one who had seen them, and of which the police had a full description, I think it follows that they must have been sold to Penrose with the condition that he should maintain inviolable secrecy as to their being in his possession and that he should neither show them nor disclose their existence to anybody. Do you agree?”

“I do, certainly,” Thorndyke replied. “It seems impossible that they could have been sold on any other conditions.”

“Moreover,” Lockhart continued, “there is nothing improbable in such a condition. Penrose wanted the things, not for display, but for the purpose of floating over in secret. In consideration of a low price, he would be quite willing to accept the condition of secrecy. Very well, then; we are agreed that Penrose must have been bound by a promise of secrecy to Parrott, on the faithful performance of which Parrott’s safety depended. Consequently, when it appeared to Parrott that Penrose had broken his promise by showing me the jewels and that he was actually contemplating their disclosure to a valuer (who would almost certainly recognise them), he would suddenly see himself placed in a position of great and imminent danger. Penrose’s indiscretion threatened to send him to penal servitude. In your own phrase, Parrott must henceforth have gone in fear of Penrose. But when a man of a criminal type like Parrott goes in fear of another, there has arisen a fairly adequate motive for the murder of that other. I think that answers your question.”

“It does, very completely,” said Thorndyke. “It brings into view exactly the kind of motive for which I have been looking. The money motive, even if Pettigrew had known about the intestacy, would have seemed hardly sufficient. Deliberate, planned murder for the purpose of pecuniary profit is rare. But murder planned and committed for the purpose of removing some person whose existence is a menace to the safety of the murderer, is relatively common. The motive of fear is understandable, and, in a sense, reasonable. It may even be, in certain circumstances, justifiable. But in any case, it is a strong and urgent motive, impelling to immediate action and making it worth while to take risks. You don’t remember the date of your interview with Parrott, I suppose?”

“I don’t,” replied Lockhart, “but it must have been quite a short time before Penrose’s disappearance, for, when I came back to London, he had been absent for a month or two. It looks as if the murder had followed pretty closely on that interview.”

“And now, Thorndyke,” said I, “that you have heard Lockhart’s story, what is your final conclusion? Apparently you exclude the money motive altogether.”
“I would hardly say that,” he replied, “because, after all, we have no certain knowledge. But I see no reason to suppose that Pettigrew knew anything about his position as next of kin until he saw Brodribb’s advertisement. On the other hand, from the moment when he became a party to the sale of the jewels, he was at Penrose’s mercy; and as soon as he formed the definite suspicion that Penrose was not keeping faith with him, he had a perfectly understandable motive for making away with Penrose."

“Then,” said I, “you think it was a deliberate, premeditated murder?”

“I think that is the conclusion that we are driven to,” he replied. “At any rate, we must conclude that Pettigrew lured Penrose to that place with the idea of murder in his mind. The intention may have been conditional on what happened there; on whether, for instance, Penrose could or would clear himself of the charge of bad faith. But the remarkable suitability of the time and place, both for the murder, itself, and for the secure disposal of the body, seems to imply a careful selection and a considered intention.”

“What makes you suggest that the intention may have been conditional?” Lockhart asked.

“There are two facts,” Thorndyke replied, “which seem to offer that suggestion. The piece of pottery that we found in Pettigrew’s pocket shows clearly that an excavation was actually carried out by the two men. There would certainly have been no collecting of pottery after the murder. Then the fact that Penrose was killed with his own weapon suggests a quarrel, and a pretty violent one, for Penrose must, himself, have produced his weapon. But when Pettigrew had got possession of that weapon, his behaviour was unmistakable. He struck to kill. It was no mere tap on the head. It was a murderous blow into which the assailant put his whole strength.

“So, taking all the facts into account, I think our verdict must be wilful murder, not only in the legal sense—which it obviously was—but in the sense in which ordinary men use the words. But it is an impressive and disturbing thought that only by a hair’s-breadth did he miss escaping completely. He had abandoned and hidden the car and was sneaking off in the darkness to disappear for ever, unknown and unsuspected. But for the incalculable chance of his being knocked down by that unknown car or lorry, he would have got away without leaving a trace, and we should still be looking for the missing Penrose.”

There was a short interval of silence when Thorndyke had concluded. Then Elmhurst remarked:

“It is rather a gruesome thought, that of the two men digging away amicably into the barrow when one of them must have known that the other was almost certainly digging his own grave.”

“It is,” I agreed. “But Thorndyke’s interpretation of the facts suggests some other strange and gruesome pictures; that, for instance, of the murderer reading Brodribb’s advertisement and realising that his murderous blow had been worth fifty thousand pounds; and his visit to New Square to collect his earnings.”

“Yes, indeed,” moralised Elmhurst, “and he collected them truly enough. It is a satisfaction to think of that moment of disillusionment when he saw his ill-gotten fortune turn to dust and ashes and realised that, for him as for others, the wages of sin was death.”

THE END
I. — THE MAN IN THE PORCH

THERE is something almost uncanny in the transformation which falls upon the City of London when all the offices are closed and their denizens have departed to their suburban homes. Throughout the working hours of the working days, the streets resound with the roar of traffic and the pavements are packed with a seething, hurrying multitude. But when the evening closes in, a strange quiet descends upon the streets, and the silent, deserted by-ways take on the semblance of thoroughfares in some city of the dead.

The mention of by-ways reminds me of another characteristic of this part of London. Modern, commonplace, and dull as is the aspect of the main streets, in the areas behind and between them are hidden innumerable quaint and curious survivals from the past; antique taverns lurking in queer, crooked alleys and little scraps of ancient churchyards, green with the grass that sprang up afresh amidst the ashes of the Great Fire.

With one of these curious “hinterlands”—an area bounded by Cornhill, Gracechurch Street, Lombard Street, and Birchin Lane, and intersected by a maze of courts and alleys—I became intimately acquainted, since I usually crossed it at least twice a day going to and from the branch of Perkins’s Bank at which I was employed as a cashier. For the sake of change and interest, I varied my route from day to day—all the alleys communicated and one served as well as another—but the one that I favoured most was the very unfrequented passage which took me through the tiny churchyard of St. Michael’s. I think the place appealed to me especially because somewhere under the turf reposèd old Thomas Stow, grandfather of the famous John, laid here in the year 1527 according to his wish “to be buried in the litel Grene Churchyard of the Paryssh Church of Seynt Myghel in Cornyhyll, betwene the Crosse and the Church Wall, nigh the wall as may be.” Many a time, as I passed along the paved walk, had I tried to locate his grave; but the Great Fire must have made an end of both Cross and wall.

I have referred thus particularly to this “haunt of ancient peace” because it was there, on an autumn even in the year 1929, that there befell the adventure that has set me to the writing of this narrative; an adventure which, for me, changed the scene in a mom from a haunt of peace to a place of gruesome and tragic memories.

It was close upon eight o’clock when I emerged from the bank and started rather wearily on my way homeward. It had been a long day, for there had been various arrears to dispose of which had kept us hard at work hours after the bank had closed its doors; and it had been a dull, depressing day, for the sky had been so densely overcast that no single gleam of sunlight had been able to break through, and we had perforce kept the lamps alight all day. Even now, as I came out and shut the door behind me, twilight seemed to have descended on the City, though the sun had barely set and it was not yet time for the street lamps to be lit.

I stood for a moment looking up the gloomy, twilit street, hesitating as to which way to go. Our branch was in Gracechurch Street close to the corner of Lombard Street, and both thoroughfares were equally convenient. Eventually, I chose Gracechurch Street, and, crossing to the west side, walked up it until I came to the little opening of Bell Yard. Turning into the dark entry, I trudged up the narrow passage, cogitating rather vaguely and wishing that I had provided some thing better than the scanty cold supper that I knew awaited me at my lodgings. But I was tired and chilly and empty; I had not had enough food during the day, owing to the pressure of work; so that the needs of the body tended to assert themselves to the exclusion of more elevated thoughts.

At the top of the yard I turned into the little tunnel-like covered passage that led through into Castle Court and brought me out by the railings of the churchyard. Skirting them, I went on to the entrance to the paved walk and passed in up a couple of steps and through the open gateway, noting that even “the litel Grene Churchyard” looked dull and drab under the lowering sky and that lights were twinkling in the office windows beyond the grass plot and in those of the tavern at the side.

At the end of the paved walk is a long flower-bed against the wall of St. Michael’s Church, and, just short of this, the arched entrance to another tunnel-like covered passage into which, near its middle, the deep south porch of the church opens. I was about to step down into the passage—which is below the level of the churchyard—when I noticed a hatlying on the flower-bed close up in the corner. It lay crown downwards with its silk lining exposed, and, as it appeared to be in perfectly good condition, I picked it up to examine it. It was quite a good hat; a grey soft felt, nearly new, and the initials A. W., legibly written on the white lining, suggested that the owner had set some value on it. But where was the owner? And how on earth came this hat to belying abandoned by the wayside? A man may drop a glove or a handkerchief or a tobacco pouch and be unaware of his loss; but surely the most absent-minded of men could hardly lose his hat without noticing the fact. And then the further question arose: what does one do with a derelict hat? Of course, I could have dropped it where I had found it; but from this my natural thriftiness and responsibility revolted. It was too good a hat to have been casually flung away by its owner, and, since Fate had appointed me its custodian, the duty seemed to devolve on me to restore it.

I stood for a few moments holding the hat and looking through the dark passage at the shape of light at the farther end, but no one was in sight; and I now recalled that I had not met a soul since I entered Bell Yard from Gracechurch Street.
Still wondering how I should set about discovering the owner of the hat, I stepped down into the passage and began to walk along it; but when I reached the middle and came opposite the church porch, my problem seemed to solve itself in a rather startling fashion; for, glancing into the porch, I saw, dimly but quite distinctly in its shadowy depths, a man sitting on the lowest of the three steps that lead up to the church door. He was leaning back against the jamb limply and helplessly as if he were asleep or, more probably, drunk, the latter probability being rather confirmed by a stout walking-stick with a large ivory knob, which had fallen beside him, and what looked like a rimless eyeglass which lay on the stone floor between his feet. But what was more to my present purpose was the fact that not only was he bare-headed, but that no hat was visible. This, then, was doubtless the owner of the derelict.

Holding the latter conspicuously, I stepped into the cavern-like porch, and, addressing the man in a rather loud tone, enquired whether he had lost a hat. As he made no reply or any sign of having heard me, I was disposed to lay the hat down by his side and retire, when it occurred to me that he might possibly have had some kind of fit or seizure. On this I approached closer, and, stooping over him, listened for the sound of his breathing. But I could hear nothing nor could I make out any movement of his chest.

As he was sitting, or sprawling, with his legs spread out, his shoulders supported by the jamb of the door and his head drooping forward on his chest, his face was almost hidden from me. But I now knelt down beside him, and, taking my petrol lighter from my pocket, held it close to his face. And then, as the gleam of the flame fell on him, I sprang up with a gasp of horror. The man’s eyes were wide open, staring before him with an intensity that was in hideous contrast to his limp and passive posture. And the face was unmistakably the face of a dead man.

Dropping the hat by his side, I ran through the passage into St. Michael’s Alley and down this to Cornhill. At the entrance to the alley I stood for a moment looking up and down the street. In the distance, near the Royal Exchange, I could see a white-sleeved policeman directing the traffic, and I was about to start off towards him when, glancing eastward, I saw a constable approaching along the pavement. At once I hurried away in his direction and we met nearly opposite St. Peter’s Church. A few words conveyed my information and secured his very complete attention. “A dead man, you say. Whereabouts did you see him?”

“He is lying in the south porch of St. Michael’s Church, just up the alley.”

“Well,” said he, “you had better come along and show me”; and without further parley he started forward with long, swinging strides that gave me some trouble to keep up with him. Back along Cornhill we went and up the alley until we came to the arched entrance to the passage, and here the constable produced his lantern and switched on the light. As we came opposite the porch and my companion threw a beam of light into it, the cave-like interior was rendered clearly visible with the dead man sitting, or reclining, just as I had left him.

“Yes,” said the constable, “there don’t seem to be much doubt about his being dead.” Nevertheless, he put his ear close to the man’s face, raising the head gently, and felt for the pulse at the wrist. Then he stood up and looked at me.

“I’d better get on the phone,” said he, ”and report to the station. They’ll have to send an ambulance to take him to the mortuary. Will you stay here until I come back? I sha’n’t be more than a minute or two.”

Without waiting for an answer, he strode out of the passage and disappeared down the alley, leaving me to pace up and down in the gathering gloom or to stand and gaze out on the darkening churchyard. It was a dismal business, and very disturbing to the nerves I found it; for I am rather sensitive to horrors of any kind, and, being now tired and physically exhausted, I was more than ordinarily susceptible. I had suffered a severe shock, and its effect was still with me as I kept my vigil, now glancing with horror at the shadowy figure in the dark porch, and now stealing away to the entrance to be out of sight of it. Once, a man came in from the offices across the churchyard, but he hurried through into the alley, brushing past me and all unaware of that dim and ghostly presence.

After the lapse of two or three incredibly long minutes the constable reappeared, and, almost at the moment of his arrival, the lights were switched on and a lamp in the vault of the passage exactly opposite the porch threw a bright light on the dead man.

“Ah!” the officer commented cheerfully, “that’s better. Now we can see what we are about.” He stepped up to the body, and, stooping over, cast the light from his lantern on the step behind it.

“There’s something there on the stone step,” he remarked; “some broken glass and some metal things. I can’t quite see what they are, but we’d better not meddle with them until the people from the station arrive. But while we are waiting for the ambulance I’ll just jot down a few particulars.” He produced a large note-book, and, taking an attentive look at me, added: “We’ll begin with your name, address and occupation.”

I gave him these, and he then enquired how I came to discover the body. I had not much to tell, but, such as my story was, he wrote it down verbatim in his note book and made me show him the exact spot where I had found the hat; of which spot he entered a description in his book. When he had completed his notes, he read out to me what he had written; and on my confirming its correctness, he handed me his pencil and asked me to add my signature.

He had just returned the note-book to his pocket when an inspector appeared at the alley entrance of the passage, closely followed by two constables carrying a stretcher and one or two idlers who had probably been attracted by the ambulance. The inspector walked briskly up to the porch, and, having cast a quick glance at the dead man, turned to the constable.

“I suppose,” said he, “you have got all the particulars. Which is the man who discovered the body?”
“This is the gentlemen, sir,” the constable replied, introducing me; “Mr. Robert Mortimer; and this is his statement.”

He produced his note-book and presented it, open, to his superior; who stood under the lamp and ran his eye over the statement.

“Yes,” he when he had finished reading and returned the book to its owner, “that’s all right. Not much in it except the hat. Just show me where you found it.”

I conducted him up into the churchyard and pointed out the corner of the flower-bed where the hat had been lying. He looked at it attentively and then glanced down the passage, remarking that the dead man had apparently come down from Castle Court. “By the way,” he added, “I suppose you don’t recognise him?”

“No,” I replied, “he is a total stranger to me.”

His reference to the inquest prompted me to ask if I should be wanted to give evidence.

“Certainly,” he replied. “You haven’t much to tell, but the little that you have may be important.”

We were now back at the porch, on the floor of which the stretcher had been placed. At a word from the inspector the two bearers lifted the corpse on to it, and, having laid the hat on the body and covered it with a waterproof sheet, grasped the handles of the stretcher, stood up, and marched away with their burden, followed by the spectators.

The raising of the body had brought into view the objects which the constable had observed and which now appeared to be the fragments of a broken hypodermic syringe. These the inspector collected with scrupulous care, spreading his handkerchief on the upper step to receive them and picking up even the minute splinters of glass that had scattered when the syringe was dropped. When he had gathered up every particle that was visible, and taken up some drops of moisture with a piece of blotting-paper, he made his collection into a neat parcel and put it in his pocket. Then he cast a rapid but searching glance over the floor and walls of the porch, and, apparently observing nothing worth noting, began to walk towards the alley.

“I wonder,” he said as we turned into it and came in sight of the waiting ambulance, “how long that poor fellow had been lying there when you first saw him. Not very long, I should say. Couldn’t have been. Somebody must have noticed him. However, I expect the doctor will be able to tell us how long he has been dead. And you had better note down all that you can remember of the circumstances so that you can be clear about it at the inquest.”

Here we came out into Cornhill, where the ambulance had been drawn up opposite the church, and the inspector, having wished me “good night,” pushed his way through the considerable crowd that had collected and took his place in the ambulance beside the driver. Just as the vehicle was moving away and I was about to do the same, a voice from behind me enquired:

“What’s the excitement? Motor accident?”

I seemed to recognise the voice, which had a slight Scottish intonation, and when I turned to answer I recognised the speaker. He was a Mr. Gillum, one of the bank’s customers with whom I had often done business.

“No,” I replied, “I don’t know what it was, but the dead man looked perfectly horrible. I can’t get his face out of my mind.”

“Oh, but that won’t do,” said Gillum. “It has given you a bad shake up, but you’ve got to try to forget it.”

“I know,” said I, “but just now I’m rather upset. This affair caught me at the wrong time, after a long, tiring day.”

“Yes,” he agreed, “you do look a bit pale and shaky. Better come along with me and have a drink. That will steady your nerves.”

“I am rather afraid of drinks at the moment,” said I. “You see, I have had a long day and not very much in the way of food.”

“Ah!” said he, “there you are. Horrors on an empty stomach. That’s all wrong, you know. Now I’m going to prescribe for you. You will just come and have a bit of dinner and a bottle of wine with me. That will set you up and will give me the great pleasure of your society.”

Now I must admit that a bit of dinner and a bottle of wine sounded gratefully in my ears, but I was reluctant to accept hospitality which my means did not admit conveniently of my returning. A somewhat extravagant taste in books absorbed the surplus of my modest income and left me rather short of pocket-money. However, Gillum would take no denial. Probably he grasped the position completely. At any rate, he brushed aside my half-hearted refusal without ceremony and, even while I was protesting, he hailed a prowling taxi, opened the door and bundled me in. I heard him give the address of a restaurant in Old Compton Street. Then he got in beside me and slammed the door.

“Now,” said he, as the taxi trundled off, “for ‘the gay and festive scenes and halls of dazzling light’; and oblivion to the demmed unpleasant body.”

II. — JOHN GILLUM
AS the taxi pursued its unimpeded way westward through the half-populated streets, I reflected on the curious circumstances that had made me the guest of a man who was virtually a stranger to me, and I was disposed to consider what I knew of him. I use the word “disposed” advisedly, for, in fact, my mind was principally occupied by my late experiences, and the considerations which I here set down for the reader’s information are those that might have occurred to me rather than those that actually did.

I had now been acquainted with John Gillum for some six months; ever since, in fact, I had been transferred to the Gracechurch Street branch of the bank. But our acquaintance was of the slightest. He was one of the bank’s customers and I was a cashier. His visits to the bank were rather more frequent than those of most of our customers and on slack days he would linger to exchange a few words or even to chat for a while. Nevertheless, our relations hardly tended to grow in intimacy; for though he was a bright, gay, and rather humorous man, quite amusing to talk to, his conversation persistently concerned itself with racing matters and the odds on, or against, particular horses, a subject in which I was profoundly uninterested. In truth, despite our rather frequent meetings, his personality made so little impression on me that, if I had been asked to describe him, I could have said no more than that he was a tallish, rather good-looking man with black hair and beard which contrasted rather noticeably with his blue eyes, that he spoke with a slight Scotch accent and that two of his upper front teeth had been rather extensively filled with gold. This latter characteristic did, indeed, attract my notice rather unduly; for, though gold is a beautiful material (and one that a banker might be expected to regard with respectful appreciation), these golden teeth rather jarred on me and I found it difficult to avoid looking at them as we talked.

Yet even in those days I felt a certain interest in our customer; but it was a purely professional interest. As cashier, I naturally knew all about his account and his ways of dealing with his money, and on both, and especially his financial habits, I occasionally speculated with mild curiosity. For his habits were not quite normal, or at least were not like those of most other private customers. The latter usually make most of their payments by cheque. But Gillum seemed to make most of his in cash. It is true that he appeared to pay most of his tradespeople by cheque, but from time to time, and at pretty frequent intervals, he would present a “self” cheque for a really considerable sum—one, or even two or three hundred pounds, and occasionally a bigger sum still—and take the whole of it away in pound notes.

It was rather remarkable, in fact very much so when I came to look over the ledger and note the fluctuations of his account. For at fairly regular intervals he paid in really large cheques—up to a thousand pounds—mostly drawn upon an Australian bank, which for a time swelled his account to very substantial proportions. But, by degrees, and not very small degrees, his balance dwindled until he seemed on the verge of an overdraft, and then another big cheque would be paid in and give him a fresh start.

Now there is nothing remarkable in the fluctuation of an account when the customer receives payment periodically in large sums and pays out steadily in the small amounts which represent the ordinary expenses of living. But when I came to cast up Gillum’s account, it was evident that the great bulk of his expenditure was in the form of cash. And it seemed additional to the ordinary domestic payments, as I have said; and I found myself wondering what on earth he could be doing with his money. He could not be making investments, or even “operating” on the Stock Exchange, for those transactions would have been settled by cheque. Apparently he was making some sort of payments which had to be made in cash.

Of course it was no business of mine. Still, it was a curious and interesting problem. What sort of payments were these that he was making? Now when a man pays away at pretty regular intervals considerable sums in cash, the inference is that he is having some sort of dealings with someone who either will not accept a cheque or is not a safe person to be trusted with one. But a person who will not accept payment by an undoubtedly sound cheque is a person who is anxious to avoid evidence that a payment has been made. Such anxiety suggests a secret and probably unlawful transaction; and in practice, such a transaction is usually connected with the offence known as “demanding money with menaces.” So, as I cast up the very large amounts that Gillum had drawn out in cash, I asked myself, “Is he a gambler, or has he fallen into the clutches of a blackmailer?”

The probability of the latter explanation was suggested by certain large withdrawals at approximately quarterly periods, and also by the fact that Gillum not only took payment almost exclusively in pound notes, but also showed a marked preference for notes that had been in circulation as compared with new notes, of the serial numbers of which the bank would have a record. Still, the two possibilities were not mutually exclusive. A gambler is by no means an unlikely person to be the subject of blackmail.

Such, then, were the reflections that might have occupied my mind had it not been fully engaged with my recent adventure. As it was, the short journey was beguiled by brief spells of scrappy and disjointed conversation which lasted until the taxi drew up opposite the brilliantly lighted entrance of the restaurant and a majestic person in the uniform of a Liberian admiral hurried forward to open the door. We both stepped out, and when Gillum had paid the taxi-driver extravagantly, as I gathered from the man’s demeanour—we followed the admiral into a wide hall where we were transferred to the custody of other and less gorgeous myrmidons.

Giamborini’s Restaurant was an establishment of a kind that was beyond my experience, as it was certainly beyond my means. It oozed luxury and splendour at every pore. The basin of precious marble in which I purged myself of the by-products of the London atmosphere was of a magnificence that almost called for an apology for washing in it; the floor of delicate Florentine mosaic seemed too precious to stand upon in common boots; while as to the dining-saloon, I can recall it only as a bewildering vision of marble and gilding, of vast mirrors, fretted ceilings and stately columns—apparently composed of gold and polished gorgonzola—and multitudinous chandeliers of a brilliancy that justified Dick Swiveller's
description, lately quoted by Gillum. I found it a little oppressive and was disposed to compare it (not entirely to its advantage) with the homely Soho restaurants that I remembered in the far-off pre-war days.

A good many of the tables were unoccupied, though the company was larger than I should have expected, for the hour was rather late for dinner but not late enough for theatre suppers. Of the guests present, the men were mostly in evening dress, and so, I suppose, were the women, judging by the considerable areas of their persons that were uncovered by clothing. As to their social status I could form no definite opinion, but the general impression conveyed by their appearance was that they hardly represented the cream of the British aristocracy. But perhaps I was prejudiced by the prevailing magnificence.

“What are you going to have, Mortimer?” my host asked as we took our seats at the table to which we had been conducted. “Gin and It, cocktail, or sherry? You prefer sherry. Good. So do I. It is wine that maketh glad the heart of man, not these chemical concoctions.”

He selected from the wine list the particular brand of sherry that commended itself to him and then gave a few general directions which were duly noted. As the waiter was turning away, he added: “I suppose you haven’t got such a thing as an evening paper about you?”

The waiter had not. But there was no difficulty. He would get one immediately. Was there any particular paper that would be preferred?

“No,” replied Gillum, “any evening paper will do.” Thereupon the waiter bustled away with the peculiar quick, mincing gait characteristic of his craft; a gait specially and admirably adapted to the rapid conveyance of loaded trays. In a minute or two he came skating back with a newspaper under his arm and a tray of hors-d’oeuvres and two brimming glasses of sherry miraculously balanced on his free hand. Gillum at once opened the paper, while I fixed a ravenous eye on the various and lurid contents of the tray. As I had expected, he turned immediately to the racing news. But he did not read the column. After a single brief glance, he folded up the paper and laid it aside with the remark, uttered quite impassively: “No luck.”

“I hope you haven’t dropped any money,” said I, searching for the least inedible contents of the tray.

“Nothing to write home about,” he replied. “Fifty.”

“Fifty!” I repeated. “You don’t mean fifty pounds?”

“Yes,” he replied calmly. “Why not? You can’t expect to bring it off every time.”

“But fifty pounds!” I exclaimed, appalled by this horrid waste of money. “Why, it would furnish a small library.”

He laughed indulgently. “That’s the bookworm’s view of the case but it isn’t mine. I’ve had my little flutter and I’m not complaining; and let me tell you, Mortimer, that I have just barely missed winning a thousand pounds.”

I was on the point of remarking that a miss is as good as a mile, but, as that truth has been propounded on some previous occasions, I refrained and asked: “When you say that you have just barely missed winning a thousand pounds, what exactly do you mean? How do you know that you nearly won that amount?”

“It is perfectly simple, my dear fellow,” said he. “I laid fifty pounds on the double event at twenty to one against. That is to say, I backed two particular horses to win two particular races. Now, one of my horses won his race all right. The other ought to have done the same. But he didn’t. He came in second. So I lost. But you see how near a thing it was.”

“Then,” said I, “if you had backed the two horses separately, I suppose you would have won on the whole transaction?”

“I suppose I should,” he admitted, “but there would have been nothing in it. The horse that won was the favourite. But the double event was a real sporting chance. Twenty to one against. And you see how near I was to bringing it off.”

“Nevertheless,” I objected, “you lost. And you went into the business with the knowledge, not only that you might lose, but that the chances that you would lose were estimated at twenty to one. I should have supposed that no sane man would have taken such a chance as that.”

He looked at me with a broad smile that displayed his golden teeth to great disadvantage.

“Thus saith the banker,” he commented. “But you are taking a perverted view of the transaction. You are considering it as an investor might: as a means of realising the greatest profit with the smallest risk. That is the purely commercial standpoint. But I am not engaged in commerce; I am engaged in sport—in gambling, if you prefer the expression. Now the essence of the sport of gambling is the possibility that you may lose. If you were certain to win every time, it might be highly profitable but it would be uncommonly poor fun. Believe me, Mortimer, the heart and soul of the game is the chance of losing.”

He spoke quite gravely and earnestly and the statement put me, for the moment, rather at a loss for a reply. For, in its mad way, it was true, and yet, from a practical point of view, it was nonsense. Meanwhile, the waiter brought and placed before us a strangely sophisticated dish, based, I believe, on fish, and then proceeded to fill our glasses with champagne. It was, I think, quite good champagne, though I am no authority, my extreme dissipation, in the ordinary way, not going beyond the traditional “chop and a pint of claret.” At any rate, it was highly stimulating, and when Gillum had raised his glass and, with a toast “to the next double event,” emptied it and insisted on my doing likewise, the last traces of my depression vanished.
“I admit, Gillum,” said I, resuming the discussion, “that there is a certain amount of truth in what you say. But we must try to keep some sense of proportion. Fifty pounds is a devil of a price for the fun of a little flutter. Surely you could have got your sport at a cheaper rate than that.”

“But that is just what you can’t do,” said he. “What you don’t seem to realise is that the intensity of the thrill is strictly proportionate to the amount of the possible loss, and, of course, of the possible gain. I could have laid five shillings on the double event and been secure from appreciable loss. But then I should have stood to gain a mere flyer. No, my young friend, you can’t get a respectable thrill for five bob. And there is another thing that you are over-looking. You speak as if I lost every time. But I don’t. Sometimes I win. If I never won, it would be a dull game and I expect I shouldn’t go on.”

“I think you would,” said I. “You would always be hoping that at last you would get your money back.”

“Perhaps you are right,” he conceded. “It is certainly the fact that a genuine gambler is not put off by a succession of losses. The oftener he loses the more dogged he becomes.”

“So I have always understood,” said I. “But to come to your own case, you say that sometimes you win. How often do you win? Taking your betting transactions as a whole, how does the balance stand? Are you in pocket or out?”

“Out, of course,” he replied promptly. “Everybody is, excepting the bookies. And they don’t do it for sport, but just as a cold-blooded matter of business. They don’t lose, in ordinary circumstances, and they don’t win to a considerable extent. They just balance their book and make a comfortable living. But, of course, the fact that the bookies are in pocket by the transaction is clear proof that the backers, as a whole, must be out.”

There seemed to me something very odd and rather abnormal in the reasonable and lucid way in which he discussed this absurdity. I had the sort of feeling that one might have had in discussing insane delusions with a lunatic. But I returned to the charge, futile as I knew the discussion to be.

“Very well,” said I, “you agree that the balance of profit and loss is against you. How much, you know better than I do, but I suspect that your losses, from month to month, are pretty heavy.” (Of course, I did not “suspect.” I knew. The bank’s books told the story.) “You must be paying very considerable sums for your little flutters and I put it to you, isn’t it a most monstrous waste of money?”

He laughed cheerfully and refilled our glasses.

“I see,” he replied, “that you are an incorrigible financier. You are taking a completely perverted view of the matter. You speak of waste of money. But what, after all, is money?”

“If you are asking me that as a banker,” I replied, “I can only say that I don’t know. I know what money was before the war, but now that the politicians and financial theorists have taken it over, it has become something quite different and I don’t profess to understand it.”

“That isn’t quite what I meant,” said he. “I was referring to money in general terms. What is it? It is simply a means of obtaining certain satisfactions or pleasures. No one wants money for itself excepting a miser.”

“You can rule out misers,” said I. “They are an extinct race. A miser doesn’t hoard paper vouchers which have only a conventional and temporary value.”

“No, I suppose not,” he agreed. “At any rate, I am not a miser,” (which was most unquestionably true), “and I have no use for money excepting as a means of obtaining satisfactions. And that is the rational use of money. I put it to you, Mortimer, if a man has money and there are certain things that he desires and that money will buy, is it not obviously reasonable that he should exchange the thing that he doesn’t want for the things that he does? You speak of waste of money. But is it wasted when it is being used for the very purpose for which it exists? Take, for instance, this bottle of champagne—which, by the way, is getting low and needs replacing. Now, I think we like champagne.”

“I do, certainly,” I admitted.

“I am glad you do. So do I. And we can get it in exchange for your despised paper vouchers. Accordingly, like sensible men, we make the exchange; and I submit that it is a reasonable and profitable transaction. For if, as you suggest, the money is a mere fleeting convention, the champagne for which we have exchanged it isn’t. It is real champagne.”

Seeing that we had already emptied one bottle, the cogency of this argument did not impress me. Probably I should have proceeded to rebut it, but at this point an interruption occurred and the discussion broke off.

When we had entered the room, I had noticed a party of three persons, two men and a woman, at a table in a corner. They had caught my attention because we had evidently caught theirs. But I don’t think that Gillum observed them; and when we had seated ourselves, as his back was towards them, they were outside his range of vision whereas I was nearly facing them; and throughout our meal I found myself from time to time looking in their direction, attracted as before by the occasional glances that they cast in ours. It seemed to me that they must be acquainted with Gillum, for there was otherwise nothing noticeable in our appearance. At any rate, they were obviously interested in us and I received the impression that we were being discussed.

They did not prepossess me favourably. I cannot say exactly why, but there was an indefinable some thing about them that jarred on me. The men did not look like gentlemen, and the woman, dressed in the extreme of an unbecoming fashion, was so heavily and coarsely made up as to extinguish any good looks that she might have had. Everything about her
seemed to be artificial. Her hair was of an unnatural colour, her cheeks were visibly painted, and her lips were plastered with crude vermilion like the lips of a circus clown.

That these people were acquaintances of Gillum's became evident when they rose to depart, for they steered a course across the room which brought them opposite our table. And here they halted; and, for the first time, Gillum became aware of their presence. His expression did not convey to me that he was over joyed, but as the lady bestowed on him the kind of leer that is known as "giving the glad eye," he made shift to produce a responsive smile.

"Now, don't let us interrupt your dinner," said she, as he rose to shake hands. "But, as you cut us dead when you came in, we have just come across to say 'howdy' and let you know that we saw you. We are now off to the club. Shall you be coming along presently?"

Gillum was inclined to be evasive.

"I don't quite know what the programme is," he replied. "It depends on what my guest would like to do."

"Bring him along with you," said she, "and let him see the ball roll. I'm sure he'd enjoy it, wouldn't you?"

As she asked the question, she turned to me with the peculiar cat-like grin that one sees in newspaper portraits of young women, with a distinct tendency to the "glad eye"; and I noticed that it seemed a rather tired eye and slightly puffy about the lower lids.

"I am not really an enthusiast in regard to billiards," I replied, "and I am no player. But it is interesting enough to look on at a good game."

Apparently I had said something funny, for the lady greeted my answer with a gay—and rather strident—laugh, and the two men, who had been looking on in silence, broke into sour grins. But Gillum, also smiling, evidently wished to get rid of his acquaintances for he interposed with the air of closing the conversation.

"Well, we shall see what we feel like when we have dined. I won't make any engagement now."

The lady took the hint graciously enough. "Very well, Jack," said she. "We will leave you in peace and hope to see you later;" and with this and another smile which embraced us both, she moved off with her two companions, neither of whom seemed to take any notice of Gillum.

"What was the joke?" I asked when they had gone. "And what club was she referring to?"

"It isn't really a club," replied Gillum. "It is what, I suppose, you would call a gambling hell; a place where you can stake your money at trente et quarante, rouge et noir, chemin de fer, or any of the regular gambling games. The joke was that the ball she meant was not a billiard ball but the little ball that rolls round the roulette wheel. It is not a particularly amusing joke."

"No," I agreed. "And are these people connected with the club?"

"Very much so," he replied. "That tall chappie—the one with the squint—runs the place, and I should think he does fairly well out of it. He is a Frenchman of the name of Foucault."

"He doesn't look a particularly amiable person," I remarked, recalling the rather sulky way in which he had looked on at the interview.

Gillum laughed. "He is a silly ass," said he, "as jealous as the devil; and as Madame's manners are, as you saw, of the distinctly coquettish, slap and tickle order, there is pretty constant trouble. But he needn't worry. There is no harm in the fair Marie. Her engaging wiles are all in the way of business."

"Do you spend much time at the club?" I asked.

"I drop in there pretty frequently," he replied.

"And I suppose you drop a fair amount of money."

"I suppose I do. But not so much as you would think. You orthodox financiers seem to imagine that a gambler always loses, but that is quite a mistake. The luck isn't always on the one side. Sometimes I pick up a little windfall that pays my expenses for quite a long time."

"Still," said I, "the balance must be against you in the long run."

"I have already admitted," he replied, "that I lose on my gambling transactions as a whole, and probably I lose, in the long run, at the club, though it isn't so easy to keep accounts of what I do there. But supposing that the balance is against me. What about it? Foucault runs the club to make a profit. But he can only make a profit if the players make a loss. What they lose to the bank is, in effect, their payment to him for the entertainment that he supplies. Hang it all, Mortimer, you can't expect to get your fun for nothing."

"Some people do," said I, "the people, I mean, who have infallible systems. I gather that you don't use a system."

"Well," he replied cautiously, "I haven't managed yet to devise a system that really works, but I have given some thought to the matter. There ought to be some way of ascertaining how the laws of chance operate, and if one could discover that, one would have the means of circumventing them."

“You haven’t tried the plan of doubling the stakes when you lose?”

“Yes, I have; and I must admit that, for sheer excitement there is nothing like it. Your real, rabid gambler loves it—and usually cleans himself out. But for a sane and sober gambler it is not practicable. There are too many snags. To begin with, at the best you only get your money back plus the amount of the lowest stake. Consequently, the first stake must be a fairly large one or there is nothing in it. But if you start with a substantial stake and the luck is against you, you are up in enormous figures before you know where you are. For instance, supposing you are playing roulette and you lay a hundred pounds on manque or impair or any of the even chances. If you lose four times in succession, which would not be extraordinary, you have dropped fifteen hundred pounds; and the danger is that you may empty your pocket before the winning coup comes round. Then you have lost the lot. But there is another snag. The bank won’t let you go on doubling as long as you like. There is a limit set to each kind of bet, and when you reach that limit you are not allowed to double any more. If you go on playing you have got to go back to a flat stake, in which case it is impossible for you to win back what you have lost. So, regarded as a serious method of play, the doubling racket is no go.”

“It seems astonishing,” said I, “that anyone should practise it. But perhaps they don’t.”

“Oh, don’t they?” said Gillum. “You must understand, Mortimer, that to the real, perfect gambler, the charm of the game is the risk of losing. The bigger the risk, the greater the thrill. Plenty of people at the club, particularly the roulette players, double the stakes when they lose; and there is a temptation, you know, when you have lost, to take another chance in the hope of getting your money back. But it is a bad plan, because you stand to lose so much more than you stand to gain.”

“Don’t some people double on their winnings?” I asked.

“Ah,” said he, “but that is quite a different kind of affair. There is some sense in that because it is quite the opposite of the other method. If you win you win, you don’t merely get your money back; and if you eventually lose, you have only lost your original stake—plus your winnings, of course. Supposing you take an even chance at roulette, say you put a hundred pounds on red and you win; and suppose that you leave the stake and the winnings—two hundred pounds—on the table as a fresh stake. If the red turns up again you take up four hundred, of which one hundred is your original stake. You have won three hundred. But if you lose, you have only lost a hundred, plus the three that you had won. From a gambler’s point of view it is quite a sound method.”

“Yes,” I agreed, “I see that, at least, you start with the knowledge of the amount that you stand to lose. But the whole thing is beyond my comprehension. I can’t begin to understand the state of mind of a man who is prepared to risk his money in a transaction over which he has no control and in respect to which no judgement, calculation or prevision is possible.”

He laughed gaily and refilled our glasses. “You are a banker to the finger-tips, Mortimer,” said he; “and, as you happen to be my banker, I am not disposed to quarrel with your eminently correct outlook. I suppose you have never seen a gambling den.”

“Never,” I replied; “and I am an absolute ignorant on the subject of gambling. I hardly know how to play the common card games.”

“I think you ought to know what these shows are like,” said he. “I can assure you that, as a mere spectacle, a regular gaming house is worth seeing. What do you say to strolling round to the club when we have had our coffee? It’s too late to do anything else.”

It was really too late to do anything but go home and to bed. But I could hardly, in the circumstances, suggest that course. Nor, in fact, was I particularly disposed to; for the excellent dinner and the equally excellent wine had produced a state of exhilaration that made me not disinclined for adventure. In my normal state, nothing would have induced me to set foot in a gambling den. Now I fell in readily enough with Gillum’s suggestion.

“But shall I be expected to play?” I enquired. “Because I am not going to.”

“That will be all right,” he replied. “I shall explain to Madame, and she will see that you are left in peace. But you understand that this is an unregistered club and that you will keep your own counsel about your visit there. I shall have to guarantee your secrecy.”

I gave the necessary undertaking and Gillum then held the wine bottle up to the light.

“There’s half a bottle left,” said he, making as if to refill my glass. “Won’t you really? Not another half-glass? Well, I don’t think I will, either. We will just have our coffee and a cognac and then toddle round to the club and see the ball roll.”

III. — THE GAMING HOUSE

FROM Giamborini’s we strolled forth into Wardour Street, and, proceeding in a southerly direction, promptly turned into Gerrard Street. I knew the place slightly and on my occasional passage through it had found a certain bookish interest in contrasting its recent faded and shabby aspect with that which it must have presented in the days when Dryden was a resident, and, later, when the Literary Club with Johnson, Reynolds, Goldsmith and Gibbon, held its meetings here.

“Queer old street,” Gillum commented, looking about him disparagingly. “Quite fashionable, I believe, at one time, but it is down on its luck nowadays. Very mixed population, too. All sorts of odd clubs, British and foreign, and tradesmen who
seem to have survived from the Stone Age. There is a fellow some where along here who makes spurs. Think of it. Spurs! In the twentieth century. This is our show.”

He halted at a doorway which, shabby and grimy as it was, yet preserved some vestiges of its former dignity, and having run his eye over an assortment of bell handles, put his finger on an electric button which surmounted them and pressed several times at irregular intervals.

“Are you ringing out a code message?” I asked.

“Well, yes, in a way,” he replied. “There is a particular kind of ring that the regular members give just to let the people upstairs know that it isn’t a stranger. There is always the possibility of a raid and our friends like to have time to make the necessary arrangements.”

The idea of a police raid was not a pleasant one and the suggestion tened rather to damp my enthusiasm. I expressed the hope that this would not happen to be the occasion of one.

“No, indeed,” said Gillum, “it would be unfortunate for you. Wouldn’t increase your prestige at the bank. But you needn’t worry. There has never been any trouble since I have known the place. I have sometimes suspected that Foucault has some sort of discreet understanding with the authorities, but in any case, I know there is a bolt hole through into the next house where an Italian club has its premises.”

This did not sound very reassuring. I felt the exhilarating effects of the champagne evaporating rapidly; and when at length the door was opened, the aspect of the janitor did not produce a favourable impression. He was a big, powerful man, with a heavy jaw and beetling brows and a strong suggestion of the professional pugilist. He carried an electric lamp, the light of which he cast on us while he inspected us critically. Then the truculent expression faded suddenly from his face and a cheerful Irish voice exclaimed:

“What did ye say the gentleman’s name was?”

“Yes,” replied Gillum, “it’s all right, Cassidy. All’s well and the lights are burning brightly, sir.”

Mr. Cassidy chuckled as he let us in and shut the door. “Many’s the time,” said he, “as I’ve spoken them same wurds in the days when I used the sea. What did ye say the gentleman’s name was?”

“His name is Mortimer,” replied Gillum.

“To be sure it is,” said Cassidy, adding, as he threw his light downwards: “Kape your eyes on the stairs, sorr. There’s a tread loose at the turn.”

The stairs were, in fact, in somewhat indifferent repair, but I noticed as the light flickered over them that this had once been quite a handsome staircase though a trifle narrow; and even now the fine moulded handrail and the graceful twisted balusters redeemed its extreme shabbiness. At the top of the second flight we came to a bare landing with a door facing us. This Cassidy opened, and, having admitted us, passed in himself, crossed the room and disappeared through mother doorway, presumably to report our arrival and identity.

I looked round the room which we had entered and was conscious of a faint sense of anti-climax. It was so very ordinary and so very innocent; much like the interior of the cheaper kind of old-fashioned Soho restaurant. At the farther end of the room was a large sideboard, presided over by a man in a white coat and cap and piled with a variety of food, including a ham, a number of different types of sausage, a great stack of sandwiches and long French loaves. On a shelf behind was a long row of bottles of mineral waters but on the sideboard I noted several champagne bottles, a few of whisky, and some of absinthe and other liqueurs.

The room was moderately full of people; full enough to have given Mr. Cassidy considerable occupation if they had been admitted separately. Some of them were lounging about, talking; others were seated at little tables, taking food rather hurriedly, and some were actually drinking ginger ale, though most of them were provided with wine, whisky or Dutch gin. One or two of the tables were furnished with chess-boards and sets of dominoes, but none of them appeared to be in use. Apparently their function was purely psychological. They were part of the “make-up” of the establishment.

I had not much time to examine the company, but a rapid inspection conveyed to me the impression that they were all rather abnormal and slightly disreputable. There was an air of eagerness, anxiety and excitement about them, mingled, in some cases, with a sort of wild hilarity. Those at the tables gobbled their food as if they were hastily stoking up and were anxious to get the business over. Particularly I noticed a group of four men standing by the sideboard devouring sandwiches wolffishly and gulping champagne from tumblers. But, as I said, I had little time to observe them, for, after a brief pause and a curious glance round the room, Gillum conducted me to a door near the farther end from which Cassidy emerged as we approached.

There was certainly nothing innocent about the room that we now entered. A single glance convinced it. The roulette table alone furnished evidence to which there could be no answer, and the groups of haggard, intent men and women gathered round the card tables that filled most of the room, if less conclusive to a possible raider, were unmistakable, seen as I saw them.

From one of these tables the lady of the restaurant rose, and laying down her cards, came to meet us.

“So you have persuaded Mr. Mortimer to come,” she said, bestowing a gracious smile on me and offering an extensive
sample of teeth for my inspection (apparently she had got my name from Mr. Cassidy).

“Yes,” replied Gillum, “but he has only come as a spectator. I have just brought him round to show him the ropes in case he may feel disposed for an evening’s sport later on.”

“That is very good of you, Jack,” said she. “Of course, he can please himself as to whether he plays or not. Perhaps, when he has looked on for a while, he may feel inclined to try his luck. People who come to look on very often do.”

“I have no doubt they do,” said Gillum with a sly smile. “The complaint is catching and fools who come to scoff remain to play.”

“I hope Mr. Mortimer hasn’t come to scoff,” said she; and when I had protested with more emphasis than sincerity she asked: “Where is your pupil going to take his first lesson?”

“Well,” he replied, “as he knows practically nothing about card games, I think roulette will suit him best. Besides, it is the beginner’s game and it is the most typical game of chance.”

“That’s true,” Madame agreed, “though it seems to me a dull game, if you can call it a game at all. Let me find a couple of chairs so that you and your pupil can sit together; and then, when Mr. Mortimer is comfortably settled, I want to have a few words with you.”

We secured two chairs and placed them in a vacant place at the end of the table by the compartment distinguished by a red lozenge on the green cloth. Then Madame introduced me to the croupier, whom she addressed as Hyman—his surname I found later to be Goldfarb—and when Gillum had placed his hat on his chair, she linked her arm with his and led him away among the multitude of card tables.

Left to myself, I first disposed of my hat and stick under my chair, as I noticed that several other men had done, though there was a large hat rack in the adjoining room. Then I proceeded to make my observations.

There was plenty to observe, and it was all strange and novel to me. There were, for instance, the various players, most of them seated at the table, though some preferred to stand and hover about behind the chairs, and there was the croupier, a pleasant faced Jew, calm, impassive and courteous, though obviously very much “on the spot”; and there were the parties of players at the card tables, most of whom I could see from my position without appearing to spy on them.

I considered them one by one. My next neighbour was an elderly woman whom I judged to be French, who sat like a graven image, silently and immovably intent on her game. She seemed to have the disease in a chronic form, for she played mechanically without a sign of satisfaction when she won or annoyance when she lost. At each spin of the wheel she laid a ten-shilling note on the space before which she sat—that marked with the red lozenge. If she won, she put the note that she had gained into a little hand bag and held the other in readiness for the next turn of the wheel; if she lost, she fished a note out of the bag for the next coup. So she went on as long as I observed her; always the same stake on the same spot. It looked deadly dull, and it was not gambling at all in any proper sense; for, by the ordinary laws of chance, it was almost impossible for her either to win or lose to an appreciable extent. So fatuous her proceedings seemed that I almost felt more respect for her next-door neighbour, a small German who might, from his appearance, have been a waiter. He certainly took risks, for his formula was two numbers “a cheval,” and he kept to the same two numbers. As the odds against him were seventeen to one, he naturally lost with great regularity; and when he lost cursed under his breath—not very far under—shook his head and grimaced angrily. I think he must have been pretty near the end of his resources, for I saw him take out a wallet and look into it anxiously. But at this moment his magic number was announced, whereat he gave a yell of ecstasy, grabbed up his winnings, stuffed them into his wallet excepting one pound note, which he laid on the same spot as before and lost within a minute.

From the roulette table my attention wandered to the other occupants of the room and occasionally to Gillum and Madame, who walked slowly to and fro at the end of the room conversing earnestly. Nor was I the only observer. Several of the card-players cast a glance from time to time at the pair, and the three occupants of the table from which Madame had risen made no secret of their interest. Two of these I could not see very well but M. Foucault sat facing me; and never have I seen a more evil expression than that which his countenance bore as he watched them. He was not a pleasant-looking man at the best, and a slight squint did not improve matters; but now his aspect was positively villainous.

Not that his manifest anger was without provocation, for Madame’s oglings and her caressing manner towards Gillum, regardless of the company, would have been offensive to the most tolerant of husbands. She might have been Gillum’s lover—and not a very reticent lover at that. It is true that Gillum took it all very coolly with no sign of responsive demonstrations; but I felt that he was being more than indiscreet. Obviously, in his association with this woman, who seemed of set purpose to exasperate her husband, he was taking the risk of serious trouble.

Presently, to my relief they strolled over to Foucault’s table and while Madame resumed her seat, Gillum drew up a spare chair and sat down facing her husband. Apparently the lady was giving some sort of explanation for she spoke volubly, leaning across the table to avoid raising her voice, while the others leaned forward to listen, and Foucault appeared to be gazing simultaneously at his wife and Gillum—an optical illusion, of course, due to his “swivel eye.”

The discussion did not last long, and it was evidently quite an amicable affair, for when Gillum stood up, he shook hands with them all, including the grim-faced Foucault, before turning away to rejoin me; and I noted the leave-taking with considerable satisfaction, for it was getting alarmingly late and I began to feel that I had had enough of this not very thrilling form of entertainment.
“Yes,” Gillum agreed, when I ventured on a hint to that effect, “time’s getting on and you’ve to be at the bank as fresh as a lark to-morrow morning. But we must have one little flutter before we go. What shall it be? Shall we try an experiment with the doubling plan that we were discussing at dinner?”

Without waiting for an answer he laid a pound note on the red beside the ten-shilling note that the elderly lady had just put down. I watched with unexpected in as the revolving wheel was checked and the little white ball clattered round the dial, and was sensibly disappointed when it settled at last in compartment 21. For 21 happened unfortunately to be black. But Gillum was as indifferent as the old lady, and while Mr. Goldfarb raked in the bank’s winning’s and paid out to the players who had won, he calmly selected two fresh notes from his bulging wallet.

Once more the wheel was spun, the ball was thrown out on to the revolving surface, then the croupier chanted “Rien ne va plus” and checked the wheel, Gillum laid down his two notes, and a dozen pairs of eyes anxiously followed the travels of the dancing ball. At length it dropped into compartment 32—black again; and Gillum sorted out four pound notes from his wallet.

So it went on for a while. Regardless of the law of probability, the ball persisted in dropping into black compartments, and at each failure Gillum doubled his stake. I watched the proceedings with ridiculous anxiety. At the fourth losing coup when the croupier raked in eight of Gillum’s pound notes, I noted mentally that my friend was already fifteen pounds out of pocket. If he lost the next coup, that fifteen would become thirty-one. It was positively harrowing to a thrifty man like myself; accustomed to keep a rigid account of every shilling that I spent.

However, he did not lose this time. My anxious eye following the ball, saw it eventually settle in compartment four which was red; and the croupier’s rake, instead of sweeping away Gillum’s sixteen pounds, added to them another sixteen.

“There, you see,” said Gillum; “I am one pound to the good; and that is all I should have gained if I had gone on till doomsday. But I am a gainer to the extent that I have got back what I had lost.”

He began to pick up the notes, counting them as he did so. Among them there had been four ten-shilling notes, but now there were only three; the explanation of which was that the old lady, when she had gathered up her two notes, had quietly added to them one of Gillum’s. I saw her do it, and so did he; and he now ventured, with the utmost delicacy, to point out the little inadvertency. The lady gazed at him stonily, and I think was about to contest the matter, but at this moment a shout from the farther end of the room, followed by a crash and the sound of shattering glass, effectually diverted our attention.

I looked round quickly and saw two men, each grasping the other by the hair and both yelling like Bedlamites, one accusing the other—in Italian—of being a cheat and the other retorting—in French—that his accuser was a liar. A table and two chairs had been capsized, and very soon, as the combatants gyrated wildly and clawed at each other, more tables were capsized. Then the occupants of those tables joined in the fray with suitable vocal accompaniments and in a moment pandemonium reigned in the previously quiet room. As Foucault and his two friends sprang up and charged into the midst of the mêlée, the door burst open and Cassidy rushed in like an angry bull.

“We’d better clear out of this,” said Gillum. “If they keep up this hullabaloo they’ll bring the police up.” As I agreed heartily, he grabbed up his winnings (but I observed that there were now only two ten-shilling notes) and we retrieved our hats from under the chairs and stole out as well as we could through the little crowd of spectators from the restaurant-room who had gathered round the door to look on at the battle. With the aid of my pocket lamp we made the perilous passage of the stairs—not forgetting the loose tread—and at last emerged safely into the street.

“My word!” exclaimed Gillum, as we crossed the road the more completely to sever our connection with the club, “how those dagoes do yell when they have a bit of a scrap. Just listen to them.”

There was not much need to listen for the uproar was such that windows were opening and various night-birds were appearing from the doors of adjacent houses. Evidently, it was desirable for us to get out of the neighbourhood as quickly as possible; which we did, walking briskly but with no outward sign of undue hurry until we were safely out in Wardour Street, where we turned to the left and headed for Leicester square. Here we had the good fortune to encounter prowling, nocturnal taxi, the driver of which Gillum hailed by voice and gesture. As the vehicle drew up to the kerb he turned to me and asked: “Whereabouts do you hang out, Mortimer?”

“I live at Highbury,” I replied.

“Yes, but that’s a trifle vague. What’s the exact address?” I gave him my full postal address which he communicated to the driver. “And,” he added, “you can drop me at Clifford’s Inn Passage, opposite the Inner Temple Gate. Will that do for the whole journey?

“That” appeared to be a ten-shilling note and the driver replied that “it would do very well, thank you, sir”; whereupon we got in and the cab trundled away towards the Strand. I made some ineffectual efforts to refund my share of the payment, but Gillum declared that the calculation was beyond his arithmetic and suggested that we should work it out on some more suitable occasion. We were still arguing the point when the cab stopped in the shadow of St. Dunstan’s Church and Gillum got out.

“Well, good night, Mortimer,” said he, “or good morning, to be more exact. I hope you have had a pleasant and instructive evening. You have certainly had a full one what with corpses, illegal gambling, and the battle of the dagoes.”

He shut the door and waved his hand, and the taxi resumed its journey, turning up Fetter Lane and later heading for
Gray’s Inn Road. Now that I was alone, I felt a strong disposition to go to sleep; but by an effort I managed to keep awake and watch the familiar landmarks as they slipped by until, in a surprisingly short time, the taxi drew up at the gate of the eligible suburban residence which enshrined the two rooms that served me as a home. The driver actually got out to open the door for me—possibly suspecting some temporary disability, or perhaps as a demonstration of his satisfaction with the fare. At any rate, he gave me a cheerful “good night” and I inserted my latch-key with ease and precision as the clock of a neighbouring church was striking two.

IV. — Abel Webb, Deceased

The events of the evening which I had spent with Gillum gave me a good deal to think about. There was no longer any mystery as to what he did with the large sums that he drew from the bank. He just gambled them away. As to how much it was possible for an inveterate gambler like Gillum to drop in any one transaction, I could form no guess. Apparently there was no limit excepting the total amount that the gambler possessed. I had heard and read of players who had lost thousands in a single game, but it had always seemed to me incredible. Now, however, judging by what I had seen, and still more by what Gillum had said, I felt that nothing could overstate the monstrous truth.

The reflection was a sad and depressing one. It made me quite unhappy. For Gillum was no longer a mere customer. He had become an acquaintance, almost a friend, and I had found him a pleasant, likeable man, and apparently a man of good intelligence apart from his insane hobby. It really distressed me to think of a man with his brilliant opportunities frittering away the means of achievement in this puerile sport. And then, what of the future? If his source of supply was a permanent one he might go on indefinitely, simply flinging away his income as fast as he received it. But suppose it were not a stable, continuing income. Suppose it should dwindle or cease? What then? It was pretty certain that this relatively wealthy man would very soon be reduced to actual poverty.

But the mystery of Gillum’s expenditure was not completely solved. Apart from the big drafts in cash at irregular intervals there were those regular, periodic drafts which I had regarded with such suspicion. Had our evening’s experiences thrown any light on them? I could not say positively that they had. And yet there was at least a suggestion. The whole atmosphere of that sordid gaming house with its deeply shady frequenter: the sinister-looking proprietor—manifestly hostile to Gillum—the painted Jezebel, his wife, the ruffian Cassidy, obviously a paid bully, and finally, Gillum’s long and mysterious conference with Madame; if these did not actually offer a suggestion of blackmail, they did at least suggest the very conditions in which blackmail is apt to occur.

From Gillum and his affairs my thoughts turned at intervals to the dead man who had been the means of our introduction. I had read a brief notice of the discovery in the morning paper and had expected to receive on the same day a summons to attend the inquest. Actually, I did not receive it until the evening of the second day, when I found it awaiting me at my lodgings, requiring my attendance on the following day at two o’clock in the afternoon. Accordingly, on my arrival at the office in the morning, I showed it to our manager, and, having received his authority to absent myself from the bank, duly presented myself at the time and place appointed.

The body had been identified as that of a man named Abel Webb, and that was all that was said about him in the first place. Further particulars were left to transpire in the evidence.

There is no need for me to describe the proceedings in detail apart from the essentials. The coroner opened with a concise statement of the matter which formed the subject of the inquiry, the jury were then conducted to the mortuary to view the body, and when they had returned and taken their places the coroner proceeded to deal with the evidence.

“I think,” said he, “that we had better begin by calling Mr. Mortimer. His evidence is of no great importance but it comes first in the order of time.”

My name was accordingly called, and when I had given the necessary particulars concerning myself, the coroner said: “Now, Mr. Mortimer, just tell us how you came to be connected with the subject of this inquiry. We can ask any necessary questions later.”

Thus directed, I gave a plain and rather bald account of my discovery of the body and the circumstances leading thereto, to which the jury listened with eager interest; naturally enough, since the coroner’s statement had given but the barest indication of the nature of the case.

“We understand,” said the coroner, “that you did not recognise deceased as a person whom you had ever seen before?”

“That is so,” I replied. “The man was a stranger to me.”

“Would it have been possible for anyone passing along the alley as you did to fail to notice the body?”

“Yes,” I replied, “and not only possible but rather probable. It was dark in the alley and still darker in the church porch. I am not sure that I should have seen the body myself but for the fact that I had found the hat and was on the look-out for the owner. Moreover, I was walking very slowly at the moment when I saw the body.”

“You think, then, that a person walking at an ordinary pace and not closely observing his surroundings, might have passed the porch without seeing the body?”

“I think it extremely likely,” I answered. “In fact, while I was waiting for the constable, a man did actually pass through
without noticing the body. He was certainly in a great hurry, but I think if he had not been, he still might not have noticed anything.”

“That,” said the coroner, addressing the jury, “is, of course, only an opinion, but it agrees with the facts to which the witness has deposed; and the point may be of some importance. Does anything further occur to you, Mr. Mortimer, or do you think that you have told us all that you have to tell?”

“I think I have told you all I know about the matter,” I replied; whereupon the coroner, having invited the jury to ask any questions that they wished to ask and receiving no response, the depositions were read and signed and the next witness called.

Constable Walter Allen of the City Police, having completed the preliminaries, deposed as follows: “I was on duty in Cornhill on the evening of Monday the ninth of September. At eight-two p.m. on that evening I was accosted by the last witness, Mr. Robert Mortimer, who informed me that he had seen the dead body of a man lying in the passage leading from St. Michael’s Alley to the churchyard. I went with him at once to the place mentioned and there saw the body of deceased in the church porch. The body was partly sitting and partly lying. It was seated on the lowest of the three steps and was leaning back in the corner against the church door. I examined the body sufficiently to assure myself that the man was really dead and then I went away and telephoned to the station in Old Jewry, reporting the discovery and returned to the passage to wait until I was relieved.”

“You have heard what the last witness said about the darkness of the passage,” said the coroner. “Do you agree that it would have been possible for anyone to pass through the passage without noticing the body?”

“Yes,” the constable replied, “I do. It was growing dark out in the street, and in the passage, which is a sort of tunnel, the light was very dim; and in the porch, which is about eight feet deep, it was practically dark. A person might easily have passed through the covered passage without seeing the body in the porch.”

This completed the constable’s evidence, and as he retired, the name of Inspector Pryor was called; whereupon that officer came forward, and having been sworn, proceeded to give his testimony with professional conciseness and precision. Taking up the thread of the constable’s story, he confirmed the description of the body and its position in the porch and agreed that it might have been lying there unnoticed for some time—perhaps as long as half an hour—before it was discovered.

“Were you able,” the coroner asked, “to form any opinion as to how deceased met with his death?”

“Yes. When the body had been put on the stretcher, I examined the place where it had been lying and there I found the pieces of a broken hypodermic syringe and some drops of liquid on the stone step. The fragments of the syringe gave off a smell rather like bitter almonds and so did the liquid, which I took up with a piece of clean blotting-paper. The fragments of the syringe are in this box but the blotting-paper was handed to the medical officer.”

He handed a small cardboard box to the coroner who opened it, peered in, sniffed at it, and passed it on to the jury. Then he asked: “Were there any finger-prints on the fragments of the syringe?”

“No,” said the coroner, “I suppose there would not.” He reflected for a few moments, and then, as there was apparently nothing more to be got out of the Inspector, he intimated that the examination was concluded; and when the depositions had been read and signed, the officer retired.

“I think,” said the coroner, “that, as I see that Dr. Ripley is present, we had better take the medical evidence next so as not to detain the doctor unnecessarily.”

The new witness, a small, very alert-looking gentle man, having been sworn and having stated his name and professional qualifications, looked enquiringly at the coroner; who, after a brief glance at his notes, opened the examination.

“Perhaps, Doctor,” said he, “it would save time if you were to give us your evidence in the form of a statement. You saw the body, I think, shortly after the discovery.”

“Yes,” replied the witness “On Monday evening, the ninth of September, at eight-fifty-six, I received a summons by telephone from the police to go to the mortuary to examine a body which had just been brought in. I went at once and arrived there at five minutes past nine. There I found the body of the deceased which had been undressed and laid on the mortuary table. At the first glance I formed the provisional opinion that deceased had died as a result of poisoning by hydrocyanic acid or some cyanide compound. The face, and especially the lips, were of a distinct violet colour. The eyes
were wide open, set in a fixed stare. The jaws were firmly closed and there was slight stiffening of the muscles at the back of
the neck. The hands were tightly clenched and the finger nails were blue. These are the usual appearances in cases of
cyanide poisoning, but the froth on the lips, which nearly always occurs in such cases, was absent.

“I examined the body for bruises or other signs of violence, but there were none, excepting that on the left thigh, a couple
of inches from the groin, was a very distinct puncture which looked as if it had been made with a hypodermic needle of
unusually large size. I was shown a broken syringe which had been found close to the body. It was not an ordinary
hypodermic syringe but a larger kind; what is known as a serum syringe; and the needle was not a regular serum needle,
but a longer and stouter form with a larger bore, such as is used by veterinary surgeons. I produce for your inspection an
exactly similar syringe, but fitted with an ordinary serum needle, which you can compare with the broken syringe that was
handed to you by the inspector.”

He laid the syringe on the table and paused while the coroner and the jury compared it with the fragments in the box.
When they had made the comparison and put the two syringes aside, he resumed: “The broken syringe and the needle both
contained minute quantities of a clear liquid, which I collected in a pipette for subsequent analysis. But, at the time, I could
tell by the characteristic smell of bitter almonds that it was one of the cyanide compounds.”

“So that, in effect,” said the coroner, “you had then established the cause of death.”

“Yes,” was the reply, “there was practically no room for doubt. The body showed the distinctive appearances of cyanide
poisoning. There was no froth on the lips, which suggested that the poison had not been swallowed. There was the mark of
a hypodermic needle, and there was a syringe containing traces of a cyanide compound. It was all perfectly consistent.”

“You subsequently made a post mortem examination?”

“Yes; and, as it is very important in cases of poisoning by hydrocyanic acid or cyanide, I made the post-mortem the same
night. But first I analysed the liquid in the pipette; which I found to be a concentrated solution of potassium cyanide.”

“Did the post-mortem throw any fresh light on the case?”

“Not very much, but it converted the inference into an ascertained fact. I can say with certainty that deceased died from
the effects of a very large dose of potassium cyanide injected into the upper part of the thigh—the region which is known as
Scarpa’s Triangle. But one, possibly important, fact came to light, which was that the needle of the syringe entered the
great vein of the thigh—the femoral vein.”

“In what respect is that fact of importance?” the coroner asked.

“In its bearing on the rapidity with which the poison will have taken effect. Five grains of potassium cyanide will, if
swallowed, produce death in about a quarter of an hour. The same quantity injected hypodermically would cause death in a
minute or two at the most; while if it were injected into one of the great veins, death would probably follow in a matter of
seconds. Now, in the present case, a much larger quantity was discharged directly into this great vein; from which I infer
that death must have occurred practically instantaneously.”

“Is it possible to say how much was injected?”

“Not in exact terms. I made only a qualitative analysis. Anything like an exact estimate of quantity would have involved a
long and complicated procedure and it would have served no useful purpose. But I can say confidently, that the amount of
cyanide injected was at least ten grains.”

“When you first saw the body, did you form any opinion as to how long deceased had been dead?”

“Yes. Judging principally by the temperature of the body, I should say that he had been dead about an hour.”

“You mentioned some stiffening of the muscles—apparently rigor mortis. Would that occur so soon after death?”

“The clenching of the jaws and hands was not due to rigor mortis. It was really cadaveric spasm and will have occurred at
the moment of death. But the stiffening of the neck muscles did indicate the beginning of rigor mortis and was, of course,
much earlier than in the average of cases. But there is nothing remarkable in this early onset. It very commonly occurs in
cases of violent death and especially of suicide. I don’t think deceased had been dead more than about an hour.”

The coroner wrote down this statement and appeared to scan the preceding evidence before putting the next question. At
length he looked up and turned to the witness.

“You say that death was due to poison injected by means of a syringe. Could that injection have been administered by
deceased himself?”

“Yes. The site chosen was not a very convenient one for self-administration but it was well within reach, and self-
administration would not have been difficult.”

“So far as you could judge from your examination, was there anything that suggested either that deceased had or had not
administered the poison to himself?”

“In a medical sense and in terms of mere physical possibility, there was no evidence one way or the other.”

The coroner looked at the witness critically, and then remarked: “I seem to detect a note of doubt and reservation in your
answer. Is that not so?”
“Perhaps it is,” the doctor replied. “But I am here as a medical witness and my evidence is properly restricted to what I know, or can reasonably infer from my examination of the body.”

“That is a highly correct attitude, doctor,” said the coroner with a faint smile, “but I don’t think we need be quite so particular. Have you any opinion, medical or other, as to whether deceased did or did not administer the poison to himself?”

“I have,” the witness replied promptly. “My opinion is that he did not administer the poison to himself.”

“That is perfectly definite,” said the coroner, “and I am sure the jury would like to hear your reasons for that opinion, as I should myself.”

“My opinion,” said Dr. Ripley, “is based upon the circumstances of the deceased’s death. Either he killed himself or was killed by some other person. There is no question of accident or misadventure. It is either suicide or homicide. If we consider the theory of suicide, we are confronted by two anomalies.

“The first is the syringe. Why should deceased have used a hypodermic syringe? There is no reason at all. In the case of morphia there would be a reason; for the poison acts comparatively slowly, and large doses, if swallowed, tend to cause vomiting and so defeat the suicide’s ends. But cyanide poisons act very rapidly and tend to produce death before the stomach becomes disturbed. Suicide by means of potassium cyanide is not uncommon, but the usual method is to swallow one or more tablets; and this is quite efficient for the purpose. I have never before heard of a syringe being used for this poison.

“The conditions in the case of homicide are exactly the reverse. You can’t compel a man to swallow a tablet or even a liquid poison. But you can stick a hypodermic needle into him even if he has time to resist. And then the peculiarities of this particular syringe are adapted to homicide but not at all to suicide. The big veterinary needle would cause considerable pain in insertion. Its only advantage, its large bore, enabling the syringe to be discharged rapidly, would be of no benefit to the suicide; but it would be of vital importance to a murderer, who would want to get the business over as quickly as possible and make off.

“The other anomaly is the place where the death occurred. Why should a suicide, having provided himself with the poison and the syringe, go forth to use them in a public thoroughfare when he could have done the business without disturbance in his own premises? And why, if he chose a public place, should he have selected a dark corner in an unfrequented passage? To a suicide, the solitude and obscurity of the place would offer no advantage. But to a murderer, those conditions would be essential; for he would want to get clear of the neighbourhood before the body was discovered. In short, the mode of death, the means used, and the place selected, were all unadapted to suicide, but perfectly adapted to homicide.”

As the doctor concluded his exposition, a murmur of approval arose from the jury, and the coroner, who also appeared to be deeply impressed, commented “Dr. Ripley has given us, in a very ingenious and cogent argument, his reasons for taking a particular view of this case, and I am sure that when we come to consider the evidence as a whole, we shall give them due weight. And now, as he is a busy man, I think we ought not to detain him any longer, unless any of you wish for further information.”

He looked enquiringly at the jury, and the foreman, in response to the implied invitation, signified that he would like to put a question.

“The doctor,” said he, “has referred to the solitude and obscurity of the place where the body was found. I should like to ask him if he has any personal acquaintance with that place.”

“Yes,” replied the witness, “I know it very well indeed. My practice is in the City of London and I am perfectly familiar with all the courts and alleys that form the short cuts from one main thoroughfare to others. As to St. Michael’s Alley, I think that hardly a week passes in which I do not pass through it at least once.”

“And if you pass through it,” said the foreman, “I suppose other people do.”

“Undoubtedly,” the witness agreed; “and in the day a fair number of people pass up and down the alley, although after business hours, when the City has emptied, it is very little frequented. But the point is that when I go up the alley I go straight up to Castle Court; I don’t turn off through the covered passage. And other people do the same, and for the same reason, which is that the covered passage also leads to Castle Court but by a less direct route. The only people who habitually use the covered passage are those who are employed in the office building that faces the churchyard. When they have gone, there are probably periods of half an hour or more during which not a soul passes through that passage.”

The foreman expressed himself as quite satisfied with the explanation and thanked the witness, who was then released to go about his business. When he had departed, the name of Alfred Stowell was called and a middle-aged, gentlemanly man came forward and took his place at the table. Mr. Stowell, having been sworn, gave his particulars, describing himself as the manager of The Cope Refrigerating Company, of Gracechurch Street, London.

“You have viewed the body of deceased,” said the coroner. “Did you recognise it as that of anyone whom you knew?”

“Yes. It is the body of Mr. Abel Webb, lately my assistant manager.”

“How long had he been with you?”
“Less than two months. He took up his duties with us on the twenty-second of last July.”

“Do you know how he was employed before he came to you?”

“He was in the service of the Commonwealth and Dominion Steamship Company and had been for about ten years. He had served as purser on several of their ships and it was on account of his experience in that capacity that my firm engaged him.”

“I don’t quite follow that. In what way is a purser’s experience of value to you?”

“The ships of the Commonwealth Line are engaged in the frozen meat trade, and Mr. Webb had a rather special knowledge of refrigerating plant, as well as of the trade in general.”

“What sort of person was deceased—as to temperament, I mean? Did he strike you as a man who might possibly take his own life?”

“Most certainly not,” the witness replied. “He was of a singularly cheerful and happy disposition and very pleased with his new occupation after the long years at sea.”

“Have you any reason to suppose that he was in financial difficulties or in any way troubled about money?”

“No reason at all. Quite the contrary, in fact. I gathered from certain remarks that he let fall that he was in very comfortable circumstances. He was a bachelor without any dependants or responsibilities and had been steadily saving money all the time that he was at sea. That is what I understood from him. Of course, I have no first-hand knowledge of his affairs.”

“So far as you know, had deceased any enemies?”

“I am not aware that he had, and I have no reason to suppose that he had. In the excellent testimonial from his late employers he was described as an amiable and kindly man who was universally liked. I know no more than that.”

“Do you know of anything that could throw light on the manner and circumstances of his death?”

“Nothing whatever,” was the reply; and as this seemed to conclude the evidence, the coroner asked the jury the usual question, and when the depositions had been signed the witness was released.

For some time after he had retired, the coroner sat scanning his notes with a manifestly dissatisfied air. At length he confided his difficulties to the jury.

“There is no denying,” said he, “that the evidence which we have heard has left this mysterious affair to a great extent unelucidated; and the question arises as to whether it is advisable to adjourn the inquiry and endeavour to obtain further evidence. On the whole, as the police have not succeeded in discovering any of deceased’s relatives, I am disposed to think that nothing would be gained by an adjournment. The further elucidation, if it is possible, seems to lie outside our province and within that of the police. Accordingly, I think it will be best for us to try to find a verdict on the evidence which is before us.

“It is unnecessary for me to recapitulate that evidence. It was all very clearly given and you have followed it closely and attentively. The question that you have to decide is: Who injected the poison? If deceased injected it himself, it is obviously a case of suicide. If you decide that it was injected by some other person you will have to find a verdict of wilful murder, since the injection could not have been given for any lawful purpose.

“The difficulty of deciding between suicide and murder is that there is no positive evidence of either. The medical evidence is to the effect that suicide was physically possible and that murder was physically possible. That is all that we have in the way of positive evidence. And in considering the medical evidence we must be careful to keep the facts separate from the opinions. The facts sworn to by the medical witness we can accept confidently; but the witness’s opinions, weighty though they are, can be accepted only so far as your judgment confirms them. It is you who have to find the verdict, and that verdict must be based on the evidence which you have heard and on nothing else. That, I think, is all I need say, except to remind you that you are not in the position of a jury at a criminal trial, who are bound to decide yes or no, guilty or not guilty. If, having considered the evidence, you find it insufficient to enable you to decide between the alternatives of murder and suicide, you are at liberty to say so.”

When the coroner had finished speaking, the members of the jury drew together and engaged in earnest and anxious consultation. It was a difficult question that they had to settle and they very properly took their time in debating it. At length the foreman announced that they had agreed on their verdict, and in reply to the coroner’s question stated “We find that deceased died from the effects of a poison injected into his body with a syringe, but whether the injection was administered by himself or by some other person there is no evidence to show.”

“Yes,” said the coroner, “I don’t see that you could have found otherwise. I shall record an open verdict and any further inquiries that may be necessary or possible will be conducted by the police.”

The proceedings having now come to an end, the audience and the witnesses rose and filed out into the street; and as I took my way back to the bank I reflected a little uncomfortably on what I had heard. It was a horrible affair and profoundly mysterious. If I had been a member of the jury my verdict would have been the same as that had been recorded. But it would not have expressed my inward convictions. The doctor’s convincing exposition, which still rang in my ears, had but confirmed in my mind an already formed belief.
The circumstance of the tragedy seemed to whisper ‘Murder’; and as I entered Ball Court (instinctively avoiding the neighbourhood of the fatal passage) and threaded the maze of alleys into George Yard and Lombard Street, I looked about me with a shuddering interest, speculating on the way that poor Webb had gone to his death and wondering whether the callous murderer—with the charged syringe ready in his pocket—had walked at his side or had waylaid him in the covered passage.

---

V. — CLIFFORD’S INN

THE events of the evening which I had spent with John Gillum, though they threw a good deal of light on his financial affairs, by no means diminished my interest in, or curiosity concerning, those affairs. On the contrary, having now clearly established the principal channel through which his money flowed—virtually into the gutter—I found myself the more concerned with the question whether that was the sole channel or whether he might perchance be dropping money in ways even less desirable than gambling. I have mentioned that at intervals of about a month he was accustomed to present a “self” cheque for a considerable amount, never less, though usually more, than five hundred pounds. It might be that this represented merely “the sinews of war” for the month’s gambling. But to my eye it looked like something different, something suggesting a definite periodic payment; and this view was strengthened by the fact that other drafts, often for large sums, were presented at irregular intervals. These, from their irregularity in time and amount, seemed much more likely to represent his gaming losses.

The periodic cheque was usually drawn about the fourteenth day of the month (rather suggesting a payment on the fifteenth) and it was Gillum’s custom to notify the bank a day in advance of the amount of cash that he intended to withdraw. Accordingly, as the day drew near, I awaited the notification with some expectancy; and sure enough, on the morning of the thirteenth—two days after the inquest—it was delivered at the bank and shown to me by the manager, as Gillum usually elected to transact his business with me. This time the amount was six hundred and fifty pounds; and as Gillum had a preference for notes that had been in circulation, some sorting out of the stock was necessary.

On the morning of the fourteenth, soon after the hank had opened, he made his appearance, and coming straight over to my “pitch,” laid his cheque on the counter.

“I’m afraid I’m the bane of your life, Mortimer.” said he, “with my big cash drafts. You ought to have a note-counting machine—turn a handle, shoot ‘em out by the dozen and show the number on a dial.”

“It would be a convenience,” I admitted, “though I doubt whether a court of law would accept the reading of the machine as evidence. But it is no great trouble to count a few hundred notes, and at any rate, it is what I am here for.”

I brought out the bundles of notes that I had prepared in readiness for the payment and having re-counted them, passed the bundles across to him.

“You had better check them,” said I as he picked them up and stuffed them into his pocket.

“No need,” he replied. “I’ll take them as read. I’m not equal to your lightning manipulation, and if we differed I should be sure to be wrong.”

He paused to distribute the seven bundles more evenly and then, as there were no customers waiting at the moment, lingered to gossip. “I hope,” said he, “you were none the worse for our little dissipation.”

“Thank you, no,” I replied. “A little sleepy the next morning, but I am quite convalescent now.”

“Good,” said he. “We must have another outing soon, not quite so boisterous. We might go and hear some music.”

“That is quite a good idea,” said I, “and it reminds me that an opportunity presents itself this very day. Do you care for organ music?”

“I like it in church,” he replied; “not so much in a concert hall. The appropriate atmosphere seems to be lacking.”

“Then,” said I, “perhaps you would like to come with me this evening to St. Peter’s, Cornhill. There is to be an organ recital from six to seven by Dr. Dyer. I am going, and if you can manage it, I can promise you a musical treat.”

He considered for a few moments and then replied: “It sounds rather alluring and I’ve got the evening free. So I accept subject to conditions; which are that after the recital you come along to my chambers and join me in a little rough bachelor dinner. I can’t do you in Giamborini’s style but you won’t starve. When we have fed, we can either smoke a pipe and yarn or go out somewhere. What do you say?”

I accepted promptly, for the proposed entertainment was much more to my taste than a restaurant dinner; and when we had made the necessary arrangements he took his leave and I reverted to my duties.

At half-past five he reappeared at the bank and found me waiting outside, and we strolled together up Gracechurch Street, looking in at Leadenhall Market on our way, and took our seats in the church at five minutes to the hour. The fame of the organist had drawn a surprisingly large number of men and women to the recital, and it was evident by the instant hush that fell as soon as the music began that Dr. Dyer had a genuinely appreciative audience.

And I was interested, and a little surprised, to note that Gillum not only enjoyed but—as I gathered ii ut his whispered comments in the intervals—followed the rather austere and technical works that were played with manifest sympathy and
understanding. One would hardly have associated the gambling den and the racecourse with a refined taste for music. But Gillum was a rather queer mixture in many respects.

When the recital came to an end, we set forth on foot to stretch our legs and sharpen our appetites with the walk of a little over a mile from Cornhill to Clifford’s Inn, beguiling the short journey with a discussion of the music that we had been listening to, and comments on objects of interest that we observed by the way. In Fleet Street Gillum gave me another mild surprise by halting me opposite Anderton’s Hotel and bidding me note the fine silhouette that St. Dunstan’s Church and the Law Courst made against the sunset sky.

“I always stop here to look at the view,” said he, “and although the shapes are always the same, the picture is different every time I see it. There is a lot of fine scenery of a kind in the streets of London.”

Once more, as we walked on, I reflected on the strange contradictions and inconsistencies of my companion’s temperament. Somehow, he managed to combine a sensitiveness to the picturesque and beautiful with a singular tolerance of the sordid and unlovely.

A few yards farther on we turned up Fetter Lane, and crossing the road, made for an iron gate set in a row of railings and now standing wide open. Entering, we found ourselves in the precincts of Clifford’s Inn and seemed in a moment to have passed out of the clamorous twentieth century into the quiet and dignified repose of a bygone age. I knew the place slightly from having occasionally ventured in to explore and I now looked round with friendly recognition of the pleasant old red brick houses and the slightly faded grass and trees in the garden.

“This is my lair,” said Gillum, indicating an arched doorway lighted by a hanging lantern and surmounted by a tablet bearing the inscription “P.R.G. 1682.” Within the deep portal a shadowy flight of stairs faded away into profound obscurity, and when Gillum led the way in and up the stairs, he too, faded into the darkness and became a mere black shape against the dim light from the landing above. I groped my way up after him (for the lamp at the entry was not yet lit) and presently emerged on to the landing where I found my host inserting a key into a massive iron-bound door above which was painted in black letters on a faded white ground, “Mr. John Gillum.” The forbidding, gaol-like door swung open heavily disclosing a lighter inner door garnished with an ordinary lock and a small brass knocker. Gillum turned the handle, and throwing open the door, invited me to enter; and as soon as I was inside, he pulled to the outer door, which closed with the snap of a spring latch and a resounding clang suggestive of the door of a prison cell.

“Just as well to sport the oak,” said Gillum. “Not that anyone ever comes after business hours, but it is more pleasant to feel that you can’t be interrupted.”

He switched on the light and I was instantly impressed, by the contrast of the cheerful, cozy interior with the rather grim approach. A fire—well banked and enclosed by a guard—was burning in the grate, a couple of easy chairs faced each other companionably, and the table, covered with a spotless white cloth, was laid with all the necessary appointments for a meal.

Gillum was a good host. This was a simple, informal “feed” and I was not a guest but a pal who had dropped in. He established the position at once by setting me to work at decanting the bottle of claret that had been stood on the mantel shelf to get the chill off, while he attended to the fire.

“May as well make a bit of a blaze,” said he, “though it isn’t a cold evening. But a fire is a companionable thing.”

He tipped the remaining contents of the scuttle into the grate and then, after a hesitating glance at the empty receptacle, put it down.

“Where do you keep your coal?” I asked, with a view to replenishment.

“In the larder, or cellar or store-room,” he replied. “It’s that door across the landing, and a most excellent larder it makes; perfectly cool even in the height of summer. And that reminds me that we shall want the butter and cheese and perhaps we might as well get out a bottle of Chablis to go with the lobster—and, by the way, the lobster is in there, too.”

He went to the door and I followed to give assistance in carrying the goods. Not unnecessarily, as it turned out, for the door across the landing was fitted, not only with a night latch, but also with a rather strong spring, fixed to the inside of the door, as the latter opened outwards. I stood with my back against the open door and received the butter and the lobster, holding them until Gillum collected the cheese and the wine and came out, when I moved away and the door closed with a slam and a click of the lock.

“Now, Mortimer,” said Gillum, when he had deposited our burdens on the table, “you are the wine waiter. Just open the chablis while I go into the kitchen and hot up the soup.”

He retired through one of two small doorways which faced each other at the farther side of the room and I began operations on the capsule of the bottle. But at this moment the empty coal-scuttle caught my eye, and at the same time it occurred to me that we must have left the key in the larder door, since we had both come away with our hands full. With the double purpose of retrieving the key and replenishing the scuttle, I picked up the latter and carried it out to the landing; and, sure enough, there was the key in the door. I turned it, and bearing the spring in mind, when I had pulled the door open I set the scuttle against it while I went in and switched on the light. Then I took up the scuttle, carefully easing the door to, so that it remained unlatched (though there was a knob on the inside by which I could have let myself out), and proceeded to prospect. There was no difficulty in locating the coal, for a large bin or locker that extended right along the farther wall was so well filled that its lid gaped and displayed its contents.
I threw up the lid of the locker, and, taking the scoop from the scuttle, began rapidly to shovel out the coal, my movements rather accelerated by the unpleasant cellar-like atmosphere, which struck an uncomfortable chill in contrast with the warm dining-room. I soon had the scuttle filled, but in my haste I a few lumps of coal fall on the floor. Having put the scoop back in its socket, I stooped to pick up the stray lumps with my fingers. And at that moment I was conscious of a sudden feeling of giddiness and a loud ringing noise in my ears. Whether it was due to my position or to the abrupt change of temperature I cannot say; but as the place seemed to whirl around me and I felt myself swaying as if I were about to fall, I hastily grabbed the edge of the locker, pulled myself upright and staggered out on to the landing.

As I emerged from the larder, letting the door slam behind me, Gillum appeared at the door of the living it and stared at me in dismay.

“Good God, Mortimer!” he exclaimed. “What on earth is the matter?”

Without waiting for an explanation, he hustled me into the living-room, threw up the window, and dragging a chair towards it, sat me down in the full draught.

“What was it?” he asked.

“I don’t know,” I replied. “I just stooped to pick up a lump of coal and then I suddenly turned giddy.”

“Strange,” said he, looking at me anxiously. “Have you ever had any attacks like this before?”

“Never,” I answered; “and I can’t imagine what brought it on now. I suppose it was the sudden stooping.”

“But that won’t do, Mortimer,” said he. “You’ve no business to get giddy from stooping at your age. I don’t believe you take proper care of yourself. You’d better let me get you a nip of whisky.”

“No, thank you,” said I. “The fresh air has done the business. I am all right now excepting a slight headache, and I expect that will go off in a few minutes. By the way, I left the light on in the larder.”

“I’ll go and switch off and get the coal-scuttle,” said he, “and then we will have some grub. That will complete the cure, with a glass of wine.”

He went out and presently returned with the scuttle, shutting the “oak” behind him. Then he fetched the soup from the kitchen and we drew our chairs up to the table and proceeded to business.

It was a pleasant little dinner, and not so very little, for when we had disposed of the lobster, the raising of a couple of covers revealed a cold roast fowl and a pile of sliced ham, the produce, as I learned, of an invaluable shop in Fetter Lane. Moreover, as the food was cold it lent itself to leisurely consumption and the free flow of conversation. And conversation with Gillum naturally tended to drift in the direction of betting and play.

“How is the infallible system progressing?” I asked.

“Slowly,” he admitted, “but still, I think the thing is possible. I don’t make much of it from the mathematical direction, so I am falling back on the excellent method of trial and error. I have got a miniature roulette box and I find it invaluable for trying out schemes of chances. I’ll show it to you.”

He produced a beautifully made little wooden box, and placing it on the table, affectionately twisted the ivory spindle.

“Yes,” I agreed, “it is an excellent contraption, for you can play any odds you like against yourself and win in any event. I should advise you to stick to it. Do your gambling at home—and let the Foucaults have a rest.”

He laughed, rather grimly I thought.

“Perhaps,” said he, “it might rather be a question of their letting me have a rest. But your advice is futile, as you know perfectly well. Solo roulette is well enough for experimental purposes, but it isn’t sport and it isn’t gambling. You can’t gamble if you don’t stand to win or lose.”

Of course, I knew this and his reply left me with nothing to say; so I reverted to the roast fowl and inwardly speculated on the possibility of a connection between the Foucaults and the morning’s transaction at the bank. He had spoken as if they gave him more attention than he cared for, but obviously the subject was one that I could not even approach. When, searching for some new topic, I suddenly remembered the circumstances of our first meeting and their later developments, in which Gillum might probably be interested.

“I intended,” said I, “to bring you a copy of The Telegraph which I kept for you. It contains a full report of the inquest on that poor fellow whose body I discovered. But perhaps you have seen it.”

“I have,” he replied. “I saw a pretty full account of it in an evening paper. Extraordinary affair. Rather horrible, too. I liked the way in which that doctor fellow let out. He knew his own mind.”

“Yes, he was remarkably outspoken for a medical witness. But I certainly agreed with him, and so, I think, did the jury. If he hadn’t been so downright I suspect the verdict would have been suicide while temporarily insane.”

“Very likely. But what was there to suggest insanity?”

“Nothing that I know of,” I replied. “I was only repeating the usual formula. When a man commits suicide it is generally assumed that he was temporarily insane when he did it.”
"I know," said Gillum. "But it is just a convention, and a silly convention which ought to be dropped. Really, it is a theological survival. The pretence of insanity is for the purpose of proving that deceased was not aware of the nature of his act and that there fore he was not guilty of foelo de se and did not die in a state of mortal sin. It was quite well meant, but it was always a false pretence; and now that we have outgrown theological crudities of that sort, the formula ought to be abolished excepting in cases where there is actual evidence of insanity."

He spoke with an amount of feeling that rather surprised me. For it did not appear to me that the point was of any importance. Nor did I entirely agree with his view of the matter, and accordingly proceeded to contest it.

"I don't think that is quite the position, Gillum," I objected. "No doubt there is a theological factor, but the usual verdict is based on the assumption that the very act of suicide constitutes evidence of mental unsoundness; and I think it is quite a reasonable assumption."

"Why do you think so?" he demanded.

"Because," I replied, "the impulse of self-preservation—the preservation of one's own life—is so universal and so deep-seated as to amount to one of the fundamental instincts of intelligent living beings. But an act which is in opposition to a natural instinct is an abnormal act and affords evidence of an abnormal state of mind."

"I admit the instinct," he rejoined. "But man is a reasoning animal and is not completely dominated by his instincts. If in a particular case he is convinced that the following of those instincts is to his disadvantage, surely it will be reasonable for him to disregard them and adopt the action which he knows is to his advantage. Let us take an instance. Suppose a man to be suffering from a painful and incurable form of malignant disease. He knows that it is going to kill him within a measurable time. He knows that until death releases him he will suffer continual pain. Is he going to drag on a miserable existence, waiting for the inevitable death, or will he not, if he is a man, anticipate that death and cut short his sufferings?"

He had put his case with such cogency that I was rather at a loss. Nevertheless, I objected, somewhat weakly: "The instance you give is a very exceptional one. The conditions are quite abnormal."

"Exactly," he rejoined. "That is my point. The conditions being abnormal, the common rules of normal conduct do not apply. The conduct is adjusted to the conditions and consequently is rational. But that is true, I think, in a large proportion of suicides. If you consider them in detail with an open mind you must come to the conclusion that the act is a reasonable response to the existing conditions."

"I doubt that," said I. "The case that you have cited I should be disposed to admit, but I can think of no other."

"The point is," said he, "whether the conduct is or is not adapted to the existing conditions. If it is it is rational conduct. And a man is entitled to estimate those conditions for himself to decide whether they are or are not acceptable; whether, in those conditions, he would rather be alive or not. Whether, in short, life is or is not worth living. If he decides that it is not, then it is reasonable for him to bring it to an end."

"My point is," I rejoined, "that a normal man would always rather be alive than not."

"Then, Mortimer," said he, "I think you are mistaken. Let us take a concrete case. Suppose a man, like yourself, an employee of a bank, tied down to a particular place. Suppose he has a quarrelsome wife who makes his life a misery and perhaps gets him into debt, and a family who are a constant trouble and disgrace to him. What is he to do? He can't escape because he is tied to his job. If he finds life intolerably unpleasant under these conditions, which he cannot alter, what could be more reasonable than for him to bring it to an end? Or again, take the case of a man who has inherited a fortune and has had a roaring good time enjoying all sorts of expensive pleasures. The natural result is that he steadily gets through his money. Now when he comes down to his last shilling what is the prospect before him? What is the natural thing for him to do?"

"The most reasonable thing," I replied, "would be to turn over a new leaf; to get a job, work hard at it and live within his means."

Gillum shook his head. "No, Mortimer," said he. "That would not be possible to the type of man that I am describing. He couldn't do it, and he wouldn't try. If he was absolutely broke, he could try to live by sponging, by borrowing, by fraud or by some other form of crime, but either method would bring him, sooner or later, to disaster; and almost certainly, in the end, to suicide. But I contend that the more reasonable plan would be to anticipate and avoid all these troubles. When once his money was gone and the only kind of life that he cared for had become impossible, I say that the sane and sensible thing for him to do would be to recognise the facts and make his quietus—though not with a bare bodkin."

"But," I exclaimed, "do you mean to tell me seriously that is what you would do, as a considered act, in the circumstances that you mention?"

He laughed and shook a finger at me in mock reproof. "Now, Mortimer," said he, "you know that is quite an improper question. We are considering a hypothetical case, and in effect, a certain question of principle. But you immediately—and quite irrerelevantly—turn it into a personal question. What I, personally, might do is beside the mark."

"I don't see that it is," I objected. "If you really mean what you say, I understand that if ever you should go stony broke with no possible chance of recovery you would proceed at once, as a matter of considered policy, to hang yourself or cut your throat."

"No, no, Mortimer," he protested, "I said nothing about hanging or throat-cutting. That would be temporary insanity
with a vengeance. No, pray do me the justice of believing that, if the occasion arose, I should perform the coil-shuffling operation with decency, dignity, and the maximum of personal corn fort. The rope and the carving knife are the wretched resources of the mere lunatic or moron. There is no excuse for such barbarities when, as we know, there are certain medicinal substances which are perfectly efficient for the purpose and which are not only painless but rather agreeable in their operation."

To this I made no reply, for there had come on me a sudden dislike to the turn that the discussion had taken. He had spoken semi-facetiously, but yet there was an underlying seriousness that gave his words a rather gruesome quality. So I let the discussion drop and, after a short silence, directed our talk into a fresh channel.

After dinner Gillum brewed a pot of excellent coffee and we then adjourned to the easy chairs to smoke our pipes and talk; and as I listened to my host's comments and observations on the various topics that we discussed, I was surprised—having regard to the outrageous folly of his conduct—not only at the range of his knowledge and general in formation but especially at the shrewdness and sanity of his outlook. Moreover, he was a man of some culture. I had already noticed his interest in the more serious forms of music and his lively appreciation of the fine grouping and skyline of the buildings of Fleet Street, and it now appeared that he shared my affection for the quaint nooks and corners and antique survivals of the older parts of London and seemed to have a quite extensive acquaintance with them. Indeed, so pleasant and sympathetic was our gossip and so agreeably did the time slip away that I was quite taken aback when St. Dunstan's clock, reinforced by the more distant bells of St. Clement's, announced the hour of eleven and bade me set forth on my journey homewards.

"I will pilot you out as far as Fleet Street," said Gillum, as he helped me into my overcoat. "Next time you will know your way; and I hope the next will be quite soon."

"You have given me every inducement to repeat the offence," I replied. "It has been a jolly evening. Quite a red-letter day for me."

We sallied forth from the dark entry—but it was dark no longer now that the lamp was alight—and, crossing the courtyard, plunged into the tunnel which passes the Hall, and, crossing the little courtyard, entered Clifford's Inn Passage. The main gate was shut and the night porter sat on a chair by the wicket, holding a newspaper and conversing with a spectacled gentleman who was formally arrayed in a frock coat and tall hat and supported himself on an umbrella.

"That is Mr. Weech," said Gillum, "the Inn porter; a queer old bird, quite a character in his way and a complete Victorian survival. I'll introduce you as you like antiques."

As we approached, Mr. Weech opened the wicket for us and gave my companion "good evening."

"Good evening, Mr. Weech," said Gillum. "Taking a last look round to see that we are all safe before you turn in?"

"That is so," replied Mr. Weech. "It is my custom to conclude the day's duty with a perambulation of the precincts to see that everything is in order."

"A very wise precaution," said Gillum. "It's of no use to have a locked gate if the doubtful characters are lurking inside. Let me introduce my friend, Mr. Mortimer, who has been spending the evening with me, so that you may know him in future as an accredited visitor. This is Mr. Weech, the custodian of the Inn and the faithful guardian of our security. As you see, he carries an umbrella as a symbol of his protective functions. Isn't that so, Mr. Weech? I notice that you are never without it."

Mr. Weech chuckled and glanced fondly at the symbol.

"I suppose I am not," he admitted. "When I put on my hat I take up the umbrella automatically. It has become a habit and I do it without thinking. Consuetudo alterus naturum, as the saying is."

"Well," said I, as I stepped through the wicket, "it is a wise habit in a fickle climate like ours. Good-night, Mr. Weech."

He raised his hat with an old-fashioned flourish as he returned my valediction, and Gillum and I walked slowly down the passage to Fleet Street.

"An odd fish is Mr. Weech," Gillum remarked. "Quite a good sort but odd. I believe he takes that umbrella to bed with him. And he's a devil for Latin. I suspect he keeps a book of quotations and primes himself with them for conversation. Well, good night, Mortimer. Take care of yourself and come again soon."

As I made my way homewards to my lodgings I turned over the events of the evening. It had been a pleasant experience and Gillum had been a most agreeable companion. Indeed, I had been rather surprised at the way in which he had improved on better acquaintance and I was still puzzled by the contrast between his obvious intelligence and culture and the idiotic manner in which he was wasting his life and his substance. But as I recalled our conversation there was one item that jarred on me badly. Gillum's defence of suicide may have been partly playful. Evidently, he rather inclined to the role of the Devil's Advocate and took a perverse pleasure in arguing and defending a paradox. But still, I had an unpleasant feeling that the views that he had expressed really represented his convictions. And what made the recollection of his argument especially disturbing to me was the fact that one of the cases that he had cited in illustration was alarmingly like what his own case might be. At present, it is true, his wild expenditure was balanced by his very ample income. He never overdrew; and as long as his income continued at its present rate, he would remain solvent and merely waste his possessions.

But suppose some day, his source of income should dry up. Then he would soon be penniless and would quite possibly
fall into debt. And if he did, the very conditions that he had postulated as justifying suicide would be brought into being. It was a profoundly disturbing thought; and though I tried to put it away, it recurred again and again, not only during my journey home, but at intervals in the days that followed.

VI. — THE PASSING OF JOHN GILLUM

HITHERTO I have followed in rather close detail the circumstances of my association with John Gillum. This I have done advisedly; since the purpose of this narrative is to present as clear a picture as I am able of his personality and manner of life. But, having done this, I shall now pass more lightly over the events that occurred during the remainder of our association. That association, which extended over a period of about ten months, was fairly intimate and tended to become more as the time ran on. Gillum was an entirely acceptable companion; cheerful, lively, humorous, and extremely well-informed. And, apparently, he liked my society, for he took every opportunity of cultivating it. The result was that we met as frequently as could be expected in the case of two rather self-contained men, each of whom had his own particular interests and occupations.

Sometimes he would call for me at the bank, but more commonly our rendezvous was Clifford’s Inn, where we would take tea and then sally forth to spend the evening at a concert or a play or in a voyage of discovery into the lesser-known parts of the London in which we were both so much interested. Once, on an off day, I accompanied him to a race meeting, where he narrowly missed winning a considerable sum but actually—as I learned later—dropped about a hundred pounds. But this was the only occasion on which I came into contact with his gambling activities. He had, in his taciturn, accommodating way, accepted the fact that betting and games of chance were outside the sphere of my interests and such evidence as came to me of his exploits at the tables at the races or on the turf was in the nature of hearsay. But the books of the bank furnished direct evidence that, whatever those exploits may have been, the net result was displayed on the debit side of his account.

As the period of our friendship lengthened I began to be aware of a rather curious fact; which was that, intimate as we seemed to be, I really knew nothing about him. It was rather remarkable. In respect of his present mode of life and his daily doings he was—or, at least, appeared to be—open even to expansiveness. But of his past life or his antecedents, not a word was ever dropped. Gradually I came to realise that, under this appearance of free and frank confidence, lay a profound secretiveness. It was not a pleasing trait; and it occasioned a certain amount of reflection on my part. And when I came to consider it, I began to perceive that the secretiveness was not limited to the past; for, with all his expansiveness, he never made the slightest references to those periodical drafts on which I had looked—and still looked—with so much suspicion. In short, it began gradually to dawn on me that the confidences that he made with so much apparent openness were in fact limited to what I, in my capacity as his banker, already knew.

Of course, I asked no questions. But, naturally, as I reflected on this secretive habit, amounting virtually to concealment, it aroused some curiosity. I am not in general an inquisitive person. But when I came to consider that this man, with whom I was on terms of daily intimacy, was an absolute stranger to me; that I knew nothing whatever of his past, of his relations, of the places where he had lived, of his profession or calling, if he had any, or of how he passed his time or whether he had any occupation other than gambling; it could not but appear very remarkable. And these reflections inevitably led to others. If his past life was never referred to, could there be any reason for this reticence? Was there anything in his past that made concealment necessary?

The question was not entirely without relevance. The periodical drafts, which had always seemed to me to suggest periodical payments, had raised a suspicion that he was being blackmail and as time went on, this suspicion tended to grow. But how should he come to be blackmailed? There is no smoke without fire. It is usually impossible to blackmail a man unless there is something in his life that he is unwilling to disclose. Could it be that his past was in some respects unpresentable? Or could it be that, even now, he was engaged in some activities that would not bear the light of day?

These questions presented themselves unsought and unwelcomed. For I liked the man and was unwilling to think ill of him or to harbour suspicions concerning him. Still, there were the facts, and I had to recognise them though the process of recognition cost me some mental discomfort. But presently I began to have anxieties of a different kind. I had always assumed that Gillum’s income was derived from a permanent source. The large sums that he had paid in at approximately regular intervals had appeared to represent something in the nature of dividends or an annuity. But in the last month of my acquaintance with him this regularity had become suddenly disturbed. One or two large cheques—unusually large ones—had been paid in, but the balance created by them had begun immediately to melt away. I waited in expectation of the usual credit payment. But the time when it should have become due passed and no such payment was made; and Gillum's account began to show an uncomfortably small balance. It looked rather alarmingly like a failure of the source of supply.

Now, so long as his income was regular, his ridiculous expenditure merely kept him poor when he should have been rich. But with the failure of the supply and the continuance of the expenditure, a very different situation was created. As I scanned his account in our books and noted the growing tendency for the debit to overgrow the credit, I felt that—unless there were some change in the conditions—sooner or later, and probably sooner rather than later, some sort of crash was to be looked for; and, knowing what his ideas were as to the way to meet a crash, I had already dimly envisaged the kind of disaster which actually occurred, and of which I shall now proceed to relate the circumstances.

It was in the early afternoon of a rather sultry day in July that a tall, sunburnt, athletic-looking man came to the bank
and asked to see the manager, explaining that he had been sent by Mr. Penfield and that his business was connected with the affairs of our customer, Mr. John Gillum. On this I pricked up my ears, and when he had been ushered into the manager's room, I waited expectantly for the summons which seemed almost inevitable, having regard to my known intimacy with Gillum; and sure enough, in a few minutes, the bell rang and the clerk who went in to answer it returned to inform me that the manager wished to speak to me. Accordingly I went in and found the manager and the visitor seated on opposite sides of a small table.

"This," said the former, introducing me, "is Mr. Arthur Benson, a cousin of Mr. Gillum's, who has called to make some enquiries; and as you know Mr. Gillum personally as well as officially, you will probably be able to give him more information than I can. Mr. Mortimer is, I think I may say, a fairly intimate friend of your cousin's, Mr. Benson, and may be able to tell you what you want to know."

Mr. Benson shook hands heartily and proceeded at once with his enquiries.

"I am in rather a difficulty, Mr. Mortimer," said he, "and I may add, a little puzzled and worried by the way in which my cousin is behaving. But I had better begin by explaining the circumstances. I have just come from Australia, where I run a sheep farm in which my cousin, Gillum, is to some extent interested. I have been in regular correspondence with him about our affairs and have sent him cheques from time to time, which have been duly acknowledged. Now, as the business which has brought me to England arose quite unexpectedly, I wrote to him from Sydney telling him that I should be coming on by the next boat and asking him either to meet me at Tilbury or to send a letter to the ship there telling me where and when I should find him. Well, he didn't meet me at Tilbury, but he sent a letter which was handed to me as soon as the ship brought up in the river. In this he asked me to come straight on to his chambers in Clifford's Inn.

"Accordingly, I did so; but when I called at his chambers, I could not get any answer to my knock. The place was all shut up, and though I hammered at the iron-bound door with my stick for some time, nothing happened. It was evident that he was not at home.

"This seemed a bit queer and not at all what I should have expected of him. However, I went off and got fixed up at an hotel, and then I came back to the Inn and made another attack on the door. But still there was no sign of life; so I gave it up for the time and went back to my hotel and spent the night there. Next day, I went to the Inn again and had another try. But still there was no result. The place was as still as the grave.

"It was really very extraordinary and I began to wonder whether there could be anything amiss. So I went on to Mr. Penfield, who acted for us in our business transactions, and asked him if he knew anything about Gillum's movements. But he knew nothing at all, not having seen my cousin for some months, but he recommended me to come along here and see whether you knew anything about him or could give me any advice. So here I am; and the question is, can you give me any sort of help or tell me where I may be likely to find him?"

The manager looked at me. "What do you say, Mortimer? You know Mr. Gillum's haunts pretty well, I think. Have you any idea where he is likely to be found?"

"Not the least," I replied. "I should have expected him to be at his chambers, especially as he had made an appointment with Mr. Benson. That is where he lives, and I had always supposed that he, at least, spent the night there."

"When did you see him last?" the manager asked.

"I haven't seen him for nearly a fortnight," I replied. "The last time that I saw him was when he came to the bank last Friday week to cash a cheque. I had a few words with him then but he did not say anything about his intended movements; and, in fact, he could not have had any intention of going away as he had made this appointment with Mr. Benson."

The manager looked thoughtful and rather puzzled. "It really does seem a little queer," said he, "and I think we ought to try to help Mr. Benson as he is a stranger in London. What do you suggest, Mortimer?"

"I hardly know what to suggest," I replied. "It is certainly an odd affair. Perhaps it might be worth while for me to run round with Mr. Benson to Clifford's Inn and try the door again and if we still can't get any answer we might drop in at the lodge and see if we can get any information from Mr. Weech, the porter of the Inn. He might be able to tell us something."

"Yes," said the manager, "that seems about the best thing to do. At any rate, it is worth trying. So perhaps you will kindly take Mr. Benson in tow and see what you can do for him."

With this he stood up and shook hands with Benson, and the latter then accompanied me into the outer office, and when I had got my hat and stick we sallied forth together.

It is no great distance from Gracechurch Street to Clifford's Inn and we agreed to walk; Benson for the advantage of seeing the town and I for the opportunity to think things over and possibly get a little additional information. For, as I have hinted, I was more disturbed by the strange state of affairs than I had admitted either to the manager or to our visitor. I had not mentioned to him the amount of the cheque which had been cashed less than a fortnight ago, but it came to my mind now with a slightly ominous suggestiveness. The amount had been two hundred pounds, which I had paid in one-pound notes; and that payment had not only cleared out the balance but had left the account a few pounds overdrawn.

Reflecting on this, I ventured to make one or two discreet enquiries though avoiding direct questions.

"Your name is fairly familiar to me," I began as a cautious lead off.
"I suppose it is," he replied. "You must have had a good many of my cheques through your hands."

"Yes," said I. "They have come in at pretty regular intervals until just lately. But I don't think I have seen one for over three months. However, the last one was quite a big cheque, if I remember rightly."

"It was," said he; "eleven hundred pounds. That was the final payment."

"Indeed!" said I, rather startled. "Then it was not a continuing transaction?"

"No," he replied. "The payments were instalments of purchase money. The sheep farm that I run originally belonged to Gillum. But he had a fancy to come to England and I was connected with a meat-exporting establishment; so he proposed that I should take over the farm and pay for it by instalments out of income while he should buy with the proceeds, or part of them, a partnership in a firm of meat importers in London. He thought that we could work things to our mutual advantage, and so did I. So I fixed up the deal with him and he came to England and arranged the partnership; and I paid off my debt as well as I could out of income. But after nearly two years I thought that it had gone on for long enough, so I raised a loan and paid off the final instalment in one sum."

"By the way," said I, "did it not occur to you to go round to his firm and ask if he had been there?"

"It did," he replied. "I went there before I went to Mr. Penfield. And then I got another surprise. It seemed that he didn't take to the meat-importing trade and about six months ago he sold his interest in the concern to the other partner and they have not seen anything of him since. It is curious that he should not have said anything about it to me in his letters."

"Very curious," I agreed. And it certainly was very remarkable. But it was not the oddity of his behaviour that principally impressed me. What instantly struck me with devastating force was the appalling fact that, at this moment, John Gillum must be absolutely penniless. Those big cheques had been paid in to my knowledge and had produced a most impressive balance; but that balance had been dribbling away ever faster and faster as the "self" cheques were turned into cash to provide the means for his insane expenditure. And now, as I have said, he had not only drawn out the last penny of his balance but was actually in debt to the bank.

It was a terrible position; and when I reflected on it by the light of his expressed views on the appropriate way to meet a financial crash, the behaviour disclosed by Benson's experiences assumed an undeniably sinister aspect. I said nothing to my companion as to what was in my mind, but, as we approached the neighbourhood of Clifford's Inn, my forebodings became so profound as to engender a very definite distaste for the errand on which I was bent.

We entered the Inn by the postern gate in Fetter Lane, and, crossing the little quadrangle which I knew so well, made our way straight to the rather forbidding entry. As we plunged into the shadow which enclosed the staircase, I could hear the typewriters in the ground-floor office ticking away, conveying a sense of human life and activity which seemed to contrast almost uncannily with the silence and aloofness of the—presumably—empty room upstairs.

We groped our way up the dim staircase and came out on the rather sordid and ill-lighted landing where the empty dust-bin confirmed the suggestion of an absent tenant. But we did not stop to examine the landing. Walking up to the grim iron-bound door, above which the name of Mr. J. Gillum could be read on a painted label, now rather faded and dirt-stained, we listened for a few moments and then tapped on the massive oak panel. Perhaps the word "tapped" is inadequate, for Benson, who carried a stout stick of some hard and heavy wood, applied it in the manner of a battering-ram with such effect that the place resounded with the blows and I expected some protest from the office below.

"Well," said Benson, after banging away for a couple of minutes, "I think we may take it that there is no one at home. Shall we go round and hear what your porter man has got to tell us?"

"I think we had better," I replied; and forthwith led the way down the steep stairs, my state of mind by no means improved by the unpleasant fashion in which the noise of Benson's hammerings had echoed through the building. In fact, I found myself growing distinctly nervous and, as we made our way towards the passage in which the porter's lodge was situated, I began to consider what we had better do if we could get no more satisfactory tidings of the missing man. But I still had some hopes that the porter might be able to resolve the mystery or at least give us a hint of some kind.

A hearty pull at the pendent handle outside the lodge door elicited a cheerful jangle from within; and in a few moments the door opened and Mr. Weech appeared, fully attired as usual in his long frock coat and tall silk hat. Whether he slept in that hat I cannot guess, but it seemed that he wore it constantly from the time when he arose in the morning until he retired at night. At least, that was my impression, for I never saw him without it. He now regarded me benevolently through his spectacles and then cast an enquiring glance at my companion.

"We have called, Mr. Weech," said I, "to make one or two enquiries and see if you can help us. A rather unaccountable thing has happened. My friend, Mr. Gillum, seems to be absent from his chambers. We have hammered at his door and can't get any answer, and my friend here, Mr. Benson, tried yesterday and the day before, but he also could not make anybody hear."

Mr. Weech retired for a few moments, apparently to fetch an umbrella, for he reappeared with one in his hand; and thus fortified, he again inspected me, first through his spectacles and then over them and replied in a tone of mild protest:

"But what about it, Mr. Mortimer? A gentleman is not bound to stay in his chambers if he doesn't want to. He isn't under any contract to be in residence excepting at his own convenience and by his own choice. Probably he has gone out of town for a few days. Gentlemen frequently do; and they are not under any obligation to give notice of their intentions. That is the
advantage of living in chambers."

"Yes," I replied, "but that is not quite the position. Mr. Gillum had an appointment with Mr. Benson at his chambers and it was a rather special one, definitely made by letter. Mr. Gillum could hardly have gone away for a holiday and ignored this engagement."

Here I gave Mr. Weech a slight sketch of the circumstances to which he listened with interest and growing attention.

"My, he agreed, when I had finished, "it does sound a little remarkable, the way you put it. Of course, he might have overlooked the matter, but that doesn't seem likely. Still, I certainly have not seen him about the Inn for the last day or two."

"When did you last see him?" Benson asked.

Mr. Weech considered for a few moments. "Now, let me see," said he. "I met him one evening just outside the Hall. He was coming down towards Fleet Street. Now, when would that be? I should say it would be about ten days ago." He reflected again and then confirmed his estimate with the definite statement: "Yes. Ten days ago it was. I can fix it by the fact that one of our tenants, who was a bit in arrears with his rent, came to the lodge to settle up. And very glad I was. The Court don't like rents to get behindhand."

"Very well, Mr. Weech," said I. "You haven't seen him for ten days. Now is that at all unusual?"

Mr. Weech, having duly considered the question, decided that it was slightly unusual. "You see," he explained, "I am pretty constantly up and down the Inn and I tend to run up against the resident tenants, particularly if they are fairly regular in their habits, as Mr. Gillum is. I should think I must have met him nearly every day since he came here. And he is a rather sociable man and likes to stop for a bit of a chat."

"Then," said I, "that seems to confirm our idea that there is something unusual about this affair. I suppose you don't happen to have a duplicate key of his chambers?"

Mr. Weech seemed to stiffen at my suggestion. "We don't usually keep duplicate keys of gentle men's chambers," he replied. "The agreements stipulate that the tenants shall have full use and enjoyment of their premises, which would not be the case if we reserved either the right or the means of entry. But, as a matter of fact, I have a duplicate key of Mr. Gillum's chambers. I offered it to him, but he said that he had no use for a second key, and he thought that it might be as well for me to keep it in case he might lose his or in the event of some emergency arising. But why do you ask?"

"Well," I said a little diffidently, "it occurred to me that it might be as well, if you had a key, just to look in and see that all is as it should be."

Mr. Weech shook his head decidedly. "No, sir," said he, "I have no right to enter the chambers of any of our tenants without his express permission and authority."

I realised Mr. Weech's point of view and fully agreed as to its propriety. But, having ascertained that a key was available, I made up my mind quite definitely that those chambers had got to be entered.

"That is true enough in ordinary circumstances," said I. "But the circumstances are not ordinary. You must see that something unusual has happened, and I may say that Mr. Benson and I are extremely uneasy. Supposing Mr. Gillum should have been taken ill or had some sort of accident."

Mr. Weech was visibly impressed though he made no reply, and I proceeded to press my advantage.

"What would people say if it should become known that he had been left in his chambers without help simply because of a mere scruple of official etiquette?"

"Yes," Mr. Weech admitted, "there is something in that. It would be very awkward for him, shut up there, solus cum soli, if he was seriously ill. But we don't know that he is."

"We don't," I agreed, "but we can easily find out. Come, now, Mr. Weech, don't stand on mere pedantic ceremony. Do the reasonable thing. Mr. Gillum may be, at this moment, lying in there, helpless, waiting for someone to succour him. We ought to go and see whether he is or not. And I am not suggesting anything irregular. Mr. Benson is his cousin and I am a responsible friend. I am only asking you to do what he would have expected you to do. You say that he left the key in your custody in case any emergency should arise. Well, an emergency has arisen and you have got the key."

"I should hardly call it an emergency," Mr. Weech objected, "but still I don't want to be obstinate. You have shown cause why a visit of inspection might reasonably be made, and, if you and Mr. Benson will take the responsibility, I will get the key and go round with you to the chambers. Then you will be able to see for yourselves whether there is or is not any foundation for your anxieties."

With this he went back into the lodge and presently returned carrying on his finger a couple of keys on a string loop to which was attached a wooden label.

Together we passed up the outer passage, across the small courtyard, through the covered way (not to call it a tunnel) on which the door of the Hall opened, and, crossing the inner courtyard, approached Gillum's entry. Our previous visit with its very audible accompaniments had evidently not passed unnoticed, for, as we walked into the entry, the door of the typewriting office opened slightly and a face appertaining to an elderly woman appeared, surveying us with an interest that
was not entirely benevolent.

On arriving at the landing, Mr. Weech transferred his umbrella from his right hand to the left, the better to manipulate the keys, the larger of which he inserted into the lock. It was not a very good fit, but, after a few tentative turns, he succeeded in shooting back the bolt; having done which, he drew the door outwards a couple of inches and sniffed audibly. Taking the key out of the door, he drew the latter wide open and was preparing to insert the key into the lock of the inner door when he observed that the latter was slightly ajar; whereupon he pushed it open and stepped into the room.

But he took only one two steps, and then, as he passed the open door, he stopped short, and ejaculating, “God save us!” hastily backed out. And, at the same moment, I became aware of a strange, musty, cadaverous odour.

With all my forebodings intensified and a feeling of extreme distaste, I nevertheless ventured to step in at the open door to see what it was that had given such a shock to Mr. Weech. But my stay was little longer than his, though in that instant my eyes took in a tableau that rises vividly before me as I write. As I cleared the edge of the door, I came into view of a couch drawn up by the Window, whereon reclined a pyjama-clad figure whose aspect confirmed the worst of my fears.

It was a horrible spectacle, that motionless figure, half strange and half familiar, with its discoloured face and the open mouth from which the two gold teeth seemed to stare out as they gleamed in the bright afternoon sunlight. I stood, as I have said, gazing at it for but a few seconds and then, sick with the horror of the sight and the the effluvium that filled the room, I hurried out an joined Mr. Weech, who stood at the head of the stairs holding a handkerchief to his nose.

As I came out, Benson looked at me, but he asked no question. I suppose he guessed what we had seen, but his nerves were evidently stronger than ours for he strode into the room without hesitation, and pushing the door right back, opened the view into the room so far that I could see him stooping over that dreadful figure, regardless of the foul atmosphere and the obscene flies that buzzed around, He made a long and critical examination of the corpse and then turned to a small table that was placed beside the couch. This, I now noticed, bore a decanter, apparently containing whiskey, a siphon, a tumbler, and a small corked bottle; and each of these objects Benson scrutinised minutely.

At length he came out, shutting the inner door after him, and looking very grim and solemn. Evidently he was deeply moved, but, though he was a shade pale, he was quite calm and self-possessed, in striking contrast to Weech and me, whose nerves were quite unstrung by the horrid experience. He closed the outer door, and, taking the key out of the lock, silently handed it to Mr. Weech.

“Well,” he said, “what is to be done now?”

“I suppose,” said Weech, “I had better communicate with the police. They have a telephone in the office below and I dare say they will let me use it.”

“Yes,” Benson agreed, “that will be the best thing to do; and you had better ask the police how soon they can send someone up. We shall have to wait here and see them, as they will want some particulars and we may as well get the business over at once.”

We went down to the ground floor and once more were the objects of interested scrutiny from the half-opened door. Then Mr. Weech made his request and was admitted forthwith while Benson and I went out into the quadrangle to wait for him. Presently he came out and joined us, with the information that an officer was being sent up and would be at the Inn in the course of a few minutes. Then he invited us to come to the lodge to await the officer’s arrival; an offer which Benson promptly declined, explaining that he wanted to talk things over with me before the officer should arrive. Accordingly, Mr. Weech excused himself and went off in the direction of the lodge, and Benson and I turned into the quiet alley between a row of ancient houses and the garden railings.

“This is a very astounding affair, Mortimer,” said Benson, when Mr. Weech was out of earshot. “Doesn’t it seem so to you?”

I hesitated for a moment, but as there was no reason for secrecy, and as I should certainly have to make a statement to the police, or at the inquest, I replied: “It is a very dreadful business, but I can’t say that I am so greatly surprised.”

“Aren’t you?” he exclaimed. “Now, I should have said that Jack Gillum was the very last person I should have expected to take his life. Why do you say that you are not surprised?”

“Well,” I replied, “I have known a good deal about his way of living and the muddle that he has got his affairs into; and, of course, I have certain special knowledge which it would not be permissible for me to refer to.”

“If you mean knowledge that you have obtained in your capacity as an employee of his bank,” said Benson, “there is nothing in it. He was your customer and you had to keep his affairs secret. But now that he is dead, his executor is your customer.”

“He made a will, then?” said I, somewhat surprised.

“Yes, by special arrangement. Mr. Penfield is his executor and I am the sole beneficiary under the will. So I am, in effect, your customer and am entitled to know how his affairs stand.”

I was not at all satisfied that this view was technically correct. But, as it was certain that poor Gillum’s affairs would have to be more or less completely disclosed at the inquest, I felt it to be unreasonable to withhold the information from one who was so clearly entitled to know all the facts. Accordingly I replied: “I am not sure that you are right, but I am prepared
to waive the strict letter of the law if you will promise to regard as absolutely confidential anything that I may tell you about Gillum’s financial position.”

“Certainly I will,” said he. “But surely his financial position was perfectly satisfactory?”

“On the contrary,” said I, “it was profoundly unsatisfactory; in fact, I don’t think I am exaggerating if I say that he was absolutely penniless.”

Benson stopped and gazed at me with a frown of astonishment. “Penniless!” he exclaimed. “But he should have been a rich man, comparatively speaking. When he came to England, he had his very substantial savings, which I know he sent to Mr. Penfield to be deposited in a bank—your bank, I suppose.”

“Yes,” said I. “Mr. Penfield opened the account in Gillum’s name with a deposit of three thousand pounds.”

“Very well. Then he had payments from me from time to time, including the eleven hundred pounds that I sent him a little over three months ago. And he must have got something from the business, to say nothing of the purchase price of his partnership, whatever that may have been. But, of course, you know all about that.”

“Yes,” said I. “All those big cheques have been paid in, and the amounts have gone out nearly as fast as they have come in, and the position now is that there is not only no balance, but the account is a pound or two overdrawn.”

Benson continued to stare at me with the utmost amazement. “But,” he exclaimed, “where the devil has the money gone? Do you suppose he has been playing the fool on the Stock Exchange?”

“I don’t,” I replied. “I know where the bulk of the money has gone. It has been frittered away in gambling; some of it on the turf and a good deal on cards and roulette and various other fooleries. I have sometimes suspected that there might be a blackmailer in the background, but I have no knowledge to that effect. I only know that the bulk of the money was drawn out in cash and that he usually asked to have his ‘self’ cheques cashed in notes of small denomination—preferably in Treasury notes. It looked as if he wanted to secure himself against the possibility of the notes being traced.”

Benson reflected on this statement in silence for a few moments, still looking at me with an expression of angry incredulity. At length he rejoined: “We shall have to go into this in more detail later on. Obviously, as you are in possession of the actual facts, what you tell me must be true. But yet I find it beyond belief. The whole affair, including this suicide—for that is evidently what it is—is so utterly opposed to all that I know of Jack Gillum—and I have known him since he was a boy—that I can make nothing of it.”

“Then,” I suggested, “he was not always a gambler?”

“No,” Benson replied, though without much emphasis. “No, I wouldn’t call him a gambler. He liked a game of cards, and he liked to play rather higher than I cared about, and he had a way of betting in a small way and making wagers. But his play was never on a great scale, and his ordinary management of his financial affairs was perfectly reasonable. The amount that he had saved speaks for itself, and you can be sure that I should not have been willing to enter into the arrangements that existed between us if he had been a spendthrift and a wild gambler.”

Benson’s account of his cousin did not very greatly surprise me. It had been obvious to me that his habits could not always have been such as those that were known to me, or he would never have had any money at all. The gambling habit must have grown on him by frequent indulgence. So it appeared to me, and I answered to that effect.

“My acquaintance with your cousin,” said I, “extends only to a short time, only about a year, or rather less. And when I first met him these new habits were already formed, so I never knew him otherwise. But even so, it has been a matter of surprise to me that a man, in other respects so sensible and capable, should have behaved in this idiotic manner. But what you have just told me makes it even more surprising. We can only suppose that the new surroundings, when he came to live in London, must have exerted some peculiar influence over him. And it may be that he fell into the society of people who had a bad effect on him. I happen to know that he was acquainted with some pretty shady characters, though how he came to know them I have no idea.”

“There may be something in what you say,” said Benson, “in fact, there must be. But the gambling alone doesn’t seem to be a satisfactory explanation. I am inclined to suspect that you are right in your suggestion of a possible blackmailer. The way in which the money was drawn out in untraceable notes seems to support that view very strongly. There is no reason why a simple, straightforward gambler should take precautions against having his payments traced. However, we shall have to adjourn this discussion. That gentleman looks like the police officer.”

As he spoke, Mr. Weech appeared emerging from the covered way in company with a tall, brisk-looking man in civilian clothes who carried a largish attaché case. The two men approached us and Mr. Weech effected a concise introduction.

“There is no need for you two gentlemen to come up with me,” said the officer; “in fact it would be better for me to go alone so that I can make my observations undisturbed. But I will ask you to be good enough to wait here until I have seen what there is to see. I shall want to take a few particulars for the purposes of the inquest.”

With this he departed under Mr. Weech’s guidance in the direction of Gillum’s entry, the approach of the pair closely observed from the window of the type writing office. When they had gone, I rather expected Benson to resume our conversation. But apparently what had been said already gave him sufficient food for thought, for he paced up and down the alley at my side uttering no word and evidently deep in his own reflections, which, to judge by his stern, gloomy expression, were of a highly disagreeable kind.
The officer's observations took rather longer than I had expected. At each turn of our walk when we came to the end of the alley and in view of Gillum's chambers, I could see Mr. Weech at the open landing window, gazing out discontentedly across the quadrangle, and at the office window below watchful heads appeared from time to time over the wire blind. But the officer remained hidden from our sight.

At length, at about the twentieth turn, as we came to the corner of the alley, I observed that Mr. Weech had disappeared from his post at the window, and a moment later he came into view in the obscurity of the staircase and then emerged into the open, followed closely by the officer, whereupon Benson and I walked forward to meet them.

"Well, gentlemen," said the officer, "it seems quite a straightforward case from my point of view, but I may as well have a few particulars for the guidance of the coroner's officer in preparing the details of the inquest. I will begin by taking your names and addresses and your relations with deceased."

He looked from one of us to the other, and Benson, as an actual relative, opened the proceedings by giving his name and address and stating his relationship.

"Ah!" said the officer, "you are deceased's cousin. Then you will be the proper person to identify the body. Not that it is of any importance as there is no question as to who he is. But you have seen the body. Can you identify it positively?"

"Yes," replied Benson. "It is the body of my cousin, John Gillum."

"Exactly," said the officer. "Now, is there anything that you can tell us that would throw any light on the suicide—assuming it to be a suicide?"

"No," replied Benson. "I can't account for it at all. But I haven't seen deceased for about two years, so I haven't any very recent information about him. This gentleman, Mr. Mortimer, knows a good deal more about his affairs than I do."

Thereupon the officer turned to me and asked me to give him any information that might guide him as to the kind of evidence that would be required at the inquest and the names of any witnesses who might have to be called. Accordingly I told him who I was but pointed out that, as an employee of deceased's bank, I was not at liberty to give any information as to his financial affairs.

"No," he agreed, "not in the ordinary way. But the customer's death releases the bank from its obligations of secrecy. However, I won't press you. Any information that the bank may be able to supply will have to be given at the inquest if it is relevant. Should you say that it would be relevant? I mean in relation to the motive for the suicide—assuming it to be a suicide?"

"Yes," I replied, "I think I may say that much. But perhaps you had better see the manager. He knows the ropes better than I do."

"Or Mr. Penfield," Benson suggested. "He is Gillum's executor and was his man of business and as he is a lawyer he will know exactly what information he ought to give."

The officer agreed to this and took down the addresses of the manager and Mr. Penfield. "And that," said he, "is all for the present. Now I must see about getting the body removed to the mortuary. I had better keep the keys until the inquest is over as we don't want the rooms disturbed, and there may be some letters or papers which ought to be examined either by me or by Mr. Penfield. I will hear what he has to say about that. So I will wish you gentlemen good afternoon."

With this he bustled away and Benson and Weech and I walked down to the lodge where, declining an invitation to go in and rest a few minutes, Benson and I left the porter and made our way out into Fleet Street. My companion was still silent and gloomy, uttering scarcely a word as we walked down towards Ludgate Circus. Only just before we parted at the corner did he make any observation on the tragedy.

Then, in a tone of almost passionate grief, he exclaimed: "It is a miserable business, and what makes it more awful to me is the feeling that I have been, in a manner, the cause of the disaster. It looks very much as if poor Gillum had funk'd meeting me."

I could not but admit that the same idea had occurred to me. It would certainly have been a very awkward meeting, involving some exceedingly uncomfortable explanations.

"But he needn't have funk'd it," said Benson. "Of course, I should have been pretty sick. But I shouldn't have reproached him and I should not have let him down. He could have come back with me and helped me to run the farm and got back to his natural way of life. However, it is no use thinking now of what might have been. Good-bye, Mortimer. You know where to find me if you should want me."

He shook my hand heartily and turned away down Farringdon Street, and, as it was now too late to go back to the bank, I made my way towards my own place of abode.

VII. — THE CORONER'S INQUEST

If the facts which were disclosed by the evidence of witnesses at the inquest on the body of John Gillum were mostly new to me only to the extent that they were facts, for most of them had already existed in my mind in the form of suspicions. Nevertheless, the grim proceedings had for me the melancholy interest that now, when all the contributory circumstances
of the final catastrophe were assembled, I was able to realise the enormity of that catastrophe. It was really beyond belief. That a man who had seemed to have been the especial favourite of fortune should have mismanaged his affairs so unutterably as to bring himself to actual destitution and to a pauper suicide's grave, appeared, and was, an incredible instance of human folly and perversity. But I need not moralise on the tragedy, the facts deposed to in evidence tell their own tale.

The first witness was Mr. Weech, who gave a slightly verbose but very impressive description of the discovery. When he had finished and in answer to a question, had stated the date on which he had last seen deceased alive, he was dismissed and his place taken by Arthur Benson.

"You were present with Mr. Weech when the body was discovered," said the coroner. "Were you able to identify the body?"

"Yes," was the reply, "it was the body of my cousin, John Gillum."

"The identity of the body is not in question," said the coroner, "but may we take it that you are certain that it was the body of your cousin?"

"I am quite certain," replied Benson. "The circumstances were so remarkable that I had at first some doubt whether it could really be John Gillum, so I examined it closely and carefully. There is no doubt whatever that it was John Gillum's body."

"Naturally," said the coroner, "you were greatly shocked at what had happened, but were you surprised?"

"I was astounded," replied Benson. "John Gillum was the last man in the world whom I should have expected to have committed suicide. But I had not seen him for nearly two years, when he was leaving Australia to come to England. Up to that time he had been working on a sheep farm and had seemed to be a happy, capable, well-balanced man. But I learn that since he came to this country his habits and even his character seem to have undergone a radical change. Of that, of course, I know nothing."

Here the coroner put one or two questions concerning Gillum's antecedents, to which Benson answered in much the same terms as those in which he had replied to mine, as recorded in the last chapter. And these details of Gillum's pecuniary position formed the remainder of his evidence.

The next witness was Detective-Sergeant Edmund Waters, who stepped up to the place appointed for witnesses and gave his evidence with professional readiness and precision.

"On Wednesday the eighteenth of July, I was in formed that a telephone message had been received reporting the finding of the dead body of a man in a room at 64, Clifford's Inn. I proceeded therewith, going first to the porter's lodge where I met Mr. Weech, who had sent the message, Mr. Benson and Mr. Mortimer. Mr. Weech conducted me to the room, which was in a set of chambers on the first floor, and unlocked the door to admit me.

"On entering the room, I saw the dead body of a man lying on a couch close to a window. From the appearance of the body and a very foul odour which pervaded the air of the room, I judged that the man had been dead several days. I inspected the body without disturbing it but could see no injuries or any sign of violence or any indication of a struggle. The man was lying on the couch in an easy posture, as if he had fallen asleep there and nothing in the room appeared to be disturbed. By the side of the couch was a small table on which was a decanter containing whisky, a siphon of soda-water, a tumbler, and a small bottle labelled 'Tablets of morphine hydrochloride; gr. 1/2.' and containing a number of white tablets. The description on the label was written with a pen in block capital letters.

"I took possession of the bottle and then I examined the tumbler. There were quite a large number of finger-prints on it and most of them were perfectly distinct. There were also finger-prints on the bottle, but these were not so distinct and I had to develop some of them up, especially those on the label, before I could be sure of the pattern. As I had my finger print apparatus with me, I proceeded very carefully to take a set of the finger-prints of the body to compare with those on the tumbler and the bottle. When I made the comparison, it became perfectly clear that all the prints on both vessels were made by deceased. Those on the tumbler were prints of the fingers of deceased's right hand and those on the bottle were principally prints of the left hand with one or two of the right."

"You are sure," said the coroner, "that there were no other finger-prints?"

"Quite sure," replied the sergeant. "The prints were all recognisable and I compared each one separately with the prints that I had taken from the body."

"That is very important," said the coroner, "and it seems quite conclusive. Did you make any examination of the room?"

"Not a minute examination. I just looked round to see if there were any signs of anything unusual, but there were not. Everything looked perfectly normal."

"Have you made any further investigation since then?"

"Yes. I went to the chambers with Mr. Bateman, who was acting for the executors, to see if there were any papers or documents that might throw any light on the affair. We found the keys in the pockets of deceased's clothes and with them we opened the drawers of the writing-table. In one of the drawers we found several letters in their envelopes tied up in a bundle. We read these letters and we both formed the opinion that they were blackmailer's letters. Mr. Bateman took
possessed of them and I believe he has them still.”

"Then," said the coroner, "as Mr. Bateman is here and will be giving evidence, we need not go into the question of the letters now. Is there anything else that you have to tell us?"

"No," replied the sergeant, "excepting that I notified the coroner—youself—that I had the bottle of tablets and, in accordance with instructions, handed it to Dr. Sidney."

"Then," said the coroner, "we need not trouble you further unless any member of the jury wishes to ask any questions. No questions? Then we had better next take the medical evidence."

Accordingly, the medical witness, Dr. Thomas Winsford, was called and, having given his name and qualifications, deposed, in answer to the coroner’s question: "I have made a careful examination of the body of deceased. It is of a man about forty years of age, well-developed and muscular and free from any signs of disease. I examined it in relation to the questions of the date of death and its cause. With regard to the first, there was a slight difficulty owing to the condition of the body, which was definitely in a state of incipient putrefaction. But, taking into account the temperature of the room in which it had been lying, I should say that deceased had been dead from six to eight days."

"You speak of the heat of the room. Had you any personal knowledge of the conditions in that room?"

"Yes. I obtained the key of the chambers from Sergeant Waters and went there in the afternoon. The sun was shining in at the window and the room was very hot. I took the temperature with a thermometer and found it to be eighty-one degrees Fahrenheit. That would account for the rather advanced state of putrefaction in the time that I have mentioned, and I am inclined to the opinion that deceased had not been dead more than six or seven days."

"Yes," the coroner remarked, "that seems to agree with what Mr. Weech has told us. He saw deceased alive ten days before the discovery of the body. And what do you say as to the cause of death?"

"From the inspection of the body, it was difficult to assign any cause of death. There were no injuries or external marks of any kind or any abnormal appearances whatever. But I had been informed of the finding of the bottle of morphine tablets and I examined the body for signs of morphine poisoning."

"And did you find any such traces?"

"Morphine does not ordinarily leave very pronounced traces, and the condition of the body was not favourable for discovering the more minute signs. But I found a somewhat contracted state of the pupils, and this, with the absence of any other signs indicating death from any other cause, confirmed the suggestion that death was due to poisoning with morphine. But I can only say that all the appearances were consistent with morphine poisoning and that I could not discover any other cause of death."

"Did you take any measure, to settle this question?"

"Yes. I removed from the body certain of the internal organs and put them in chemically clean jars which I closed and sealed and affixed to each a label on which I wrote the particulars and the date, and signed my name. These jars, in accordance with instructions, I handed personally to Dr. Walter Sidney for analysis."

This concluded the doctor’s evidence. He was followed by Dr. Walter Sidney, who deposed that he was a pathologist and an analytical chemist, and that he had received from the preceding witness certain jars containing various organs from a human body which he was informed had been removed from the body of deceased. He had also received from Sergeant Waters a bottle containing a number of white tablets and labelled with a written label: “Morphine hydrochloride, gr. 1/2.” He had analysed four of the tablets and found that they were composed of morphine hydrochloride and that each tablet contained half a grain of the drug. He had also made a chemical examination of the organs from the jars and had obtained from them a little over two and a quarter grains of morphine. He estimated the amount of morphine present in the whole body at, at least, four grains, but probably more.

"What do you consider a poisonous dose of morphine?" the coroner asked.

"It varies considerably in different persons,” the witness replied. “Half a grain has been known to cause death, but that is very unusual. One grain would be very likely to cause death in a person who was not accustomed to the drug, and two grains would ordinarily be a lethal dose.”

"Then four grains is definitely a lethal dose?"

"Yes. It would almost certainly cause death in a person who was not in the habit of taking the drug."

"Did your examination enable you to form any opinion as to whether deceased had been in the habit of taking morphine?"

"I should not like to give a very definite opinion. All the organs, including the liver, were quite healthy; which would hardly have been the case if deceased had been in the habit of dosing himself with morphine. I can only say that I found no signs that suggested the habitual taking of the drug. And Dr. Winsford’s evidence, in which he stated that deceased appeared to be a strong, healthy man, is quite inconsistent with the idea that deceased was a morphine addict."

"As a result of your examination, can you make any suggestion as to the cause of death?"

"Inasmuch as a lethal dose of morphine was found in the body, and as no other cause of death was discoverable, I should
say that there is no doubt that deceased died from poisoning by morphine."

"Thank you," said the coroner; "that is what we want to know; and I think that, if you have nothing more to tell us, we need not detain you any longer."

He glanced enquiringly at the jury, and, as neither the jury nor the witness volunteered any remark, the latter withdrew to his seat.

The next witness was Mr. Alfred Bateman, a gentle man of typically legal aspect whose acquaintance I had already made. Having been sworn, he deposed that he was the managing clerk of Mr. Penfield, a solicitor and executor of the will of deceased, for whom he also acted as man of business.

"Are you in possession of any facts that explain, or have any bearing on, the death of deceased?" the coroner asked.

"I am in possession of certain facts which seem to me to be relevant to the subject of this inquiry," the witness replied. "In the first place, deceased had, in less than two years, got through a fortune, and was, at the time of his death, so far as I can ascertain, absolutely penniless and in debt. In the second place, he was, at the time of his death, being harassed by blackmailers."

"Yes," said the coroner, "those facts certainly seem to be relevant to the subject of this inquiry. Perhaps you might give us a few particulars without going into unnecessary detail."

"As to the financial question," said Bateman, "the facts, in outline, are these: Nearly two years ago—on the sixteenth of April, 1928, to be exact—deceased wrote to Mr. Penfield stating that he was coming to England to live and remitting a sum of three thousand pounds which he asked Mr. Penfield to deposit in a suitable bank in his, deceased’s, name, five hundred to be placed to the current account and the remainder on deposit. I dealt with this matter myself, under Mr. Penfield’s instructions, and placed the money in Perkins’s Bank. Three months after the receipt of this letter, that is, on the eighteenth of September, deceased called at our office to announce his arrival. There were certain business transactions connected with the purchase of a partnership which I think I need not describe in detail as they seem to have no bearing on recent events. When these were concluded, and deceased had deposited his will with Mr. Penfield, I accompanied him to the bank and introduced him to the manager. Thereafter our contact with him practically ceased. He came to the office once or twice afterwards, and then, as we had finished with his affairs and he had kept the partnership deed in his own possession, we lost sight of him; and, excepting that his address in Clifford’s Inn was known to us—he having given Mr. Penfield as a reference when he applied for the chambers—we knew nothing of what he was doing or how he lived.

"He next came into view, so to speak, when his cousin, Mr. Benson, called at our office to ask if we could give him any information as to where he could find deceased. That was on the seventeenth of this month. As we knew nothing, we referred him to deceased’s bank, and, as he has deposited, he went there. On the evening of the eighteenth, Mr. Benson called at the office and informed me—as Mr. Penfield had already left—of the discovery of the body in the chambers. He also informed me that the keys of the chambers were in the possession of Sergeant Waters. Thereupon, as I knew that Mr. Penfield was the executor of deceased’s will, I thought it best to see the sergeant without delay and accordingly went forthwith to the police station where I was fortunate enough to find the sergeant. He suggested that we had better go to the chambers and see if there were any letters or papers which might throw any light on the motives for the assumed suicide.

"I agreed that it was desirable and we accordingly went together to the chambers and made the search. In a drawer in the writing-table we found a considerable number of letters and other documents, all neatly tied into bundles and docketed. There was one bundle tied with red tape and labelled ‘Horse-leech’ and this we examined first. It consisted of eleven letters, each enclosed in its envelope. They were all in a similar, and apparently disguised, handwriting, none of them bore any signature or contained any reference to any person by name, and none of them was dated, though the date could be inferred from the postmark on the envelope.

"On reading them, we came to the conclusion that they were undoubtedly from a blackmailer. Ten of them were quite short and were simply reminders that a payment was due. The other one, which appeared to be the first of the series, plainly demanded money with menaces. I produce the letters for your inspection."

Here the witness drew from his pocket a bundle of letters tied together with red tape and laid them on the table before the coroner.

"I think," said the latter, "that it would be better for you to read them to us, or, at least, the first letter and one of the others. The jury can inspect them afterwards if they wish to."

Accordingly, Mr. Bateman untied the bundle, and, taking the two outside letters, opened one of them and read its contents aloud: "‘With reference to our little friendly talk last night, as you did not seem able to make up your mind, I will see if I can help you. To put the matter in a nutshell, I want £500 from you as a first instalment. The others we can arrange later, but I must have this at once; and I warn you that I am not going to stand any nonsense. If this is not handed over by Sunday night at the latest, the consequences which I mentioned to you will follow without further notice."

"The money is to be paid in pound notes (not new ones) and the parcel is to be handed personally either to me or to the party whom you know and whose name I mentioned to you."

"This is the final offer and I advise you to take it. You will be sorry if you don’t.’”

"I agree with you," said the coroner, "as to the character of that letter. It is a typical blackmailer’s letter. What is the date
on the envelope?"

"The postmark," the coroner replied, whereupon the witness drew the other letter from its envelope, and, glancing at the latter, said: "This is dated by the post-mark the fourth of this present month of July and the contents are as follows: ‘In case you should forget to look at your calendar, as you did last time, I am sending you this little reminder. And don’t forget that the notes must be old ones which have seen some service. There were several brand new notes in the last instalment which had to be kept for use on the turf. Don’t let that happen again.’"

As he finished reading, Bateman laid the two letters on the table and the coroner, after glancing through them, passed them to the foreman of the jury.

"Beyond these blackmailing letters," said he, addressing the witness, "did you find anything that might throw light on what has happened?"

"No evidence," Bateman replied, "but it looked highly suspicious. The ‘self’ cheques appeared at very frequent intervals and some of them were for considerable amounts. However, we could not make very much of the pass-book, but, from what we could see, it looked as if deceased had spent his money as fast as he received it; and the cheques that were entered to his credit were for quite large amounts."

"You found no evidence of any other blackmailers?" the coroner asked.

"You say that deceased had received considerable sums of money. We don’t want details, but, roughly speaking, about how much had he spent and how long had he been in spending it?"

"The total amount that he had held to his credit, including the original deposit, was just over £13,000. And he had got through the whole of this between the end of September, 1928, and the middle of this present month; a period of one year and ten months."

"Did you learn at the bank whether he appeared to have been operating on the Stock Exchange?"

"I think we may definitely infer that he had not. Settlements on the Stock Exchange are made by cheque, and there were no records of any cheques payable to stockbrokers. The comparatively few cheques that appeared in the ledger were mostly small in amount and appeared to have been payable to tradesmen or other persons concerned with the ordinary, normal expenditure. What had exhausted the account was the large number of cheques payable to himself in cash."

"Well," said the coroner, addressing the jury, "there is no object in our enquiring further into the details of this astonishing instance of reckless prodigality. We have the material fact that in less than two years this unfortunate man flung away what most of us would have regarded as a fortune. We also know that, at the time of his death, he was penniless and in debt, and that he was the victim of a particularly rapacious set of blackmailers. I think Mr. Bateman has given us some most illuminating information and that we might now thank him for the clear and lucid way in which he has given his evidence and not detain him any longer. Unless any member of the jury wishes for any further information."

One member of the jury, apparently thrilled by the vast sums that had been mentioned, would have sought further details, but was politely suppressed by the coroner; whereupon Bateman was released and retired to his seat. There was a short interval during which the coroner glanced through the depositions, and then, as I had expected, my name was called.

"You have heard Mr. Bateman’s evidence," said the coroner, when the preliminaries had been disposed of. "As a member of the staff of the bank, you will probably consider yourself prohibited from giving any particulars of deceased's financial affairs. But can you tell us if you endorse what the last witness has stated?"

"I endorse it completely," I replied. "I was present with the manager when the particulars were given to him. And I may say that I am fully authorised by the executor—in whom the account is now vested—and the manager, to give any information that may be required as to our late customer's dealings with the bank."

"Then," said the coroner, "as you, in your capacity of cashier, knew exactly what monies deceased received and what he drew out, and in what form, perhaps you can tell us what opinions you held as to his very unusual manner of conducting his affairs. Did you ever suspect that he was being blackmailed?"
“I did.”

“What circumstances in particular led you to form that suspicion?”

“In the first place, there were the very large sums which he drew out in cash. It is very unusual for customers to draw out in cash more than quite modest amounts and these large drafts in cash were, in themselves, rather suggestive of some slightly irregular transactions. But what specially tended to arouse my suspicions was the fact that deceased usually asked expressly for old notes; notes that had been in circulation and were more or less soiled.”

“What did you infer from that?”

“As the only possible advantage of a note that has been used is that it cannot be traced, I inferred that the notes were to be used for making payments of a secret, and possibly unlawful, character.”

“Is it unusual for customers to ask for used notes?”

“It is rather unusual, though some customers prefer the used notes because they are less liable to stick together than the new. But usually, customers express a marked preference for new, clean notes.”

“But the new notes are more easy to trace?”

“They are quite easy to trace. Usually, when a customer presents a bearer cheque for a considerable amount, he is paid in notes which have been newly issued and supplied direct to the bank. Such an issue is in the form of a series of notes of which the numbers are consecutive, and the numbers of the series are entered, not only in our own books but in the books of the bank of issue. Moreover, the numbers of the notes paid to the customer are also recorded; so that, if any question arises, it is possible to say with certainty that a particular note was paid to a particular person on a known date.”

“You inferred, then, that these notes were being used to make payments of a questionable kind? What led you to suspect blackmail in particular?”

“It is common knowledge that blackmailers always refuse cheques and insist on being paid in cash; and their objection to cheques would equally apply to a series of newly issued notes. The only other kind of persons known to me who demand payment in untraceable cash are either thieves or receivers of stolen goods. But in the case of deceased, blackmailers were more probable than thieves or receivers. And there was another circumstance that strongly suggested a blackmailer. In addition to the smaller drafts which were presented at irregular intervals, there were certain larger drafts which were presented periodically and pretty regularly at intervals of three months. This suggested that someone was being paid a quarterly allowance; and, having regard to the mode of payment, I felt very little doubt that that person was a blackmailer.”

“You speak of a blackmailer. It has been suggested that there may have been more than one. What do you say to that?”

“I can only say that I think it highly probable. I have always, from the first, suspected a blackmailer in the background, simply by reason of the large cash withdrawals. But I had nothing more definite than that to go on until the large periodical drafts began last September. If there were any other blackmailers they must have been paid at irregular intervals, and, I should say, in smaller amounts. But it is possible that the irregular cash drafts merely represented what deceased spent on gambling. I know that his expenditure on betting and play was very large.”

“But would he have needed used notes for that purpose? Gambling is a foolish pursuit, but it is not usually unlawful.”

“No; but it may be associated with other acts which are unlawful. This was certainly the case in the one instance in which I accompanied him to one of his gambling resorts. It was a most disreputable place and the persons present seemed to me to be of the shadiest type. And drink was being sold freely on unlicensed premises and during prohibited hours. The place might have been, at any moment, raided by the police, and, in that case, deceased would not have wished that any evidence should exist that he had been associated with it, if he had happened not to be there at the time of the raid.”

“Is it actually known to you that deceased gambled to a really serious extent?”

“Yes. I was present on two occasions; the one that I have mentioned and another at a horse-race. On the first occasion he played very little as he was merely showing me the place and the people. But at the race he plunged rather heavily and lost—as he informed me—about a hundred pounds. But he was quite unconcerned about it. He seemed to consider the dropping of a hundred pounds as quite a negligible loss.”

“Did he know that you were aware of the extent to which he gambled?”

“Oh, yes. He made no secret of it. I spoke to him very seriously on several occasions and pointed out to him how his capital was wasting. But he was incorrigible. He took my lectures quite amiably, but he would promise no reform. He was quite confident that he would get all his losses back presently.”

The coroner reflected for a few moments on this statement. Then, in a grave and emphatic tone, he said: “As you were a friend of deceased’s and the only person who appears to know much of his affairs, I am going to ask you two questions. The first is: Have you any inklings as to the identity of the person who was blackmailing him?”

Now I had expected this question and had carefully considered the reply that I ought to make. I had a very definite suspicion as to who the blackmailer was. But it was only a guess; and a guess is not an inkling in the sense intended. I was prepared to communicate my suspicions to the police, but I had no intention of making guesses in sworn testimony with the certainty of publicity. Accordingly, I replied with strict truth: “I have no knowledge whatsoever. Deceased made no
confidences to me, and I never hinted to him what I suspected."

The coroner, whatever he may have thought, accepted this answer without comment and wrote it down. Then he put his second question.

"Had you ever any reason to think it possible that deceased might take his life?"

"Yes," I replied, "I have had that possibility in mind for some time, and, as soon as I heard that he was missing, I suspected what had happened."

"What led you to that belief?"

"It was something that deceased himself had said. On a certain occasion we happened to be speaking of suicide and I remarked that, to me, it seemed that the fact of suicide was in itself evidence of an unsound state of mind. With this he disagreed emphatically. He contended that suicide was a perfectly rational proceeding in appropriate circumstances; and when I asked him what he considered appropriate circumstances, he mentioned as an example, total and irremediable financial ruin. From that time, since his affairs were obviously tending in that direction, I have always had an uneasy expectation that, when the crash came, he would take that course for solving his difficulties."

"You had that expectation," said the coroner, "but was it based on the mere opinion that he had expressed, or on some more definite indication of intention? I mean, did he ever convey to you that he actually contemplated suicide as an act possible to himself?"

"He conveyed to me quite definitely the view that, if he were reduced to abject poverty, life would not be worth living, and that he would take measures to bring it to an end. He seemed to consider that it was the natural and reasonable thing to do."

The coroner pondered this statement for a while. Then he looked towards the jury.

"Are there any further questions that you would like to ask this witness?" he enquired. "It seems to me that he has given us all the material facts."

That was apparently the view of the jury, for no further questions were suggested. Accordingly, when the depositions had been completed, I was released and returned to my seat, and, as there were no other witnesses, the coroner proceeded to sum up briefly but quite adequately.

"You have now heard all the evidence," he began, "and you will have noticed that it all seems to establish a single conclusion. The medical evidence is quite clear. Deceased died from the effects of a large dose of morphine, or morphia, as it is more commonly called. On the question whether the poison was administered by himself or some other person, we have the evidence of the sergeant that the finger-prints on the drinking-vessel and on the poison bottle were those of deceased himself and that there were no signs of the presence of any other person. Then we have the clear evidence of Mr. Mortimer that deceased had contemplated suicide as a means of escape from the consequences of financial ruin; and we have the evidence of both Mr. Bateman and Mr. Mortimer that financial ruin had actually occurred on a scale that almost takes one’s breath away. So you see that the drift of the evidence is all in the same direction; and I will leave you to consider it with the feeling that you will have no difficulty in finding your verdict."

Apparently the coroner’s feeling was a just one, for the jury, after a very brief consultation, communicated their verdict through the foreman. It was to the effect that deceased died from the effects of a large dose of morphine, administered by himself.

"That," said the coroner, "is a verdict of suicide. What do you say as to the state of deceased’s mind at the time of the act?"

The decision of the jury, in direct contradiction of poor Gillum’s own view, was that he was insane at the time when the act was committed. And when this finding had been recorded the proceedings came to an end.

I lingered after the court had risen to exchange a few words with Benson, to whom I had taken a rather strong liking, and presently we were joined by Mr. Bateman, who apparently wanted to learn how his client had been affected by the incidents of the inquiry.

"A most amazing story," he commented, "the evidence in this case has brought to light. I have never heard anything more astonishing. The finding of the jury as to the state of mind of deceased at the time of the act might fairly be extended to all his other acts. The conduct that the evidence has disclosed is the conduct of a sheer lunatic. Don’t you agree with me, Mr. Benson?"

"I do indeed," Benson admitted gloomily.

"And I think," pursued Bateman, "that you will also agree that, however incomprehensible poor Gillum’s conduct may seem to a sane man, the fact that he did act in that insane manner has been established beyond any possible doubt. A consistent story has been elicited and established on an undeniable basis of ascertained fact."

He looked a little anxiously, as I thought, at Benson, who reflected a few moments before replying, but, at length, gave a qualified assent to Bateman’s proposition.

"As to the facts which were proved in evidence," said he, "they seem to admit of no doubt or denial. But I still have the
feeling that there is something behind all this that I don’t understand. The whole affair is too abnormal.”

“As to its abnormality,” said Bateman, “I am entirely with you. But, abnormal as it is, I think we have got to accept it as a sequence of events that actually happened. Surprise is natural enough, but doubt would seem to be unreasonable.”

He paused and looked questioningly at Benson, and, as the latter did not reply immediately, he asked: “You are not contemplating any further action in the matter, are you? Any sort of private or unofficial inquiry? I hope not, for I feel that nothing could come of it; nothing, that is to say, but the dredging up of a quantity of unprofitable and unsavoury details. And inquiries of this kind are apt to prove costly out of all proportion to their value.”

“It would certainly be proper,” Benson replied, “for me to give very respectful consideration to your advice, seeing that your experience is so much greater than mine. But I must confess that I am not satisfied. Still, I will not take any decision without earnest consideration of what you have said. I will think things over for a day or two, and I will let you know whether I decide to accept this mysterious affair at its face value or to see if any sort of unravelling is possible.”

“Very well,” rejoined Bateman. “We will leave it at that. If, in the end, you decide to open the matter further, we have the material. Mr. Penfield has carried out your instructions. We had, as you may have noticed, our Mr. James—a very skilful shorthand reporter—in court to-day to make a complete verbatim report of everything that was said, in evidence or otherwise. So that we are independent of the newspaper reports and we shall have no need to ask for access to the depositions. But I hope that neither will be required.”

With this, Mr. Bateman took his leave and bustled away; and, as Benson appeared more disposed for reflection than conversation, and I had my own business to attend to, I parted from him at the entrance to the building and we went our respective ways.

And here my narrative comes to its natural end. Its purpose was to give an account of my association with John Gillum, and this I have done; and if my story is not without an epilogue, that epilogue will issue from a pen other than mine.
PART II. — THE CASE OF JOHN GILLUM, DECEASED:
NARRATED BY CHRISTOPHER JERVIS, M.D.

VIII. — IS THERE A CASE?

THE George and Vulture Inn has always been I associated in my mind with the historic case of Bardell and Pickwick and those extremely astute gentlemen, Messrs. Dodson and Fogg of Freeman's Court hard by. But nowadays that venerable tavern associates itself more especially with the very queer case of John Gillum, deceased, and a less famous but much more respectable practitioner of the law. For it was at the George and Vulture that I—together with my colleague, John Thorndyke—became introduced to the queer case aforesaid, and the introducer was no less a person than Mr. Joseph Penfield.

There was nothing surprising in our encounter there at lunch-time with Mr. Penfield, for his office in George Yard was but a few doors from the tavern. Probably it was his daily resort; at any rate, as we entered the grill-room, there he was, seated at a table gravely contemplating a grilled chop which the waiter had just set before him. He observed us as we entered and immediately indicated a couple of vacant chairs at his table.

"This is an unexpected pleasure," said he as we took possession of the chairs. "Isn’t the City of London rather outside your radius?"

"No place is outside our radius," replied Thorndyke. "But we have just come from the Griffin Life Office where we have been conferring with our old friend, Mr. Stalker. The Griffin retains me permanently."

"As medical referee, I suppose?" Mr. Penfield ventured.

"No," replied Thorndyke. "As medico-legal adviser; I might almost say as adviser in doubtful cases of suicide, for that is the kind of problem that is usually submitted to me."

"Ha!" said Penfield; "and I presume that Mr. Stalker’s bias is usually towards an affirmative view."

"Naturally," Thorndyke agreed, "but he doesn’t expect me to share that bias. On the contrary, my usual function is rather to shatter his hopes and to convince him of all the things that he doesn’t want to believe."

"Yes," said Penfield, "and a very useful function, too. If more people would seek the services of an expert destructive critic, there would be a good deal less litigation."

With this he returned to the consideration of his lunch while I, having secured the waiter’s attention, communicated to him our joint requirements. Mean while, Mr. Penfield proceeded methodically with his meal, dropping an occasional remark but chiefly leaving the conversational initiative to Thorndyke and me. But as I watched him skilfully dissecting his chop and noted his reflective expression, I had the feeling that he was cogitating some matter arising out of Thorndyke’s explanation and his own rejoinder, and I waited expectantly for it to rise to the surface. And at length (as Pepys would have expressed it) "out it come."

"Your description," said he, "of your connection with the Griffin has brought to my mind a matter that is causing me some embarrassment. In short, to be quite honest, it has raised the hope that I may be able to transfer the burden of it from my shoulders to yours. You may consider the case as being within your province. It certainly isn’t within mine."

"That suggests to me," said Thorndyke, "that it is a criminal case."

"Yes," replied Penfield, "it is. Highly criminal. A nasty, unsavoury, disreputable affair, and, legally, quite impossible at that. I will just indicate its nature, though I expect you know something of it already from the newspapers. Probably you heard of a case of suicide that occurred in Clifford’s Inn about a month ago."

"I remember it quite well," said Thorndyke, "and I recall that you were the dead man’s solicitor."

"Then," said Penfield, "you will remember that the dead man, John Gillum by name, having wasted his substance in riotous living, to wit, in gambling, and having—presumably by his own folly—become the victim of blackmailers, proceeded to overdraw his accounts at the bank and then to commit suicide."

"Yes," said Thorndyke, "I remember that."

"Very well," said Penfield. "Now deceased had a cousin who was much too good for him; a most estimable Australian gentleman named Benson. I speak of him with sympathy and respect although he is now the bane of my life. He was present when Gillum’s body was discovered and he at once formed the opinion that there was something abnormal about the affair; something more than met the eye. And so there may have been. However, he asked me to send shorthand writer to attend the inquest and make a verbatim report of the proceedings, which I did; and I can let you have a transcript of that report if it is of any use. But I must admit that, on reading it, I was utterly unable to see anything in the case that was not perfectly normal, the circumstances being what they were. And that is still my position, and I have tried to impart that view to Benson. But he is still unsatisfied and he continues to stir me up from time to time with demands that some kind of action shall be taken."
“What does he want you to do?” Thorndyke asked.

“To tell you the truth,” replied Penfield, “I am not quite clear. But, primarily, he wants the blood of those blackmailers.”

“Naturally,” said Thorndyke, “and very properly. But is there any clue to their identity?”

“Not the slightest,” replied Penfield. “He expects me, in some mystic manner, by employing private detectives or other agents, to discover who the blackmailers are and to drag them forth from their lairs and bring them to justice.”

“You say that he has nothing to go on. Nothing at all?”

“Nothing,” replied Penfield, “but a few letters in a disguised hand, dated only by the postmarks, unsigned, of course, and mentioning nobody by name nor hinting at any locality.”

“And have you no letters or documents that might be of assistance?”

“I have Gillum’s will. Benson is the sole beneficiary; and the sole benefit that he has enjoyed has been a small debt to the bank, which he has insisted on paying. I have also one or two of Gillum’s letters to me, but they are simple business letters making no reference to his private affairs.”

“And what do you want me to do?” Thorndyke asked.

“I should like,” replied Penfield, “to bring him to you and let him state his case and say what he wants. If you think that it is possible to do anything for him, well and good; and if you think otherwise, I should suggest that you give him some of the medicine that you tell me you administer to Mr. Stalker for the cure of unreasonable optimism.”

Thorndyke did not reply immediately, but I could see that the case, unpromising as it looked, was riot without its attractions for him. For, unlike Penfield, he was stimulated rather than discouraged by apparent difficulties. Still, even Thorndyke could not embark on a case without data of some sort. Eventually, he replied without committing himself to any definite course of action: “I think it would be worth while to hear what Mr. Benson has to say. He may know more than he is aware of; and I recall that at the inquest a friend of Gillum’s gave evidence, a man named Mortimer. He seemed to know more about deceased affairs than anybody else. Perhaps we might get some information from him.”

“Excellent!” exclaimed Penfield, obviously delighted at the prospect of shifting his burden on to Thorndyke’s shoulders. “Excellent. I can put you into touch with Mr. Mortimer, and I am sure he will give you any assistance that he can. And now, as we seem to have finished our lunch, perhaps you will walk down to my office with me and I will hand you the report. It contains all the positive information that I think you are likely to get.”

Accordingly, when we had settled our score, we set forth from the tavern down George Yard to Mr. Penfield’s office. There we observed a rack of deed-boxes the lids of which were decorated, rather like coffin-plates, with the names of Mr. Penfield’s clients. One of these, bearing the name of “John Gillum Esq.,” our friend let down, when he had unlocked the box, displaying a small collection of documents within. From these he selected a large envelope, and having opened it and verified its contents, handed it to Thorndyke.

“That,” said he, “is the report. If you decide to undertake the case, I shall, if you wish it and Mr. Benson agrees, transfer the deed-box with its contents to you. And now, perhaps we can make an appointment for your meeting with Mr. Benson. Will you come here, or shall I bring him to your chambers?”

“I don’t see why you should bring him,” said Thorndyke, “unless you would prefer to. I suggest that he calls on me one evening by appointment, for an informal talk, and if he can bring Mr. Mortimer with him, we shall be able to see exactly how we stand.”

“Thank you,” said Mr. Penfield. “It will suit me much better to send him than to bring him, so, if you will give me a date, I will make the appointment.”

“I will give you two dates,” said Thorndyke, “and you can notify me when to expect the visit. One will be the day after tommorrow at eight o’clock in the evening, if that will suit you, Jervis, and the other two days later.”

“Both these dates will do for me,” said I; on which Mr. Penfield entered them in his book with undissembled satisfaction.

“I must thank you again,” said he, accompanying us out into George Yard. “You have really rendered me a great service.”

He shook hands cordially with us both and even stood watching us as we walked away up the court towards Cornhill. And thus was set rolling the ball whose evolutions I was to watch with so much interest during the next few months. None of Thorndyke’s cases ever started less hopefully, and few developed in a more surprising fashion.

Mr. Benson chose the earlier of the two dates and arrived at our chambers punctually at eight in the evening thereof; so punctually that the Temple clock was actually striking the hour as the knock on our door was heard. He was accompanied by another gentleman, and when I let him in, mutual introductions were effected and followed by mutual inspection. Like Mr. Penfield, we were pleasantly impressed by our visitor, indeed by both our visitors. Benson was a typical Australian; tall, well set up and athletic looking, with a fresh, weather-beaten face and a frank, agreeable manner. His companion, Mr. Mortimer, was of a quite different type; a quiet, sedate man with something rather studious and bookish in his appearance.

“I suppose,” said Benson, when the conversational preliminaries had been disposed of, “Mr Penfield has given you a general outline of the business?”

“He has given me the report of the inquest,” replied Thorndyke, “and I and my colleague, Dr. Jervis, have read it most
carefully. So now we probably know as much as to the facts of the case as you do, and are in a position to discuss them. Mr. Penfield informs me that you wish some action to be taken, and the first question is what kind of action you contemplate."

This very definite question seemed rather to disconcert Benson, for he answered in a somewhat hesitating manner: "Well, you see, I have had along the feeling that this dreadful affair was perfectly unnatural and that there was something behind it that was never brought out by the inquest. In the first place, my cousin, Gillum, was the very last person whom I should have expected to commit suicide."

"That," said Thorndyke, "is frequently said by witnesses at inquests and probably quite truly. But let us be definite. There are only two possibilities in the case of your cousin's death. Either he committed suicide or he was murdered. The jury decided that he killed himself. Do you contest the fact of the suicide?"

"Well, no," replied Benson. "I don't see how I can. I heard all the evidence; and, unwilling as I am to believe that he killed himself, I don't see that there is any escape from the facts."

"No," Thorndyke agreed, "that is how it appears to me. Then, if we accept, as we seem bound to do, the fact that John Gillum died by his own hand, we can pass on to the next point. What is the further question that you want to raise?"

"The further question," replied Benson, "is, why did he commit suicide? Mortimer thinks that he killed himself because he had gambled away all his money, but I don't believe that. It isn't a sufficient reason. And we know that he was being harassed by blackmailers. Now, my feeling is that it was not the loss of his money that drove him to suicide, but the agony of mind that he was suffering on account of these blackmailing devils."

"That," said Thorndyke, "is a perfectly reasonable view, and I am inclined to agree with you. But what practical effect do you propose to give to your belief?"

"If John Gillum was driven to his death by these wretches," Benson replied with some heat, "they are virtually his murderers. I know that, in law, they are not chargeable with murder. But, even legally, they are guilty of a very serious crime, and I want them found and brought to justice."

"That, again," said Thorndyke, "is a perfectly reasonable position, and I view your desire very sympathetically. But there are two points that I think it necessary to put to you. The first is that what you propose is as nearly as may be an impossibility. So far as I know at present, there is no clue whatever to the identity of these people, nor—so far as I am aware—is anything known as to the circumstances in which the payments were made."

"I think," said Benson, "Mortimer can tell us something about that, and I believe he has some suspicions as to who these people are."

"We will hear what Mr. Mortimer has to tell us presently," said Thorndyke. "Meanwhile let us consider the second point. That raises the question whether it is, in fact, expedient to take any action, even with a chance of success."

"Expedient?" Benson repeated. "Is there any thing against it besides the difficulty?"

"I think," said Thorndyke, "that if we consider the circumstances as they are known to us, we shall see certain objections to taking the kind of action that you contemplate. May I ask whether your cousin was at all a nervous or timorous man? A man easily intimidated?"

"Most certainly not," replied Benson. "He was a decidedly bold, self-reliant man."

"Very well," said Thorndyke, "then consider his position at the time of his death. He was being blackmailed by at least one person, and that at the v of two thousand pounds a year. Now, you know, Mr. Benson, it is not usually possible to levy blackmail on a person who has nothing to conceal unless that person is more than ordinarily easily frightened. But your cousin was not easily frightened; and yet he was paying this enormous amount. More over, as you believe, he was so distressed by his position that he took his life to escape from the persecution. What are we to infer from this? Is it possible to resist the inference that there was something in his life that he was compelled to conceal at any price?"

Benson was evidently a good deal taken aback by Thorndyke's blunt statement of the case. He remained silent for some moments; then he replied: "It had occurred to me that some mud might be stirred up if we were to bring the blackmailers to justice, but I hadn't put it as strongly as you have."

"It is necessary to face the facts squarely," said Thorndyke, "and those facts suggest very strongly that your cousin was concealing something highly discrepant; and it could have been no trivial scandal. In that case he could have appealed to the police and would have been given ample protection without any inquisition. The amount which he paid suggests something of extreme gravity; something which he dared not allow to come to light. Therefore, I ask you again, would it not be wiser to let sleeping dogs lie?"

Once more Benson reflected before replying, but he was not long in coming to a decision. "It might be wiser," he admitted, "but it would be against justice and common morality. As to the scandal, poor old Jack is dead, so it won't affect him. And I don't suppose it was anything that would lessen my respect for him. At any rate, I feel strongly that those devils who drove him to a miserable death ought to be dragged out into the light of day and made to pay their debt."

"Yes," Thorndyke agreed, "I think you are right in principle. But I must finally remind you of the difficulties of the case. Remember that, not only are we without any clue as to who these people were—unless Mr. Mortimer can supply one—but, even if we could discover them, the principal witness—the vital witness, in fact—is dead, and it might easily turn out to be
impossible to make out a case against them, or, at any rate, to prove it. Furthermore, the proceedings, involving the employment of private enquiry agents, might prove to be extremely costly; and in the very probable event of total failure, a vast amount of money would have been wasted."

"I know," said Benson, "and it is very good of you to put the matter so clearly. But my mind is made up. Whatever it costs, if you are prepared to undertake the case, I should like you to get on with it. I am a man of ample means, and I am a bachelor; and if I spend every penny that I have, and even if we fail after all, I shall feel that the money was well spent in trying to bring Jack Gillum's murderers to the punishment that they deserve."

I could see that Benson's attitude had secured Thorndyke's warm sympathy, as, indeed, it had secured mine. But I think both of us rather regretted that he should have embarked on an enterprise that was almost certain to end in disappointment.

"Well, Benson," my colleague said cordially, "I congratulate you on your courage and your very proper desire for justice. I will certainly do what I can to get you satisfaction; but I warn you that, if the case turns out to be quite impossible, I shall not waste my time and your money in pursuing a will-o'-the-wisp."

"Thank you," replied Benson. "I put myself entirely in your hands, and I promise you to abide loyally by your decision."

"Then," said Thorndyke, "as we are agreed on the conditions, we may as well make a start and see exactly what our position is. You said that Mr. Mortimer could give us some useful information. Perhaps we had better begin with that."

He looked enquiringly at Mortimer, who, in his turn, looked a little sheepish.

"I am afraid," said he, "that I haven't much to tell. It is only a matter of suspicion."

"Suspicions," remarked Thorndyke, "are of no use as evidence, but they may be quite useful as indicating a line of enquiry. At any rate, let us have them."

"They relate," said Mortimer, "to some people named Foucault who run a gaming house in Gerrard Street. I went there with Gillum on one occasion; on the very night, in fact, when I first made his acquaintance in a social sense. They were an obviously shady lot; but what specially struck me was that Madame Foucault made a dead set at Gillum—flirted with him, or made a show of doing so, in the most ostentatious, almost indecent, manner before the whole roomful of gamesters."

"And was Gillum responsive?" Thorndyke asked.

"Not in the least," replied Mortimer. "But Monsieur Foucault was. He watched them closely the whole of the time that they were together, and his expression as he looked at Gillum was positively murderous. And I gathered that there had been some trouble on previous occasions, for Gillum remarked to me on Foucault's jealousy and made rather a joke of it. And there was no mistaking Foucault's hostility to Gillum. I noticed it when we met in the restaurant before we followed them to the gambling den."

"Have you any further knowledge of these people?" Thorndyke asked.

"No," Mortimer answered. "That was the only occasion on which I met them, and I know nothing more than what I have told you. I must confess that there doesn't seem to be very much in it."

"I am inclined to agree with you," said Thorndyke. "A little made-up scandal of the kind that you suggest might account for an attempt at blackmail on a modest scale. But the one which we are considering seems to have been something much more formidable. Still, I will get you to let me have the names and address of these people so that we may make a few enquiries. And now, as we have squeezed Mr. Mortimer dry, let us hear what Mr. Benson has to tell us."

"I am afraid," said Benson, "that I have nothing at all to tell. You see, it is two years since Gillum left Australia and I know nothing about his doings or way of living since he came to England."

"No," said Thorndyke, "we have to depend on Mr. Mortimer for that. But there is his life in Australia. I want you to review that. Blackmail is usually related to the past, and often to a rather remote past. I ask you to try to recall the circumstances of Gillum's life in Australia and consider whether there may not have been some incident which could have been the subject of blackmail."

"I will think that question over," said Benson, "but, at the moment, I can recall nothing that could possibly have been used against him to extort money. He had no enemies, he never, to my knowledge, had any troubles with women, and I never heard of any sort of scandal."

"Well," said Thorndyke, "turn the question over at your leisure. Now, as we seem to have drawn a blank in Australia, let us take the next stage, his voyage to England. Do you know anything of the incidents of that voyage?"

"Not in much detail," replied Benson; "but I came to England in the same ship, and I had some talk about him with the captain and the first officer."

"Then," said Thorndyke, "try to recall what you learned from them and consider whether there was anything—in his relations with the other passengers, for instance—that might be worth enquiring into."

"I don't think he had much to do with the other passengers. There were only a few of them—the ship was chiefly a cargo ship—and they were mostly men in the meat trade. I gathered that Gillum spent most of his time playing cards with the doctor and the purser in their cabins, particularly in the purser's room. Those two men were his special cronies, and, by all
accounts, he struck up a very close friendship with them both."

"Then," said Thorndyke, "they ought to be able to tell us all about the voyage and who the other passengers were."

"Why do you suppose anything happened on the ship?" Benson asked.

"I am merely considering it as a possibility," Thorndyke replied. "Remember, Benson, that something happened somewhere. That blackmail was not paid for nothing; and as we have not yet found a starting-point for an inquiry, we must trace Gillum's doings and his contacts with other persons as well as we can. Probably these two men are at present not available for inquiries. I suppose the ship is now outward bound?"

"Yes," replied Benson, "but neither of those men is on board. Both of them left the ship and the service at the end of the voyage. I learned that when I was on board."

"You mean that they both left the ship at the same time as Gillum?" Thorndyke asked.

"Not actually at the same time," Benson replied. "Gillum went ashore at Marseilles and travelled over land, making a leisurely journey across France so as to see something of the country. I think he arrived in England about six weeks or two months after the others. But I know that the doctor and the purser both left the service at the end of the voyage, when they had settled their business with the owners."

"Then," said Thorndyke, "it is possible that their relations with Gillum may have continued during the time of his residence in England, in fact, it is rather likely. You don't, I suppose, know where it would be possible to find them?"

"I asked about them at the shipping office," replied Benson. "As to the doctor, they knew nothing but that he had some idea of going into practice or else getting a job on a different line. But the purser is certainly beyond our reach. He is dead. They told me about him when I called at the office. It seems that he died under rather mysterious circumstances, for there was some uncertainty as to whether he had committed suicide or had been murdered. But I don't know any of the details. As the man was a stranger to me, I didn't go into the matter."

"No," said Thorndyke, "but I think we shall have find out what the circumstances were. A suicide, and still more a murder, seems to demand investigation. Do you remember the purser's name?"

"Yes," replied Benson, "his name was Abel Webb."

"Abel Webb!" Mortimer exclaimed in a tone of the utmost astonishment. "Why, that was the name of the man whose body I discovered in the porch of St. Michael's Church. It is a most astonishing coincidence. And what makes it still more so is the fact that the finding of that body was the occasion of my making Gillum's acquaintance."

"You had better tell us about that," said Thorndyke. "I mean as to Gillum's connection with your discovery. The case itself I remember quite clearly."

"It happened this way," said Mortimer. "I had seen the police carry the body down to the ambulance and was standing there in the crowd waiting to see it move off when someone came up and asked me what the excitement was about and whether it was a motor accident. I turned round to answer, and then I recognised the questioner as one of the bank's customers, Mr. Gillum. I told him what had happened, and I also told him, and he could see for himself that I was a good deal upset by the affair. He was extremely kind and sympathetic and eventually insisted on taking me off in a taxi to dine with him at a restaurant. And it was that same evening after dinner, that I went with him to the gaming house that I told you about."

"I take it," said Thorndyke, "that you did not know at the time who the dead man was."

"No," answered Mortimer. "I learned that first at the inquest."

"Did Gillum come forward to give any evidence as to deceased at the inquest or afterwards?"

"He couldn't have come forward before the inquest because the identity of the deceased had not been disclosed. But I should say that he never did."

"Do you know whether Gillum ever learned who the dead man was?"

"I know he did, for I discussed the case with him. He had read a very full report of the inquest and seemed to remember all about the evidence. And the report contained not only the name of the deceased but his description as a former purser of one of the Dominion Line ships."

"Did he tell you much about his relations with Webb?"

"No," replied Mortimer, "the astonishing thing is that he never let drop the faintest hint that he had ever heard of the man before. In our talk about the inquest, he spoke of the dead man as if he had been a complete stranger."

"That is very extraordinary," exclaimed Benson.

"It is," Mortimer agreed, "though Gillum's reticence in this case is less remarkable than another man's would have been, for he was reticent about everything; I might almost say, secretive. He never told me anything about himself—excepting his gambling exploits. He was confidential enough about those. But he was extraordinarily close respecting his private affairs. You will hardly believe it, but until after his death I never knew that he had been in Australia."

When Mortimer had finished speaking, a rather curious silence fell on us all. Benson looked puzzled, but he made no
remark and put no question to Mortimer. But I could see that the latter's statement had made a deep impression on Thorndyke, as it had on me; and when the discussion was resumed, the drift of his questions made it clear to me that what had struck me had also struck him.

"I think," said he, "that Webb's death occurred about a year ago. Do you happen to remember the approximate date, Mortimer?"

"I remember the exact date," was the reply. "It was the ninth of last September."

Thorndyke made a note of the date and then remarked: "The fact that Abel Webb met a violent death makes it necessary to look rather more closely into the incidents of the voyage to England. Of course, there may be no connection; but it is an abnormal circumstance and we are bound to take note of it. And as Abel Webb has gone out of our ken, the only person left from whom we could get any in is the doctor. Benson can't tell us where he is to be found, but a doctor is usually easy to trace, as he is bound to keep the Registrar informed as to changes of address. What was his name?"

"His name was Peck," replied Benson. "Augustus Peck."

"I will look him up in the directory," said Thorndyke "or at the Registrar's office and see if we can get into touch with him. And now, Mortimer, to return to the evidences of blackmail. Apart from the large drafts that you have mentioned, evidently connected with the letters that were found, is there any positive suggestion of other payments, earlier in date. It is important that we should fix, if possible, the time when the blackmailing began. Can you tell us anything definite about that?"

"Yes," replied Mortimer, "I think I can. Quite recently I have gone into the question afresh. Benson has kindly lent me Gillum's pass-book so that I could study it at home. I have gone through it very carefully, and it occurred to me that if I made a graph of the dates and amounts, any small periodic fluctuations would be made visible."

"Excellent," said Thorndyke. "And what did your graph show?"

"It showed a small periodic rise corresponding roughly with the ordinary quarter days. This began quite early, within a month of the opening of the account, and it went on until the big drafts began."

"Do you say," Thorndyke asked, "that the small rises ceased when the large drafts began, or were you unable to ascertain that?"

"I am disposed to think that the small rises ceased when the large quarterly payments began, though they might have become merged in higher rises of the curve due to the big payments. But, allowing for the possibility of this confusion, the smaller payments ceased and were replaced by the larger."

"What were the amounts of the smaller payments?"

"So far as I could judge, the excess above the ordinary withdrawals would be about two hundred pounds a quarter."

"What did you infer from this? Did it seem to you to suggest that there was more than one blackmailer?"

"No," replied Mortimer. "My reading of it was that there was only one; that for about a year he had been satisfied with a payment of something like eight hundred a year, and that he had then suddenly raised his demands. That would account for the smaller payments ceasing when the larger ones began."

"Yes," Thorndyke agreed, "that appears to be a reasonable inference. But it is difficult to judge. We really want to know more about Gillum's private life and habits; but I don't see where we are to gain the knowledge."

"I think," said Benson, "that Mortimer may be able to help you in that. He is writing some sort of account of his connection with my cousin. How are you getting on with it, Mortimer?"

"I have finished it," Mortimer replied, "but I don't think it would be of much use to Dr. Thorndyke. You see," he continued in response to an enquiring glance from my colleague, "it occurred to me after the inquest that it would be rather interesting to put on record, while the facts were still fresh in my memory, the whole incident of my acquaintance with John Gillum; and I have found it quite interesting to write, but I don't think it would be very thrilling to read. And I doubt whether it would be of any use to you, for I wrote it without any thought of an inquiry such as you are engaged in."

"But, my dear fellow," said Thorndyke, "that is precisely its most valuable quality. A man writing an account with the conscious intention of throwing light on some question tends unconsciously to select the facts which appear to him to be important and to ignore other facts which seem to have no bearing. But his selection may be all wrong. He may omit something of vital importance through having failed to realise its significance. Whereas your little history gives the facts impartially without selection. Would it be possible for us to have the privilege of reading it?"

Mortimer smiled rather shyly. "It is a poor performance in a literary sense," said he, "but, of course, you can see it if you wish to. I rattled it off on the typewriter, and, as I did it in duplicate, you can have one copy to keep as long as you like. I will post it off to you to-night."

"Thank you," said Thorndyke. "I shall read it with interest even if it throws no further light on the case. And there are two other matters that may be mentioned before we adjourn this meeting. Who has the blackmailer's letters?"

"They are in Penfield's custody at present," replied Benson. "He has all the documents."

"The other matter," said Thorndyke, "refers to Gillum's chambers. Who has possession of them? You, I suppose, are the
nominal tenant."

"Yes, I am the tenant until Michaelmas or until they are let. Why do you ask?"

"I merely wanted to know whether they would be available if it should seem desirable to make an inspection."

"What use would an inspection be?" Benson asked.

"It is impossible to say," replied Thorndyke. "Probably none. But some point may arise from the reading of Mortimer's manuscript which may be elucidated by looking over the premises."

"Well, you know best," said Benson. "At any rate, I will send you the keys in case you should want them. And I think that finishes our business for the present. It is very good of you to have given us so much of your time; but, before we go, there is one question that I should like to ask. You have gone very patiently into the case to-night. From what you have learned from us, do you think you will be disposed to do what I am hoping you will; to prosecute a search for those wretches who are responsible for poor Jack Gillum's death?"

"I am prepared to look into the case," Thorndyke replied. "If I find that we come to an absolute dead end, I shall advise you to abandon the inquiry. But if I see any prospect whatever of bringing it to a successful conclusion, I shall place my services unreservedly at your disposal. Will that satisfy you?"

"It will more than satisfy me," replied Benson, "and, for my part, I promise to be guided by your advice, whatever you may decide."

With this, the two men rose, and, when we had escorted them to the landing and seen them safely launched on the stairs, we wished them good-night and re-entered our chambers.

IX. — THE EMPTY NEST

"WELL, Thorndyke," I said when we had re-entered and closed the door, "this has been quite an entertaining interview. I fancy that your drag net brought up rather more than you expected. A mighty queer catch, in fact."

"Yes," he agreed, as he dug out his pipe with a thoughtful air, "a decidedly queer catch. And it will need some sorting out. What do you make of it?"

"It seems to me," I replied, "that we have identified one of the blackmailers and accounted for the other."

"That is the result in a nutshell," said he. "But I should like to hear how you arrived at it."

"The argument," I replied, "consists in stating the facts in their natural sequence. To begin with Abel Webb. I remember the case quite clearly. It was that cyanide injection case; and when we discussed it, we agreed that suicide could not be entertained. It was a blatant case of murder."

"Yes," Thorndyke agreed. "I accept that."

"Then we agree that Abel Webb was murdered. He was murdered on the ninth of September. At that time Gillum was being blackmailed at the rate of eight hundred a year. But exactly a week after the murder, on the sixteenth of September, the blackmail suddenly jumped up to the rate of two thousand a year."

"At, or about, the time of the murder, Gillum is known to have been in the neighbourhood, within a few yards of the place where it was committed; and, after the murder, although he and Mortimer discussed it in detail, he concealed from Mortimer the fact that he had been acquainted with Webb. You agree to that?"

"Yes," Thorndyke replied. "Mortimer referred to it as reticence, but reticence to that extent amounts to concealment."

"Those, then," said I, "are the facts, and my interpretation of them is this: Abel Webb was blackmailing Gillum to the tune of eight hundred a year. Possibly he was also becoming troublesome. At any rate, Gillum got tired of it and took an opportunity to blacken Webb. For that I don't blame him, although his methods were not pretty. But then Gillum had bad luck. Somebody knew more than he was aware of and promptly put on the screw; and put it on so forcibly that when Gillum came to the end of his resources, he committed suicide rather than face the consequences of not being able to pay. That is my reading of the case, and I rather think it is yours too."

"Yes," Thorndyke agreed, "that is what the facts seem to suggest, and I am prepared to accept your theory as a working hypothesis. Without prejudice, however, as our friend Penfield would say. I mean that, while adopting it as a working hypothesis, we must not lose sight of its hypothetical nature. Fresh facts may lead us to modify our views."

"Yes, that is true," I admitted; "but you speak of a working hypothesis. But how does it work? The problem is to find the principal blackmailer. But I don't see that what we have learned gets us any more forward on that quest."

"There," said Thorndyke, "I disagree entirely. Assuming your interpretation of the facts to be correct, we have a most important clue to the identity of the chief blackmailer. You have said it yourself. 'Somebody knew more than he was aware of.' But what did that somebody know? He must have known, not only of the connection between Gillum and Webb, but that Webb was blackmailing Gillum. That implies that the blackmailer must have known Webb pretty intimately; but if Webb was really a blackmailer, the suggestion is that the matter which supported the blackmail was something connected with the voyage from Australia to England. But that, in its turn, seems to connect the unknown blackmailer with the
voyage; and if we are right in inferring such a connection, we have a very valuable hint as to where to look for further information."

"You mean the ship's doctor?"

"Yes. If the blackmail arose out of any incident that occurred on board ship, and still more if the blackmailer should have been one of the other passengers, the doctor could hardly fail to have some knowledge of the matter, or some knowledge of the circumstances out of which the blackmail arose. Even if he had no suspicion of the blackmailing transaction, he must know what the general conditions were on the voyage. There isn't much privacy on board ship, especially on a long voyage."

"Yes," I agreed, "the doctor should be a useful witness. Benson's knowledge of the matter is based on hearsay, but Dr. Peck's is first-hand, so that we could cross-examine him in detail. But the question is, how are we to get into touch with him? He may be in India or China by this time."

"That is a possibility," said Thorndyke, "but we had better begin by finding out his permanent address from the Medical Directory."

He went into the office and returned with the volume in his hand. Laying it down on the table, he turned over the leaves until he found the entry, which he read put.

"Staple Inn," I repeated. "It is rather odd that this case should be connected with the only two remaining inns of Chancery. And I notice that he has the dental as well as the medical qualification."

"Yes," said Thorndyke, "and quite a useful combination for a ship's surgeon. I suppose our next move must be to call at Staple Inn and see if we can discover his present whereabouts. But there is no hurry. We shall have Mortimer's manuscript in the morning and it may be that we shall pick up some hint from that."

This ended our discussion for the time being; and if it had not carried us far, it, and the preceding inter view, had yielded more matter for investigation than Penfield's dismal account of the case had led us to expect.

On the following morning, Mortimer's manuscript arrived, and the same post brought a package from Benson containing two keys tied together and bearing a parchment label inscribed, "64, Clifford's Inn, Ist floor." As Thorndyke was occupied during the morning and I was free, I took possession of the manuscript and read through the seven chapters of which it consisted with close attention and growing disappointment. For I had expected that Mortimer's story would furnish us with some new facts; whereas it seemed to me merely to repeat at greater length what he had already told us or what we had gathered from the report of the inquest.

But in this, as appeared later, I was mistaken; and as Mortimer's history contained practically all that we ever knew of the period that it described, I have attached it as a preface to this record and shall henceforth assume that the reader is fully acquainted with its contents. And it may be that he, or she, more discerning than I, will already have noted certain points the significance of which I failed to appreciate.

Certain suspicions did, indeed, cross my mind on the subject, especially when I noted the deep interest and attention with which Thorndyke studied the document. But then my colleague was a man who habitually gave his whole attention to even the simplest matters; and I could see that this case, with all its obscurities and ambiguities, had taken a strong hold on him. It was the kind of puzzle that he really enjoyed; and he was going to spare no pains in seeking out the solution.

About a week after the arrival of the manuscript I ventured to ask his views on it, with the above suspicions in mind.

"What do you make of Mortimer's history?" said I. "To me it seems rather barren of matter. I have not extracted from it anything that I did not already know."

"Nor have I," he replied, "in the sense of new facts of a fundamental order. I hardly expected to. But the story has its value in that it gives us a lively picture of the man, Gillum. It shows us a shrewd, ingenious, rather subtle man, with a distinctly casuistical type of mind; and it enables us to contrast his apparent intelligence with his amazingly foolish conduct."

"But we were able to do that already," I objected; "and as to the main problem, the identity of the principal blackmailer, it gives us not the faintest hint."

"That is true," said Thorndyke. "But perhaps the immediate problem is rather the occasion of the blackmail; what it was that Gillum had done to render him susceptible to blackmail. Mortimer throws no light on that question either. Whatever we are to learn from his story must be gathered by reading between the lines and considering the possible significance of apparently trivial things and events."

"You mean, in relation to our working hypothesis?" I suggested.

"Yes," he replied. "But let us not be obsessed by our hypothesis. It may be entirely erroneous; and while we are using it as the only instrument of investigation which we possess, we should scrutinise every new fact, as well as the old ones, to see whether any alternative hypothesis is suggested. Read Mortimer's history again, Jervis, and ask yourself in respect of Gillum's sayings and doings and the little trivial occurrences which Mortimer chronicles, whether they support our
hypothesis or whether they seem to be consistent with some different meaning."

As this implied that Thorndyke had already taken his own prescription, I decided to study the manuscript afresh. Meanwhile, by way of “getting some of my own back,” I remarked with a grin: “There is one thing that I have been expecting ever since Mortimer’s document turned up; and I’m still expecting it.”

“What is that?” he asked, regarding me suspiciously.

“I have been expecting that you would want to go across to Clifford’s Inn and nose round the empty chambers.”

“And why not?” said he. “I think it is an excellent suggestion. It would be quite interesting to fill in Mortimer’s picture with its appropriate background; and as we have the afternoon free, I propose that we put your idea into execution forthwith. We will go over as soon as we have had lunch.”

Of course, I agreed (noting that Thorndyke, according to his habit, had planted his “idea” on me); and, when we had dispatched our meal, and Thorndyke had provided himself with his invaluable research-case and his graduated walking-stick, we went forth, and passing out of the Inner Temple gate, crossed Fleet Street, and walking up Clifford’s Inn Passage, came out into the courtyard by the garden.

“Sic transit,” Thorndyke remarked, regretfully, as he cast a disparaging eye on the garish new buildings that were beginning to replace the pleasant old houses. “John Penhallow’s chambers have gone and soon all the others will follow; and then all that will remain to show posterity the quiet sumptuousness and dignity of London chambers in the seventeenth century will be Penhallow’s rooms in the Victoria and Albert Museum.”

He stood for a few moments running a reflective eye over the exterior of Number 64, observed by a pair of inquisitive eyes from the window of the type writing office on the ground floor; then he plunged into the dim entry and I followed him up the stairs until we emerged into the daylight of the first-floor landing.

“This is rather gruesome,” said I, as we threw open the inner door and looked into the room. “With the exception of the corpse, the place is just the same as it appeared to Mortimer when he and Benson and Weech discovered the body. Nothing seems to have been moved.”

“No,” Thorndyke agreed. “We have only to imagine the body lying on the couch and we have the tableau that Mortimer described.”

We went in and looked curiously at the couch, the pillow of which still bore the impression of the dead man’s head, and the little table by its side with the siphon, the tumbler, and the decanter, all bearing the very distinct prints of the dead man’s fingers.

“We may as well preserve these,” said Thorndyke, slipping on a pair of loose gloves. “They are not likely to help us, but you never know. It is a good rule never to destroy evidence.”

“I don’t see what evidence they could furnish,” said I, “seeing that they were proved to be Gillum’s own finger-prints.”

“But that is evidence,” he replied. “Prints like these are Gillum’s; and prints unlike them are those of somebody else. As we are seeking an unknown person, that kind of evidence may be quite material. And you notice that there is a nearly complete set of both hands.”

He looked about the room, and observing a built-in cupboard by the fireplace, turned the key which was in the lock, and opened the door. One of the shelves was nearly empty, and as the height was sufficient to take the siphon, he transferred that and the tumbler and the smooth, patternless decanter from the table to the vacant space and closed the door.

“We will lock the cupboard and take the key when we go,” said he. “Meanwhile, we may find some other things which we may think fit to put in it.”

He went back to the couch and ran his eye over the cushions and the pillow, stooping over the latter and examining it more closely.

“This is worth noticing,” said he. “The man’s head could have rested on this pillow only a few hours while he was alive and capable of movement, but yet there are no less than three hairs sticking to the fabric.”

“He may have used the pillow on other occasions,” I suggested; to which Thorndyke assented.

“At any rate,” he added, “we may as well collect these hairs, as we can assume them to be authentic samples of Gillum’s hair.”

“I suppose so,” I agreed, though without enthusiasm; for it would have been more to the point if they had been authentic samples of the blackmailer’s hair. Thorndyke noted the tone of my remark and smiled as he opened his research case, which he had deposited on the table.

“You think,” said he, “that we are collecting all the things that don’t matter. Probably you are right; but it is better to provide yourself with useless material than to throw away things that may later be badly needed.”

He took out of the case a pair of forceps and one of his invaluable seed envelopes, and with the former picked out the three hairs—two black and one white—and transferred them to the envelope, on which he wrote a brief description, before returning it to the case. Then he began a leisurely perambulation of the room, inspecting its various contents and making occasional remarks on them. The bookcase seemed to interest him, for he stood before it running his eye along the rows of
volumes and apparently reading their titles.

“In general,” said he, “the books seem to confirm Mortimer’s estimate of Gillum’s character and tastes. There are six works on London topography, catalogues of the National Gallery, the Tate, and the Wallace Collection, a book on games of chance, and one on the theory of probability. Those are according to expectation and so is the book on Modern Organ Music; but Staunton’s Chess is not. I don’t think that chess-players are usually interested in games of chance.”

He turned away from the bookcase and resumed his travels round the room, halting presently before a rather elegantly turned roulette box.

“This,” said he, “is the box that Mortimer speaks of. Apparently, Gillum used it for experiments in connection with his projected system. But it is possible hat the may have used it for actual play with some of his visitors. Perhaps it would be as well to put it away with the other specimens.”

He took it up in his gloved hands and carried it over to the cupboard where he placed it on the shelf with the objects from the table. Then, having exhausted the interest of the living-room, he passed through into the bedroom.

It was a small room, simply and rather barely furnished, but clean and orderly with the tidiness of a ship’s cabin, a fact which attracted Thorndyke’s attention as well as mine, for he remarked: “The late Gillum seems to have been a tidy, methodical man. You noticed evidences of that in the living-room, and it is still more striking here. The bed, you observe, has been carefully made; and he made it himself; though he must have known that he was never going to sleep in it. And no cast-off clothes lying about or even hanging on the pegs. I suppose, when he undressed, he put them into the wardrobe.”

He verified the surmise by opening the doors of the wardrobe; which showed, in the one division, the clothes that Gillum must have taken off hanging on the side pegs, while, in the other division, which was fitted with shelves, were stored clean shirts, collars, handkerchiefs, several pairs of shoes and three hats. These things he considered attentively, and especially the cast-off clothes, which he took down from the pegs and, having looked them over, turned out the pockets, returning the contents of each after having examined them. But Gillum seemed to have carried few things in his pockets, and of those which we found none appeared to be of any interest. A bank-note case—empty—a handful of silver and bronze coins, a pocket-knife and a set of well-worn dice formed the principal items.

“Not much to be learned from those,” Thorndyke remarked as he closed the wardrobe, “excepting that he respected his clothes and avoided bulging pockets.”

He walked across the room to the large chest of drawers that stood in the corner near the bed, lifting the valance of the latter and revealing a sponge bath underneath. As we reached the chest, I observed in the dark corner between it and the wall a good sized cylindrical basket which had apparently served as a rubbish dump, and drew Thorndyke’s attention to it as a possible mine of evidential wealth. He ignored the irony of my tone and, promptly adopting my suggestion, picked up the basket and turned out its contents on to the bed. It was certainly a very miscellaneous collection and as I regarded it with a faint grin I wondered what Mr. Penfield would have thought if he could have seen my colleague systematically sorting it out and placing each article after inspection at the foot of the bed. Over some of these, such as three obviously superannuated socks and a couple of slightly frayed collars, he passed lightly with a single glance; but most of the things he inspected attentively, little as they seemed to merit his attention, evidently considering what inferences they suggested. I watched him curiously, my tendency to be amused by the apparent triviality of the proceedings restrained by the recollection of the surprising results of similar examinations in the past; and, as I looked on, I made a mental inventory of the collection with a view to possible results in the future.

Besides the socks and collars, a pair of worn fabric gloves and a broken shoe-lace, the “find” included an empty tin which had once contained an antiseptic tooth powder, which Thorndyke opened, and sniffed at the pinch of powder which still clung to the box; two empty “Milk of Magnesia” bottles, a worn-out toothbrush (which Thorndyke examined closely and also smelt), an empty bottle labelled “Bromidia,” which seemed to suggest that Gillum had suffered from insomnia, another empty bottle labelled “Cawley’s Cleansing Fluid,” from which Thorndyke drew out the cork in order to smell at what remained of the contents, several crumpled-up tradesmen’s bills, and a small, heavy object wrapped up in a sheet of writing-paper. This Thorndyke took up and carefully opening out the paper displayed a small bolt with a fly nut attached.

“Now,” said he, “I wonder what that might have belonged to. A one-inch, square-headed eighth-inch bolt with what looks like a Whitworth thread and a fly nut. Apparently part of some mechanism; but we have not come across any mechanism to which it corresponds.”

He smoothed out the paper and examined it on both sides, but there was no writing on it to give any clue to the use of the bolt. Finally he wrapped the latter up again in its paper and dropped it into his pocket, presumably for further consideration at his leisure. And having thus exhausted the material from the basket, he gathered the derelicts together and returned them to their receptacle.

The chest of drawers had apparently served the purpose of a dressing-table in conjunction with a good-sized looking-glass which hung on the wall beside the window. Like the rest of the room, it was quite tidy though now covered with dust, and the objects set out on it represented the bare necessaries for the toilet. On a china tray were two toothbrushes and a small tin of “Odonto” dentifrice, and beside the tray were a pair of nail scissors, a button-hook, and a turned wooden box containing spare collar-studs—one gold and several ivory—and a pair of cheap rolled gold links. There was also an earthenware bowl and a pair of hairbrushes. The latter Thorndyke took up, and, separating them, looked them over in his queer, inquisitive way. They were good brushes, though old and much worn as to the bristles, with ebony backs in which
the initials “J.G.” had been inlaid in silver, but they appeared not to have been cleaned very lately, for the bristles held a considerable quantity of hair.

“I think,” said Thorndyke, “we will take these and sort out the hairs. Probably they are all Gillum’s but it is possible that the brushes may have been used by some of his visitors, if he ever had any, and we may learn something about them.”

He put the brushes in his coat pocket and then took up the bowl, which was of red earthenware, fitted with a cover bearing a highly-coloured label with the inscription: “Dux Super-fatted Shaving Soap.”

“Rather a nice bowl,” said Thorndyke, holding it out at arm’s length to view it; “a pleasant shape and very suitable to the plain earthen body. But I am surprised that Gillum didn’t soak off that label.”

He lifted the lid of the bowl, and finding it empty save for a few drops of moisture at the bottom, sniffed at it and passed it to me.

“It smells to me,” said I, “like chlorine, or perhaps chlorinated soda; some lotion of the Eusol type.”

“Yes,” he agreed, “something of that kind. Apparently it came from the bottle of antiseptic cleansing solution that we found in the tidy.”

He put the bowl back in its place and then pulled out the drawers of the chest in succession. All of them seemed to be filled with articles of clothing, neatly folded and smelling slightly of camphor. These he glanced at but without disturbing them, and, when he had pushed in the last of the drawers, he turned away and stood a while, looking thoughtfully around the room, apparently memorising its contents and their arrangement. There was not very much to see. The mantelpiece was bare save for a couple of candlesticks carrying rather large stearine candles. There remained only the large porcelain sink in the corner; a deep, rectangular sink of the kind used in chemical laboratories, but which here seemed, by the bracket over it bearing a soap dish, a nailbrush, and a bath sponge, to have served the purpose of a lavatory basin as well as a means of emptying the bath.

When we had inspected the sink, Thorndyke drew my attention to a mouse-hole in the corner beneath it which had been very neatly and effectively filled with Portland cement.

“That,” said he, “suggests a man with a practical and efficient mind. Some people will go on for ever setting traps, regardless of the rate at which rodents increase. But in old buildings the only effective method is to stop the holes with Portland cement, preferably mixed with an ‘aggregate’ of sand or powdered glass. That is Polton’s plan, and it keeps our chambers practically free from mice.”

From the bedroom we passed through a narrow doorway into the kitchen, and here we noticed the same appearance of order and tidiness as in the other rooms. It was a small place, but very completely equipped. There was a little gas cooker mounted on a stand and bearing a large aluminium kettle, a range of shelves on which the china was neatly disposed, the plates on edge and the cups inverted and all spotlessly clean; another shelf bore a row of covered jars and tins, each labelled with the name of its contents; several dish covers of wire gauze or aluminium hung from nails on the wall with a frying-pan and a couple of small saucepans, and a carpet-sweeper in the corner accounted for the conspicuous cleanliness of the floor. And here, too, I noticed a couple of neatly stopped mouse-holes.

The kitchen communicated with another room by a narrow doorway. The door was locked, but as the key was in the lock we were able to open it and pass through into the adjoining room, which I recognised as the larder that Mortimer had described.

It was smaller even than the kitchen, being only about eight feet by six; and this small space was further reduced by the great coal-bin, which occupied the whole of the longer side of the room. But like the kitchen it was admirably arranged. There were two shelves on one of which lay three bottles of claret and one of sauterne, while the other was occupied by one or two dishes protected by wire covers through which could be seen—and smell—some mouldy remains of food. In addition to the open shelves there was a tall, narrow, meat-safe through the wire gauze panels of which a mouldy, cadaverous odour exhaled. I opened the door and looked in, but as the odour then became more pronounced, I was about to shut it when Thorndyke stooped to examine the bottom shelf and then, reaching in, brought out from the back of the shelf a basin which was thickly encrusted with Portland cement and in which a rough bone spatula still stuck.

“I see,” said Thorndyke, “that he used the same ‘aggregate’ that Polton favours—powdered glass. It is more effective than sand.”

“Yes,” said I, “and I notice that he has infringed another of Polton’s copyrights—the utilisation of worn out toothbrushes by shaving off the bristles.”

I broke the spatula off the cement and scraped it clean with my pocket-knife, when it revealed itself as a bone handled dental-plate brush from which he bristles had been cleanly shaved off leaving a broad, blunt blade perfectly suited for the purpose for which it had been used.

“It is really remarkable,” I commented, “that a man of so much common sense and capacity in small things should have been such a fool in the things that seriously matter.”

“It is,” he agreed, “but Gillum’s case is by no means unique in that respect.”

He turned away from the safe and transferred his attention to the coal-bin.
"I think," he remarked, "that this is the largest bin that I have ever seen in a set of chambers. Coal storage is not usually their strong point."

He measured the principal dimensions roughly with his graduated stick and then continued: "Eight feet long by thirty inches wide and twenty-nine inches deep—roughly fifty cubic feet. I don't know what that represents in coal, but it would seem to be a fairly liberal allowance for a man living alone and cooking by gas."

"Yes," I agreed. "Nearly a year's supply. I should think. And it seems," I added, as I lifted the lid and found the bin nearly full, "as if he had replenished his stock shortly before his death. Which appears an odd proceeding when we remember what the weather was like at that time. But perhaps he took advantage of the low summer prices to lay in his year's supply."

"Possibly," Thorndyke agreed, "that is to say, if it is really all coal. The quantity seems rather incredible."

He thrust his stick down into the loose coal, and at a few inches of depth found it stopped by an obviously solid obstruction.

"There seems to be a false bottom," I remarked. "Convenient enough for keeping the coal within easy reach, but rather a waste of space."

"Perhaps he didn't waste the space," said Thorndyke. "Let us see."

With the scoop that lay on top of the coal, he began to shovel the latter away from the right-hand end, piling it in a heap at the left end. This soon brought the false bottom into view, and with it an iron ring sunk into the board near the right-hand end. Further shovelling disclosed a crack across the bottom near the middle, that divided it into two halves. Taking down a brush that hung from a nail on the wall, and that had manifest traces of coal dust on its hair, Thorndyke proceeded to brush away the small coal and dust until the surface of the false bottom was comparatively clean. Then he slipped his finger through the ring and lifted the right half of the bottom out bodily.

"The space wasn't wasted, you see," he said. "It seems to have been used as a store for things that were only occasionally wanted."

As he spoke, he threw the light of his pocket-lamp into the dark cavity, revealing a number of tins of various sizes, apparently containing tongue and other preserved foods, and seven or eight bottles of port and sherry.

"There was a good deal of space wasted nevertheless," said I. "The cavity looks about eighteen inches deep, and only four or five have been used."

Thorndyke dipped his stick into the cavity and read off the measurement. "Nineteen inches from the top of the supporting blocks to the floor. It would have held a good deal more than he put into it, but it was not a very handy container as the coal had to be moved every time it was opened. But it looks as if the contrivance had been put in by Gillum, himself. The bin is obviously old, perhaps as old as the house, but the false bottom and the blocks that support it look quite fresh and new. Evidently, they were a recent addition."

He put the false bottom back in its place and then, taking a last look round, stepped up to the window. Apparently, a sash cord had broken and not been repaired, for the lower half of the sash was held up as far as it would go by a piece of wood on either side, which had been jammed into the groove and fixed with screws. It looked a makeshift arrangement, but as Thorndyke pointed out, it had been adopted deliberately, for the little wooden props had been neatly planed and fitted their place exactly, and the holes for the screws had been properly countersunk.

"I think," he said, "that there is no need to assume a broken sash line. It looks like an arrangement to fix the window open permanently so as to make sure of constant ventilation. You notice the row of holes at the foot of the door, evidently bored for the same purpose, and apparently by Gillum, himself to judge by the fresh, unstained wood inside them."

We let ourselves out by the door which opened on to the landing and which, presumably for that reason, had been fitted with a Yale night-latch and a spring. When we had come out and closed the door, Thorndyke stood for a few moments hesitating.

"I suppose," he said, "that is all, excepting the key of the cupboard." He unlocked the living-room door and re-entered, and when he had locked the cupboard and pocketed the key, looked about the room to see if there was anything that we had omitted to examine.

"What about the writing-table?" said I. "Oughtn't we to see what is in the drawers?"

"I expect Bateman took away all the papers," he replied. "Still, we may as well take a glance at them."

We went over to the table and tried the drawers, but they were all locked, excepting the top one, and we had no key; and the top drawer contained nothing but Gillum's stock of note-paper and envelopes, of each of which Thorndyke took a sample before closing the drawer.

"And that," said he as he folded the paper neatly and slipped it into the envelope, "I think completes the inspection, for the time being, at any rate; unless you can suggest anything further."

"I can suggest lots of things," I replied with a grin. "For instance, you might take the legs off the tables and chairs as the police did in Poe's story of 'The Purloined Letter'; and you might go over the walls and furniture for finger-prints. And then there is the floor. You might set Polton to work on it with a vacuum cleaner and examine with the microscope the dust that
he collected. This has been quite a superficial inspection.”

He smiled indulgently at my rather feeble joke, but the result of it was not quite what I had expected.

“I think,” he replied, “that we will leave the furniture intact and reserve the finger-print hunt for some future occasion. But, really, your suggestion of the vacuum cleaner is an excellent one, though Gillum’s sweeper may have left us a rather meagre gleaning. I will get Polton to go over the floors, and hope that Gillum was not too thorough in his use of the sweeper.”

This reply to my facetious suggestion took me aback completely. For my knowledge of Thorndyke told me that he was, according to a playful habit of his, crediting me with an idea which was already in his own mind. He had certainly intended to collect the dust from those floors for examination. But I could not imagine why. Considering the nature of our problem, the proceeding seemed to be completely futile and purposeless. Yet I knew that it could not be. And so the old familiar feeling came over me; the feeling that he had seen farther into this case than I had; that he had already some theory and was not groping in the dark as I was, but was even now seeking an answer to some definite question.

X. — MR. WEECH DISCLAIMS

As we came out of the entry into the courtyard, we became aware of our old acquaintance, Mr. Weech, the porter of the Inn, hovering in the back ground, whence he had probably observed us at the landing window. Mr. Weech had always interested me. He was a complete and unabridged survival from the Victorian age, alike in his dress, his habits and in a certain subtle combination of dignity and deference in this bearing towards his social superiors. His costume invariably included a tall silk hat and a formal frock coat. Formerly, perchance, but not in my time, the hat may have borne a gold-laced band, and the coat have been embellished with gilt buttons. But nowadays the hat and coat were distinctive enough in themselves; and even the umbrella which was his constant companion, his sceptre and staff of office, seemed not quite like modern umbrellas.

In speech he was singularly precise and careful in his choice of words, though, unfortunately, his judgement was not always equal to his care. For he loved to interlard his sentences with Latin tags; and, as he obviously had no acquaintance with that language, the results were sometimes a little startling.

As we came into view, then, Mr. Weech quickened his pace and advanced towards us with the peculiar splay-footed gait characteristic of men who stand much and walk little, and peering at us inquisitively through his spectacles, essayed cautiously to ascertain what our business was.

“I am afraid,” said he, “that you will have found poor Mr. Gillum’s chambers locked up—if it was his chambers that you wanted.”

“Thank you, Mr. Weech,” Thorndyke replied, “but we have the keys. Mr. Benson has lent them to us.”

“Oh, indeed,” said Mr. Weech, in a tone of mild surprise and still milder disapproval.

“We just wanted to look over the chambers,” Thorndyke explained.

“Did you indeed, sir?” said Mr. Weech with rather more definite disapproval. “Not, I venture to hope, for professional reasons?”

“I am sorry, Mr. Weech,” Thorndyke replied suavely, “but it must be admitted that our interest in the chambers has a slight professional taint. The fact is that Mr. Benson has asked me to make certain enquiries concerning his late cousin.”

“Oh, dear!” exclaimed Weech, now undisguisedly disapproving. “Has it come to that? I had hoped that we had heard the last of that dreadful business. Don’t tell me that these quiet, respectable precincts are to be involved in another scandal.”

“I’ll tell you all about it,” said Thorndyke. “There is no need to be evasive with an old friend like you; and I know that I can trust to your discretion.”

“Undoubtedly you can,” replied Mr. Weech, evidently mollified by Thorndyke’s candour (he didn’t know my colleague as well as I did).

“Well,” said Thorndyke, “the position is this: the evidence at the inquest disclosed the existence of certain blackmailers who had been preying on Mr. Gillum. Now, Mr. Benson holds those blackmailers accountable for his cousin’s death, and he wants them identified and, if possible, brought to justice.”

“M’yes,” said Mr. Weech, clearly sceptical and unsympathetic. “I don’t see why. What’s the use, even if it were possible? Poor Mr. Gillum is beyond their reach now. Your protection of him has come—or would come, if it came at all—too late. It’s a case of post bellum auxilium.”

“I am inclined to agree with you, Mr. Weech,” Thorndyke replied, “but it is not my choice. Mr. Benson wants these rascals found and prosecuted, and he has engaged my professional services to that end; and it is my duty to render those services to the best of my ability.”

“Certainly, sir,” Mr. Weech agreed; “and I don’t say that I would not be glad to hear that those wretches had been brought to justice, if it were possible—which I don’t believe it is.”
“And I am sure,” said Thorndyke, “that you would give me any help that you could, as a matter of public policy.”

“I would for old acquaintance sake,” replied Weech, “though I can’t pretend that I am anxious for you to succeed, seeing what a rumpus there would be if you did. And I really don’t see how I can help you.”

“I think,” said Thorndyke, “that you could help me by supplying certain information that I should like to have. For instance, as a rather important point, you could tell me what visitors Mr. Gillum received.”

“But I don’t know,” Weech protested. “How should I? Both gates are open all day and strangers pass in and out unquestioned. My impression is that he had very few visitors, but that is only a guess. As far as actual knowledge goes, I can recall only two. One was a Mr. Mortimer, who, I think, came to him several times—”

“We know Mr. Mortimer,” interrupted Thorndyke. “Who was the other?”

“I have no idea,” replied Weech. “I know about him because he spoke to me when I was standing at the gate by the lodge. That would be about the beginning of last September. He asked me if a Mr. John Gillum lived in the Inn. I replied ’Yes,’ and gave him the number of the chambers; whereupon he bustled off. I didn’t go with him, as he couldn’t make any mistake, there being only the one set of chambers in that building.”

“Can you describe him?” Thorndyke asked.

“Yes,” was the reply. “Curiously enough, I remember him quite well, perhaps because he was little out of the ordinary. He was a short, stocky man with a sallow face, a small moustache, waxed at the ends, and bushy black eyebrows. He wore a rather queer kind of single eyeglass. It had no rim and no cord; it was just a plain glass, stuck in his eye with no kind of support. How he kept it there I can’t imagine. Then, as he walked off up the passage, I noticed that he had a slight limp and that he used a stick to help himself along; and a most uncommonly fine stick it was; a thick malacca with a silver band and a big ivory knob.”

Thorndyke jotted down in his note-book the points of this excellent description and then asked: “Do you know how long he stayed with Mr. Gillum?”

“I don’t. I never saw him again; but he might have gone out by the Fetter Lane gate. It couldn’t have been a long interview because, about a quarter of an hour later, I saw Mr. Gillum come out of his chambers alone, and I thought he looked a little annoyed and upset.”

“By the way,” said Thorndyke, “you mentioned just now that there is only one set of chambers in that building. But there is a second floor.”

“Yes,” Mr. Weech explained, “but it is not suitable for chambers. We use it as a general lumber room for the Inn, and it is always kept locked.”

As the conversation had developed, we had moved away from the window of the typewriting office on the ground floor and began slowly to pace up and down the courtyard, but I noticed that every time that we re-passed the window there happened to be some person looking out of it. Apparently we were being kept under observation.

“I am wondering,” Thorndyke said after a pause, “by what chance Mr. Gillum, an Australian, strange to England, should have happened to discover such a retired backwater as Clifford’s Inn. Did he ever tell you?”

“He did not, because, in fact, he did not discover it. Being a stranger, he very wisely employed an agent to find him rooms.”

“Do you mean a regular house-agent?”

“I don’t know what he was, but I had an idea that he was a personal friend of Mr. Gillum’s. At any rate, he not only carried out all the negotiations but he furnished the chambers and got them ready for the tenant by the time he wanted them.”

“I wonder,” said Thorndyke, “whether you would mind giving us a more circumstantial account of this transaction.”

“Well,” Mr. Weech replied, “let me see. It happened, so far as I can remember, somewhat like this. One morning, towards the end of August, 1928, a man came to the lodge to enquire about some chambers that we had to let at that time. He seemed to think that Number 64, which was empty, might suit him; so I gave him the keys and he went off to have a look at them. Presently he came back and said that they would suit him perfectly and that he would like to take a lease of them. But then he explained that they were not for himself but that he was acting as agent for a gentleman of means, and that he was fully authorised to execute an agreement and to furnish references and to pay whatever deposit I might think necessary. I would rather have dealt direct with the prospective tenant, but he produced a written authority from his principal, Mr. Gillum, who, he assured me, was a gentleman of good position and ample means, and he referred me to Mr. Gillum’s solicitor and his bank; but he did suggest that it would be better not to take up the references until the tenant came and entered into residence.”

“Did he give any reason for that suggestion?”

“Yes, and quite a sound one. He said that Mr. Gillum had lived abroad for some years and was still abroad and that his relations with both his solicitor and his bank had been conducted by correspondence and that neither of them knew him personally. Well, he was willing to pay half a year’s rent in advance and to sign a provisional agreement per procurationem,
I closed with him. He paid the money—twenty-five pounds—signed the agreement, and I handed him the keys. He wanted them because Mr. Gillum had asked him to get the rooms furnished so far as to be ready for immediate occupation. And that, in fact, is what he did. He took possession and had the chambers furnished up and some odd jobs done, and he ordered in enough furniture to enable Mr. Gillum to go into residence at once.

“I am rather surprised that you agreed to the deal,” said I.

“I don’t see why,” he retorted. “It was a slightly unusual transaction, but it was quite straightforward. The man couldn’t run away with the chambers. What possible danger of injury was there? Ad quod damnam, as the lawyers would say.” (He pronounced the last word “damn ‘em.”) “At any rate, the transaction turned out all right, so my action was justified by the results.”

“Yes,” I replied, “that has to be admitted. Finis coronat opus.”

“Exactly,” he rejoined eagerly (and, I suspect, make a mental note of the tag with a view to future use). “The proof of the pudding is in the eating, as the vulgar saying has it.”

“When Mr. Gillum arrived,” said Thorndyke, “was he introduced to you by the agent?”

“No,” replied Weech. “As I understood from the night porter, the two gentlemen came to the Inn together at night between nine and ten. He mentioned the matter to me the next morning, because the agent had asked him to. When they knocked at the wicket, he opened it, and, as he knew the agent by sight, having seen him once before, he let them pass through, and they went up the passage. Presently the agent came back alone and said: ‘By the way, that gentleman is Mr. Gillum, the new tenant of Number 64. You might mention to Mr. Weech that he has come to take possession.’ Which, as I have told you, he did.”

“Did he mention to you how long the agent stayed that night?”

“No. But, you see, that was no business of mine.”

“And when did you first meet Mr. Gillum?”

“The very next morning. I made it my business to. I looked in at the chambers about eleven in the forenoon, and the door was opened by Mr. Gillum himself. I told him who I was and asked him if he acknowledged the agreement signed by his agent. He said ‘yes,’ but that he would rather have a new agreement signed by himself to put things on a regular basis. I thought he was quite right; and, as I had the agreement with me and some forms in my pocket, we filled in a new form, and, when he had signed it, we tore up the old one. Then he gave me his references and that finished the business.”

“By the way,” said Thorndyke, “you didn’t mention the agent’s name.”

“I’m not sure that I remember it,” replied Weech. “But does it matter?”

“It might matter,” Thorndyke replied, “if it should seem desirable to get into touch with him, as I think it may be.”

“Well,” said Weech, “I seem to remember that it was something like Baker or Barber, or it may have been Barker—something of, that sort.”

“Of that sort!” I protested. “But there is all the difference in the world between a man who bakes your bread and one who shaves you or barks at you.”

Mr. W smiled deprecatingly. “I was referring to the sound,” said he. “They are a good deal alike. And really, his name did not arise, excepting when he signed the agreement; and his signature was not very distinct.”

“But,” objected Thorndyke, “there was the cheque and the receipt that you gave him.”

“There was no cheque,” replied Weech. “He paid in five five-pound notes. And the receipt was made out, at his request, to Mr. John Gillum. So, you see, his name was never mentioned; and I only saw it once in writing.”

“Perhaps,” Thorndyke suggested persuasively, “you might give us some idea as to what this gentleman was like. I am rather interested in him because he must know more about Mr. Gillum than most of my informants seem to.”

“Well,” Weech replied musingly, “I don’t remember much about him. He was a tallish man—about my height—and he was a fair man, with a light-brown, tawny beard and moustache and blue eyes. He was quite a gentlemanly man with a pleasant, persuasive manner, not to say plausible. And that is really all that I can remember about him. You see, I only saw him once to speak to, and only once or twice at a distance when he was furnishing the chambers; and I have never seen him since. He may have been here to see Mr. Gillum on some occasions, but, if so, I never happened to see him.”

Thorndyke reflected on this statement for a few moments. Then he asked, apparently apropos of nothing in particular: “I noticed that some carpenter’s work had been done in the rooms at Number 64; some alterations to the coal-bin and the larder door. Do you happen to know whether they were done by Mr. Gillum or by the agent?”

“They were done by the agent—Mr. Barker, we’ll call him. I only heard of it afterwards from Mr. Wing, the carpenter, of Fetter Lane, who does most of the odd jobs about the Inn. He ought really to have got permission to have the alterations made, though there isn’t much in it. The false bottom to the coal-bin was a distinct improvement, but I did think the holes in the larder door a trifle ultra vires,” (Mr. Weech made “vires” rhyme with fires; but we knew what he meant.)

Then there was a brief pause, and, as we passed the window of the typewriting office, I observed a lady in a hat, putting
on her gloves. Then Thorndyke resumed the conversation with the question: “Did you find Mr. Gillum a satisfactory tenant?”

“Very,” Mr. Weech replied. “A model tenant. Paid his rent promptly on quarter day, kept his chambers clean and tidy, and gave no trouble in any way. I greatly regret his loss, and so, I am sure, does Miss Darby, the lady who has the ground floor.”

“How?” I asked, scenting a romance.

“Well, you see,” he replied, “the gentleman who had Mr. Gillum’s chambers before him was terribly untidy, particularly in the matter of food, which is what matters in chambers. He used to leave food uncovered on his table and even in the larder, and the crumbs from his meals all over the floor. The natural consequence was that the place was overrun with mice; and, of course, they overflowed into the ground floor and kept the lady’s nerves fairly on edge. But when Mr. Gillum took over, the nuisance stopped at once. The mice disappeared like magic. Of course, it was quite simple. Mr. Gillum used to sweep up his crumbs after each meal and keep all food in the larder under covers or in bins or jars with lids. There was nothing for the mice to feed on. And what is more, he stopped up all the mouse-holes. Here is Miss Darby, and I am sure she will bear out what I have said.”

At this point the lady whom I had seen at the window emerged from her entry and met us on our return march. Mr. Weech raised his hat with the kind of flourish which is possible only with a “topper” and accosted her. “We were just speaking of the way poor Mr. Gillum cleared the mice out of his chambers. You remember, I dare say.”

“Indeed I do,” she replied emphatically. “Before he came, my rooms simply swarmed with the nasty little creatures. The man on the first, floor must have lived like a pig—kept a regular restaurant for mice. It was awful. I had great difficulty in getting the young ladies to stay with me. But when Mr. Gillum came, the little beasts disappeared completely. We never saw a mouse. I can’t tell you how grateful we were.”

“Very naturally,” said Thorndyke. “Mice are pretty little animals, but they are most unpleasant in their habits. However, I hope that your mice have gone for good. I suppose you are still clear of them?”

“Well, you know,” Miss Darby replied with a slight frown, “the rather curious thing is that we are not. Just lately, one or two have made their appearance again. I can’t understand it. Of course, we have our teas in the office, and sometimes our lunches. But we used to do that before. And we are most careful to sweep up all crumbs and to leave no food about. It is really rather strange.”

“It is,” Thorndyke agreed. “But perhaps you would get rid of your uninvited guests if you were to adopt Mr. Gillum’s plan; stop up the holes with Portland cement mixed with powdered glass. I strongly recommend you to try that remedy.”

Miss Darby thanked him for the advice and then, with a smile and a little bow, bustled away and disappeared into the tunnel-like passage that ran past the hall door. And thither we shortly followed her, as it appeared that Thorndyke had squeezed his informant dry—with mighty little result, as it seemed to me. But then you could never tell what was in Thorndyke’s mind or what might be the significance to him of trivial facts that seemed to have no significance at all.

Mr. Weech walked with us down the passage to Fleet Street and finally dismissed us with another impressive flourish of his hat, which we returned punctiliously and then crossed the road to the Inner Temple gate.

As we walked down the lane past the church I reflected on what we had heard and seen. Presently I remarked “Weech’s description of the unknown visitor at the Inn seemed to me to correspond pretty closely with that of Abel Webb.”

“So I thought,” replied Thorndyke; “and, for the present, I am assuming that he was Abel Webb, though we shall have to get confirmation if possible.”

“I don’t quite see how,” said I. “But assuming him to have been Webb, how does that square with what we have been inferring about the relations between him and Gillum? It seems to me to be rather a misfit. If the man was Webb, that must have been his first visit to Gillum as he had to inquire of Weech and was not sure of the address or that Gillum did actually live there. Now that visit was made only a few days before his death. But we inferred—at least, I did—that Webb had been blackmailing Gillum for the best part of a year. There seems to be a radical disagreement. You can hardly blackmail a man whose address you do not know.”

“It is not actually impossible,” said Thorndyke, “but I agree with you that it is extremely difficult to see how it could be done. However, we are not certain that this man was Webb, and, before we make any further inferences, we must get more evidence. The whole question of the relations of these two men needs to be elucidated; for if we were wrong in our original inferences we may have to recast our theory of the circumstances of Webb’s death. Obviously, the first thing to do is to ascertain, if possible, whether the man who came to the inn was really Abel Webb.”

XI. — A FRESH PUZZLE

MY colleague’s remark that it would be necessary to test our belief as to the identity of the visitor to Gillum’s chambers rather puzzled me. For, apparently, Mr. Weech was the only person who had seen that visitor, and he had told us all that he had to tell; and I could not think of any means by which we could check his description. But, on the very next day, Thorndyke reopened the subject and disposed of my difficulties. “I think,” said he, “that it is desirable that we should
confirm or disprove our assumptions as to the identity of Gillum’s visitor at the Inn. At present our belief is founded entirely on Mortimer’s not very precise description of the stick and the eye glass. That is not enough. The question whether Abel Webb did or did not go to Gillum’s chambers is a very important one and we ought to settle it more definitely. Indeed, the whole of the Abel Webb incident requires clearing up.”

“And how do you propose to set about it?” I asked.

“I propose,” he replied, “to go to the place where Webb was employed and get a description of his person. We have an excellent one from Weech with which to compare it. And perhaps, if we are fortunate, we may pick up some additional information. We want it badly enough.”

“Yes,” I agreed; “the Abel Webb business is rather in the air.”

“Very much so,” said he. “We have adopted the provisional theory that John Gillum, a most respectable gentleman, murdered Webb. That is a theory that wants clearing up, one way or the other. So, as the matter is of some urgency, I am proposing to devote the afternoon to it so we are both free and I hope that the expedition will interest you. What do you say?”

Of course I agreed, with some enthusiasm; and, as there were no preparations to make, we set forth within a few minutes.

It was characteristic of Thorndyke that, in making his way to Webb’s place of business, he should choose the route that carried us over the scene of the tragedy. Leaving, the Temple by the Tudor Street gate, we made for the Temple Station and travelled to the bank, whence we started along the south side of Cornhill until we reached the Church of St. Michael. Here we turned up the alley, and, in a few paces, came to the arched entrance to the covered passage that Mortimer had described. A few steps along this brought us to the cavern-like south porch of the church; and here we both halted to reconstitute the picture that Mortimer had drawn so vividly, though the appearance of the place, in the bright afternoon light, was not easily reconciled with his description.

“It is an astounding affair,” said Thorndyke; as he gazed into the now well-lighted porch. “By whomsoever that murder was committed, it was a remarkable exploit; and the murderer must have been a remarkable man—a man of iron nerve who combined the utmost audacity with caution and sound judgment. Not a man in ten thousand would have dared to take the risk; but yet, apart from that momentary risk, the crime was absolutely safe from detection. The actual murder can have been but a matter of seconds; and the instant the blow was struck the murderer could slip out into the alley, quietly walk down into Cornhill, and there instantly become merged into the indistinguishable population of the street. For a premeditated murder, which it must have been, it was the boldest and the most skilfully managed crime that I have ever known.”

“I don’t know,” said I, “that I am so much impressed with his judgment. It was a terrific gamble and he took a frightful risk. It doesn’t seem to me that he made such a very good choice of the place.”

“I am rather assuming,” Thorndyke replied, “that he had not much choice. The suggestion to me is that of a desperate man who felt an immediate need to dispose of Webb; who had no time to make suitable arrangements but had to seize the one opportunity that presented itself. It was an opportunity, and he took it, and the result justified him in accepting the risk.”

I was disposed to smile at Thorndyke’s ultra-professional view of this murder, which he was evidently considering purely in terms of efficiency; putting himself, in his queer way, in the murderer’s shoes and debating the appropriate technique. But I suppressed my amusement, and, following his own train of thought, asked: “How do you suppose the murder was actually carried out?”

“I should assume,” he replied, “that the murderer knew that Webb would pass through this passage at a certain time and that—greatly favoured by the unusual darkness of the evening—he lurked here, keeping a look-out from either end for possible wayfarers who might be approaching. Then, when Webb appeared at the entrance—the coast being clear at the moment—he made his attack. Probably Webb saw him, and there was a brief struggle, as suggested by the hat in the churchyard. But when they came opposite the porch the murderer thrust in the syringe, pushed his victim down on the steps, and walked away down St. Michael’s Alley. But the point of interest to us is that the murderer seems to have been familiar with Webb’s habits. Perhaps we may get some further light on that point from our enquiries at Cope’s.”

With this we turned away from the porch, and, stepping up into the churchyard, took our way along the paved walk, out into Castle Court and through the little covered passage into Bell Yard. At the entrance of the yard into Gracechurch Street, Thorndyke paused and ran his eye along the houses on the south side of the street until it rested on a building which bore in large gilded letters the inscription, “The Cope Refrigerating Company,” when we crossed the road and bore down on it.

On entering by the main doorway, we found ourselves in a large showroom filled with a bewildering assortment of various types of refrigerators, and were confronted by a member of the staff.

“I think,” said Thorndyke, addressing him, “that the late Mr. Abel Webb was employed here.”

“Yes,” was the reply, “but not in this department. We deal here with refrigerating apparatus and plant. Mr. Webb was in the solid carbonic acid department. That is next door. You turn to the right as you go on.”

Following this direction we entered a small doorway adjoining the main entrance and came into a long, narrow shop or
warehouse fitted with a counter which ran from end to end. Behind this were two men, one at the farther end, who was delivering one or two large and heavy packages to a carman, and the other, nearer to us, who appeared to be disengaged. To the latter Thorndyke repeated his former question, and thereby immediately captured his attention.

“Yes,” he replied, “poor Mr. Webb was employed here. He was assistant manager. Most of his time was spent in the manufacturing section, which adjoins this warehouse, and it was there that I knew him. I only came out into the retail department a short time before his death.”

“Then,” said Thorndyke, “as you knew him fairly well, perhaps you could tell us what sort of a man he was to look at. Would you mind?”

“Certainly not,” was the cordial reply. “But may I ask, if it is not an impertinence, whether you two gentlemen are connected with the police?”

“We are not,” Thorndyke replied. “My friend and I are lawyers; but I may say that our interest in Mr. Webb is a professional interest. We are trying to get some fresh light on the circumstances of his death.”

“I am glad to hear that,” said the assistant. “It’s time someone did. The police came here once or twice after the inquest, but, of course, we couldn’t tell them much, and they didn’t seem particularly keen. But I don’t think the affair ought to have been let drop in the way that it was. Now, as to what Mr. Webb was like. He was rather a noticeable man, though short. He was a bit of a dandy, always well-dressed and smartly turned out; waxed the ends of his moustache and wore a single eyeglass. Quite a nut in his way.”

“Yes,” said Thorndyke, “and to come to particulars; was he dark or fair, fat or thin?”

“He was dark. Sallow face, black moustache and eyebrows—bushy eyebrows like young moustaches; and I wouldn’t call him fat. He was just stoutly built, and looked stouter because of his shortness.”

“You spoke of an eyeglass. What was that like?”

“It was just an eyeglass. No rim or frame, no cord or ribbon. Just a plain glass. He used to carry it in his waistcoat pocket, and, when he wanted it, he would take it out and fix it in his eye, and there it stuck as if it were glued in.”

“When he was out of doors, did he carry an umbrella or a stick?”

“A stick, always. He had just a slight limp—I think one leg was a little shorter than the other. That was why he gave up the sea. Found it a trifle inconvenient on board ship. So he used a stick for a bit of extra support. And a rare fine stick it was; a very thick malacca with a silver band and an ivory knob like a young billiard ball. And that, I think, is all that I can tell you about Mr. Webb.”

“Thank you,” said Thorndyke, “you have given us a very admirable and complete description.” He paused for a few moments and appeared to be reflecting. Then he opened a new topic. “I notice that you seem to reject the idea that Mr. Webb committed suicide.”

“That I certainly do,” was the reply. “Webb was not the man to commit any foolishness of that kind. Besides, it was a plain case of murder. Anyone could see that from the way it was done—and the place, too, for that matter.”

“What is the significance of the place?” Thorndyke asked.

“The significance is that anyone waiting at that place at the right time would have been sure of meeting him. He used to get on his bus at the Royal Exchange and he always walked there by the same route; through Bell Yard, Castle Court and the churchyard and out into Cornhill by St. Michael’s Alley. Always the same way; he told me so, himself, one day when I walked that way with him. He that he liked the walk through the churchyard. And he was wonderfully punctual, too. He would stay on here finishing up the day’s work after the rest of the staff had gone; but at seven-thirty, sharp, he would take his stick and hat and off he would go. Anyone waiting for him in that dark passage could have been certain of him to half a minute. It would have been perfectly easy if there happened to be nobody about.”

“Yes,” Thorndyke agreed, “that is quite an important point. But you see that the idea of some person lying in wait there suggests the further idea someone who had an intimate knowledge of Mr. Webb’s habits. Can you think of any persons who had that knowledge?”

“No. I don’t know that anyone besides myself knew what his habits were; and even if any of our people knew, there is none of them that I could possibly suspect.”

Thorndyke agreed cordially with the latter statement and again paused with a reflective air, and I got the impression that he was feeling about for a new opening. Apparently he found one, for he proceeded to put a fresh case. “Looking back on that time—the time just before Mr. Webb’s death—can you recall any incident that could possibly be, in any way, regarded as suspicious?”

Our friend weighed the question seriously for some seconds but finally concluded that he really did not think that he could. But yet I seemed to detect a certain hesitancy in his reply as if he did not absolutely reject the suggestion. And this was evidently perceived also by Thorndyke, for he returned to the attack with his customary persistence, tempered by suavity.

“You must forgive me for pressing you, Mr.—”
“My name is Small.”

“Mr. Small. But, looking back by the light of what happened, can you think of any incident—we won’t say actually suspicious; perhaps quite trivial and commonplace, but which, considered retrospectively, might conceivably have had some connection with the tragedy. Any strangers, for instance, who might have called to see Mr. Webb, or who might have met him by chance. Now, what do you say?”

Mr. Small was still hesitant and slightly evasive.

“You see,” said he, “when an awful thing like that has happened, it tends to upset your judgment and sense of proportion. You look back on what went before and you are apt to magnify every little simple thing that occurred and think that it might have had something to do with the disaster.”

“Exactly,” said Thorndyke. “And so it might have had. Don’t forget that. It is by the close scrutiny of little simple things that we sometimes get a valuable hint. Now, Mr. Small, I can see that there is something in your mind that you have given some thought to, but that you are shy of mentioning because of its apparent triviality. Let us have it. Perhaps it may not appear so trivial to me; and if it does, there will be no harm done.”

“Well,” Mr. Small replied with some reluctance, “it is really a very trivial incident, but yet I have thought it rather odd. It just amounts to this: One evening, not very long before closing time, a man—a gentleman, I might call him—came here to buy some four-pound blocks of snow—solid carbonic acid, you know—and he had brought a sort of suit-case to carry it away in. Now, I had got the blocks, wrapped in a rough insulated packing, and was just handing them to him when Mr. Webb came in through that door and stopped to look up at the shelves, standing about where the other assistant is standing now. Well, what attracted my notice was this; as Mr. Webb came through the doorway, the customer glanced at him, and then he looked again very hard with an expression as if he was surprised or startled. And at that moment Mr. Webb noticed him, and he looked very hard at him. But he couldn’t get a very good view of him, for the customer turned away so that his back was towards Mr. Webb while he was packing the blocks in his vase. And when he had got them in, as he had already paid for them, he said ‘good evening’ and walked out. When he had gone Mr. Webb asked me if I knew who the customer was, and I said I didn’t. ‘Well,’ he said, ‘the next time that he comes, find out his name if you can,’ and I said I would.”

“And did you?” Thorndyke asked.

“No,” replied Small, “because he never came again, and I have never seen him since.”

“Do you remember, roughly, the date on which this incident occurred?”

“I should say that it was from ten days to a fortnight before Mr. Webb’s death; and that happened on the ninth of September. That is what has made it stick in my memory. I have often wondered whether it could have had any connection with that dreadful affair.”

“Naturally,” said Thorndyke; “and it does not appear so very improbable that it had. It might be useful to have a description of that customer if you could remember what he was like.”

“I can’t remember much about him,” said Small, “though I should know him if I met him, but, of course, I didn’t notice him particularly. I know that he was a rather tall man, say about five foot ten, and dark; black hair and a smallish black beard with a close-clipped moustache; and that is about all that I do remember.”

“You didn’t by any chance notice what his teeth were like?”

Mr. Small seemed to start, and gazed at Thorndyke in evident surprise. “Well, now,” he exclaimed, “that’s curious; because, now that you come to mention it, I did notice his teeth, when he smiled at something that I said. His upper front teeth had been stopped with gold; pretty extensively, too; and those stoppings were no ornament. I wonder he let the dentist disfigure him in that way. But you seemed to know the man, to judge by your question.”

“It was only a shot,” replied Thorndyke. “I remembered a man who might have been surprised at seeing Mr. Webb here. But, as that man is now dead, there isn’t much in it.”

As Thorndyke seemed to have elicited the information that he had come for, I ventured to seek a little on my own account.

“What sort of people use those blocks that you were speaking of,” I asked, “and what do they use them for?”

“All sorts of people use the solid carbonic acid,” replied Small. “The standard twenty-five-pound blocks are mostly used by brewers and mineral water manufacturers. The small four-pound blocks were made in the first place principally for the convenience of the ice-cream tricycles, to keep their stuff cold. But nowadays those blocks are used for a number of purposes. Doctors use them for freezing warts and moles, and engineers and motor repair men use them quite a lot.”

“What on earth do engineers want carbonic acid now for?” I asked.

“Principally,” he replied, “for shrinking metal. Say you have got a bush that is just too big to drive into its hole. Well, you can get it in either by expanding the piece with the hole in it by making it hot, which may be a big job, or you can shrink the bush by freezing it with the dioxide snow, which is much more convenient.”

Hitherto, fortunately for us, the warehouse had been so nearly empty that the other assistant had been able to deal with
the business. But now several customers came in, and their arrival brought our conversation to an end. Mr. Small apologised for having to leave us in order to attend to them, and accordingly, when we had thanked him for having given us so much of his time, we wished him good afternoon and retired.

We took our way back by the way we had come, through Bell Yard and the paved walk beside the little grass plot, lingering a while in the quiet and seclusion of the churchyard to discuss the results of the expedition.

"That was a bold shot of yours," I remarked, "with respect to the teeth. What made you think that the man might be Gillum—for there can be no doubt that it was he?"

"Practically none," he replied. "But the reasons that made me change the suggestion were, first, that the circumstances seemed to make it probable that the man was Gillum, and, second, the description that Small gave fitted Gillum perfectly, as far as it went."

"I don't quite see the probability that you mention," said I; "in fact, I find these new developments rather bewildering. I can't fit them into our scheme. Small's description almost suggests an unexpected meeting, which might be natural enough on Webb's part, but hardly on Gillum's. For, as he was neither an ice-cream vendor nor a doctor nor an engineer, it would seem that the purchase of the blocks was merely a pretext for going to Webb's place of business and getting into touch with him. But that doesn't seem to fit in with our theory at all; and neither does Webb's visit to Clifford's Inn—for that visitor certainly was Webb."

"Yes," Thorndyke agreed, "Small's description corresponds exactly with Weech's. But you are quite right, Jervis. These new facts do not fit our theory in its original form. We shall have to modify it. But you notice that our new discoveries, so far from exonerating Gillum, tend to confirm our suspicion that he was responsible for Webb's death. What we shall have to reconsider is the possible motive for the murder. We assumed that Webb was a blackmailer. We may have been right, but these two meetings, as you say, do not fit comfortably into the group of events that we assumed. We must have another try. But what will be much better than speculating on the possible alternatives, will be the collection of some further data. There are still some unexplored territories in which we may possibly make new discoveries."

"Yes," I agreed; "there is, for instance, Dr. Peck. He might be able to give us some useful information. But the question is: where is he? He may be in the middle of the Pacific."

"True," Thorndyke admitted; "but, on the other hand, he may not. I think that your question has to be answered, and I propose that we seek the answer without delay."

XII. — THE PURSUIT OF DR. PECK

THORNDYKE'S decision that an immediate answer must be found to my question, "Where is Dr. Peck?" was given effect on the very following morning; when, as our engagements permitted, we set forth together for the pleasant old precinct of Staple Inn. As our business was with the porter, and he was most likely to be found in his lodge by the main gate, we took our way up Fetter Lane and along Holborn until we reached the arched entrance in the ancient timber houses through which the wayfarer in the busy street can get a glimpse of the quiet, secluded quadrangle. And here, passing under the archway, we found the lodge door open and the porter plainly visible within.

Observing that we had halted with an air of business, he came to the door and asked, civilly, what he could do for us.

"I want," said Thorndyke, "to get into communication with one of your tenants; a certain Dr. Peck."

"Ah!" the official replied, "then you have made a bull's eye at the first shot; though he is not one of our tenants now. But I can give you his address."

This he proceeded to do, writing it down on a slip of paper which my colleague offered for the purpose. And, with this, it seemed to me that our business had come to an unexpectedly swift conclusion, and that we might forthwith go about "getting into communication" with our quarry. But this was evidently not Thorndyke's view, for having put the slip of paper in his pocket-book, he developed an unmistakable tendency to open a conversation and to start the porter talking. From which I inferred that he hoped to gather up a few unconsidered trifles of a biographical nature which might be dropped in the course of a properly directed gossip.

"I came here," said he, "because this was given as his address in the Medical Directory; though I hadn't much hope of finding him, as he spends most of his time at sea."

"No," replied the porter, "and if you had come a little earlier you wouldn't have found him or got any news of him either. He seems to have been all over the world this last trip, not on an ordinary voyage out and home, but changing about from one ship to another and going into all sorts of unheard-of places."

"But I suppose," said Thorndyke, "he kept in touch with you so that you could send on his letters?"

"Not a bit," was the reply. "He couldn't. He never knew where he was going to next, and he never stayed long in any place. He meant this to be his last trip at sea, and he was determined to see as much of the world as he could before he settled down ashore. And he did. It must have been a regular Captain Cook's voyage."

"And he never gave you any place to send his letters to all the time that he was away? There must have been a pretty
considerable accumulation when he came home."

"I expect there was. But I never collected them from his chambers as I had no place to send them to. In fact, he told me to leave them where they dropped through the letter slit."

"I suppose you heard from him from time to time, when the rent became due, for instance?"

"No, he never wrote. There was nothing to write about. He had always left an order with his banker to pay his rent as it became due, when he was away at sea, and he did the same this time."

"It seems a wasteful arrangement," said Thorndyke, "to have kept a set of chambers empty, month after month, while the tenant was wandering about the earth. Don't you think so?"

"I do, and I told him so. But he said that a doctor has to have a permanent address to keep his name on the register; and he liked to have a place to come to when he returned from a voyage. But this last trip did really seem to me out of all reason. He was away close upon two years; and all that time there were the chambers lying empty and the rent going on just the same as if he had been living in them. It happened to be a low rent, because he was an old tenant. He came here years ago when he was a medical student. We used to have a lot of students in those days, mostly from Barts, and when one qualified and gave up his chambers, he was allowed to hand them on to a new student. So Dr. Peck had been living here more years than I can remember, and I suppose he didn't like the idea of giving up his old chambers. But still, as you said, two years' rent for unoccupied chambers does seem a wicked waste."

"Perhaps," Thorndyke suggested, "he didn't expect to be away so long."

"Oh yes, he did. He told me that he might be away for as much as a couple of years. He meant to go overland to Marseilles and there pick up some kind of foreign tramp and go with her wherever she might be going, and after a time, change over to another ship and make a voyage somewhere else. And he made mighty preparations so that he should be as comfortable as possible. He got a brand new cabin trunk, in addition to his old ones, and he had a couple of portable bookcases made so that he could have his library with him."

"He must have reckoned that those tramps would have pretty liberal cabin space," I remarked. "You couldn't get many bookcases into an ordinary tramp's cabin, so far as my experience goes."

"Oh, but these were quite small things," the porter explained. "Only about three foot high by a couple of foot wide. And uncommonly cleverly they were planned, too, at least, so I thought. You see, they were intended to travel with the books in them. They had moveable fronts fixed on with a dozen long screws, well greased so that they would come out easily, and lying flush so that there was nothing projecting to catch when they were travelling. And when you had got them into your cabin, all you had to do was to take out the screws and the front was free. You could just take it off and slip it behind the case out of the way, and there was your bookcase with all your books properly arranged and ready for use. I thought it a mighty neat idea."

"So it was," Thorndyke agreed. "Extremely convenient, not only for use on board ship, but for travelling on land. Did you see the cases?"

"Yes," was the reply, "I saw them in Mr. Crow's workshop just before he delivered them, and I complimented him on having made such a good job of them. He had got them stained and varnished so that they looked quite smart, although they were only made of deal, you understand."

"Mr. Crow, I take it," said Thorndyke, "is a local craftsman."

"Yes, he lives close by in Baldwin's Gardens, so we give him all the jobs that we want done about the Inn. And a real good tradesman he is. I always recommend him whenever I can. It's a kindness to him and to the customer, too."

"It is, indeed," said Thorndyke, "especially to the customer. Really skilful and dependable tradesmen are getting scarce, and it is no small advantage to know where one can find such a man on occasion. I shall make a note of Mr. Crow's address, and perhaps call on him. I am quite impressed by your description of those bookcases."

"Well, I think you would find them handy if you travel much," said the porter, apparently much gratified by the impression he had made. "Dr. Peck did, as he told me; and they took the fancy of the captain of his last ship to such an extent that when the doctor left the ship at Marseilles to come home overland, the skipper insisted on buying the cases, books and all."

"Then you have seen Dr. Peck since he came home?"

"Lord, yes," the porter chuckled, "and I didn't recognise him at first. You see, he had shaved off his beard; and when a beaver does a clean shave, the results are apt to be surprising. But he was quite right. A beard is the thing on board ship, where shaving isn't very convenient and not at all necessary, but, as he said very truly, when a man is in practice as a doctor, he doesn't want a bunch of hair on his chin to stick in his patient's face. Yes, he came here to give notice and settle up, and to move his things out of the chambers."

"When did he arrive in England?"

"Ah!" was the reply, "that I can't say, exactly. I didn't know that he was back until he turned up here, as I have told you. That was about three weeks ago. But he must have been in England some time before that, seeing that he had taken a house, and perhaps a doctor's business as well."
“Then he never came back here to live?”

“No. Which makes the waste of money seem worse than ever. He appears to have taken his new premises, furniture and all, and settled there at once. So I understood.”

“And he is now engaged in medical practice at the address you gave me just now?”

“Well,” the porter replied with a faint grin, “That’s as may be. If he bought a going concern, I suppose he is. But if he just took the premises without any goodwill, he is probably squatting there and waiting for business to turn up. However, in either case, he has got a brass plate at the address I gave you: and there you'll find him, and he will able to give you the particulars about himself better than I am.”

I seemed to detect in the final sentence a subtle hint that our friend thought that he had asked questions, and so, apparently, did Thorndyke, for he accepted the hint—the more readily, I suspect, because he had no further questions to ask—and brought the interview to an end by thanking our friend for the address and wishing him good morning.

As this dialogue had proceeded, I had become and more puzzled. For I had supposed mission had the simple purpose of finding out, if possible, the whereabouts of Dr. Peck; and I had imagined that our business with Peck was to elicit from him whatever he might be able to tell us about the incidents of the voyage from Australia as affecting John Gillum. But it seemed that neither of these suppositions was true. Thorndyke was not interested only in what Peck might be able and willing to tell us; he was interested in Peck, himself. The apparently trivial conversation to which I had listened was, I felt sure, a carefully conducted examination designed to elicit certain facts. But what facts? I had listened attentively and even curiously; but not a single fact of any apparent significance seemed to have transpired. Yet something had transpired, unperceived by me. Thorndyke’s behaviour had convinced me of that. The way in which he had, almost abruptly, closed the conversation, told me that, whatever might be the item of information which he had been seeking, that item was now in his possession. But I could not form the vaguest guess as to what it could be.

My confusion of thought was rather increased by Thorndyke’s conduct when we emerged from the Inn; for, halting at the edge of the pavement and looking across the road, he said, meditatively:

“Baldwin’s Gardens. I think that turns out of the Gray’s Inn Road a little way down on the right, doesn’t it?”

“Yes,” I replied. “About the third turning. Were you thinking of paying a visit to the ingenious Mr. Crow?”

“Why not?” said he. “We may as well look him up now, as we are so near.”

“But,” I protested, “why look him up at all? Those bookcases were very ingenious and handy for the purpose for which they were made, but you have no use for such things. You don’t make sea voyages or even prolonged journeys away from home; and if you did, you would hardly want to take your library with you.”

“But they would be useful for carrying other things besides books,” he replied; “apparatus and reagents, for instance. At any rate, I should like to get particulars of construction and dimensions.”

“With a view,” said I, “to pinching Mr. Crow’s copyright and having a pirated edition turned out by Polton.”

“Not at all,” he retorted. “If I decided to have one, or a pair, made, I should certainly commission Mr. Crow to make them.”

As he had evidently got some kind of unreasonable fancy for those bookcases, I said no more. We crossed the road and in two or three minutes found ourselves at the corner of Baldwin’s Gardens, whence we began a perambulation of the street. It was some time before we were able to locate Mr. Crow’s premises, but eventually we discovered, at the corner of a side passage, a painted board inscribed with the name of “William Crow, Carpenter and Joiner” and the intimation that his workshop would be found on the right up the passage. We accordingly followed the direction and, coming to a door on which the description was repeated, pushed it open and entered a spacious, well-lighted workshop in which a tall, elderly man was engaged in planing up the edge of a board. At the sound of our entry, he turned and looked at us over the tops of his spectacles, and then, laying his plane down on the bench, enquired politely what he could do for us.

Thorndyke briefly stated the purpose of our visit, whereupon Mr. Crow took off his spectacles to get a better view of us and appeared to meditate on what my colleague had said.

“A pair of bookcases, you say, sir, made for a gentleman in Staple Inn of the name of Peck. Yes, I seem to remember a-making of them, but I can’t rightly recollect exactly what they were like. Small cases, I think you said?”

“Yes; about three feet by two.”

“Well, sir,” said Mr. Crow—very reasonably, I thought—“if you will tell me just what you want, I can take down the particulars and make the articles without troubling about those other ones.”

But this simple plan apparently did not commend itself to Thorndyke, for he objected: “I am not sure that I have got the full particulars and I rather wanted to see the construction and dimensions of those that you made for Dr. Peck. Don’t you keep an account in your books of work that you have in hand?”

“Oh, yes,” replied Crow, “I’ve got the particulars all right if I only knew where to look for them. But you see, it’s a longish time ago and my memory ain’t what it was. I suppose, now, you couldn’t tell me about when those cases were made?”

“I can’t give you the exact date,” said Thorndyke, “but I should say that it would have been some time in September,
1928, probably the early part of the month. Or it might have been the latter part of August. What do you say, Jervis?"

"I expect you are right," I replied, "though I don't quite see how you arrived at the date."

But however he had arrived at it, the date turned out to be correct; for when Mr. Crow, having resumed his spectacles, had picked out from a row of trade books a shabby-looking folio volume and opened it on the bench, the required entry came into view almost at once.

"Ah!" said Crow, "here we are. Twenty-eighth of August, 1928. I see the order is marked 'urgent.' Things wanted as soon as possible. They usually are. So I treated it as urgent and delivered the goods at the Inn on the thirty-first, in the evening, as soon as I had got them finished."

"That was a fairly quick piece of work," I remarked.

"Yes," he replied, "I got a move on with 'em. But there wasn't a lot of work in 'em, as you can see by the drawings. No dovetails and no gluing up except for the backs. They were just screwed together and stained and brush-varnished. It wasn't a job to take up much time. I have written the dimensions on the drawings, so you can see exactly what the cases were like."

We looked over the drawings, which were quite neatly executed, though rapidly sketched in, with the dimensions marked on them in clear legible figures notwithstanding which, Mr. Crow proceeded to expound them and the details of construction.

"The cases," he said, "were of yellow deal, stained and varnished; three foot three high by twenty inches wide and fourteen inches deep, all outside measurements; and as the stuff was full one-inch board, the inside measurements would be two inches less in height and width and one inch less in depth. There were three shelves in each case, equal distances apart, so you have got four spaces of a little under nine inches each, as the shelves were only half-inch stuff. All the parts were fastened together with screws, excepting the shelves, and they slid freely in grooves. The fronts were the same size as the backs, and they were just laid on and fixed in position by twelve two-and-a-half-inch number eight screws, which had to be well greased with tallow so that they would come out easily. It was quite a handy arrangement for, you see, you just filled the case up with books and then you put on the front and ran in the screws and you'd got a thoroughly secure packing-case with no hinges or other projections to get in the way when it was being stowed. Then, when you had got it in the place where it was to be, such as the cabin, all you had got to do was to draw out the screws, take off the front, and slip it behind the case, and there you were with all your books ready to hand."

"Wouldn't it have been stronger," I suggested, "if the top and bottom had been dovetailed to the sides?"

"Yes, it would," he agreed, "and that is what I wanted to do. But he wouldn't have it. He said that all the parts were to be screwed together with greased screws so that it could be taken to pieces if necessary for stowage or storing."

"I don't see much utility in that," I remarked.

"There isn't," he agreed, "excepting that, if the cases should be out of use at any time, they could be taken apart, and then the pieces would lie flat and take up less room than the assembled cases."

"I certainly think it a good method of construction," said Thorndyke. "The case would be strongly bound together by the back and front when it was travelling, and when it was not travelling, the extra strength would not be wanted."

"Then," said Crow, "you'd like yours made the same way, I suppose. Did you wish me to make one case or two?"

"You may as well make two while you are about it," answered Thorndyke, "and I think you had better make them in every way similar to those that you have in your day book and of the same dimensions. They are quite suitable and I don't think they could be improved on. But I may say that this order is not urgent. You can take your own time over them."

Mr. Crow thanked him for his consideration, and when he had booked the order in the current book and taken Thorndyke's name and address, we took our leave and made our way homeward. During our walk along Holborn and down Fetter Lane very little was said by either of us. Thorndyke appeared to be cogitating on the morning's experiences, and my own reflections were principally concerned with speculations on the nature of his. For, as far as I could see, the only tangible result of the expedition was that we had got Peck's address and had secured two bookcases which we did not want. In addition, we had picked up a number of rather trivial personal particulars relating to Peck and his comings and goings, none of which seemed to have the slightest bearing on the problem which we were endeavouring to solve. But I suspected that there was more in it than this; that, out of the porter's trifling reminiscences, Thorndyke had gathered some thing, the significance of which was evident to him although it had, for the present, escaped me.

We entered the Temple by Mitre Court and, as we emerged into the upper end of King's Bench Walk, we observed a figure advancing up the pavement from the direction of our chambers, which, as we drew nearer, resolved itself into that of our friend Benson. He recognised us at the same moment and quickened his pace to meet us.

"I have taken the liberty," said he, when he had shaken hands heartily, "to drop in at your rooms, as I was in the neighbourhood, not to detain you and waste your time, but just to ask if there were any news of our case."

"There is nothing definite to report," replied Thorndyke. "I am making various enquiries and picking up such facts as I can, but, so far, the result is a rather miscellaneous collection which will want a good deal of sorting out and collation. But I am by no means hopeless. Won't you come back and have a bit of lunch with us? There are one or two questions that I
wanted to ask you, and we might discuss them over the lunch table."

Benson looked at his watch. "I should like to," said he, "but I think I had better not. I have an appointment at half-past two, and I mustn’t be late. Could I answer your questions now?"

"I think so," replied Thorndyke. "It is just a matter of personal description. You see, as I never saw John Gillum and have only the vaguest idea as to what he was like, I shall be rather at a loss if I have occasion to trace his movements. I can give no description of him. Could you sketch out a few personal characteristics by which he could be described or identified?"

Benson reflected as we turned to walk slowly down the pavement.

"Let me see," said he. "Now, what do you call personal characteristics? There is his height. He was rather a tall man; about five feet ten. In colour he was a mixture—dark and fair. His hair and beard were black, but his skin was fair and his eyes were blue; you know the type of black-haired blond. But probably the most striking and distinctive characteristic, and the most useful for identification would be the peculiarity of his teeth. You have heard, I think, that his upper front teeth were extensively filled with gold and as they showed a good deal, they were a very serious disfigurement."

"Yes, I have heard of those teeth," said Thorndyke, "and I have rather wondered why a fairly good-looking man, as I understood him to be, should have allowed himself to be disfigured in that way. Were his other teeth filled extensively in the same way?"

"No," replied Benson, "that was the exasperating feature of the case. He had an exceptionally fine, sound set of teeth; not a stopping among the whole lot, I believe. It was bad luck that the only unsound ones should have happened to be those that were constantly on view. And I have an impression that they were really sound; that the spots of decay on them were started by some kind of blow or injury. But I think the dentist might have done something better for him."

"Yes," I agreed. "A competent man would not have used a gold filling at all. He would have put in a porcelain inlay."

"To return to the hair," said Thorndyke. "You described it as black. Do you mean actually black, or very dark brown?"

"I mean black. There was no tinge of brown in it, to the best of my belief. It seemed to be dead black, with just a tiny sprinkling of grey. But the grey was hardly noticeable, except, perhaps, on the temples above the ears. Otherwise, there was only a white hair here and there; single hairs that you would scarcely notice and that did not interfere with the general effect of black hair."

"Thank you," said Thorndyke, "Your description is quite helpful. But what would be still more helpful would be a portrait. If you can show a portrait and say, 'Is this the man whom you saw?' the identification is much more definite. I suppose you don’t happen to have a photograph of your cousin?"

"Not here," Benson answered; and then, as with a sudden afterthought, he said, "Wait, though. I have got something that will possibly answer your purpose. You must know that I am an amateur in a small way. I run a pocket camera, and I have a sort of a book file for the film negatives. That file I have brought with me and it is in one of my trunks. Among the old films are one or two of Gillum, mostly in groups, but I don’t suppose that will matter. They are not very good portraits—you know what snapshot portraits are like—and of course, they are rather small. But they could be enlarged. Do you think they would be of any use to you?"

"They would be of the greatest use," Thorndyke replied. "They could not only be enlarged, but they could be retouched to get rid of the exaggerated shadows, which are the principal cause of the bad likeness in outdoor snapshots. Will you let me have one or two of them?"

"Certainly," said Benson. "I will look them over and pick out a few of the best and clearest and send them to you. And I have got a photograph that the first officer gave me, which he took on the former voyage. It is a group of officers and passengers, including a fairly good portrait of Gillum. I will send that too. And now," he added, once more glancing at his watch, "I think I must really be running away. There wasn’t anything more that you wanted to ask me, was there?"

"No," replied Thorndyke, "I think that was all. If you send me the photographs and they are reasonably good ones, my difficulties in the matter of identification will be disposed of."

With this we both shook hands with him and stood awhile, watching him as he strode away towards Crown Office Row, the picture of health and strength and energy. Then, as our fancies lightly turned to thoughts of lunch, we walked back to our entry and ascended to our chambers where we found the table already laid and Polton on the look-out for our arrival.

XIII. — DR. AUGUSTUS PECK

OF certain men we are apt to say that once seen they are never forgotten. They are not mere samples of the human race, turned out from the common mould, but executed individually as special orders and never repeated. Such were Paganini and the great Duke of Wellington, recognisable by us all from their mere counterfeit presentments after the lapse of a century.

Now Mr. Ethelbert Snuper was exactly the reverse. He might have been seen a thousand times and never remembered. So exactly was he like every other ordinary person that he might have come straight out of a text-book of "The Dismal Science"—the Economic Man, now for the first and only time enjoying a concrete existence. Often as I met him, I
recognised him with doubt. And the worst of it was that when at last I thought that I had committed his impersonality to memory, behold! the very next time I met him he was somebody else. It was quite confusing. There was a sort of unreality about the man. His very name was incredible, so exactly did it define his status and his "place in Nature," (but one meets with these coincidences in real life. I once knew a ritualist clergyman named Mummery).

For Mr. Snuper was a private inquiry agent and, especially, a professed and expert shadower; a vocation to which his personal peculiarities (or should I say, his impersonal peculiarities?) adapted him with a degree of perfection usually met with only in the lower creation. Even as the cylindrical body of the mole answers to the form of his burrow, and the flatness of Cimex lectularius (Norfolk Howard) favours unostentatious movements beneath a wallpaper, so Mr. Snuper's total lack of individual character enabled him to walk the streets a mere unnoticed unit of the population.

I had often met him about our premises, for Thorndyke had employed him from time to time to make such enquiries and observations as were obviously impossible to either of us; and now, the day after our visit to Staple Inn, I met him once more, descending our stairs, and should certainly have passed him if he had not stopped to wish me "good afternoon." As he had evidently just come from our chambers, I assumed that there was something afoot and was a little curious as to what it might be, and the more so as we had no case on hand which seemed to need Mr. Snuper's services.

Of course, I could not put any questions to the gentleman himself, but I had no such delicacy with Thorndyke. As soon as I entered our chambers I proceeded to make a few private enquiries on my own account.

"I met Snuper on the stairs," said I. "Is there anything doing in his line?"

"It is just a matter of one or two enquiries," Thorndyke replied. "I have set him to collect a few data concerning Peck."

"What sort of data?" I asked.

"Oh, quite simple data," he replied; "what sort of practice he has, whether he lives on the premises, how he spends his time, what bank he patronises, and so on. You see, Jervis, we know nothing about Peck, and it would be useful to have a few facts in our possession when we call on him."

"I don't see that the kind of facts that you mention have much relevance to our inquiry," I objected.

He admitted the objection. "But," he added, "your experience in cross-examination will have taught you that an irrelevant question, to which you know the answer, may be a valuable means of testing the general truth of a witness's statements."

To this I had to assent, but I was not satisfied. Such extremely vague enquiries would have suggested that Thorndyke was at a loose end, which I did not believe he was.

"You are not connecting Peck with the blackmailing business, are you?" I asked.

"Why not?" he demanded.

"But the thing is impossible," I exclaimed. "The man was absent from England during the whole of the material time."

"Which is a fact worth noting," said he. "But what do you call the material time? When we were discussing Abel Webb, we agreed that the clue to this business was to be sought in the events of the voyage from Australia. Peck was present then."

"But he was on the other side of the world when the great blackmailing took place, after Abel Webb's death and apparently connected with it. However," I concluded, "it is of no use discussing the matter. I expect you have perfectly good reasons for what you are doing and are keeping them to yourself."

He smiled blandly at this suggestion, and the subject dropped; and as we had several court cases which kept us employed during the fortnight which followed, the Gillum mystery fell into abeyance, or, at least, appeared to. Mr. Snuper made no further appearances (but then he never did in the course of an inquiry, reports by post being more safe from observation); and the case had nearly faded out of my mind when my interest in it was suddenly revived by Thorndyke's announcement that he proposed to call on Dr. Peck on the following day shortly before noon.

"By the way," said I, "where is he carrying on his practice?"

"His premises are in Whitechapel High Street," Thorndyke replied.

"Whitechapel High Street!" I repeated in astonishment. "What an extraordinary place to have pitched upon."

"It does seem a little odd," he admitted, "but somebody must practise in Whitechapel; and there are some advantages in a poor neighbourhood. At any rate, that is where he is, and I hope we shan't find him too busy for an interview. I don't much think we shall, judging from Snuper's reports of the practice."

How far Mr. Snuper's estimate was correct I was unable to judge when we arrived at the premises on the following morning. From a brass plate on a jamb of the side door of a tailor's trimming warehouse I learned that Augustus Peck, Physician and Surgeon, had consulting-rooms on the first floor and was to be found in them between the hours of 10.30 a.m. and 1, and in the afternoon from 2 to 6 p.m. Accordingly, it being then about 11.30 a.m., we entered the doorway and ascended a flight of rather shabby stairs to a landing on which two doors opened, one of which bore the doctor's name in painted lettering with the instruction: "Ring and enter"; which we did, and found ourselves in a large room covered with floor-cloth and provided with a considerable number of chairs, but otherwise almost unfurnished. However, we had no
time to inspect this apartment—of which we were the sole occupants—for, almost as we entered, a communicating door opened and a rather tall, well-dressed man invited us to come through into the consulting-room. We followed him into the sanctuary, and, when he had shut the door and placed a couple of chairs for us, he seated himself at his writing-table, and, having bestowed on us a look of more than ordinary attention, asked:

"Which of you is the patient?"

Thorndyke smiled apologetically as he replied: "Neither of us is. We have not come for medical advice, but in the hope—rather a forlorn hope, I fear—that you may be able and willing to assist us in some inquiries that we have in hand."

Dr. Peck smiled. "I was afraid," said he, "that you were too good to be true. My practice doesn't include many members of the aristocracy. But what kind of inquiries are you referring to? And, if you will pardon me, whom have I the honour of addressing?"

Thorndyke took out his card-case, and, extracting a card, said, as he handed the latter to Peck: "This will introduce me. My friend is Dr. Jervis, who is collaborating with me."

Dr. Peck took the card from him and glanced at it, at first rather casually; but then he looked at it again with such evidently awakened interest that I felt sure that he had recognised the name. Indeed, he said so when he had pondered over it a while, for, as I offered him my card and he took it from me, laying Thorndyke's down on the table, he asked: "Are you the Dr. Thorndyke who used to lecture at St. Margaret's on medical jurisprudence?"

Thorndyke admitted that he was the person referred to. "But," he added, "I don't remember you. Were you ever at St. Margaret's?"

"No," replied Peck, "I am a Bart's man. But I remember your name, as our lecturer used to quote you rather freely. And that brings us back to the question of your inquiry. What is its nature, and how do you think I can help you?"

"Our inquiry," said Thorndyke, "is concerned with a man named John Gillum, who came from Australia to England about two years ago. Do you remember him?"

"Oh, yes," replied Peck, "I remember him quite well. He was a passenger on the Port Badmington, of the Commonwealth and Dominions Line, of which I was medical officer. He came on board, I think, at Perth and travelled with us to Marseilles. What about him?"

"Did you know that he is dead?"

"Dead!" exclaimed Peck. "Good Lord, no. When did he die?"

"He was found dead in his chambers in Clifford's Inn nearly three months ago. Apparently, he had committed suicide—at least, that was the verdict of the coroner's jury."

"Dear, dear!" Peck exclaimed in a tone of deep concern. "What a dreadful affair! Poor old Gillum! A most shocking affair, and surprising, too. I can hardly believe it. He was such a cheerful soul, so gay and happy and so full of the high old times that he was going to have when he got to England. I suppose there is no doubt that he really did make away with himself?"

"There seemed to be no doubt whatever," replied Thorndyke; "but I can speak only from hearsay. I had no connection with the case at the time."

"And now that you are connected with the case," said Peck, "what is the nature of your inquiry? What do you want to know?"

"The answer to that question," said Thorndyke, "involves a few explanations. From what transpired at the inquest, it appeared that Gillum had been driven to suicide by the loss of his entire fortune. It was only a modest fortune—about thirteen thousand pounds—but he had got through every penny of it. Part of it he had wasted by betting and other forms of gambling, but a quite considerable portion of what had been lost appeared to have been paid away to blackmailers."

"Blackmailers!" Peck repeated in a tone of the utmost astonishment. "It seems incredible. The gambling I can understand to some extent, though that surprises me. For, though he certainly did like a little flutter at cards, I should hardly have called him a gambler. But blackmail! I can't believe it. Who on earth could have blackmailed Gillum? And what possible chance could he have given them to do it?"

"Precisely," said Thorndyke. "That is our problem. Gillum's relatives are convinced that it was the blackmail, and not the mere gambling losses, that was the determining cause of the suicide; and they have commissioned me to make such inquiries as may establish the identity of the blackmailers and bring them within reach of the law."

"Very proper, too," said Peck, "but it doesn't look a very hopeful job. Have you anything to go on?"

"Not very much," Thorndyke replied. "There is this and there are some other letters, but, as you will see, they are not very helpful."

As he spoke he took from his pocket a little portfolio, from which he drew out a single sheet of paper and handed it to Peck; who read its contents slowly and with deep attention and then asked:

"Is this the original letter?"

"No," Thorndyke replied. "One doesn't hawk original documents about, which may have to be produced in court. This is
a copy, but it is certified correct. The attestation is on the back.”

Peck turned the sheet over and glanced at the certificate; then he turned it back and once more read through the letter.

“It’s an astonishing thing,” said he. “The blackmail works out at two thousand a year. Gillum must have had some pretty hefty secrets if he was prepared to pay that. But I don’t quite see where I come in.”

“You come in,” said Thorndyke, “at precisely the point which you, yourself have indicated: the identity of the blackmailer and the subject of the blackmail.”

Peck looked at him in astonishment. “I don’t understand what you mean,” said he. “This man, Gillum, travelled on my ship from Australia to Europe. He came on board a complete stranger to me; he went ashore at Marseilles, and I never saw him again. Moreover, I have been abroad for nearly two years, and I came back only a couple of months ago. How could I know anything about Gillum or his blackmailers?”

“It had occurred to me,” Thorndyke replied, “that the blackmailers might have been some of his fellow passengers on that voyage, and that the blackmail might have been based on some incidents that had occurred on board. What do you say to that?”

“It is quite possible,” replied Peck, “but I know of nothing to support the idea. Gillum seemed to be on good terms with everybody, and, as to the other passengers, I knew very little about them. A much more likely source of information would be the purser, if you could get into touch with him. He knew Gillum better than I did, and he knew more about the passengers. Get hold of him if you can. His name is Webb. Abel Webb.”

“Abel Webb is dead,” said Thorndyke. “He was found dead about a week after the date of that letter.”

Dr. Peck stared at Thorndyke, round-eyed and open-mouthed. "Good God!” he exclaimed. "Found dead! Don't tell me that he committed suicide, too.”

“It was suggested that he did,” Thorndyke replied, “but it is more probable that he was murdered. The jury returned an open verdict.”

For some seconds Peck sat motionless and silent, his wide-open blue eyes fixed, with an expression of horror, on Thorndyke's face. At length he said in a low tone, as if deeply moved: “You are making my flesh creep, doctor. Two of the ship's company cut off by violence in a few months! I almost ask myself if it will be my turn next.”

There was a long pause, during which Peck and Thorndyke looked at each other in silence and I continued my observation of the former. He was a rather good-looking man, clean-shaved and well groomed, with close-cropped light-brown hair and clear blue eyes. His manners were easy and pleasant, and he had an undeniably engaging personality. And yet, somehow, I did not very much like him; and I liked him least when he smiled and exposed an unpleasing array of false teeth, mingled with one or two rather discoloured “aboriginals.” He had better have kept his moustache.

“Well, doctor,” he said, suddenly recovering himself and handing the letter back to Thorndyke—who replaced it in the portfolio—"you see what my position is. I should have liked to help you, but I really have no connection with the business at all.”

“No,” Thorndyke agreed, “that appears to be the case. But I am not greatly disappointed. It was, as I said, only a forlorn hope. Nevertheless,” he added, as he rose and pocketed the portfolio, “I am greatly obliged to you for having received us so kindly and given us so much of your time.”

“Not at all,” Peck replied, opening the side door, which gave access to the landing, “I am only sorry that your time has been occupied to so little purpose. Good morning, doctor. Good morning, Dr. Jervis.” He bowed and dismissed us with a genial smile, and we retreated down the shabby stairs and out into the busy High Street.
XIV. — FURTHER EXPLORATIONS

THE advantages of modern transport do not include facilities for conversation. The fact was recognised by us both as we sat in the motor omnibus which bore us at lightning speed—when it was not held up by an immovable jam of other lightning speeders—from the cosmopolitan region in which Dr. Peck had pitched his tent towards the less picturesque but more respectable west. But even in a motor-bus thought is possible; and thus I was able to beguile the—intermittently—swift journey by cogitating upon our recent interview.

As to the results achieved, they were, so far as I was concerned, exactly what I had expected. The man had been absent from England during the whole of the blackmailing period and had nothing whatever to tell. And if Thorndyke had learned anything of his personality—which I had not—the knowledge could be only curious and irrelevant. For the one fact that had emerged was that, for the purposes of our inquiry, Dr. Peck was completely outside the picture.

When the bus delivered us at Holborn Circus and we strode away along the broad pavement, I ventured to present my views as aforesaid, adding: “It doesn’t seem to me that Snuper’s inquiries have helped us very much, but, of course, I don’t know what discoveries he made.”

“They were not very sensational,” Thorndyke replied, “and mainly they agree with our own. Peck has just squatted in Whitechapel. His practice consists, at present, of a brass plate and an empty waiting-room, and his arrangements dispense with the inconveniences of a night-bell.”

“He doesn’t live there, then?”

“No. He lives at Loughton, on the skirts of Epping Forest, quite accessible to East London, and very delightful in the summer but rather bleak and muddy in the winter.”

“It is not very obvious why he gave up his chambers,” said I. “Staple Inn is nearer to Whitechapel than Loughton. What else did Snuper find out about him?”

“Very little. He ascertained that Peck seems to be a solitary man with no discoverable friends or acquaintances; that he spends his spare time in wandering about the far east of London or in long walks in the forest; and also—which is the most curious discovery—that he, apparently, has three banks, and that he visits each of them regularly twice a week.”

“That really is odd,” said I. “What on earth can he want with three banks? And for what purpose can he make these regular visits? If he has no practice there can be no cash to pay in, and he can’t draw out twice a week, and from three banks, too.”

Thorndyke smiled in his exasperating way. “There, Jervis,” said he, “is quite a pretty little problem for you to excogitate. Why should a man who has no visible cash income pay in to three banks at once; or, alternatively, why should a man whose visible expenditure is negligible draw out twice a week from three banks?”

“Is there any answer to it?” I asked dismally as we turned into Fetter Lane.

“There must be,” he replied. “Probably several, and one of them will be the right one. I strongly recommend the problem for your consideration. Attack it constructively. Think of all possible explanations, and then consider which of them is applicable to the present case. And, meanwhile, I suggest that we drop in at Clifford’s Inn and see how Polton is progressing.”

“What is Polton doing at Clifford’s Inn?” I asked.

“My dear fellow,” he replied, “he is carrying out your own suggestion; collecting dust for microscopical examination.”

I smiled acutely at this outrageous fiction; for, of course, my suggestion had been made ironically as an example of superlative futility. The idea had been Thorndyke’s own; and since there must have been some reasonable purpose behind it, I was now all agog to discover what that purpose was. It was not discoverable, however, from Polton’s activities, for they exhibited only the method of procedure, which was, characteristically, orderly and systematic. The vacuum cleaner that he was using consisted of a sort of steel jar, into which the suction tube opened, the latter having a nozzle on which a gauge bag could be fastened. Thus, when the air-tight lid was on the jar and the machine was set working, a stream of dust-laden air was discharged into the bag, which detained the dust and let the air escape through its pores. Polton had provided himself with half a dozen or so of these bags, and, by the time we arrived—letting ourselves in with a duplicate key of his manufacture—most of them had been filled and now stood in a row on the mantelpiece, each filled with a label describing the source of its contents and referring to a sketch plan of the premises.

“You see, sir, I have nearly finished,” said Polton, as Thorndyke glanced along the row of bags and scanned the labels. “I’ve done the bedroom, the kitchen and the larder, and now I am going over this room in sections. But,” he added gloomily, “I’m afraid it will be a poor harvest. The floors are terribly clean. That carpet-sweeper must have taken off the cream of the really valuable dust, and they seem to have used it to a most unnecessary extent. However,” he concluded, “I’ve got what I could out of that sweeper. I’ve combed the brushes and vacuumed the inside thoroughly.”

“That was a capital idea,” said Thorndyke. “The sweeper is probably quite a storehouse of ancient dust, and of the most useful kind for our purpose. By the way, did you have time to make that key?”

“Yes, sir,” replied Polton. “I’ve got it here. It’s only a skeleton. There was no use in fiddling about with wards, so I just cut
the middle of the bit right out. But it opens the lock all right. I've tried it.”

With this, he produced from his pocket a monstrous skeleton key, such as might have been fabricated by Jack Sheppard to open the gates of Newgate, and handed it to Thorndyke, who remarked as he took it that “they liked good, substantial keys in the days when these houses were built.”

“What key is it?” I asked.

“It belongs to—or rather, it opens—the door on the landing, which I have assumed to be that of the staircase leading up to the lumber-room above which you heard Mr. Weech refer to. I hope there isn’t another locked door at the top. Shall we go and see?”

I assented and followed him out to the landing, speculating on his object—if he had one—in surveying the lumber-room. But I asked no question and made no comment. His proceedings in this case were getting out of my depth.

The big key seemed to fit the lock snugly and shot the bolt back with unexpected ease, but the ancient hinges groaned when Thorndyke pulled the door open and exposed the bottom of a flight of rude steps, a sort of compromise between stairs and a ladder. Only the lower steps were visible, for they rapidly faded upward into the total darkness of the chimney-like cavity, but we both noticed that they bore distinct footprints on their dusty treads. Thorndyke went first, lighting our way with the little electric lamp that he always carried, until we were near the top, when a faint glimmer from above mitigated the darkness, and increased as we ascended.

There was no landing at the top, but just a space cut out of the floor to accommodate the steps, so that we came up into the room like a couple of stage demons rising through a trap. When he reached the floor level Thorndyke stepped sideways, clear of the well, and stood motionless, peering into the dim interior. I followed him in the same way, to avoid having the dangerous staircase well behind me, and stood beside him, looking about me with mild curiosity.

It was a rather eerie place; a great, bare room, little lighter than the staircase. For, though there were three large windows, they were all closely shuttered, and what vestiges of light there were filtered in through the cracks and joints at the hinges and folds. But to our accustomed eyes the general features of the place were visible in the dim twilight; the disorderly piles of “junk,” ranged along the sides of the room, shadowy forms of chairs, cupboards, baths, tables, rejected and forgotten and probably ruinous, chandeliers, lengths of water-pipe, and multitudinous indistinguishable objects, the accumulations, it might be, of a century or more. But it was not the “junk” that had attracted Thorndyke’s attention. Along the clear space in the middle of the room a double row of footprints could be seen, extending from the head of the staircase and fading away into the darkness at the farther end.

“Someone has been up here comparatively recently,” said he, “and went directly to the farther end either to fetch or to deposit something. Perhaps we shall be able to judge which. But before we disturb anything I think we had better take a record of these footprints. Polton has the small camera downstairs as there were one or two photographs to take. I’ll just go and fetch him up. And, meanwhile, you might open one set of shutters, if you can get at the window.”

He handed me his lamp, and, when I had seen him safely on to the steps, I approached the only accessible window and investigated the fastenings of the shutters. They were simple enough, consisting of a thick wooden bar resting in wooden sockets and requiring merely to be lifted out; and when I had done this I was able to pull back the shutters and let in the light of day. And now I could see how the footprints had come to be so surprisingly distinct on the bare floor. In the years during which this room had lain undisturbed, the dust had been settling continuously until it now formed a thick grey mantle on every horizontal surface and the footprints were almost as clear as if they had been in snow or on a sandy shore. In some the very brads in the soles and heels could be seen.

I was still examining them and speculating on Thorndyke’s unaccountable interest in them, when the staircase became brightly illuminated and my colleague appeared carrying an inspection lamp and followed by Polton with the camera slung over his shoulder and the tripod under his arm. Apparently he had his instructions, for he proceeded at once to walk along parallel to the tracks, minutely examining each footprint until he found one that satisfied him. Then he opened the tripod, fixed the camera to the attachment specially designed for the purpose, laid a footrule down beside the print, and proceeded to focus them both.

When he had made the exposure—carefully timed by his watch—and changed the film, he picked up the rule and moved along a few paces, when he halted by a specially clear impression of a left foot, and, having drawn Thorndyke’s attention to its remarkable sharpness, fetched the camera and repeated his former procedure.

“And now,” said Thorndyke, as Polton carefully re-packed his apparatus, “let us see if we can find out what was the object of this visit; to take something away or to get rid of some unwanted article. The latter seems the more probable.”

He followed the double line of footprints to a dark corner at the farther end of the room, where they became confused with various large objects—including a big copper bath—which had evidently been moved, as we could see by the marks on the dusty floor. Behind these, and close to the wall, was a pile of dismembered remains—a small cupboard door, a broken table-top, some odd shelves, pieces of board and fragments of some kind of box or case. A glance at the pile made it evident that the collection had been disturbed, for there were traces of finger-marks on some of the fragments and others seemed to have been wiped, while the heap, as a whole, was free from the thick mantle of dust which shrouded all the untouched objects in the room. Apparently this pile had been the object of the unknown visitor’s activities.

“It is evident,” said Thorndyke, “that all these things have been moved, and that they were piled up as we see them by the
person who made the footprints. Now, the question is: did he take something away or did he add something to the pile? And if he added something, what is it that he added?

“It is impossible to say,” I replied, “whether he took anything away, but some of those pieces of wood at the bottom look newer than the rest, and, if they are, they are probably what he added, though it is curious that they should be at the bottom. What do you say, Polton, as a practical wood-worker?”

“If you mean those bits of a chest or case,” he replied, “I should say they are not more than six months old, and the broken edges are quite fresh. Shall I get them out?”

Without waiting for an answer he scrambled over the obstructions and proceeded to lift off the upper members of the pile, handing them to Thorndyke and me as he removed them, until he came down to six pieces of board, the clean surfaces of which contrasted noticeably with the ancient grime of the objects that had been removed. When he had handed these out he scrambled back, and he and Thorndyke began a systematic examination of the fragments—rather to my surprise; for there was nothing remarkable in their appearance. They seemed to be just the remains of a broken box or case of some kind.

“What puzzles me,” said Polton, who was keenly interested because he saw that Thorndyke was, “is how these pieces got broken. Sound one-inch board like this takes some breaking. It couldn’t have been an accident; yet why should anyone want to, break up a good piece of board?”

“What do you suppose it was, originally?” I asked. “Was it some sort of packing-case?”

“No, sir,” he replied, “it couldn’t have been that. The stuff is too good—prime yellow deal, excepting that bit of American white wood—and so is the workmanship. You see that there are three glued joints and they have all held. It was the wood that broke, not the joints; which means that whoever made it was a proper tradesman who could plane a joint true. Besides, all these pieces were stained on both sides and varnished on one, which must have been the outside. I should say it was a permanent case made to carry some particular thing. You see, there are three grooves in the side piece, so there were three partitions. But whatever it was meant to carry must have been pretty heavy to require one inch board throughout. And just look at the screw-holes. Number eight screws they will have been, and plenty of them, too.”

“I suppose they are all parts of the same thing?” said I.

“They seem to be,” he replied, running his footrule along one piece and then resting them upright on the floor. “They are all one length—thirty-nine inches—and these three broken pieces fit together to make a complete top or bottom twenty inches wide, while the other two broken ones seem to make two-thirds of a similar top or bottom; and the screw-holes in them correspond to those in what must have been one of the long sides. That’s what I make of them, sir.”

As he concluded, he looked enquiringly at Thorndyke, who agreed that the reconstruction appeared to be correct. “But,” he added, “I think we might consider them more conveniently in our own premises. I suppose you have a bit of string about you, Polton?”

“Do you propose to annex them, then?” I asked, as Polton produced the inevitable hank of string and proceeded to lash the pieces of board together.

“Yes,” Thorndyke replied. “It is a little irregular, but I shall call on Weech and explain matters.”

But the explanatory call proved unnecessary. For, almost as Thorndyke was speaking, we became aware of sounds from the staircase as of someone ascending the steps, slowly and by no means easily. As the sounds drew nearer we turned to see who the intruder might be, and presently there arose out of the well, first a chimney-pot hat, then a pair of spectacles, and finally the entire person of Mr. Weech, complete with umbrella. When he reached the floor level he stood for a few moments gazing at us, steadily. Then he advanced towards us with an expression of something less than his usual cordiality.

“I happened to notice,” he said, rather dryly, “as I passed, that the shutters of one window were open; and as the only key of these premises is at this moment hanging on the key-board in the lodge, I concluded that some person, or persons, had obtained access to the said premises without authority and by some irregular means. Apparently I was right.”

“You were perfectly right, Mr. Weech,” said Thorndyke, “as you always are. We are entirely unauthorised intruders. I ought to have applied to you for authority to inspect this room, but as I happened to have a key that fitted the lock, and as I merely wanted to look round, I—well, I waived the formality, thinking that I would mention the matter the next time we met.”

“Yes,” said Mr. Weech, fixing a stony gaze on the pieces of board under Polton’s arm. “Quite so. Perhaps it would have been more regular to obtain the authority before the event rather than after. May I ask why you wished to inspect this room?”

Now this was precisely the question that I had been asking myself. But I had not the slightest hope of enlightenment. My learned senior was not in the least addicted to disclosing his motives. Nevertheless, I was curious to see how he would avoid this rather awkward question.

“I wished,” he replied, “for certain reasons connected with my inquiries, to ascertain whether this apparently disused room is, in fact, really disused, or whether it is ever visited or made use of.”
“I could have told you that if you had asked me,” said Weech. “It is not. I could have told you that nobody has entered this room for several years.”

“Then, Mr. Weech,” Thorndyke retorted, “you would have told me what is not true. For I have just ascertained that it has been entered within the last six months; and that it was entered, apparently, for the purpose of depositing these remains of an obviously new box or case.”

“Which,” said Weech, with a sly smile, “I see you have taken possession of and are carrying away without authority. However,” he concluded with a return to his usual geniality, “I raise no objection. The things are of no value, and de minimus non curat lex. I don’t understand what you want them for, but that is your affair. Have you finished your explorations?”

“Yes,” replied Thorndyke, “we were just about to retire; and you had better let me hand you your umbrella when you are safely at the bottom of the steps.”

Mr. Weech gratefully accepted this offer, and, when he had closed the shutters, he embarked on the perilous descent and we followed. He lingered on the landing to wait for us, and, when Polton had let himself into the chambers, he strolled in and looked round.

“I see you are having a spring clean,” said he, glancing at the vacuum cleaner. “Not very necessary, I should think, but perhaps just as well after what has happened.”

He wandered through the rooms while Thorndyke retired to the bedroom—where I caught a glimpse of him making a survey of the late John Gillum’s shoes—and eventually accompanied us down to the court yard, when we departed for home and a rather belated lunch, attended by Polton with the camera and the purloined wood. We paused for a minute or so outside the entry to exchange a few final words with Mr. Weech, and it was at this moment that a rather curious thing happened.

As we were standing there, almost facing the covered passage that connected the two courtyards, I saw a man come through it and appear at the arched entrance. And there he halted. But only for a moment. For, having taken a single quick glance at us, he turned about, looked at his watch, and hurried away back through the passage. It was but an instantaneous glimpse that I had of him; but yet, in that instant, it seemed to me that the man was extraordinarily like Dr. Peck. Obviously, it could be no more than a chance resemblance, for we had left that gentleman established in his consulting-room waiting for the arrival of patients. But yet his was a face that one would remember, and the resemblance had certainly been rather remarkable.

I was still reflecting on the coincidence when another man came up the passage and emerged from the arch. Preoccupied as I was with the first man, I hardly noticed him, for, unlike the other, he was quite, undistinguishable—he might have been a solicitor’s clerk or a superior type of traveller. Subconsciously, I was aware that he wore horn-rimmed spectacles, that he carried a small bag and an umbrella and that he walked with a slight limp. Only as he passed close to us on his way to the Fetter Lane gate did I become conscious of a feeling that I had seen him somewhere before; and that feeling might have been due to the fact that, as he passed us, he gave a quick look at Thorndyke, who seemed to return an instantaneous glance of recognition.

When we had shaken off Mr. Weech at the door of the lodge, I raised the question. “Did you recognise that man who passed us in the Inn?”

“Hardly,” Thorndyke replied with a laugh. “Not until he looked at me. Did you?”

“I seemed to have seen him before, but I can’t give him a name.”

“You weren’t meant to,” Thorndyke chuckled. “That was our invaluable and Protean friend, Mr. Snuper.”

“Oh, course!” I exclaimed. “But I never can spot that fellow. He looks different every time I see him. But there was another man who came up the passage and who produced exactly the opposite effect. I thought I recognised him though I must have been mistaken. Did you notice him?”

“Yes,” he replied. “What was your impression of him?”

“I thought he was extraordinarily like Dr. Peck.”

“So I thought,” said Thorndyke.

“Then it was a real resemblance and not a mere illusion. But it is a queer coincidence; for, of course, the man couldn’t have been Peck. The thing is impossible.”

“It isn’t impossible,” he replied. “Only wildly improbable. He had no apparent reason for following us as he had our cards and knew where we lived. But if he had wanted to follow us, it was actually possible for him to have done it. Snuper did.”

“Snuper!” I exclaimed. “You say that Snuper followed us! How do you know that he did?”

“I saw him in Whitechapel High Street as we came away from Peck’s.”

XV. — SERMONS IN DUST
THE appearance of the party that gathered that same evening round the table in our sitting-room to examine Polton’s gleanings from John Gillum’s chambers struck me at the time as slightly ludicrous. And that is still my impression when I recall the scene. In the middle of the table was a collection of the labelled bags, containing the floor-sweepings, or vacuum-cleanings, from the respective rooms. Before each of the three investigators was a microscope with triple nose-piece, flanked by a large photographic dish, a jar for waste, and a small covered glass pot for “reserved specimens”; and the appointed procedure consisted in scanning the material with a very low magnifying power, examining objects of interest with the higher powers, and the preservation of special “finds” for subsequent consideration.

We began by each taking a bag and turning out its contents on to the dish; the said contents forming an unsavoury heap of the material known to housewives as “flue”—the sort of stuff that you can rake out from under a chest of drawers or a neglected bedstead. From the heap a pinch was taken up with forceps, spread out on the glass plate and rapidly inspected through the microscope. If it contained nothing of interest, it was cast into the waste jar and a fresh pinch taken.

“Are we looking for anything in particular?” I asked as I turned out my mass of flue into the dish; “or do we report everything?”

“You know what is likely to turn up in a floor sweeping,” Thorndyke replied. “We can ignore the inevitable wool fibres from the carpet, and cotton and linen fibres. Everything else had better be noted.”

With this we all fell to work, stimulated at first by the hope of turning up something interesting or curious. But, as the things which we were to ignore appeared to be the only things discoverable, the occupation began presently to pall, and I don’t mind admitting that I found it rather tedious. By the time that my heap was reduced to a mere handful, I had observed—apart from the ubiquitous fibres—nothing more thrilling than a few minute particles of what looked like broken glass.

“Yes,” said Thorndyke, when I mentioned my discovery, “I have found some, too. It isn’t quite obvious what they are, but we had better keep them. Possibly we may come on a larger fragment with a more definite character.”

Accordingly, I picked out the grains with fine forceps, aided by a pointed sable brush, moistened at the tip, and deposited them in the glass pot. Having done this, I was about to reach for a second bag when Polton announced a discovery.

“I’ve found a hair,” said he. “It looks like a moustache hair, but it must have been a funny sort of moustache. It seems to have been dyed. Must have been. But did you ever see a man with a violet moustache?”

He passed the slide to Thorndyke, who confirmed the discovery.

“Yes,” said he, “it is a moustache hair—a rather fair one—dyed black.”

“But,” protested Polton, “it’s violet.”

“Hardly violet,” said Thorndyke. “A dull, bluish purple, I should call it. That is the appearance of a single hair, seen under the microscope by a strong transmitted light. Seen in a mass by the naked eye and by reflected light, it would appear jet black.”

“Would it, now,” said Polton. “Think of that. The microscope is a wonderful instrument, but you mustn’t believe all that it tells you.”

He took back his slide, and picking the hair out daintily with his forceps, deposited it in the glass pot, while I, encouraged by his success, began an attack on a fresh bagful of flue.

This time, I had considerably better luck. At the first cast I struck an object which looked like a coarse and rather irregular thread of glass; and, as I could make nothing more of it than that, I passed the slide to Thorndyke for a “further opinion.”

“Ha!” said he, when he had taken a look at it, “now we know what those other particles were. This is undoubtedly a fibre of silicate wool, or slag-wool, as it is sometimes called. It is made from the slag from the smelting furnaces, which is really a kind of crude glass.”

“And what is it used for?”

“For a variety of purposes. As it is cheap and incombustible, is unaffected by acids—excepting hydrofluoric acid—or by moisture, and is a bad conductor of heat, it is useful for packing, and especially for packing hot or cold substances.”

“I wonder what Gillum used it for,” said I.

“We had better defer speculations and inferences,” Thorndyke replied, “until we have examined the whole of the material”; and with this he took a fresh bag and resumed his observations.

My good fortune did not stop at the slag-wool fibre. Presently there came into the field of the microscope a hair, obviously a scalp hair and probably from a man’s head, though the sex is not so easy to decide in these days of shingling and Eton cropping. At any rate, it was a short hair and had been recently cut; and as it had been dyed the same dull purple colour as Polton’s moustache hair, it was reasonable to infer that it came from the same person. Accordingly, I considered it attentively in its bearing on that person’s natural characteristics. The dye did not, of course, extend to the root. There was a space of perhaps, a twelfth of an inch above the neck of the bulb—representing the growth since the last application of the dye—which was of the natural colour; and from this I was able to infer that the man was of a medium complexion,
inclining to be fair rather than dark; that the hair had been originally of a somewhat light brown tint. This was also Thorndyke's opinion, based on an inspection of my "find" and of another scalp hair which he had found in his own material.

"So," he concluded, "we now know that this was a rather blond man who wore a moustache. What we don't know is whether he shaved his chin or wore a beard."

"Begging your pardon, sir," Polton interposed, "I think we do. I have just found another hair, a thick, rather wavy one. It isn't a moustache hair and it doesn't look like a hair of the head. I think it must be a beard hair. Will you just take a look at it, sir?"

Thorndyke took the slide from him, and having made a brief examination of the specimen, decided that it was undoubtedly a beard hair; a decision that I confirmed when the slide had been submitted to me.

"So," I said, "we now have a fairly complete picture of this man, and the question is: Who can he have been? Do you think it possible that Benson could have been mistaken? That what he took for natural black hair was really dyed hair?"

"No," Thorndyke replied, decidedly. "That is impossible for two reasons. First, Benson had known Gillum since his boyhood—practically the whole of his life. But the second reason is absolutely conclusive. You remember that Benson described Gillum's hair as being slightly streaked with grey; that is to say, there was a slight sprinkling of white hairs among the black. And he expressly stated that he had examined the hair of the corpse to see whether the proportion of white hairs had increased, and that he found them apparently unchanged. Moreover, there are the hairbrushes that we found in the chambers—apparently Gillum's brushes. I have examined some of the hairs from those brushes and found them to be natural black hairs with a very few white ones. So these dyed hairs are not Gillum's, but those of some other person who had frequented those chambers."

"Yes," I agreed, "that is perfectly clear. I wonder who he can have been. Is it possible that we have struck the actual villain—the blackmailer, himself?"

"It seems quite possible," Thorndyke replied; "but we had better get on with our search and see what the other bags have to tell us."

We worked on steadily for another hour, making no further comments but transferring all new finds to the glass pots. By this time we had dealt with all the bags excepting the two small ones containing the material from the sweeper and the coal-bin; and the net result was, five more dyed hairs, one natural black hair and seven fibres of slag-wool. Of the two small bags, I took the one labelled "coal-bin," while the other was divided between Polton and Thorndyke, the latter taking the extracted dust while Polton was awarded the fibrous mass that he had so industriously combed from the sweeper's brushes.

As for my material, I approached it with no expectation of any discovery, whatever. In a coal-bin one may reasonably anticipate the presence of coal. And coal there certainly was. When I turned the bag out into my dish, the contents presented an undeniable heap of coal-dust, a trial sample of which I took up with the blade of my pocket-knife and sprinkled over the glass plate. But when I applied my eye to the microscope, the appearance of that sprinkling came as a considerable surprise. Undoubtedly there was coal galore; a scattered mass of black, opaque, characterless fragments. But everywhere in the spaces of the particles of coal, the glass surface was covered with a multitude of slag-wool fragments of all sizes from quite considerable lengths of thread down to mere grains of glassy dust. I announced my discovery to Thorndyke and passed the slide to him, but when he had examined it, with evident interest, he handed it back to me with no comment beyond the suggestion that it seemed desirable to preserve the whole of the material from the bin.

His own portion of sweeper dust yielded nothing but a single dyed hair and a few particles of slag-wool, but Polton's combings from the sweeper-brushes were quite rich in material so far as quantity went. But they contained nothing new. There were no less than seven hairs, all dyed, one or two threads of slag-wool, and a number of particles of no interest such as crumbs of bread or biscuit, tobacco ash, a piece of cotton thread and some shavings from a lead pencil. The combings were, in fact, but a sort of condensed epitome of the general "floor-sweep."

"Well, Thorndyke," I said, as I rose and stretched myself, "I think my brilliant and original idea has justified itself by the results. But I'm hanged if I understand them. The gent with the purple hair has deposited well over a dozen samples in different parts of the premises, including the sweeper, whereas John Gillum has dropped only one. But Gillum was the resident. The other fellow could only have been a visitor, even if Gillum put him up. It seems quite inconsistent, unless we assume that the purple chappie was moulting; which I am not prepared to do."

"No," Thorndyke agreed, "we shall have to find some explanation more plausible than that. And now, if you and Polton will clear away the remains while I jot down a few particulars of the evening's work, we shall all be ready for supper. I presume," he added, addressing Polton, "that the contingency has been foreseen."

It had. There could be no doubt of that, though Polton's only reply was a smile which converted his countenance into the likeness of one of good Abbot Mendel's famous wrinkled peas. But even that smile understated the gorgeous reality. A cold boiled fowl and a ham were mere incidents in the Sybaritic menu. As Polton deposited "the goods" on the table with another smile—which left the Mendelian pea nowhere —I was once more impressed by the queer contradictions in his character. For Polton, himself a spare-living, almost ascetic little man, was apt, when Thorndyke was concerned, to manifest his devotion by developing a sort of vicarious gluttony. He would contemplate Thorndyke's robust appreciation of
good food and wine with the sympathetic joy of a fond mother administering delicacies to a beloved child.

Of course, we made him join us at the feast. He could not be allowed to go away and feed in the laboratory, as he had proposed; and when he had taken his place at the table and I had filled his glass with Chambertin (I believe he would rather have had ginger beer), the cup of his happiness was literally full. It was a glorious ending to what had been, for him, a red-letter day.

When the banquet had passed through its final stages and Polton had retired triumphant to his own dominions, Thorndyke and I drew up our chairs to a rather premature but highly acceptable fire and filled our pipes. And, naturally, my thoughts reverted to the evening’s researches and their rather surprising results. My colleague had seemed unwilling to discuss them at the time, though we had few secrets from Polton in these days, but now that we were alone, I thought he might be less reticent, and accordingly I ventured to reopen the topic.

“The presence in Gillum’s chambers,” I began, “of that mysterious stranger with the dyed hair seems to be a new discovery. At least, it is new to me. Have you any idea who he was?”

“Yes,” Thorndyke replied. “I think that the facts in our possession enable us to form a fairly definite opinion as to his identity.”

“You say ‘the facts in our possession.’ Shouldn’t you rather say ‘in your possession’?”

“Not at all,” he replied. “Whatever is known to me is known also to you. As to the actual observed facts, we are on an equal footing. Any difference between us is in their interpretation.”

This was so manifestly true that it left me nothing to say. It was the old story. I lacked that peculiar gift that Thorndyke had by virtue of which he was able to perceive, almost at a glance, the relations of facts which appeared to be totally unrelated. For some time I smoked my pipe in silence, reflecting on this unsatisfactory difference between us. Presently I remarked: “You have put in a good deal of work on this case. Does it seem to you that you have made any real progress?”

“Yes,” he replied. “I am quite satisfied.”

“And have you marked out any further line of investigation?”

“No,” he answered. “I am making no further investigations. I have finished. The details can be filled in by the police.”

I looked at him in amazement. “Finished!” I exclaimed. “Why, I imagined that you had hardly begun. Do you mean to say that you have identified the blackmailer?”

“I believe so,” he replied. “Indeed, I may say that I have no doubt. But there is one point at which I have an advantage over you which must be redressed at once.”

He rose, and, opening the cabinet in which the “exhibits” connected with the case were kept, took out two sheets of paper, which he laid on the table.

“Now,” said he, “here is the blackmailer’s letter, which you have seen; and here is a sheet of paper which you have also seen. We found it in the tidy in Gillum’s bedroom with a little bolt and nut wrapped in it. Do you remember?”

“I remember. But I thought it was the bolt and nut that were the objects of interest.”

“So they were at the time,” said he. “But I had a look at the paper, too, and then that became the object of interest. I have flattened it out in the press to get rid of the creases, so that it is now easy to compare it with the letter. See what you think of it.”

I took up the two sheets and compared them. It was at once obvious that they were very similar. Both had been torn off a writing-pad; they appeared to be of the same size; the paper seemed to be the same in both—a thin, rather low-quality paper, ruled, with very faint lines. When I held them up to the light, I could see in each a portion of what was evidently the same watermark; and the ruled lines were exactly the same distance apart in both.

“Your point,” said I, “is that these two pieces of paper are identically similar. I agree to that. But is the similarity of any great significance? Writing-pads such as these sheets were torn from are made by the thousand. There must have been thousands of persons using pads indistinguishably similar to these at the time when this letter was written.”

“That is perfectly true,” Thorndyke agreed. “But now make another comparison. I put the two sheets of paper together, thus, both face upwards, as we can tell by the watermark. Now, see if all four of their edges coincide.”

“So far as I can see, they all coincide perfectly.”

“Very well. Now I turn one sheet over face down wards and again put the two together. Can you still make all four edges coincide?”

I tried, but found it impossible. “No,” I replied. “They agree everywhere but at the bottom. One of them must be a little out of the square.”

“Not one of them, Jervis,” he corrected. “They must be both equally out of the square since all four edges coincided when they were both face upwards. And in fact they are. Test each of them with this set-square. You see that, in each, the bottom edge is out of the square with the sides, and in both to the same amount. I measured them with a protractor and found the deviation in both to be just under one degree. The reasonable inference is that they are both from the same pad.”
“Reasonable,” I agreed, “but not conclusive. The whole batch of pads must have presented the same peculiarity of shape.”

“True,” he admitted. “But consider the probabilities. Either these two sheets were from the same pad, or they were from two different pads in the possession of two different persons. Now, which is the more probable?”

“Oh, obviously, as a mere question of probability, they would appear to be from the same pad. But you seem to be suggesting that the blackmailer was Gillum himself; which is so improbable that it cancels the other probabilities. I shouldn’t admit that the coincidence in the shape of these sheets is enough to support such an extraordinary conclusion.”

“I agree with you, Jervis,” he rejoined. “The coincidence alone would not justify that conclusion. But it is not alone. From facts known to us both I had already concluded that the blackmailing letters had been written by Gillum himself. The evidence of these two sheets is merely corroborative. But, as corroboration, it is enormously weighty.”

“When you speak of facts known to us both,” I said hopelessly, “you leave me stranded. I know of no such facts. But apparently you have worked out a complete case. What is your next move?”

“I am sending Miller the report of the inquest on Gillum’s body and informing him that I propose handing the case over to him. That will probably bring him here by to-morrow evening at the latest to get the particulars. Then I shall, in effect, lay a sworn information.”

“An information!” I exclaimed. “But against whom? You say that the blackmailer is a myth—that Gillum pretended to blackmail himself. But Gillum is dead; and if he were not, he would have committed no legal offence. It was a pretence, according to your assertion; but it was not, in a legal sense, a fraud.”

“Now, Jervis,” said he, “to-morrow evening I shall show you the suggested indictment before Miller sees it. But I should like you, in the interval, to make a final effort to work this case out for yourself. You have all the facts. Turn them over in your mind without reference to any preconceived theory, and read Mortimer’s narrative once again. If you do that, I think you will be forced to the conclusion that I shall propound to Miller.”

I could do no less than agree to this. But I foresaw the inevitable result. Doubtless, I had all the facts. But alas! I had not Thorndyke’s unique power of inference and synthetic reasoning.

XVI. — THE DISCLOSURE

A TELEPHONE call shortly before midday making an appointment for eight o’clock in the evening, informed us that Mr. Superintendent Miller had “caught on.” Indeed, he was distinctly curious and would have liked a few particulars in advance, but as his call was answered by Polton, in Thorndyke’s absence, these were not available. I sympathised with Miller and should have “liked a few particulars” myself; for I had re-read Mortimer’s narrative before going to bed and cogitated on the case all the morning, and was as much in the dark as ever.

I saw little of Thorndyke during the day, for he went abroad alone, and even seemed to make a point of doing so. But we went out together in the evening for a rather early dinner at a tavern in Devereux Court; and it was on our way home that I had the unique experience of recognising Mr. Snuper. We were just about to enter through the little iron gate that leads from Devereux Court into New Court when a man emerged from a doorway in the former and came along at a quick pace behind us. He followed us into New Court and there overtook us, and as he passed ahead, I observed him, though with no particular attention, noting, in fact, no more than that he was a nondescript sort of person and that he carried a large parcel.

It was this parcel that brought him to my notice; for, when he had got some little distance ahead, he seemed to get into difficulties with it and nearly dropped it; whereupon he halted to make some readjustments, allowing us to pass him. And it was at this moment, when he turned his face towards us and the light from a lamp fell on him, that I suddenly realised who he was.

Almost at the instant of the recognition Thorndyke seemed to change his direction. He had appeared to be heading for the passage that leads through into Essex Court; but now he turned sharply to the right and led the way down into Fountain Court, which he crossed to the left into Middle Temple Lane, following the Lane down as far as Crown Office Row and passing along the latter until we emerged into King’s Bench Walk. And all the way I could hear the footsteps of Mr. Snuper padding along behind us, and still, to judge by the occasional stoppages, wrestling with his parcel. When we came out into King’s Bench Walk he passed us once more, and, turning to the right, made for the pavement at the lower end, where presently he vanished into one of the entries.

It was a mysterious affair for the man appeared to be shadowing us; which was a manifest absurdity. I was about to seek enlightenment from Thorndyke when he forestalled my enquiries by producing from his pocket a small folded paper which he handed to me.

“That,” said he, “is a copy of the statement that I am going to hand to Miller. You had better look through it before the interview so that you may be in a position to join in the discussion.”

I took the little document very gladly; for it would have been rather humiliating if I had had to expose my ignorance to Miller. And it was none too soon; for even as we passed in at our entry, fully five minutes before our time, I caught a
glimpse of the superintendent bearing down on us from the direction of Tanfield Court.

I hurried up the stairs to my bedroom and eagerly took out the paper, all agog to learn what Thorndyke’s conclusions were. My expectations had been of the vaguest, but whatever they may have been, a glance at the little document blew them to the winds. I read it through again and again, hardly able to believe my eyes. For what it affirmed was not only astounding, it was bewildering and incredible. If the statement that it set forth was true, I had never even begun to understand the nature of the problem.

Slipping the paper back into my pocket, I ran down to the sitting-room where I found Miller already established in an easy chair with a big whisky and soda at his side and a cigar of corresponding size between his fingers. He greeted me with an affable smile as I entered and struck a match by way of getting the cigar going.

“Well, Doctors both,” said he, “here we are again with another prime mystery in the offering. But I can’t imagine what it may be.”

“You have read the report of the inquest on John Gillum?” Thorndyke asked.

“Yes,” replied Miller. “I haven’t had time to read Mortimer’s screed, but I have gone through the inquest carefully; and I have come to the same conclusion as the jury—a perfectly straightforward and obvious case of suicide. And I suppose I am wrong. Isn’t that the position?”

“Yes,” Thorndyke replied, “at least, that is my position.”

“You are not suggesting that it was a case of murder?”

“I am not suggesting anything,” replied Thorndyke, producing a small sheet of paper from his wallet. “I am making a perfectly definite statement. This is what I say, and what I am prepared to prove; and you can have it in the form of a sworn information if you like.”

With this he handed the paper to Miller, who took it, opened it, and read through the short statement. Then he read it through again, with deep attention and much wrinkling of the brow. Finally, he laid down his cigar and faced Thorndyke with an air of perplexity.

“I don’t quite understand this,” said he. “Of course the dates are all wrong. Clerical error, I suppose.”

“The dates are perfectly correct,” Thorndyke assured him.

“But they can’t be,” the superintendent protested. “It’s an absurdity. What you say is that you accuse Augustus Peck, a registered medical practitioner, that he did, on the night of the 17th of September, 1928, at 64, Clifford’s Inn, London, maliciously and feloniously kill and murder one John Gillum. Do you say that you really mean that?”

“Certainly, I do,” replied Thorndyke.

“But, my dear doctor,” Miller protested, plaintively, “the thing that you are alleging is an impossibility. Gillum’s body was discovered on the 18th of July, 1930. That is nearly two years after the date which you give as that of the murder. You admit that?”

“Of course I do,” Thorndyke replied. “It is the simple fact.”

“But the thing is impossible,” persisted Miller. “You are alleging, in effect, that the body which was discovered had been dead nearly two years.”

“Not only in effect,” said Thorndyke. “That is my definite statement.”

The superintendent groaned. “But, doctor,” he urged, “that statement is not reasonable, and what is more, it isn’t true. It is contrary to all the known facts. That body was examined by a very competent medic witness who deposed at the inquest that it had been dead from six to eight days.”

“Appeared to have been dead from six to eight days,” Thorndyke corrected. “That is what he said, and I agree to the appearance.”

“Very well,” said Miller. “Appeared if you like. But the time he stated was about correct, for the man had been seen alive only ten days previously by Mr. Weech; and Mortimer had seen him alive only a few days before that.”

“My position is,” said Thorndyke, “that neither Weech nor Mortimer had ever set eyes on John Gillum.”

“Never set eyes on him!” exclaimed Miller. “Why, they both knew him intimately, and had known him for—” He paused suddenly. Then, directing an intent look at Thorndyke, he added, slowly: “Unless you mean—”

“Exactly,” said Thorndyke. “That is what I do mean. Weech and Mortimer and Penfield knew a certain man by the name of John Gillum. But he was not John Gillum. He was Augustus Peck, made up so far as was necessary to play the part. And he played the part successfully as long as it was possible; and when it became impossible, he quietly disappeared leaving John Gillum’s body to carry on the illusion.”

Miller was profoundly impressed, but he was evidently not convinced, for he returned to the charge with further objections.

“You say he left the body on view when he disappeared. Then he must have had it in his possession. Where was it all that
time?"

“It was lying hidden in a large coal-bin in the chambers at Clifford’s Inn.”

“But how was it that it didn’t—well, you know, a dead body tends to undergo a good deal of change in two years. But the doctor said that it looked as if it had been dead not more than eight days. How do you account for that?”

“My dear Miller,” said Thorndyke, “we live in a scientific age; an age in which natural processes are largely under our control. We can, if we please, prevent dead bodies from decomposing. And we do. In the Paris Morgue, bodies which have not been identified are now put into storage and kept, in a perfectly fresh state, ready for further inspections. I don’t know how long they are kept, but, physically, there is no limit to the possible time.”

“Yes,” said Miller, “I see. Of course, you have got an answer to every objection. You would have. I might have known that you wouldn’t propose an impossible case. But now, doctor, let us come down to the immediate business. As I mentioned when I phoned, I am not free to-night. In fact,” he added, looking at his watch, “I must be off in a few minutes, but I should like to fix things up before I go. You have given me the substance of the case, a sort of sketch of an indictment. Now, I needn’t tell you that that’s no use even if you swore to it and signed it. Before I can make an arrest, I must have enough evidence to establish a prima facie case. When can I have that evidence? The sooner, the better, if we are not to risk a miscarriage.”

“I agree with you as to the of the matter,” said Thorndyke, “for I suspect that our friend, Peck, has smelt a rat. I have him under close observation, but I fancy he has me under observation, too.”

“The devil, he has!” exclaimed Miller. “I don’t like that. What do you mean by having him under close observation?”

“I have got Snuper and a couple of assistants watching him night and day. You know Snuper?”

“Yes,” replied Miller, “a capital fellow, a genius in his own line. But he doesn’t meet the present case. He has no locus standi. He couldn’t make an arrest unless he caught Peck committing some overt criminal act. And we don’t want that. You had better give me his address and then I can detail one or two of our men to take over or act with him.”

Thorndyke wrote the address on a slip of paper and handed it to the superintendent, who put it into his note-case and then resumed: “We mustn’t let the grass grow, doctor. Watching is all very well, but we ought to get that gentleman under lock and key. If your statement is true he must be a pretty slippery customer. When can I have that evidence?”

“Can you come in to-morrow evening?” Thorndyke asked.

“Yes,” was the reply. “I’ve got the whole evening free.”

“Then,” said Thorndyke, “what I propose is this: I ask you to arrange, if you can, for Anstey to lead for the prosecution, as he is used to working with me.”

“The choice of counsel doesn’t rest with us,” replied Miller. “The Director of Public Prosecutions decides that, subject to the Attorney General. But I expect the Director will be willing to appoint Mr. Anstey as you will be the principal witness. What then?”

“I shall assume that Anstey will be appointed and I shall get him to meet you here to-morrow night. I know that he will be able to. Then I shall lay before you a complete scheme of the evidence. How will that do?”

“It will do perfectly,” replied Miller.

“I should like, also, if you agree,” said Thorndyke, “to have Benson and Mortimer here. We can rely on their secrecy and discretion.”

The superintendent was inclined to demur to this proposal. “It doesn’t seem to be quite in order,” he objected. “They will both be witnesses.”

“They are not witnesses yet,” retorted Thorndyke. “And you want to know what yours are prepared to say and swear to. But apart from that, I think they may be able to give us some valuable help by answering questions on matters of fact.”

“Very well,” Miller agreed. “I don’t much like it, but it’s your funeral.”

With this, he finished his whisky, and having been provided with a fresh cigar, rose to take his leave.

“And, look here, doctor,” he said, as he shook hands; “don’t you go taking too much outdoor exercise. If this fellow has rumbled you, it’s a case for minding your eye and seeing that you don’t make a target of the principal witness for the prosecution. We shall want you when the day comes, and for that matter I expect you’ll want yourself. Keep an eye on him Dr. Jervis, and by the same token, keep an eye on his invaluable coadjutor.”

He shook hands again, and having lit the new cigar, bustled away. And as his footsteps receded down the stairs, we heard him apparently trying to whistle and smoke at same time.

——

XVII. — A SYMPOSIUM

THE instinctive sense of simple hospitality which was the gift alike of Thorndyke and his devoted follower Polton, tended to impart a pleasant informality to what were essentially professional conferences. I noted it, not for the first time, when,
on the evening following Miller’s visit, we gathered round a cheerful fire to “hearken to the evidence” that my colleague had promised to expound to us. To an onlooker we should have seemed more like a party of cronies who had assembled for gossip and the exchange of “yarns” than a gathering of lawyers and police concerned with the detection and punishment of a capital crime.

Nevertheless, the attention of us all was concentrated on the business of the evening; and when Polton had provided for the comforts of all the guests, and, having placed on the table three wooden objects, one resembling an elongated brush-box and two shorter, upright boxes, had retired to the adjoining office (leaving the communicating door ajar) and the social preliminaries appeared to be getting unduly prolonged, Miller interposed with the blunt suggestion that Thorndyke “had better get on with it”; whereupon my colleague began his exposition without further preamble.

“I have considered,” said he, “the most suitable way in which to present the scheme of evidence in this case and it has seemed to me that the best plan will be to follow the line of my own investigation; to produce to you the items of evidence in the order in which they became apparent to me. Do you agree to that, Anstey?”

“Undoubtedly I do,” replied Anstey, “as that will be the order in which they will be best presented to the jury in the opening address.”

“Very well,” said Thorndyke, “then I will proceed on those lines. You have all read the report of the inquest on John Gillum’s body and Mortimer’s narrative of his relations with Gillum, and as those documents contain all the facts with which I started, I can refer to those facts as matters known to you all.

“The original inquiry was concerned with the identity of the persons who had blackmailed Gillum. That was the problem that Benson submitted to me. But though he did not contest the suicide—which seemed to have been conclusively proved—I could see that, at the back of his mind, there was a feeling that things were not as they appeared; that, behind the apparent facts of the case, there was something that had never come to light.

“Now, as soon as I began to look into the case, I had precisely the same feeling. The whole affair had a curiously abnormal appearance; so much so that it at once suggested to me the question whether the ostensible facts might not cover something of an entirely different nature. There were unexplained discrepancies. For instance, of the large sum of money that had been thrown away, no less than three thousand pounds had been money saved by Gillum in the course of his business in Australia. One naturally asked oneself how such a man ever came to have any savings at all. The result of these reflections was that I postponed the blackmailing problem and proceeded to a critical consideration of the case as a whole.”

Now, the outstanding fact of the case was that a sum of about thirteen thousand pounds had disappeared in less than two years. It had been drawn out of the bank in cash—in currency notes and, by special request, in notes which had been circulated and of which the serial numbers were unrecorded, and which it was, therefore, impossible to trace. The explanation offered for this procedure was that this untraceable money was to be used for payments to blackmailers and for discharging gambling debts.

“So far as the blackmail was concerned, this explanation was reasonable enough; but not in connection with gambling. Why should a man take such elaborate precautions to make it impossible to trace the money with which he had paid his blackmailers? There was no reason at all. Gambling debts can be, and usually are, paid by cheque. Why not? Such payments are not unlawful and there is no valid reason for secrecy. Therefore I decided that the explanation offered was not adequate. It was really no explanation at all. But if one rejected the explanation, the original problem reappeared. Thirteen thousand pounds had disappeared, leaving no trace. Of that sum, about two thousand could be accounted for by blackmail. But what of the remaining ten or eleven thousand? Had it really been gambled away, or was it possible that the gambling was a mere pretext, covering the disposal of the money in some other way? Having regard to the inadequacy of the explanation, I was disposed to suspect that this might be the case; and this suspicion was strengthened by the fact that Mortimer—the only witness as to the gambling—had no first-hand knowledge of the matter at all. His belief on the subject was based on what Gillum had told him; and in reading his narrative I could not but be struck by the way in which Gillum had posed as a reckless and desperate gambler and the pains that he had taken to impress that view of himself on Mortimer.

“From this it appeared that there was really no evidence that any gambling—on a considerable scale—had ever occurred; and there was a reasonable suspicion that it was a myth invented and maintained to cover some other kind of activity. But what kind of activity? The entertainment of that suspicion raised a new problem. What reason—apart from blackmail—could a man have for drawing large sums of money out of his bank in such a form that it could never be traced? I turned this question over in my mind and I could think of only one case in which a man might behave in this way. It was that of a man who had got temporary control of another man’s banking account. Such a man—obviously a dishonest man—would naturally seek to get permanent possession of the money under his temporary control. But how could he do this? He could not simply draw cheques in his own favour and pay them into another bank, for those cheques could be traced and the money recovered. And the same would be true of bank notes of which the serial numbers were known. The only plan possible to him would be that adopted by Gillum. He would have to draw the money out in untraceable cash. That cash he could pay into another bank or store for future disposal.

“That was the only alternative that I could think of to the gambling theory, and it appeared to be totally inapplicable to the present case. For the banking account was Gillum’s own banking account and the money in the bank was his own money which he had himself paid in. What object could he have had in transferring that money to another bank, or hoarding it? I could imagine none.
“Nevertheless, I did not immediately abandon the idea, for the alternative—the gambling theory—was almost as difficult to accept; and there was a general queerness and abnormality about the case that disposed one to consider unlikely explanations. There was the suicide, for instance. Apparently it was a genuine suicide, but there had been no positive proof that it was. Actually, it was possible that it might have been a skilfully arranged murder. Accordingly, I decided to consider this imaginary case in detail and see whether it was as completely inapplicable as it seemed.

“First, I asked myself the question, how would it be possible for a man to get control of another person’s banking account? Apparently, the only possible method would be that of personating the real owner. The case, then, which I had imagined involved, necessarily, the idea of personation. Accordingly, I set up the working hypothesis of personation and proceeded to apply it to the case of John Gillum to see how it fitted and whither it led.

“Now, when one sets up a hypothesis and proceeds to test it and deduce consequences from it, if the hypothesis is untrue it very soon comes into conflict with known facts and leads to manifestly false conclusions. But when I began to apply the personation hypothesis to the Gillum case, instead of conflicting with known facts it developed unexpected agreements with them; instead of evoking fresh difficulties, it tended to dispose of the difficulties that had at first appeared.

“The theory of personation involved the idea of two separate individuals; the personator and the personated. It was thus necessary, for the purposes of the argument, to decompose the person, John Gillum, into two hypothetical individuals: John Gillum of Australia and John Gillum, the tenant of Clifford’s Inn. They had been assumed to be one and the same person. We had now to see what evidence there was to support that assumption.

“But the first glance showed that there was no evidence at all. The identification had been illusory. In effect, there had been no identification. Benson had identified the body as that of Gillum of Australia—whom we will call simply Gillum—but he had not identified it as that of the tenant of the Inn—hereinafter called the Tenant. And Weech and Mortimer and Bateman gave evidence referring to the Tenant, but their evidence furnished no proof that the body was the Tenant’s body. There were really two sets of witnesses. There was Benson, who knew Gillum but had never seen the Tenant; and there were Weech, Mortimer, Bateman and Penfield, who knew the Tenant but had never seen Gillum.

“Thus the personation hypothesis did not conflict with the known facts. No evidence had been produced to prove that Gillum of Australia and Gillum the Tenant were one and the same person. Therefore, it was possible that they were different persons. But as soon as this possibility was established, two rather striking agreements with it came into view. Let us consider them.

“First there was the time of Benson’s arrival in England. He arrived immediately after the suicide; or, to put it the other way round, the suicide occurred immediately before his arrival. But not only was it known that he was coming; the actual date on which he would arrive was known. Now, on the personation theory, the Tenant of the Inn was some unknown stranger who was falsely personating John Gillum. He could not possibly have confronted Benson, for the fraud would then have been instantly detected. He would have had to clear out. But if he had simply disappeared, suspicion would have been aroused, whereas the presence of the body and the apparent suicide continued the illusion of the personation. Indeed, it did much more. For when Benson had identified the body as that of John Gillum, and that body had been accepted by Mortimer and Weech as that of the Tenant of the Inn, the personation seemed to be covered up for ever beyond any possibility of discovery.

“The second striking agreement is the state of the Tenant’s finances. At the inquest it transpired that deceased was absolutely penniless and that he had no expectations whatever. The last payment of the purchase money for the sheep farm had been paid into the bank and drawn out. All the money was gone and there was no more to come.

“Now see how perfectly this agrees with the personation theory. What could have been the object of the personation? Obviously, to obtain possession of the ten thousand pounds paid for the sheep farm and the three thousand forming Gillum’s savings. Well, at the time of the suicide this had been done. The whole sum of thirteen thousand pounds had been drawn out. There was not a penny left in the bank and there were no more payments to come. Then the personator’s object had been achieved and there was no occasion to continue the personation any longer. It was time for the personator to disappear; and disappear he did. Benson’s arrival simply accelerated matters and fixed the date of the disappearance.

“So far, then, the results seemed to be positive. The more the personation theory was examined, the more did it appear to agree with the known facts. But there were other difficulties; and the most formidable of them was the body. If there had been personation, it must have begun immediately on Gillum’s arrival in England and it had been maintained for nearly two years. But where was Gillum all this time? He could hardly have been alive; but if he was dead his body must have been preserved and kept somewhere ready to be produced at the psychological moment. For the pretended suicide must be assumed to have been an essential feature of the scheme.

“Of course, there was no physical difficulty. It is quite easy to preserve a dead body indefinitely, given the suitable means and appliances. The problem was how it could have been done in the circumstances of this particular case. But even while I was puzzling over this difficulty I received sudden enlightenment from Mortimer’s narrative. You will remember that, on the occasion of his first visit to Clifford’s Inn, he had a very remarkable seizure. From his admirable description it is evident that his symptoms were exactly those of rather acute carbonic acid poisoning; and he notes that the room—the larder, or storeroom—in which the attack occurred was noticeably cold. Further, he mentions that, just before the attack, he had been shovelling up coal from a bin which he describes as occupying the whole of one side of the room.

“Now this combination of low temperature with a considerable concentration of carbonic acid gas was very impressive. It
immediately suggested the presence, somewhere in the room, of a substantial quantity of solid carbonic acid; and as the gas appeared to issue from the coal-bin, it seemed probable that the solid acid was contained in the bin. But if that bin was of the size that Mortimer’s description conveyed, it would be easily large enough to contain a dead body."

“But Mortimer says that it was full of coal,” Anstey objected.

"It appeared to be," Thorndyke corrected. "But there might be room for a false bottom under the coal, and still room for the body under that. A false bottom would be a necessary feature of the arrangement.”

“I think,” said Anstey, “that we had better be clear about this solid carbonic acid. You know all about it, but we don’t. Could you just give us a few particulars as to what it is like and what is its bearing on the case?”

“A very few particulars will be enough for our purposes,” replied Thorndyke. "I need not go into the method of production. The substance, itself, is a white solid, rather like block table salt. It is simply frozen carbonic acid, just as ice is frozen water. And as ice has a maximum temperature of 0 degrees Centigrade—commonly known as freezing point—and becomes a liquid if it is raised above that temperature, so solid carbonic acid—sometimes called carbonic acid snow, from its resemblance to ordinary snow—has a temperature of minus 79 degrees Centigrade, that is, 79 degrees Centigrade below the freezing point of water. But unlike ice, it doesn’t melt into liquid when its temperature is raised. It changes directly into gas, intensely cold gas, which hangs round it and protects it from contact with warm air. If we were to place a block of it on the table, it would simply dwindle in size until it disappeared altogether, but it would not leave the slightest trace of moisture. And it would dwindle remarkably slowly; for the gas into which the solid snow changes is a very heavy gas and a specially bad conductor of heat.”

“Thank you,” said Anstey. “That is quite clear. There is only one other question. Is carbonic acid snow obtainable without any great difficulty?”

“It is quite easy to obtain,” replied Thorndyke. “The snow is now manufactured on a considerable scale, as it is used for a variety of purposes. It is sold in two forms; the standard twenty-five-pound blocks, which are the most commonly used, and smaller, four-pound blocks, made principally for use in ice-cream tricycles to keep the cream frozen. You can buy the blocks, retail, without any difficulty, and they will probably be delivered in packages enclosed in insulating material such as silicate wool, or slag-wool. Is that clear?”

“Perfectly clear,” replied Anstey. “Now we can return to the argument.”

“Well,” Thorndyke resumed, “you will now see the significance of the presence in this very cold room of free carbonic acid gas in conjunction with a very large coal-bin. It suggested a perfectly simple and efficient method of preserving a dead body for a practically unlimited time, and it thus disposed of what had been my principal difficulty. I was so much impressed by this new agreement that I abandoned the rather academic attitude in which I had considered the personation theory. For that theory was no longer a merely tenable hypothesis. It agreed with the facts much more closely than did the gambling theory. Indeed, it offered a perfectly reasonable explanation of those facts, which the gambling theory did not; and I began to feel that it was probably the true explanation of those facts.

“But there were still some difficulties; not very formidable ones, but still they had to be disposed of before the personation theory could be definitely accepted. There was, for instance, the question of resemblance and disguise. How far was it necessary for the personator to resemble John Gillum, and what amount and kind of disguise would be required to secure the resemblance? Now, it is important to realise that no very exact likeness was necessary. However much the personator had been like the personated and however skillfully he had been disguised, it would have been impossible for him to deceive any person who had really known John Gillum. On the other hand, in the case of persons like Penfield, Mortimer and Weech, who had never seen John Gillum, no resemblance at all was necessary.

“Yet, for other reasons, the personator would have had to bear a general likeness to the man whom he personated. The production of the body, for instance, must have been an essential part of the scheme; and its production involved the idea of its identification as the body of the Tenant. Therefore, the Tenant must have been so far like John Gillum that the body of the one could be mistaken for the body of the other. But for this purpose it would be sufficient for the two men to be alike in their salient characteristics.

“Now what were the salient characteristics of John Gillum? He was a tallish man—about five feet ten—with blue eyes, black hair and beard and a large upper fort tooth which were very conspicuously filled with gold. He also, apparently, spoke with a slight Scotch accent. In all these respects, as we know from Mortimer’s narrative, the Tenant resembled John Gillum; and as the body presented the salient physical features common to the two men, it was naturally recognised by Mortimer and Weech as the Tenant’s body in the single hasty glance that they took.

“But how many of those characteristics must have been natural to the personator? Evidently, the stature and the eye-colour must have been real. The personator would have to be a rather tall man with blue eyes. But the other characteristics could have been produced artificially. Whatever might have been the natural colour of the hair and beard, they could easily have been dyed black. The only real difficulty would have been the teeth. But, even in their case, there would be no physical difficulty. It would be perfectly easy for the personator to have his front teeth filled with gold, or, preferably, covered with a removable gold plating; while, if he should happen to have false teeth, there would be no difficulty at all. He would simply have a duplicate plate made with gold-filled teeth in front. But either of these methods would require the services of a skilled dentist; and that was the fatal objection to them. They would involve an accomplice. But, since the personation would not only be a serious crime in itself, but would seem inevitably to involve a previous murder, the existence of an
accomplice would constitute an appalling danger.

"However, as I have said, there was no physical impossibility or even any difficulty, and, accordingly, I accepted it provisionally as a practicable method, reserving further consideration of it until more facts were available.

"The next question was, assuming personation to have occurred, who could have been the personator? On this point, neither the report nor Mortimer’s narrative gave any help beyond furnishing certain dates. But one saw at a glance that the personation would have had to begin almost on the very day of Gillum’s arrival in England; for, immediately afterwards, the Tenant appeared in the Inn and at Penfield’s office. From this it seemed to follow that, since Gillum knew nobody in England, the personator must be somebody who had travelled with him from Australia to England. Of such persons, only two were known to me. I learned from Benson that Gillum had had two cronies on board the ship; the purser, Abel Webb, and the ship’s surgeon, Dr. Peck; and as both these men had left the ship on its arrival in England, either of them might possibly have been the personator. There was no positive reason for suspecting either; but both fulfilled what appeared to be the necessary conditions. They had been Gillum’s shipmates during the voyage, and both had left the ship for good at about the same time as Gillum.

"Of these two, poor Abel Webb was clearly out of the picture; and even if he had not died, he would still have been impossible as the personator. He was the wrong size, the wrong shape, and the wrong colour. There remained, then, Dr. Peck, the only person known to us whom we could possibly suspect; and it was desirable to get into touch with him for two reasons; first, to ascertain whether his size, form, and colour were such as to render the personation possible, and second, to get some information from him respecting the passengers and personnel of the ship.

"This brings us to the end of what I may call the first stage of the inquiry. Up to this point I had been concerned with the original sources of information; with a critical examination of the report of the inquest, of Mortimer’s narrative, and of the information supplied by Benson. The inquiry had started as a search for a hypothetical blackmailer. But examination of the material had brought into view a problem of an entirely different character; and the result of the first stage of the inquiry was the establishment of a prima facie suspicion of false personation against some person unknown. We now enter on the second stage, that of investigation proper; the search for new facts which might either confirm or rebut that suspicion."

XVIII. — CIRCUMSTANTIAL EVIDENCE

"HITHERTO," Thorndyke resumed after a brief interval, "I have followed the enquiry in the chronological order of events. But now, as we are dealing with an investigation ad hoc, it will be more convenient to consider it in terms of the particular items of evidence brought to light, maintaining the chronological sequence only so far as is practicable. The first stage of the inquiry had left us with certain matters of fact which required verification and certain others which had to be ascertained. Among the former was Mortimer’s description of the coal-bin. From it I gathered that the bin was amply large enough to contain a human body, and I assumed that it probably had a false bottom to preserve an empty space under the coal. These were matters of vital importance; for if the bin should prove to be too small, or to have been kept completely filled with coal, my theory as to the disposal and preservation of the body would fall to the ground.

"Accordingly, my first proceeding was to get the keys of Gillum’s chambers from Benson. Then Jervis and I went across to the Inn and made a preliminary tour of inspection. To come at once to the bin, we found it, as Mortimer had said, to occupy the whole length of the wall, and, on measurement, it proved to be of these dimensions: eight feet long, thirty inches from back to front and twenty-nine inches deep. It appeared to be brimful of coal; but when I took soundings through the coal with my stick, I came to a firm bottom nine inches from the top. Thereupon, we shovelled the coal away to one end, when there was brought into view a tray, or false bottom, of stout board, which we ascertained to be of the full length and width of the bin. A transverse crack showed it to be divided into two equal parts, and each half was furnished with a sunk iron ring. We brushed away the coal dust with a brush that hung close by—apparently for this purpose, as its hair was full of coal dust—and then lifted one half by means of the ring, when we found that the tray was of comparatively new wood, that it was supported by small wooden blocks which had been screwed on to the sides of the bin, and that its removal disclosed a cavity underneath nineteen inches deep and of the full length and width of the bin.

"Here, then, was a receptacle with a capacity amply sufficient to accommodate, not only a body, but also the mass of insulating material that would be necessary if that body was to be kept in a frozen state. The question of possibility was disposed of. It remained to ascertain whether there was any positive evidence that a body had actually been preserved in the manner which I have suggested.

"Having finished with the bin, we examined the little room in which it was situated. It had evidently been intended for a larder or storeroom and it had no fireplace or other outlet and only one window, which was about two feet six inches high by eighteen inches wide. But this window was fixed permanently as wide open as possible. The lower sash was pushed right up and secured in position by two wooden supports screwed to the jambs. Further, we found that a row of holes, each one inch in diameter, had been bored in the foot of the door; which, together with the permanently opened window, must have maintained a very free draught of air through this small room. And I may say that we learned from Mr. Weech that the holes had been made and the window supports and the false bottom of the bin added by the Tenant—or rather by the Tenant’s agent—at the beginning of the tenancy."

"The Tenant’s agent!” exclaimed Miller. "Who was he?"
“Ah!” replied Thorndyke, “who was he? That is a very curious and interesting question. But the answer to it does not belong to this part of the story. We shall go into that at a later stage. At present we are considering the evidence bearing on the subject of refrigeration by means of solid carbonic acid.

“To resume: In the course of our survey of the chambers we found several mouse-holes which had been most carefully and efficiently stopped with Portland cement. There appeared nothing remarkable in this, as the Tenant had evidently taken pains to keep all food in metal or earthenware containers so as to avoid harbouring mice. But later, in conversation with Mr. Weech, we got quite a new light on the matter. It seemed that he had learned from the lady who conducts the typewriting establishment on the ground floor that, up to the time when Mr. Gillum came to the Inn, the house swarmed with mice to such an extent that she had seriously considered giving up her premises. But, as soon as Mr. Gillum’s tenancy began, the mice suddenly disappeared, and disappeared so completely that not a single mouse was ever to be seen. While we were talking, the lady herself came out of her office and fully corroborated Mr. Weech’s statement. Then it occurred to me to ask her whether her premises were still free from mice; to which she answered with natural surprise that they were not. Since Mr. Gillum’s death they had begun to reappear.

“This was a very remarkable fact. The disappearance of the mice might reasonably have been assumed to be due to the Tenant’s care to keep all food covered, and especially to the very thorough stopping of all mouse-holes. But their reappearance after Gillum’s death made it clear that there must be some other explanation; for the holes were still stopped and all the conditions were precisely the same. The disappearance had evidently been due to something connected with the Tenant himself.”

“Yes,” Anstey agreed, “that seems to be so. What do you wish us to infer from this fact?”

“I suggest that the behaviour of the mice is exactly what we should expect in the conditions which I have postulated. Let us see what those conditions would be. I assume that the bin contained a dead body kept frozen by means of solid carbonic acid. New supplies of the snow would be constantly fed into it, and this snow would be slowly but continually converted into the gas. Thus the bin would be filled with the icy gas which would be constantly increasing in quantity and finding its way out. Now, carbonic acid gas is an extremely heavy gas. It behaves almost like a liquid. You can fill a tumbler with it and you can pour it from one tumbler to another as if it were water. Like all gases, it diffuses upwards into the air, but while it is pure, it falls by its own weight.

“Thus, as the bin filled up with the gas, this would be constantly overflowing on to the floor and would tend to pour down through the cracks between the boards and especially to trickle down through the mouse-holes into the burrows, so that these and the spaces between the joists would be full of the gas. In such conditions, it would be impossible for mice to exist. They would all be either killed or driven away.

“My conclusion is, therefore, that these facts are completely consistent with the presence of solid carbonic acid in the bin and that there seems to be no other explanation.”

“Yes,” said Anstey, “I am prepared to admit that. What do you say, superintendent?”

“I agree,” replied Miller, “that it seems to establish the point, subject to the condition that the theory is supported by other evidence.”

“That is all I ask,” rejoined Thorndyke. “This is only a single point. The charge against Peck rests on the whole body of evidence. But I have not completed the case for the carbonic acid snow. While we are on the subject, I may as well produce the rest of the evidence.

“Shortly after our visit to the Inn, Jervis and I made a call at the premises of the Cope Refrigerating Company. My object was twofold. First, I wanted to verify a description of Abel Webb, which, I may say, I did. But we will leave the case of Webb for consideration later. The other object was to ascertain whether the man known as John Gillum had ever had any dealings with Copes. I had reason to believe that he had obtained at least a part of his supplies from them and in this it turned out that I was right. For, when I interviewed a very intelligent gentleman named Small, I learned, among other interesting matters, that a man corresponding to the description of the Tenant had, on at least one occasion, purchased from him some four-pound blocks of solid carbonic acid; which, I also learned, were delivered in parcels roughly packed in insulating material. I ask you to note the insulated packing since the material used for that purpose is almost invariably silicate wool, or, as it is sometimes called, slag-wool.

“With regard to the identification, I may say that it does not seem to admit of any doubt. The man whom Mr. Small served resembled the Tenant, as Mortimer has described him, not only in size and general appearance but even in respect of his teeth. Mr. Small particularly noticed the extensive filling of the front teeth with gold and commented on the disfigurement that it caused.

“This completes the case for the carbonic acid snow, and you see that it is based on a remarkable body of evidence. There is the illness of Mortimer, exactly resembling carbonic-acid poisoning, occurring in a very cold room and close to the bin; the mysterious affair of the mice; and the direct evidence of the purchase by the Tenant of carbonic acid snow in blocks of a size exactly suitable for use in the manner that I have suggested. I submit that it constitutes conclusive proof that the Tenant had something in that bin which he was preserving by means of carbonic acid snow.”

Both Anstey and Miller appeared to be profoundly impressed by this demonstration and the latter expressed the hope that the rest of the evidence would be equally convincing.
“Perhaps,” said Anstey, “one might hesitate to use the word ‘conclusive’; but even if one should not put it quite as high as that, still, it is difficult to imagine any alternative explanation. And I take it that the refrigeration theory is supported by other evidence.”

“It is amply supported,” Thorndyke replied; “and I shall now proceed to the consideration of some of the other evidence. To return to the chambers. My primary object in visiting them was to verify the dimensions of the bin. But there was another question to which I was anxious to find an answer, but had very little expectation of finding it. That question was whether or not the Tenant had artificial teeth. It was an important question, for there would obviously be great difficulty in fixing a false gold filling to natural teeth, though it would not be impossible. But with a dental plate there would be no physical difficulty at all. The only difficulty would be that the making of such a plate—obviously for the purpose of disguise—would involve the very dangerous complicity of a dentist. But that danger would exist equally in the case of ‘faked’ natural teeth.

“However, I had better luck than I had expected. In a rubbish basket I found an empty bottle labelled ‘Cawley’s Cleansing Fluid,’ which is a sort of detergent lotion, principally used for filling the bowls in which wearers of false teeth put their dental plates at night so that they may be clean by the morning. Then, on the chest of drawers which served as a dressing-table, I found an earthenware bowl labelled ‘Super-fatted Shaving Soap.’ But, as the Tenant, whoever he was, wore a beard, he evidently had no use for shaving soap. And, in fact, the bowl was empty. But there were in it traces of the cleansing fluid, plainly recognisable by the smell. Apparently, the bowl had been used as a receptacle for a dental plate during the night; and, in confirmation of this, we found in the larder the handle of a dental plate brush, which had been used as a spatula for mixing Portland cement.

“Here, again, you will probably demur to the use of the word ‘conclusive’; but the fluid, the bowl, and the brush, taken together, furnish very convincing evidence that the Tenant wore a dental plate. But if he did, he could not have been John Gillum, since it is known that Gillum had a full set of natural teeth and certainly did not wear a denture. I may add that we found a worn-out toothbrush of the ordinary kind and a small tin which had contained a toothpowder, as is used for cleaning natural teeth. So that, judging by these observations, it would appear that the occupant of these chambers was a man who had some natural teeth but also wore a dental plate. And I repeat, that man could not have been John Gillum.

“We made some other discoveries which I shall not deal with now. Among them was a piece of paper which was so exactly like the paper on which the blackmailer’s letter was written that it was nearly certain that it was derived from the same writing-pad. But I leave that for your consideration later with the other letters and documents. You will probably decide to have these examined by an expert; and, at any rate, they form no part of my present case.

“The next stage of the investigation deals with the identity of the personator. I have already explained that Dr. Peck was the only person known to me who could possibly have personated John Gillum. There was no positive reason for suspecting him; but he fulfilled the conditions that made the personation possible, and it was necessary that some enquiries should be made concerning him. Accordingly, I began by looking him up in the Medical Directory; and then the interesting fact emerged that he was not only a qualified medical practitioner, but also a fully qualified dentist. So that, in his case, the difficulty of getting the counterfeit gold teeth made did not exist. He could do whatever was necessary himself. This was, of course, no evidence against him; but it was another rather striking agreement.

“Dr. Peck’s permanent address was given as Staple Inn; and thither Jervis and I went to pursue our enquiries. We were fortunate enough to find the porter of the Inn a rather talkative person, so that a few discreet questions, just to help his conversational powers, soon put us in possession of all the facts that we wanted. And very striking facts some of them were. I need not reconstitute the conversation but will give you the substance of what we elicited.

“In the first place, we were glad to learn that Dr. Peck was in England. He had just returned from a long voyage; a very long voyage, for it had taken him close upon two years. And what instantly struck me when I made a rough estimate of the dates was that he appeared to have started on his voyage just about the time when John Gillum’s tenancy at Clifford’s Inn began and that he had returned a short time after John Gillum’s death. This must be admitted to be a very remarkable coincidence. And there were certain other circumstances that were at least rather singular. For instance, he went away with a full beard and moustache and came back clean-shaved; and he had not come back to Staple Inn although he had chambers there ready to receive him, and which he had always kept so that he should have some place to come to when he returned from a voyage. Instead of this, he had gone straight, as soon as he had landed, to some premises in Whitechapel where he had put up a brass plate and started in practice.

“All this was rather odd; but, of the facts disclosed by the porter’s rambling discourse, I was most interested in certain preparations which Dr. Peck had made before he had started on his voyage. These included a pair of portable bookcases in which he proposed to carry his travelling library, packed for transport and yet instantly available for use. Of these, the porter was able to give us fairly exact particulars; and, as he gave us the name and address of the man who had made them, I had—and took—the opportunity to fill in the precise details. And, as those details are highly material to the subject of our inquiry, I ask you to give very particular attention to them, both in regard to dimensions and construction.

“These bookcases were very ingeniously planned. The idea was that they could be filled with books in their proper order on the shelves and could then be closed by simply screwing on the fronts; when they would be ready for transport either by rail or sea. On arrival at their destination, they could be stowed in the doctor’s cabin and the fronts removed, and they would be ready for immediate use. Furthermore, they could, if necessary, be quite easily taken apart for storage. There were no dovetails or other permanent joints. The parts were simply screwed together with well-greased screws, and when
these had been withdrawn, the cases could be resolved into a collection of boards which would lie flat for stowage and take up a minimum of space.

"Now, as to the alleged disposal of these cases. They were delivered by the maker, Mr. Crow, of Baldwin’s Gardens, at Peck’s chambers in Staple Inn, and, so far as I could learn, were never seen again. The statement is that Peck took them with him when he started on his voyage—he is said to have travelled overland to Marseilles and embarked there on a foreign ship—to have had them in use throughout that voyage, and finally to have sold them, with the books that they contained, to the captain of the ship from which he landed at Marseilles.

“That is the story. Now we return to the cases. They were made throughout of one-inch board, excepting the three equidistant shelves, which were of half-inch stuff and slid freely in grooves. Each case was three feet three inches high, twenty inches wide and fourteen inches deep. The depth, you notice, was inconveniently great, as the books which would stand in the nine-inch spaces between the shelves would not be more than six or seven inches deep. But the dimensions as a whole interested me profoundly. I wonder whether you notice anything significant in them."

“I certainly do not,” said Anstey, glancing enquiringly at Miller, who shook his head with a hopeless expression; “in fact, I cannot imagine what possible bearing these cases can have on the matter that we are considering."

“Their significance,” Thorndyke explained, "lies in the possibility of their conversion into something totally different. Each is three feet three inches high; the two placed end to end with the shelves and the adjoining ends removed, would form a long case with an interior capacity of six feet four inches by eighteen inches by thirteen inches. Such a case would hold quite conveniently the body of a tall man; and it would go into the coal-bin with eighteen inches to spare in the length, ten inches in the width and fifteen inches in the depth; of which ten inches must be subtracted for the false bottom, leaving a space of five inches. The two halves of the case could be secured together firmly enough for practical purposes by screwing to each side a short board such as one of the shelves."

Anstey looked at me with a somewhat wry smile. “This is ingenuity with a vengeance,” said he. “It almost looks like perverted ingenuity; for even the Great Unraveller must admit that there are plenty of quite innocent containers which would accommodate a human body perfectly well. The mere suitability is of no evidential value excepting as corroboration of evidence showing that it was in fact so used."

“Exactly,” Thorndyke agreed. "But at present I am merely proving that such a container existed. The other evidence comes later."

“But,” Anstey objected, "the container appears to have been disposed of at Marseilles and to be, at present, somewhere on the high seas."

“My thesis,” Thorndyke rejoined, “is that Peck’s voyage was a myth; that the cases never went to sea at all, but were simply dismantled and conveyed piecemeal to Clifford’s Inn. But may I suggest that my learned friend should allow me to produce my evidence in the appointed order and to defer argument until the facts have been presented?"

“I am sat upon,” said Anstey. "Deservedly. I admit it. Let the demonstration proceed."

“I think,” said Thorndyke, “that you hardly appreciate the extraordinary suitability of these cases for the use that I suggest. I thought it might be so, and I have accordingly asked Polton to make a set of scale models—two inches to the foot—to help your imaginations, and, if necessary, to produce in court. The models are on the table, but we shall have to find Polton to demonstrate the method of conversion."

The necessity of finding Polton, however, did not arise, for even as Thorndyke spoke, he emerged unblushingly from the office and enquired if anything was wanted. Miller greeted his arrival with a broad grin and bluntly accused him of eavesdropping; to which Polton made no reply beyond a bland and crinkly smile, but, producing from his pocket a pair of forceps and a watchmaker’s screwdriver, bore down on the models.

“We will begin with the coal-bin,” said Thorndyke, picking up the long, narrow box and handing it to Polton, “and I shall refer to the real dimensions, of which all these models are exactly one-sixth—two inches to the foot. This bin is eight feet long by thirty inches wide and twenty-nine inches deep. On opening the lid, you see the false bottom with a cavity above it nine inches deep—deep enough to accommodate a good supply of coal. But I need not continue the description. You can see the details for yourselves."

Our friends watched with profound interest while Polton picked up with his forceps the little sunk rings in the false bottom and lifted the latter out in its two halves, displaying in the cavity underneath a number of flat pads of cotton wool, which he picked out and laid on the table.

“What are those little pads?” Anstey asked.

“They represent the pads of insulating material,” Thorndyke replied. "You will see their use presently. The actual pads were almost certainly made of silicate wool."

Having passed the bin round, Polton took up one of the model bookcases, and with his screwdriver extracted the little screws from the front, when the latter came off, displaying the interior with its three shelves. When he had repeated the operation on the other one, and passed both round for inspection, Thorndyke replaced them on the table.

“You have seen these cases,” said he, “in their ostensible character as bookcases, and you will agree that their appearance is quite convincing. Now we shall see the transformation.”
It was very interesting to observe how complete the transformation was. Polton began by drawing out the shelves, which slid freely in their grooves. Then, having extracted the lower screws, he let the bottom of each fall out. Next, laying the two cases on their backs, he brought the two open ends together, when they formed a long, narrow box, similar in shape to, but smaller than, the bin. Then he took two of the shelves, each of which was perforated by six holes, and laying them on either side of the long box across the junction of the two halves, fixed them in position with screws. Lifting the box, he demonstrated that the two cases had now become united to form a single structure with a continuous cavity.

When this had been passed round and examined, he took up one or two of the pads and laid them on the floor of the bin. Then he placed the box inside the bin, packed some more of the pads at the ends and sides, put the fronts on, laid the rest of the pads over them, and finally replaced the false bottom, which dropped comfortably into its place on top of the pads.

“You now see for yourselves,” said Thorndyke, “how perfectly these cases are adapted to the purpose that I have suggested. The adaptability seems too perfect to be accidental. Not only is the long case exactly the right size and shape to accommodate the body of a tall man; it is also exactly the right size and shape to lie in the bin with enough space around it for the insulating pads and still room enough for the false bottom. There is not an inch to spare in any direction. Those cases have the appearance of having been carefully designed for this purpose very precisely. And I submit that they were.”

We were all deeply impressed by the demonstration, and Anstey expressed the sentiments of us all when he remarked: “You were wise, Thorndyke, to have these models made. Seeing is not only believing; it is understanding. No amount of verbal description could have conveyed the extraordinary fitness of these cases for the purpose that you suggest. I take off my hat to you and Polton. I am even prepared to take off my wig; but I will defer that until you have produced the rest of the evidence.”

The demonstration completed, Polton made as if to retire to the office, but before he could escape, Miller grabbed him and pulled him into a chair. “What’s the use of pretending, Mr. Polton?” said he. “You know you have been listening all the time. Better sit here and listen in comfort”; which view, being endorsed by Thorndyke, was duly carried into effect.

“The fact that we have established,” said Thorndyke, “is that these bookcases were capable of being converted into a receptacle which would hold the body of a tall man and which would fit the interior of the coal-bin. The objection to the suggestion that they were so used is that they are said to have been taken overseas and never brought back. I now proceed to deal with that objection.

“On the floor above Gillum’s chambers at Clifford’s Inn is a large lumber-room which has been used by the authorities of the Inn for storing old furniture and other bulky rubbish left by outgoing tenants in their chambers; but I learn that it has been out of use and undisturbed for some years. Now, it occurred to me, as a bare possibility, that the Tenant might, at the end of his tenancy when his proceedings would necessarily be somewhat hurried, find himself burdened with some objects which he would not wish to leave in the chambers but which he had no opportunity to take away or destroy; and, in fact, I had these very cases in mind. Accordingly, I decided to take a look round the lumber-room and see if anything appeared to have been deposited there; and did so, assisted by Jervis and Polton.”

“Wasn’t the room locked?” asked Miller.

“It was,” Thorndyke replied. “A common builder’s lock which could have been turned with a stiff wire. We actually used a provisional key.”

Miller chuckled delightedly. “A provisional key,” he repeated. “I must remember that expression. Sounds so much better than skeleton key. Yes, doctor; and, of course, you did find something.”

“We did,” Thorndyke replied. “Perhaps Polton will be so good as to produce our gleanings for your inspection.”

Thereupon Polton retired to the office and immediately returned bearing a bundle of pieces of board which he laid out in order on the table.

“These,” said Thorndyke, “we found hidden under a pile of much older lumber. The wood is obviously comparatively new and the broken edges quite fresh. Let us fit those broken edges together and see what results. Here, for instance, are three pieces which fit together perfectly and form a rectangle with finished edges. It is three feet three inches long by twenty inches wide, the exact dimensions of the front or back of Peck’s bookcases. Moreover, there are twelve countersunk screw-holes, each of which fits a number eight screw, and those screws are not only the same size as those in Peck’s cases, but have the same distribution; namely, four equidistant holes on each side and two at either end.

“Then, here are two pieces which evidently formed part of a similar structure. They fit together exactly and their screw-holes are the same size and have the same distribution. Finally, here is a complete piece which corresponds completely with the sides of Peck’s cases. It is three feet three inches long, thirteen inches wide, it has three equidistant half-inch grooves, and the screw-holes in the edges correspond exactly in size and position with those on the back and the front. But there is in addition an extremely interesting feature. At one end of this side are three holes which have been made by screws, showing that something, not part of the original structure, had been screwed on to the outside. Now, if you will look at Polton’s model of the long case, you will see that the two halves are secured together by screwing on one of the shelves on either side, forming a sort of fish-plate; and I submit that these screw-holes afford evidence that a precisely similar procedure had been followed in the cases of which these fragments are part.”

Miller and Anstey were both greatly impressed. Nevertheless, the latter objected: “What you have proved, Thorndyke—and proved most conclusively—is that these fragments are parts of some structure which was exactly like one of Peck’s
bookcases. But you haven’t proved that it actually was one of his cases.”

“No,” Thorndyke agreed, ”I admit the objection, and I shall now proceed to dispose of it. I sent Polton with the complete back to show it to Mr. Crow, who made Peck’s cases. He shall tell you what Mr. Crow said.”

“I went to Mr. Crow,” said Polton,”and showed him the three pieces and we put them together on his bench. Then he looked up his book and compared the dimensions and the size and position of the screw-holes, and he said that the three pieces made up some thing that was exactly like the back or front of one of the cases that he had made for Dr. Peck. I told him that we knew that, and I asked him if he couldn’t be more definite. So he took another look at the pieces, and then he noticed this bit of American white wood,—here Polton pointed out the strip of foreign wood—”and that brought the job back to his memory. He remembered that he had then had a small piece of good American white wood left over from another job, and as the case was going to be stained, he thought he might as well use it up. So he did; and by that piece of white wood he was able to swear, and he was prepared to swear, that these pieces were actually the back of one of the cases that he had made for Dr. Peck.”

“I think that is good enough,” said Miller; and, as Anstey agreed, the evidence as to the cases was accepted as complete, so far as it went.

“We are agreed, then,” said Thorndyke, “as to the identity of the cases, and that somebody brought them from Staple Inn to Clifford’s Inn. The next question that we have to settle is: Who brought them? Fortunately, we have some fairly conclusive evidence on that point. I have mentioned that the lumber-room had not been disturbed, or even entered, for at least several years. Apart from Weech’s statement, this was evident from the appearance of the place. Everything in it, including the floor and the steps leading up to it, was covered with a thick, even coating of dust, almost like a thin covering of snow. Now, when we started to ascend the steps, we could see on them the very distinct footprints of some person who had gone up a short time previously; and when we reached the room, we could see a double line of footprints extending from the head of the steps to the farther end of the room—actually, as we found later, to the pile of lumber under which the fragments of the cases were hidden.

“As the dust must have been something like an eighth of an inch thick, these footprints were extraordinarily distinct. Like footprints in the snow, they were actual impressions, having a sensible depth and showing some detailed characters of the feet that made them; and their distinctness emphasised the fact that there was no trace whatever of any other footprints. As it happened that Polton had a camera with him in the chambers below, I asked him to photograph two of the footprints, a right and a left, selecting those which showed the most detail.

“This he did, laying a footrule beside each print to give a measuring standard and including the rule in the photograph. I produce here enlargements of the two photographs of the footprints, and I also produce photographs to the same scale, likewise including a footrule, of a pair of house-shoes which I found in the bedroom of the chambers and which seemed to correspond to the footprints. If you examine the two sets of photographs, you will see that the correspondence is quite unmistakable, even to the position of the brads in the soles and heels, which, as well as the various dimensions, you can verify with a pair of dividers and the footrule. I have done this, and I am prepared to swear, and to prove, that the footprints were made by these shoes. Whence it follows—since there were no other footprints, and the cases must have been deposited after the last previous visit to the room—that the fragments of the cases must have been put where we found them by the Tenant, whoever he may have been. Do you agree to that?”

“It is impossible not to agree,” replied Anstey. “The proof is absolutely conclusive.”

“Then,” said Thorndyke, ”we will consider the cases as disposed of, and I shall now pass on to another investigation which yielded evidence on two separate aspects of our inquiry. On Jervis’s suggestion, I decided to make a systematic collection of dust from the floor of Gillum’s chambers. The collection was carried out by Polton with a vacuum cleaner; and he not only kept the dust from the different areas separate, but, finding that the Tenant had used a carpet-sweeper, he extracted the dust from that and also carefully combed out its brushes. The same evening, we formed a sort of committee, with three microscopes, and went through the entire collection of dust. I need not trouble you with details of the procedure. Of the objects brought to light by our microscopes, there were only two kinds that are of interest to us; human hairs and particles of silicate wool.”

“Silicate wool!” exclaimed Miller. “That sounds rather significant.”

“It does,” Thorndyke agreed, “but the hairs are, perhaps, even more illuminating, so we will deal with them first. We found, in all, nineteen hairs, of which seventeen were from the scalp, one a moustache hair and one a hair from a beard. Three of the hairs were taken by me from the pillow on which the head of Gillum’s corpse had rested. Two of these were natural black hairs and one was white. We found, in the dust from the sitting-room floor, one other natural black hair. Of the other fifteen hairs, all were rather fair hairs dyed black.”

“My eye!” exclaimed Miller. “Fifteen dyed hairs out of a total of nineteen! I suppose it isn’t possible that they could have been Gillum’s?”

“It is quite impossible,” replied Thorndyke. “Not only were the black hairs from the pillow natural black, but one of them was white. And Benson will tell you that John Gillum’s hair, both during life and after death, was black streaked with white. I need not point out to you that the presence of white hairs is incontestable evidence that the hair is not dyed.

“Let us, then, consider what we are compelled to infer from these dyed hairs. And first as to their number. Of the four
natural hairs, three were from the pillow and had evidently come from the head of the corpse, while the fourth came from the floor of the same room. It had probably been detached when the corpse was moved either to or from the couch. At any rate, it was only a single hair. But there were fifteen dyed hairs collected from a fairly clean and habitually well-swept room. The unavoidable inference is that the owner of those dyed hairs was the person who occupied those chambers. Of Gillum himself there is no trace excepting four hairs, three of which certainly, and the fourth most probably, came from the corpse. But there are abundant traces of a rather fair man with hair, moustache, and beard dyed black. In other words, of a man who was not Gillum, but who was disguised so as to resemble Gillum."

"Amazing!" said Anstey; "and all this impressive evidence from a few handfuls of dust!"

"Yes," said Thorndyke, "but we have not finished with the dust. Besides the hairs, we found, as I told you, particles of silicate wool. In the living-room they were few in number and mostly broken quite small by having been repeatedly trodden on. But Polton made a separate operation of the coal-bin; and when we came to examine the dust from that, we found it to consist entirely of coal and silicate wool. And the wool was not only present in large quantities; it consisted to a considerable extent of recognisable lengths of fibre."

"I need hardly ask," said Anstey, "whether you have preserved these tell-tale dust particles for production in evidence?"

"They have all been kept intact," replied Thorndyke, "so that they can be shown direct as well as by enlarged photographs; indeed, all possible exhibits have been carefully preserved. And now, you will be relieved to hear, I am getting near to the completion of my case. Only two more points of evidence remain to be considered, and I will take first that relating to the beginning of the tenancy at Clifford's Inn. I had the particulars from Mr. Weech, and this is what he told me.

"One morning, towards the end of August, 1928, a man came to the lodge to enquire about some chambers that were to let. He thought that Number 64, which was empty, might suit him, so he was given the keys, and presently he returned and announced that the chambers would suit him and that he would like to take a lease of them. But he then explained that he was not taking them for himself but that he was acting as agent for a gentleman of means who was, at the moment, abroad, but wanted a set of chambers made ready for him to come home to. He was fully authorised to execute an agreement, to furnish references, and to pay whatever deposit might be thought necessary.

"As he produced a written authority from his principal, Mr. John Gillum, and referred Weech to Mr. Gillum's solicitor and banker, and was willing to pay a half-year's rent in advance, Weech accepted the tenancy. A provisional agreement was signed, the money paid, the keys handed to the agent to enable him to proceed with the furnishing and repairs, and the transaction was closed with one exception. The agent suggested that the references should not be taken up until Mr. Gillum came into residence."

"Why did he stipulate that?" asked Anstey.

"His explanation—quite a reasonable one—was that Mr. Gillum had lived abroad for some years and had done all his business with his solicitor and banker by correspondence and that neither of them knew him personally. This satisfied Weech and the agent was allowed to take possession of the chambers and get on with the furnishing and the repairs. And it is interesting to note that those repair included the false bottom to the coal-bin, the fixed window in the larder, and the holes in the larder door."

"What was the agent's name?" Miller asked.

"Weech is a little obscure on that point. He thinks it was either Baker or Barker or Barber."

"But," said Anstey, "there is the agreement with his signature."

"That agreement was destroyed when Gillum arrived and a new one executed."

"Then," said Anstey, "there was the agent's cheque. That ought to be traceable."

"There was no cheque," replied Thorndyke. "The money—twenty-five pounds—was paid in five five-pound notes."

"Then there must have been a receipt."

"There was; but it was made out to John Gillum. Mr. Baker, as we will call him, left no trace whatever. But let us finish with Mr. Weech's story.

"About three weeks after the signing of the agreement—on the seventeenth of September, to be exact—John Gillum came to the Inn, and the circumstances of his arrival were these, as related to Weech by the night porter: That night, between nine and ten, someone knocked at the gate, and when he had opened the wicket, he saw two gentlemen, one of whom was Mr. Baker, whom he had seen once before. Accordingly he let them pass through and they went up the passage. Presently Mr. Baker came back alone and said: 'By the way, that gentleman is Mr. Gillum, the new tenant of Number 64. You might mention to Mr. Weech that he has come.'"

"The porter did so in the morning, and Mr. Weech then called at the chambers. The door was opened by the man thereafter known as John Gillum; Mr. Weech introduced himself and a new agreement was then executed and, the old one torn up. So the tenancy began, and the mysterious Mr. Baker was seen no more."

"How long did he stay that night?" asked Miller.
“There is no answer to that question. The night porter saw him go back into the Inn, and so far as I can learn he was never seen again.”

“Did you get any description of him?” Miller asked.

“Yes,” replied Thorndyke. “Weech described him as a tallish man, about his own height—that is, about five feet ten—fair complexioned, with light-brown hair, a tawny beard and moustache and blue eyes; apparently a gentleman with a pleasant, persuasive manner and a rather engaging personality. You notice that if his fair hair and beard had been dyed black, he would have seemed to correspond completely to Mortimer’s description of the man whom he knew as John Gillum.

“I now come to the last stage of the investigation, and I must admit that I approached it with some anxiety. For if the result should not be what I expected, I should be left with the greater part of the inquiry to be begun afresh with no data to work from. I had assumed that Dr. Augustus Peck was the personator of John Gillum, and that Mr. Baker and Dr. Peck were one and the same person. If these propositions were true, it followed that Dr. Peck must be a man of about five feet ten inches in height, of blond complexion with blue eyes and light-brown hair. Further more, I should expect him to have some false upper front teeth. If he did not agree with this description, then he could not be the man; and I should have to look for another person to fill the role of personator.

“I need not describe our interview with him at length. When Jervis and I called on him, we were confronted by a rather spare man about five feet ten inches in height with light-brown hair and blue eyes. As he was clean-shaved, the colour of his beard was not ascertainable; but it could reasonably be assumed to agree with that of his hair. While we were conversing I was able to observe his teeth, as he had a short upper lip and showed them a good deal; and it was quite easy to see that there were several false teeth in the upper jaw and that these included the four upper incisors—the very teeth that had contained the gold fillings.

“Thus, you see, Dr. Peck’s physical characteristics agreed in every respect with those of the Tenant of the Inn, of the man whom Mortimer knew as John Gillum, and of the mysterious Mr. Baker; and I affirm his actual identity with those persons. And I further affirm that, in view of that identity and of the body of evidence which I have presented, I have proved that Augustus Peck is the man who, on the night of the seventeenth of September, murdered John Gillum and thereafter falsely personated him at the Inn and elsewhere.

“And, as we say in court, that is my case.”

XIX. — RE-ENTER MR. SNUPER

FOR some time after thorndyke had finished speaking, a profound silence prevailed in the room. We were all deeply impressed by the ingenuity with which the complicated train of evidence had been constructed and presented. And yet there was probably the same thought in the minds of us all. Despite the completeness and conclusiveness of the demonstration, the case seemed to be pervaded by a certain unreality. Something seemed to be lacking.

It was Anstey who broke the silence and put our thoughts into words.

“You have presented us, Thorndyke,” said he, “with a most remarkable scheme of circumstantial evidence. I have never heard anything finer of its kind. The proof of your thesis appears to be absolutely conclusive, and it would seem almost ungracious for me to offer any criticisms. But, after all, the superintendent and I are practical men who have to deal with realities. It will fall to us to translate this scheme of evidence into action. And we are at once confronted with a serious practical difficulty. I dare say you realise what it is.”

“Your difficulty, I presume,” replied Thorndyke, “is that the whole case, from beginning to end, rests on circumstantial evidence.”

“Exactly,” said Anstey. “If we arrest this man and charge him with the murder, we have not a particle of direct evidence to produce against him. Now, the late Lord Darling once said that circumstantial evidence is more conclusive than direct evidence. But juries don’t take that view, and I think the juries are right. If we bring this man to trial on the evidence that you have given us, we may easily fail to get a conviction; and there is even the possibility that some fact might be produced by the defence which would upset our case completely. You see the difficulty?”

“I do,” replied Thorndyke. “I have seen it all along; and I have provided the means to meet it. Hitherto, I have dealt exclusively with the train of circumstantial evidence that is really what the case rests upon. But I have borne in mind the need for some direct evidence to impart a quality of concrete reality to the other evidence; and I am able to produce two items which I think will satisfy you and Miller. The first is a set of photographs which Polton has prepared and which I will ask him to hand to me that I may show them to you.”

Here Polton paid another visit to the office and came back carrying a small portfolio which he delivered to Thorndyke, who took from it two ten-by-eight mounted photographs and resumed: “These two photographs are enlargements from small originals lent to me by Mr. Benson. The first is a group taken by Mr. Benson, himself; in Australia, and enlarged from the negative. I chose it because it had been taken in the shadow of a building and the faces were quite well lighted. What do you think of it, Benson? Is the likeness fairly good?”

Benson took the photograph from him, and having looked at it, replied: “It is an excellent likeness. The enlargement has brought it out wonderfully.”
“Then,” said Thorndyke, “pass it to Mortimer.”

“Has Mortimer seen it before?” asked Anstey.

“No,” Thorndyke replied. “I thought it best that you should see the actual trial.”

“You are pretty confident,” said Anstey; and the thought had occurred to me. But apparently his confidence was justified, for, after a prolonged and careful examination of the photograph, Mortimer announced: "There is nobody that I know in this group."

“The man with the beard is John Gillum,” said Benson.

“So I had supposed,” replied Mortimer. “But I don’t recognise him. He appears to be a complete stranger to me.”

“Then,” said Thorndyke, "we come to the second photograph. That is an enlargement from a small print and is not quite so clear as the other. It was taken by the first officer of the ship and shows a group of four men, one of whom is John Gillum. Look at the group carefully, Mortimer, and see if you can recognise Gillum this time.”

Mortimer took the photograph and examined it attentively; and as he did so he appeared to become more and more surprised.

“This is really very curious,” said he. “I recognised him at a glance. I suppose this must be a better likeness than the other.”

“Show Benson which is John Gillum,” said Thorndyke.

Mortimer turned to Benson, holding out the photograph and pointing to one of the figures.

“I say that this is Gillum,” said he.

“Then,” replied Benson, “you are wrong. That is the ship’s surgeon, Dr. Peck. The man standing next him is Jack Gillum.”

Mortimer looked at him in astonishment—though I didn’t quite see why, after what we had heard. Then, after another look at the photograph, he exclaimed:

“So that man is Dr. Peck! Then the man I knew as John Gillum must have been Dr. Peck, for the likeness is quite unmistakable. It is rather an appalling thought; though, considering the sort of terms we were on.”

Miller rubbed his hands. “Now,” said he, “we are getting down to brass tacks.” (apparently he regarded the circumstantial tacks as being of an entirely different metal). “Mr. Mortimer’s evidence seems pretty convincing, but I think you said, doctor, that you had another item up your sleeve.”

“I have,” replied Thorndyke, “and I think it will be particularly acceptable to you.”

He rose, and stepping across to a cabinet, opened it and took out an object which I recognised as the little roulette box that I had seen in Gillum’s chambers. Having briefly explained its nature and origin, he continued: “I have fixed it to this board with a spot of glue so that it can be handled without being touched. You will see that it is marked all over with a multitude of finger-prints, many of them superimposed and most of them undecipherable. The grey powder with which I developed them doesn’t show up at all well to the eye, but it photographs admirably; so I suggest that you give your attention to the excellent photographs which Polton has made of this box, which show the prints much more distinctly than they appear in the original.”

He took from the portfolio a number of prints on glossy bromide paper and passed them to Miller, who examined them with eager interest.

“But these are not so bad, doctor,” he said, when he had looked them over. “I can pick out at least half a dozen which our experts could identify quite easily. But what is the point about them? What do they prove?”

“The point is,” Thorndyke replied, “that they are the prints of someone who had handled this box. But the box was the property of the Tenant of the Inn and the prints are presumably the prints of his fingers. At any rate, they were made by somebody who had been in those chambers; and Mortimer actually saw the Tenant handling this box. They furnish evidence, therefore, that the person who made them must, at some time, have been in John Gillum’s chambers. And now cast your eye over this other collection.”

As he spoke, he took out of the portfolio a sheet of paper on which there were two groups of finger-prints, apparently made with printing ink and accompanied by a signature of the same intense black. Miller took the paper and, after a careful scrutiny, compared the prints on it with those shown in the photographs.

“There is no doubt,” said he, “that these finger prints are the same as those that came from the box. But whose are they, and what are they? I should have taken them for lithographs. And what is this signature? That looks like a lithograph, too.”

“It is a lithograph,” replied Thorndyke, taking yet another paper from the portfolio. “I will explain how it was made. Here, you see, is a copy of the famous blackmailer’s letter. I wrote it out myself on a carefully prepared sheet of lithographic transfer paper. When we called on Dr. Peck, I gave it to him to read. When he had read it, I drew his attention to the attestation on the back, whereupon he turned it over, read the attestation, and turned it back. Thus his fingers and thumbs touched the paper at three different points, all of which I carefully avoided when I took the letter from him.
“Later, I called on a very skilful lithographer and got him to transfer both sides of the letter to the one and take off a few proofs. But first I asked him to write his signature on the letter with lithographic chalk so that it would ink up with the finger-prints and enable him to swear to the proofs.”

“Then,” said Miller, “these are Peck’s finger-prints, excepting those at the upper corners, which I presume are your own, and it follows that the prints on the box are his, too. But that seems to put the coping-stone on your case, doctor, though, as this is a murder case, we could still do with a bit more evidence.”

“You will find plenty of further evidence,” said Thorndyke, “when you get to work with regular enquiries; evidence from the banks, from Copes and from various other sources. But you now have enough to enable you to arrest Peck. These finger-prints prove that he was in Gillum’s chambers at the very time when, according to his own story, he was on the high seas at the other side of the world. Are you satisfied, Anstey?”

“Perfectly,” he replied. “I should go into court confidently on what we have now, without depending on the further evidence that the police will be able to rake together. I see the shadow of the rope already.”

It was at this point that Mortimer interposed a question.

“I have been expecting,” said he, “to hear some reference to poor Abel Webb. Doesn’t he come into the scheme of evidence?”

“He did,” Thorndyke replied, “for the purposes of my investigation, but he does not for the purposes of the prosecution. I have not the slightest doubt that Peck murdered him. But I can’t prove it; and without proof it would be useless to introduce any reference to the murder.”

“Can you form any guess as to why Peck should have murdered him?”

“My dear fellow,” exclaimed Thorndyke, “it is not a matter of guessing. It is obvious. Abel Webb was intimately acquainted with both John Gillum and Augustus Peck. Now, it happened that he saw Peck at his place of business, and he must have recognised him and have noticed that his hair was dyed black—that, in fact, he was disguised so as to resemble Gillum. He seems to have got Gillum’s address—probably from the shipping office—and he certainly called at Gillum’s chambers, apparently to make enquiries. There he met Peck, disguised and obviously impersonating Gillum. Then the murder was out. Peck had the choice of two alternatives; either to kill Webb or to abandon his scheme and disappear. Naturally, being Peck, he elected to murder Webb; and, accordingly, Webb was murdered immediately after his visit to the Inn—apparently on the very same day.”

“While we are on the subject of explanations,” said Benson, “could you give us just an outline of the actual events? A sort of condensed narrative of Peck’s proceedings? I am not perfectly clear as to how the crime was carried out.”

“To put it very briefly,” Thorndyke replied, “I take it that the sequence of events was this: During the voyage, Peck learned a good deal about Gillum’s affairs and, among other matters, two very important facts. First, that Gillum was coming into a large sum of money, accruing in instalments, and second, that he was a total stranger to England; that he knew nobody there and that nobody knew him. These two circumstances suggested to him the possibility of making away with Gillum, personating him while the instalments were being paid, and getting the money into his own possession.

“During the rest of the voyage, he must have devoted himself to finding out everything that he could about Gillum and his affairs and establishing himself as Gillum’s intimate friend. Perhaps Gillum may have commissioned him to find a residence for him in London. At any rate, when Gillum went ashore at Marseilles, the friendship was already established and the two men must have been in communication while Gillum was travelling in France. That is clear from the fact that Peck knew when he would arrive in England and was able to meet him and bring him to the Inn, either as a guest or as the actual tenant of the chambers.

“As soon as Peck arrived in England, he set about the preparations to carry out his scheme; and he had the extraordinary good luck to find a set of chambers which contained an enormous coal-bin in an isolated room. When he had secured those chambers, his difficulties were practically over. He had merely to execute the necessary details; to have the bin made suitable for his purpose, to get a container to hold the body with the refrigerating material, to lay in a supply of slag-wool and solid carbon dioxide, to prepare the denture with the gold-filled teeth, and to obtain a suitable hair dye. All this he was able to do without committing himself in any way. If the scheme should prove impossible, he could simply call it off. He had done nothing unlawful or even irregular.

“Then, when Gillum arrived, everything was ready, even to the refrigerating chamber lying on its bed of slag-wool, enclosed in the insulating material, and already charged with carbonic acid snow. The unsuspecting victim was led into the chambers, the oak was shut, and Peck proceeded quietly to convert the living man into a corpse. Probably he gave him food and as much liquor as he would take, with a moderate dose of morphia mixed in with it; and when this had taken effect and Gillum had fallen asleep, he administered the lethal dose with a hypodermic syringe.”

“No marks of an injection were found at the post mortem,” Anstey remarked.

“They were not looked for,” replied Thorndyke. “But it would be easy for a doctor to give an injection to a sleeping man so that the marks would not be discovered. However, the point is not material. The poison was administered, and when this had been done, Gillum was, in effect, a dead man. Peck was now irrevocably committed. He had burned his boats; and the instant, pressing necessity, was to get rid of the corpse. For if he should be found there with the dead man, he was lost. Probably, he proceeded with the disposal as soon as Gillum was quite unconscious; he stripped the body, put it into the
container with the carbonic acid snow, closed the lid, covered it with the slag-wool pads, fitted the false bottom over it, and emptied a scuttle or two of coal on to the false bottom.”

“Do you mean to suggest,” Anstey exclaimed, “that he put the living man into the refrigerator?”

“He wouldn’t be a living man very long,” replied Thorndyke, “in an atmosphere some fifty degrees below freezing-point. But that is what he must have done. As long as the dead body was visible in the chambers, he was in deadly peril; but as soon as it was put out of sight and covered up, he was safe. He could spend the rest of the night dyeing his hair and completing his arrangements for the morning. And when his hair was dry and his dental plate with the gold teeth substituted for the one that he had been wearing, he was ready to begin the personation and to carry it on as long as should be necessary in perfect safety, provided that he should never meet any person who knew Dr. Peck or John Gillum, or, still worse, both of them.

“Moreover, you will note the completeness of his arrangements. Sooner or later, he would have to bring the personation to an end. What was he to do then? A simple disappearance would not answer at all. It would give rise to enquiries. But no disappearance would be necessary. At the appointed time, he could simply produce the body, properly staged for a suicide, and the exit of John Gillum would be perfectly natural. But he did not leave it even at that. He created in advance the expectation of suicide so as to forestall enquiries; and he prepared the blackmailing letters with such skill and foresight that they not only agreed with his drafts on the bank, but, if any suspicion should have arisen as to his connection with the murder of Abel Webb, they agreed with that, too. Actually, Jervis and I did, at first, connect the blackmail with that murder.

“Then, finally, observe the forethought displayed in the production of the body. As it was managed, it was practically certain that the corpse would lie undiscovered for several days at the least. But in that time it would undergo such changes as would effectually cover up any traces of either the murder or the refrigeration. Looking at the case as a whole, one has to admit that it was a most masterly crime; amazingly ingenious in design and conception and still more astonishing in the forethought, the care and caution, combined with daring and resolution displayed in its execution.”

“That is true,” said Anstey, “but what strikes me more is the callous villainy of the scheme and the way it was carried out. I am glad you told us the story, Thorndyke, because it has brought home to me what an inhuman monster we have to deal with. If he escapes the rope, it will not be from any lack of effort on my part.”

We continued for some time rather discursively to debate the various features of this extraordinarily villainous crime. At length, Miller, having looked at our clock and then at his watch, remarked that “time was getting on” and stood up; and the others, taking this as an indication that the proceedings were adjourned, rose also.

“We will see you safely out of the precincts,” said Thorndyke. “It has been a long sitting and we shall all be the better for a breath of fresh air.”

Accordingly we set forth together, and having discharged Anstey at his chambers, sauntered by way of Tanfield Court to the Inner Temple Gate, where we took leave of our guests. As we turned to retrace our steps, I noticed two men whom I had previously observed loitering opposite our chambers in the shade of Paper Buildings. Apparently they had followed us and seemed to be doing so still, for as we turned, they retired, and slipping round the corner of Goldsmith Building, moved away along the walk towards the cemetery. I drew Thorndyke’s attention to them but, of course, he had already noticed them.

“I wonder,” said I, “whether that will be Snuper and one of his myrmidons.”

“It is quite possible,” he replied. “I know that Snuper is keeping an eye on me. He divides his attention between me and Peck. But they may be a couple of Miller’s men. The Superintendent is nearly as anxious about me as Snuper is.”

He had hardly finished speaking when two shots rang out—sharp, high-pitched reports, suggesting an automatic pistol. At the moment we were crossing Tanfield Court and the sound seemed to come from the direction of the covered passage that leads through to the Terrace.

“That will be Peck,” Thorndyke remarked quietly, and forthwith started off at a run towards the passage. It was extremely uncomfortable; for, though I would have much preferred to take cover and raise an alarm there was nothing for it but to keep close to Thorndyke. As we raced down the echoing passage, I caught, faintly, the sound of quick footsteps ahead, and almost at the same moment, similar but louder sounds from our rear, punctuated by the shrieks of a police whistle.

At the moment when we emerged from the passage on to the Terrace, I had a fleeting glimpse of a man running furiously, but even as I looked, he shot round the corner into Fig Tree Court and was lost to view. Here I would very willingly have called a halt to discuss tactics; for Fig Tree Court, with its two covered passages, both leading into Elm Court, afforded perfect opportunities for an ambush. It was about as dangerous a place as could be imagined for the pursuit of a man armed with an automatic and evidently bent on murder. But there was no choice. Thorndyke was leading; and when another shot sounded from ahead, accompanied by the shattering of glass, he merely noted the direction and bore down straight on the left-hand passage.

It was in Elm Court that the pursuit came to a sudden end. As we rushed out of the passage we saw two men sprawling on the pavement, engaged in a fierce and deadly struggle. One of them grasped a pistol and was trying to turn its muzzle towards his adversary, who, clinging tenaciously with both hands to the wrist that controlled the pistol, concentrated his
attention on the weapon. But it was an unequal contest, for, even as we emerged, the man with the pistol was groping with his free hand under the skirt of his coat.

Thorndyke went straight for the pistol, and seizing it with both hands, wrenched it out of the holder’s grasp; while I gripped the free arm at wrist and elbow and pinned it to the ground. And none too soon; for, as I straightened out the arm, I saw that the hand held one of those deadly, double-edged surgical knives known as Catlins.

But the struggle was by no means over, for our prisoner seemed to have the strength of twenty men and the ferocity of a hundred. He writhed and twisted and kicked and even tried to bite. As I looked at his mouthing, distorted face in the dim lamplight—the face, it seemed, of a maniac or a wild beast—I found it difficult to connect it with the calm and dignified Dr. Peck of our Whitechapel interview, but easy enough to recognise the murderer of Abel Webb and poor, confiding John Gillum.

The struggle ended as suddenly as the pursuit. It was only a matter of seconds, though it seemed an hour, before our two followers came flying out of the passage and instantly fell upon the prisoner. As one of them helped Thorndyke and me to drag the hands together—with an anxious eye upon the knife—the other produced a pair of handcuffs and expertly snapped them on to the wrists.

"There," said he in a soothing, persuasive tone, “that’s fixed you up. It’s no use wriggling, and you’d better let me have that knife”; which, in fact, he took possession of by a method which caused the prisoner suddenly to drop it.

Apparently, Peck realised the futility of further resistance, for he allowed his captors to raise him to his feet, when he stood glowering sullenly at Thorndyke, breathing hard but uttering not a word; while his original antagonist, who had risen unaided, regarded him with mild satisfaction and cast an occasional pensive glance at a ragged hole in his own sleeve through which issued a little oozing of blood. Noticing this, I exclaimed anxiously:

“I hope you are not seriously hurt.”

“Oh, no," he replied, turning to me with a smile, “it’s just a matter of sticking-plaster and a tailor” and as he spoke and looked at me, I suddenly realised who he was. It was Mr. Snuper.

We accompanied the two officers and their prisoner up to the Inner Temple Gate and stood by until a police car arrived in response to a telephone call. Then as the door slammed and the car moved away, we turned back once more towards our chambers. Mr. Snuper would have said goodnight and faded away in his usual inscrutable fashion. But Thorndyke would have none of this.

“No, no, Snuper,” said he. “You come back with us. We owe it to you that we are still alive and you were very near to giving your own life for ours. Neither of us is likely to forget your courage and devotion. But now you have got to come and undergo the necessary repairs.”

The repairs were executed by me assisted by Polton (who positively grovelled at Snuper’s feet when he heard the story) while Thorndyke attended to the hospitality; and, speaking as a surgeon, I am not sure that his methods were quite orthodox, even though it really was little more than a matter of sticking-plaster.
XX. — EPILOGUE

THE trial of Augustus Peck lies outside the scope of this narrative. To follow it in detail would be merely to repeat what the reader has already been told. For there was practically no defence; ingenious and convincing as the scheme of the crime had been, directly the alleged and presumed facts were challenged the whole edifice of deception collapsed. So overwhelming was the evidence for the prosecution that the jury agreed on their verdict of “Guilty” after less than ten minutes’ deliberation.

The case for the Crown was based mainly, as Thorndyke had predicted, on the complete train of circumstantial evidence. But his prediction turned out to be correct in another respect. No sooner had systematic enquiries been set afoot by the police than an imposing mass of confirmatory evidence was brought into view. Inquiries, for instance, at Copes and other manufacturers of refrigerating material elicited the fact that Peck had kept himself regularly supplied with blocks of solid carbon dioxide. And an examination by experts of the various documents, including Gillum’s holograph will, showed that the will and the letters received from Australia were clearly distinguishable from the skilfully forged documents executed by Peck; and this examination (together with Thorndyke’s sheet of blank paper) enabled the experts to testify that the blackmailer’s letters had undoubtedly been written by Peck, himself.

But perhaps the most striking corroborative evidence came from the three banks at which Peck had kept accounts. When Miller, armed with an order of the Court, called on them to make enquiries, it was revealed that Peck had been in the habit of paying into each bank some thirty pounds a week in cash—mostly old one-pound notes—ostensibly the receipts from his Whitechapel practice, though, in fact, it was proved that the said practice was a pure fiction. As the money accumulated at the banks, it was promptly converted into gilt-edged securities, which Peck retained in his own possession and which were found locked up in his writing-table at Whitechapel.

But even more striking were the discoveries which were made in the strong-rooms of those banks; which included three large dispatch boxes, each crammed with old one-pound notes, evidently forced in under heavy pressure and forming a solid, compact mass. On counting them, the total amount contained in them was found to be just over ten thousand pounds; which, together with the securities and the combined credit balance, came near to accounting for the whole sum of thirteen thousand pounds which had been withdrawn from Gillum’s bank.

“If one were disposed to moralise,” said Thorndyke, as he laid down the newspaper in which an account of Peck’s execution was printed, “one would lament the misuse of the remarkable gifts with which Augustus Peck was undeniably endowed. He was a very unusual type of criminal. I do not recall any other quite like him. He was clearly a man of some culture; he was gifted with a constructive imagination of a high order and with inexhaustible ingenuity and resourcefulness. He avoided risks whenever they could be avoided, and when they could not be, he took them with a courage and resolution that would be admirable in any other circumstances. Consider his murder of Abel Webb. The risk of committing a murder in a public thoroughfare was enormous. But yet, as a matter of mere policy, the risk was justified. For when he had taken the immediate risk and escaped, the very publicity of the crime was a safeguard so complete that though we were certain that he had committed the crime, we could never have brought it home to him. And Abel Webb was silenced for ever.

“Nevertheless, he suffered from the inherent folly that is characteristic of all criminals. The paltry thirteen thousand pounds was not worth the risk that he took; and his ridiculous attempt to murder you and me—when, I suppose, he had to some extent lost his nerve—was sheer imbecility. For he still had a sporting chance of escape.

“But, at any rate, the world is better without him, and I am not dissatisfied to have been the means of his elimination.”

“No,” I agreed. “You have done a brilliant piece of work, and as to the result of your labours, as Mr. Weech would express it: Finis coronat opus.”
THE STONEWARE MONKEY

BOOK I
NARRATED BY JAMES OLDFIELD, M.D.

CHAPTER I. — HUE AND CRY

THE profession of medicine has a good many drawbacks in the way of interrupted meals, disturbed nights and long and strenuous working hours. But it has its compensations, for a doctor’s life is seldom a dull life. Compared, for instance, with that of a civil servant or a bank official, it abounds in variety of experience and surroundings, to say nothing of the intrinsic interest of the work in its professional aspects. And then it may happen at any moment that the medical practitioner’s duties may lead him into the very heart of a drama or a tragedy or bring him into intimate contact with crime.

Not that the incident which I am about to describe was, in the first place, directly connected with my professional duties. The initial experience might have befallen anyone. But it was my medical status that enlarged and completed that experience.

It was about nine o’clock on a warm September night that I was cycling at an easy pace along a by-road towards the town, or village, of Newingstead, in which I was temporarily domiciled as the locum-tenens of a certain Dr. Wilson. I had been out on an emergency call to a small village about three miles distant and had taken my bicycle instead of the car for the sake of the exercise; and having ridden out at the speed that the occasion seemed to demand, was now making a leisurely return, enjoying the peaceful quiet of the by-way and even finding the darkness restful with a good headlight to show the way and a rear light to secure me from collisions from behind.

At a turn of the lane, a few twinkling lights seen dimly through spaces in the hedgerow told me that I was nearing my destination. A little reluctant to exchange the quiet of the countryside for the light and bustle of the town, I dismounted, and, leaning my bicycle against a gate, brought out my pipe and was just dipping into my pocket for my tobacco pouch when I heard what sounded to me like the call of a police whistle.

I let go the pouch and put away my pipe as I strained my ears to listen. The sound had come from no great distance but I had not been able exactly to locate it. The cart track from the gate, I knew, skirted a small wood, from which a footpath joined it, and the sound had seemed to come from that direction. But the wood was invisible in the darkness, though I could judge its position by a group of ricks, the nearest of which loomed vaguely out of the murk.

I had switched off the lamps of my machine and was just considering the expediency of walking up the cart track to explore, when the unmistakable shriek of a police whistle rang out, considerably nearer than the last and much shorter, and was succeeded by the sound of voices—apparently angry voices—accompanied by obscure noises as of bodies bursting through the undergrowth of the wood, from the direction of which the sounds now clearly proceeded. On this I climbed over the gate and started up the cart track at a quick pace, treading as silently as I could and keeping a bright lookout. The track led through the groups of ricks, the great shapes of which loomed up one after another, looking strangely gigantic in the obscurity, and near the last of them I passed a farm wagon and was disposed to examine it with my flashlight, but then judged it to be more prudent not to show a light. So I pushed on with the flashlight in my hand, peering intently into the darkness and listening for any further sounds.

But there were none. The silence of the countryside—now no longer restful, but awesome and sinister—was deepened rather than broken by the faint sounds that belonged to it; the half-audible “skreek” of a bat, the faint murmur of leaves and, far away, the fantastic cry of an owl.

Presently I was able to make out the wood as a vague shape of deeper darkness and then I came on the little footpath that meandered away towards it. Deciding that this was the right direction, I turned on to it and followed it—not without difficulty, for it was but a narrow track through the grass—until I found myself entering the black shadows of the wood. Here I paused for a moment to listen while I peered into the impenetrable darkness ahead. But no sounds came to my ear save the hushed whisper of the trees. Whatever movement there had been was now stillled, and as I resumed my advance toward the wood I began to ask myself uneasily what this strange and sudden stillness might portend. But I had not gone more than a score of paces when the sound was answered. Quite suddenly, almost at my feet, I saw the prostrate figure of a man.

Instantly I switched on my flashlight and as its beam fell on him it told the substance of the tragic story in a single flash. He was the constable whose whistle I had heard—it was still hanging loose at the end of its chain. He was bareheaded and at the first glance I thought he was dead; but when I knelt down by his side I saw that he was still breathing, and I now noticed a small trickle of blood issuing from an invisible wound above his ear. Very carefully I sought the wound by a light touch of my finger and immediately became aware of a soft area of the scalp, which further cautious and delicate palpation showed to be a depression of the skull.

I felt his pulse—a typical brain-compression pulse—and examined his eyes, but there was no doubt as to his condition. The dent in the skull was compressing his brain and probably the compression was being increased from moment to moment by internal bleeding. The question was, what was to be done? I could do nothing for him here, but yet I could hardly leave him to go in search of help. It was a horrible dilemma; whatever could be done for him would need to be done quickly, and the sands of his life were running out while I knelt helplessly at his side.

Suddenly I bethought me of his whistle. The sound of it had brought me to the spot and it must surely bring others. Picking it up, I put it to my lips and blew a loud and prolonged blast, and, after a few moments’ pause, another and yet another. The harsh, strident screech, breaking in on the deathly stillness of the wood and setting the sleeping birds astir, seemed to strike my overstrung nerves a palpable blow. It was positive pain to me to raise that hideous din, but there was
nothing else to do. I must keep it up until it should be heard and should attract someone to this remote and solitary place.

It took effect sooner than I had expected, for I was in the act of raising the whistle once more to my lips when I heard sounds from within the wood as of someone trampling through the undergrowth. I threw the beam of my flashlight in that direction but took the precaution to stand up until I should have seen who and what the newcomer might be. Almost immediately there appeared a light from the wood which flashed out and then disappeared as if a lantern were being carried among tree trunks. Then it became continuous and was evidently turned full on me as the newcomer ran out of the wood and advanced towards me. For a few moments I was quite dazzled by the glare of his light, but as he came nearer, mine lighted him up and I then saw that he was a police constable. Apparently he had just observed the figure lying at my feet, for he suddenly quickened his pace and arrived so much out of breath that, for a moment or two, he was unable to speak, but stood with the light of his lantern cast on his unconscious comrade, breathing hard and staring down at him with amazement and horror.

“God save us!” he muttered at length. "What the devil has been happening? Who blew that whistle?"

“I did,” I replied, upon which he nodded, and then, once more throwing his light on me, and casting a searching glance at me, demanded:

“And who are you, and how do you come to be here?”

I explained the position very briefly and added that it was urgently necessary that the injured man should be got to the hospital as quickly as possible.

“He isn’t dead, then?” said he. “And you say you are a doctor? Can’t you do anything for him?”

“Not here,” I answered. “He has got a deep depressed fracture of the skull. If anything can be done, it will have to be done at the hospital; and he will have to be moved very gently. We shall want an ambulance. Could you go and fetch one? My bicycle is down by the gate.”

He considered for a few moments. Apparently he was in somewhat of a dilemma, for he replied:

“I oughtn’t to go away from here with that devil probably lurking in the wood. And you oughtn’t to leave this poor chap. But there was another man coming along close behind me. He should be here any minute if he hasn’t lost his way. Perhaps I’d better go back a bit and look for him.”

He threw the beam from his lantern into the opening of the wood and was just starting to retrace his steps when there sounded faintly from that direction the voice of someone apparently hailing us:

“Is that you, Mr. Kempster?” the constable roared.

Apparently it was, though I could not make out the words of the reply, for a minute or so later a man emerged from the wood and approached us at a quick walk. But Mr. Kempster, like the constable, was a good deal the worse for his exertions, and, for a time, was able only to stand panting, with his hand to his side, while he gazed in consternation at the prostrate form on the ground.

“Can you ride a bicycle, Mr. Kempster?” the constable asked.

Mr. Kempster managed to gasp out that he could, though he wasn’t much of a rider.

“Well,” said the constable, “we want an ambulance to take this poor fellow to the hospital. Could you take the doctor’s bicycle and run along to the police station and just tell them what has happened?”

“Where is the bicycle?” asked Kempster.

“It is leaning against the gate at the bottom of the cart track,” I replied, adding, “You can have my flashlight to find your way and I will see you down the path to the place where it joins the track.”

He agreed, not unwillingly, I thought, having no great liking for the neighbourhood, so I handed him my flashlight and conducted him along the path to its junction with the cart track, when I returned to the place where the constable was kneeling by his comrade, examining him by the light of his lantern.

“I can’t make this out,” said he as I came up. “He wasn’t taken unawares. There seems to have been a considerable scrap. His truncheon’s gone. The fellow must have managed to snatch it out of his hand, but I can’t imagine how that can have happened. It would take a pretty hefty customer to get a constable’s truncheon out of his fist, especially as that’s just what he’d be on his guard against.”

“He seems to have been a powerful ruffian,” said I, “judging by the character of the injury. He must have struck a tremendous blow. The skull is stove in like an egg-shell.”

“Blighter!” muttered the constable. Then, after a pause, he asked:

“Do you think he is going to die, Doctor?”

“I am afraid his chances are not very good,” I replied, “and the longer we have to wait for that ambulance, the worse they will be.”

“Well,” he rejoined, “if Mr. Kempster hustles along, we shan’t have very long to wait. They won’t waste any time at the station.”
He stood up and swept the beam of his lantern around, first towards the wood and then in the direction of the ricks. Suddenly he uttered an indignant snort and exclaimed, angrily:

“Well, I'm damned! Here's Mr. Kempster coming back.” He kept the light of his lantern on the approaching figure, and as it came within range he roared out: “What's the matter, sir? We thought you'd be half way there.”

Mr. Kempster hurried up, breathing hard and looking decidedly resentful of the constable's tone.

“There is no bicycle there,” he said, sulkily. “Somebody must have made off with it. I searched all about there but there was not a sign of it.”

The constable cursed as a well trained constable ought not to curse.

“But that's put the lid on it,” he concluded. “This murderous devil must have seen you come up, Doctor, and as soon as you were out of sight, he must have just got on your machine and cleared out. I suppose you had a headlight.”

“I had both head and rear light,” I replied, “but I switched them both off before I started up the cart track. But, of course, if he was anywhere near—hiding behind one of those ricks, for instance—he would have seen my lights when I came up to the gate.”

“Yes,” the constable agreed, gloomily, “it was a bit of luck for him. And now he's got clean away; got away for good and all unless he has left some sort of traces.”

Mr. Kempster uttered a groan. “If he has slipped through your fingers,” he exclaimed, indignant, “there's about ten thousand pounds' worth of my property gone with him. Do you realize that?”

“I do, now you've told me,” replied the constable, adding unsympathetically, “and it's bad luck for you; but still, you know, you are better off than my poor mate here who was trying to get it back for you. But we mustn't stop here talking. If the man has gone, there is no use in my staying here. I'll just run back the way I came and report at the station. You may as well wait here with the doctor until I come back with the ambulance.”

But Mr Kempster had had enough of the adventure.

“There is no use in my waking here,” said he, handing me my flashlight. “I'll walk back through the wood with you and then get along home and see exactly what that scoundrel has taken.”

The constable made no secret of his disapproval of this course, but he did not actually put it into words. With a brief farewell to me, he turned the light of his lantern on the entrance to the wood and set off at a pace that kept his companion at a brisk trot. And as the light faded among the trees and the sound of their footsteps died away in the distance, I found myself once more alone with my patient, encompassed by the darkness and wrapped in a silence which was broken only by an occasional soft moan from the unconscious man.

It seemed to me that hours elapsed after the departure of the constable; hours of weary expectation and anxiety. I possessed myself of my patient's lantern and by its light examined him from time to time. Naturally, there was no improvement; indeed, each time that I felt his pulse it was with a faint surprise to find it still beating. I knew that, actually, his condition must be getting worse with every minute that passed, and it became more and more doubtful whether he would reach the hospital alive.

Then my thoughts strayed towards my bicycle and the unknown robber. We had taken it for granted that the latter had escaped on the machine, and in all probability he had. Yet it was possible that the cycle might have been stolen by some tramp or casual wayfarer and that the robber might be still lurking in the neighbourhood. However, that possibility did not disturb me, since he could have no object in attacking me. I was more concerned about the loss of my bicycle.

From the robber, my reflections drifted to the robbed. Who and what was Mr. Kempster? And what sort of property was it that the thief had made off with? There are not many things worth ten thousand pounds which can be carried away in the pocket. Probably the booty consisted of something in the nature of jewelry. But I was not much interested. The value of property, and especially of such trivial property as jewelry, counts for little compared with that of a human life. My momentarily wandering attention quickly came back to the man lying motionless at my feet, whose life hung so unsteadily in the balance.

At last my seemingly interminable vigil came to an end. From the road below came the distinctive clang of an ambulance bell, and lights winked over the unseen hedgerow. Then the glare from a pair of powerful headlamps came across the field, throwing up the ricks in sharp silhouette, and telling me that the ambulance was passing in through the gate. I watched the lights growing brighter from moment to moment; saw them vanish behind the ricks and presently emerge as the vehicle advanced up the cart track and at length turned on to the footpath.

It drew up eventually within a few paces of the spot where the injured man was lying, and immediately there descended from it a number of men, including a police inspector and the constable who had gone with Kempster. The former greeted me civilly, and, looking down on his subordinate with deep concern, asked me a few questions while a couple of uniformed men brought out a stretcher and set it down by the patient. I helped them to lift him on to the stretcher and to convey the latter to its place in the ambulance. Then I got in, myself, and, while the vehicle was being turned round, the inspector came to take a last look at the patient.

“I am not coming back with you, Doctor,” said he. “I have got a squad of men with some powerful lights to search the
wood."

“But,” said I, “the man has almost certainly gone off on my bicycle.”

“I know,” said he. “But we are not looking for him. It’s this poor fellow’s truncheon that I want. If the thief managed to snatch it away from him, there are pretty certain to be finger-prints on it. At any rate, I hope so, for it’s our only chance of identifying the man.”

With this, as the ambulance was now ready to start, he turned away; and as we moved off towards the cart track, I saw him, with the constable and three plain-clothes men advancing towards the wood which, by the combined effects of all their lights, was illuminated almost to the brightness of daylight.

Once out on the road, the smoothly-running ambulance made short work of the distance to the hospital. But yet the journey had not been short enough. For when the stretcher had been borne into the casualty room and placed on the table, the first anxious glance showed that the feebly-flickering light had gone out. In vain the visiting surgeon—who had been summoned by telephone—felt the pulse and listened to the heart. Poor Constable Murray—such, I learned, was his name—had taken his last turn of duty.

“A bad business,” said the surgeon, putting away his stethoscope and passing his fingers lightly over the depression in the dead man’s skull. “But I doubt whether we could have done much for him even if he had come in alive. It was a devil of a blow. The man was a fool to hit so hard, for now he’ll have to face a charge of wilful murder—that is, if they catch him. I hope they will.”

“I hope so, too,” said I, “but I doubt whether they will. He seems to have found my bicycle and gone off on it, and I gather that nobody saw him near enough to recognize him.”

“H’m,” grunted the surgeon, “that’s unfortunate; and bad luck for you, too, though I expect you will get your cycle back. Meanwhile, can I give you a lift in my car?”

I accepted the offer gladly, and, after a last look at the dead constable, we went out together to return to our respective homes.
CHAPTER 2. — THE INQUIRY

IT was on the fourth day after my adventure that I received the summons to attend the inquest—which had been kept back to enable the police to collect such evidence as was available—and in due course presented myself at the little Town Hall in which the inquiry was to be held. The preliminaries had already been disposed of when I arrived, but I was in time to hear the coroner’s opening address to the jury. It was quite short, and amounted to little more than the announcement of his intention to take the evidence in its chronological order; a very sensible proceeding, as it seemed to me, whereby the history of the tragedy would evolve naturally from the depositions of the witnesses. Of these, the first was Mr. Arthur Kempster, who, by the coroner’s direction, began with a narrative of the events known to him.

“I am a diamond merchant, having business premises in Hatton Garden and a private residence at The Hawthorns, Newingstead. On Friday, the 16th of September, I returned from a trip to Holland and came direct from Harwich to The Hawthorns. At Amsterdam I purchased a parcel of diamonds and I had them in a paper packet in my inside waistcoat pocket when I arrived home, which I did just about dinner time. After dinner, I went to my study to examine the diamonds and to check their weight on the special scales which I keep for that purpose. When I had finished weighing them and had looked them over, one by one, I put away the scales and looked about for the lens which I use to examine stones as to their cutting. But I couldn’t find the lens. Then I had a faint recollection of having used it in the dining room, which adjoins the study, and I went to that room to see if I might have left it there. And I had. I found it after a very short search and went back with it to the study. But when I went to the table on which I had put the diamonds, to my amazement I found that they had vanished. As nobody could possibly have come into the study by the door, I looked at the window; and then I saw that it was open, whereas it had been shut when I went to the dining room.

“I immediately rushed out through the dining room to the front door, and as I came out of it I saw a man walking quickly down the drive. He was nearly at the end of it when I ran out, and, as soon as he heard me, he darted round the corner and disappeared. I ran down the drive as fast as I could go, and, when I came out into the road, I could see him some distance ahead, running furiously in the direction of the country. I followed him as fast as I could, but I couldn’t see that he was gaining on me. Then, as I came to a side turning—Bascombe Avenue—I saw a policeman approaching along it and quite near. So I hailed him and gave the alarm; and when he ran up, I told him, very briefly, what had happened; and, as the thief was still in sight, he ran off in pursuit. I followed as well as I could, but I was already out of breath and couldn’t nearly keep up with him. But I saw the thief make off along the country road and get over a gate nearly opposite Clay Wood; and the policeman, who seemed to be gaining on the fugitive, also got over the gate, and I lost sight of them both.

“It seemed to me that it was useless to try to follow them, so I turned back towards the town to see if I could get any further assistance. Then, on the main road, I met Police Constable Webb and told him what had happened, and we started off together to the place where the thief had disappeared. We got over the gate, crossed a field, and entered the wood. But there we rather lost ourselves as we had missed the path. We heard a police whistle sounding from the wood while we were crossing the field; and we heard another shorter one just after we had entered. But we couldn’t make out clearly the direction the sounds had come from, and we still couldn’t find the path.

“Then, after a considerable time, we heard three long blasts of a whistle and at the same moment we saw a glimmer of light; so we ran towards the light—at least the constable did, for I was too blown to run any farther—and at last I found the path and came out of the wood and saw Dr. Oldfield standing by the deceased, who was lying on the ground. Constable Webb suggested that I should take Dr. Oldfield’s bicycle and ride to the police station and the doctor gave me his flashlight to light me down the cart track to the gate where he had left the bicycle. But when I got to the gate, there was no sign of any bicycle, so I returned and reported to the constable, who then decided to go, himself, to the station, and we went back together through the wood. When we got back to the field he ran on ahead and I went back to my house.”

“When you went to the dining room,” said the coroner, “how long were you absent from the study?”

“About two minutes, I should say. Certainly not more than three.”

“You say that the study window was closed when you went out of the room. Was it fastened?”

“No. It was open at the top. I opened it when I came in after dinner as it was a warm night and the room seemed rather close.”

“Was the blind down?”

“There is no blind; only a pair of heavy curtains. They were drawn when I came into the room, but I had to pull them apart to open the window and I may not have drawn them close afterwards; in fact, I don’t think I did.”

“Do you think that anyone passing outside could have seen into the room?”

“Yes. The study is on the ground floor—perhaps a couple of feet above the level of the ground—and the window sill would be about the height of a man’s shoulder, so that a man standing outside could easily look into the room.”

“Does the window face the drive?”

“No. It looks on the alley that leads to the back premises.”

“You, apparently, did not hear the sound of the window sash being raised?”
“No, but I shouldn’t, in the dining room. The sash slides up easily and I have all the sash pulleys of my windows kept oiled to prevent them from squeaking.”

“Were the diamonds in an accessible position?”

“Yes, quite. They were lying, all together, on a square of black velvet on the table.”

“Were they of any considerable value?”

“They were, indeed. The whole parcel would be worth about ten thousand pounds. There were fifteen of them, and they were all very exceptional stones.”

“Would you be able to recognize them if they could be traced?”

“I could easily identify the complete parcel, and I think I could identify the individual stones. I weighed each one separately and the whole group together, and I made certain notes about them of which I have given a copy to the police.”

“Was anything taken besides the diamonds?”

“Nothing, not even the paper. The thief must have just grabbed up the stones and put them loose in his pocket.”

This completed Mr. Kempster's evidence. Some of the jury would have liked more detailed particulars of the diamonds, but the coroner reminded them gently that the inquiry was concerned, not with the robbery but with the death of Constable Alfred Murray. As there were no other questions, the depositions were read and signed and the witness was released.

Following the chronological sequence, I succeeded Mr. Kempster, and, like him, opened my evidence with a narrative statement. But I need not repeat this, or the examination that amplified it, as I have already told the story of my connection with the case. Nor need I record Constable Webb’s evidence, which was mainly a repetition of Kempster's. When the constable had retired, the name of Dr. James Tansley was called and the surgeon whom I had met at the hospital came forward.

“You have made an examination of the body of deceased,” said the coroner when the preliminary questions had been answered. “Will you tell us what condition you found?”

“On external examination,” the witness replied, “I found a deep depression in the skull two and a quarter inches in diameter starting from a point an inch and a half above the left ear, and a contused wound an inch and three quarters in length. The wound and the depressed fracture of the skull both appeared to have been produced by a heavy blow from some blunt instrument. There was no sign of more than one blow. On removing the cap of the skull I found that the inner table—that is, the hard inner layer of the skull—had been shattered and portions of it driven into the substance of the brain, causing severe lacerations. It had also injured one or two arteries and completely divided one, with the result that extensive bleeding had occurred between the skull and the brain, and this would have produced great pressure on the surface of the brain.”

“What would you say was the cause of death?”

“The immediate cause of death was laceration and compression of the brain, but, of course, the ultimate cause was the blow on the head which produced those injuries.”

“It is a mere formality, I suppose, to ask whether the injury could have been self-inflicted?”

“Yes. It is quite impossible that the blow could have been struck by deceased himself.”

This was the substance of the doctor's evidence. When it was concluded and the witness had been released, the name of Inspector Charles Roberts was called, and that officer took his place by the table. Like the preceding witnesses, he began, at the coroner’s invitation, with a general statement.

“No, but I shouldn’t, in the dining room. The sash slides up easily and I have all the sash pulleys of my windows kept oiled to prevent them from squeaking.”

“Were the diamonds in an accessible position?”

“Yes, quite. They were lying, all together, on a square of black velvet on the table.”

“Were they of any considerable value?”

“They were, indeed. The whole parcel would be worth about ten thousand pounds. There were fifteen of them, and they were all very exceptional stones.”

“Would you be able to recognize them if they could be traced?”

“I could easily identify the complete parcel, and I think I could identify the individual stones. I weighed each one separately and the whole group together, and I made certain notes about them of which I have given a copy to the police.”

“Was anything taken besides the diamonds?”

“Nothing, not even the paper. The thief must have just grabbed up the stones and put them loose in his pocket.”

This completed Mr. Kempster's evidence. Some of the jury would have liked more detailed particulars of the diamonds, but the coroner reminded them gently that the inquiry was concerned, not with the robbery but with the death of Constable Alfred Murray. As there were no other questions, the depositions were read and signed and the witness was released.

Following the chronological sequence, I succeeded Mr. Kempster, and, like him, opened my evidence with a narrative statement. But I need not repeat this, or the examination that amplified it, as I have already told the story of my connection with the case. Nor need I record Constable Webb’s evidence, which was mainly a repetition of Kempster's. When the constable had retired, the name of Dr. James Tansley was called and the surgeon whom I had met at the hospital came forward.

“You have made an examination of the body of deceased,” said the coroner when the preliminary questions had been answered. “Will you tell us what condition you found?”

“On external examination,” the witness replied, “I found a deep depression in the skull two and a quarter inches in diameter starting from a point an inch and a half above the left ear, and a contused wound an inch and three quarters in length. The wound and the depressed fracture of the skull both appeared to have been produced by a heavy blow from some blunt instrument. There was no sign of more than one blow. On removing the cap of the skull I found that the inner table—that is, the hard inner layer of the skull—had been shattered and portions of it driven into the substance of the brain, causing severe lacerations. It had also injured one or two arteries and completely divided one, with the result that extensive bleeding had occurred between the skull and the brain, and this would have produced great pressure on the surface of the brain.”

“What would you say was the cause of death?”

“The immediate cause of death was laceration and compression of the brain, but, of course, the ultimate cause was the blow on the head which produced those injuries.”

“It is a mere formality, I suppose, to ask whether the injury could have been self-inflicted?”

“Yes. It is quite impossible that the blow could have been struck by deceased himself.”

This was the substance of the doctor's evidence. When it was concluded and the witness had been released, the name of Inspector Charles Roberts was called, and that officer took his place by the table. Like the preceding witnesses, he began, at the coroner’s invitation, with a general statement.

“On receiving Constable Webb's report, as the Chief Constable was absent, I ordered the sergeant to get out the ambulance and I collected a search party to go with it. When we arrived at the spot where the deceased was lying, I saw him transferred to the ambulance under the doctor’s supervision, and when it had gone, I took my party into the wood. Each member of the party was provided with a powerful flashlight, so that we had a good light to work by.

“We saw no sign of anyone hiding in the wood, but near the path we found deceased's helmet. It was uninjured and had probably been knocked off by a branch of a tree. We searched especially for deceased’s truncheon and eventually found it quite near to the place where he had been lying. I picked it up by the wrist strap at the end of the handle and carried it in that way until we reached the station, when I examined it carefully and could see that there were several finger-prints on it. I did not attempt to develop the prints, but hung up the truncheon by its strap in a cupboard, which I locked. On the following morning I delivered the key of the cupboard to the Chief Constable when I made my report.”

“Did you find any traces of the fugitive?”

“No. We went down to the gate and found marks there on the earth where the bicycle had stood; and we could see where it had been wheeled off on to the road. But we were unable to make out any visible tracks on the road itself.”

“Has the bicycle been traced since then?”

“Yes. Two days after the robbery it was found hidden in a cart shed near the London Road, about three miles from Clay
Wood, towards London. I went over it carefully with developing powder to see if there were any finger-prints on it, but, although there were plenty of finger-marks, they were only smears and quite unidentifiable.”

This was the sum of the inspector’s evidence; and as there were no questions, the officer was released and was succeeded by Chief Constable Herbert Parker, who took up and continued the inspector’s account of the dead constable’s truncheon.

“The key of the cupboard at the police station was delivered to me by Inspector Roberts as he has deposed. I unlocked the cupboard and took out the truncheon, which I examined in a good light with the aid of a magnifying lens. I could see that there were, on the barrel of the truncheon, several finger-prints; and by their position and grouping, I judged that they had been made by the thief when he snatched the truncheon out of deceased’s hand. They were quite distinct on the polished surface, but not sufficiently so to photograph without development; and I did not attempt to develop them because I thought that, having regard to their importance, it would be better to hand the truncheon intact to the experts at Scotland Yard. Accordingly, I packed the truncheon in such a way that the marked surfaces should be protected from any contact and took it up to the finger-print department at Scotland Yard, where I delivered it to the Chief Inspector, who examined it and developed the fingerprints with a suitable powder.

“It was then seen that there were four decipherable prints, evidently those of a left hand; one was a thumb-print and was perfectly clear, and the others, of the first three fingers, though less perfect, were quite recognizable. As soon as they had been developed, they were photographed; and when the photographs were ready, they were handed to the expert searchers who took them to the place where the collections are kept and went through the files with them. The result of the search was to make it certain that no such finger-prints were in any of the files; neither in those of the main collection nor in those containing single finger-prints.”

“And what does that amount to?”

“It amounts to this: that, since these finger-prints are not in the principal files—those containing the complete sets taken by prison officers—it is certain that this man has never been convicted; and since they are not in the single finger-print files, there is no evidence that he has ever been connected with any crime. In short—so far as the finger-prints are concerned—this man is not known to the police.”

“That is very unfortunate,” said the coroner. “It would seem as if there were practically no chance of ever bringing the crime home to him.”

“There is little,” he began, “that I need say to you, members of the jury. You have heard the evidence, and the evidence tells the whole sad story. I do not suppose that you will have any doubt that the gallant officer whose tragic and untimely death is the subject of this inquiry, was killed by the runaway thief. But I have to point out to you that if that is your decision, you are legally bound to find a verdict of wilful murder against that unknown man. The law is quite clear on the subject. If any person, while engaged in committing a felony, and in furtherance of such felony, kills, or directly causes the death of any other person, he is guilty of wilful murder, whether he did or did not intend to kill that person.

“Now, there is no evidence that this fugitive desired or intended to kill the constable. But he dealt him a blow which might have killed him and which, in fact, did kill him; and the fugitive was at the time engaged in committing a felony. Therefore, he is guilty of wilful murder. That is all, I think, that I need say.”

The jury had apparently already made up their minds on the subject, for after but the briefest whispered consultation with them, the foreman announced that they had agreed on their verdict.

“We find,” he continued as the coroner took up his pen, “that deceased was murdered in Clay Wood by the unknown man who entered Mr. Kempster’s house to commit a robbery.”

The coroner nodded. “Yes,” he said, “I am in entire agreement with you and I shall record a verdict of wilful murder against that unknown man; and I am sure you will concur with me in expressing our deepest sympathy with the family of this gallant officer whose life was sacrificed in the performance of a dangerous duty.”

Thus, gloomily enough, ended the adventure that had brought me for the first time into intimate contact with serious crime. At least, it appeared to me that the adventure was at an end and that I had heard the last of the tragedy and of the sinister, shadowy figure that must have passed so near to me on the margin of the wood. It was a natural belief, since I had played but a super’s part in the drama and seemed to be concerned with it no more, and since my connection with Newington and its inhabitants would cease when my principal. Dr. Wilson, should return from his holiday.

But it was, nevertheless, a mistaken belief, as will appear at a later stage of this narrative.
CHAPTER 3. — PETER GANNET

A PROBLEM that has occasionally exercised my mind is that of the deterioration of London streets. Why do they always deteriorate and never improve? The change seems to be governed by some mysterious law. Constantly we meet with streets, once fashionable but now squalid, whose spacious houses have fallen from the estate of mansions, tenanted by the rich and great, to that of mere tenements giving shelter to all grades of the poverty-stricken, from the shabby genteel to the definitely submerged; streets where the vanished coaches have given place to the coster’s barrow and the van of the yelling coal vendor. But never, in my experience, does one encounter a street that has undergone a change in the reverse direction; that has evolved from obscurity to fashion, from the shabby to the modish.

The reflection is suggested to me by the neighbourhood in which I had recently taken up my abode, on the expiration of my engagement at Newingstead. Not that Osnaburgh Street, Marylebone, could fairly be described as squalid. On the contrary, it is a highly respectable street. Nevertheless, its tall, flat-faced houses with their spacious rooms and dignified doorways are evidently survivors from a more opulent past, and the whole neighbourhood shows traces of the curious subsidence that I have referred to.

The occasion of my coming to Osnaburgh Street was the purchase by me of a “death vacancy”; very properly so described, for there was no doubt of the decease of my predecessor, and the fact of the vacancy became clearly established as I sat, day after day, the undisturbed and solitary occupant of the consulting room, incredulously turning over the pages of the old ledgers and wondering whether the names inscribed therein might perchance appertain to mythical persons, or whether those patients could, with one accord, have followed the late incumbent to his destination in Heaven or Gehenna.

Yet there were occasional calls or messages, at first from casual strangers or newcomers to the district; but presently, by introduction and recommendation, the vacancy grew into a visible “nucleus,” which, expanding by slow degrees, seemed to promise an actual practice in the not too distant future. The hours of solitary meditation in the consulting room began more frequently to be shortened by welcome interruptions, and my brisk, business-like walks through the streets to have some purpose other than mere geographical exploration.

Principally my little practice grew, as I have said, by recommendation. My patients seemed to like me and mentioned the fact to their friends; and thus it was that I made the acquaintance of Peter Gannet. I remember the occasion very clearly, though it seemed so insignificant at the time. It was a gloomy December morning, some three months after my departure from Newingstead, when I set forth on my “round” (of one patient), taking a short cut to Jacob Street, Hampstead Road, through the by-streets behind Cumberland Market and contrasting the drab little thoroughfares with the pleasant lanes around Newingstead. Jacob Street was another instance of the “law of decay” which I have mentioned. Now at the undeniably shabby genteel stage, it had formerly been the chosen resort of famous and distinguished artists. But its glory was not utterly departed; for, as several of the houses had commodious studios attached to them, the population still included a leavening of artists, though of a more humble and unpretentious type. Mr. Jenkins, the husband of my patient, was a monumental mason, and from the bedroom window I could see him in the small yard below, chipping away at a rather florid marble headstone.

The introduction came when I had finished my leisurely visit and was about to depart.

“Before you go, Doctor,” said Mrs. Jenkins, “I must give you a message from my neighbour, Mrs. Gannet. She sent her maid in this morning to say that her husband is not very well and that she would be glad if you would just drop in and have a look at him. She knows that you are attending me and that they’ve got no doctor of their own. It’s next door but one; Number 12.”

I thanked her for the introduction, and, having wished her good morning, let myself out of the house and proceeded to Number 12, approaching it slowly to take a preliminary glance at the premises. The result of the inspection was satisfactory as an index to the quality of my new patient, for the house was in better repair than most of its neighbours and the bright brass knocker and door-knob and the whitened door-step suggested a household rather above the general Jacob Street level. At the side of the house was a wide, two-leaved gate with a wicket, at which I glanced inquisitively. It seemed to be the entrance to a yard or factory, adapted to the passage of trucks or vans, but it clearly belonged to the house, for a bell-pull on the jamb of the gate had underneath it a small brass plate bearing the inscription, “P. Gannet.”

In response to my knock, the door was opened by a lanky girl of about eighteen with long legs, a short skirt, and something on her head which resembled a pudding cloth. When I had revealed my identity, she conducted me along a tiled hall to a door, which she opened, and having announced me by name, washed her hands of me and retired down the kitchen stairs.

The occupant of the room, a woman, of about thirty-five, rose as I entered and laid down some needlework on a side table.

“Am I addressing Mrs. Gannet?” I asked.

“Yes,” she replied. “I am Mrs. Gannet. I suppose Mrs. Jenkins gave you my message?”

“Yes. She tells me—which I am sorry to hear—that your husband is not very well.”

“He is not at all well,” said she, “though I don’t think it is anything that matters very much, you know.”
“I expect it matters to him,” I suggested.

“I suppose it does,” she agreed. “At any rate, he seems rather sorry for himself. He is sitting up in his bedroom at present. Shall I show you the way? I think he is rather anxious to see you.”

I held the door open for her, and when she passed through, I followed her up the stairs, rapidly sorting out my first impressions. Mrs. Gannet was a rather tall, slender woman with light brown hair and slightly chilly blue eyes. She was decidedly good-looking but yet I did not find her prepossessing. Comely as her face undoubtedly was, it was not—at least to me—a pleasant face. There was a tinge of petulance in its expression, a faint suggestion of unamiability. And I did not like the tone in which she had referred to her husband.

Her introduction of me was as laconic as that of her maid. She opened the bedroom door and standing at the threshold, announced:

“Here’s the doctor.” Then, as I entered, she shut me in and departed.

“Well, Doctor,” said the patient, “I’m glad to see you. Pull up a chair to the fire and take off your overcoat.”

I drew a chair up to the fire gladly enough, but I did not adopt the other suggestion; for already I had learned by experience that the doctor who takes off his overcoat is lost. Forthwith he becomes a visitor and his difficulties in making his escape are multiplied indefinitely.

“So you are not feeling very well?” said I, by way of opening the proceedings.

“I’m feeling devilish ill,” he replied. “I don’t suppose it’s anything serious, but it’s deuced unpleasant. Little Mary in trouble, you know.”

I didn’t know, not having heard the expression before, and I looked at him inquiringly, and probably rather vacantly.

“Ha!” said I, with sudden comprehension. “You are suffering from abdominal pain. Is it bad?”

“Is it ever good?” he demanded, with a sour grin.

“It certainly is never pleasant,” I admitted. “But is the pain severe?”

“Sometimes,” he replied. “It seems to come and go—Whoo!”

A change of facial expression indicated that, just now, it had come. Accordingly, I suspended the conversation until conditions should be more favourable, and, meanwhile, inspected my patient with sympathetic interest. He was not as good-looking as his wife, and his appearance was not improved by a rather deep scar which cut across his right eyebrow, but he made a better impression than she; a strongly-built man, though not large, so far as I could judge, seeing him sitting huddled in his easy chair, of a medium complexion and decidedly lean. He wore his hair rather long and had a well-shaped moustache and a Vandyke beard. Indeed, his appearance in general was distinctly Vandykish, with his brown velveteen jacket, his open, deep-pointed collar, and the loose bow with drooping ends which served as a necktie. I also noted that his eyes looked red and irritable like those of a long-sighted person who is in need of spectacles.

“Pff!” he exclaimed after a spell of silence. “That was a bit of a twister, but it’s better now. Going to have a lucid interval, I suppose.”

Thereupon I resumed the conversation, which, however, I need not report in detail. I had plenty of time and could afford to encourage him to enlarge on his symptoms, the possible causes of his illness, and his usual habits and mode of life. And as he talked, I looked about me, bearing in mind the advice of my teacher, Dr. Thorndyke, to observe and take note of a patient’s surroundings as a possible guide to his personality. In particular I inspected the mantelpiece which confronted me and considered the objects on it in their possible bearings on my patient’s habits and life history.

They were rather curious objects; examples of pottery of a singularly uncouth and barbaric type which I set down as the gleanings gathered in the course of travel in distant lands among primitive and aboriginal peoples. There were several bowls and jars, massive, rude and unshapely, of a coarse material like primitive stoneware, and presiding over the whole collection, a crudely modeled effigy of similar material, apparently the artless representation of some forest deity, or, perhaps a portrait of an aboriginal man. The childish crudity of execution carried my thoughts to Darkest Africa or the Ethnographical galleries of the British Museum, or to those sham primitive sculptures which have recently appeared on some of the public buildings in London. I looked again at Mr. Gannet and wondered whether his present trouble might be the aftermath of some tropical illness contracted in the forests or jungles where he had collected these strange and not very attractive curios.

Fortunately, however, I did not put my thoughts into words, but in pursuance of another of Dr. Thorndyke’s precepts to “let the patient do most of the talking,” listened attentively while Mr. Gannet poured out the tale of his troubles. For, presently, he remarked, after a pause:

“And it isn’t only the discomfort. It’s such a confounded hindrance. I want to get on with my work.”

“By the way, what is your work?” I asked.

“I am a potter,” he replied.
“A potter!” I repeated. “I didn’t know that there were any pottery works in London—except, of course, Doultons.”

“I am not attached to any pottery works,” said he. “I am an artist potter, an individual worker. The pieces that I make are what is usually called studio pottery. Those are some of my works on the mantelpiece.”

In the vulgar phrase, you could have knocked me down with a feather. For the moment I was bereft of speech and could only sit like a fool, gazing round-eyed and agape at these amazing products of the potter’s art, while Gannet observed me gravely, and, I thought, with slight disfavour.

“Possibly,” he remarked, “you find them a little over-simplified.”

It was not the expression that I should have used, but I grasped at it eagerly.

“I think I had that feeling at the first glance,” I replied; “that and the—er—the impression that perhaps—ha—in the matter of precision and—er—symmetry—that is, to an entirely inexpert eye—er—”

“Exactly!” he interrupted. “Precision and symmetry are what the inexpert eye looks for. But they are not what the artist seeks. Mechanical accuracy he can leave to the ungifted toiler who tends a machine.”

“I suppose that is so,” I agreed. “And the—” I was about to say “image” but hastily corrected the word to “statuette”—“that is your work, too?”

“The figurine,” he corrected; “yes, that is my work. I was rather pleased with it when I had it finished. And apparently I was justified, for it was extremely well received. The art critics were quite enthusiastic, and I sold two replicas of it for fifty guineas each.”

“That was very satisfactory,” said I. “It is a good thing to have material reward as well as glory. Did you give it any descriptive title?”

“No,” he replied. “I am not like those anecdote painters who must have a title for their pictures. I just called it ‘Figurine of a monkey.’”

“Of a—oh, yes. Of a monkey. Exactly!”

I stood up, the better to examine it and then discovered that its posterior aspect bore something like a coil of garden hose, evidently representing a tail. So it obviously was a monkey and not a woodland god. The tail established the diagnosis; even as, in those sculptures that I have mentioned, the absence of a tail demonstrates their human character.

“And I suppose,” said I, “you always sign your works?”

“Certainly,” he replied. “Each piece bears my signature and a serial number; and, of course, the number of copies of a single piece is rigidly limited. You will see the signature on the base.”

With infinite care and tenderness, I lifted the precious figurine and inverted it to examine the base, which I found to be covered with a thick layer of opaque white glaze, rather out of character with the rough grey body but excellent for displaying the signature. The latter was in thin blue lines as if executed with a pen and consisted of something resembling a bird, supported by the letters, “P.G.” and underneath, “Op. 571 A.”

“The goose is, I suppose,” said I, “your sign manual or personal mark—it is a goose, isn’t it?”

“No,” he replied, a little testily. “It’s a gannet.”

“Of course it is,” I agreed, hastily. “How dull of me not to recognize your rebus, though a gannet is not unlike a goose.”

He admitted this, and watched me merely as I replaced the masterpiece on the little square of cloth which protected it from contact with the marble shelf. Then it occurred to me that perhaps I had stayed long enough, and as I buttoned my overcoat, I reverted to professional matters with a few parting remarks.

“Well, Mr. Gannet, you needn’t be uneasy about yourself. I shall send you some medicine which I think will soon put you right. But if you have much pain, you had better try some hot fomentations or a hot water bottle—a rubber one, of course; and you would probably be more comfortable lying down.”

“It’s more comfortable sitting by the fire,” he objected; and as it appeared that he was the best judge of his own comfort, I said no more, but having shaken hands, took my departure.

As I was descending the stairs, I met a man coming up; a big man who wore a monocle and was carrying a glass jug. He stopped for a moment when he came abreast, and explained:

“I am just taking the invalid some barley water. I suppose that is all right? He asked for it.”

“Certainly,” I replied. “A most suitable drink for a sick person.”

“I’ll tell him so,” said he, and with this we went our respective ways.

When I reached the hall, I found the dining room door open, and as Mrs. Gannet was visible within, I entered to make my report and give a few directions, to which she listened attentively though with no great appearance of concern. But she promised to see that the patient should take his medicine regularly, and to keep him supplied with hot water bottles, “though,” she added, “I don’t expect that he will use them. He is not a very tractable invalid.”

“Well, Mrs. Gannet,” said I, pulling on my gloves, “we must be patient. Pain is apt to make people irritable. I shall hope
to find him better tomorrow. Good morning!"

At intervals during the day, my thoughts reverted to my new patient, but not, I fear, in the way that they should have done. For it was not his abdomen—which was my proper concern—that occupied my attention but his queer pottery and above all, the unspeakable monkey. My reflections oscillated between frank incredulity and an admission of the possibility that these pseudo-barbaric works might possess some subtle quality that I had failed to detect. Yet I was not without some qualifications for forming a judgment, for mine was a distinctly artistic family. Both my parents could draw, and my maternal uncle was a figure painter of some position who, in addition to his pictures, executed small, unpretentious sculptures in terra-cotta and bronze; and I had managed, when I was a student, to spare an evening a week to attend a life class. So I, at least, could draw, and knew what the human figure was like; and when I compared my uncle's graceful, delicately-finished little statuettes with Gannet's uncouth effigy, it seemed beyond belief that this latter could have any artistic quality whatever.

Yet it doesn't do to be too cocksure. It is always possible that one may be mistaken. But yet, again, it doesn't do to be too humble and credulous; for the simple, credulous man is the natural prey of the quack and the impostor. And the quack and the impostor flourish in our midst. The post-war twentieth century seems to be the golden age of "bunk."

So my reflections went around and around and brought me to no positive conclusion; and meanwhile, poor Peter Gannet's abdomen received less attention than it deserved. I assumed that a dose or two of bismuth and soda, with that fine old medicament, once so overrated and now rather under-valued—Compound Tincture of Cardamoms—would relieve the colicky pains and set the patient on the road to recovery; and having dispatched the mixture, I dismissed the medical aspects of the case from my mind.

But the infallible mixture failed to produce the expected effect, for when I called on the following morning, the patient's condition was unchanged. Which was disappointing (especially to him) but not disturbing. There was no suspicion of anything serious; no fever and no physical signs suggestive of appendicitis or any other grave condition, I was not anxious about him, nor was he anxious about himself, though slightly outspoken on the subject of the infallible mixture, which I promised to replace by something more effectual, repeating my recommendations as to hot water bottles or fomentations.

The new treatment, however, proved no better than the old. At my third visit I found my patient in bed, still complaining of pain and in a state of deep depression. But even now, though the man looked definitely ill, neither exhaustive questioning nor physical examination threw any light either on the cause or the exact nature of his condition. Obviously, he was suffering from severe gastro-intestinal catarrh. But why he was suffering from it, and why no treatment gave him any relief, were mysteries on which I pondered anxiously as I walked home from Jacob Street, greatly out of conceit with myself and inclined to commiserate the man who had the misfortune to be my patient.
CHAPTER 4. — DR. THORNDYKE TAKES A HAND

It was on the sixth day of my attendance on Mr. Gannet that my vague but increasing anxiety suddenly became acute. As I sat down by the bedside and looked at the drawn, haggard, red-eyed face that confronted me over the bedclothes, I was seized by something approaching panic. And not without reason. For the man was obviously ill—very ill—and was getting worse from day to day; and I had to admit—and did admit to myself—that I was completely in the dark as to what was really the matter with him. My diagnosis of gastro-enteritis was, in effect, no diagnosis at all. It was little more than a statement of the symptoms; and the utter failure of the ordinary empirical treatment convinced me that there was some essential element in the case which had completely eluded me.

It was highly disturbing. A young, newly established practitioner cannot afford to make a hash of a case at the very outset of his career, as I clearly realized, though to do myself justice, I must say that this was not the consideration that was uppermost in my mind. What really troubled me was the feeling that I had failed in my duty towards my patient and in ordinary professional competence. My heart was wrung by the obvious suffering of the quiet, uncomplaining man who looked to me so pathetically for help and relief—and looked in vain. And then there was the further, profoundly disquieting consideration that the man was now very seriously ill and that if he did not improve, his condition would presently become actually dangerous.

“Well, Mr. Gannet,” I said, “we don’t seem to be making much progress. I am afraid you will have to remain in bed for the present.”

“There’s no question about that, Doctor,” said he, “because I can’t get out, at least I can’t stand properly if I do. My legs seem to have gone on strike and there is something queer about my feet; sort of pins and needles, and a dead kind of feeling, as if they had got a coat of varnish over them.”

“But,” I exclaimed, concealing as well as I could my consternation at this fresh complication, “you haven’t mentioned this to me before.”

“I hadn’t noticed until yesterday,” he replied, “though I have been having cramps in my calves for some days. But the fact is that the pain in my gizzard occupies my attention pretty completely. It may have been coming on before I noticed it. What do you suppose it is?”

To this question I gave no direct answer. For I was not supposing at all. To me the new symptoms conveyed nothing more than fresh and convincing evidence that I was completely out of my depth. Nevertheless, I made a careful examination which established the fact that there was an appreciable loss of sensibility in the feet and some abnormal conditions of the nerves of the legs. Why there should be I had not the foggiest idea, nor did I make any great effort to unravel the mystery; for these new developments brought to a definite decision a half-formed intention that I had been harbouring for the last day or two.

I would seek the advice of some more experienced practitioner. That was necessary as a matter of common honesty, to say nothing of humanity. But I had hesitated to suggest a second opinion since that would not only have involved the frank admission that I was graved—a most impolitic proceeding in the case of a young doctor—but it would have put the expense of the consultant’s fee on the patient; whereas I felt that, since the need for the consultation arose from my own incompetence, the expense should fall upon me.

“What do you think, Doctor, of my going into a nursing home?” he asked, as I resumed my seat by the bed.

I rather caught at the suggestion, for it seemed to make my plan easier to carry out.

“THERE IS SOMETHING TO BE SAID FOR A NURSING HOME,” I replied. “You would be able to have more constant and skilled attention.”

“That is what I was thinking,” said he; “and I shouldn’t be such a damned nuisance to my wife.”

“Yes,” I agreed, “there’s something in that. I will think about your idea and make a few inquiries; and I will look in again later in the day and let you know the result.”

With this I rose, and having shaken his hand, took my departure, closing the door audibly and descending the stairs with a slightly heavy tread to give notice of my approach to the hall. When I arrived there, however, I found no sign of Mrs. Gannet and the dining room door was shut; and glancing towards the hat-rack on which my hat was awaiting me, I noted another hat upon an adjoining peg and surmised that it possibly accounted for the lady’s non-appearance. I had seen that hat before. It was a somewhat dandified velour hat which I recognized as appertaining to a certain Mr. Boles—the man whom I had met on the stairs at my first visit and had seen once or twice since—a big, swaggering, rather good-looking young man with a noisy, bullying manner and a tendency to undue familiarity. I had disliked him at sight. I resented his familiarity, I suspected his monacle of a merely ornamental function, and I viewed with faint disapproval his relations with Mrs. Gannet—though, to be sure, they were some sort of cousins, as I had understood from Gannet, and he obviously knew all about their friendship.

So it was no affair of mine. But still, the presence of that hat gave me pause. It is awkward to break in on a tete-a-tete. However, my difficulty was solved by Boles himself, who opened the dining room door a short distance, thrust out his head, and surveyed me through his monacle—or perhaps with the less-obstructed eye.
“Thought I heard you sneaking down, Doc,” said he. “How’s the sufferer? Aren’t you coming in to give us the news?”

I should have liked to pull his nose. But a doctor must learn early to control his temper—especially in the case of a man of Boles’s size. As he held the door open, I walked in and made my bow to Mrs. Gannet, who returned my greeting without putting down her needlework. Then I delivered my report, briefly and rather vaguely, and opened the subject of the nursing home. Instantly, Boles began to raise objections.

“Why on earth should he go to a nursing home?” he demanded. “He is comfortable enough here. And think of the expense.”

“It was his own suggestion,” said I, “and I don’t think it a bad one.”

“No,” said Mrs. Gannet. “Not at all. He would get better attention there than I can give him.”

There followed something like a wrangle between the two, to which I listened impassively, inwardly assessing their respective motives. Obviously the lady favoured the prospect of getting the invalid off her hands, while as to Boles, his opposition was due to mere contrariety; to an instinctive impulse to object to anything that I might propose.

Of course, the lady had her way—and I had intended to have mine in any case. So, when the argument had petered out, I took my leave with a promise to return some time later to report progress.

As I turned away from the house, I rapidly considered the position. I had no further visits to make, so for the present, my time was my own; and as my immediate purpose was to seek the counsel of some more experienced colleague, and as my hospital was the most likely place in which to obtain such counsel, I steered a course for the nearest bus route by which I could travel to its neighbourhood. There, having boarded the appropriate omnibus, I was presently delivered at the end of the quiet street in which St. Margaret’s Hospital is situated.

It seemed but a few months since I had reluctantly shaken from my feet the dust of that admirable institution and its pleasant, friendly medical school, and now, as I turned into the familiar street, I looked about me with a certain wistfulness as I recalled the years of interesting study and companionship that I had spent here as I slowly evolved from a raw freshman to a fully qualified practitioner. And as, approaching the hospital, I observed a tall figure emerge from the gate and advance towards me, the sight brought back to me one of the most engrossing aspects of my life as a student. For the tall man was Dr. John Thorndyke, a lecturer on Medical Jurisprudence, perhaps the most brilliant and the most popular member of the teaching staff.

As we approached, Dr. Thorndyke greeted me with a genial smile and held out his hand.

“I think,” said he, “this is the first time we have met since you fluttered out of the nest.”

“We used to call it the incubator,” I remarked.

“I think ‘nest’ sounds more dignified,” he rejoined. “There is something rather embryonic about an incubator. And how do you like general practice?”

“Oh, well enough,” I replied. “Of course, it isn’t as thrilling as hospital practice—though mine happens, at the moment, to be a bit more full of thrills than I care for.”

“That sounds as if you were having some unpleasant experiences.”

“I am,” said I. “The fact is that I am up a tree. That is why I am here. I am going to the hospital to see if one of the older hands can give me some sort of tip.”

“Very wise of you, Oldfield,” Thorndyke commented. “Would it seem impertinent if I were to ask what sort of tree it is that you are marooned in?”

“Not at all, sir,” I replied, warmly. “It is very kind of you to ask. My difficulty is that I have got a rather serious case, and I am fairly graved in the matter of diagnosis. It seems to be a pretty acute case of gastro-enteritis, but why the fellow should have got it and why none of my treatment should make any impression on it, I can’t imagine at all.”

Dr. Thorndyke’s kindly interest in an old pupil seemed to sharpen into one more definitely professional.

“The term ‘gastro-enteritis,’” said he, “covers a good many different conditions. Perhaps a detailed description of the symptoms would be a better basis for discussion.”

Thus encouraged, I plunged eagerly into a minute description of poor Gannet’s symptoms—the abdominal pain, the obstinate and distressing nausea and physical and mental depression—with some account of my futile efforts to relieve them; to all of which Dr. Thorndyke listened with profound attention. When I had finished, he reflected for a few moments and then asked:

“And that is all, is it? Nothing but the abdominal trouble? No neuritic symptoms, for instance?”

“Yes, by Jove, there are!” I exclaimed. “I forgot to mention them. He has severe cramps in his calves and there is quite distinct numbness of the feet with loss of power in the legs; in fact, he is hardly able to stand, at least so he tells me.”

Dr. Thorndyke nodded, and after a short pause, asked:

“And as to the eyes—anything unusual about them?”
“Well,” I replied, “they are rather red and watery, but he put that down to reading in a bad light; and then he seems to have a slight cold in his head.”

“You haven’t said anything about the secretions,” Dr. Thorndyke remarked. “I suppose you made all the routine tests?”

“Oh yes,” I replied, “most carefully. But there was nothing in the least abnormal; no albumen, no sugar, nothing out of the ordinary.”

“I take it,” said Thorndyke, “that it did not occur to you to try Marsh’s test?”

“Marsh’s test!” I repeated, gazing at him in dismay. “Good Lord, no! The idea never entered my thick head. And you think it may actually be a case of arsenic poisoning?”

“It is certainly a possibility,” he replied. “The complex of symptoms that you have described is entirely consistent with arsenic poisoning, and it doesn’t appear to me to be consistent with anything else.”

I was thunderstruck. But yet no sooner was the suggestion made than its obviousness seemed to stare me in the face.

“Of course!” I exclaimed. “It is almost a typical case. And to think that I never spotted it, after attending all your lectures, too! I am a fool. I am not fit to hold a diploma.”

“Nonsense, Oldfield,” said Thorndyke, “you are not exceptional. The general practitioner nearly always misses a case of poisoning. Quite naturally. His daily experience is concerned with disease, and as the effects of a poison simulate disease, he is almost inevitably misled. He has, by habit, acquired an unconscious bias towards what we may call normal illness; whereas an outsider, like myself, coming to the case with an open mind, or even a bias towards the abnormal, is on the lookout for suspicious symptoms. But we mustn’t rush to conclusions. The first thing is to establish the presence or absence of arsenic. That would be a good deal easier if we had him in hospital, but I suppose there would be some difficulty —”

“There would be no difficulty at all, sir,” said I. “He has asked me to arrange for him to go to a nursing home.”

“Has he?” said Thorndyke. “That almost seems a little significant; I mean that there is a slight suggestion of some suspicions on his own part. But what would you like to do? Will you make the test yourself, and carry on, or would you like me to come along with you and have a look at the patient?”

“It would be an enormous relief to me if you would see him, sir,” I replied, “and it is awfully good of you to—”

“Not at all,” said Thorndyke. “The question has to be settled, and settled without delay. In a poisoning case, the time factor may be vital. And if we should bring in a true bill, he should be got out of that house at once. But you understand, Oldfield, that I come as your friend. My visit has no financial implications.”

I was disposed to protest, but he refused to discuss the matter, pointing out that no second opinion had been asked for by the patient. “But,” he added, “we may want some reagents. I had better run back to the hospital and get my research case, which I had left to be called for, and see that it contains all that we are likely to need.”

He turned and retraced his steps to the hospital where he entered the gateway, leaving me to saunter up and down the forecourt. In a few minutes he came out, carrying what looked like a small suitcase covered with green Willesden canvas; as there happened to to be a disengaged taxi at the main entrance, where it had just set down a passenger, Thorndyke chartered it forthwith. When I had given the driver the necessary directions, I followed my senior into the interior of the vehicle and slammed the door.

During the journey Dr. Thorndyke put a few discreet questions respecting the Gannet household, to which I returned correspondingly discreet answers. Indeed, I knew very little about the three persons—or four, including Boles—of whom it consisted and I did not think it proper to eke out my slender knowledge with surmises. Accordingly I kept strictly to the facts actually known to me, leaving him to make his own inferences.

“Do you know who prepares Gannet’s food?” he asked.

“To the best of my belief,” I replied, “Mrs. Gannet does all the cooking. The maid is only a girl. But I am pretty sure that Mrs. Gannet prepares the invalid’s food; in fact, she told me that she did. There isn’t much of it, as you may imagine.”

“What is Gannet’s business or profession?”

“I understand that he is a potter; an artist potter. He seems to specialize in some sort of stoneware. There are one or two pieces of his in the bedroom.”

“And where does he work?”

“He has a studio at the back of the house; quite a big place, I believe, though I haven’t seen it. But it seems to be bigger than he needs, as he lets Boles occupy part of it. I don’t quite know what Boles does, but I fancy it is something in the goldsmithing and enamelling line.”

Here, as the taxi turned from Euston Road into Hampstead Road, Thorndyke glanced out of the window and asked:

“Did I hear you mention Jacob Street to the driver?”

“Yes, that is where Gannet lives. Rather a seedy-looking street. You don’t know it, I suppose?”
"It happens that I do," he replied. "There are several studios in it, relics of the days when it was a more fashionable neighbourhood. I knew the occupant of one of the studios. But here we are, I think, at our destination."

As the taxi drew up at the house, we got out and he paid the cabman while I knocked at the door and rang the bell. Almost immediately the door was opened by Mrs. Gannet herself, who looked at me with some surprise and with still more at my companion. I hastened to anticipate questions by a tactful explanation.

"I've had a bit of luck, Mrs. Gannet. I met Dr. Thorndyke, one of my teachers at the hospital, and when I mentioned to him that I had a case which was not progressing very satisfactorily, he very kindly offered to come and see the patient and give me the benefit of his great experience."

"I hope we shall all benefit from Dr. Thorndyke's kindness," said Mrs. Gannet, with a smile and a bow to Thorndyke, "and most of all my poor husband. He has been a model of patience, but it has been a weary and painful business for him. You know the way up to his room."

While we were speaking, the dining room door opened softly and Boles's head appeared in the space, adorned with the inevitable eye-glass through which he inspected Thorndyke critically and was not, himself, entirely unobserved by the latter. But the mutual inspection was brief, for I immediately led the way up the stairs and was closely followed by my senior.

As we entered the sickroom after a perfunctory knock at the door, the patient raised himself in bed and looked at us in evident surprise. But he asked no question, merely turning to me interrogatively; whereupon I proceeded at once concisely to explain the situation "It is very good of Dr. Thorndyke," said Gannet, "and I am most grateful and pleased to see him, for I don't seem to be making much progress. In fact, I seem to be getting worse."

"You certainly don't look very flourishing," said Thorndyke, "and I see that you haven't taken your arrowroot, or whatever it is."

"No," said Gannet, "I tried to take some, but I couldn't keep it down. Even the barley water doesn't seem to agree with me, though I am parched with thirst. Mr. Boles gave me a glassful when he brought it up with the arrowroot but I've been uncomfortable ever since. Yet you'd think that there couldn't be much harm in barley water."

While the patient was speaking, Thorndyke looked at him thoughtfully as if appraising his general appearance, particularly observing the drawn, anxious face and the red and watery eyes. Then he deposited his research case on the table, and remarking that the latter was rather in the way, carried it, with my assistance, away from the bedside over to the window, and in place of it drew up a couple of chairs. Having fetched a writing pad from the research case, he sat down, and without preamble, began a detailed interrogation with reference to the symptoms and course of the illness, writing down the answers in shorthand and noting all the dates. The examination elicited the statement that there had been fluctuations in the severity of the condition, a slight improvement being followed by a sudden relapse. It also transpired that the relapses, on each occasion, had occurred shortly after taking food or a considerable drink. "It seems," Gannet concluded, dismally, "as if starvation was the only possible way of avoiding pain."

I had heard all this before, but it was only now, when the significant facts were assembled by Thorndyke's skilful interrogation, that I could realize their unmistakable meaning. Thus set out they furnished a typical picture of arsenic poisoning. And so with the brief but thorough physical examination. The objective signs might have been taken from a text-book case.

"Well, Doctor," said Gannet, as Thorndyke stood up and looked down at him gravely, "what do you think of me?"

"I think," replied Thorndyke, "that you are very seriously ill and that you require the kind of treatment and attention that you cannot possibly get here. You ought to be in a hospital or a nursing home, and you ought to be removed there without delay."

"I rather suspected that myself," said Gannet; "in fact, the doctor was considering some such arrangement. I'm quite willing."

"Then," said Thorndyke, "if you agree, I can give you a private ward or a cubicle at St. Margaret's Hospital; and as the matter is urgent, I propose that we take you there at once. Could you bear the journey in a cab?"

"Oh, yes," replied Gannet, with something almost like eagerness, "if there is a chance of some relief at the end of it."

"I think we shall soon be able to make you more comfortable," said Thorndyke. "But you had better just look him over, Oldfield, to make sure that he is fit to travel."

As I got out my stethoscope to listen to the patient's heart, Thorndyke walked over to the table, apparently to put away his writing pad. But that was not his only purpose. For as I stooped over the patient with the stethoscope at my ears, I could see him (though the patient could not) carefully transferring some arrowroot from the bowl to a wide-mouthed jar. When he had filled it and put in the rubber stopper, he filled another jar from the jug of barley water and then quietly closed the research case.

Now I understood why he had moved the table away from the bed to a position in which it was out of the range of the patient's vision. Of course, the specimens of food and drink could not have been taken in Gannet's presence without an explanation, which we were not in the position to give; for although neither of us had much doubt on the subject, still, the actual presence of arsenic had yet to be proved.
“Well, Oldfield,” said Thorndyke, “do you think he is strong enough to make the journey?”

“Quite,” I replied, “if he can put up with the discomfort of traveling in a taxi.”

As to this, Gannet was quite confident, being evidently keen on the change of residence.

“Then,” said Thorndyke, “perhaps you will run down and explain matters to Mrs. Gannet; and it would be just as well to send out for a cab at once. I suppose Madame is not likely to raise objections?”

“No,” I replied. “She has already agreed to his going to a nursing home; and if she finds our methods rather abrupt, I must make her understand that the case is urgent.”

The interview, however, went quite smoothly so far as the lady was concerned, though Boles was disposed to be obstructive.

“Do you mean that you are going to cart him off to the hospital now?” he demanded.

“That is what Dr. Thorndyke proposes,” I replied.

“But why?” he protested. “You say that there is no question of an operation. Then why is he being bustled off in this way?”

“I think,” said I, “if you will excuse me, I had better see about that cab,” and I made a move towards the hall, whereupon Mrs. Gannet intervened, a little impatiently.

“Now, don’t waste time, Fred. Run along and get a taxi while I go up with the doctor and make Peter ready for the journey.”

On this, Boles rather sulkily swaggered out into the hall, and without a word, snatched down the velour hat, jammed it on his head and departed on his quest, slamming the street door after him. As the door closed, Mrs. Gannet turned towards the staircase and began to ascend and I followed, passing her on the landing to open the bedroom door.

When we entered the room, we found Thorndyke standing opposite the mantelpiece, apparently inspecting the stoneware image; but he turned, and bowing to the lady, suavely apologized for our rather hurried proceedings.

“There is no need to send any clothes with him,” said he, “as he will have to remain in bed for the present. A warm dressing-gown and one or two blankets or rugs will do for the journey.”

“Yes,” she replied. “Rugs, I think, will be more presentable than blankets.” Then turning to her husband, she asked: “Is there anything that you will want to take with you, Peter?”

“Nothing but my attache case,” he replied. “That contains all that I am likely to want, excepting the book that I am reading. You might put that in, too. It is on the small table.”

When this had been done, Mrs. Gannet proceeded to make the few preparations that were necessary while Thorndyke resumed his study of the pottery on the mantelpiece. The patient was assisted to rise and sit on the edge of the bed while he was inducted into a thick dressing gown, warm woollen socks and a pair of bedroom slippers.

“I think we are all ready, now,” said Mrs. Gannet. Then, as there seemed to be a pause in the proceedings, she took the opportunity to address a question to Thorndyke.

“Have you come to any conclusion,” she asked, “as to what it is exactly that my husband is suffering from?”

“I think,” Thorndyke replied, “that we shall be able to be more definite when we have had him under observation for a day or two.”

The lady looked a little unsatisfied with this answer—which certainly was rather evasive—as, indeed, the patient also seemed to note. But here the conversation was interrupted, providentially, by the arrival of Boles to announce that the cab was waiting.

“And now, old chap,” said he, “the question is, how are we going to get you down to it?”

That problem, however, presented no difficulty, for when the patient had been wrapped in the rugs, Thorndyke and I carried him, by the approved ambulance method, down the stairs and deposited him in the taxi, while Boles and Mrs. Gannet brought up the rear of the procession, the latter carrying the invaluable attache case. A more formidable problem was that of finding room in the taxi for two additional large men; but we managed to squeeze in, and amidst valedictory hand waving from the two figures on the doorstep, the cab started on its journey.

It seemed that Thorndyke must have given some instructions at the hospital for our arrival appeared to be not unexpected. A wheeled chair was quickly procured and in this the patient was trundled, under Thorndyke’s direction, through a maze of corridors to the little private ward on the ground floor which had been allotted to him. Here we found a nurse putting the finishing touches to its appointments, and presently the sister from the adjacent ward came to superintend the establishment of the new patient. We stayed only long enough to see Gannet comfortably settled in bed, and then took leave of him; and in the corridor outside we parted after a few words of explanation.

“I am just going across to the chemical laboratories,” said Thorndyke, “to hand Professor Woodfield a couple of samples for analysis. I shall manage to see Gannet tomorrow morning, and I suppose you will look in on him from time to time.”
“Yes,” I replied. “If I may, I will call and see him tomorrow.”

“But of course you may,” said he. “He is still your patient. If there is anything to report—from Woodfield, I mean—I will leave a note for you with Sister. And now I must be off.”

We shook hands and went our respective ways; and as I looked back at the tall figure striding away down the corridor, research case in hand, I speculated on the report that Professor Woodfield would furnish on a sample of arrowroot and another of barley water.
CHAPTER 5. — A TRUE BILL

IMPELLED by my anxiety to clear up the obscurities of the Gannet case, I dispatched the only important visit on my list as early on the following morning as I decently could and then hurried off to the hospital in the hope that I might be in time to catch Thorndyke before he left. It turned out that I had timed my visit fortunately, for as I passed in at the main entrance, I saw his name on the attendance board and learned from the hall porter that he had gone across to the school. Thither, accordingly, I directed my steps, but as I was crossing the garden, I met him coming from the direction of the laboratories and turned to walk back with him.

"Any news yet?" I asked.

"Yes," he replied. "I have just seen Woodfield and had his report. Of the two samples of food that I gave him for analysis, one—some of the arrowroot that you saw—contained no arsenic. The other—a specimen of the barley water—contained three-quarters of a grain of arsenic in the five fluid ounces of my sample. So, assuming that the jug held twenty fluid ounces, it would have contained about three grains of arsenic—that is, of arsenious acid."

"My word!" I exclaimed. "Why, that is a fatal dose, isn't it?"

"It is a possibly fatal dose," he replied. "A two grain dose has been known to cause death, but the effects of arsenic are very erratic. Still, we may fairly well say that if he had drunk the whole jugful, the chances are that it would have killed him."

I shuddered to think of the narrow escape that he—and I—had had. Only just in time had we—or rather Thorndyke—got him away from that house.

"Well," I said, "the detection of arsenic in the barley water settles any doubts that we might have had. It establishes the fact of arsenic poisoning."

"Not quite," Thorndyke dissented. "But we have established the fact by clinical tests. Woodfield and the House Physician have ascertained the presence of arsenic in the patient's body. The quantity was quite small; smaller than I should have expected, judging by the symptoms. But arsenic is eliminated pretty quickly; so we may infer that some days have elapsed since the last considerable dose was taken."

"Yes," said I, "and you were just in time to save him from the next considerable dose, which would probably have been the last. By the way, what are our responsibilities in this affair? I mean, ought we to communicate with the police?"

"No," he replied, very decidedly. "We have neither the duty nor the right to meddle in a case such as this, where the patient is a responsible adult in full control of his actions and his surroundings. Our duty is to inform him of the facts which are known to us and to leave him to take such measures as he may think fit."

That, in effect, is what we did when we had made the ordinary inquiries as to the patient's condition—which, by the way, was markedly improved.

"Yes," Gannet said, cheerfully, "I am worlds better; and it isn't from the effects of the medicine, because I haven't had any. I seem to be recovering of my own accord. Queer, isn't it? Or perhaps it isn't. Have you two gentlemen come to any conclusion as to what is really the matter with me?"

"Yes," Thorndyke replied in a matter-of-fact tone. "We have ascertained that your illness was due to arsenic poisoning."

"Arsenic poisoning!" he repeated, incredulously. "I can't believe it. Are you sure that there isn't some mistake? It seems impossible."

"It usually does," Thorndyke replied, drily. "But there is no mistake. It is just a matter of chemical analysis, which can be sworn to and proved, if necessary, in a court of law. Arsenic has been recovered from your own body and also from a sample of barley water that I brought away for analysis."

"Oh!" said Gannet, "so it was in the barley water. I suppose you didn't examine the arrowroot?"

"I brought away a sample of it," replied Thorndyke, "and it was examined, but there was no arsenic in it."

"Ha!" said Gannet. "So it was the barley water. I thought there was something wrong with that stuff. But arsenic! This is a regular facer! What do you think I ought to do about it, Doctor?"

"It is difficult for us to advise you, Mr. Gannet," Thorndyke replied. "We know no more than that you have been taking poisonous doses of arsenic. As to the circumstances in which you came to take that poison, you know more than we do. If any person knowingly administered that poison to you, he, or she, committed a very serious crime; and if you know who that person is, it would be proper for you to inform the police."

"But I don't," said Gannet. "There are only three persons who could have given me the arsenic, and I can't suspect any one of them. There is the servant maid. She wouldn't have given it to me. If she had wanted to poison anybody, it would have been her mistress. They don't get on very well, whereas the girl and I are on quite amiable terms. Then there is my
wife. Well, of course, she is outside the picture altogether. And then there is Mr. Boles. He often brought up my food and drink, so he had the opportunity; but I couldn’t entertain the idea of his having tried to poison me. I would as soon suspect the doctor—who had a better opportunity than any of them.” He paused to grin at me, and then summed up the position.

“So, you see, there is nobody whom I could suspect, and perhaps there isn’t any poisoner at all. Isn’t it possible that the stuff might have got into my food by accident?”

“I wouldn’t say that it is actually impossible,” Thorndyke replied, “but the improbability is so great that it is hardly worth considering.”

“Well,” said Gannet, “I don’t feel like confiding in the police and possibly stirring up trouble for an innocent party.”

“In that,” said Thorndyke, “I think you are right. If you know of no reason for suspecting anybody, you have nothing to tell the police. But I must impress on you, Mr. Gannet, the realities of your position. It is practically certain that some person has tried to poison you, and you will have to be very thoroughly on your guard against any further attempts.”

“But what can I do?” Gannet protested. “You agree that it is of no use to go to the police and raise a scandal. But what else is there?”

“The first precaution that you should take,” replied Thorndyke, “would be to tell your wife all that you know, and advise her to pass on the information to Mr. Boles—unless you prefer to tell him, yourself—and to anyone else whom she thinks fit to inform. The fact that the poisoning has been detected will be a strong deterrent against any further attempts, and Mrs. Gannet will be on the alert to see that there are no opportunities. Then you will be wise to take no food or drink in your own house which is not shared by someone else; and, perhaps, as an extra precaution, it might be as well to exchange your present maid for another.”

“Yes,” Gannet agreed, with a grin, “there will be no difficulty about that when my wife hears about the arsenic. She’ll send the girl packing at an hour’s notice.”

“Then,” said Thorndyke, “I think we have said all that there is to say. I am glad to see you looking so much better, and if you continue to improve at the same rate, we shall be able to send you out in a few days to get back to your pottery.”

With this, he took leave of the patient, and I went out with him in case he should have anything further to say to me; but it was not until we had passed out at the main entrance and the porter had duly noted his departure, that he broke the silence. Then, as we crossed the court-yard, he asked:

“What did you make of Gannet’s statement as to the possible suspects?”

“Not very much,” I replied; “but I rather had the feeling that he was holding something back.”

“He didn’t hold it back very far,” Thorndyke commented, with a smile. “I gathered that he viewed Mr. Boles with profound suspicion and that he was not unwilling that we should share that suspicion. By the way, are you keeping notes of this case?”

I had to admit that I had nothing beyond the entries in the Day Book.

“That won’t do,” said he. “You may not have heard the last of this case. If there should, in the future, be any further developments, you ought not to be dependent on your memory alone. I advise you to write out now, while the facts are fresh, a detailed account of the case, with all the dates and full particulars of the persons who were in any way connected with the affair. I will send you a certified copy of Woodfield’s analysis, and I should be interested to see your memoranda of the case to compare with my own notes.”

“I don’t suppose you will learn much from mine,” said I.

“They will be bad notes if I don’t,” said he. “But the point is that if anything should hereafter happen to Gannet—anything, I mean, involving an inquest or a criminal charge—you and I would be called, or would volunteer, as witnesses, and our evidence ought to agree. Hence the desirability of comparing notes now when we can discuss any disagreements.”

Our conversation had brought us to the cross roads; and here, as our ways led in opposite directions, we halted for a few final words and then parted, Thorndyke pursuing his journey on foot and I waiting at the bus stop for my omnibus.

During Gannet’s stay in the hospital, I paid him one or two visits, noting his steady improvement and copying into my notebook the entries on his case sheet. But his recovery was quite uneventful, and after a few days, I struck him off my visiting list, deciding to await his return home to wind up the case.

But in the interval I became aware that he had, at least in one particular, acted on Thorndyke’s advice. The fact was conveyed to me by Mrs. Gannet, who appeared one evening, in a very disturbed state, in my consulting room. I guessed at once what her mission was, but there was not much need for guessing as she came to the point at once.

“I have been to see Peter this afternoon,” said she, “and he has given me a most terrible shock. He told me—quite seriously—that his illness was really not an illness at all, but that his condition was due to poison. He says that somebody had been putting arsenic into his food, and he quotes you and Dr. Thorndyke as his authorities for this statement. Is he off his head or did you really tell him this story?”

“It is perfectly true, Mrs. Gannet,” I replied.

“But it can’t be,” she protested. “It is perfectly monstrous. There is nobody who could have had either the means or the
motive. I prepared all his food with my own hands and I took it up to him myself. The maid never came near it—though I have sent her away all the same—and even if she had had the opportunity, she had no reason for trying to poison Peter. She was really quite a decent girl and she and he were on perfectly good terms. But the whole thing is impossible—fantastic. Dr. Thorndyke must have made some extraordinary mistake.”

“I assure you, Mrs. Gannet,” said I, “that no mistake has been made. It is just a matter of chemical analysis. Arsenic is nasty stuff, but it has one virtue; it can be identified easily and with certainty. When Dr. Thorndyke saw your husband, he at once suspected arsenic poisoning, so he took away with him two samples of the food—one of arrowroot and one of barley water—for analysis.

“They were examined by an eminent analyst and he found in the barley water quite a considerable quantity of arsenic—the whole jugful would have contained enough to cause death. You see, there is no doubt. There was the arsenic in the barley water. It was extracted and weighed, and the exact amount is known; and the arsenic itself has been kept and can be produced in evidence if necessary.”

Mrs. Gannet was deeply impressed—indeed, for the moment, she appeared quite overwhelmed, for she stood speechless, gazing at me in the utmost consternation. At length she asked, almost in a whisper:

“And the arrowroot? I took that up to him, myself.”

“There was no arsenic in the arrowroot,” I replied; and it seemed to me that she was a little relieved by my answer, though she still looked scared and bewildered. I could judge what was passing in her mind, for I realized that she remembered—as I did—who had carried the barley water up to the sickroom. But whatever she thought, she said nothing, and the interview presently came to an end after a few questions as to her husband’s prospects of complete recovery and an urgent request that I should come and see him when he returned from the hospital.

That visit, however, proved unnecessary, for the first intimation that I received of Gannet’s discharge from the hospital was furnished by his bodily presence in my wailing room. I had opened the communicating door in response to the “ting” of the bell (“Please ring and enter”) and behold! there he was with velveteen jacket and Vandyke beard, all complete. I looked at him with the momentary surprise that doctors and nurses often experience on seeing a patient for the first time in his ordinary habiliments and surroundings; contrasting this big, upstanding, energetic-looking man with the miserable, shrunken wretch who used to peer at me so pitifully from under the evidence if necessary.”

Mrs. Gannet was deeply impressed—indeed, for the moment, she appeared quite overwhelmed, for she stood speechless, gazing at me in the utmost consternation. At length she asked, almost in a whisper:

“And the arrowroot? I took that up to him, myself.”

“There was no arsenic in the arrowroot,” I replied; and it seemed to me that she was a little relieved by my answer, though she still looked scared and bewildered. I could judge what was passing in her mind, for I realized that she remembered—as I did—who had carried the barley water up to the sickroom. But whatever she thought, she said nothing, and the interview presently came to an end after a few questions as to her husband’s prospects of complete recovery and an urgent request that I should come and see him when he returned from the hospital.

That visit, however, proved unnecessary, for the first intimation that I received of Gannet’s discharge from the hospital was furnished by his bodily presence in my wailing room. I had opened the communicating door in response to the “ting” of the bell (“Please ring and enter”) and behold! there he was with velveteen jacket and Vandyke beard, all complete. I looked at him with the momentary surprise that doctors and nurses often experience on seeing a patient for the first time in his ordinary habiliments and surroundings; contrasting this big, upstanding, energetic-looking man with the miserable, shrunken wretch who used to peer at me so pitifully from under the bedclothes.

“Come to report, sir,” said he, with a mock naval salute, “and to let you see what a fine job you and your colleagues have made of me.”

I shook hands with him and ushered him through into the consulting room, still pleasantly surprised at the completeness of his recovery.

“You didn’t expect to see me looking so well,” said he.

“No,” I admitted. “I was afraid you would feel the effects for some time.”

“So was I,” said he, “and in a sense I do. I am still aware that I have got a stomach; but apart from that dyspeptic feeling, I am as well as I ever was. I am eternally grateful to you and Dr. Thorndyke. You caught me on the hop—just in time. Another few days and I suspect it would have been a case of Hic jacet. But what a rum affair it was. I can make nothing of it. Can you? Apparently, it couldn’t have been an accident.”

“No,” I replied. “If the whole household had been poisoned, we might have suspected an accident, but the continued poisoning of one person could hardly have been accidental. We are forced to the conclusion that the poison was administered knowingly and intentionally by some person.”

“I suppose we are,” he agreed, “But what person? It’s a regular corker. There are only three, and two of them are impossible. As to Boles, it is a fact that he brought up that jug of barley water and he poured out half a tumblerful and gave it me to drink. And he has brought me up barley water on several other occasions. But I really can’t suspect Boles. It seems ridiculous.”

“It is not for me to suggest any suspicions,” said I. “But the facts that you mention are rather striking. Are there any other facts? What about your relations with Boles? There is nothing, I suppose, to suggest a motive?”

“Not a motive for poisoning me,” he replied. “It is a fact that Boles and I are not as good friends as we used to be. We don’t hit it off very well nowadays, though we remain, in a sort of way, partners. But I suspect that Boles would have cut it and gone off some time ago if it had not been for my wife. She and he have always been the best of friends—they are distant cousins of some kind—and I think they are quite attached to each other. So Boles goes on working in my studio for the sake of keeping in touch with her. At least, that is how I size things up.”

It seemed to me that this was rather like an affirmative answer to my question, and perhaps it appeared so to him. But it was a somewhat delicate matter and neither of us pursued it any farther. Instead, I changed the subject and asked:

“What do you propose to do about it?”

“I don’t propose to do anything,” he replied. “What could I do? Of course, I shall keep my weather eyelid lifting, but I don’t suppose anything further will happen now that you and Dr. Thorndyke have let the cat so thoroughly out of the bag. I shall just go on working in my studio in the same old way, and I shall make no difference whatever in my relations with
Boles. No reason why I should as I really don’t suspect him.”

“Your studio is somewhere at the back of the house, isn’t it?” I asked.

“At the side,” he replied, “across the yard. Come along one day and see it,” he added, cordially, “and I will unfold the whole art and mystery of making pottery. Come whenever you like and as soon as you can. I think you will find the show interesting.”

As he issued this invitation (which I accepted gladly) he rose and picked up his hat; and we walked out together to the street door and said farewell on the door-step.
CHAPTER 6. — SHADOWS IN THE STUDIO

PETER GANNET’S invitation to me to visit his studio and see him at work was to develop consequences that I could not then have foreseen; nor shall I hint at them now, since it is the purpose of this narrative to trace the course of events in the order in which they occurred. I merely mention the consequences to excuse the apparent triviality of this part of my story.

At my first visit I was admitted by Mrs. Gannet, to whom I explained that this was a friendly call and not a professional visit. Nevertheless, I loitered awhile to hear her account of her husband and to give a few words of advice. Then she conducted me along the hall to a side door which opened on a paved yard, in which the only salient object was a large galvanized dust-bin. Crossing this yard, we came to a door which was furnished with a large, grotesque, bronze knocker and bore in dingy white lettering the word “Studio.”

Mrs. Gannet executed a characteristic rat-tat on the knocker, and without waiting for an answer, opened the door and invited me to enter; I did, and found myself in a dark space, the front of which was formed by a heavy black curtain. As Mrs. Gannet had shut the door behind me, I was plunged in complete obscurity, but groping at the curtain, I presently drew its end aside and then stepped out into the light of the studio.

“Excuse my not getting up,” said Gannet, who was seated at a large bench, “and also not shaking hands. Reasons obvious,” and in explanation he held up a hand that was plastered with moist clay. “I am glad to see you, Doctor,” he continued, adding. “Get that stool from Boles’s bench and set it alongside mine.”

I fetched the stool and placed it beside his at the bench, and having seated myself, proceeded to make my observations. And very interesting observations they were, for everything that met my eye—the place itself and everything in it—was an occasion of surprise. The whole establishment was on an unexpectedly large scale. The studio, a great barn of a place, evidently, by its immense north window, designed and built as such, would have accommodated a sculptor specializing in colossal statues. The kiln looked big enough for a small factory; and the various accessories—a smaller kiln, a muffle furnace, a couple of grinding mills, a large iron mortar with a heavy pestle, and some other appliances—seemed out of proportion to what I supposed to be the actual output.

But the most surprising object was the artist, himself, considered in connection with his present occupation. Dressed correctly for the part in an elegant gown or smock of blue linen, and wearing a black velvet skull cap, “The Master” was, as I have said, seated at the bench, working at the beginnings of a rather large bowl. I watched him for a while in silent astonishment, for the method of work used by this “Master Craftsman” was that which I had been accustomed to associate with the Kindergarten. It was true that the latter had simply adopted, as suitable for children, the methods of ancient and primitive people, but these seemed hardly appropriate to a professional potter. However, such as the method was, he seemed to be quite at home with it and to work neatly and skilfully; and I was interested to note how little he appeared to be incommoded by a stiff joint in the middle finger of the right hand. Perhaps I might as well briefly describe the process.

On the large bench before him was a stout, square board, like a cook’s pastry board, and on this was a plaster “bat,” or slab, the upper surface of which had a dome-like projection (now hidden) to impart the necessary hollow to the bottom of the bowl. This latter (I am now speaking from subsequent experience) was made by coiling a roll, or cord, of clay into a circular disc, somewhat like a Catharine-wheel, and then rubbing the coils together with the finger to produce a flat plate. When the bottom was finished and cut true, the sides of the bowl were built up in the same way. At the side of the pastry board was an earthenware pan in which was a quantity of the clay cord, looking rather like a coil of gas tubing, and from this the artist picked out a length, laid it on top of the completed part of the side, and, having carried it round the circumference, pinched it off and then pressed it down lightly, and rubbed and stroked it with his finger and a wooden modelling tool until it was completely united to the part below.

“Why do you pinch it off?” I inquired. “Why not coil it up continuously?”

“Because,” he explained, “if you built a bowl by just coiling the clay cord round and round without a break, it would be higher one side than the other. So I pinch it off when I have completed a circle; and you notice that I begin the next tier in a different place, so that the joins don’t come over each other. If they did, there would be a mark right up the side of the bowl.”

“Yes,” I agreed, “I see that, though it hadn’t occurred to me. But do you always work in this way?”

“With the clay coils?” said he. “No. This is the quick method and the least trouble. But for more important pieces, to which I seek to impart the more personal and emotional qualities and at the same time to express the highest degree of plasticity, I dispense with the coil and work, as a sculptor does, with simple pellets of clay.”

“But,” said I, “what about the wheel? I see you have one, and it looks quite a high-class machine. Don’t you throw any of your work on it?”

He looked at me solemnly, almost reproachfully, as he replied:

“Never. The machine I leave to the machinist; to the mass-producer and the factory. I don’t work for Woolworth’s or the crockery shops. I am not concerned with speed of production or quantity of output or mechanical regularity of form. Those things appertain to trade. I, in my humble way, am an artist; and though my work is but simple pottery, I strive to infuse into it qualities that are spiritual, to make it express my own soul and personality. The clay is to me, as it was to other and
greater masters of the medium—such as Della Robbia and Donatello—the instrument of emotional utterance.”

To this I had nothing to say. It would not have been polite to give expression to my views, which were that his claims seemed to be extravagantly disproportionate to his achievements. But I was profoundly puzzled, and became more so as I watched him; for it appeared to me that what he was doing was not beyond my own powers, at least with a little practice, and I found myself half-unconsciously balancing the three obvious possibilities but unable to reach a conclusion.

Could it be that Gannet was a mere impostor, a pretender to artistic gifts that were purely fictitious? Or was he, like those mentally unbalanced “modernists” who honestly believe their crude and childish daubings to be great masterpieces, simply suffering from a delusion? Or was it possible that his uncouth, barbaric bowls and jars did really possess some subtle aesthetic qualities that I had failed to perceive merely from a lack of the necessary special sensibility? Modesty compelled me to admit the latter possibility. There are plenty of people to whom the beauties of nature or art convey nothing, and it might be that I was one of them.

My speculations were presently cut short by a thundering flourish on the knocker, at which Gannet started with a muttered curse. Then the door burst open and Mr. Frederick Boles swaggered into the studio, humming a tune.

“I wish you wouldn’t make that damned row when you come in, Boles,” Gannet exclaimed, irritably.

He cast an angry glance at his partner, or tenant, to which the latter responded with a provocative grin.

“Sorry, dear boy,” said he. “I’m always forgetting the delicate state of your nerves. And here’s the doctor. How de do, Doc? Hope you find your patient pretty well. Him? None the worse for all that arsenic that they tell me you put into his medicine? Ha ha!”

He bestowed on me an impudent stare through his eyeglass, removed the latter and swaggered across to the part of the studio which appeared to be his own domain, followed by a glance of deep dislike from Gannet which fairly expressed my own sentiments.

Mr. Boles was not a prepossessing person. Nevertheless, I watched his proceedings with some interest, being a little curious as to the kind of industry that he carried on; and presently, smothering my distaste—for I was determined not to quarrel with him—I strolled across to observe him at close quarters. He was seated on a rough, box-like stool, similar to the one which I had borrowed, at an ordinary jeweler’s bench fitted with a gas blowpipe and a tin tray in place of the usual sheep-skin. At the moment he was engaged in cutting with an engraving tool a number of shallow pits in a flattened gold object which might have been a sketchy model of a plaice or turbot. I watched him for some time, a little mystified as to the result aimed at, for the little pits seemed, themselves, to have no determinate shape nor could I make out any plan in their arrangement. At length I ventured on a cautious inquiry.

“Those little hollows, I suppose, form the pattern on this—er—object?”

“Don’t call it an object. Doc,” he protested. “It’s a pendant, or it will be when it is finished; and those hollows will form the pattern—or more properly, the surface enrichment—when they are filled with enamel.”

“Oh, they are to be filled with enamel,” said I, “and the spots of enamel will make the pattern. But I don’t quite see what the pattern represents.”

“Represents!” he repeated, indignantly, fixing his monocle (which he did not use while working) to emphasize the reproachful stare that he turned on me. “It doesn’t represent anything, I’m not a photographer. The enamel spots will just form a symphony of harmonious, gem-like colour with a golden accompaniment. You don’t want representation on a jewel. That can be left to the poster artist. What I aim at is harmony—rhythm—the concords of abstract colour. Do you follow me?”

“I think I do,” said I. It was an outrageous untruth, for his explanation sounded like mere meaningless jargon. “But,” I added, “probably I shall understand better when I have seen the finished work.”

“I can show you a finished piece of the same kind now,” said he; and laying down his work and the scorer, he went to the small cupboard in which he kept his materials and produced from it a small brooch which he placed in my hand and requested me to consider as “a study in polychromatic harmony.”

It was certainly a cheerful and pleasant-looking object but strangely devoid of workmanship (though I noticed, on turning it over, that the pin and catch seemed to be quite competently finished); a simple elliptical tablet of gold covered with irregular-shaped spots of many-coloured enamel distributed over the surface in apparently accidental groups. The effect was as if drops of wax from a number of coloured candles had fallen on it.

“You see,” said Boles, “how each of these spots of colour harmonizes and contrasts with all the others and reinforces them?”

“Yes, I see that,” I replied, “but I don’t see why you should not have grouped the spots into some sort of pattern.”

Boles shook his head. “No,” said he, “that would never do. The intrusion of form would have destroyed the natural rhythm of contrasting colour. The two things must be kept separate. Gannet is concerned with abstract form mainly uncomplicated with colour. My concern is with abstract colour liberated from form.”

I made shift to appear as if this explanation conveyed some meaning to me and returned the brooch with a few
appreciative comments. But I was completely fogged; so much so that I presently took the opportunity to steal away in order that I might turn matters over in my mind.

It was quite a curious problem. What was it that was really going on in that studio? There was a singular air of unreality about the industries that were carried on there. Gannet, with his archaic pottery, had been difficult enough to accept as a genuine artist; but Boles was even more incredible. And different as the two men were in all other respects, they were strangely alike in their special activities. Both talked what sounded like inflated, pretentious nonsense. Both assumed the airs of artists and virtuosi. And yet each of them appeared to be occupied with work which—to my eye—showed no sign of anything more than the simplest technical skill, and nothing that I could recognize as artistic ability.

Yet I had to admit that the deficiency might be in my own powers of perception. The curious phase of art known as “modernism” made me aware of widespread taste for pictures and sculpture of a pseudo-barbaric or primitive type; and the comments of the art critics on some of these works were not so very unlike the stuff that I had heard from Boles and Gannet. So perhaps these queer productions were actually what they professed to be and I was just a Philistine who couldn’t recognize a work of art when I saw it.

But there was one practical question that rather puzzled me. What became of these wares? Admittedly, neither of these men worked for the retail shops. Then how did they dispose of their works, and who bought them? Both men were provided with means and appliances on a quite considerable scale and it was to be presumed that their output corresponded to the means of production; moreover, both were apparently obtaining a livelihood by their respective industries. Somewhere there must be a demand for primitive pottery and barbaric jewelry. But where was it? I decided—though it was none of my business—to make a few cautious inquiries.

Another matter, of more legitimate interest to me, was that of the relations of these two men. Ostensibly they were friends, comrades, fellow-workers, and in a sense, partners. But real friends they certainly were not. That had been frankly admitted by Gannet; and even if it had not been, his dislike of Boles was manifest and hardly dissembled. And, of course, it was natural enough if he suspected Boles of having tried to poison him, to say nothing of the rather doubtful relations of that gentleman with Mrs. Gannet. Indeed, I could not understand why, if he harboured this suspicion—of which Thorndyke seemed to entertain no doubt—he should have allowed the association to continue.

But if Gannet’s sentiments towards Boles were unmistakable, the converse was by no means true. Boles’s manners were not agreeable. They were coarse and vulgar—excepting when he was talking “high-brow”—and inclined to be rude. But though he was a bounder he was not consciously uncivil, and—so far as I could at present judge—he showed no signs of unfriendliness towards Gannet. The dislike appeared to be all on the one side.

Yet there must have been something more than met the eye. For if it was the fact—and I felt convinced that it was—that Boles had made a deliberate, cold-blooded attempt to poison Gannet, that attempt implied a motive which, to put it mildly, could not have been a benevolent one.

These various problems combined to make the studio a focus of profound interest to me, and as my practice at this period was productive principally of leisure, I spent a good deal of my time there; more, indeed, than I should have if Gannet had not made it so plain that my visits were acceptable. Sometimes I wondered whether it was my society that he enjoyed, or whether it might have been that my frequenting the studio gave him some sort of feeling of security. It might easily have been so, for, whenever I found him alone, I took the opportunity to satisfy myself that all was well with him. At any rate, he seemed always glad to see me, and for my part, I found the various activities of the two workers interesting to watch, quite independently of the curious problems arising out of their very odd relations.

By degrees my status changed from that of a mere spectator to something like that of a co-worker. There were many odd jobs to be done requiring no special skill and in these I was able to “lend a hand.” For instance, there was the preparation of the “grog”—why so-called I never learned, for it was a most unconvivial material, being simply a powder made by pounding the fragments of spoiled or defective earthenware or broken saggars and used to temper the clay to prevent it from cracking in the fire. The broken pots or saggars were pounded in a great iron mortar until they were reduced to small fragments, when the latter were transferred to the grog mill and ground to powder. Then the powder was passed through a series of sieves, each marked with the number of meshes to the inch, and the different grades of powder—coarse, medium and fine—stored in their appropriate bins.

Then there was the plaster work. Both men used plaster, and I was very glad to learn the technique of mixing, pouring and trimming. Occasionally, Gannet would make a plaster mould of a successful bowl or jar (much to my surprise, for it seemed totally opposed to his professed principles) and “squeeze” one or two replicas; a process in which I assisted until I became quite proficient. I helped Boles to fire his queer-looking enamel plaques and to cast his uncost gold ornaments and took over some of the picking and polishing operations. And then, finally, there was the kiln, which interested me most of all. It was a coal-fired kiln and required a great deal of attention both before and during the firing. The preparation of the kiln Gannet attended to himself, but I stood by and watched his methods; observed the way in which he stacked the pieces, bedded in ground flint or bone-ash—he mostly used bone-ash—in the “saggars” (fire-clay cases or covers to protect the pieces from the flames) and at length closed the opening of the kiln with slabs of fire-clay.

But when the actual firing began, we were all kept busy. Even Boles left his work to help in feeding the fires, raking out the ashes and clearing the hearths, leaving Gannet free to control the draught and modify the fire to the required intensity. I was never able to observe the entire process from start to finish, for even at this time my practice called for some attention; but I was present on one occasion at the opening of the kiln—forty-eight hours after the lighting of the fires—and
noted the care with which Gannet tested the temperature of the pieces before bringing them out into the cool air.

One day when I was watching him as he built up a wide-mouthed jar from a rough drawing—an extraordinarily rough drawing, very unskilfully executed, as I thought—which lay on the bench beside him, he made a new suggestion.

"Why shouldn’t you try your hand at a bit of pottery, Doctor?" he said. "Just a simple piece. The actual building isn’t difficult and you’ve seen how I do it. Get some of the stoneware body out of the bin and see what sort of job you can make of it."

I was not very enthusiastic about built pottery, for recently I had purchased a little treatise on the potter’s art and had been particularly thrilled by the directions for “throwing” on the wheel. I mentioned to Gannet, but he gave me no encouragement. For some reason he seemed to have an invincible prejudice against the potter’s wheel.

"It’s all right for commercial purposes," said he, "for speed and quantity. But there’s no soul in the mechanical stuff. Building is the artist’s method; the skilled hand translating thought directly into form."

I did not contest the matter. With a regretful glance at the wheel, standing idle in its corner, I fetched a supply of the mixed clay from the bin and proceeded to roll it into cords on the board that was kept for the purpose. But it occurred to me as an odd circumstance that, hating the wheel as he appeared to, he should have provided himself with one.

"I didn’t buy the thing," he explained, when I propounded the question, "I took over this studio as a going concern from the executors of the previous tenant. He was a more or less commercial potter and his outfit suited his work. It doesn’t suit mine. I don’t want the wheel or that big mixing mill and I would sooner have had a smaller, gas-fired kiln. But the place was in going order and I got it dirt cheap with the outfit included, so I took it as it was and made the best of it."

My first attempt, a simple bowl, was no great success, being distinctly unsymmetrical and lopsided. But Gannet seemed to think quite well of it—apparently for these very qualities—and even offered to fire it. However, it did not satisfy me, and eventually I crumpled it up and returned it to the clay-bin, whence, after re-moistening, it emerged to be rolled out into fresh coils of cord. For I was now definitely embarked on the industry. The work had proved more interesting than I had expected, and as usually happens in the case of any art, the interest increased as the difficulties began to be understood and technical skill developed and grew.

"That’s right, Doctor," said Gannet. "Keep it up and go on trying; and remember that the studio is yours whenever you like to use it, whether I am here or not." (As a matter of fact, he frequently was not, for both he and Boles took a good many days off, and rather oddly, I thought, their absences often coincided.) "And you needn’t trouble to come in through the house. There is a spare key of the wicket which you may as well have. I’ll give it to you now."

He took a couple of keys from his pocket and handed me one, whereby I became, in a sense, a joint tenant of the studio. It was an insignificant circumstance, and yet, as so often happens, it developed unforeseen consequences, one of which was a little adventure for the triviality of which I offer no apology since it, in its turn, had further consequences not entirely irrelevant to this history.

It happened that on the very first occasion on which I made use of the key, I found the studio vacant, and the condition of the benches suggested that both my fellow tenants were taking a day off. On the bench that I used was a half-finished pot, covered with damp cloths. I removed these and fetched a fresh supply of moist clay from the bin with the intention of going on with the work, when the wheel happened to catch my eye; instantly I was assailed by a great temptation. Here was an ideal opportunity to satisfy my ambition; to try my prentice hand with this delightful toy, which, to me, embodied the real romance of the potter’s art.

I went over to the wheel and looked at it hungrily. I gave it a tentative spin and tried working the treadle, and finding it rather stiff, fetched Boles’s oil can and applied a drop of oil to the pivots. Then I drew up a stool and took a few minutes’ practice with the treadle until I was able to keep up a steady rotation. It seemed quite easy to me, as I was accustomed to riding a bicycle, and I was so far encouraged that I decided to try my skill as a thrower. Placing a basin of water beside the wheel, I brought the supply of clay from the bench, and working it into the form of a large dumpling, slapped it down on the damped hardwood disc, and having wetted my hands, started the rotation with a vigorous spin.

The start was not a perfect success, as I failed to centre the clay ball correctly and put on too much speed, with the result that the clay flew off and hit me in the stomach. However, I collected it from my lap, replaced it on the wheel-head, and made a fresh start with more care and caution. It was not so easy as it had appeared. Attending to the clay, I was apt to forget the treadle, and then the wheel stopped; and when I concentrated on the treadle, strange things happened to the clay. Still, by degrees, I got the “hang” of the process, recalling the instructions in my handbook and trying to practice the methods therein prescribed.

It was a fascinating game. There was something almost magical in the behaviour of the revolving clay. It seemed, almost of its own accord, to assume the most unexpected shapes. A light pressure of the wet hands and it rose into the form of a column, a cylinder or a cone. A gentle touch from above turned it miraculously into a ball; and a little pressure of the thumbs on the middle of the ball hollowed it out and transformed it into a bowl. It was wonderful and most delightful. And all the transformations had the charm of unexpectedness. The shapes that came were not designed by me; they simply came of themselves, and an inadvertent touch instantly changed them into something different and equally surprising.

For more than an hour I continued, with ecstatic pleasure and growing facility, to play this incomparable game. By that time, however, signs of bodily fatigue began to make themselves felt, for it was a pretty strenuous occupation, and it
occurred to me that I had better get something done. I had just made a shallow bowl (or, rather, it had made itself), and as I took it gently between my hands, it rose, narrowed itself, and assumed the form of a squat jar with slightly in-turned mouth. I looked at it with pleased surprise. It was really quite an elegant shape and it seemed a pity to spoil it by any further manipulation. I decided to let well alone and treat it as a finished piece.

When I took my foot off the treadle and let the wheel run down, some new features came into view. The jar at rest was rather different from the jar spinning. Its surface was scored all over with spiral traces of “the potter’s thumb,” which stamped it glaringly as a thrown piece. This would not quite answer my purpose, which was to practice a playful fraud on Peter Gannet by foisting the jar on him as a built piece. The telltale spirals would have to be eliminated and other deceptive markings substituted.

Accordingly, I attacked it cautiously with a modelling tool and a piece of damp sponge, stroking it lightly in vertical lines and keeping an eye on one of Gannet’s own jars, until all traces of the wheel had been obliterated and the jar might fairly have passed for a hand-built piece. Of course, a glance at the inside, which I did not dare to touch, would have discovered the fraud, but I took the chance that the interior would not be examined.

The next problem was the decoration. Gannet’s usual method—following the tradition of primitive and barbaric ornament—was either to impress an encircling cord into the soft clay or to execute simple thumb-nail patterns. He did not actually use his thumb-nail for this purpose. A bone mustard-spoon produced the same effect and was more convenient. Accordingly I adopted the mustard-spoon, with which I carried a sort of rude guilloche round the jar, varied by symmetrically placed dents, made with the end of my clinical thermometer. Finally, becoming ambitious for something more distinctive, I produced my latch-key, and, having made a few experiments on a piece of waste clay, found it quite admirable as a unit of pattern, especially if combined with the thermometer. A circle of key impressions radiating from a central thermometer dent produced a simple but interesting rosette which could be further developed by a circle of dents between the key-marks. It was really quite effective, and I was so pleased with it that I proceeded to enrich my masterpiece with four such rosettes, placing them as symmetrically as I could (not that the symmetry would matter to Gannet) on the bulging sides below the thumb-nail ornaments.

When I had finished the decoration and tidied it up with the modelling tool I stood back and looked at my work, not only with satisfaction but with some surprise. For, rough and crude as it was, it appeared to my possibly indulgent eye quite a pleasant little pot; and comparing it with the row of Gannet’s works which were drying on the shelf, I asked myself once again what could be the alleged subtle qualities imparted by the hand of the master?

Having made a vacancy on the shelf by moving one of Gannet’s pieces from the middle to the end, I embarked on the perilous task of detaching my jar from the wheel-head. The instrument that I employed was a thin wire with a wooden handle at each end, which we used for cutting slices of clay; a dangerous tool, for a false stroke would have cut the bottom off my jar. But Providence, which—sometimes—watches over the activities of the tyro, guided my hand, and at last the wire emerged safely, leaving the jar free of the surface to which it had been stuck. With infinite care and tenderness—for it was still quite soft—I lifted it with both hands and carried it across to the shelf, where I deposited it safely in the vacant space. Then I cleaned up the wheel, obliterating all traces of my unlawful proceedings, threw my half-finished built piece back into the clay-bin, and departed, chuckling over the surprise that awaited Gannet when he should come to inspect the pieces that were drying on the shelf.

As events turned out, my very mild joke fell quite flat, so far as I was concerned, for I missed the denouement. A sudden outbreak of measles at a local school kept me so busy that my visits to the studio had to be suspended for a time, and when at last I was able to make an afternoon call, the circumstances were such as to occupy my attention in a more serious and less agreeable manner. As this episode was later to develop a special significance, I shall venture to describe it in some detail.

On this occasion, I did not let myself in, as usual, by the wicket, for at the end of Jacob Street I overtook Mrs. Gannet and we walked together to the house, which I entered with it. She seemed that she had some question to ask her husband, and when I had opened the side door, she came out to walk with me across the yard to the studio. Suddenly, as we drew near to the latter, I became aware of a singular uproar within; a clattering and banging, as if the furniture were being thrust about and stools overturned, mingled with the sound of obviously angry voices. Mrs. Gannet stopped abruptly and clutched my arm.

“Oh, dear,” she exclaimed, “there are those two men quarrelling again. It is dreadful. I do wish Mr. Boles would move to another workshop. If they can’t agree, why don’t they separate?”

“They don’t hit it off very well, then?” I suggested, listening attentively and conscious of a somewhat unfortunate expression—for they seemed to be hitting it off rather too well.

“No,” she replied, “especially since—you know. Peter thinks Mr. Boles gave him the stuff, which is ridiculous, and Mr. Boles—I think I won’t go in now,” and with this she turned about and retreated to the house, leaving me standing near the studio door, doubtful whether I had better enter boldly or follow the lady’s discreet example and leave the two men to settle their business.

It was very embarrassing. If I went in, I could not pretend to be unaware of the disturbance. On the other hand, I did not like to retreat when my intervention might be desirable. Thus I stood hesitating between considerations of delicacy and expediency until a furious shout in Boles’s voice settled the question.
“You’re asking for it, you know!” he roared; whereupon, flinging delicacy to the winds, I rapped on the door with my knuckles and entered. I had opened the door deliberately and rather noisily and I now stood for a few moments in the dark lobby behind the curtain while I closed it after me in the same deliberate manner to give time for any necessary adjustments. Sounds of quick movement from within suggested that these were being made, and when I drew aside the curtain and stepped in, the two men were on opposite sides of the studio. Gannet was in the act of buttoning a very crumpled collar and Boles was standing by his bench, on which lay a raising hammer that had a suspicious appearance of having been hastily put down there. Both men were obviously agitated: Boles, purple-faced, wild-eyed and furiously angry; Gannet, breathless, pale and venomous.

I greeted them in a matter-of-fact tone as if I had noticed nothing unusual, and went on to excuse and explain the suspension of my visits. But it was a poor pretense, for there were the overturned stools and there was Boles, scowling savagely and still trembling visibly, and there was that formidable-looking hammer the appearance of which suggested that I had entered only just in time.

Gannet was the first to recover himself, though even Boles managed to growl out a sulky greeting, and when I had picked up a fallen stool and seated myself on it, I made shift to keep up some sort of conversation and to try to bring matters back to a normal footing. I glanced at the shelf, but it was empty. Apparently the pieces that I had left drying on it had been fired and disposed of. What had happened to my jar, I could not guess and did not very much care. Obviously, the existing circumstances did not lend themselves to any playful interchanges between Gannet and me, nor did they seem to lend themselves to anything else; and I should have made an excuse to steal away but for my unwillingness to leave the two men together in their present moods.

I did not, however, stay very long; no longer, in fact, than seemed desirable. Presently, Boles, after some restless and apparently aimless rummaging in his cupboard, shut it, locked its door, and with a sulky farewell to me, took his departure; and as I had no wish to discuss the quarrel and Gannet seemed to be in a not very sociable mood, I took an early opportunity to bring my visit to an end.

It had been a highly disagreeable episode, and it had a permanent effect on me. Thenceforward, the studio ceased to attract me. Its pleasant, friendly atmosphere seemed to have evaporated. I continued to look in from time to time, but rather to keep an eye on Gannet, than to interest myself in the works of the two artists. Like Mrs. Gannet, I wondered why these two men, hating each other as they obviously did, should perversely continue their association. At any rate, the place was spoiled for me by the atmosphere of hatred and strife that seemed to pervade it, and even if the abundance of my leisure had continued—which it did not—I should still have been but an occasional visitor.
CHAPTER 7. — MRS. GANNET BRINGS STRANGE TIDINGS

THE wisdom of our ancestors has enriched us with the precept that the locking of the stable door fails in its purpose of security if it is postponed until after the horse has been stolen. Nevertheless (since it is so much easier to be wise after the event than before) this futile form of post-caution continues to be prevalent; of which truth my own proceedings furnished an illustrative instance. For having allowed my patient to be poisoned with arsenic under my very nose, and that, too, in the crudest and most blatant fashion, I now proceeded to devote my leisure to an intense study of Medical Jurisprudence and Toxicology.

Mine, however, was not a truly representative case. The actual horse had indeed been stolen, but still the stable contained a whole stud of potential horses. I might, and probably should, never encounter another case of poisoning in the practice of a life-time. On the other hand, I might meet with one tomorrow; or if not a poisoning case, perhaps some other form of crime which lay within the province of the medical jurisprict. There seemed to be plenty of them, judging by the lurid accounts of the authorities whose works I devoured, and I began almost to hope that my labours in their study would not be entirely wasted.

It was natural that my constant preoccupation with the detection and demonstration of crime should react more or less on my habitual state of mind. And it did. Gradually I acquired a definitely Scotland Yardish outlook and went about my practice—not neglectful, I trust, of the ordinary maladies of my patients—with the idea of criminal possibilities, if not consciously present, yet lurking on the very top surface of the subconscious. Little did my innocent patients or their equally innocent attendants suspect the toxicological balance in which symptoms and ministrations alike were being weighed; and little did the worthy Peter Gannet guess that, even while he was demonstrating the mysteries of stoneware, my perverted mind was canvassing the potentialities of the various glazes that he used for indirect and secret poisoning.

I mention these mental reactions to my late experience and my recent profound study of legal medicine in explanation of subsequent events. And I make no apology. The state of mind may seem odd, but yet it was very natural. I had been caught napping once and I didn’t intend to be caught again; and that involved these elaborate precautions against possibilities whose probability was almost negligible.

It happened on a certain evening that in the intervals of my evening consultations, my thoughts turned to my friend, Peter Gannet. It was now some weeks since I had seen him, my practice having of late made a temporary spurt and left me little leisure. I had also been acting as locum tenens for the Police Surgeon, who was on leave; this further diminished my leisure and possibly accentuated the state of mind that I have described. Nevertheless, I was a little disposed to reproach myself, for, solitary man as he was, he had made it clear that he was always pleased to see me. Indeed, it had seemed to me that I was the only friend that he had, for certainly Boles could not be regarded in that light; and if the quarrel between them had given me a distaste for the studio, that very occurrence did, in fact, emphasize those obligations of friendship which had led me at first visit to the studio.

I had then felt that it was my duty to keep an eye on him, since some person had certainly tried to poison him. That person had some reason for desiring his death and had no scruple about seeking to compass it; and as the motive, presumably, still existed, there was no denying that, calmly as he had taken the position, Peter Gannet stood definitely in peril of a further and more successful attempt—to say nothing of the chance of his being knocked on the head with a raising hammer in the course of one of his little disagreements with Boles. I ought not to have left him so long without at least a brief visit of inspection.

Thus reflecting, I decided to walk round to the studio as soon as the consultations were finished and satisfy myself that all was well; and as the time ran on and no further patients appeared, my eye turned impatiently to the clock, the hands of which were creeping towards eight, when I should be free to go. There were now only three minutes to run and the clock had just given the preliminary hiccup by which clocks announce their intention to strike, when I heard the door of the adjoining waiting room open and close, informing me that a last minute patient had arrived.

It was very provoking; but after all it was what I was there for. So dismissing Gannet from my mind, I rose, opened the communicating door and looked into the waiting room.

The visitor was Mrs. Gannet and at the first glance at her my heart sank. For her troubled, almost terrified, expression told me that something was seriously amiss; and my imagination began instantly to frame lurid surmises.

“What is the matter, Mrs. Gannet?” I asked, as I ushered her through into the consulting room. “You look very troubled.”

“I am very troubled,” she replied. “A most extraordinary and alarming thing has happened. My husband has disappeared.”

“Disappeared!” I repeated in astonishment. “Since when?”

“That I can’t tell you,” she answered. “I have been away from home for about a fortnight, and when I came back I found the house empty. I didn’t think much of it at the time, as I had said, when I wrote to him, that I was not certain as to what time I should get home, and I simply thought that he had gone out. But then I found my letter in the letter box, which seemed very strange, as it must have been lying there two days. So I went up and had another look at his bedroom, but everything was in order there. His bed had not been slept in—it was quite tidily made—and his toilet things and hair brushes were in their usual place. Then I looked over his wardrobe, but none of his clothes seemed to be missing excepting
the suit that he usually wears. And then I went down to the hall to see if he had taken his stick or his umbrella, but he hadn’t taken either. They were both there; and what was more remarkable, both his hats were on their pegs.”

“Do you mean to say,” I exclaimed, “that there was no hat missing at all?”

“No. He has only two hats, and they were both there. So it seems as if he must have gone away without a hat.”

“That is very extraordinary,” said I. “But surely your maid knows how long he has been absent.”

“There isn’t any maid,” she replied. “Our last girl, Mabel, was under notice and she left a week before I went away; and, as there was no time to get a fresh maid, Peter and I agreed to put it off until I came back. He said that he could look after himself quite well and get his meals out if necessary. There are several good restaurants near.

“Well, I waited all yesterday in hopes of his return and I sat up until nearly one in the morning, but he never came home, and there has been no sign of him today.”

“You looked in at the studio, I suppose?” said I.

“No, I didn’t,” she replied almost in a whisper. “That is why I have come to you. I couldn’t summon up courage to go there.”

“Why not?” I asked.

“I was afraid,” she answered in the same low, agitated tone, “that there might be something—something there that—well, I don’t quite know what I thought, but you know—”

“Yes, I understand,” said I, rising—for the clock had struck and I was free. “But that studio ought to be entered at once. Your husband may have had some sudden attack or seizure and be lying there helpless.”

I went out into the hall and wrote down on the slate the address where I was to be found if any emergency should arise. Then Mrs. Gannet and I set forth together, taking the short cuts through the back streets, with which I was now becoming quite familiar. We walked along at a quick pace, exchanging hardly a word, and as we went, I cogitated on the strange and disquieting news that she had brought. There was no denying that things had a decidedly sinister aspect. That Gannet should have gone away from home hatless and unprovided with any of his ordinary kit, and leaving no note or message, was inconceivable. Something must have happened to him. But what? My own expectation was that I should find his dead body in the studio, and that was evidently Mrs. Gannet’s, too, as was suggested by her terror at the idea of seeking him there. But that terror seemed to me a little unnatural. Why was she so afraid to go into the studio, even with the expectation of finding her husband dead? Could it be that she had some knowledge or suspicion that she had not disclosed? It seemed not unlikely. Even if she had not been a party to the poisoning, she must have known, or at least strongly suspected who the poisoner was; and it was most probable that she had been able to guess at the motive of the crime. But she would then realize, as I did, that the motive remained and might induce another crime.

When we reached the house, I tried the wicket in the studio gate, but it was locked, and the key which Gannet had given me was not in my pocket. Meanwhile, Mrs. Gannet had opened the street door with her latch-key and we entered the house together.

“Are you coming into the studio with me?” I asked, as we went through the hall to the side door that opened on the yard.

“No,” she replied. “I will come with you to the door and wait outside until you have seen whether he is there or not.”

Accordingly, we walked together across the yard, and when we came to the studio door, I tried it. But it was locked; and an inspection by means of my flashlight showed that it had been locked from the inside and that the key was in the lock.

“Now,” said I, “what are we to do? How are we going to get in?”

“There is a spare key,” she replied. “Shall I go and get it?”

“But,” I objected, “we couldn’t get it into the lock. There is a key there already. And the wicket is locked, too. Have you got a spare key of that?”

She had, so we returned to the house, where she found the key and gave it to me. And as I took it from her trembling hand, I could see—though she made no comment—that the locked door with the key inside had given her a further shock. And certainly it was rather ominous. But if the wicket should prove also to be locked from the inside, all hope or doubt would be at an end. It was, therefore, with the most acute anxiety that I hurried out into the street, leaving her standing in the hall, and ran to the wicket. But to my relief, the key entered freely and turned in the lock and I opened the little gate and stepped through into the studio. Lighting myself across the floor with my flashlight I reached the switch and turned it on, flooding the place with light. A single glance around the studio showed that there was no one in it, alive or dead. Thereupon, I unlocked the yard door and threw it open, when I perceived Mrs. Gannet standing outside.

“Well, he isn’t here,” I reported, whereupon she came, almost on tiptoe, into the lobby and peered round the curtain.

“Oh dear!” she exclaimed, “what a relief! But still, where can he be? I can’t help thinking that something must have happened to him.”

As I could not pretend to disagree with her, I made no reply to this, but asked: “I suppose you have searched the house thoroughly?”
“I think so,” she replied, “and I don’t feel as if I could search any more. ‘But if you would be so kind as to take a look round and make sure that I haven’t overlooked anything—’

“Yes,” said I, “I think that would be just as well. But what are you going to do tonight? You oughtn’t to be in the house all alone.”

“I couldn’t be,” she replied. “Last night was dreadful, but now my nerves are all on edge. I couldn’t endure another night. I shall go to my friend, Miss Hughes—she lives in Mornington Crescent—and see if she will come and keep me company.”

“It would be better if she would put you up for the night,” said I.

“Yes, it would,” she agreed. “Much better. I would rather not stay in this house tonight. As soon as you have made your inspection, I will run round and ask her.”

“You needn’t wait for me,” said I. “Go round to her at once, as it is getting late. Give me the number of her house and I will call on my way home and tell you whether I have discovered any clue to the mystery.”

She closed with this offer immediately, being, evidently, relieved to get away from the silent, desolate house. I walked back with her across the yard, and when I had escorted her to the street door and seen her start on her mission, I closed the door and went back into the house, not displeased to have the place to myself and the opportunity to pursue my investigations at my leisure and free from observation.

I made a very thorough examination, beginning with the attics at the very top of the house and working my way systematically downwards. On the upper floors there were several unoccupied rooms, some quite empty and others more or less filled with discarded furniture and miscellaneous lumber. All these I searched minutely, opening up every possible—and even impossible—hiding-place, and peering, with the aid of my pocket flashlight, into the dim and musty recesses of the shapeless closets in the corners of the roof or under the staircases. In the occupied bedrooms I knelt down to look under the beds, I opened the cupboards and wardrobes and prodded the clothes that hung from the pegs to make sure that they concealed no other hanging object. I even examined the chimneys with my lamp and explored their cavities with my walking-stick, gathering a little harvest of soot up my sleeves but achieving no other result and making no discoveries, excepting that, when I came to examine Gannet’s bedroom, I noticed that the pots and pans and the effigy of the monkey had disappeared from the mantelpiece.

It was an eerie business and seemed to become more so (by a sort of autosuggestion) as I explored one room after another. By the time I had examined the great stone-paved kitchen and the rather malodorous scullery and searched the cavernous, slug-haunted cellars, even probing the mounds of coal with my stick, I had worked myself up into a state of the most horrid expectancy.

But still there was no sign of Peter Gannet. The natural conclusion seemed to be that he was not there. But this was a conclusion that my state of mind made me unable to accept. His wife’s statement set forth that he had disappeared in his ordinary indoor apparel, in which it was hardly imaginable that he could have gone away from the house. But if he had not, then he must be somewhere on the premises. Thus I argued, with more conviction than logic, as I ascended the uncARPETED basement stairs, noting the surprisingly loud sound that my footsteps made as they broke in on the pervading silence.

As I passed into the hall, I paused at the hat-stand to verify Mrs. Gannet’s statement. There were the two hats, sure enough; a shabby, broad-brimmed, soft felt which I knew well by sight, and a rather trim billycock which I had never seen him wear, but which bore his initials in the crown, as I ascertained by taking it down and inspecting it. And there was his stick, a rough oak crook, and his umbrella with a legible P. G. on the silver band. There was also another stick which I had never seen before and which struck me as being rather out of character with the Bohemian Gannet: a smart, polished cane with a gilt band and a gilt tip to the handle. I took it out of the stand, and as it seemed to me rather long, I lifted out the oak stick and compared the two, when I found that the cane was the longer by a full inch. There was nothing much in this, and as the band bore no initials, I was putting it back in the stand when my eye caught a minute monogram on the gilt tip. It was a confused device, as monograms usually are, but eventually I managed to resolve it into the two letters F. and B.

Then it was pretty certain that the stick belonged to Frederick Boles. From which it followed that Boles had been to the house recently. But there was nothing abnormal in this, since he worked pretty regularly in the studio and usually approached it through the house. But why had he left his stick? And why had Mrs. Gannet made no mention of it, or, indeed, of Boles himself? For if he had been working here, he must have known when Gannet was last seen, for unless he had a latch-key, he must have been admitted by Gannet himself. Turning this over in my mind, I decided, before leaving the house, to take another look at the studio. It had certainly been empty when I had looked in previously, and there were no large cupboards or other possible hiding places. Still there was the chance that a more thorough examination might throw some light on Gannet’s activities and on the question as to the time of his disappearance. Accordingly, I passed out by the side door, and crossing the yard, opened the studio door, switched on the lights, drew aside the curtain and stepped in.
CHAPTER 8. — DR. OLDFIELD MAKES SURPRISING DISCOVERIES

ON entering the studio, I halted close by the curtain and stood awhile surveying the vast, desolate, forbidding interior with no definite idea in my mind. Obviously, there was no one there, dead or alive, nor any closed space large enough to form a hiding place. And yet as I stood there, the creepy feeling that had been growing on me as I had searched the house seemed to become even more intense. It may have been that the deathly silence and stillness of the place, which I had known only under the cheerful influence of work and companionship, cast a chill over me.

At any rate, there I stood, vaguely looking about me with a growing uncomfortable feeling that this great, bare room which had been the scene of Gannet’s labours and the centre of his interests, had been in some way connected with his unaccountable disappearance.

Presently my vague, general survey gave place to a more detailed inspection. I began to observe the various objects in the studio and to note what they had to tell of Gannet’s recent activities. There was the potter’s wheel, carefully cleaned—though never used—according to his invariable orderly practice, and there was a row of “green” unfired jars drying on a shelf until they should be ready for the kiln. But when I looked at the kiln itself, I was struck by something quite unusual, having regard to Gannet’s habitual tidiness. The fire-holes which led into the interior of the kiln were all choked with ash; and opposite to each was a large mound of the ash which had been raked out during the firing and left on the hearths. Now, this was singularly unlike Gannet’s practice. Usually, as he raked out the ash, he shovelled it up into a bucket and carried it out to the ash-bin in the yard; and as soon as the fires were out, he cleared each of the fireplaces of the remaining ash, leaving them clean and ready for the next firing.

Here, then, was something definitely abnormal. But there was a further discrepancy. The size of the mounds made it clear that there had been a rather prolonged firing and a “high fire.” But where were the fired pieces? The shelves on which the pots were usually stored after firing were all empty and there was not a sign of any pottery other than the unfired jars. The unavoidable conclusion was that the “batch” must be still in the kiln. But if this were so, then Gannet’s disappearance must have coincided with the end of the firing. But that seemed entirely to exclude the idea of a voluntary disappearance. It was inconceivable that he should have gone away leaving the fires still burning and the kiln unopened.

However, there was no need to speculate. The question could be settled at once by opening the kiln if it was sufficiently cool to handle. Accordingly, I walked over to it and cautiously touched the outside brick casing, which I found to be little more than lukewarm, and then I boldly unlatched and pulled open the big iron, fire-clay lined door, bringing into view the loose fire-bricks which actually closed the opening. As these, too, were only moderately warm, I proceeded to lift them out, one by one, which I was able to do the more easily since they had been only roughly fitted together.

It was not really necessary for me to take them all out, for, as soon as the upper tier was removed, I was able to throw the beam of my flashlight into the interior. And when I did so, I discovered, to my astonishment, that the kiln was empty.

The mystery, then, remained. Indeed, it grew more profound. For not only was the problem as to what had become of the fired pottery still unsolved, but there was the remarkable fact that the kiln must have been opened while it was still quite hot; a thing that Gannet would never have done, since a draught of cold air on the hot pottery would probably result in a disaster. And when I took away the rest of the fire-bricks and the interior of the kiln was fully exposed to view, another anomaly presented itself. The floor of the kiln, which during the firing would be covered with burnt flint or bone-ash, was perfectly clean. It had been carefully and thoroughly swept out, and this while the kiln was hot and while the fire-holes remained choked with ash.

As to the missing pottery, there was one possibility, though an unlikely one. It might have been treated with glaze and put into the glost oven. But it had not, for when I opened the oven and looked in, I found it empty and showing no sign of recent use.

It was all very strange; and the strangeness of it did nothing to allay my suspicion that the studio held the secret of Gannet’s disappearance. I prowled round with uneasy inquisitiveness, scrutinizing all the various objects in search of some hint or leading fact. I examined the grog mill and noted that something white had been recently ground in it, and apparently ground dry, to judge by the coating of fine powder on the floor around it. I looked into the big iron mortar and noted that some white material had been pounded in it. I examined the rows of cupels on the shelves by Boles’s little muffle, noted that they were badly made and of unusually coarse material, and wondered when Boles had made them. I even looked into the muffle—finding nothing, of course—and observing that the floor of the studio seemed to have been washed recently, speculated on the possible reason for this very unusual proceeding.

But speculation got me no more forward. Obviously, there was something abnormal about the kiln. There had been a prolonged and intense fire, but of the fired ware there was not a trace. What conceivable explanation could there be of such an extraordinary conflict of facts? The possibility occurred to me that the whole batch might have been disposed of by a single transaction or sent to an exhibition. But a moment’s reflection showed me that this would not do. There had not been time for the batch to be cooled, finished, glazed and refired, for the kiln was still quite warm inside.

The rough, box-like stool that Gannet had made to sit on at the bench was standing near the kiln. I slipped my hand through the lifting hole and drew the stool up to the open door in order more conveniently to examine the interior. But the examination yielded nothing. I threw the beam of light from my flashlight into every corner, but it simply confirmed my original observation. The kiln was empty, and no trace of its late contents remained beyond the few obscure white smears
I sat there for some minutes facing the open door and reflecting profoundly on this extraordinary problem. But I could make nothing of it, and at length, I started up to renew my explorations. For it had suddenly occurred to me that I had forgotten to examine the contents of the bins. But as I rose and turned round, I noticed a small white object on the floor which had evidently been covered by the stool before I had moved it. I stooped and picked it up, and at the first glance at it all my vague and formless suspicions seemed to run together into a horrible certainty.

The little object was the ungual phalanx, or terminal joint, of a finger—apparently a forefinger—burned to the snowy whiteness characteristic of incinerated bone. It was unmistakable. For if I lacked experience in some professional matters, at least my osteology was fresh; and as the instant recognition flashed on me, I stood as if rooted to the ground, staring at the little relic with a shuddering realization of all that it meant.

The mystery of the absent pottery was solved. There had never been any pottery. That long and fierce fire had burned to destroy the evidence of a hideous crime. And the other mysteries, too, were solved. Now I could guess what the white substance was that had been ground in the grog mill; how it came that the hastily-made cupels were of such abnormally coarse material; and why it had been necessary to wash the studio floor. All the anomalies now fell into a horrid agreement and each served to confirm and explain the others.

I laid the little fragile bone tenderly on the stool and proceeded to re-examine the place by the light of this new and dreadful fact. First I went to the shelves by Boles’s muffle and looked over the cupels, taking them in my hand the better to examine them. Their nature was now quite obvious. Instead of the finely powdered bone-ash of which they were ordinarily composed, they had been made by cramming fragments of crushed, incinerated bone into the cupel press; and the cohesion of these was so slight that none of the cupels held together in my hand.

Laying the loose fragments on the shelf, I turned away to examine the bins, of which there was a row standing against the wall. I began with the clay-bins, containing the material for the various “bodies”—stoneware, earthenware and porcelain. But when I lifted the lids, I saw that they contained clay and could contain nothing else. The grog-bins were nearly empty and showed nothing abnormal, and the same was true of the plaster-bin, though I took the precaution of dipping my hand deeply into the plaster to make sure that there was nothing underneath. When I came to the bone-ash-bin I naturally surveyed it more critically; for here, with the aid of the mill, the residue of a cremated body could have been concealed beyond the possibility of recognition.

I lifted off the lid and looked in, but at the first glance perceived nothing unusual. The bin was three parts full, and its contents appeared to be the ordinary finely powdered ash. But I was not prepared to accept the surface appearances. Rolling my sleeve up above the elbow, I thrust my hand deep down into the ash, testing its consistency by working it between my fingers and thumb. The result was what the cupels had led me to expect. About eight inches from the surface, the feel of the fine, smooth powder gave place to a sensation as if I were grasping a mixture of gravel and sand with occasional fragments of appreciable size. Some of these I brought up to the surface, dropping them into my other hand and dipping down for further specimens until I had collected a handful, when I carried them over the cupel shelves and, having deposited them on a vacant space, picked out one or two of the larger fragments and carried them across to the modelling stand to examine them by the light of the big studio lamp.

Of course, there could be no doubt as to their nature. Even to the naked eye, the characteristic structure of bone was obvious, and rendered more so by the burning away of the soft tissues. But I confirmed the diagnosis with the aid of my pocket lens, and then, having replaced the fragments on the shelf, I put the lid back on the bin and began seriously to consider what I should do next. There was no need for further exploration. I had all the essential facts. I now knew what had happened to Peter Gannet, and any further elucidation lay outside my province and within that of those whose business it is to investigate crime.

Before leaving the studio, I looked about for some receptacle in which to pack the little finger bone; for I knew that it would crumble at a touch, and, as it was the one piece of undeniable evidence, it must be preserved intact at all costs. Eventually I found a nearly empty match box, and, having tipped out the remaining matches and torn a strip from my handkerchief, I rolled the little relic in this, packed it tenderly in the match box and bestowed the latter in my breast pocket. Then I took up my stick and prepared to depart; but just as I was starting towards the door, it occurred to me that I might as well take a few of the small fragments from the bin to examine more thoroughly at my leisure. Not that I had any doubts as to their nature, but the microscope would put the matter beyond dispute. Accordingly, I collected a handful from the shelf, and having wrapped them in the remainder of my handkerchief, put the little parcel in my pocket and then made my way to the door, switched off the lights and went out, taking the door-key with me.

Coming out from the glare of the studio into the darkness, I had to light myself across the yard with my flashlight, and, as I flashed it about, its beam fell on the big rubbish-bin which stood in a corner waiting for the dustman. For a moment, I was disposed to stop and explore it; but then I reflected that it was not my concern to seek further details, and as it was getting late and I still had to report to Mrs. Gannet, I went on into the house, and passing through the hall, let myself out into the street.

The distance from Jacob Street to Mornington Crescent is quite short; all too short for the amount of thinking that I had to do on the way thither. For it was only when I had shut the door and set forth on my errand that the awkwardness of the coming interview began to dawn on me. What was I to say to Mrs. Gannet? As I asked myself the question, I saw that it involved two others. The first was, how much did she know? Had she any suspicion that her husband had been made away
with? I did not for a moment believe that she had been privy to the gruesome events that the studio had witnessed, but her agitation, her horror at the idea of spending the night in the house, and above all, her strange fear of entering the studio, justified the suspicion that, even if she knew nothing of what had happened, she had made some highly pertinent surmises.

Then, how much did I know? I had assumed quite confidently that a body had been cremated in the kiln and that the body was that of Peter Gannet. And I believed that I could name the other party to that grim transaction. But here I recalled Dr. Thorndyke’s oft-repeated warnings to his students never to confuse inference or belief with knowledge and never to go beyond the definitely ascertained facts. But I had done this already; and now when I revised my convictions by the light of this excellent precept, I realized that the actual facts that I had ascertained (though they justified my inferences) were enough only to call for a thorough investigation.

Then should I tell Mrs. Gannet simply what I had observed and leave her to draw her own conclusions? Considered, subject to my strong distrust of the lady, this course did not commend itself. In fact, it was a very difficult question, and I had come to no decision when I found myself standing on Miss Hughes’s door-step, and in response to my knock, the door was opened by Mrs. Gannet herself.

Still temporizing in my own mind, I began by expressing the hope that Miss Hughes was able to accommodate her.

“‘Yes,’ she replied, as she ushered me into the drawing room, ‘I am glad to say that she can give me the spare bedroom. She has been most kind and sympathetic. And how have you got on? You have been a tremendous time. I expected you at least half an hour ago.”

“The search took quite a long time,” I explained, “for I went through the whole house from the attics to the cellars and examined every nook and corner.”

“And I suppose you found nothing, after all?”

“Not a trace in any part of the house.”

“It was very good of you to take so much trouble,” said she. “I don’t know how to thank you and you such a busy man, too. I suppose you didn’t go into the studio again?”

“Yes,” I replied. “I thought I would have another look at it, in rather more detail, and I did pick up some information there as to the approximate time when he disappeared, for I opened the big kiln and found it quite warm inside. I don’t know how long it takes to cool. Do you?”

“Not very exactly,” she answered, “but quite a long time, I believe, if it is kept shut up. At any rate, the fact that it was warm doesn’t tell us much more than we know. It is all very mysterious, and I don’t know what on earth to do next.”

“What about Mr. Boles?” I suggested. “He must have been at the studio some time quite lately. Wouldn’t it be as well to look him up and see if he can throw any light on the mystery?”

She shook her head, disconsolately. “I have,” she said. “I went to his flat yesterday and again this morning, but I could get no answer to my knocking and ringing. And the caretaker man in the office says that he hasn’t seen him for about a week, though he has been on the lookout for him on account of a parcel that the postman left. He has been up to the flat several times, but could get no answer. And there hasn’t been any light in the windows at night. So he must be away from home.”

“Did he know when you would be returning?”

“Yes,” she replied. “And there is another strange thing. I wrote and told him what day I should be back and asked him to drop in and have tea with me. But he not only never came, but he didn’t even answer my letter.”

I reflected on this new turn of events, which seemed less mysterious to me than it appeared to her. Then I cautiously approached the inevitable proposal.

“Well, Mrs. Gannet,” said I, “it is, as you say, all very mysterious. But we can’t just leave it at that. We have got to find out what has happened to your husband; and as we haven’t the means of doing it ourselves, we must invoke the aid of those who have. We shall have to apply for help to the police.”

As I made this proposal, I watched her attentively and was a little relieved to note that it appeared to cause her no alarm. But she was not enthusiastic.

“Do you think it is really necessary?” she asked. “If we call in the police, it will be in all the papers and there will be no end of fuss and scandal; and after all, he may come back tomorrow.”

“I don’t think there is any choice,” I rejoined, firmly. “The police will have to be informed sooner or later, and they ought to be notified at once while the events are fresh and the traces more easy to follow. It would never do for us to seem to have tried to hush the affair up.”

That last remark settled her. She agreed that perhaps the police had better be informed of the disappearance, and to my great satisfaction, she asked me to make the communication.

“I don’t feel equal to it,” said she, “and as you have acted as police surgeon and know the officers, it will be easier for you. Hadn’t you better have the latch-key in case they want to look over the house?”

“But won’t you want it yourself?” I asked.
“No,” she replied. “Miss Hughes has invited me to stay with her for the present. Besides, I have a spare key and I brought it away with me; and of course, if Peter should come back, he has his own key.”

With this she handed me the latch-key and when I had pocketed it I took my leave and set forth at a swinging pace for home, hoping that I should find no messages awaiting me and that a substantial meal would be ready for instant production. I was very well pleased with the way in which the interview had gone off and congratulated myself on having kept my own counsel. For now I need not appear in the investigation at all. The police would, of course, examine the studio, and the discoveries that they would make, on my prompting, could be credited to them.

When I let myself in, I cast an anxious glance at the message slate and breathed a benediction on the blank surface that it presented. And as a savoury aroma ascending from the basement told me that all was well there, too, I skipped off to the bathroom, there to wash and brush joyfully and reflect on the delight of being really hungry—under suitable conditions.

As I disposed of the excellent dinner—or supper—that my thoughtful housekeeper had provided, it was natural that I should ruminate on the astonishing events of the last few hours. And now that the excitement of the chase had passed off, I began to consider the significance of my discoveries. Those discoveries left me in no doubt (despite Thorndyke's caution) that my friend, Peter Gannet, had been made away with; and I owed it to our friendship, to say nothing of my duty as a good citizen, to do everything in my power to establish the identity of the murderer in order that he—or she—might be brought within the grasp of the law.

Now who could it be that had made away with my poor friend? I had not the faintest doubt as to, at least, the protagonist in that horrid drama. In the very moment of my realization that a crime had been committed, I had confidently identified the criminal. And my conviction remained unshaken. Nevertheless, I turned over the available evidence as it would have to be presented to a stranger and as I should have to present it to the police.

What could we say with certainty as to the personality of the murderer? In the first place, he was a person who had access to the studio. Then he knew how to prepare and fire the kiln. He understood the use and management of the grog mill and of the cupel press, and he knew which of the various bins was the bone-ash-bin. But, so far as I knew, there was only one person in the world to whom this description would apply—Frederick Boles.

Then, to approach the question from the other direction, were there any reasons for suspecting Boles? And the answer was that there were several reasons. Boles had certainly been at the house when Gannet was there alone, and had thus had the opportunity. He had now unaccountably disappeared, and his disappearance seemed to coincide with the date of the murder. He had already, to my certain knowledge, violently assaulted Gannet on at least one occasion. But far more to the point was the fact that he was under the deepest suspicion of having made a most determined attempt to kill Gannet by means of poison. Indeed, the word “suspicion” was an understatement. It was nearly a certainty. Even the cautious Thorndyke had made no secret of his views as to the identity of the poisoner. It was at this stage of my reflections that I had what, I think, Americans call a ‘hunch’—a brain wave, or inspiration. Boles had made at least one attempt to poison poor Gannet. We suspected more than one attempt, but of the one I had practically no doubt. Now one of the odd peculiarities of the criminal mind is its strong tendency to repetition. The coiner, on coming out of prison, promptly returns to the coining industry; the burglar, the forger, the pickpocket, all tend to repeat their successes or even their failures. So, too, the poisoner, foiled at a first attempt, tries again, not only by the same methods, but nearly always makes use of the same poison.

Now Boles had been alone in the house with Gannet. He had thus had the opportunity, and it might be assumed that he had the means. Was it possible that he might have made yet another attempt and succeeded? It was true that the appearances rather suggested violence, and that this would be, from the murderer’s point of view, preferable to the relatively slow method of poisoning. Nevertheless, a really massive dose of arsenic, if it could be administered, would be fairly rapid in its effects; and after all, in the assumed circumstances, the time factor would not be so very important.

But there was another consideration. Supposing Boles had managed to administer a big, lethal dose of arsenic, would any trace of the poison be detectible in the incinerated remains of the body? It seemed doubtful, though I had no experience by which to form an opinion. But it was certainly worth while to try; for if the result of the trial should be negative, no harm would have been done, whereas if the smallest trace of arsenic should be discoverable, demonstrable evidence of the highest importance would have been secured.

I have mentioned that, since the poisoning incident, I had taken various measures to provide against any similar case in the future, and among other precautions, I had furnished myself with a very complete apparatus for the detection of arsenic. It included the appliances for Marsh’s test—not the simple and artless affair that is used for demonstration in chemistry classes, but a really up-to-date apparatus, capable of the greatest delicacy and precision. And as a further precaution, I had made several trial analyses with it to make sure that, should the occasion arise, I could rely on my competence to use it.

And now the occasion had arisen. It was not a very promising one, as the probability of a positive result seemed rather remote. But I entered into the investigation with an enthusiasm that accelerated considerably my disposal of the rest of my dinner, and as soon as I had swallowed the last mouthful, I rose and proceeded forthwith to the dispensary which served also as a laboratory. Here I produced from my pocket the match box containing the finger bone and the parcel of crushed fragments from the bin. The match box I opened and tenderly transferred the little bone to a corked glass tube with a plug of cotton wool above and below it, and put the tube away in a locked drawer. Then I opened the parcel of fragments and embarked on the investigation.
I began by examining one or two of the fragments with a low power of the microscope and thereby confirming beyond all doubt my assumption that they were incinerated bone; and having disposed of this essential preliminary, I fell to work on the chemical part of the investigation. With the details of these operations—which, to tell the truth, I found rather tedious and troublesome—I need not burden the reader. Roughly, and in bare outline, the procedure was as follows: First, I divided the heap of fragments into two parts, reserving one part for further treatment if necessary. The other part I dissolved in strong hydrochloric acid and distilled the mixture into a receiver containing a small quantity of distilled water; a slow and tedious business which tried my patience severely, and which was, after all, only a preliminary to the actual analysis. But at last, the fluid in the retort dwindled to a little half-dry residue, whereupon I removed the lamp and transferred my attention to the Marsh’s apparatus. With this I made the usual preliminary trial to test the purity of the reagents and then set the lamp under the hard glass exit tube, watching it for several minutes after it had reached a bright red heat. As there was no sign of any darkening or deposit in the tube, I was satisfied that my chemicals were free from arsenic—as indeed I knew them to be from previous trials.

And now came the actual test. Detaching the receiver from the retort, I emptied its contents—the distilled fluid—into a well-washed measure glass and from this poured it slowly, almost drop by drop, into the thistle funnel of the flask in which the gas was generating. I had no expectation of any result—at least, so I persuaded myself. Nevertheless, as I poured in the “distillate” I watched the exit tube with almost tremulous eagerness. For it was my first real analysis; and after all the trouble that I had taken, a completely negative result would have seemed rather an anticlimax. Hence the yearning and half-expectant eye that turned ever towards the exit tube.

Nevertheless, the result, when it began to appear, fairly astonished me. It was beyond my wildest hopes. For even before I had finished pouring in the distillate, a dark ring appeared on the inside of the glass exit tube, just beyond the red hot portion, and grew from moment to moment in intensity and extent until a considerable area of the tube was covered with a typical “arsenic mirror.” I sat down before the apparatus and watched it ecstatically, moved not only by the natural triumph of the tyro who has “brought it off” at the first trial, but by satisfaction at the thought that I had forged an instrument to put into the hands of avenging justice.

For now the cause of poor Gannet’s death was established beyond cavil. My original surmise was proved to be correct. By some means, the murderer had contrived to administer a dose of arsenic so enormous as to produce an immediately fatal result. It must have been so. The quantity of the poison in the body must have been prodigious; for even after the considerable loss of arsenic in the kiln, there remained in the ashes a measurable amount, though how much I had not sufficient experience to judge.

I carried the analysis no farther. The customary procedure is to cut off the piece of tube containing the “mirror” of metallic arsenic and subject it to a further, confirmatory test. But this I considered unnecessary and, in fact, undesirable. Instead, I carefully detached the tube from the flask and, having wrapped it in several layers of paper, packed it in a cardboard postal tube and put it away with the finger bone in readiness for my interview with the police on the morrow.
CHAPTER 9. — INSPECTOR BLANDY INVESTIGATES

ON the following morning, as soon as I had disposed of the more urgent visits, I collected the proceeds of my investigations—the finger bone, the remainder of the bone fragments, and the glass tube with the arsenic mirror—and bustled off to the police station, all agog to spring my mine and set the machinery of the law in motion. My entry was acknowledged by the sergeant, who was perched at his desk, with an affable smile and the inquiry as to what he could do for me.

“1 wanted rather particularly to see the Superintendent, if he could spare me a few minutes,” I replied.

“I doubt whether he could,” said the sergeant. “He’s pretty busy just now. Couldn’t I manage your business for you?”

“I think I had better see the Superintendent,” I answered. “The matter is one of some urgency and I don’t know how far it might be considered confidential. I think I ought to make my communication to him, in the first place.”

“Sounds mighty mysterious,” said the sergeant, regarding me critically, “however, we’ll see what he says. Go in, Dawson, and tell the Superintendent that Dr. Oldfield wants to speak to him and that he won’t say what his business is.”

On this, the constable proceeded to the door of the inner office, on which he knocked, and having been hidden in a loud, impatient voice to “come in,” went in. After a brief delay, occupied probably by explanations, he reappeared, followed by the Superintendent, carrying in one hand a large note-book and in the other a pencil. His expression was not genial, but rather irritably interrogative, conveying the question, “Now, then. What about it?” And in effect, that was also conveyed by his rather short greeting.

“I should like to have a few words with you, Superintendent.” I said, humbly.

“Well,” he replied, “they will have to be very few. I am in the middle of a conference with an officer from Scotland Yard. What is the nature of your business?”

“I have come to inform you that I have reason to believe that a murder has been committed,” I replied.

He brightened up considerably at this, but still he accepted the sensational statement with disappointing coolness.

“So you mean that you think, or suspect, that a murder has been committed?” he asked in an obviously sceptical tone.

“It is more than that,” I replied. “I am practically certain. I came to give you the facts that are known to me; and I have brought some things to show you which I think you will find pretty convincing.”

He reflected for a moment; then, still a little irrationally, he said:

“Very well. You had better come in and let us hear what you have to tell us.”

With this, he indicated the open door, and when I had passed through, he followed me and closed it after us.

As I entered the office I was confronted by a gentleman who was seated at the table with a number of papers before him. A rather remarkable-looking gentleman, slightly bald, with a long, placid face and a still longer, and acutely pointed nose, and an expression in which concentrated benevolence beamed on an undeserving world. I don’t know what his appearance suggested, but it certainly did not suggest a detective inspector of the Criminal Investigation Department. Yet that was his actual status, as appeared when the Superintendent introduced him to me—by the name of Blandy—adding:

“This is Dr. Oldfield who has come to give us some information about a case of suspected murder.”

“How good of him!” exclaimed Inspector Blandy, rising to execute a deferential bow and beaming a benediction on me as he pressed my hand with affectionate warmth. “I am proud, sir, to make your acquaintance. I am always proud to make the acquaintance of members of your learned and invaluable profession.”

The Superintendent smiled sourly and offered me a chair.

“I suppose, Inspector,” said he, “we had better adjourn our other business and take the doctor’s information?”

“Surely, surely,” replied Blandy. “A capital crime must needs take precedence. And as the doctor’s time is even more valuable than ours, we can rely on him to economize both.”

Accordingly, the Superintendent, with a distinct return to the “what about it?” expression, directed me shortly to proceed, which I did; and bearing in mind the Inspector’s polite hint, I plunged into the matter without preamble.

I need not record my statement in detail since it was but a repetition, suitably condensed, of the story that I have already told. I began with the disappearance of Peter Gannet, went on to my search of the house (to which the Superintendent listened with undiszsembled impatience) and then to my examination of the studio and my discoveries therein, producing the finger bone and the packet of fragments in corroboration. To the latter part of my statement both officers listened with evidently aroused interest, asking only such questions as were necessary to elucidate the narrative; as, for instance, how I came to know so much about the kiln and Gannet’s method of work.

At the conclusion of this part of my statement, I paused while the two officers pored over the little bone in its glass container and the open package of white, coral-like fragments. Then I prepared to play my trump card. Taking off the paper wrapping from the cardboard case, I drew out from the latter the glass tube and laid it on the table.

The Superintendent glared at it suspiciously while the Inspector picked it up and regarded it with deep and benevolent
interest.

"To my untutored eye," said he, "this dark ring seems to resemble an arsenic mirror."

"It is an arsenic mirror," said I.

"And what is its connection with these burnt remains?" the Superintendent demanded.

"That arsenic," I replied, impressively, "was extracted from a quantity of bone fragments similar to those that I have handed to you; and with this, I proceeded to give them an account of my investigations with the Marsh's apparatus, to which the Superintendent listened with open incredulity.

"But," he demanded, when I had finished, "what on earth led you to test these ashes for arsenic? What suggested to you that there might be arsenic in them?"

Of course, I had expected this question, but yet, curiously enough, I was hardly ready for it. The secret of the poisoning had been communicated to Gannet, but otherwise I had, on Thordyke's advice, kept my own counsel. But now this was impossible. There was nothing for it but to give the officers a full account of the poisoning affair, including the fact that the discovery had been made and confirmed by Dr. Thordyke.

At the mention of my teacher's name, both men pricked up their ears, and the Superintendent commented:

"Then Dr. Thordyke would be available as a witness."

"Yes," replied, "I don't suppose he would have any objection to giving evidence on the matter."

"Objection be blown!" snorted the Superintendent, "He wouldn't be asked. He could be subpoenaed as a common witness to the fact that this man, Gannet, was suffering from arsenic poisoning. However, before we begin to talk of evidence, we have got to be sure that there is something like a prima facie case. What do you think, Inspector?"

"I agree with you, Superintendent, as I always do," the Inspector replied. "We had better begin by checking the doctor's observations on the state of affairs in Gannet's studio. If we find the conditions to be as he has described them—which I have no doubt that we shall—and if we reach the same conclusions that he has reached, there will certainly be a case for investigation."

"Yes," the Superintendent agreed. "But our conclusions on the primary facts would have to be checked by suitable experts; and I suppose an independent analysis would be desirable. The doctor's evidence is good enough, but counsel likes to produce a specialist with a name and a reputation."

"Very true," said the Inspector. "But the analysis can wait. It is quite possible that the arsenic issue may never be raised. If we find clear evidence that a human body has been burned to ashes in that kiln, we shall have the very strongest presumptive evidence that a murder has been committed. The method used doesn't really concern us, and an attempt to prove that deceased was killed in some particular manner might only confuse and complicate the case."

"I was thinking," said the Superintendent, "of what the doctor has told us about the attempt to poison Gannet. The presence of arsenic in the bones might point to certain possible suspects, considered in connection with that previous attempt."

"Undoubtedly," agreed the Inspector, "if we could prove who administered that arsenic. But we can't. And if Gannet is dead, I don't see how we are going to, he being the only really competent witness. No, Superintendent. My feeling is that we shall be wise to ignore the arsenic, or at any rate keep it up our sleeves for the present. But to come back to the immediate business, we want to see that studio, Doctor. How can it be managed without making a fuss?"

"Quite easily," I replied. "I have the keys, and I have Mrs. Gannet's permission to enter the house and to admit you, if you want to inspect the premises. I could hand you the keys if necessary, but I would much rather admit you myself."

"And very proper, too," said the Inspector. "Besides, we should want you to accompany us, as you know all about the studio and we don't. Now when could you manage the personally conducted exploration? The sooner the better, you know, as the matter is rather urgent."

"Well," I replied, "I have got several visits to make, and it is about time that I started to make them. It won't do for me to neglect my practice."

"Of course it won't," the Inspector agreed. "If duty calls you must away; and after all, a live patient is better than a dead potter. What time shall we say?"

"I think I shall be clear by four o'clock. Will that do?"

"It will do for me," replied the Inspector, glancing inquiringly at his brother officer; and as the latter agreed, it was arranged that they should call at my house at four o'clock and that we should proceed together to the studio.

As I rose to depart, my precious mirror tube—despised by Blandy but dear to me—caught my eye, and I proceeded unostentatiously to resume possession of it, remarking that I would take care of it in case it should ever be wanted. As neither officer made any objection, I returned it to its case; and the packet of bone ash having served its purpose, I closed it and slipped it into my pocket with the tube.

On leaving the police station, I glanced rapidly through the entries in my visiting list, and having planned out a
convenient route, started on my round, endeavouring—none too successfully—to banish from my mind all thoughts of the Gannet mystery that I might better concentrate my attention on the clinical problems that my patients presented. But if I suffered some distraction from my proper business, there was compensation in the matter of speed, for I dispatched my round of visits in record time, and even after a leisurely lunch, found myself with half an hour to spare before my visitors were due to arrive. This half hour I spent with my hat on, pacing my consulting room in an agony of apprehension lest an inopportune professional call should hinder me from keeping my appointment. But fortunately no message came, and punctually at four o’clock Inspector Blandy was announced and conducted me to a large roomy car which was drawn up outside the house.

“The Superintendent couldn’t come,” Blandy explained, as he ushered me into the car. “But it doesn’t matter. This is not a case for the local police. If there is anything in it, the C.I.D. will have to carry out the investigation.”

“And what are you proposing to do now?” I asked.

“Just to check your report,” he replied. “Personally, having seen you and noted your careful and exact methods, I accept it without any hesitation. But our people take nothing on hearsay if they can get observed facts, so I must be in a position to state those facts on my own knowledge and the evidence of my own eyesight; though as you and I know, my eyesight would have been of no use without yours.”

I was beginning a modest disclaimer, suggesting that I was but an amateur investigator, but he would have none of it, exclaiming:

“My dear Doctor, you undervalue yourself. The whole discovery is your own. Consider now what would have happened if I had looked into the studio as you did. What should I have seen? Nothing, my dear sir, nothing. My mere bodily senses would have perceived the visible objects but their significance would never have dawned on me. Whereas you, bringing an expert eye to bear on them, instantly detected the signs of some abnormal happenings. By the way, I am assuming that I am going to have the benefit of your co-operation and advice on this occasion.”

I replied that I should be very pleased to stay for a time and help him (being, in fact, on the very tip-toe of curiosity as to his proceedings), on which he thanked me warmly, and was still thanking me when the car drew up opposite the Gannets’ front door. We both alighted, Blandy lifting out a large, canvas covered suit-case, which he set down on the pavement while he stood taking a general view of the premises.

“Does that gate belong to Gannet’s house?” he asked, indicating the wide, double-leaved studio door.

“Yes,” I replied. “It opens directly into the studio. Would you like to go in that way? I have the key of the wicket.”

“Not this time,” said he. “We had better go in through the house so that I may see the lie of the premises.”

Accordingly, I let him in by the front door and conducted him through the hall, where he looked about him inquisitively, giving special attention to the hat-rack and stand. Then I opened the side door and escorted him out into the yard, where again he inspected the premises and especially the walls and houses which enclosed the space. Presently he espied the rubbish-bin, and walking over to it, lifted its lid and looked thoughtfully into its interior.

“Is this domestic refuse?” he inquired, "or does it belong to the studio?”

“I think it is a general dump,” I replied, “but I know that Gannet used it for ashes and anything that the dustmen would take away.”

“Then,” said he, “we had better take it in with us and look over the contents before the dustman has his innings.”

As I had by this time got the studio door unlocked, we took the bin by its two handles and carried it in. Then, at the Inspector’s suggestion, I shut the door and locked it on the inside.

“Now, I suppose,” said I, “you would like me to show you round the studio and explain the various appliances.”

“Thank you, Doctor,” he replied, “but I think we will postpone that, if it should be necessary after your singularly lucid description, and get on at once with the essential part of the inquiry.”

“What is that?” I asked

“Our present purpose,” he replied, beaming on me benevolently, “is to establish what the lawyers call the corpus delicti. To ascertain whether a crime has been committed, and if so, what sort of crime it is. We begin by finding out what those bone fragments really amount to. I have brought a small sieve with me, but probably there is a better one here; preferably a fairly fine one.”

“There is a set of sieves for sifting grog and other powders,” said I. “The coarser ones are of wire gauze and the finer of bolting cloth, so you can take your choice. The number of meshes to the linear inch is marked on the rims.”

I took him across to the place where the sieves were stacked, and, when he had looked through the collection, he selected the finest of the wire sieves, which had twenty meshes to the inch. Then I found him a scoop, and when he had tipped the contents of one grog bin into another and placed the empty bin by the side of that containing the bone-ash, he spread out on the bench a sheet of white paper from his case, laid the sieve on the empty bin and fell to work.

For a time, the proceedings were quite uneventful, as the upper part of the bin was occupied by the finely-ground ash, and when a scoopful of this was thrown on to the sieve, it sank through at once. But presently, as the deeper layers were
reached, larger fragments, recognizable as pieces of burnt bone, began to appear on the wire-gauze surface, and these, when he had tapped the sieve and shaken all the fine dust through, the Inspector carefully tipped out on to the sheet of paper. Soon he had worked his way down completely past the deposit of fine powder, and now each scoopful consisted almost entirely of bone fragments; and as these lay on the gauze surface, Blandy bent over them, scrutinizing them with amiable intenntess and shaking the sieve gently to spread them out more evenly.

“There can be no doubt,” said he, as he ran his eye over a fresh scoopful thus spread out, “that these are fragments of bone; but it may be difficult to prove that they are human bones. I wish our unknown friend hadn’t broken them up quite so small.”

“You have the finger bone,” I reminded him. “There’s no doubt that that is human.”

“Well,” he agreed, “if you are prepared to swear positively that it is a human bone, that will establish a strong probability that the rest of the fragments are human. But we want proof if we can get it. In a capital case, the court isn’t taking anything for granted.”

Here he stooped closer over the sieve with his eyes riveted on one spot. Then very delicately with finger and thumb, he picked out a small object, and laying it on the palm of his other hand, held it out to me with a smile of concentrated benevolence. I took it from his palm, and placing it on my own, examined it closely, first with the naked eye and then with my pocket lens.

“And what is the diagnosis?” he asked, as I returned it to him.

“It is a portion of a porcelain tooth,” I replied. “A front tooth, I should say, but it is such a small piece that it is impossible to be sure. But it is certainly part of a porcelain tooth.”

“Ha!” said he, “there is the advantage of expert advice and cooperation. It is pronounced authoritatively to be certainly a porcelain tooth. But as the lower animals do not, to the best of my knowledge and belief, ever wear porcelain teeth, we have corroborative evidence that these remains are human. That is a great step forward. But how far does it carry us? Can you suggest any particular application of the fact?”

“I can,” said I. “It is known to me that Peter Gannet had a nearly complete upper dental plate. I saw it in a bowl when he was ill.”

“Excellent!” the Inspector exclaimed. “Peter Gannet wore porcelain teeth, and here is part of a porcelain tooth. The evidence grows. But if he were a dental plate, he must have had a dentist. I suppose you cannot give that dentist a name?”

“It happens that I can. He is a Mr. Hawley of Wigmore Street!”

“Really, now,” exclaimed the Inspector, “you are positively spoiling me. You leave me nothing to do. I have only to ask for information and it is instantly supplied.”

He laid the fragment of tooth tenderly on the corner of the sheet of paper and made an entry in his note-book of the dentist’s address. Then, having tipped the contents of the sieve on to the paper, he brought up another scoopful of bone fragments and shook it out on the gauze surface.

I need not follow the proceedings in detail. Gradually we worked our way through the entire contents of the bone-ash-bin, finishing up by holding the bin itself upside down over the sieve and shaking out the last grains. The net result was a considerable heap of bone fragments on the sheet of paper and no less than four other pieces of porcelain. As to the former, they were for the most part, mere crumbs of incinerated bone with just a sprinkling of lumps large enough to have some recognizable character. But the fragments of porcelain were more informative, for close examination and a few tentative trials at fitting them together left little doubt that they were all parts of the same tooth.

“But we won’t leave it at that,” said Blandy, as he dropped them one by one into a glass tube that he produced from his case. “We’ve got a man at Headquarters who is an expert at mending up broken articles. He’ll be able to cement these pieces together so that the joins will hardly be visible. Then I’ll take the tooth along to Mr. Hawley and see what he has to say to it.”

He slipped the tube into his pocket and then, having produced from his case a large linen bag, shovelled the bone fragments into it, tied up its mouth and stowed it away in the case.

“This stuff,” he remarked, “will have to be produced at the inquest; if we can identify it definitely enough to make an inquest possible. But I shall go over it again, a teaspoonful at a time, to make sure that we haven’t missed anything; and then it will be passed to the Home Office experts. If they decide that the remains are certainly human remains, we shall notify the coroner.”

While he was speaking his eyes turned from one object to another, taking in all the various fittings of the studio, and finally his glance lighted on Boles’s cupboard and there remained fixed.

“Do you happen to know what is in that cupboard?” he asked.

“I know that it belongs to Mr. Boles,” I replied, “and I think he uses it to keep his materials in.”

“What are his materials?” the Inspector asked.

“Principally gold and silver, especially gold. But he keeps some of his enamel material there and the copper plates for his
The Inspector walked over to the cupboard and examined the keyhole narrowly.

"It isn't much of a lock," he remarked, "for a repository of precious metals. Looks like a common ward lock that almost any key would open. I think you said that Mr. Boles is not available at the moment?"

"I understand from Mrs. Gannet that he has disappeared from his flat and that no one knows where he is."

"Pity," said Blandy. "I hate the idea of opening that cupboard in his absence, but we ought to know what is in it. And, as I have a search warrant, it is my duty to search. H'm! I happen to have one or two keys in my case. Perhaps one of them might fit this very simple lock."

He opened his case and produced from it a bunch of keys, and very odd-looking keys they were; so much so that I ventured to inquire:

"Are those what are known as skeleton keys?"

He beamed on me with a slightly deprecating expression.

"The word 'skeleton,'" said he, "as applied to keys, has disagreeable associations. I would rather call these simplified keys; just ordinary ward keys without wards. You will see how they act."

He illustrated their function by trying them one after another on the keyhole. At the third trial the key entered the hole, whereupon he gave it a turn and the door came open.

"There, you see," said he. "We break nothing, and when we go away we leave the cupboard locked as we found it."

The opened door revealed one or two shelves on which were glass pots of the powdered enamels, an agate mortar and a few small tools. Below the shelves were several small but deep drawers. The Inspector pulled out one of these and looked inquisitively into it as he weighed it critically in his hand.

"Queer-looking stuff, this, Doctor," said he, "and just feel the weight of it. All these lumps of gold in a practically unlocked cupboard. Are these the things that Mr. Boles makes?"

As he spoke he turned the drawer upside down on the paper that still covered the bench and pointed contemptuously to the heap of pendants, rings and brooches that dropped out of it.

"Did you ever see such stuff?" he exclaimed. "Jewelry, indeed! Why, it might have been made by a plumber's apprentice. And look at the quantity of metal in it. Look at that ring. There's enough gold in it to make a bracelet. This stuff reminds me of the jewelry that the savages produce, only it isn't nearly so well made. I wonder who buys it. Do you happen to know?"

"I have heard," I replied, "that Mr. Boles exhibits it at some of the private galleries, and I suppose some of it gets sold. It must, you know, or he wouldn't go on making it."

Inspector Blandy regarded me with a rather curious, cryptic smile, but he made no rejoinder. He simply shot "the stuff" back into the drawer, replaced the latter, and drew out the next.

The contents of this seemed to interest him profoundly for he looked into the drawer with an expression of amiable satisfaction and seemed to meditate on what he saw as if it conveyed some new idea to him. At length he tipped the contents out on to the paper and smilingly invited me to make any observations that occurred to me. I looked at the miscellaneous heap of rings, brooches, lockets and other trinkets and noted that they seemed to resemble the ordinary jewelry that one sees in shop windows excepting that the stones were missing.

"I don't think Mr. Boles made any of these," said I.

"I am quite sure he didn't," said Blandy, "but I think he took the stones out. But what do you make of this collection?"

"I should guess," I replied, "that it is old jewelry that he bought cheap to melt down for his own work."

"Yes," agreed Blandy, "he bought it to melt down and work up again. But he didn't buy it cheap if he bought from the trade. You can't buy gold cheap in the open market. Gold is gold, whether old or new. It has its standard price per ounce and you can't get it any cheaper; and you can always sell it at that price. I am speaking of the open market."

Once more he regarded me with that curious, inscrutable smile, and then, sweeping the jewelry back into its drawer, he passed on to the next.

This drawer contained raw material proper: little ingots of gold, buttons from cupels or crucibles, and a few pieces of thin gold plate. It did not appear to me to present any features of interest, but evidently Blandy thought otherwise, for he peered into the drawer with a queer, benevolent smile for quite a considerable time. And he did not tip out its contents on to the bench. Instead, he took a pair of narrow-nosed pliers from one of the shelves and with these he delicately picked out the pieces of gold plate, and having examined them on both sides, laid them carefully on the paper.

"You seem to be greatly interested in those bits of plate," I remarked.

"I am," he replied. "There are two points of interest in them. First there is the fact that they are pieces of gold plate such as are supplied to the trade by bullion dealers. That goes to show that he bought some of his gold from the dealers in the
regular way. He didn’t get it all second hand. The other point is this.”

He picked up one of the pieces of plate with the pliers and exhibited it to me, and I then observed that its polished surface was marked with the impression of a slightly greasy finger.

“You mean that finger-print?” I suggested.

“Thumb-print,” he corrected, “apparently a left thumb; and on the other side, the print of a forefinger. Both beautifully clear and distinct, as they usually are on polished metal.”

“Yes,” said I, “they are clear enough. But what about it? They are Mr. Boles’s finger-prints. But this is Mr. Boles’s cupboard. We knew that he had used it and that he had frequented this studio. I don’t see that the finger-prints tell you anything that you didn’t know.”

The Inspector smiled at me, indulgently. “It is remarkable,” said he, “how the scientific mind instantly seizes the essentials. But there is a little point that I think you have missed. We find that Mr. Boles is a purchaser of second-hand jewelry. Now, in the Fingerprint Department we have records of quite a number of gentlemen who are purchasers of second-hand jewelry. Of course, it is quite incredible that Mr. Boles’s finger-prints should be among them. But the scientific mind will realize that proof is better than belief. The finger-print experts will be able to supply the proof.”

The hint thus delicately expressed conveyed a new idea to me and caused me to look with rather different eyes on the contents of the next, and last drawer. These consisted of three small cardboard boxes, which, being opened, were found to contain unmounted stones. One was nearly half-filled with the less precious kinds; moonstones, turquoise, garnets, agates, carnelians and the like. The second held a smaller number of definitely precious stones such as rubies, sapphires and emeralds, while the third contained only diamonds, mostly quite small. The Inspector’s comments expressed only the thought which had instantly occurred to me.

“These stones,” said he, “must have been picked out of the secondhand stuff. I shouldn’t think he ever buys any stones from the dealers, for only two of his pieces are set with gems, and those only with moonstone and carnelian. He doesn’t seem to use stones often; too much trouble; easier to stick on a blob of enamel. So he must sell them. I wonder who buys them from him.”

I could offer no suggestion on this point, and the Inspector did not pursue the subject. Apparently the examination was finished, for he began to pack up the various objects that we had found in the drawers, bestowing especial care on the pieces of gold plate.

“As Mr. Boles seems to have disappeared,” said he, “I shall take these goods into my custody. They are too valuable to leave in an unoccupied studio. And I must take temporary possession of these premises, as we may have to make some further investigations. We haven’t examined the dust-bin yet, and it is too late to do it now. In fact, it is time to go. And what about the key, Doctor? I shall seal these doors before I leave—the wicket on the inside and the yard door on the outside—and the place will have to be watched. I should take it as a favour if you would let me have the key so that I need not trouble Mrs. Gannet. You won’t be using it yourself.”

As I saw that he meant to have it, and as it was of no further use to me, I handed it to him, together with the spare key of the wicket, on which he thanked me profusely and made ready to depart.

“Before we go,” said he, “I will just make a note of Mrs. Gannet’s present address in case we have to communicate with her, and you may as well give me Mr. Boles’s, too. We shall have to get into touch with him, if possible.”

I gave him both addresses, rather reluctantly as to the former, for I suspected that Mrs. Gannet was going to suffer some shocks. But there was no help for it. The police would have to communicate with her if only to acquaint her with the fact of her husband’s death. But I was sorry for her, little as I liked her and little as I approved of her relations with Boles.

When the Inspector had locked, bolted and sealed the wicket, he took up his case and we went into the yard, where he locked the door with the key that I had left in it, pocketed the latter and sealed the door. Then we went out to the car, and, when the driver had put away his book and his cigarette, we started homeward and arrived at my premises just in time for my evening consultations.
CHAPTER 10. — INSPECTOR BLANDY IS INQUISITIVE

MY forebodings concerning Mrs. Gannet were speedily and abundantly justified. On the morning of the third day after the search of the studio, an urgent note from Miss Hughes, delivered by hand, informed me that her guest had sustained a severe shock and was in a state of complete nervous prostration. She had expressed a wish to see me and Miss Hughes hoped that I would call as soon as possible.

As the interview promised to be a somewhat lengthy one, I decided to dispose of the other patients on my modest visiting list and leave myself ample time for a leisurely talk, apart from the professional consultation. As a result, it was well past noon when I rang the bell at the house in Mornington Crescent. The door was opened by Miss Hughes herself, from whom I received forthwith the first instalment of the news.

“She is in an awful state, poor thing,” said Miss Hughes. “Naturally, she was a good deal upset by her husband’s extraordinary disappearance. But yesterday a gentleman called to see her—a police officer he turned out to be, though you’d never have suspected it to look at him. I don’t know what he told her—it seems that she was sworn to secrecy—but he stayed a long time, and when he had gone and I went into the sitting room, I found her lying on the sofa in a state of collapse. But I mustn’t keep you here talking. I made her stay in bed until you’d seen her, so I will take you up to her room.”

Miss Hughes had not overstated the case. I should hardly have recognized the haggard, white-faced woman in the bed as the sprightly lady whom I had known. As I looked at her pallid, frightened face, turned so appealingly to me, all my distaste of her—it was hardly dislike—melted away in natural compassion for her obvious misery.

“Have you heard of the awful thing that has happened. Doctor?” she whispered when Miss Hughes had gone, discreetly shutting the door after her. “I mean what the police found in the studio.”

“Yes, I know about that,” I replied, not a little relieved to find that my name had not been mentioned in connection with the discovery. “I suppose that the officer who called on you was Inspector Blandy?”

“Yes, that was the name, and I must say that he was most polite and sympathetic. He broke the horrible news as gently as he could and told me how sorry he was to be the bearer of such bad tidings; and he did seem to be genuinely sorry for me. I only wished he had left it at that. But he didn’t. He stayed ever so long telling me over and over again how sincerely he sympathized with me, and then asking questions; dozens of questions he asked until I got quite hysterical. I think he might have given me a day or two to recover a little before putting me through such a catechism.”

“It does seem rather inconsiderate,” said I, “but you must make allowances. The police have to act promptly and they naturally want to get at the facts as quickly as possible.”

“Yes. That is the excuse he made for asking so many questions. But it was an awful ordeal. And although he was so polite and sympathetic, I couldn’t help feeling that he suspected me of knowing more about the affair than I admitted. Of course he didn’t say anything to that effect.”

“I think that must have been your imagination,” said I. “He couldn’t have suspected you of any knowledge of the—or—the tragedy, seeing that you were away from home when it happened.”

“Perhaps not,” said she. “Still, he questioned me particularly about my movements while I was away and wanted all the dates, which, of course, I couldn’t remember off-hand. And then he asked a lot of questions about Mr. Boles, particularly as to where he was on certain dates; and somehow he gave the impression that he knew a good deal about him.”

“What sort of questions did he put about Mr. Boles?” I asked with some curiosity, recalling Blandy’s cryptic reference to the fingerprint files at Scotland Yard.

“It began with his asking me whether the two men, Peter and Fred, were usually on good terms. Well, as you know, Doctor, they were not. Then he asked me if they had always been on bad terms; and when I told him that they used to be quite good friends, he wanted to know exactly when the change in their relationship occurred and whether I could account for it in any way. I told him, quite truthfully, that I could not; and as to the time when they first fell out, I could only say that it was some time in the latter part of last year. Then he began to question me about Mr. Boles’s movements; where he was on this and that date, and, of course, I couldn’t remember, if I had ever known. But his last question about dates I was able to answer. He asked me to try to remember where Mr. Boles was on the 19th of September. I thought about it a little and then I remembered, because Peter had gone to spend a long week-end with him and I had taken the opportunity to make a visit to Eastbourne. As I was at Eastbourne on the 19th of September, I knew that Peter and Mr. Boles must have been at Newingstead on that date.”

“Newingstead!” I exclaimed, and then stopped short.

“Yes,” said she, looking at me in surprise. “Do you know the place?”

“I know it slightly,” I replied, drawing in my horns rather suddenly as the finger-print files came once more into my mind. “I happen to know a doctor who is in practice there.”

“Well, Mr. Blandy seemed to be very much interested in Mr. Boles’s visit to Newingstead and particularly with the fact that Peter was there with him on that day; and he pressed me to try to remember whether that date seemed to coincide
with the change in their feelings to each other. It was an extraordinary question. I can’t imagine what could have put the idea into his head. But when I came to think about it, I found that he was right, for I remember quite clearly that when I came back from Eastbourne I saw at once that there was something wrong. They weren’t a bit the same. All the old friendliness seemed to have vanished and they were ready to quarrel on the slightest provocation. And they did quarrel dreadfully. I was terrified, for they were both strong men and both inclined to be violent.

“Did you ever get any inkling as to what it was that had set them against each other?”

“No. I suspected that something had happened when they were away together, but I could never find out what it was. I spoke to them both and asked them what was the matter, but I couldn’t get anything out of either of them. They simply said that there was nothing the matter; that it was all my imagination. But I knew that it wasn’t, and I was in a constant state of terror as to what might happen.”

“So I suppose,” said I, “that the—er—the murder has not come as a complete surprise?”

“Oh, don’t call it a murder!” she protested. “It couldn’t have been that. It must have been some sort of accident. When two strong and violent men start fighting, you never know how it will end. I am sure it must have been an accident—that is, supposing that it was Mr. Boles who killed Peter. We don’t know that it was. It’s only a guess.”

I thought that it was pretty safe guess but I did not say so. My immediate concern was with the future. For Mrs. Gannet was my patient and I chose to regard her as my friend. She had been subjected to an intolerable strain, and I suspected that there was worse to come. The question was, what was to be done about it?

“Did the Inspector suggest that he would require any further information from you?” I asked.

“Yes. He said that he would want me to come to his office at Scotland Yard one day pretty soon to make a statement and sign it. That will be an awful ordeal. It makes me sick with terror to think of it.”

“I don’t see why it should,” said I. “You are not in any way responsible for what has happened.”

“You know that I am not,” said she, “but the police don’t; and I am absolutely terrified of Mr. Blandy. He is a most extraordinary man. He is so polite and sympathetic and yet so keen and searching and he asks such unexpected questions and seems to have such uncanny knowledge of our affairs. And as I told you, I am sure he suspects that I had something to do with what has happened.”

“I suppose he didn’t seem to know anything about that mysterious affair of the arsenic poisoning?” I suggested.

“No,” she replied, “but I am certain that he will wring it out of me when he has me in his office; and then he will think that it was I who put the poison into poor Peter’s food.”

At this point she broke down and burst into tears, sobbing hysterically and mingling incoherent apologies with her sobs. I tried to comfort her as well as I could, assuring her—with perfect sincerity—of my deep sympathy. For I realized that her fears were by no means unfounded. She probably had more secrets than I knew; and once within the dreaded office in the presence of a committee of detective officers, taking down in writing every word that she uttered, she might easily commit herself to some highly incriminating statements.

“It is a great comfort to me. Doctor,” said she, struggling to control her emotion, “to be able to tell you all my troubles. You are the only friend that I have; the only friend, I mean, that I can look to for advice and help.”

It wrung my heart to think of this poor, lonely woman in her trouble and bereavement, encompassed by perils at which I could only guess, facing those perils, friendless, alone and unprotected save by me—and who was I that I could give her any effective support? As I met the look of appeal that she cast on me, so pathetic and so confiding, it was borne in on me that she needed some more efficient adviser and that the need was urgent and ought to be met without delay.

“I am very willing,” said I, “to help you, but I am not very competent. The advice that you want is legal, not medical. You ought to have a lawyer to protect your interests and to advise you.”

“I suppose I ought,” she agreed, “but I don’t know any lawyers; and I trust in you because you know all about my affairs and because you have been such a kind friend. But I will do whatever you advise. Perhaps you know a lawyer whom you could recommend.”

“The only lawyer whom I know is Dr. Thorndyke,” I replied.

“Is he a lawyer?” she exclaimed in surprise. “I thought he was a doctor.”

“He is both,” I explained, “and what is more to the point, he is a criminal lawyer who knows all the ropes. He will understand your difficulties and also those of the police. Would you like me to see him and ask him to advise us?”

“I should be most grateful if you would,” she replied, earnestly. “And you may take it that I agree to any arrangements that you may make with him. But,” she added, “you will remember that my means are rather small.”

I brushed this proviso aside in view of Thorndyke’s known indifference to merely financial considerations and the fact that my own means admitted of my giving material assistance if necessary. So it was agreed that I should seek Thorndyke’s advice forthwith and that whatever he might advise should be done.

“That will be a great relief,” said she. “I shall have somebody to think for me, and that will leave me free to think about all that has to be done. There will be quite a lot of things to attend to. I can’t stay here for ever, though dear Miss Hughes
concentrated attention, he remarked, as he closed and put away the moment also assumed a heavy balance and an unusual-looking admirable timepiece, inspection I looked at the watch, which was a rather large silver lacklustre eye), announced that it appeared to belong to the premises; a small gentleman press the electric bell at myself confronted by a grim-looking, iron bound door, above which was painted the name “Dr. Thorndyke.” Thereupon I made an appointment to call at three-thirty, and having given my name, rang off, and proceeded without delay to dispatch my immediate business, including the dispensing of medicine, the writing up of the Day Book and the wash and brush up preliminary to lunch.

On my way home, I considered my next move. Obviously, no time ought to be lost in making the necessary arrangements. But, although I had the afternoon free, Thorndyke probably had not. He was a busy man and it would be futile for me to make a casual call on the chance of finding him at home and disengaged. Accordingly, as soon as I had let myself in and ascertained that there were no further engagements, I rang him up on the telephone to inquire when I could have a few words with him. In reply, a voice, apparently appertaining to a person named Polton, informed me that the doctor was out; that he would be in at three-thirty and that he had an engagement elsewhere at four-fifteen. Thereupon I made an appointment to call at three-thirty, and having given my name, rang off, and proceeded without delay to dispatch my immediate business, including the dispensing of medicine, the writing up of the Day Book and the wash and brush up preliminary to lunch.

As I had no clear idea of the geography of the Temple, I took the precaution of arriving at the main gate well in advance of the appointed time; with the result that having easily located King’s Bench Walk, I found myself opposite the handsome brick portico of Number 5A at the very moment when a particularly soft-toned bell ventured most politely to suggest that it was a quarter past three.

There was, therefore, no need to hurry. I whiled away a few minutes inspecting the portico and surveying the pleasant surroundings of the dignified old houses—doubtless still more pleasant before the fine, spacious square had become converted into a parking lot—then I entered and took my leisurely way up the stairs to the first floor landing, where I found myself confronted by a grim-looking, iron bound door, above which was painted the name “Dr. Thorndyke.” I was about to press the electric bell at the side of the door when I perceived, descending the stairs from an upper floor, a gentleman who appeared to belong to the premises; a small gentleman of a sedate and even clerical aspect, but very lively and alert.

“I have the honour, sir, of addressing Dr. Oldfield?” he inquired, suavely.

I replied that I was, in fact, Dr. Oldfield. “But,” I added, “I think I am a little before my time.”

Thereupon, like Touchstone, he “drew a dial from his poke,” and regarding it thoughtfully (but by no means “with a lacklustre eye”), announced that it was now twenty-four minutes and fifteen seconds past three. While he was making his inspection I looked at the watch, which was a rather large silver timepiece with an audible and very deliberate tick, and as he was putting it away, I ventured to remark that it did not appear to be quite an ordinary watch.

“It is not, sir,” he replied, hauling it out again and gazing at it fondly. “It is an eight-day pocket chronometer; a most admirable timepiece, sir, with the full chronometer movement and even a helical balance spring.”

Here he opened the case and then, in some miraculous way, turned the whole thing inside out, exhibiting the large, heavy balance and an unusual-looking balance spring which I accepted as helical.

“You can’t easily see the spring detent,” said he, “but you can hear it; and you will notice that it beats half-seconds.”

He held the watch up towards my ear and I was able to distinguish the peculiar sound of the escapement. But at this moment he also assumed a listening attitude; but he was not listening to the watch, for after a few moments of concentrated attention, he remarked, as he closed and put away the chronometer:

“You are not much too early, sir. I think I hear the doctor coming along Crown Office Row and Dr. Jervis with him.”
I listened attentively and was just able to make out the faint sound of quick footsteps which seemed to be approaching; but I had not my small friend’s diagnostic powers, which, however, were demonstrated when the footsteps passed in at the entry, ascended the stairs and materialized into bodily forms of Thorndyke and Jervis. Both men looked at me a little curiously but any questions were forestalled by my new acquaintance.

“Dr. Oldfield, sir, made an appointment by telephone to see you at half-past three. I told him of your engagement at four-fifteen.”

“Thank you, Polton,” said Thorndyke. “So now, Oldfield, as you know the position, let us go in and make the best use of the available half-hour; that is, if this is anything more than a friendly call.”

“It is considerably more,” said I, as Mr. Polton opened the two doors and ushered us into a large room. “I have come on quite urgent business, but I think we can dispatch it easily in half an hour.”

Here, Mr. Polton, after an interrogative glance at Thorndyke, took himself off, closing after him both the inner and outer doors.

“Now, Oldfield,” said Jervis, setting out three chairs in a triangle, “sit down and let the engine run.”

Thereupon we all took our seats facing one another and I proceeded, without preamble, to give a highly-condensed account of the events connected with Gannet’s disappearance with a less-condensed statement of Mrs. Gannet’s position in relation to them. To this account Thorndyke listened with close attention, but quite impassively and without question or comment. Not so Jervis. He did, indeed, abstain from interruptions; but he followed my recital with devouring interest, and I had hardly finished when he burst out:

“But, my good Oldfield, this is a first-class murder mystery. It is a sin to boil it down into a mere abstract. I want details, and more details, and, in short—or rather, in long—the whole story.”

“I am with you, Jervis,” said Thorndyke. “We must get Oldfield to tell us the story in extenso. But not now. We have an immediate and rather urgent problem to solve; how to protect Mrs. Gannet.”

“Does she need protecting?” demanded Jervis. “The English police are not in the habit of employing ‘third degree’ methods.”

“True,” Thorndyke agreed. “The English police have usually the desire and the intention to deal fairly with persons who have to be interrogated. But an over-zealous officer may easily be tempted to press his examination—in the interests of justice, as he thinks—beyond the limits of what is strictly admissible. We must remember that, under our system of police procedure in the matter of interrogation, the various restrictions tend to weight the dice rather against the police and in favour of the accused person.”

“But Mrs. Gannet is not an accused person,” I protested.

“No,” Thorndyke agreed. “But she may become one, particularly if she should make any indiscreet admissions. That is what we have to guard against. We don’t know what the views of the police are, but one notes that our rather foxy friend, Blandy, was not disposed to be over-scrupulous. To announce to a woman that her husband has been murdered and his body burned to ashes, and then, while she is still dazed by the shock, to subject her to a searching interrogation, does not impress one as a highly considerate proceeding. I think her fear of Blandy is justified. No further interrogation ought to take place excepting in the presence of her legal adviser.”

“She isn’t legally bound to submit to any interrogation until she is summoned as a witness,” Jervis suggested.

“In practice, she is,” said Thorndyke. “It would be highly improper for her to withhold from the police any assistance that she could give them. And it would be extremely impolitic, as it would suggest that she had something serious to conceal. But it would be perfectly proper for her to insist that her legal adviser should accompany her and be present at the interrogation. And that is what will have to be done. She will have to be legally represented. But by whom? Can you make any suggestion, Jervis? It is a solicitor’s job.”

“What about the costs?” asked Jervis. “Is the lady pretty well off?”

“We can waive that question,” said I. “The costs will be met. I will make myself responsible for that.”

“I see,” said Jervis. “Your sympathy takes a practical form. Well, if you are going to back the bill, we must see that it doesn’t get too obese. A swagger solicitor wouldn’t do; besides, he would be too busy to attend in person. But we should want a good man. Preferably a young man with a rather small practice. Yes, I think I know the very man. What do you say, Thorndyke, to young Linnell? He was Marchmont’s managing clerk, but he has gone into practice on his own account and he has distinct leanings towards criminal work.”

“I will see him today before he leaves his office and I think there is no doubt that he will undertake the case gladly. At any rate, Oldfield, you can take it that the matter is in our hands and that the lady will be fully protected, even if I have to accompany her to Scotland Yard myself. But you must play your hand, too. You are her doctor, and it is for you to see that she is not subjected to any strain that she is not fit to bear. A suitable medical certificate will put the stopper even on Blandy.”
As Jervis ceased speaking, the soft-voiced bell of the unseen clock, having gently chimed the quarters, now struck (if one may use so violent an expression) the hour of four. I rose from my chair, and, having thanked both my friends profusely for their help, held out my hand.

“One moment, Oldfield,” said Thorndyke. “You have tantalized us with a bare precis of the astonishing story that you have to tell. But we want the unabridged edition. When are we to have it? We realize that you are rather tied to your practice. But perhaps we could look in on you when you have some time to spare, say, one evening after dinner. How would that do?”

“Why after dinner?” I demanded. “Why not come and dine with me and do the pow-wow after?”

“That would be very pleasant,” said Thorndyke. “Don’t you agree, Jervis?”

Jervis agreed emphatically; and as it appeared that both my friends were free that very evening, it was settled that we should meet again at Osnaburgh Street and discuss the Gannet case at length.

“And remember,” said I, pausing in the doorway, “that consultation hours are usually more or less blank, so you can come as early as you like.”

With this parting admonition, I shut the door after me and went on my way.
CHAPTER 11.—MR. BUNDERBY EXPONDS

AS I emerged from the Temple gateway into Fleet Street I was confronted by a stationary omnibus, held up temporarily by a block in the traffic; and glancing at it casually, my eye caught, among the names on its rear board, those of Piccadilly and Bond Street. The latter instantly associated itself with the gallery of which Mrs. Gannet had spoken that morning, and the effect of the association was to cause me to jump on to the omnibus just as it started to move. I had nearly two hours to spare and in that time could easily inspect the exhibition of Gannet’s work.

I was really quite curious about this show, for Gannet’s productions had always been somewhat of a mystery to me. They were so amazingly crude and so deficient, as I thought, in any kind of ceramic quality. And yet I felt there must be something more in them than I had been able to discover. There must be some deficiency in my own powers of perception and appreciation; for it was a fact that they had not only been publicly exhibited but actually sold, and sold at quite impressive prices; and one felt that the people who paid those prices must surely know what they were about. At any rate, I should now see the pottery in its appropriate setting and perhaps hear some comments from those who were better able than I to form a judgment.

I had no difficulty in finding the Lyntondale Gallery, for a flag bearing its name hung out boldly from a first floor window; and when I had paid my shilling entrance fee and a further shilling for a catalogue, I passed in through the turnstile and was straightway spirited aloft in an elevator.

On entering the principal room of the gallery I was aware of a knot of people—about a dozen—gathered before a large glass case and appearing to surround a stout, truculent-looking gentleman with a fine, rich complexion and a mop of white hair which stood up like the crest of a cockatoo. But my attention was more particularly attracted by another gentleman, who stood apart from the knot of visitors and appeared to be either the proprietor of the gallery or an attendant. What drew my attention to him was an indefinite something in his appearance that seemed familiar. I felt that I had seen him somewhere before. But I could not place him; and while I was trying to remember where I might have seen him, he caught my eye and approached with a deferential smile.

“You have arrived quite opportunely, sir,” said he. “Mr. Bunderby, the eminent art critic, is just about to give us a little talk on the subject of Peter Gannet’s very remarkable pottery. It will be worth your while to hear it. Mr. Bunderby’s talks are always most illuminating.”

I thanked him warmly for the information, for an illuminating talk on this subject by a recognized authority was precisely what I wanted to hear; and as the cockatoo gentleman—whom I diagnosed as Mr. Bunderby—had just opened a show case and transferred one of the pieces to a small revolving stand, like a modeler’s turntable, I joined the group that surrounded him and prepared to “lend him my ears.”

The piece that he had placed on the stand was one of Gannet’s roughest; an uncouth vessel, in appearance something between a bird’s nest and a flower pot. I noticed that the visitors stared at it in obvious bewilderment and Mr. Bunderby watched their expressions with a satisfied smile.

“Before speaking to you,” said he, “of these remarkable works, I must say just a few words about their creator. Peter Gannet is a unique artist. Whereas the potters of the past have striven after more and yet more sophistication, Gannet has perceived the great truth that pottery should be simple and elemental, and with wonderful courage and insight, he has set himself to retrace the path along which mankind has strayed, back to that fountainhead of culture, the New Stone Age. He has cast aside the potter’s wheel and all other mechanical aids, and relies solely on that incomparable instrument, the skilled hand of the artist.

“So in these works, you must not look for mechanical accuracy or surface finish. Gannet is, first and foremost, a great stylist, who subordinates everything to the passionate pursuit of essential form. So much for the man. And now we will turn to the pottery.”

He paused a few moments and stood with half-closed eyes and his head on one side, contemplating the bowl on the stand. Then he resumed his discourse.

“I begin,” said he, “by showing you this noble and impressive work because it is typical of the great artist by whose genius it was created. It presents in a nutshell (he might have said a coconut shell) “the aims, the ambitions and the inmost thoughts and emotions of its maker. Looking at it, we realize with respectful admiration the wonderful power of analysis, the sensibility—at once subtle and intense—that made its conception possible; and we can trace the deep thought, the profound research—the untiring search for the essentials of abstract form.”

Here a lady, who spoke with a slight American intonation, ventured to remark that she didn’t quite understand this piece. Mr. Bunderby fixed her with his truculent blue eye and replied, impressively:

“You don’t understand it! But of course you don’t. And you shouldn’t try to. A great work of art is not to be understood. It is to be felt. Art is not concerned with intellectual expositions. Those it leaves to science. It is the medium of emotional transfer whereby the soul of the artist conveys to kindred spirits the reactions of his own sensibility to the problems of abstract form.”

Here another Philistine intervened with the objection that he was not quite clear as to what was meant by “abstract
form."

"No," said Mr. Bunderby, "I appreciate your difficulty. Mere verbal language is a clumsy medium for the expression of those elusive qualities that are to be felt rather than described. How shall I explain myself? Perhaps it is impossible. But I will try.

"The words 'abstract form,' then, evoke in me the conception of that essential, pervading, geometric sub-structure which persists when all the trivial and superficial accidents of mere visual appearances have been eliminated. In short, it is the fundamental rhythm which is the basic aesthetic factor underlying all our abstract conceptions of spatial limitation. Do I make myself clear?"

"Oh, perfectly, thank you," the Philistine replied, hastily, and forthwith retired deep into his shell and was heard no more.

I need not follow Mr. Bunderby's discourse in detail. The portion that I have quoted is a representative sample of the whole. As I listened to the sounding phrases with their constantly recurring references to "rhythm" and "essential abstract form," I was conscious of growing disappointment. All this nebulous verbiage conveyed nothing to me. I seemed merely to be listening to Peter Gannet at second hand (though probably it was the other way about; that I had, in the studio talks, been listening to Bunderby at second hand). At any rate, it told me nothing about the pottery; and so far from resolving my doubts and misgivings, left me only still more puzzled and bewildered.

But enlightenment was to come. It came, in fact, when the whole collection seemed to have been reviewed. There was an impressive pause while Mr. Bunderby passed his fingers through his crest, making it stand up another two inches, and glared at the empty stand.

"And now," said he, "as a final bonne bouche, I am going to show you another facet of Peter Gannet's genius. May we have the decorated jar, Mr. Kempster?"

As the name was uttered, my obscure recognition of the proprietor was instantly clarified. But close as his resemblance was to the diamond merchant of Newingstead, he was obviously not the same man. Indeed he could not have been. Nevertheless, I observed him with interest as he advanced with slow steps, treading delicately and holding the precious jar in both hands as if it had been the Holy Grail or a live bomb. At length he placed it, with infinite care and tenderness, on the stand; slowly withdrew his hands and stepped back a couple of paces, still gazing at it reverentially.

"There," said Bunderby, "look at that!"

They looked at it and so did I,—with bulging eyes and mouth agape. It was amazing—incredible. And yet it was impossible that I could be mistaken. Every detail of it was familiar, including the marks of my own latch-key and the little dents made by the clinical thermometer. Eagerly I awaited Bunderby's exposition; and when it came it surpassed even my expectations.

"I have reserved this, the gem of the collection, to the last because, though at first glance it is different from the others, it is typical. It affords the perfect and unmistakable expression of Peter Gannet's artistic personality. Even more than the other it testifies to the rigorous, single-minded search for essential form and abstract rhythm. It is the fine flower of hand-built pottery. And mark you, not only does its hand-built character leap to the eye (the expert eye, of course), but it is obvious that by no method but that of direct modelling by hand could it have been created.

"Then consider the ornament. Note this charming guilloche, executed with the most masterly freedom with the thumb-nail—just the simple thumb-nail; a crude instrument, you may say; but no other could produce exactly this effect, as the ancient potters knew."

He ran his finger lovingly over the mustard-spoon impressions and continued:

"Then look at these lovely rosettes. They tell us that when the artist created them he had in his mind the idea of 'what o'clocks'—the dandelion head. Profoundly stylized as the form is, generalized from the representational plane to that of ultimate abstraction, we can still trace the thought."

As he paused, one of the spectators remarked that the rosettes seemed to have been executed with the end of a key.

"They do," Bunderby agreed, "and it is quite possible that they were. And why not? The genius asks for no special apparatus. He uses the simple means that lie to his hand. But that hand is the hand of a master which transmutes the very clay that feels its touch.

"So it has done in this little masterpiece. It has produced what we feel to be a complete epitome of abstract three-dimensional form. And then the rhythm! The rhythm!"

He paused, having apparently exhausted his vocabulary (if such a thing were possible). Then suddenly he looked at his watch and started.

"Dear me!" he exclaimed. "How the time flies! I must be running away. I have four more galleries to inspect. Let me thank you for the courteous interest with which you have listened to my simple comments and express the hope that some of you may be able to secure an example of the work of a great and illustrious artist. I had intended to say a few words about Mr. Boles's exquisite neo-primitive jewelry but my glass has run out. I wish you all good afternoon."

He bowed to the assembly and to Mr. Kempster and bustled away, and I noticed that with his retirement all interest in
the alleged masterpieces seemed to lapse. The visitors strayed away to other parts of the gallery and the majority soon strayed towards the door.

Meanwhile, Mr. Kempster took possession of the jar and carried it reverently back to its case. I followed him with my eyes and then with the rest of my person. For, like Mr. Tite Barnacle (or, rather, his visitor), I "wanted to know, you know." I had noticed a red wafer stuck to the jar, and this served as an introduction.

"So the masterpiece is sold," said I. "Fifteen guineas, according to the catalogue. It seems a long price for a small jar."

"It does," he admitted. "But it is a museum piece; hand-built and by an acknowledged master."

"It looks rather different from most of Gannet's work. I suppose there is no doubt that it is really from his hand?"

Mr. Kempster was shocked. "Good gracious, no!" he replied. "He drew up the catalogue himself. Besides—"

He picked up the jar quickly (no Holy Grail touch this time) and turned it up to exhibit the bottom.

"You see," said he, "the piece is signed and numbered. There is no question as to its being Gannet's work."

If the inference was erroneous, the fact was correct. On the bottom of the jar was Gannet's distinctive mark; a sketchy gannet, the letters "P. G." with the number, Op. 961. That disposed of the possibility which had occurred to me that the jar might have been put among Gannet's own works by mistake, possibly by Mrs. Gannet. The fraud had evidently been deliberate.

As he replaced the jar on its shelf, I ventured to indulge my curiosity on another point.

"I heard Mr. Bunderby mention your name. Do you happen to be related to Mr. Kempster of Newingstead?"

"My brother," he replied. "You noticed the likeness, I suppose. Do you know him?"

"Very slightly. But I was down there at the time of the robbery; in fact, I had to give evidence at the inquest on the unfortunate policeman. It was I who found him by the wood."

"Ah, then you will be Dr. Oldfield. I read the report of the inquest, and, of course, heard all about it from my brother. It was a disastrous affair. It appears that the diamonds were not covered by insurance and I am afraid that it looks like a total loss. The diamonds are hardly likely to be recovered now. They are probably dispersed, and it would be difficult to identify them singly."

"I was sorry," said I, "to miss Mr. Bunderby's observations on Mr. Boles's jewelry. It seems to me to need some explaining."

"Yes," he admitted, "it isn't to everybody's taste. My brother, for instance, won't have it at any price, though he knows Mr. Boles and rather likes him. And speaking of Newingstead, it happens that Mr. Boles is a native of that place."

"Indeed. Then I suppose that is how your brother came to know him?"

"I can't say, but I rather think not. Probably he made the acquaintance through business channels. I know that he has had some dealings—quite small transactions—with Mr. Boles."

"But surely," I exclaimed, "Mr. Boles doesn't ever use diamonds in his neolithic jewelry?"

"Neo-primitive," he corrected with a smile. "No, I should think he was a vendor rather than a buyer or he may have made exchanges. Like most jewelers, Mr. Boles picks up oddments of old or damaged jewelry, when he can get it cheap, to use as scrap. Any diamonds or faceted stones would be useless to him as he uses only simple stones, cabochon cut, and not many of those. But that is only a surmise based on remarks that Mr. Boles has let fall; I don't really know much about his affairs."

At this moment I happened to glance at a clock at the end of the gallery, and to my dismay saw that it stood at ten minutes to six. With a few words of apology and farewell, I rushed out of the gallery, clattered down the stairs and darted out into the street. Fortunately, an unoccupied taxi was drifting towards me and slowed down as I hailed it. In a moment I had given my address, scrambled in and slammed the door and was moving on at a pace that bid fair to get me home within a minute or two of six.

The short journey gave me little time for reflection. Yet in those few minutes I was able to consider the significance of my recent experiences sufficiently to be conscious of deep regret and disillusionment. Of the dead, one would wish not only to speak but to think nothing but good; and though Peter Gannet had been more an acquaintance than a friend, and one for whom I had entertained no special regard, I was troubled that I could no longer even pretend to think of him with respect. For the doubts that I had felt and tried to banish were doubts no longer. The bubble was pricked. Now I knew that his high pretensions were mere clap-trap, his "works of art" a rank imposture.

But even worse than this was the affair of the "decorated jar." To pass off as his own work a piece that had been made by another—though that other were but an incompetent beginner—was unspeakably shabby; to offer it for sale was sheer dishonesty. Not that I grudged the fifteen guineas, since they would benefit poor Mrs. Gannet, nor did I commiserate the "mug" who had paid that preposterous price. Probably, he deserved all he got—or lost. But it irked me to think that Gannet, whom I had assumed to be a gentleman, was no more than a common rogue.

As to Bunderby, obviously, he was an arrant quack. An ignoramus, too, if he really believed my jar to have been hand-built, for a glance at its interior would have shown the most blatant traces of the wheel. But at this point my meditations
were interrupted by the stopping of the taxi opposite my house. I hopped out, paid the driver, fished out my latch-key and had it in the keyhole at the very moment when the first—and, as it turned out, also the last—of the evening’s patients arrived on the door-step.
CHAPTER 12. — A SYMPOSIUM

TO the ordinary housewife, the casual invitation to dinner of two large, able-bodied men would seem an incredible proceeding. But such is the way of bachelors; and perhaps it is not, after all, a bad way. Still, as I immured the newly-arrived patient in the waiting room, it did dawn on me that my housekeeper, Mrs. Gilbert, ought to be notified of the expected guests. Not that I had any anxiety, for Mrs. Gilbert appeared to credit me with the appetite of a Gargantua (and, in fact, I had a pretty good “twist”), and she seemed to live in a state of chronic anxiety lest I should develop symptoms of impending starvation.

Having discharged my bombshell down the kitchen stairs, I proceeded to deal with the patient—fortunately, a “chronic” who required little more than a “repeat”—and having safely launched him, bottle in hand, from the door step, repaired to the little glory-hole, known as “the study,” to make provision for my visitors. Of their habits I knew nothing; but it seemed to me that a decanter of whiskey, another of sherry, a siphon and a box of cigars would meet all probable exigencies; and I had just finished these preparations when my guests arrived.

As they entered the study, Jervis looked at the table on which the decanters were displayed and grinned.

“It’s all right, Thorndyke,” said he. “Oldfield has got the restoratives ready. You won’t want your smelling salts. But he is evidently going to make our flesh creep properly.”

“Don’t take any notice of him, Oldfield,” said Thorndyke. “Jervis is a perennial juvenile. But he takes quite an intelligent interest in this case, and we are both all agog to hear your story. Where shall I put my note-book? I want to take rather full notes.”

As he spoke, he produced a rather large block of ruled paper and fixed a wistful eye on the table; whereupon, having, after a brief discussion, agreed to take the restoratives as read, we transferred the whole collection—decanters, siphon and cigar box—to the top of a cupboard and Thorndyke laid his block on the vacant table and drew up a chair.

“Now, Oldfield,” said Jervis, when we had all taken our seats and filled our pipes, “fire away. Art is long but life is short. Thorndyke is beginning to show signs of senile decay already, and I’m not as young as I was.”

“The question is,” said I, “where shall I begin?”

“The optimum place to begin,” replied Jervis, “is at the beginning.”

“Yes, I know. But the beginning of the case was the incident of the arsenic poisoning, and you know all about that.”

“Jervis doesn’t,” said Thorndyke, “and I only came in at the end. Tell us the whole story. Don’t be afraid of repetition and don’t try to condense.”

Thus directed, I began with my first introduction to the Gannet household and traced the history of my attendance up to the point at which Thorndyke came into the case, breaking off at the cessation of my visits to the hospital.

“I take it,” said Jervis, “that full notes and particulars of the material facts are available if they should be wanted.”

“Yes,” Thorndyke replied, “I have my own notes and a copy of Woodfield’s, and I think Oldfield has kept a record.”

“I have,” said I, “and I had intended to send you a copy. I must write one out and send it to you.”

“Don’t do that,” said Jervis. “Lend it to me and I will have a typewritten copy made. But get on with the story. What was the next phase?”

“The next phase was the return home of Peter Gannet. He called on me to report and informed me that, substantially, he was quite fit.”

“Was he, by Jove?” exclaimed Jervis. “He had made a pretty rapid recovery, considering the symptoms. And how did he seem to like the idea of coming home? Seem at all nervous?”

“Not at all. His view was that, as the attempt had been spotted and we should be on our guard, they wouldn’t risk another. And apparently he was right—up to a certain point. I don’t know what precautions he took—if he took any. But nothing further happened until—but we shall come to that presently. I will carry the narrative straight on.”

This I did, making a brief and sketchy reference to my visits to the studio and the activities of Gannet and Boles. But at this point Jervis pulled me up.

“A little vague and general, this, Oldfield. Better follow the events more closely and in full detail.”

“But,” I protested, “all this has really nothing to do with the case.”

“Don’t you let Thorndyke hear you say that, my child. He doesn’t admit that there is such a thing as an irrelevant fact, ascertainable in advance as such. Detail, my friend, detail; and again I say detail.”

I did not take him quite literally, but I acted as if I did. Going back to the beginning of the studio episode, I recounted it with the minutest and most tedious circumstantiality, straining my memory in sheer malice to recall any trivial and unmeaning incident that I could recover, and winding up with a prolix and exact description of my prentice efforts with the potter’s wheel and the creation of the immortal jar. I thought I had exhausted their powers of attention, but to my surprise...
Thorndyke asked:

"And what did your masterpiece look like when you had finished it?"

"It was very thick and clumsy, but it was quite a pleasant shape. The wheel tends to produce pleasant shapes if you let it."

"Do you know what became of it?"

"Yes. Gannet fired it and passed it off as his own work. But I will tell you about that later. I only discovered the fraud this afternoon."

He nodded and made a note on a separate slip of paper and I then resumed my narrative; and as this was concerned with the discovery of the crime, I was genuinely careful not to omit any detail, no matter how unimportant it might appear to me. They both listened with concentrated attention, and Thorndyke apparently took my statement down verbatim in shorthand.

When I had finished with the gruesome discoveries in the studio, I paused and prepared to play my trump card, confident that, unlike Inspector Blandy, they would appreciate the brilliancy of my inspiration and its important bearing on the identity of the criminal. And I was not disappointed, at least as to the impression produced, for as I described how the “brain wave” had come to me, Thorndyke looked up from his note-book with an appearance of surprise and Jervis stared at me, open-mouthed.

"But, my dear Oldfield!” he exclaimed, “what in the name of Fortune gave you the idea of testing the ashes for arsenic?”

"Well, there had been one attempt,” I replied, “and it was quite possible that there might have been another. That was what occurred to me.”

"Yes, I understand,” said he. “But surely you did not expect to get an arsenic reaction from incinerated bone?”

"I didn’t, very much. It was just a chance shot; and I must admit that the result came quite as a surprise.”

"The result!” he exclaimed. “What result?”

"I will show you,” said I; and forthwith I produced from a locked drawer the precious glass tube with its unmistakable arsenic mirror.

Jervis took it from me and stared at it with a ludicrous expression of amazement, while Thorndyke regarded him with a quiet twinkle.

"But,” the former exclaimed, when he had partially recovered from his astonishment, “the thing is impossible. I don’t believe it!” Whereupon Thorndyke chuckled aloud.

"My learned friend,” said he, “reminds me of that German professor who, meeting a man wheeling a tall cycle—a thing that he had never before seen the like of—demonstrated conclusively to the cyclist that it was impossible to ride the machine for the excellent reason that, if you didn’t fall off to the right, you must inevitably fall off to the left.”

"That’s all very well,” Jervis retorted, “but you don’t mean to tell me that you accept this mirror at its face value?”

“It is certainly a little unexpected,” Thorndyke replied, “but you will remember that Soderman and O’Connell state definitely that it has been possible to show the presence of arsenic in the ashes of cremated bodies.”

"Yes, I remember noting their statement and finding myself unable to accept it. They cited no instances and they gave no particulars. A mere ipse dixit has no evidential weight. I am convinced that there is some fallacy in this case. What about your reagents, Oldfield? Is there a possibility that any of them might have been contaminated with arsenic?”

“No,” I replied, “it is quite impossible. I tested them exhaustively. There was no sign of arsenic until I introduced the bone ash.”

"By the way,” Thorndyke asked, “did you use up all your material, or have you some left?”

"I used only half of it, so if you think it worth while to check the analysis, I can let you have the remainder.”

"Excellent!” said Thorndyke. "A control experiment will settle the question whether the ashes do, or do not, contain arsenic. Meanwhile, since the mirror is an undeniable fact, we must provisionally adopt the affirmative view. I suppose you told the police about this?”

"Yes, I showed them the tube. Inspector Blandy spotted the arsenic mirror at a glance, but he took a most extraordinary attitude. He seemed to regard the arsenic as of no importance whatever; quite irrelevant, in fact. He would, apparently, like to suppress it altogether; which appears to me a monstrous absurdity.”

"I think you are doing Blandy an injustice," said Thorndyke. “From a legal point of view, he is quite right. What the prosecution has to prove is, first, the fact that a murder has been committed; second, the identity of the person who has been murdered; and third, the identity of the person who committed the murder. Now the fact of murder is established by the condition of the remains and the circumstances in which they were found. The exact cause of death is, therefore, irrelevant. The arsenic has no bearing as proof of murder, because the murder is already proved. And it has no bearing on the other two questions.”

“Surely,” said I, “it indicates the identity of the murderer, in view of the previous attempt to poison Gannet.”
“Not at all,” he rejoined. “There was never any inquiry as to who administered that poison and there is no evidence. The court would not listen to mere surmises or suspicions. The poisoner is an unknown person, and at present the murderer is an unknown person. But you cannot establish the identity of an unknown quantity by proving that it is identical with another unknown quantity. No, Oldfield, Blandy is perfectly right. The arsenic would only be a nuisance and a complication to the prosecution. But it would be an absolute godsend to the defense.”

“Why?” I demanded.

“Well,” he replied, “you saw what Jervis’s attitude was. That would be the attitude of the defense. The defending counsel would pass lightly over all the facts that had been proved and that he could not contest, and fasten on the one thing that could not be proved and that he could make a fair show of disproving. The element of doubt introduced by the arsenic might wreck the case for the prosecution and be the salvation of the accused. But we are wandering away from your story. Tell us what happened next.”

I resumed my narrative, describing my visit to the police station and Blandy's investigations at the studio, dwelling especially on the interest shown by the Inspector in Boles's works and materials. They appeared to arouse a similar interest on the part of my listeners, for Jervis commented:

“The plot seems to thicken. There is a distinct suggestion that the studio was the scene of activities other than pottery and the making of modernist jewelry. I wonder if those finger-prints will throw any light on the subject?”

“I rather suspect that they have,” said I, “judging by the questions that Blandy put to Mrs. Gannet. He had got some information from somewhere.”

“I don’t want to interrupt the narrative,” said Thorndyke, “but when we have finished with the studio, we might have Blandy’s questions. They probably represent his views on the case, and as you say, they may enable us to judge whether he knows more about it than we do.”

“There is only one more point about the studio,” said I, “but it is a rather important one, as it seems to bear on the motive for the murder.” And with this I gave a detailed account of the quarrel between Gannet and Boles, an incident that, in effect, brought my connection with the place and the men to an end.

“Yes,” Thorndyke agreed, “that is important, for all the circumstances suggest that it was not a mere casual falling out but the manifestation of a deep-seated enmity.”

“That was what I thought,” said I, “and so, evidently, did Mrs. Gannet; and it was on this point that Blandy’s questions were so particularly searching. First, he elicited the fact that the two men were formerly quite good friends and that the change had occurred quite recently. He inquired as to the cause of the change, but she was quite unable to account for it. Then he wanted to know when the change had occurred, but she was only able to say that it occurred some time in the latter part of last year. The next questions related to Boles’s movements about that time, and naturally, she couldn’t tell him very much. And then he asked a most remarkable question, which was, could she remember where Boles was on the 19th of last September? And it happened that she could. For at that time Gannet had gone to spend a week-end with Boles and she had taken the opportunity to spend a week-end at Eastbourne. And as she remembered clearly that she was at Eastbourne on the 19th of September, it followed that on that date Boles and Gannet were staying together at a place called Newingstead.”

At the mention of Newingstead, Thorndyke looked up quickly, but he made no remark, and I continued:

“This information seemed greatly to interest Inspector Blandy, especially the fact that the two men were at Newingstead together on that date; and he pressed Mrs. Gannet to try to remember whether the sudden change from friendship to enmity seemed to coincide with that date. The question naturally astonished her; but on reflection, she was able to recall that she first noticed the change when she returned from Eastbourne.”

“There is evidently something significant,” said Jervis, “about that date and that place, but I can’t imagine what it can be.”

“I think,” said I, “that I can enlighten you to some extent, for it happens that I also was at Newingstead on the 19th of last September.”

“The deuce you were!” exclaimed Jervis. “Then it seems that you did not begin your story at the beginning, after all.”

“I take it,” said Thorndyke, “that you are the Dr. Oldfield who gave evidence at the inquest on Constable Murray?”

“That is so. But how do you come to know about that inquest? I suppose you read about it in the papers? But it is odd that you should happen to remember it.”

“It isn’t, really,” said Thorndyke. “The fact is that Mr. Kempster—the man who was robbed, you remember—consulted me about the case. He wanted me to trace the thief, and if possible, to trace the diamonds, too. Of course, I told him that I had no means of doing anything of the kind. It was purely a police case. But he insisted on leaving the matter in my hands and he provided me with a verbatim report of the inquest from the local paper. Don’t you remember the case, Jervis? I know you read the report.”

“Yes,” replied Jervis. “I begin to have a hazy recollection of the case. I remember now that a constable was murdered in a wood; killed with his own truncheon, wasn’t he?”
“Yes,” I replied; “and some very distinct finger-prints were found on the truncheon—finger-prints from a left hand, with a particularly clear thumb-print.”

“Ha!” said Jervis. “Yes, of course, I remember; and I think I begin to ‘rumble’ Mr. Blandy, as Miller would say. Did you see those finger-prints on the gold plate?”

“I just had a look at them, though I was not particularly interested. But they were extremely clear—they would be, on polished gold plate. There was a thumb on one side and a forefinger on the reverse.”

“Do you know whether they were left or right?”

“I couldn’t tell; but Blandy said they were from a left hand.”

“I expect he was right,” said Jervis. “I am not fond of Blandy, but he certainly does know his job. It looks as if there were going to be some startling developments in this case. What do you think, Thorndyke?”

“It depends,” replied Thorndyke, “on what Blandy found at the studio. If the finger-prints on the gold plate were the same as those found on the truncheon, they can be assumed to be those of the man who murdered the constable; and as Blandy will have assumed—quite properly—that they were the finger-prints of Boles, we can understand his desire to ascertain where Boles was on the day of the murder, and his intense interest in learning from Mrs. Gannet that Boles was actually at Newingstead on that very day. Further, I think we can understand his disinclination to have any dealings with the arsenic.”

“I don’t quite see why,” said I.

“It is partly a matter of legal procedure,” he explained. “Boles cannot be charged with any crime until he is caught. But, if he is arrested, and his finger-prints are found to be the same as those on the truncheon, he will be charged with the murder of the constable. He may also be charged with the murder of Gannet. Thus when it comes to the trial, there will be two indictments. But, whereas—in the circumstances that we are assuming—the evidence against him in the matter of the murder at Newingstead appears to be conclusive and unanswerable, that relating to the murder of Gannet is much less convincing; in fact, there is hardly enough at present to support the charge.

“Hence it is practically certain that the first indictment would be the one to be proceeded with; and as this would almost certainly result in a conviction, the other would be of no interest. The police would not be willing to waste time and effort on preparing a difficult and inconclusive case which would never be brought to trial. That is how the matter presents itself to me.”

“Yes,” Jervis agreed, “that seems to be the position. But yet we can’t dismiss the Gannet murder altogether. Boles is the principal suspect, but he isn’t the monopoly. He might have had an accomplice—an accessory, either before or after the fact. As I see the case, it seems to leave Mr. Boles fairly in the soup and Mrs. Gannet, so to speak, sitting on the edge of the tureen. But I may be wrong.”

“I think you are,” said I, with some warmth. “I don’t believe that Mrs. Gannet has any guilty knowledge of the crime at all.”

“I am inclined to agree with you, Oldfield,” said Thorndyke. “But I think Jervis was referring to the views of the police, which may be different from ours.”

At this moment the clock in the adjacent consulting room struck eight, and, before its reverberations had died away, the welcome sound of the gong was heard summoning us to dinner. I conducted my guests to the dining room, and a quick glance at the table as I entered assured me that Mrs. Gilbert had been equal to the occasion. And that conviction deepened as the meal proceeded and evidently communicated itself to my guests, for Jervis remarked, after an appreciative sniff at his claret glass:

“Oldfield seems to do himself pretty well for a struggling G.P.”

“Yes,” Thorndyke agreed. “I think we may congratulate him on his housekeeper.”

“And his wine merchant,” added Jervis. “I propose a vote of thanks to them both.”

I bowed my acknowledgments and promised to convey the sentiments of the company to the proper quarters (which I did, subsequently, to our mutual satisfaction), and we then reverted to the activities proper to the occasion. Presently Jervis looked up at me as if a sudden thought had struck him.

“When you were describing Gannet’s method of work, Oldfield, you didn’t give us a very definite idea of the result. I gather that he posed as a special kind of artist potter. Did you consider that his productions justified that claim?”

“To tell the truth,” I replied. “I didn’t know what to think. To my eye his pottery looked like the sort of rough, crude stuff that is made by primitive people—but not so good—or the pottery that children turn out at the kindergartens. But you see I am not an expert. It seemed possible that it might have some subtle qualities which I was too ignorant to detect.”

“A very natural state of mind for a modest man,” said Thorndyke, “and a perfectly proper one; but a dangerous one, nevertheless. For it is just that self-distrust, that modest assumption that ‘there must be something in it, after all,’ that lets in the charlatan and the impostor. I saw some of Gannet’s pottery in his bedroom, including that outrageous effigy, and I am afraid that I was less modest than you were, for I decided definitely that the man who made it was no potter.”
“And you were absolutely right,” said I. “The question has been settled conclusively, so far as I am concerned, this very day. I have just visited an exhibition of Gannet’s works, and the bubble of his reputation was burst before my eyes. I will give you the particulars. It was quite a quaint experience.”

With this I produced the catalogue from my pocket and having read to them Bunderby’s introduction, I gave them a full description of the proceedings, including as much of Bunderby’s discourse as I could remember, and finishing up with the amazing incident of the “decorated jar.” They both listened with deep interest and with appreciative chuckles, and when I had concluded, Jervis remarked:

“Well, the jar incident fairly puts the lid on it. Obviously, the whole of the pottery business was what the financiers call a ramp. And I should say that Bunderby was in it up to the neck.”

“That is not so certain,” said Thorndyke. “He is either an ignoramus or a sheer impostor, and possibly both. It doesn’t matter much, as he is apparently not our pigeon. But the affair of the jar—a mere beginner’s experiment—is more interesting, for it concerns Gannet, who is our pigeon. As Jervis says, it explodes Gannet’s pretensions as a skilled artist, and thus convicts him of deliberate imposture, but it also proves him guilty of an act, not only mean but quite definitely dishonest. For the jar might conceivably be sold.”

“It is sold,” said I, “for fifteen guineas.”

“Which,” Jervis pronounced, oracularly, “illustrates the proverbial lack of cohesion between a fool and his money. I wonder who the mug is.”

“I didn’t discover that; in fact, I didn’t ask. But I picked up some other items of information. I had quite a long chat with Mr. Kempster, the proprietor of the gallery.”

“Mr. Kempster?” Thorndyke repeated, with a note of interrogation.

“Yes, but not your Mr. Kempster. This man is the brother of your client and a good deal like him. That is how I came to speak to him.”

“And what did you learn from Mr. Kempster?” Thorndyke asked.

“I learned, in the first place, that Boles is a Newingstead man; that he is acquainted with your Mr. Kempster, and that they have had certain business transactions.”

“Of what kind?” asked Thorndyke.

“Either the sale or exchange of stones. It seems that Boles buys up oddments of old or damaged jewelry to melt down for his own work. If they contain any diamonds, he picks them out and passes them on to Kempster, either in exchange for the kind of stones that he uses, or else, I suppose, for cash. Apparently the transactions are on quite a small scale.”

“Small or large,” said Jervis, “it sounds a bit fishy. Wouldn’t Blandy be interested?”

“I don’t quite see why,” said I. “Blandy is all out on the murder charge. It wouldn’t help him if he could prove Boles to be a receiver, or even a thief.”

“I think you are wrong there,” said Thorndyke. “If you recall the circumstances of the diamond robbery, which led to the murder of the constable, you will see that what you have told us has a distinct bearing. It was assumed that the thief was a chance stranger who had strayed into the premises. But a man who was suspected of being either a receiver or a thief, who had had dealings with Kempster—possibly in that very house—and knew something of his habits, and who happened to be in Newingstead at the time of the robbery, would fit into the picture much better than a chance stranger. However, that case really turns on the finger-print. If the print on the truncheon is Boles’s print, Boles will hang if he is caught; and if it is not, he is innocent both of the murder and of the robbery.”

I did not pursue the topic any farther, and the conversation drifted into other channels. But suddenly it occurred to me that nothing had been said on the very subject that had occasioned the present meeting.

“By the way,” said I, “you haven’t told me what has been done about poor Mrs. Gannet. I hope you have been able to make some arrangements.”

“We have,” said Jervis. “You need have no further anxiety about her. I called on Linnell this afternoon and put the proposal to him, and he agreed, not only quite willingly but with enthusiasm, to undertake the case. He is keen on criminal practice, and for a solicitor he has an unusual knowledge of criminal law and procedure. So we can depend on him in both respects. He will see that Mrs. Gannet’s rights and interests are properly safeguarded, and on the other hand, he won’t obstruct and antagonize the police.”

“I am relieved to hear that,” said I, “for I was most distressed to think of the terrible position that this poor lady finds herself in. I feel the deepest sympathy for her.”

“Very properly,” said Thorndyke, “as her medical adviser, and I think I am disposed to agree with your view of the case. But we must be cautious. We must not take sides. In the words of a certain ecclesiastic, ‘we must keep a warm heart and a cool head.’ You will remember that when the arsenic poisoning occurred, both you and I, having regard to Mrs. Gannet’s relations with Boles, felt that she was a possible suspect, either as an accessory or a principal. That view was perfectly correct and I must remind you that nothing has changed since then. The general probabilities remain. I do not believe that
she had any hand in this crime, but you and I may both be wrong. At any rate, the police will consider all the possibilities, and our business is to see that Mrs. Gannet gets absolutely fair treatment; and that we shall do.”

“Thank you, sir,” said I. “It is most kind of you to take so much interest, and so much trouble, in this case, seeing that you have no personal concern in it. Indeed, I don’t quite know why you have interested yourselves in it in the way that you have done.”

“That is easily explained,” replied Thorndyke. “Jervis and I are medico-legal practitioners, and here is a most unusual crime of the greatest medico-legal interest. Such cases we naturally study for the sake of the knowledge and experience that may be gleaned from them. But there is another reason. It has repeatedly happened that when we have studied some unusual case from the outside for its mere professional interest, we have suddenly acquired a personal interest in it by being called on to act for one of the parties. Then we have had the great advantage of being able to take it up with full and considered knowledge of most of the facts.”

“Then,” I asked somewhat eagerly, “if you were asked to take up this case on behalf of Mrs. Gannet, would you be willing—assuming, of course, that the costs would be met?”

“The costs would not be an essential factor,” he replied. “I think that if a charge should be brought against Mrs. Gannet, I would be willing to investigate the case—with an open mind and at her risk as to what I might discover—and if I were satisfied of her innocence, to undertake her defense.”

“Only if you were satisfied of her innocence?”

“Yes. Reasonably satisfied when I had all the facts. Remember, Oldfield, that I am an investigator. I am not an advocate.”

I found this slightly disappointing, but as no charge was probable, and as Thorndyke’s view of the case was substantially similar to my own, I pursued the subject no farther. Shortly afterwards, we adjourned to the study and spent the remainder of the evening discussing Gannet’s pottery and the various aspects of modernist art.
CHAPTER 13. — THE INQUIRY

The results of Mr. Linnell’s activities on Mrs. Gannet’s behalf were slightly disappointing, though she undoubtedly derived great encouragement from the feeling that his advice and support were always available. But Inspector Blandy was quietly but doggedly persistent in his search for information. Characteristically, he welcomed Linnell with almost affectionate warmth. It was such a relief to him to know that this poor lady now had a really competent and experienced legal adviser to watch over her interests. He had formerly been so distressed at her friendless and solitary condition. Now he was quite happy about her, though he deplored the necessity of troubling her occasionally with tiresome questions.

Nevertheless, he returned to the charge again and again in spite of Linnell’s protests that all available information had been given. There were two points on which he yearned for more exact knowledge. The first related to the movements of Mr. Boles; the second to her own movements during the time that she had been absent from home. As to the first, the last time she had seen Boles was about a week before she went away, and she then understood that he was proposing to take a short holiday to Burnham-on-Crouch. Whether, in fact, he did go to Burnham she could not say. She had never seen or heard from him since that day. As to his usual places of resort, he had an aunt at Newingstead with whom he used to stay from time to time as a paying guest. She knew of no other place which he was in the habit of visiting, and she had no idea whatever as to where he might be now.

As to her own movements, she had been staying at Westcliff-on-Sea with an old servant who had a house there and let lodgings to visitors. While there, she had usually walked along the sea front to Southend in the mornings and returned to tea or dinner. Sometimes she spent the whole day at Southend and went to a theatre or other entertainment, coming back at night by train. Naturally she could not give exact dates or say positively where she was at a certain time on a given day, though she tried to remember. And when the questions were repeated on subsequent occasions, the answers that she gave inevitably tended to vary.

From these repeated questionings, it was evident to Linnell (from whom, as well as from Mrs. Gannet, I had these particulars) that, in the intervals, Blandy had checked all these statements by exhaustive inquiries on the spot; and further, that he had been carefully studying the facts from the point of view of the fast train service between Southend and London. Apparently he had discovered no discrepancy, but yet it seemed that he was not satisfied; that he still harboured a suspicion that Mrs. Gannet knew more about the affair than she had admitted and that she could, if she chose, give a useful hint as to where Boles was in hiding.

Such was the state of affairs when I received a summons to attend and give evidence at an inquest “on certain remains, believed to be human, found on the premises of No. 12 Jacob Street.” The summons came rather as a surprise, and on receiving it I gave very careful consideration to the questions that I might be asked and the evidence that I should give. Should I, for instance, volunteer any statements as to the arsenic poisoning and my analysis of the bone-ash? As to the latter, I knew it was a matter of great importance that Blandy would have my own enthusiasm on the subject has largely evaporated after witnessing Jervis’s open incredulity. But I would be sworn to tell the whole truth, and as the analysis was a fact, it would have to be mentioned. However, as will be seen, the choice was not left to me; the far-sighted Blandy had anticipated my difficulty and provided the necessary counterblast.

On the morning of the inquest, I made a point of calling on Mrs. Gannet to satisfy myself that she was in a fit state to attend and to ascertain whether Linnell would be there to represent her. On both points I was reassured; for, though naturally a little nervous, she was quite composed and prepared to face courageously what must necessarily be a rather painful ordeal.

“I can never be grateful enough to you and Dr. Thorndyke,” said she, “for sending Mr. Linnell to me. He is so kind and sympathetic and wise. I should have been terrified of this inquest if I had had to go it alone; but now that I know Mr. Linnell will be there to support me, I feel quite confident. For you know I really haven’t anything that I need conceal.”

“Of course you haven’t,” I replied, cheerfully, though without any profound conviction, “and there is nothing at all for you to worry about. You can trust Mr. Linnell to keep Inspector Blandy in order.”

With this I took my departure, greatly relieved to find her in so satisfactory a state, and proceeded to dispatch my visits so as to leave the afternoon clear. For my evidence would probably occupy a considerable time and I wanted, if possible, to hear the whole of the inquiry; I managed this so successfully that I was able to present myself only a few minutes late and before the business had actually commenced.

Looking round the room as I entered, I was surprised to find but a mere handful of spectators; not more than a dozen, and these occupied two benches at the back, while the witnesses were accommodated on a row of chairs in front of them. Before seating myself on the vacant chair at the end, I glanced along the row, which included Blandy, Thorndyke, Jervis, Mrs. Gannet, Linnell and one or two other persons who were unknown to me.

I had hardly taken my seat when the coroner opened the proceedings with a brief address to the jury.

“The general nature of this inquiry,” said he, “has been made known to you in the course of your visit to the studio in Jacob Street. There are three questions to which we have to find answers. First, are these fragments of burnt bones the remains of a human being? Second, if they are, can we give a name and identity to that person? And third, how did that person come by his death? To these questions the obvious appearances and the known circumstances suggest certain answers; but we must disregard all preconceived opinions and consider the facts with an open mind. To do that, I think the
best plan will be to trace, in the order of their occurrence, the events which seem to be connected with the subject of our inquiry. We will begin by taking the evidence of Dr. Oldfield.

Here I may say that I shall not follow the proceedings in detail since they dealt with matters with which the reader is already acquainted; and for such repetition as is unavoidable, I hereby offer a comprehensive apology.

When the preliminaries had been disposed of, the coroner opened his examination with the question:

“When, and in what circumstances, did you first meet Peter Gannet?”

“On the 16th of December, 1930,” I replied. “I was summoned to attend him professionally. He was then an entire stranger to me.”

“What was the nature of his illness?”

“He was suffering from arsenic poisoning.”

“Did you recognize the condition immediately?”

“No. The real nature of his illness was discovered by Dr. Thorndyke, whom I consulted.”

Here, in answer to a number of questions, I described the circumstances of the illness up to the time when Peter Gannet called on me to report his recovery.

“Were you able to form any opinion as to whom administered the poison to Gannet?”

“No. I had no facts to go upon other than those that I have mentioned.”

“You have referred to a Mr. Frederick Boles as being in attendance on Gannet. What was his position in the household?”

“He was a friend of the family and he worked with Gannet in the studio.”

“What were his relations with Gannet? Were they genuinely friendly?”

“I thought so at the time, but afterwards I changed my opinion.”

“What were the relations of Boles and Mrs. Gannet?”

“They were quite good friends.”

“Should you say that their relations were merely friendly? Nothing more?”

“I never had any reason to suppose that they were anything more than friends. They seemed to be on the best of terms, but their mutual liking was known to Gannet and he used to refer to it without any sign of disapproval. He seemed to accept their friendship as quite natural and proper.”

The questions now concerned themselves with what I may call the second stage; my relations with Gannet up to the time of the disappearance, including the quarrel in the studio which I had overheard. This evidently produced a deep impression and evoked a number of searching questions from the coroner and from one or two of the jury. Then came the disappearance itself, and as I told the story of my search of the house and my discoveries in the studio, the profound silence in the court and the intent looks of the jury testified to the eager interest of the listeners. When I had finished the account of my doings in the studio, the coroner (who I suspected had been primed by Blandy) asked:

“What about the sample of bone-ash that you took away with you? Did you make any further examination of it?”

“Yes. I examined it under the microscope and confirmed my belief that it was incinerated bone; and I also made a chemical test to ascertain whether it contained any arsenic.”

“Had you any expectation that it would contain arsenic?”

“I thought it just possible that it might contain traces of arsenic. It was the previous poisoning incident that suggested the examination.”

“Did you, in fact, find any arsenic?”

“Yes. To my surprise, I discovered a considerable quantity. I don’t know how much, as I did not attempt to estimate it, but I could see that there was a comparatively large amount.”

“And what conclusion did you reach from this fact?”

“I concluded that deceased, whoever he was, had died from the effects of a very large dose of arsenic.”

“Is that still your opinion?”

“I am rather doubtful. There may have been some source of error which is not known to me, but the arsenic was certainly there. Really, its significance is a matter for an expert, which I am not.”

This, substantially, brought my evidence to an end. I was followed by Sir Joseph Armadale, the eminent medico-legal authority, acting for the Home Office. As he took his place near the coroner, he produced and laid on the table a shallow, glass-topped box. In reply to the coroner’s question, he deposed:

“I have examined a quantity of fragments of incinerated bone submitted to me by the Commissioner of Police. Most of
them were too small to have any recognizable character, but some were large enough to identify as parts of particular bones. These I found, in every case, to be human bones."

"Would you say that all these fragments are the remains of a human being?"

"That, of course, is an inference, but it is a reasonable inference. All I can say is that every fragment that I was able to recognize as part of a particular bone was part of a human bone. It is reasonable to infer that the unrecognisable fragments were also human. I have picked out all the fragments that were identifiable and put them in this box, which I submit for your inspection."

Here the box was passed round and examined by the jury, and while the inspection was proceeding, the coroner addressed the witness.

"You have heard Dr. Oldfield’s evidence as to the arsenic that he found in the ashes. Have you any comments to make on his discovery?"

"Yes. The matter was mentioned to me by Inspector Blandy and I accordingly made an analysis to check Dr. Oldfield’s findings. He is perfectly correct. The ashes contain a considerable quantity of arsenic. From two ounces of the ash I recovered nearly a tenth of a grain."

"And do you agree that the presence of that arsenic is evidence that deceased died from arsenic poisoning?"

"No. I do not associate the arsenic with the body of deceased at all. The quantity is impossibly large. As a matter of fact, I do not believe that, if deceased had been poisoned even by a very large dose of arsenic, any trace of the poison would have been discoverable in the ashes. Arsenic is a volatile substance which changes into a vapour at a comparatively low temperature—about 300 degrees Fahrenheit. But these bones had been exposed for hours to a very high temperature—over 2000° Fahrenheit. I should say that the whole of the arsenic would have been driven off in vapour. At any rate, the quantity which was found in the ashes was quite impossible as a residue. The arsenic must have got into the ashes in some way after they had become ashes."

"Can you suggest any way in which it could have got into the ashes?"

"I can only make a guess. Inspector Blandy has informed me that he found a jar of arsenic in the studio among the materials for making glazes or enamels. So it appears that arsenic was one of the materials used, in which case it would have been possible for it to have got mixed with the ashes either in the grinding apparatus or in the bin. But that is only a speculative suggestion. There may be other possibilities."

"Yes," the coroner agreed. "But it doesn’t matter much. The important point is that the arsenic was not derived from the body of deceased, and you are clear on that?"

"Perfectly clear," replied Sir Joseph; and that completed his evidence.

The next witness was Mr. Albert Hawley, who described himself as a dental surgeon and deposed that he had attended Mr. Peter Gannet professionally and had made for him a partial upper denture which included the four incisors. The coroner then handed to him a small stoppered tube which I could see contained a tooth, remarking:

"I think you have seen that before, but you had better examine it."

"Yes," the witness replied as he withdrew the stopper and shook the tooth out into the palm of his hand. "It was shown to me by Inspector Blandy. It is a porcelain tooth—a right upper lateral incisor—which has been broken into several fragments and very skilfully mended. It is of the type known as Du Trey’s."

"Does it resemble any of the teeth in the denture which you made for Peter Gannet?"

"Yes. I used Du Trey’s teeth in that denture, so this is exactly like the right upper lateral incisor in that denture."

"You can’t say, I suppose, whether this tooth actually came from that denture?"

"No. The teeth are all alike when they come from the makers, and if I have to make any small alterations in adjusting the bite, no record is kept. But nothing seems to have been done to this tooth."

"If it were suggested to you that this tooth came from Gannet’s denture, would you have any reason to doubt the correctness of that suggestion?"

"None whatever. It is exactly like a tooth in his denture and it may actually be that tooth. Only I cannot say positively that it is."

"Thank you," said the coroner. "That is all that we could expect of you, and I think we need not trouble you any further."

Mr. Hawley was succeeded by Inspector Blandy who gave his evidence with the ease and conciseness of the professional witness. His description of the researches in the studio and the discovery of the fragments of the tooth were listened to by the jury with the closest interest, though in the matter of sensation I had rather "stolen his thunder." But the turning out of Boles’s cupboard was a new feature and several points of interest arose from it. The discovery, for instance, of a two-pound jar of arsenic, three-quarters full, was one of them.

"You had already learned of Dr. Oldfield’s analysis?"

"Yes. He showed me the tube with the arsenic deposit in it, but I saw at once that there must be some mistake. It was too
good to be true. There was too much arsenic for a cremated body.”

“Did you gather what the arsenic was used for?”

“No. The cupboard contained a number of chemicals, apparently used for preparing enamels and fluxes, and I presumed that the arsenic was used for the same purpose.”

The discovery of the finger-prints raised some other interesting questions, particularly as to their identity, concerning which the coroner asked:

“Can you say whose finger-prints those were?”

“No positively. But there were quite a lot of them on various objects, on bottles and jars, and some on tool-handles, and they were all from the same person; and as the cupboard was Boles’s cupboard and the tools and bottles were his, it is fair to assume that the finger-prints were his.”

“Yes,” the coroner agreed, “that seems a reasonable assumption. But I don’t see the importance of it, unless the finger-prints are known to the police. Is it expedient to ask whether they are?”

“I don’t want to go into particulars,” said Blandy, “but I may say that these finger-prints are known to the police and that their owner is wanted for a very serious crime against the person; a crime involving extreme violence. That is their only bearing on this case. If they are Boles’s finger-prints, then Boles is known to be a violent criminal; and there seems to be evidence in this case that a violent crime has been committed.”

“Have you had an opportunity of interviewing Mr. Boles?” the coroner asked.

The Inspector smiled, grimly. “No,” he replied. “Mr. Boles disappeared just about the time when the body was burned, and so far, he has managed to keep out of sight. Apparently he doesn’t desire an interview.”

That was the substance of the Inspector’s evidence, and, as he was disposed to be evasive and reticent, the coroner discreetly refrained from pressing him. Accordingly, when the depositions had been read and signed, he was allowed to retire to his seat and the name of Letitia Gannet was called. As she advanced to the table, where a chair was placed for her, I watched her with some uneasiness; for though I felt sure that she knew nothing that she had not already disclosed, the atmosphere of the court was not favourable. It was easy to see that the jury regarded her with some suspicion, and that Blandy’s habitually benevolent expression but thinly disguised a watchful attention which was not entirely friendly.

As I had expected, the coroner began with an attempt to get more light on the incident of the arsenic poisoning, and Mrs. Gannet recounted the history of the affair in so far as it was known to her.

“Of what persons did your household consist at that time?” the coroner asked.

“Of my husband, myself and one maid. Perhaps I should include Mr. Boles as he worked in the studio with my husband and usually took his meals with us and was at the house a good deal.”

“Who prepared your husband’s food?”

“I did while he was ill. The maid did most of the other cooking.”

“And the barley water? Who prepared that?”

“Usually I did; but sometimes Mr. Boles made it.”

“And who took the food and drink to your husband’s room?”

“I usually took it up to him myself, but sometimes I sent the maid up with it and occasionally Mr. Boles took it up.”

“Is the maid still with you?”

“No. As soon as I heard from my husband that there had been arsenic in his food, I sent the girl away with a month’s wages in lieu of notice.”

“Why did you do that? Did you suspect her of having put the arsenic in the food?”

“No, not in the least, but I thought it best to be on the safe side.”

“Did you form any opinion as to who might have put it in?”

“No, there was nobody whom I could suspect. At first I thought that there must have been some mistake, but when Dr. Oldfield explained to me that no mistake was possible, I supposed that the arsenic must have got in by accident; and I think so still.”

The next questions were concerned with the relations existing between Gannet and Boles and the time and circumstances of the break-up of their friendship.

“As to the cause of this sudden change from friendship to enmity—did you ever learn from either of the men what the trouble was?”

“Neither of them would admit that there was any trouble, though I saw that there must be. But I could never guess what it was.”

“Did it ever occur to you that your husband might be jealous on account of your intimacy with Mr. Boles?”
“Never, and I am sure he was not. Mr. Boles and I were relatives—second cousins—and had known each other since we were children. We were always the best of friends, but there was never anything between us that could have occasioned jealousy on my husband's part, and he knew it. He never made the least objection to our friendship.”

“You spoke of Mr. Boles as working with your husband in the studio. What, precisely, does that mean? Was Mr. Boles a potter?”

“No. He sometimes helped my husband, particularly in firing the kiln; but his own work, for the last year or two, was the making of certain kinds of jewellery and enamels.”

“You say ‘for the last year or two’—what was his previous occupation?”

“He was originally a dental mechanic; but when my husband took the studio, as it contained a jeweler's and enameler's plant, Mr. Boles came there and began to make jewellery.”

Here I caught the eye of Inspector Blandy, and a certain fluttering of the eyelid recalled his observations on Mr. Boles's “neo-primitive” jewelry. But a dental mechanic is not quite the same as a plumber's apprentice.

The inquiry now proceeded to the circumstances of Peter Gannet's disappearance and the dates of the various events.

“Can you remember exactly when you last saw Mr. Boles?”

“I think it was on Tuesday, the 21st of April; about a week before I went away. He came to the studio and had lunch with us, and then he told us that he was going to spend a week or ten days at Burnham in Essex. I never saw or heard from him after that.”

“You say that you went away. Can we have particulars as to when and where you went?”

“I left home on the 29th of April to stay for a fortnight at Westcliff-on-Sea with an old servant, Mrs. Hardy, who has a house there and lets rooms to visitors in the season. I returned home on Thursday, the 14th of May.”

“Between those two dates, were you continuously at Westcliff, or did you go to any other places?”

To this she replied in the same terms that she had used in her answers to Blandy, which I have already recorded. Here again I suspected that the coroner had received some help from the Inspector for he inquired minutely into the witness's doings from day to day while she was staying at Westcliff.

“In effect,” said he, “you slept at Westcliff, but you frequently spent whole days elsewhere. During that fortnight, did you ever come to London?”

“No.”

“If you had wished to spend a day in London, could you have done so without your landlady being aware of it?”

“I suppose so. There is a very good train service. But I never did.”

“And what about Burnham? That is not so very far from Westcliff. Did you ever go there during your stay?”

“No. I never went farther than Southend.”

“During that fortnight, did you ever write to your husband?”

“Yes, twice. The first letter was sent a day or two after my arrival at Westcliff and he replied to it a couple of days later. The second letter I wrote a few days before my return, telling him when he might expect me home. I received no answer to that, and when I got home I found it in the letter box.”

“Can you give us the exact dates of those letters? You see that they are important as they give, approximately, the time of the disappearance. Can you remember the date of your husband's reply to your first letter? Or perhaps you have the letter itself.”

“I have not. It was only a short note, and when I had read it I tore it up. My first letter was written and posted, I am nearly sure, on Monday, the 4th of May. I think his reply reached me by the first post on Friday, the 8th, so it would have been sent off on Thursday, the 7th. My second letter, I remember quite clearly, was written and posted on Sunday, the 10th of May, so it would have been delivered at our house early on Monday, the 11th.”

“That is the one that you found in the letter box. Is it still in existence?”

“No. Unfortunately, I destroyed it. I took it from the letter box and opened it to make sure that it was my letter, and then, when I had glanced at it, I threw it on the fire that I had just lit. But I am quite sure about the date.”

“It is a pity you destroyed the letter,” said the coroner, “but no doubt your memory as to the date is reliable. Now we come to the incidents connected with the disappearance. Just give us an account of all that happened from the time when you arrived home.”

In reply to this, Mrs. Gannet told the story of her alarming discovery in much the same words as she had used in telling it to me, but in greater detail, including her visit to me and our joint examination of the premises. Her statement was amplified by various questions from the coroner, but her answers to them conveyed nothing new to me with one or two exceptions. For instance, the coroner asked: “You looked at the hall stand and noticed that your husband’s hats and stick were there. Did you notice another walking-stick?”
“I saw that there was another stick in the stand.”

“Did you recognize it as belonging to any particular person?”

“No, I had never seen it before.”

“Did you form any opinion as to whose stick it was?”

“I felt sure that it did not belong to my husband. It was not the kind of stick that he would have used; and as there was only one other person who was likely to be the owner—Mr. Boles—I assumed that it was his.”

“Did you take it out and examine it?”

“No, I was not interested in it. I was trying to find out what had become of my husband.”

“But you assumed that it was Mr. Boles’s stick. Did it not occur to you as rather strange that he should have left his stick in your stand?”

“No. I suppose that he had gone out of the studio by the wicket and had forgotten about his stick. He was sometimes inclined to be forgetful. But I really did not think much about it.”

“Was that stick in the stand when you went away from home?”

“No. I am sure it was not.”

“You have mentioned that you called at Mr. Boles’s flat. Why did you do that?”

“For two reasons. I had written to him telling him when I should be home and asking him to come and have tea with us. As he had not answered my letter and did not come to the house, I thought that something unusual must have happened. But especially I wanted to find out whether he knew anything about my husband.”

“When you found that he was not at his flat, did you suppose that he was still at Burnham?”

“No, because I learned that he had returned about a week previously at night and had slept at the flat and had the next day gone away again.”

“Did you know, or could you guess, where he had gone?”

“No, I had not the least idea.”

“Have you any idea as to where he may be at this moment?”

“No, I had not the least idea.”

“Do you know of any places to which he is in the habit of going?”

“The only place I know of is his aunt’s house at Newingstead. But I understand from Inspector Blandy that inquiries have been made there and that his aunt has not seen or heard of him for some months. I know of no other place where he might be.”

“When you were describing your search of the premises, you said that you did not look in the studio. Why did you not? Was it not the most likely place in which he might be?”

“Yes, it was. But I was afraid to go in. Since my husband and Mr. Boles had been on bad terms, they had quarrelled dreadfully. And they were both rather violent men. On one occasion—which Dr. Oldfield has mentioned—I heard them actually fighting in the studio, and I think it had happened on other occasions. So, when I could find no trace of my husband in the house, I began to fear that something might have happened in the studio. That was why I was afraid to go there.”

“In short, you were afraid that you might find your husband’s dead body in the studio. Isn’t that what you mean?”

“Yes, I think that was in my mind. I suspected that something awful had happened.”

“Was it only a suspicion? Or did you know that there had been some trouble?”

“I knew nothing whatever about any trouble. I did not even know whether the two men had met since I went away. And it was hardly a suspicion; only, remembering what had happened in the past, the possibility occurred to me.”

When the coroner had written down this answer, he sat for a few moments looking reflectively at the witness. Apparently, he could think of nothing further to ask her, for, presently, turning to the jury, he said:

“I think the witness has told us all that she knows about this affair, but possibly some members of the jury might wish to ask a further question.”

There was a short pause, during which the members of the jury gazed solemnly at the witness. At length one enterprising jurymen essayed a question.

“Could we ask Mrs. Gannet if she knows, or has any idea, who murdered her husband?”

“I don’t believe,” the coroner replied with a faint smile, “that we could ask that question, even if it were a proper one to put to a witness, because we have not yet decided that anyone murdered Peter Gannet, or even that he is dead. Those are precisely the questions that you will have to answer when you come to consider your verdict.”
He paused and still regarded the jury inquiringly, but none of them made any sign; then, after waiting for yet a few more moments, he read the depositions, took the signature, released the witness, and pronounced the name of her successor, Dr. Thorndyke; who came forward and took the place which she vacated. Having been sworn, he deposed, in answer to the coroner’s question:

“I attended Peter Gannet in consultation with Dr. Oldfield last January. I formed the opinion that he was suffering from arsenic poisoning.”

“Had you any doubt on the subject?”

“No. His symptoms were the ordinary symptoms of poisoning by arsenic, and, when I had him in the hospital under observation, it was demonstrated chemically that there was arsenic in his body. The chemical tests were made by Professor Woodfield and by me.”

He then went on to confirm the account which I had given, including the analysis of the arrowroot and the barley water. When he had finished his statement, the coroner asked, tentatively:

“I suppose you were not able to form an opinion as to how, or by whom, the poison was administered, or whether the poisoning might have been accidental?”

“No. I had no first-hand knowledge of the persons or the circumstances. As to accidental poisoning, I would not say that it was impossible, but I should consider it too improbable to be seriously entertained. The poisoning affected only one person in the house, and when the patient returned home after the discovery it did not recur. Those facts are entirely opposed to the idea of accidental poisoning.”

“What do you say about the arsenic that Dr. Oldfield found in the ashes?”

“I agree with Sir Joseph Armadale that there must have been some contamination of the ashes. I do not associate the arsenic with the body of the person who was burned—assuming the ashes to be those of a burned human body.”

“On that matter,” said the coroner, “perhaps you will give us your opinion on the fragments which Sir Joseph Armadale has shown us.”

He handed the box to Thorndyke, who took it and examined the contents with an appearance of the deepest interest, assisting his eyesight with his pocket lens. When he had—a seemingly—inspected each separate fragment, he handed the box back to the coroner, who asked, as he replaced it on the table:

“Well, what do say about those fragments?”

“I have no doubt,” replied Thorndyke, “that they are all fragments of human bones.”

“Would it be possible to identify deceased from these fragments?”

“I should say that it would be quite impossible.”

“Do you agree that the ashes as a whole may be assumed to be the remains of a burned human body?”

“That is an obviously reasonable assumption, though it is not susceptible of proof. It is the assumption that I should make in the absence of any reasons to the contrary.”

That concluded Thorndyke’s evidence, and when he retired, his place was taken by Professor Woodfield. But I need not record the Professor’s evidence since it merely repeated and confirmed that of Thorndyke and Sir Joseph. With the reading and signing of his depositions the body of evidence was completed and when he had returned to his seat, the coroner proceeded to his summing up.

“In opening this inquiry,” he began, “I said that there were three questions to which we had to find answers. First, are these ashes the remains of a human being? Second, if they are, can we identify that human being as any known person? And third, if we can so identify him, can we decide how he came by his death?

“Let us take these questions in their order. As to the first, it is definitely answered for us by the medical evidence. Sir Joseph Armadale and Dr. Thorndyke, both authorities of the highest eminence, have told us that all the fragments which are large enough to have any recognizable characters are undoubtedly portions of human bones; and they agree—as, indeed, common sense suggests—that the unrecognizable remainder of the ashes must also be presumed to be fragments of human bones. Thus our first question is answered in the affirmative. The bone ashes found in the studio are the remains of a human being.

“The next question presents much more difficulty. As you have heard from Dr. Thorndyke, the fragments are too small to furnish any clue to the identity of deceased. Our efforts to discover who this person was must be guided by evidence of another kind. We have to consider the persons, the places and the special circumstances known to us.

“As to the place, these remains were found in the studio occupied by Peter Gannet; and we learn that Peter Gannet has disappeared under most mysterious circumstances. I need not repeat the evidence in detail, but the fact that when he disappeared he was wearing only his indoor clothing, seems to preclude the possibility of his having gone away from his home in any ordinary manner. Now the connection between a man who has mysteriously disappeared, and unrecognizable human remains found on his premises after his disappearance, appears strongly suggestive and invites the inquiry, What is the nature of the connection? To answer this, we must ask two further questions: When did the man disappear and when
did the remains make their appearance?

“Let us take the first question. We learn from Mrs. Gannet’s evidence that she received a letter from her husband on the 8th of May. That letter, we may presume, was written on the 7th. Then she wrote and posted a letter to him on the 10th of May, and we may assume that it was delivered on the 11th. Most unfortunately, she destroyed that letter, so we can not be absolutely certain about the date on which it was delivered, but we can feel little doubt that it was delivered in the ordinary way on the 11th of May. If that is so, we can say with reasonable confidence that Peter Gannet was undoubtedly alive on the 7th of May; but inasmuch as Mrs. Gannet found her letter in the letter box, we must conclude that at the date of its delivery, Peter Gannet had already disappeared. That is to say that his disappearance occurred at some time between the 7th and the 11th of May.

“Now let us approach the problem from another direction. You have seen the kiln. It is a massive structure of brick and fire-clay with enormously thick walls. During the burning of the body, we know from the condition of the bones that its interior must have been kept for several hours at a temperature which has been stated in evidence as well over 2000° Fahrenheit; that is to say, at a bright red heat. When Dr. Oldfield examined it, the interior was just perceptibly warm. Now I don’t know how long a great mass of brick and fire-clay such as this would take to cool down to that extent. Allowing for the fact that it had been opened to extract the ashes, as it had then been reclosed, its condition was undoubtedly favourable to slow cooling. We can confidently put down the time taken by the cooling which had occurred at several days; probably somewhere about a week. Now Dr. Oldfield’s inspection was made on the evening of the 15th. A week before that was the 8th. But we have seen that the disappearance occurred between the 7th and the 11th of May; and the temperature of the kiln shows that the burning of the body must have occurred at some time before the 11th and almost certainly after the 7th. It thus appears that the disappearance of Peter Gannet and the destruction of the body both occurred between those two dates. The obvious suggestion is that the body which was burned was the body of Peter Gannet.

“Is there any evidence to support that conclusion? There is not very much. The most striking is the discovery among the ashes of a porcelain tooth. You have heard Mr. Hawley’s evidence. He identifies that tooth as one of a very distinctive kind, and he tells us that it is identically and indistinguishably similar to a tooth on the denture which he supplied to Peter Gannet. He will not swear that it is the same tooth; only that it is the exact facsimile of that tooth. So you have to consider what are the probabilities that the body of some unknown person should have been burned in Peter Gannet’s kiln and that that person should have worn a denture containing a right upper lateral incisor of the type known as Du Trey’s, in all respects identical with that in Peter Gannet’s denture; and how such probabilities compare with the alternative probability that the tooth came from Peter Gannet’s own denture.

“There is one other item of evidence. It is circumstantial evidence and you must consider it for what it seems to be worth. You have heard from Dr. Oldfield and Dr. Thorndyke that some months ago Peter Gannet suffered from arsenic poisoning. Both witnesses agree that the suggestion of accidental poisoning cannot be entertained. It is therefore practically certain that some person or persons administered this poison to Gannet with the intention of causing his death. That intention was frustrated by the alertness of the doctors. The victim survived and recovered.

“But let us see how those facts bear on this inquiry. Some unknown person or persons desired the death of Peter Gannet and sought, by means of poison, to compass it. The attempted murder failed; but we have no reason to suppose that the motive ceased to exist. If it did not, then Peter Gannet went about in constant peril. There was some person who desired his death and who was prepared, given the opportunity, to take appropriate means to kill him.

“Apply these facts to the present case. We see that there was some person who wished Gannet to die and who was prepared to realize that wish by murdering him. We find in Gannet’s studio the remains of a person who may be assumed to have been murdered. Gannet has unaccountably disappeared, and the date of his disappearance coincides with that of the appearance of these remains in his studio. Finally, among these remains, we find a tooth of a rather unusual kind which is in every respect identical with one known to have been worn by Peter Gannet. Those are the facts known to us, and I think you will agree with me that they yield only one conclusion: that the remains found in Peter Gannet’s studio were the remains of Peter Gannet, himself.

“If you agree with that conclusion, we have answered two of the three questions to which we had to find answers. We now turn to the third: How, and by what means, did deceased come by his death? It appears almost an idle question, for the body of deceased was burned to ashes in a kiln. By no conceivable accident could this have happened, and deceased could not have got into the kiln by himself. The body must have been put in by some other person and deliberately destroyed by fire. But such destruction of a body furnishes the strongest presumptive evidence that the person who destroyed the body had murdered the dead person. We can have no reasonable doubt that deceased was murdered.

“That is as far as we are bound to go. It is not our function to fix the guilt of this crime on any particular person. Nevertheless, we are bound to take notice of any evidence that is before us which seems to point to a particular person as the probable perpetrator of the crime. And there is, in fact, a good deal of such evidence. I am not referring to the arsenic poisoning. We must ignore that, since we have no certain knowledge as to who the poisoner was. But there are several important points of evidence bearing on the probable identity of the person who murdered Peter Gannet. Let us consider them.

“In the first place, there is the personality of the murderer. What do we know about him? Well, we know that he must have been a person who had access to the studio, and he must have had some acquaintance with its arrangements; knew where the various appliances were to be found, which of the bins was the bone-ash-bin, and so on. Then he must have
known how to prepare and fire the kiln and where the fuel was kept; and he must have understood the use and management of the appliances that he employed—the grinding-mills and the cupel press, for instance.

"Do we know of any person to whom this description applies? Yes, we know of one such person, and only one—Frederick Boles. He had free access to the studio, for it was also his own workshop and he had the key. He was familiar with all its arrangements, and some of the appliances, such as the cupel press, were his own. He knew all about the kiln, for we have it in evidence that he was accustomed to helping Gannet light and stoke it when pottery was being fired. He agrees completely with the description, in these respects, which we know must have applied to the murderer; and, I repeat, we know of no other person to whom it would apply.

"Thus there is a prima facie probability that the murderer was Frederick Boles. But that probability is conditioned by possibility. Could Boles have been present in the studio when the murder was committed? Our information is that he had been staying at Burnham. But he came home one night and passed that night at his flat and then went away again. What night was it that he spent at the flat? Now, Mrs. Gannet came home on the 14th of May, and she called at Boles’s flat on the following day, the 15th. There she learned that he had come to the flat about a week previously, spent the night there and gone away the next day. Apparently, then, it would have been the night of the 8th that he spent at the flat; or it might have been the 7th or the 9th. But Gannet’s death occurred between the 7th or the 11th. Consequently, Boles would appear to have been in London at the time when the murder was committed.

"But is there any evidence that he was actually on these premises at this time? There is. A walking-stick was found by Dr. Oldfield in the hall-stand on the night of the 15th. You have seen that stick and I pass it round again. On the silver mount of the handle you can see the initials ‘F. B.’—Boles’s initials. Mrs. Gannet had no doubt that it belonged to Boles, and indeed there is no one else to whom it could belong. But she has told us that it was not in the hall-stand when she went away. Then it must have been deposited there since. But there is only one day on which it could have been deposited; the day after Boles’s arrival at the flat. We thus have clear evidence that Boles was actually on the premises on the 8th, the 9th, or the 10th, that is to say, his presence on these premises seems to coincide in time with the murder of Peter Gannet; and we further note the significant fact that at the time when Boles came to the house, Gannet—if still alive—was there all alone.

"Thus the circumstantial evidence all points to Boles as the probable murderer and we know of no other person against whom any suspicion could rest. Add to this the further fact that the two men—Boles and the deceased—are known to have been on terms of bitter enmity and actually, on at least one occasion, to have engaged in violent conflict; and that evidence receives substantial confirmation.

"I think I need say no more than this. You have heard the evidence and I have offered you these suggestions as to its bearing. They are only suggestions. It is you who have to decide on your verdict; and I think you will have little difficulty in answering the three questions that I mentioned in opening this inquiry."

The coroner was right up to a certain point. The jury had apparently agreed on their verdict before he had finished speaking, but found some difficulty in putting it into words. Eventually, however, after one or two trials on paper, the foreman announced that he and his fellow jurors had reached a conclusion; which was that the ashes found in the studio were the remains of the body of Peter Gannet, and that the said Peter Gannet had been murdered by Frederick Boles at some time between the 7th and the 11th of May.

"Yes," said the coroner, “that is the only verdict possible on the evidence before us. I shall record a verdict of wilful murder against Frederick Boles.” He paused, and glancing at Inspector Blandy, asked the latter: "Is there any object in my issuing a warrant?"

"No, sir," Blandy replied. “A warrant has already been issued for the arrest of Boles on another charge."

"Then," said the coroner, “that brings these proceedings to an end, and I can only hope that the perpetrator of this crime may shortly be arrested and brought to trial."

On this, the court rose. The reporters hurried away, intent on gorgeous publicity; the spectators drifted out into the street; and the four experts (including myself for this occasion only), after a brief chat with the coroner and the Inspector, departed also and went their respective ways. And here it is proper for me to make my bow to the reader and retire from the post of narrator. Not that the story is ended, but that the pen now passes into another, and I hope more capable, hand. My function has been to trace the antecedents and describe the intimate circumstances of this extraordinary crime, and this I have done to the best of my humble ability. The rest of the story is concerned with the elucidation, and the centre of interest is now transferred from the rather drab neighbourhood of Cumberland Market to the historic precinct of the Inner Temple.
BOOK II
NARRATED BY CHRISTOPHER JERVIS, M.D.

CHAPTER 14. — DR. JERVIS IS PUZZLED

THE stage which the train of events herein recorded had reached when the office of narrator passed to me from the hands of my friend Oldfield, found me in a state of some mental confusion. It seemed that Thorndyke was contemplating some kind of investigation. But why? The Gannet case was no concern of ours. No client had engaged us to examine it, and a mere academic interest in it would not justify a great expenditure of valuable time and effort.

But further, what was there to investigate? In a medico-legal sense there appeared to be nothing. All the facts were known, and though they were lurid enough, they were of little scientific interest. Gannet’s death presented no problem, since it was a bald and obvious case of murder; and if his mode of life seemed to be shrouded in mystery, that was not our affair, nor, indeed, that of anybody else, now that he was dead.

But it was precisely this apparently irrelevant matter that seemed to engage Thorndyke’s attention. The ostensible business of the studio had, almost certainly, covered some other activities, doubtful if not actually unlawful, and Thorndyke seemed to be set on ascertaining what they were; whereas, to me, that question appeared to be exclusively the concern of the police in their efforts to locate the elusive Boles.

I had the first inkling of Thorndyke’s odd methods of approach to this problem on the day after our memorable dinner at Osnaburgh Street. On our way home, he had proposed that we should look in at the gallery where Gannet’s pottery was on view, and I had agreed readily, being quite curious as to what these remarkable works were really like. So it happened naturally enough that when, on the following day, we entered the temple of the fine arts, my attention was at first entirely occupied with the exhibits.

I will not attempt to describe those astonishing works for I feel that my limited vocabulary would be unequal to the task. There are some things that must be seen to be believed, and Gannet’s pottery was one of them. Outspoken as Oldfield had been in his description of them, I found myself totally unprepared for the outrageous reality. But I need not dwell on them. Merely remarking that they looked to me like the throw-outs from some very juvenile handiwork class, I will dismiss them —as I did, in fact—and proceed to the apparent purpose of our visit.

Perhaps the word “apparent” is inappropriate, for in truth, the purpose of our visit was not apparent to me at all. I can only record this incomprehensible course of events, leaving their inner meaning to emerge at a later stage of this history. By the time that I had recovered from the initial shock and convinced myself that I was not the subject of an optical illusion, Thorndyke had already introduced himself to the gallery proprietor, Mr. Kempster, and seemed to be discussing the exhibits in terms of the most extraordinary irrelevance.

“Having regard,” he was saying, as I joined them, “to the density of the material and the thickness of the sides, I should think that these pieces must be rather inconveniently ponderous.”

“They are heavy,” Mr. Kempster admitted, “but you see they are collector’s pieces. They are not intended for use. You wouldn’t want, for instance, to hand this one across the dinner table.”

He picked up a large and massive bowl and offered it to Thorndyke, who took it and weighed it in his two hands with an expression of ridiculous earnestness.

“Yes,” he said, as he returned it to Mr. Kempster, “it is extremely ponderous for its size. What should you say it weighs? I should guess it at nearly eight pounds.”

He looked solemnly at the obviously puzzled Kempster, who tried it again and agreed to Thorndyke’s estimate. “But,” he added, “there’s no need to guess. If you are interested in the matter, we can try it. There is a pair of parcel scales in my office. Would you like to see what it really does weigh?”

“If you would be so kind,” Thorndyke replied; whereupon Kempster picked up the bowl and we followed him in procession to the office, as if we were about to perform some sacrificial rite, where the uncouth pot was placed on the scale and found to be half an ounce short of eight pounds.

“Yes,” said Thorndyke, “it is abnormally heavy even for its size. That weight suggests an unusually dense material.”

He gazed reflectively at the bowl, and then, producing a spring tape from his pocket, proceeded carefully to measure the principal dimensions of the piece while Mr. Kempster looked on like a man in a dream. But not only did Thorndyke take the measurements. He made a note of them in his note-book together with one of the weight.

“You appear,” said Mr. Kempster, as Thorndyke pocketed his note-book, “to be greatly interested in poor Mr. Gannet’s work.”

“I am,” Thorndyke replied, “but not from the connoisseur’s point of view. As I mentioned to you, I am trying, on Mrs. Gannet’s behalf, to elucidate the very obscure circumstances of her husband’s death.”

“I shouldn’t have supposed,” said Kempster, “that the weight of his pottery would have had much bearing on that. But of course you know more about evidence than I do; and you know—which I don’t—what obscurities you want to clear up.”

“Thank you,” said Thorndyke. “If you will adopt that principle, it will be extremely helpful.

Mr. Kempster bowed. “You may take it, Doctor,” said he, “that, as a friend of poor Gannet’s, though not a very intimate
one, I shall be glad to be of assistance to you. Is there anything more that you want to know about this work?"

“There are several matters,” Thorndyke replied; “in fact, I want to know all that I can about his pottery, including its disposal and its economic aspects. To begin with, was there much of it sold? Enough, I mean, to yield a living to the artist?”

“There was more sold than you might have expected, and the pieces realized good prices; ten to twenty guineas each. But I never supposed that Gannet made a living by his work. I assumed that he had some independent means.”

“The next question,” said Thorndyke, “is what became of the pieces that were sold? Did they go to museums or to private collectors?”

“Of the pieces sold from this gallery—and I think that this was his principal market—one or two were bought by provincial museums, but all the rest were taken by private collectors.”

“And what sort of people were those collectors?”

“That,” said Kempster, with a deprecating smile, “is a rather delicate question. The things were offered for sale in my gallery and the purchasers were, in a sense, my clients.”

“Quite so,” said Thorndyke. “It was not really a fair question; and not very necessary as I have seen the pottery. I suppose you don’t keep any records of the sales or the buyers?”

“Certainly I do,” replied Kempster. “I keep a Day Book and a ledger. The ledger contains a complete record of the sales of each of the exhibitors. Would you like to see Mr. Gannet’s account?”

“I am ashamed to give you so much trouble,” Thorndyke replied, “but if you would be so very kind—”

“It’s no trouble at all,” said Kempster, stepping across to a tall cupboard and throwing open the doors. From the row of books therein revealed, he took out a portly volume and laid it on the desk, turning over the leaves until he found the page that he was seeking.

“Here,” he said, “is a record of all of Mr. Gannet’s works that have been sold from this gallery. Perhaps you may get some information from it.”

I glanced down the page while Thorndyke was examining it and was a little surprised at the completeness of the record. Under the general heading, “Peter Gannet Esq.” was a list of the articles sold, with a brief description of each, and in separate columns, the date, the price and the name and address of each purchaser.

“I notice,” said Thorndyke, “that Mr. Francis Broomhill of Stafford Square has made purchases on three occasions. Probably he is a collector of modernist work?”

“He is,” replied Kempster, “and a special admirer of Mr. Gannet. You will observe that he bought one of the two copies of the figurine in stoneware of a monkey. The other copy, as you see, went to America.”

“Did Mr. Gannet ever execute any other figurines?” Thorndyke asked.

“No,” Kempster replied. “To my surprise, he never pursued that form of art, though it was a striking success. Mr. Bunderby, the eminent art critic, was enthusiastic about it, and as you see, the only copies offered realized fifty guineas each. But perhaps if he had lived he might have given his admirers some further examples.”

“You speak of copies,” said Thorndyke, “so I presume that they were admittedly replicas, probably squeezed in a mould or possibly slip-casts? It was not pretended that they were original modellings?”

“No, they couldn’t have been. A small pottery figure must be made in a mould, either squeezed or cast, to get it hollow. Of course it would be modelled in the solid in the first place and the mould made from the solid model.”

“There was a third specimen of this figurine,” said Thorndyke, “I saw it in Gannet’s bedroom. Would that also be a squeeze, or do you suppose it might be the original? It was certainly stoneware.”

“Then it must have been squeezed from a mould,” replied Kempster. “It couldn’t have been fired solid; it would have cracked all to pieces. The only alternative would have been to excavate the solid original; which would have been extremely difficult and quite unnecessary, as he certainly had a mould.”

“From your recollection of the figurines, should you say that they were as thick and ponderous as the bowls and jars?”

“I can’t say, positively,” replied Kempster, “but they could hardly have been. A figure is more likely to crack in the fire than an open bowl or jar, but the thinner it is, in reason, the safer it is from fire cracks. And it is just as easy to make a squeeze thin as thick.”

This virtually brought our business with Mr. Kempster to an end. We walked out into the gallery with him, when Thorndyke had copied out a few particulars from the ledger, but our conversation, apart from a brief discussion of Boles’s jewellery exhibits, obviously had no connection with the purpose of our visit—whatever that might be. Eventually, having shaken his hand warmly and thanked him for his very courteous and helpful treatment of us, we took our departure, leaving him, I suspect, as much puzzled by our proceedings as I was myself.

“I suppose, Thorndyke,” said I, as we walked away down Bond Street, “you realize that you have enveloped me in a fog of quite phenomenal density?”
“I can understand,” he replied, “that you find my approach to the problem somewhat indirect.”

“The problem!” I exclaimed. “What problem? I don’t see that there is any problem. We know that Gannet was murdered and we can fairly assume that he was murdered by Boles. But whether he was or not is no concern of ours. That is Blandy’s problem; and in any case, I can’t imagine that the weight and density of Gannet’s pottery has any bearing on it, unless you are suggesting that Boles biffed deceased on the head with one of his own pots.”

Thorndyke smiled indulgently as he replied:

“No, Jervis. I am not considering Gannet’s pots as possible lethal weapons, but the potter’s art has its bearing on our problem, and even the question of weight may be not entirely irrelevant.”

“But what problem are you alluding to?” I persisted.

“The problem that is in my mind,” he replied, “is suggested by the very remarkable story that Oldfield related to us last night. You listened to that story very attentively and no doubt you remember the substance of it. Now, recalling that story as a whole and considering it as an account of a series of related events, doesn’t it seem to you to suggest some very curious and interesting questions?”

“The only question that it suggested to me was how the devil that arsenic got into the bone-ash. I could make nothing of that.”

“Very well,” he rejoined, “then try to make something of it. The arsenic was certainly there. We agree that it could not have come from the body. Then it must have got into the ash after the firing. But how? There is one problem. Take it as a starting point and consider what explanations are possible; and further, consider what would be the implications of each of your explanations.”

“But,” I exclaimed, “I can’t think of any explanation. The thing is incomprehensible. Besides, what business is it of ours? We are not engaged in the case.”

“Don’t lose sight of Blandy,” said he. “He hasn’t shot his bolt yet. If he can lay hands on Boles, he will give us no trouble, but if he fails in that, he may think it worth while to give some attention to Mrs. Gannet. I don’t know whether he suspects her of actual complicity in the murder, but it is obvious that he does suspect her of knowing and concealing the whereabouts of Boles. Consequently, if he can get no information from her by persuasion, he might consider the possibility of charging her as an accessory either before or after the fact.”

“But,” I objected, “the choice wouldn’t lie with him. You are surely not suggesting that either the police or the Public Prosecutor would entertain the idea of bringing a charge for the purpose of extorting information—virtually as a measure of intimidation?”

“Certainly not,” he replied, “unless Blandy could make out a prima facie case. But it is possible that he knows more than we do about the relations of Boles and Mrs. Gannet. At any rate, the position is that I have made a conditional promise to Oldfield that if any proceedings should be taken against her I will undertake the defense. It is not likely that any proceedings will be taken, but still it is necessary for me to know as much as I can learn about the circumstances connected with the murder. Hence these inquiries.”

“Which seem to me to lead nowhere. However, as Kempster remarked, you know—which I do not—what obscurities you are trying to elucidate. Do you know whether there is going to be an inquest?”

“I understand,” he replied, “that an inquest is to be held in the course of a few days and I expect to be summoned to give evidence concerning the arsenic poisoning. But I should attend in any case, and I recommend you to come with me. When we have heard what the various witnesses, including Blandy, have to tell, we shall have a fairly complete knowledge of the facts, and we may be able to judge whether the Inspector is keeping anything up his sleeve.”

As the reader will have learned from Oldfield’s narrative—which this account overlaps by a few days—I adopted Thorndyke’s advice and attended the inquest. But though I gained thereby a knowledge of all the facts of the case, I was no nearer to any understanding of the purpose that Thorndyke had in view in his study of Gannet’s pottery; nor did I find myself entirely in sympathy with his interest in Mrs. Gannet. I realized that she was in a difficult and trying position, but I was less convinced than he appeared to be of her complete innocence of any complicity in the murder or the very suspicious poisoning affair that had preceded it.

But his interest in her was quite remarkable. It went so far as actually to induce him to attend the funeral of her husband and even to persuade me to accept the invitation and accompany him. Not that I needed much persuasion, for the unique opportunity of witnessing a funeral at which there was no coffin and no corpse—where “our dear departed brother” might almost have been produced in a paper bag—was not to be missed.

But it hardly came up to my expectations, for it appeared that the ashes had been deposited in the urn before the proceedings began, and the funeral service took its normal course, with the terra-cotta casket in place of the coffin. But I found a certain grim humour in the circumstance that the remains of Peter Gannet should be enshrined in a pottery vessel of obviously commercial origin which in all its properties—in its exact symmetry and mechanical regularity—was the perfect antithesis of his own masterpieces.
CHAPTER 15. — A MODERNIST COLLECTOR

MY experiences at Mr. Kempster’s gallery were only a foretaste of what Thorndyke could do in the way of mystification, for I need not say that the most profound cogitation on Oldfield’s story and on the facts which had transpired at the inquest had failed completely to enlighten me. I was still unable to perceive that there was any real problem to solve, or that, if there were, the physical properties of Gannet’s pottery could possibly be a factor in its solution.

But obviously I was wrong. For Thorndyke was no wild goose hunter or discoverer of mare’s nests. If he believed that there was a problem to investigate, I could safely assume that there was such a problem; and if he believed that Gannet’s pottery held a clue to it, I could assume—and did assume—that he was right. Accordingly, I waited, patiently and hopefully, for some further developments which might dissipate the fog in which my mind was enshrouded.

The further developments were not long in appearing. On the third day after the funeral, Thorndyke announced to me that he had made, by letter, an appointment, which included me, with Mr. Francis Broomhill of Stafford Square, for a visit of inspection of his famous collection of works of modernist art. I gathered, subsequently, by the way in which we were received, that Thorndyke’s letter must have been somewhat misleading, in tone if not in matter. But any little mental reservations as to our views on contemporary art were, I suppose, admissible in the circumstances.

Of course I accepted gleefully for I was on the tip of curiosity as to Thorndyke’s object in making the appointment. Moreover, the collection included Gannet’s one essay in the art of sculpture; which, if it matched his pottery, ought certainly to be worth seeing. Accordingly, we set forth together in the early afternoon and made our way to the exclusive and aristocratic region in which Mr. Broomhill had his abode.

The whole visit was a series of surprises. In the first place, the door was opened by a footman, a type of organism that I supposed to be virtually extinct. Then, no sooner had we entered the grand old Georgian house than we seemed to become enveloped in an atmosphere of unreality suggestive of Alice in Wonderland or of a nightmare visit to a lunatic asylum. The effect began in the entrance hall, which was hung with strange, polychromatic picture frames enclosing objects which obviously were not pictures but appeared to be panels or canvases on which some very extravagant painter had cleaned his palette. Standing about the spacious floor were pedestals supporting lumps of stone or metal, some—to my eye—completely shapeless, while others had faint hints of obscure anthropoidal character such as one might associate with the discarded failures from the workshop of some Easter Island sculptor. I glanced at them in bewilderment as the footman, having taken possession of our hats and sticks, solemnly conducted us along the great hall to a fine pedimented doorway, and opening a noble, many-paneled, mahogany door, ushered us into the presence.

Mr. Francis Broomhill impressed me favourably at the first glance; a tall, frail-looking man of about forty with a slight stoop and the forward poise of the head that one associates with near sight. He wore a pair of deep concave spectacles mounted in massive tortoise-shell frames; looking at those spectacles with a professional eye, I decided that without them his eyesight would have been negligible. But though the pale blue eyes, seen through those powerful lenses, appeared ridiculously small; they were kindly eyes that conveyed a friendly greeting, and the quiet, pleasant voice confirmed the impression.

"It is exceedingly kind of you," said Thorndyke, when we had shaken hands, "to give us this opportunity of seeing your treasures."

"But not at all," was the reply. "It is I who am the beneficiary. The things are here to be looked at and it is a delight to me to show them to appreciative connoisseurs. I don’t often get the chance; for even in this golden age of artistic progress, there still lingers a hankering for the merely representational and anecdotal aspects of art."

As he was speaking, I glanced round the room and especially at the pictures which covered the walls, and as I looked at them they seemed faintly to recall an experience of my early professional life when, for a few weeks, I had acted as locum-tenens for the superintendent of a small lunatic asylum (or "mental hospital" as we say nowadays). The figures in them—when recognizable as such—all seemed to have a certain queer psychopathic quality as if they were looking out at me from a padded cell.

After a short conversation, during which I maintained a cautious reticence and Thorndyke was skilfully elusive, we proceeded on a tour of inspection round the room under the guidance of Mr. Broomhill, who enlightened us with comment and exposition, somewhat in the Bunderby manner. There was a quite considerable collection of pictures, all by modern artists—mostly foreign. I was glad to note—and all singularly alike. The same curious psychopathic quality pervaded them all, and the same odd absence of the traditional characteristics of pictures. The drawing—when there was any—was childish, the painting was barbarously crude, and there was a total lack of any sort of mental content or subject matter.

"Now," said our host, halting before one of these masterpieces, "here is a work that I am rather fond of though it is a departure from the artist’s usual manner. He is not often as realistic as this."

I glanced at the gold label beneath it and read: “Nude. Isreal Polhoff”; and nude it certainly was—apparently representing a naked human being with limbs like very badly made sausages. I did not find it painfully realistic. But the next picture—by the same artist—fairly "got me guessing," for it appeared to consist of nothing more than a disorderly mass of streaks of paint of various rather violent colours. I waited for explanatory comments as Mr. Broomhill stood before it, regarding it fondly.
“This,” said he, “I regard as a truly representative example of the Master; a perfect piece of abstract painting. Don’t you agree with me?” he added, turning to me, beaming with enthusiasm.

The suddenness of the question disconcerted me. What the deuce did he mean by “abstract painting”? I hadn’t the foggiest idea. You might as well—it seemed to me—talk about “abstract amputation at the hip-joint.” But I had got to say something, and I did.

“Yes,” I burred incoherently, gazing at him in consternation. “Certainly—in fact, undoubtedly—a most remarkable and—er—” (I was going to say “cheerful” but mercifully saw the red light in time) “most interesting demonstration of colour contrast. But I am afraid I am not perfectly clear as to what the picture represents.”

“Represents!” he repeated in a tone of pained surprise. “It doesn’t represent anything. Why should it? It is a picture. But a picture is an independent entity. It doesn’t need to imitate something else.”

“No, of course not,” I spluttered mendaciously. “But still, one has been accustomed to find in pictures representations of natural objects—”

“But why?” he interrupted. “If you want the natural objects, you can go and look at them; and if you want them represented, you can have them photographed. So why allow them to intrude into pictures?”

I looked despairingly at Thorndyke but got no help from that quarter. He was listening impassively; but from long experience of him, I knew that behind the stony calm of his exterior his inside was shaking with laughter. So I murmured a vague assent, adding that it was difficult to escape from the conventional ideas that one had held from early youth; and so we moved on to the next “abstraction.” But warned by this terrific experience, I maintained thereafter a discreet silence tempered by carefully prepared ambiguities, and thus managed to complete our tour of the room without further disaster.

“And now,” said our host as we turned away from the last of the pictures, “you would like to see the sculptures and pottery. You mentioned in your letter that you were especially interested in poor Mr. Gannet’s work. Well, you shall see it in appropriate surroundings, as he would have liked to see it.”

He conducted us across the hall to another fine door which he threw open to admit us to the sculpture gallery. Looking around me as we entered, I was glad that I had seen the pictures first; for now I was prepared for the worst and could keep my emotions under control.

I shall not attempt to describe that chamber of horrors. My first impression was that of a sort of infernal Mrs. Jarley’s; and the place was pervaded by the same madhouse atmosphere as I had noticed in the other room. But it was more unpleasant, for debased sculpture can be much more horrible than debased painting; and in the entire collection there was not a single work that could be called normal. The exhibits ranged from almost formless objects, having only that faint suggestion of a human head or figure that one sometimes notices in queer-shaped potatoes or flint nodules, to recognizable busts or torsos; but in these the faces were hideous and bestial and the limbs and trunks misshapen and characterized by a horrible obesity suggestive of dropsy or myxoedema. There was a little pottery, all crude and coarse, but Gannet’s pieces were easily the worst.

“This, I think,” said our host, “is what you especially wanted to see.”

He indicated a grotesque statuette labelled “Figurine of a Monkey: Peter Gannet,” and I looked at it curiously. If I had met it anywhere else it would have given me quite a severe shock; but here, in this collection of monstrosities, it looked almost like the work of a sane barbarian.

“There was some question,” Mr. Broomhill continued, “that you wanted to settle, was there not?”

“Yes,” Thorndyke replied, “in fact, there are two. The first is that of priority. Gannet executed three versions of this figurine. One has gone to America, one is on loan at a London Museum, and this is the third. The question is, which was made first?”

“There ought not to be any difficulty about that,” said our host. “Gannet used to sign and number all his pieces and the serial number should give the order of priority at a glance.”

He lifted the image carefully, and having inverted it and looked at its base, handed it to Thorndyke.

“You see,” said he, “that the number is 571 B. Then there must have been a 571 A and a 571 C. But clearly, this must have been the second one made, and if you can examine the one at the museum, you can settle the order of the series. If that is 571 A, then the American copy must be 571 C, or vice versa. What is the other question?”

“That relates to the nature of the first one made. Is it the original model or is it a pressing from a mould? This one appears to be a squeeze. If you look inside, you can see traces of the thumb impressions, so it can’t be a cast.”

He returned it to Mr. Broomhill who peered into the opening of the base and then, having verified Thorndyke’s observation, passed it to me. I was not deeply interested, but I examined the base carefully and looked into the dark interior as well as I could. The flat surface of the base was smooth but unglazed and on it was inscribed in blue around the central opening “Op. 571 B P. G.” with a rudely drawn figure of a bird, which might have been a goose but which I knew was meant for a gannet, interposed between the number and the initials. Inside, on the uneven surface, I could make out a number of impressions of a thumb—apparently a right thumb. Having made these observations, I handed the effigy back to Mr. Broomhill who replaced it on its stand, and resumed the conversation.
“I should imagine that all of the three versions were pressings, but that is only an opinion. What is your view?”

“There are three possibilities, and bearing in mind Gannet’s personality, I don’t know which of them is the most probable. The original figure was certainly modelled in the solid. Then Opus 571 A may either be that model, fired in the solid, or that model excavated and fired, or a squeeze from the mould.”

“It would hardly have been possible to fire it in the solid,” said Mr. Broomhill.

“That was Mr. Kempster’s view, but I am not so sure. After all, some pottery articles are fired solid. Bricks, for instance.”

“Yes, but a few fire cracks in a brick don’t matter. I think he would have had to excavate it, at least. But why should he have taken that trouble when he had actually made a mould?”

“I can imagine no reason at all,” replied Thorndyke, “unless he wished to keep the original. The one now at the museum was his own property and I don’t think it had ever been offered for sale.”

“If the question is of any importance,” said our host—who was obviously of opinion that it was not—“it could perhaps be settled by inspection of the piece at the museum, which was probably the first one made. Don’t you think so?”

“It might,” Thorndyke replied, “or it might not. The most satisfactory way would be to compare the respective weights of the two pieces. An excavated figure would be heavier than a pressing, and, of course, a solid one would be much heavier.”

“Yes,” Mr. Broomhill agreed with a slightly puzzled air, “that is true. So I take it that you would like to know the exact weight of this piece. Well, there is no difficulty about that.”

He walked over to the fireplace and pressed the bell-push at its side. In a few moments the door opened and the footman entered the room.

“Can you tell me, Hooper,” Mr. Broomhill asked, “if there is a pair of scales that we could have to weigh this statuette?”

“Certainly, sir,” was the reply. “There is a pair in Mr. Law’s pantry. Shall I bring them up, sir?”

“If you would. Hooper—with the weights, of course. And you might see that the pan is quite clean.”

Apparantly the pan was quite clean, for in a couple of minutes Hooper reappeared carrying a very spick and span pair of scales with a complete set of weights. When the scales had been placed on the table with the weights beside them, Mr. Broomhill took up the effigy with infinite care and lowered it gently on to the scale pan. Then, with the same care to avoid jars or shocks, he put on the weights, building up a little pile until the pan rose, when he made the final adjustment with a half-ounce weight.

“Three pounds, three and a half ounces,” said he. “Rather a lot for a small figure.”

“Yes,” Thorndyke agreed, “but Gannet used a dense material and was pretty liberal with it. I weighed some of his pottery at Kempster’s gallery and found it surprisingly heavy.”

He entered the weight of the effigy in his note-book, and, when the masterpiece had been replaced on its stand and the scales borne away to their abiding place, we resumed our tour of the room. Presently Hooper returned, bearing a large silver tray loaded with the materials for afternoon tea, which he placed on a small circular table.

“You needn’t wait, Hooper,” said our host. “We will help ourselves when we are ready.” As the footman retired, we turned to the last of the exhibits—a life-sized figure of a woman, naked, contorted and obese, whose brutal face and bloated limbs seemed to shout for thyroid extract—and having expatiated on its noble rendering of abstract form and its freedom from the sickly prettiness of “mere imitative sculpture,” our host dismissed the masterpieces and placed chairs for us by the table.

“Which museum is it,” he asked, as we sipped the excellent China tea, “that is showing Mr. Gannet’s work?”

“It is a small museum at Hoxton,” Thorndyke replied, “known as The People’s Museum of Modern Art.”

“Ah!” said Broomhill, “I know it; in fact, I occasionally lend some of my treasures for exhibition there. It is an excellent institution. It gives the poor people of that uncultured region an opportunity of becoming acquainted with the glories of modern art; the only chance they have.”

“There is the Geffrye Museum close by,” I reminded him.

“Yes,” he agreed, “but that is concerned with the obsolete furniture and art of the bad old times. It contains nothing of this sort,” he added, indicating his collection with a wave of the hand. Which was certainly true. Mercifully, it does not.

“And I hope,” he continued, “that you will be able to settle your question when you examine the figurine there. It doesn’t seem to me to matter very much, but you are a better judge of that than I am.”

When we had taken leave of our kind and courteous host and set forth on our homeward way we walked for a time in silence, each occupied with his own thoughts. As to Thorndyke’s ultimate purpose in this queer transaction, I could not make the vaguest guess and I gave it no consideration. But the experience, itself, had been an odd one with a peculiar interest of its own. Presently I opened the subject with a question.

“Could you make anything of this stuff of Broomhill’s or of his attitude to it?”

Thorndyke shook his head. “No,” he replied. “It is a mystery to me. Evidently Broomhill gets a positive pleasure from
these things, and that pleasure seem to be directly proportionate to their badness; to the absence in them of all the ordinary qualities—fine workmanship, truth to nature, intellectual interest and beauty—which have hitherto been considered to be the essentials of works of art. It seems to be a cult, a fashion, associated with a certain state of mind; but what that state of mind is, I cannot imagine. Obviously it has no connection with what has always been known as art, unless it is a negative connection. You noticed that Broomhill was utterly contemptuous of the great work of the past, and that, I think, is the usual modernist attitude. But what can be the state of mind of a man who is completely insensitive to the works of the accomplished masters of the older schools, and full of enthusiasm for clumsy imitations of the works of savages or ungifted children, I cannot begin to understand.”

“No,” said I, “that is precisely my position,” and with this the subject dropped.
“IT is curious to reflect,” Thorndyke remarked, as we took our way eastward along Old Street, “that this, which is commonly accounted one of the meanest and most squalid regions of the town, should be, in a sense, the last outpost of a disappearing culture.”

“To what culture are your referring?” I asked.

“To that of the industrial arts,” he replied, “of which we may say that it is substantially the foundation of all artistic culture. Nearly everywhere else those arts are dead or dying, killed by machinery and mass production, but here we find little groups of surviving craftsmen who still keep the lamp burning. To our right in Curtain Road and various small streets adjoining, are skilled cabinet makers, making chairs and other furniture in the obsolete tradition of what Broomhill would call the bad old times of Chippendale and his contemporaries; near by in Bunhill Row the last of the makers of fine picture frames have their workshops, and farther ahead in Bethnal Green and Spitalfields a remnant of the ancient colony of silk weavers is working with the hand-loom as was done in the eighteenth century.”

“Yes,” I agreed, “it seems rather an anomaly; and our present mission seems to rub in the discrepancy. I wonder what inspired the founders of The People’s Museum of Modern Art to dump it down in this neighbourhood and almost in sight of the Geffrye Museum?”

Thorndyke chuckled softly. “The two museums,” said he, “are queer neighbours; the one treasuring the best work of the past and the other advertising the worst work of the present. But perhaps we shan’t find it as bad as we expect.”

I don’t know what Thorndyke expected, but it was bad enough for me. We located it without difficulty by means of a painted board inscribed with its name and description set over what looked like a reconstructed shop front, to which had been added a pair of massive folding doors. But those doors were closed and presumably locked, for a large card affixed to the panel with drawing pins bore the announcement, “Closed temporarily. Re-open 11:15.”

Thorndyke looked at his watch. “We have a quarter of an hour to wait,” said he, “but we need not wait here. We may as well take a stroll and inspect the neighbourhood. It is not beautiful, but it has a character of its own which is worth examining.”

Accordingly, we set forth on a tour of exploration through the narrow streets where Thorndyke expounded the various objects of interest in illustration of his previous observations. In one street we found a row of cabinet makers’ shops, through the windows of which we could see the half-finished carcasses of wardrobes and sideboards and “period” chairs, seatless and unpainted; and I noticed that the names above the shops were mostly Jewish and many of them foreign. Then, towards Shoreditch, we observed a timber yard with a noble plank of Spanish mahogany at the entrance, and noted that the stock inside seemed to consist mainly of hardwoods suitable for making furniture. But there was no time to make a detailed examination for the clock of a neighbouring church now struck the quarter and sent us hurrying back to the temple of modernism, where we found that the card had vanished and the doors stood wide open, revealing a lobby and an inner door.

As we opened the latter and entered the gallery we were met by an elderly, tired-looking man who regarded us expectantly.

“Are you Mr. Sancroft?” Thorndyke asked.

“Ahh!” said our friend, “then I was right. You will be Dr. Thorndyke. I hope I haven’t kept you waiting.”

“Only a matter of minutes,” Thorndyke replied, in his suavest manner, “and we spent those quite agreeably.”

“I am so very sorry,” said Sancroft, with evidently genuine concern, “but it was unavoidable. I had to go out, and as I am all alone here, I had to lock up the place while I was away. It is very awkward having no one to leave in charge.”

“It must be,” Thorndyke agreed, sympathetically. “Do you mean that you have no assistant of any kind, not even a doorkeeper?”

“No one at all,” replied Sancroft. “You see, the society which runs this museum has no funds but the members’ contributions. There’s only just enough to keep the place going, without paying any salaries. I am a voluntary worker, but I have my living to earn. Mostly I can do my work in the curator’s room—I am a law writer—but there are times when I have to go out on business, and then—well, you saw what happened this morning.”

Thorndyke listened to this tale of woe, not only with patience but with a concern that rather surprised me.

“But,” said he, “can’t you get some of your friends to give you at least a little help? Even a few hours a day would solve your difficulties.”

Mr. Sancroft shook his head wearily. “No,” he replied, “it is a dull job, minding a small gallery, especially as so few visitors come to it, and I have found nobody who is willing to take it on. I suppose,” he added, with a sad smile, “you don’t happen to know of any enthusiast in modern art who would make the sacrifice in the interests of popular enlightenment and culture?”

“At the moment,” said Thorndyke, “I can think of nobody but Mr. Broomhill, and I don’t suppose he could spare the
time. Still, I will bear your difficulties in mind, and if I should think of any person who might be willing to help, I will try my powers of persuasion on him.”

I must confess that this reply rather astonished me. Thorndyke was a kindly man, but he was a busy man and hardly in a position to enter into Mr. Sancroft’s difficulties. And with him a promise was a promise, not a mere pleasant form of words; a fact which I think Sanacroft hardly realized for his expression of thanks seemed to imply gratitude for a benevolent intention rather than any expectation of actual performance.

“It is very kind of you to wish to help me,” said he. “And now, as to your own business. I understand that you want to make some sort of inspection of the works of Mr. Gannet. Does that involve taking them out of the case?”

“If that is permissible,” Thorndyke replied. “I wanted, among other matters, to feel the weight of them.”

“There is no objection to your taking them out,” said Sanacroft, “for a definite purpose. I will unlock the case and put the things in your custody for the time being. And then I will ask you to excuse me. I have a lease to engross, and I want to get on with it as quickly as I can.”

With this he led us to the glass case in which Gannet’s atrocities were exposed to view, and having unlocked it, made us a little bow and retired into his lair.

“That lease,” Thorndyke remarked, “is a stroke of luck for us. Now we can discuss the matter freely.”

He reached into the case and lifting out the effigy, began to examine it in the closest detail, especially as to the upturned base.

“The questions, as I understand them,” said I, “are, first, priority, and second, method of work; whether it was fired solid, or excavated, or squeezed in a mould. The priority seems to be settled by the signature. This is 571 A. Then it must have been the first piece made.”

“Yes,” Thorndyke agreed, “I think we may accept that. What do you say as to the method?”

“That, also, seems to be settled by the character of the base. It is a solid base without any opening, which appears to me to prove that the figure was fired solid.”

“A reasonable inference,” said Thorndyke, “from the particular fact. But if you look at the sides, you will notice on each a linear mark which suggests that a seam or join had been scraped off. You probably observed similar marks on Broomhill’s copy, which were evidently the remains of the seam from the mould. But the question of solidity will be best determined by the weight. Let us try that.”

He produced from his pocket a portable spring balance and a piece of string. In the latter he made two “running bowlines,” and, hitching them over the figure near its middle, hooked the “bight” of the string on to the balance. As he held up the latter, I read off from the index, “Three pounds, nine and a half ounces. If I remember rightly, Broomhill’s image weighed three pounds, three and a half ounces, so this one is six ounces heavier. That seems to support the view that this figure was fired in the solid.”

“I don’t think it does, Jervis,” said he. “Broomhill’s copy was undoubtedly a pressing with a considerable cavity and not very thick walls. I should say that the solid figure would be at least twice the weight of the pressing.”

A moment’s reflection showed me that he was right. Six ounces obviously could not account for the difference between a hollow and a solid figure.

“Then,” said I, “it must have been excavated. That would probably just account for the difference in weight.”

“Yes,” Thorndyke agreed, but a little doubtfully, “so far as the weight is concerned, that is quite sound. But there are these marks, which certainly look like the traces of a seam which has been scraped down. What do you say to them?”

“I should say that they are traces of the excavating process. It would be necessary to cut the figure in halves in order to hollow out the interior. I say that these marks are the traces of the join where the two halves were put together.”

“The objection to that,” said he, “is that the figure would not have been cut in halves. When a clay work, such as a terracotta bust, is hollowed out, the usual practice is to cut off the back in as thin a slice as possible, excavate the main mass of the bust, and when it is as hollow as is safe, to stick the back on with slip and work over the joins until they are invisible. And that is the obvious and reasonable way in which to do it. But these marks are in the middle, just where the seams would be in a pressing, and in the same position as those in Broomhill’s copy. So that, in spite of the extra weight, I am disposed to think that this figure is really a pressing, like Broomhill’s. And that is, on other grounds, the obvious probability. A mould was certainly made, and it must have been made from the solid figure. But it would have been much more troublesome to excavate the solid model than to make a squeeze from the mould.”

As he spoke, he tapped the figure lightly with his knuckle as it hung from the balance, but the dull sound that he elicited gave no information either way, beyond proving—which we knew already from the weight—that the walls of the shell were thick and clumsy. Then he took off the string, and having offered the image to me for further examination (which I declined), he put it back in the case. Then we went into the curator’s room to let Mr. Sanacroft know that we had finished our inspection, and to thank him for having given us the facilities for making it.

“Well,” said he, laying aside his pen, “I suppose that now you know all about Peter Gannet’s works, which is more than I
do. They are rather over the heads of most of our visitors, and mine, too.”

“They are not very popular, then,” Thorndyke ventured.

“I wouldn’t say that,” Sancroft replied with a faint smile. “The monkey figure seems to afford a good deal of amusement. But that is not quite what we are out for. Our society seeks to instruct and elevate, not to give a comic entertainment. I shan’t be sorry when the owner of that figure fetches it away.”

“The owner?” Thorndyke repeated. “You mean Mrs. Gannet?”

“No,” replied Sancroft, “it doesn’t belong to her. Gannet sold it, but as the purchaser was making a trip to America he got permission to lend it to us until such time as the owner should return and claim it. I am expecting him at any time now; and as I said, I shall be glad when he does come, for the thing is making the gallery a laughing stock among the regular visitors. They are not advanced enough for the really extreme modernist sculpture.”

“And suppose the owner never does turn up?” Thorndyke asked.

“Then I suppose we should hand it back to Mrs. Gannet. But I don’t anticipate any difficulty of that sort. The purchaser—a Mr. Newman, I think—gave fifty pounds for it, so he is not likely to forget to call for it.”

“No, indeed,” Thorndyke agreed. “It is an enormous price. Did Gannet himself tell you what he sold it for?”

“No Gannet. I never met him. It was Mrs. Gannet who told me when she brought it with the pottery.”

“I suppose,” said Thorndyke, “that the owner, when he comes to claim his property, will produce some evidence of his identity? You would hardly hand over a valuable piece such as this seems to be, to anyone who might come and demand it, unless you happen to know him by sight?”

“I don’t,” replied Sancroft. “I’ve never seen the man. But the question of identity is provided for. Mrs. Gannet left a couple of letters with me from her husband which will make the transaction quite safe. Would you like to see them? I know you are interested in Mrs. Gannet’s affairs.”

Without waiting for a reply, he unlocked and pulled out a drawer in the writing table, and having turned over a number of papers, took out two letters pinned together.

“Here they are,” said he, handing them to Thorndyke, who spread them out so that we could both read them. The contents of the first one were as follows:

“12, Jacob Street.

“April 13th, 1931.

“Dear Mr. Sancroft,

“In addition to the collection of pottery, for exhibition on loan, I am sending you a stoneware figurine of a monkey. This is no longer my property as I have sold it to a Mr. James Newman. But as he is making a business trip to the United States, he has given me permission to deposit it on loan with you until he returns to England; this he expects to do in about three months’ time. He will then call on you and present the letter of introduction of which I attach a copy; and you will then deliver the figurine to him and take a receipt from him which I will ask you kindly to send on to me.”

“Yours sincerely.

“Peter Gannet.”

The second letter was the copy referred to, and read thus:

“Dear Mr. Sancroft,

“The bearer of this, Mr. James Newman, is the owner of the figurine of a monkey which I deposited on loan with you. Will you kindly deliver it to him, if he wants to have possession of it, or take his instructions as to its disposal? If he wishes to take it away with him, please secure a receipt for it before handing it over to him.

“Yours sincerely,

“Peter Gannet.”

“You see,” said Sancroft, as Thorndyke returned the letters, “he wrote on the 13th of April, so, as this is the 7th of July, he may turn up at any moment; as he will bring the letter of introduction with him, I shall be quite safe in delivering the figure to him, and the sooner the better. I am tired of seeing the people standing in front of that case and sniggering.”

“You must be,” said Thorndyke. “However, I hope Mr. Newman will come soon and relieve you of the occasion of sniggers. And I must thank you once more for the valuable help that you have given us; and you may take it that I shall not forget my promise to try to find you a deputy so that you can have a little more freedom.”

With this, and a cordial handshake, we took our leave; once more I was surprised and even a little puzzled by Thorndyke’s promise to seek a deputy for Mr. Sancroft. I could understand his sympathy with that overworked curator, but really, Mr. Sancroft’s troubles were no affair of ours. Indeed, so abnormal did Thorndyke’s attitude appear that I began to ask myself whether it was possible that some motive other than sympathy might lie behind it. No one, it is true, could be more ready than Thorndyke to do a little act of kindness if the chance came his way, but on the other hand, experience had taught me that no one’s motives could be more difficult to assess than Thorndyke’s. For there was always this difficulty—that one never knew what was at the back of his mind.
CHAPTER 17. — MR. SNUPER

WHEN we arrived at our chambers we were met on the landing by Polton, who had apparently observed our approach from an upper window, and who communicated to us the fact that Mr. Linnell was waiting to see us.

“He has been here more than half an hour, so perhaps you will invite him to stay to lunch. I’ve laid a place for him, and lunch is ready now in the breakfast room.”

“Thank you, Polton,” said Thorndyke, “we will see what his arrangements are,” and as Polton retired up the stairs, he opened the oak door with his latch-key and we entered the room. There we found Linnell pacing the floor with a distinctly unrestful air.

“I am afraid I have come at an inconvenient time, sir,” he began, apologetically, but Thorndyke interrupted:

“Not at all. You have come in the very nick of time; for lunch is just ready, and as Polton has laid a place for you, he will insist on your joining us.”

Linnell’s rather careworn face brightened up at the invitation, which he accepted gratefully, and we adjourned forthwith to the small room on the laboratory floor which we had recently, for labour-saving reasons, adopted as the place in which meals were served. As we took our places at the table, Thorndyke cast a critical glance at our friend and remarked:

“You are not looking happy, Linnell. Nothing amiss, I hope?”

“There is nothing actually amiss, sir,” Linnell replied, “but I am not at all happy about the way things are going. It’s that confounded fellow, Blandy. He won’t let matters rest. He is still convinced that Mrs. Gannet knows, or could guess, where Boles is hiding; whereas, I am perfectly sure that she has no more idea where he is than I have. But he won’t leave it at that. He thinks that he is being bamboozled and he is getting vicious—politely vicious, you know—and I am afraid he means mischief.”

“What sort of mischief?” I asked.

“Well, he keeps letting out obscure hints of a prosecution.”

“But,” said I, “the decision for or against a prosecution doesn’t rest with him. He is just a detective inspector.”

“I know,” said Linnell. “That’s what he keeps rubbing in. For his part, he would be entirely opposed to subjecting this unfortunate lady to the peril and indignity of criminal proceedings—you know his oily way of speaking—but what can he do? He is only a police officer. It is his superiors and the Public Prosecutor who will decide. And then he goes on, in a highly confidential, friend-of-the-family sort of way, to point out the various unfortunate (and, as he thinks, misleading) little circumstances that might influence the judgment of persons unacquainted with the lady. And after all, he remarked to me in confidence, he found himself compelled to admit that if his superiors should decide (against his advice) to prosecute, they would be able, at least, to make out a prima facie case.”

“I doubt whether they could,” said I, “unless Blandy knows more than we know after attending the inquest.”

“That is just the point,” said Thorndyke. “Does he? Has he got anything up his sleeve? I don’t think he can have; for if he had knowledge of any material facts, he would have to communicate them to his superiors. And as those superiors have not taken any action so far, we may assume that no such facts have been communicated. I suppose Blandy’s agitations are connected with Boles?”

“Yes,” Linnell replied. “He keeps explaining to me, and to Mrs. Gannet, how the whole trouble would disappear if only we could get into touch with Boles. I don’t see how it would, but I do think that if Blandy could lay his hands on Boles, his interest in Mrs. Gannet would cease. All this fuss is to bring pressure on her to make some sort of statement.”

“Yes,” said Thorndyke, “that seems to be the position. It is not very creditable, and very unlike the ordinary practice of the police. But there is this to remember: Blandy’s interest in Boles, and that of the police in general, is not connected with the murder in the studio, but with the murder of the constable at Newingstead. Blandy’s idea is, I suspect—assuming that he seriously entertains a prosecution—that if Mrs. Gannet were brought to trial, she would have to be put into the witness box and then some useful information might be extracted from her in cross-examination. He is not likely to have made any such suggestions to his superiors, but seeing how anxious the police naturally are to find the murderer of the constable, they might be ready to give a sympathetic consideration to Blandy’s view, if he could make out a really plausible case. And that is the question. What sort of case could he make out? Have you any ideas on that subject, Linnell? I take it that he would suggest charging Mrs. Gannet as an accessory after the fact.”

“Yes, he has made that clear to both of us. If the Public Prosecutor decided to take action, the charge would be that she, knowing that a felony had been committed, subsequently sheltered or relieved the felon in such a way as to enable him to evade justice. Of course, it is the only charge that would be possible.”

“So it would seem,” said I. “But what facts has he got to support it? He can’t prove that she knows where Boles is hiding.”

“No,” Linnell agreed, “at least, I suppose he can’t. But there is that rather unfortunate circumstance that, when her husband was missing, she was—as she has admitted—afraid to enter the studio to see if he was there. Blandy fears that her behaviour might be interpreted as proving that she had some knowledge of what had happened.”
“There isn’t much in that,” said I. “What are the other points?”

“Well, Blandy professes to think that the relations between Boles and Mrs. Gannet would tend to support the charge. No one suggests that their relations were in any way improper, but they were admittedly on affectionate terms.”

“There is still less in that,” said I. “The suggestion of a possible motive for doing a certain act is no evidence that the act was done. If Blandy has nothing better than what you have mentioned, he would never persuade a magistrate to commit her for trial. What do you say, Thorndyke?”

“It certainly looks as if Blandy held a remarkably weak hand,” he replied. “Of course, we have to take all the facts together; but even so, assuming that he has nothing unknown to us in reserve, I don’t see how he could make out a prima facie case.”

“He has also,” said Linnell, “dropped some obscure hints about that affair of the arsenic poisoning.”

“That,” said Thorndyke, “is pure bluff. He would not be allowed to mention it, and he knows he wouldn’t. He said so explicitly, to Oldfield. It looks as if the threat of a prosecution were being made to exert pressure on Mrs. Gannet to make some revelation. Still, it is possible that he may manage to work up a case sufficiently plausible to induce the authorities to launch proceedings. Blandy is a remarkably ingenious and resourceful man, and none too scrupulous. He is a man whom one has to take seriously.”

“And suppose he does manage to get a prosecution started,” said Linnell, “what do you advise me to do?”

“Well, Linnell,” Thorndyke replied, “you know the ordinary routine. We are agreed that the lady is innocent and you will act accordingly. As to bail, we will settle the details of that later, but we can manage any amount that may be required.”

“Do you think that she might be admitted to bail?”

“But why not?” said Thorndyke. “She will be charged only as an accessory after the fact. That is not a very grave crime. The maximum penalty is only two years’ imprisonment, and in practice, the sentences are usually quite lenient. You will certainly ask for bail, and I don’t see any grounds on which the police could oppose it.

“And now as to the general conduct of the case, I advise you very strongly to play for time. Delay the proceedings as much as you can. Find excuses to ask for remands, and in all possible ways keep the pot boiling as slowly as you can contrive. The longer the date of the final hearing can be postponed, the better will be the chance of finding a conclusive answer to the charge. I will tell you why, following Blandy’s excellent example by taking you into my confidence.

“I have been examining this case in considerable detail, partly in Mrs. Gannet’s interests and partly for other reasons; and I have a clear and consistent theory of the crime, both as to its motive and approximate procedure. But at present it is only a theory. I can prove nothing. The one crucial fact which will tell me whether my theory is right or wrong is still lacking. I cannot test the truth of it until certain things have happened. I hope that they may happen quite soon, but still, I have to wait on events. If those events turn out as I expect, I shall know that my construction of the crime has been correct; and then I shall be able to show that Mrs. Gannet could not possibly have been an accessory to it. But I can give no date because I cannot control the course of events.”

Linnell was visibly impressed, and so was I—though less visibly. I was still in the same state of bewilderment as to Thorndyke’s proceedings. I still failed to understand why he was busying himself in a case which did not seem to concern him—apart from his sympathy with Mrs. Gannet. Nor could I yet see that there was anything to discover beyond what we already knew.

Of course I had realized all along that I must have missed some essential point in the case, and now this was confirmed. Thorndyke had a consistent theory of the crime, which, indeed, might be right or wrong. But long experience with Thorndyke told me that it was pretty certainly right, though what sort of theory it might be I was totally unable to imagine. I could only, like Thorndyke, wait on events.

The rest of the conversation concerned itself with the question of bail. Oldfield we knew could be depended on for one surety, and by a little manoeuvring, it was arranged that Thorndyke should finance the other without appearing in the transaction. Eventually Linnell took his departure in greatly improved spirits, cheered by Thorndyke’s encouragement and all the better for a good lunch and one or two glasses of sound claret.

Thorndyke’s “confidence,” if it mystified rather than enlightened me, had at least the good effect of arousing my interest in Mrs. Gannet and her affairs. From time to time during the next few days I turned them over in my mind, though with little result beyond the beneficial mental exercise. But in another direction I had better luck, for I did make an actual discovery. It came about in this way.

A few days after Linnell’s visit, I had occasion to go to the London Hospital to confer with one of the surgeons concerning a patient in whom I was interested. When I had finished my business there and came out into the Whitechapel Road, the appearance of the neighbourhood recalled our expedition to the People’s Museum, and I suddenly realized that I was within a few minutes’ walk of that shrine of the fine arts. Now I had occasionally speculated on Thorndyke’s object in making that visit of inspection and on his reasons for interesting himself in Sancroft’s difficulties. Was it pure benevolence or was there something behind it? And there was the further question, had his benevolent intentions taken effect? The probability was that they had. He had given Sancroft a very definite promise, and it was quite unlike him to leave a promise unfulfilled.
These questions recurred to me as I turned westward along the Whitechapel Road, and I decided that at least some of them should be answered forthwith. I could now ascertain whether any deputy for Mr. Sancroft had been found, and if so, who that deputy might be. Accordingly, I turned up Commercial Street and presently struck the junction of Norton Folegate and Shoreditch; and, traversing the length of the latter, came into Kingsland Road and so to the People's Museum.

One of my questions was answered as soon as I entered. There was no sign of Mr. Sancroft, but the priceless collection was being watched over by a gentleman of studious aspect who was seated in an armchair—a representative specimen of Curtain Road Chippendale—reading a book with the aid of a pair of horn-framed spectacles. So engrossed was he with his studies that he appeared to be unaware of my entrance, though, as I was the only visitor, I must have been a rather conspicuous object and worthy of some slight notice.

Taking advantage of his preoccupation, I observed him narrowly; and though I could not place him or give him a name, I had the distinct impression that I had seen him before. Continuing a strategic advance in his direction under cover of the glass cases, and still observing him as unobtrusively as I could, I had a growing sense of familiarity until, coming within a few yards of him, I suddenly realized who he was.

"Why," I exclaimed, "it is Mr. Snuper!"

"So I am," I replied. "What on earth are you doing here?"

"To tell the truth," said he, "I am doing very little. You see me here, taking my ease and spending my very acceptable leisure profitably in reading books that I usually have not time to read."

I glanced at the book which he was holding and was not a little surprised to discover that it was Bell's British Stalk-eyed Crustacea. Observing my astonishment, he explained, apologetically:

"I am a collector of British Crustacea in a small way, a very small way. The beginnings were made during a seaside holiday, and now I occasionally secure small additions from the fishmongers' shops."

"I shouldn't have thought," said I, "that the fishmongers' shops would have yielded many rare specimens."

"No," he agreed, "you wouldn't. But it is surprising how many curious and interesting forms of life you may discover among the heaps of shell-fish on a fishmonger's slab; especially the mussels and winkles. Only the day before yesterday, I obtained a nearly perfect specimen of Stenorhynchus phalangium from a winkie stall in the Mile End Road."

Now this was very interesting. I have often noticed how the discovery of some unlikely hobby throws most unexpected light on a man's character and personality. And so it was now. The enthusiastic pursuit of this comparatively erudite study presented a feature of Mr. Snuper's rather elusive personality that was quite new to me, and somewhat surprising. But I had not come here to study Mr. Snuper, and it suddenly occurred to me that that very discreet gentleman might be making this conversation expressly to divert my attention from other topics. Accordingly, I returned to my business with a direct question.

"But how do you come to be here?"

"It was Dr. Thorndyke's idea," he replied. "You see there was nothing doing in my line at the moment, and Mr. Sancroft was badly in need of someone who could look after the place while he went about his business, so the doctor suggested that I might as well spend my leisure here as at home, and do a kindness to Mr. Sancroft at the same time."

This answer left me nothing to say. The general question that I had asked was all that was admissible. I could not pursue the matter further, for that would have been a discourtesy to Thorndyke, to say nothing of the certainty that the discreet Snuper would keep his own counsel if there were any counsel to keep. So I brought the conversation gracefully to an end with a few irrelevant observations, and having wished my friend good day, went forth and set a course for Shoreditch Station.

But if it was not admissible for me to question Snuper, I was at liberty to turn the matter over in my mind. But that process had the effect rather of raising questions than of disposing of them. Snuper's account of his presence at the gallery was perfectly reasonable and plausible. Thorndyke had no use for him at the moment and Sancroft had. That seemed quite simple. But was it the whole explanation? I had my doubts, and they were based principally on what I knew of Mr. Snuper.

Now Mr. Snuper was a very remarkable man. Originally he had been a private inquiry agent whom Thorndyke had employed occasionally to carry out certain observation duties which could not be discharged by either of us. But Snuper had proved so valuable—so dependable, so discreet, and so quick in the uptake—that Thorndyke had taken him on as a regular member of our staff. For apart from his other good qualities, he had a most extraordinary gift of inconspicuousness. Not only was he at all times exactly the kind of person whom you would pass in the street without a second glance, but in some mysterious way he was able to keep his visible personality in a state of constant change. Whenever you met him, you found him a little different from the man whom you had met before, with the natural result that you were constantly failing to recognize him. That was my experience, as it had been on this very occasion. I never discovered how he did it. He seemed to use no actual disguise (though I believe that he was a master of the art of make-up), but he appeared to be able, in some subtle way, to manage to look like a different person.

But whatever his methods may have been, the results made him invaluable to Thorndyke, for he could keep up a
continuous observation on persons or places with practically no risk of being recognized.

Reflecting on these facts—on Mr. Snuper’s remarkable personality, his peculiar gifts and the purposes to which they were commonly applied—I asked myself once more, could there be anything behind his presence at the People’s Museum of Modern Art? And—so far as I was concerned—answer there was none. My discovery had simply landed me with one more problem to which I could find no solution.
CHAPTER 18. — MR. NEWMAN

THE premonitory rumblings which had so disturbed Linnell continued for some days, warning him to make all necessary preparations for the defense; and in spite of the scepticism which we all felt as to the practicability of a prosecution, the tension increased from day to day.

And then the bombshell exploded. The alarming fact was communicated to us in a hurried note from Linnell which informed us that a summons had been served on Mrs. Gannet that very morning, citing her to appear at the Police Court on the third day after that on which it was issued to answer to the charge of having, as an accessory after the fact of the murder of Peter Gannet, harboured, sheltered, or otherwise aided the accused person to evade justice.

Thorndyke appeared to be as surprised as I was, and a good deal more concerned. He read Linnell’s note with a grave face and reflected on it with what seemed to me to be uncalled for anxiety.

“I can’t imagine,” said I, “what sort of evidence Blandy could produce. He can’t know where Boles is, or he would have arrested him. And if he doesn’t, he couldn’t have discovered any evidence of any communications between Boles and Mrs. Gannet.”

“No,” Thorndyke agreed, “that seems quite clear. There can have been no intercepted letters from her, for the obvious reason that such letters would have had to be addressed in such a way as to reach him and thus reveal his whereabouts. And yet one feels that the police would not have taken action unless Blandy had produced enough facts to enable them to make out a prima facie case. Blandy might have been ready to gamble on his powers of persuasion, but the responsible authorities would not risk having the case dismissed by the magistrate. It is very mysterious. On my theory of the crime, it is practically certain that Mrs. Gannet could not have been an accessory either before or after the fact.”

These observations gave me some clue to Thorndyke’s anxiety; for they conveyed to me that Blandy’s case, if he really had one, would not fit Thorndyke’s theory. I put the suggestion to him in so many words, and he agreed frankly.

“The trouble is,” said he, “that my scheme of the crime is purely hypothetical. It is based on a train of deductive reasoning from the facts which are known to us all. I am in possession of no knowledge other than that which is possessed equally by Blandy and by you. The reasoning by which I reached my conclusions seems to me perfectly sound. But I may have fallen into some fallacy, or it may be that there are some material facts which are not known to me, but which are known to Blandy. One of us is mistaken. Naturally, I hope that the mistake is Blandy’s; but it may be mine. However, we shall see when the prosecution opens the case.”

“I assume,” said I, “that you will attend at the hearing.”

“Undoubtedly,” he replied. “We must be there to hear what Blandy has to say, if he gives evidence, and what sort of case the prosecution proposes to make out; and then we have to give Linnell any help that he may require. I suppose you will lend us the support of your presence?”

“Of course I shall come,” I replied. “I am as curious as you are to hear what the prosecution has to say. I shall make a very special point of being there.”

But that visit to the Police court was never to take place, for on that very night the “events” on which Thorndyke had been waiting began to loom up on our horizon. They were ushered in by the appearance at our chambers of a young man of Jewish aspect and secretive bearing who, having been interviewed by Polton, had demanded personal audience of Thorndyke and had refused to indicate his name or business to any other person. Accordingly, he was introduced to us by Polton, who, having conducted him into the presence, stood by and kept him under observation until he was satisfied that the visitor had no unlawful or improper designs; then he retired and shut the door.

As the door closed, the stranger produced from an inner pocket a small packet wrapped in newspaper which he proceeded to open; and, having extracted from it a letter in a sealed envelope, silently handed the letter to Thorndyke; who broke the seal and read through the evidently short note which it contained.

“If you will wait a few minutes,” said he, placing a chair for the messenger, “I will give you a note to take with you. Are you going straight back?”

“Yes,” was the reply. “He’s waiting for me.”

Thereupon Thorndyke sat down at the writing table, and having written a short letter, put it in an envelope, which he sealed with wax and handed to the messenger, together with a ten shilling note.

“That,” said he, “is the fee for services rendered so far. There will be another at the end of the return journey. I have mentioned the matter in my letter.”

The messenger received the note with an appreciative grin and a few words of thanks, and having disposed of it in some secret receptacle, wrapped the letter in the newspaper which had enclosed the other, stowed it away in an inner pocket and took his departure.

“That,” said Thorndyke, when he had gone, “was a communication from Snuper, who is deputizing for Sancroft at the People’s Museum. He tells me that the owner of Gannet’s masterpiece is going to call tomorrow morning and take possession of his property.”
“Is that any concern of ours?” I asked.

“It is a concern of mine,” he replied. “I am anxious not to lose sight of that monkey. There are several things about it which interest me, and if it is to be taken away from the museum, I want to learn, if I can, where it is going, in case I might wish at some future time to make a further examination of it. So I propose to go to the museum tomorrow morning and try to find out from Mr. Newman where he keeps his collection and how the monkey is to be disposed of. It is possible, for instance, that he may be a dealer, in which case there would be the danger of the monkey’s disappearing to some unknown destination.”

“I shouldn’t think that he is a dealer,” said I. “He would never get his money back. Probably he is a sort of Broomhill, but, of course, he may live in the provinces or even abroad. At what time do you propose to turn up at the museum?”

“The place opens at nine o’clock in the morning and Snuper expects Mr. Newman to arrive at about that time. I have told him that I shall be there at half-past eight.”

Now on the face of it, the transaction did not promise any very thrilling experiences, but there was something a little anomalous about the whole affair. Thorndyke’s interest in that outrageous monkey was quite incomprehensible to me, and I had the feeling that there was something more in this expedition than was conveyed in the mere statement of Thorndyke’s intentions and objects. Accordingly, I threw out a tentative suggestion. “If I should propose to make one of the party, would my presence be helpful or otherwise?”

“My dear fellow,” he replied, “your presence is always helpful. I had, in fact, intended to ask you to accompany me. Up to the present you have not seemed to appreciate the importance of the monkey in this remarkable case; but it is possible that you may gather some fresh ideas on the subject tomorrow morning. So come by all means. And now I must go and make the necessary preparations, and you had better do the same. We shall start from here not later than a quarter to eight.”

With this he went up to the laboratory floor, whence, presently, I heard the distant tinkle of the telephone bell. Apparently he was making some kind of appointment, for shortly afterwards his footsteps were audible on the stairs descending to the entry, and I saw him no more until he came in to smoke a final pipe before going to bed.

On the following morning, Polton, having aroused me by precautionary and (as I thought, premature) thumpings on my door, served a ridiculously early breakfast and then took his stand on the door-step to keep a look-out for the taxi which had been chartered overnight. Evidently he had been duly impressed with the importance of the occasion, as apparently had the taxi-man, for he arrived at half-past seven and his advent was triumphantly reported by Polton just as I was pouring out my second cup of tea. But after all there was not so very much time to spare, for in Fleet Street, Cornhill and Bishopsgate, all the wheeled vehicles in London seemed to have been assembled to do us honour and retard our progress; it was a quarter past eight when we alighted opposite the Geffrye Museum, and having dismissed the taxi, began to walk at a leisurely pace northward along the Kingsland Road.

When we were a short distance from our destination, I observed a man walking towards us, and at a second glance, I actually recognized Mr. Snuper. As soon as he saw us, he turned about and walked back to the People’s Museum, where he unlocked the door and entered. On our arrival we found the door ajar and Mr. Snuper lurking just inside, ready to close the door as soon as we had passed in.

“Well, Snuper,” said Thorndyke, as we emerged from the lobby into the main room, “everything seems to have gone according to plan so far. You didn’t give any particulars in your letter. How did you manage the adjournment?”

“It didn’t require much management, sir,” Snuper replied. “The affair came off by itself quite naturally. Mr. Sancroft didn’t come to the museum yesterday. He had to go out of town on business and, of course, as I was here, there was no reason why he shouldn’t go. So I was here all alone when Mr. Newman came just before closing time. He told me what he had come for and showed me the letter of introduction and the receipt which he had written out and signed. But I explained to him that I was not the curator and had no authority to allow any of the exhibits to be taken away from the museum. Besides, the case was locked and Mr. Sancroft had the key of the safe in which the other keys were kept, so I could not get the figure out even if I had been authorized to part with it.

“He was very disappointed and inclined to be huffy, but it couldn’t be helped, and after all, he had only to wait a few hours. I told him that Mr. Sancroft would be here today and would arrive in time to open the museum as usual, so I expect Newman will turn up pretty punctually about nine o’clock. Possibly, he will be waiting outside when Mr. Sancroft comes to let himself in.”

This forecast, however, was falsified a few minutes later, for Mr. Sancroft arrived before his time and locked the door when he had entered. Naturally, he knew nothing of what had been happening in his absence and was somewhat surprised to find Thorndyke and me in the museum. But whatever explanations were called for must have been given by Snuper, who followed Sancroft into the curator’s room and shut the door behind him; and, judging by the length of the interview, I assumed that Sancroft was being put in possession of such facts as it was necessary for him to know.

While this conference was proceeding, Thorndyke reconnoitered the galleries in what seemed to me a very odd way. He appeared to be searching for some place whence he could observe the entrance and the main gallery without being himself visible. Having tried one or two of the higher cases, and apparently finding them unsuitable, owing to his exceptional stature, he turned his attention to the small room which opened from the main gallery and was devoted entirely to watercolours. The entrance of this room was exactly opposite the case which contained the “Figurine of a Monkey,” and it also
faced the main doorway. But it seemed to have a further attraction for Thorndyke; for, on the wall nearly opposite to the entrance, hung a large water colour painting, the glass of which, taken at the proper angle, reflected the whole of the principal room, the main doorway, and the case in which the monkey was exhibited. I tried it when Thorndyke had finished his experiments, and found that, not only did it reflect a perfectly clear image, owing to the very dark colouring of the picture, but that the observer looking into it was quite invisible from the main gallery, or indeed, to anyone who did not actually enter the small room.

This was an interesting discovery, in its way. But the most interesting part of it was Thorndyke’s motive in seeking this secret point of observation. Once more I decided that things were not quite what they had seemed. As I had understood the programme, Thorndyke was going to introduce himself to Mr. Newman and try to ascertain the destination and future whereabouts of the monkey. But with this purpose, Thorndyke’s present proceedings seemed to have no connection.

However, there was not much time for speculation on my part, for, at this point Mr. Snuper emerged from the curator’s room and, walking up the gallery, unlocked the front door and threw it open; and, as he returned, accompanied by a man who had slipped in as the door opened, I realized that the proceedings, whatever they might be, had begun.

“Keep out of sight for the present,” Thorndyke directed me in a whisper; and, forthwith, I flattened myself against the wall and fixed an eager gaze on the picture as well as I could without obstructing Thorndyke’s view. In the reflection I could see Snuper and his companion advance until they were within a few yards of the place where we were lurking, and then I heard Snuper say:

“If you will give me the letter and the receipt, I will take them in to Mr. Sancroft and get the key of the case, unless he wishes to hand the figure to you himself.”

With this, he retired into the curator’s room and shut the door; and as he disappeared, the stranger—presumably Mr. Newman—who, I could now see, carried a largish hand-bag, advanced to the case which contained the monkey and stood peering into it with his back to us, and so near that I could have put out my hand and touched him. As he stood thus, Thorndyke put his head round the jamb of the doorway to examine him by direct vision, and after a few moments’ inspection, stepped out, moving quite silently on the solid parquet floor, and took up a position close behind him. Whereupon I, following his example, came out into the middle of the doorway and stood behind Thorndyke to see what was going to happen next.

For a few moments nothing happened; but just then I became aware of two men lurking in the lobby of the main entrance, half hidden by the inner door and quite hidden from Newman by the case at which he was standing. Suddenly Newman seemed to become conscious of the presence of someone behind him, for he turned sharply and faced Thorndyke. Then I knew that something critical was going to happen, and I realized, too, that Thorndyke had got his “one crucial fact.” For as the stranger’s eyes met Thorndyke’s, he gave one wild stare of horror and amazement and his face blanched to a deathly pallor. But he uttered no word; and after that one ghastly stare, turned about and appeared to resume his contemplation of the figurine.

Then three things happened in quick succession: First, Thorndyke took off his hat; then the door of the curator’s room opened and Snuper and Sancroft emerged; and then the two men whom I had noticed came out of the lobby and walked quickly up to the place where Newman and Thorndyke were standing. I looked at them curiously as they approached, and recognized them both. One was Detective Sergeant Wills of the C.I.D. The other was no less a person than Detective Inspector Blandy.

By this time Newman seemed, to some extent, to have recovered his self-possession, whereas Blandy, on the contrary, looked nervous and embarrassed. The former, ignoring the police officers, addressed himself to Sancroft, demanding the speedy conclusion of his business. But here Blandy intervened, with little confidence but more than his usual politeness.

“I must ask you to pardon me, sir,” he began, “for interrupting your business, but there are one or two questions that I want you to be so kind as to answer.”

Newman looked at him in evident alarm but replied gruffly:

“I have no time to answer questions. Besides, you are a stranger to me, and I don’t think I have any concern in your affairs.”

“I am a police officer,” Blandy explained, “and I—”

“Then I am sure I haven’t,” snapped Newman.

“I wanted to ask you a few questions in connection with a most unfortunate affair that happened at Newingstead last September,” Blandy continued persuasively; but Newman cut him short with the brusque rejoinder:

“Newingstead? I never heard of the place, and of course I know nothing about it.”

Blandy looked at him with a baffled expression and then turned an appealing face to Thorndyke.

“Can you give us something definite, sir?” he asked.

“I thought I had,” Thorndyke replied. “At any rate, I now accuse this man, Newman, as he calls himself, of having murdered Constable Murray at Newingstead on the 19th of last September. That justifies you in making the arrest; and then—well, you know what to do.”
But still Blandy seemed undecided. The man’s evident terror and the glare of venomous hatred that he cast on Thorndyke, proved nothing. Accordingly, the Inspector, apparently puzzled and unconvinced, sought to temporize.

“If you would allow me, Mr. Newman,” said he, “to take an impression of your left thumb, any mistake that may have been made could be set right in a moment. Now what do you say?”

“I say that I will see you damned first,” Newman replied fiercely, edging away from the Inspector and thereby impinging on the massive form of Sergeant Wills, which occupied the only avenue of escape.

“You’ve got a definite charge, you know, Inspector,” Thorndyke reminded him in a warning tone, still narrowly watching the accused man; and something significant in the way the words were spoken helped Blandy to make up his mind.

“Well, then, Mr. Newman,” said he, “if you won’t give us any assistance, it’s your own look-out. I arrest you on the charge of having murdered Police Constable Murray at Newingstead on the 19th of last September and I caution you that—”

The rest of the caution faded out, for Newman made a sudden movement and was in an instant clasped in the arms of Sergeant Wills, who had skilfully seized the prisoner’s wrists from behind and held them immovably pressed against his chest. Almost at the same moment, Blandy sprang forward and grasped the prisoner’s ears in order to secure his head and defeat his attempts to bite the sergeant’s hands. But Newman was evidently a powerful ruffian, and his struggles were so violent that the two officers had the greatest difficulty in holding him, even when Snuper and I tried to control his arms. In the narrow interval between two glass cases, we all swayed to and fro, gyrating slowly and making uncomfortable contacts with sharp corners. Presently Blandy turned his streaming face towards Thorndyke and gasped: “Could you manage the print, Doctor? You can see I can’t let go. The kit is in my right hand coat pocket.”

“I have brought the necessary things, myself,” said Thorndyke, producing from his pocket a small metal box. “It is understood,” he added, as he opened the box, “that I am acting on your instructions.”

Without waiting for a reply, he took out of the box a tiny roller which had been fixed by its handle in a clip, and having run it along the inside of the lid, which formed an inking-plate, he approached the squirming prisoner; waiting his opportunity, he suddenly seized the left thumb, and holding it steady, ran the little roller over its bulb. Then he produced a small pad of smooth paper, and again watching for a moment when the thumb was fixed, he took out of the box a tiny roller which had been fixed by its handle in a clip, and having taken up the pad, thrust his hand into his pocket and brought out a photograph mounted on a card. For a few moments he stood, eagerly glancing from the pad to the photograph and evidently comparing them point by point.

“Is it the right print?” Thorndyke asked.

Blandy did not answer immediately but continued his scrutiny with evidently growing excitement. At length he looked up, and forgetting his usual bland smile, replied, almost in a shout:

“Yes, by God! It’s the man himself.”

And then came the catastrophe.

Whether it was that the sergeant’s attention was for the moment distracted by the absorbing interest of Blandy’s proceedings, or that Newman had been watching his opportunity, I cannot say, but, after a brief cessation of his struggles, as if he had become exhausted, he made a sudden violent effort and twisted himself out of his captors’ grasp, darting instantly into the passage between two cases. Thither the sergeant followed, but the prisoner, with incredible quickness and dexterity, delivered a smashing blow on the chest which sent the officer staggering backwards; the next moment, the prisoner was standing in the narrow space with an automatic pistol covering his pursuers.

I will do Blandy the justice (which I am glad to do, as I never liked the man) to say that he faced the deadly danger without a sign of fear or a moment’s hesitation. How he escaped with his life I have never understood, for he dashed straight at the prisoner, looking into the very muzzle of the pistol. But by some miracle the bullet passed him by, and before another shot could be fired, he had grabbed the man’s wrist and got some sort of control of the weapon. Then the sergeant and Snuper and I came to his assistance, and the old struggle began again, but with the material difference that each and all of us had to keep a wary eye on the barrel of the pistol.

Of the crowded and chaotic events of the next minute I have but the obscurest recollection. There comes back to me a vague idea of violent, strenuous effort; a succession of pistol shots with a sort of infernal obligatto accompaniment of shattering glass; the struggles of the sergeant to reach a back pocket without losing his hold on the prisoner; and the manœuvres of Mr. Sancroft, at first ducking at every shot and finally retreating hurriedly—almost on all fours—into his sanctum. Nor when the end came, am I at all clear as to the exact manner of its happening. I know only that the firing ceased, and that almost as the last shot was fired, the writhing, struggling body became suddenly still and began limply to sag towards the floor; and that I then noticed in the man’s right temple a small hole from which issued a little trickle of blood.
Blandy rose, and looking down gloomily at the prostrate body, cursed softly under his breath.

“What infernal luck!” he exclaimed. “I suppose he is dead?”

“I am afraid there is no doubt of that,” I replied, as the last faint twitchings died away.

“Infernal luck,” he repeated, “to have him slip through our fingers just as we had made sure of him.”

“It was the making sure of him that did it,” growled the sergeant. “I mean the finger-prints. We ought to have waited for them until we had got the darbies on.”

“I know,” said Blandy. “But you see I wasn’t sure that we had got the right man. He didn’t seem to me to answer to the description at all.”

“The description of whom?” asked Thorndyke.

“Of Frederick Boles,” replied Blandy. “This is Boles, isn’t it?”

“No,” replied Thorndyke. “This is Peter Gannet.”

Blandy was thunderstruck. “But,” he exclaimed, incredulously, “it can’t be. We identified Gannet’s remains quite conclusively.”

“Yes,” Thorndyke agreed, blandly, “that is what you were intended to do. The remains were actually those of Boles—with certain additions.”

Blandy smiled sourly. “Well,” said he, “this is a knockout. To think that we have been barking up the wrong tree all the time. But you might have given us the tip a bit sooner, Doctor.”

“My dear Blandy,” Thorndyke protested, “I told you all that I knew as soon as I knew it.”

“You didn’t tell us who this man Newman was.”

“But, my dear Inspector,” Thorndyke replied, “I didn’t know myself. When I came here today, I suspected that Mr. Newman was Peter Gannet. But I didn’t know until I had seen the man and recognized him and seen that he recognized me. I told you last night that it was merely a case of suspicion.”

“Well, well,” said Blandy, “it’s no use crying over spilt milk. Is there a telephone in the office? If there is, you had better ring up the Police Station, Sergeant, and tell them to send an ambulance along as quickly as they can.”

The tinkle of the telephone bell answered Blandy’s question, and while the message was being sent and answered, Thorndyke and I proceeded to lay out the body, in view of the probability of premature rigor mortis. Then we adjourned to the curator’s room, where Blandy showed a tendency to revert to the topic of the might-have-been. But our stay there was short, for the ambulance arrived in an almost incredibly short time; and when the body had been carried out by the stretcher bearers and the outer door shut, the Inspector and the Sergeant made ready to depart.

“There are some other particulars, Doctor,” said Blandy, “that we shall want you to give us, if you will; but now I must get back to the Yard and report what has happened. They won’t be over-pleased, but at least we have cleared up a rather mysterious case.”

With this, he and the Sergeant went forth to their car, being let out by Mr. Sancroft, who, having affixed a notice to the main door, shut it and locked it. Then he came back to the room and gazed round ruefully at the wreck of the People’s Museum of Modern Art.

“The Lord knows,” said he, “who is going to pay for all this damage. Seven glass cases smashed and the nose knocked off Israel Popoff’s Madonna. It has been a shocking business; and there is that damned image—if you will excuse me—which has been the cause of all the trouble, still standing in one of the few undamaged cases. But I will soon have it out of there; only the question is, what on earth is to be done with it? The beastly thing seems to be nobody’s property now.”

“It is the property of Mrs. Gannet,” said Thorndyke. “I think it would be best if I were to take custody of it and hand it over to her. I will give you a receipt for it.”

“You need not trouble about a receipt,” said Sancroft, hauling out his keys and joyfully unlocking the case. “I accept you as Mrs. Gannet’s representative and I am only too delighted to get the thing out of the museum. Shall I make it up into a parcel?”

“There is no need,” replied Thorndyke, picking up Gannet’s bag from the floor, on which it had been dropped when the struggle began. “This will hold it, and there is probably some packing inside.”

He opened the bag, and finding it lined with a thick woollen scarf, took the figure from the open case, carefully deposited it in the folds of the scarf and shut the bag.

That seemed to conclude our business, and after a few more words with the still agitated Sancroft and a brief farewell to Mr. Snuper, we accompanied the former to the door, whence we were let out into the street.
CHAPTER 19. — THE MONKEY REVEALS HIS SECRET

BY lovers of paradox we are assured that it is the unexpected that will always happens. But this is, to put it mildly, an exaggeration. Even the expected happens sometimes. It did, for instance, on the present occasion, for when we passed into the entry of our chambers on our return from the museum, and began to ascend the stairs, I expected that Thorndyke would pass by the door of our sitting room and go straight up to the laboratory floor. And that is precisely what he did. He made directly for the larger workshop, and having greeted Polton as we entered, laid Gannet's bag on the bench.

“We need not disturb you, Polton,” said he, noting that our assistant was busily polishing the pallets of a dead beat escapement appertaining to a "regulator" that he was constructing. But Polton had already fixed an inquisitive eye on the bag, and, coupling its presence with our mysterious expedition, had evidently sniffed something more exciting than clockwork.

“You are not disturbing me, sir,” said he, laying the pallets on the table of the polishing lathe and bearing down with a purposeful air on the bag. “The clock is a spare time job. Can I give you any assistance?”

Thorndyke smiled appreciatively, and opening the bag, carefully took out the figure and stood it up on the bench.

“There, Polton,” said he, “what do you think of that for a work of art?”

“My word!” exclaimed Polton, regarding the figure with profound disfavour, “but he is an ugly fellow. Now what part of the world might he have come from? South Sea Islands he looks like.”

Thorndyke lifted the image, and turning it up to exhibit the base, handed it to Polton, who examined it with fresh astonishment.

“Why,” he exclaimed, “it seems to have been made by a civilized man! It’s English lettering, though I don’t recognize the mark.”

“It was made by an Englishman,” said Thorndyke. “But do you find anything abnormal about it apart from its ugliness?”

Polton looked long and earnestly at the base, turned the figure over and examined every part of it, finally tapping it with his knuckles and listening attentively to the sound elicited.

“I don’t think it is solid,” said he, “though it is mighty thick.”

“It is not solid,” said Thorndyke, “We have ascertained that.”

“Then,” said Polton, “I don’t understand it. The body looks like ordinary stoneware. But it can’t be if it’s hollow. There is no opening in it anywhere. But it couldn’t have been fired without a vent-hole of some kind. It would have blown to pieces.”

“Yes,” Thorndyke agreed. “That is the problem. But have another look at the base. What do you say to that white glazed slip on which the signature is written?”

Polton inspected it afresh, and finally stuck a watchmaker’s eyeglass in his eye to assist in the examination.

“I don’t know what to make of it,” said he. “It looks a little like a tin glaze, but I don’t think it is. I don’t see how it could be. What do you think it is, sir?”

“I suspect that it is some kind of hard white cement—possibly Keene’s—covered with a clear varnish.”

Polton looked up at him, and his expressive countenance broke out into a characteristic crinkly smile.

“I think you have hit it, sir,” said he; “and I think I begin to ogle, as Mr. Miller would say. What are we going to do about it?”

“The obvious thing,” said Thorndyke, “is to make what surgeons would call an exploratory puncture; drill a small hole in it and see what the base is really made of and what its thickness is.”

“Would a drill go into stoneware?” I asked.

“No,” replied Thorndyke, “not an ordinary drill. But I do not think that there is any stoneware in the middle of the base. You remember Broomhill’s specimen? There was a good-sized elliptical opening in the base, and I imagine that this figure was originally the same, but that the opening has been filled up. What we have to ascertain is what it has been filled with and how far the filling goes into the cavity.”

“We had better do it with a hand-drill,” said Polton, “and steady the image on the bench, as it wouldn’t be safe to fix it in the vise. Then it will be convenient if we want to enlarge the hole.”

He wrapped the “image” in one or two thick dusters and laid it on the bench, when I took charge of it and held it as firmly as I could to resist the pressure of the drill. Then, having fitted an eighth-inch Morse into the stock, he began operations, cautiously, and with only a light pressure; but I noticed that at first the hard drill-point seemed to make very little impression.

“What do you suppose the filling consists of, sir?” Polton asked, as he withdrew the drill to examine the shallow pit its point had made, “and how far do you suppose it goes in?”
“My idea is,” replied Thorndyke—“but it is only a guess—that there is a comparatively thin layer of Keene’s cement and then a plug of plaster, perhaps three or four inches thick. Beyond that, I should expect to come to the cavity. I hope I am right, for if it should turn out to be Keene’s cement all the way, we shall have some trouble in making a hole large enough for our purpose.”

“What is our purpose?” I asked. “To see if there is anything in the cavity, I presume.”

“Yes,” Thorndyke replied, “though it is practically certain that there is. Otherwise, there would have been no object in stopping up the opening.”

Here Polton returned to the charge, now sensibly increasing the pressure. Still, for a while, the drill seemed to make little progress. Then quite suddenly, as if some obstruction had been removed, it began to enter freely and had soon penetrated as far as the chuck would allow it to go.

“You said, three or four inches, I think, sir?” Polton remarked, as he withdrew the drill and examined the white powder in the grooves.

“Yes,” Thorndyke replied, “but possibly more. A six-inch drill would be best; and you might use a stouter one—say a quarter-inch—to avoid the risk of its bending.”

Polton made the necessary change and resumed operations with the larger drill, which soon enlarged the opening and then began quickly to penetrate the softer plaster. When it had entered about four inches, even this slight resistance seemed to cease, for it ran in suddenly right up to the chuck.

“Four inches it is, sir,” said Polton, with a triumphant crinkle, as he withdrew the drill and inspected the grooves. “How big an opening will you want?”

“An inch might do,” replied Thorndyke, “but an inch and a half would be better. I think that is possible without encroaching on the stoneware body. But you will see.”

On this, Polton produced a set of reamers and a brace, and beginning with one which would just enter the hole, turned the brace cautiously while I continued to steady the figure. Meanwhile, Thorndyke, having cut off a piece of stout copper wire about eight inches long, fixed it in the vise, and with an adjustable die, cut a screw thread about an inch long on one end.

“We may as well see what the conditions are,” said he, “before we go any further.”

He took the wire out of the vise, and as Polton withdrew the third reamer—which had enlarged the hole to about half an inch—he passed the wire into the hole and began gently to probe the bottom of the cavity. Then he pressed it in somewhat more firmly and gave it one or two turns, slowly drawing it out while he continued to turn. When it finally emerged, its end held a small knob of cotton wool from which a little twisted strand of the same material extended into the invisible interior. I watched its emergence with profound interest and a certain amount of self-contempt; for obviously he had expected to find the interior filled with cotton wool as was demonstrated by the making of the cotton wool holder. And yet I, who knew as much of the essential facts as he did, had never guessed, and even now had only a vague suspicion of what its presence suggested.

As the operations with the reamers progressed, it became evident that the larger opening was possible, for the material cut through was still only cement and plaster. When the full inch and a half had been reached, Thorndyke fixed his wire in the chuck of the hand-drill, and passing the former into the wide hole, pressed the screw end into the mass of cotton wool, and began to turn the handle, slowly drawing it in as he turned. When the end of the wire appeared at the opening, it bore a ball of cotton wool from which a thick strand, twisted by the rapid rotation of the wire into a firm cord, extended to the mass inside; and as Thorndyke slowly stepped back, still turning the handle, the cord grew longer and longer until at last its end slipped out of the opening, showing that the whole of the cotton wool had been extracted.

“Now,” said Thorndyke, “let us see what all that cotton wool enclosed.”

He laid aside the drill, and carefully lifting the figure, held it upright over the bench, when there dropped out a small, white paper packet tied up with thread. Having cut the thread, he laid the packet on the bench and opened it, while Polton and I craned forward inquisitively. I suppose we both knew approximately what to expect, and I was better able to guess than Polton; but the reality was quite beyond my expectations, and as for Polton, he was, for the moment, struck dumb. Only for the moment, however, for recovering himself, he exclaimed impressively, with his eyes fixed on the packet:

“Never in all my life have I seen the like of this. Fifteen diamonds and every one of them a specimen stone. And look at the size of them! Why, that little lot must be worth a king’s ransom!”

“I understand,” said Thorndyke, “that they represent about ten thousand pounds. That will be their market price; and you can add to that three human lives—not as their value, which it is not, but as their cost.”

“I take it,” said I, “that you are assuming these to be Kempster’s diamonds?”

“It is hardly a case of assuming,” he replied. “The facts seem to admit of no other interpretation. This was an experiment to test the correctness of my theory of the crime. I expected to find in this figure fifteen large diamonds. Well, we have opened the figure and here are the fifteen large diamonds. This figure belonged to Peter Gannet, and whatever was in it was put in by him, as is shown by the sealing on the base which bears his signature. But Peter Gannet has been proved to
be the murderer of the constable, and that murderer was undoubtedly the man who stole Kempster's diamonds; and these diamonds correspond in number and appearance with the diamonds which were stolen. However, we won't leave it at a mere matter of appearance. Kempster gave me full particulars of the diamonds, including the weight of each stone, and of course the total weight of the whole parcel. We need hardly take the weight of each stone separately, but if we weigh the whole fifteen together and we find that the total weight agrees with that given by Kempster, even my learned and sceptical friend will admit that the identity is proved sufficiently for our present purposes."

I ventured mildly to repudiate the alleged scepticism but agreed that the verification was worth while; and when Thorndyke had carefully closed the packet, we all adjourned to the chemical laboratory, where Polton slid up the glass front of the balance and went through the formality of testing the truth of the latter with empty cans.

"What weight shall I put on, sir?" he asked.

"Mr. Kempster put the total weight at 380.4 grains. Let us try that."

Polton selected the appropriate weights, and when they had been checked by Thorndyke, they were placed in the pan and the necessary "rider" put on the beam to make up the fraction. Then Polton solemnly closed the glass front and slowly depressed the lever; and as the balance rose, the index deviated barely a hair's breadth from the zero mark.

"I think that is near enough," said Thorndyke, "to justify us in deciding that these are the diamonds that were stolen from Kempster."

"Yes," I agreed; "at any rate, it is conclusive enough for me. What do you propose to do with them? Shall you hand them to Kempster?"

"No," he replied. "I don't think that would be quite in order. Stolen property should be delivered to the police, even if its ownership is known. I shall hand these diamonds to the Commissioner of Police, explain the circumstances, and take his receipt for them. Then I shall notify Kempster and leave him to collect them. He will have no difficulty in recovering them as the police have a complete description of the stones. And that will finish the business, so far as I am concerned. I have more than fulfilled my obligations to Kempster and I have proved that Mrs. Gannet could not possibly have been an accessory to the murder of her husband. Those were the ostensible objects of my investigation, apart from the intrinsic interest of the case, and now that they have both been achieved, it remains only to sing Nunc Dimittis and celebrate our success with a modest festivity of some kind."

"There is one other little matter that remains," said I. "Today's events have proved that your theory of the crime was correct, but they haven't shown how you arrived at that theory, and I have only the dimmest ideas on the subject. But perhaps the festivity will include a reasoned exposition of the evidence."

"I see nothing against that," he replied. "It would be quite interesting to me to retrace the course of the investigation; and if it would also interest you and Oldfield—who must certainly be one of the party—then we shall all be pleased."

He paused for a few moments, having, I think, detected a certain wistfulness in Polton's face, for he continued:

"A restaurant dinner would hardly meet the case, if a prolonged and necessarily confidential pow-wow is contemplated. What do you think, Polton?"

"I think, sir," Polton replied, promptly and with emphasis, "that you would be much more comfortable and more private in your own dining room, and you'd get a better dinner, too. If you will leave the arrangements to me, I will see that the entertainment does you credit."

I chuckled inwardly at Polton's eagerness. Not but that he would at any time have delighted in ministering, in our own chambers, to Thorndyke's comfort and that of his friends. But apart from these altruistic considerations, I felt sure that on this present occasion the "arrangements" would include some very effective ones for enabling him to enjoy the exposition.

"Very well, Polton," said Thorndyke. "I will leave the affair in your hands. You had better see Dr. Oldfield and find out what date will suit him, and then we will wind up the Gannet case with a flourish."
CHAPTER 20.—THORNDYKE REVIEWS THE EVIDENCE

OUR invitation to Oldfield came very opportune, for he was just preparing for his holiday and had already got a locum-tenens installed. So when, on the appointed evening, he turned up in buoyant spirits, it was as a free man, immune from the haunting fear of an urgent call.

Polton’s artful arrangements for unostentatious eavesdropping had come to naught, for Thorndyke and I had insisted on his laying a place for himself at the table and joining us as the colleague that he had actually become in late years, rather than the servant that he still proclaimed himself to be. For the gradual change of status from servant to friend had occurred quite smoothly and naturally. Polton was a man in whom perfect manners were inborn; and as for his intellect, well, I would gladly have swapped my brain for his.

“This is very pleasant,” said Oldfield, as he took his seat and cast an appreciative glance round the table, “and it is most kind of you, sir, to have invited me to the celebration, especially when you consider what a fool I have been and what a mess I made of my part of the business.”

“You didn’t make a mess of it at all,” said Thorndyke.

“Well, sir,” Oldfield chuckled, “I made every mistake that was humanly possible, and no man can do more than that.”

“You are doing yourself a great injustice, Oldfield,” Thorndyke protested. “Apparently you don’t realize that you were the actual discoverer of the crime.”

Oldfield laid down his knife and fork to gaze at Thorndyke.

“I, the discoverer!” he exclaimed; and then, “Oh, you mean that I discovered the ashes. But any other fool could have done that. There they were, plainly in sight, and it just happened that I was the first person to go into the studio.”

“I am not so sure even of that,” said Thorndyke. “There was some truth in what Blandy said to you. It was the expert eye which saw at once that something strange had happened. Most persons, going into the studio, would have failed to observe anything abnormal. But that is not what I am referring to. I mean that it was you who made the discovery that exposed the real nature of the crime and led to the identification of the criminal.”

Oldfield shook his head, incredulously, and looked at Thorndyke as if demanding further enlightenment.

“What I mean,” the latter explained, “is that here we had a crime, carefully and subtly planned and prepared in detail with admirable foresight and imagination. There was, only a single mistake, and but for you, that mistake would have passed unnoticed and the scheme would have worked according to plan. It very nearly did, as you know.”

Oldfield still looked puzzled, as well he might; for he knew, as I did, that all his conclusions had been wrong; and I was as far as he was from understanding what Thorndyke meant.

“Perhaps,” Oldfield suggested, “you will explain in a little more detail what my discovery was?”

“Not now,” replied Thorndyke. “Presently, we are going to have a reasoned analysis of the case. You will see plainly enough then.”

“I suppose I shall,” Oldfield agreed, doubtfully, “but I should have said that the entire discovery was your own, sir. I know that it came as a thunder-bolt to me, and so I expect it did to Blandy. And he must have been pretty sick at losing his prisoner, after all.”

“Yes,” said I, “he was. And it was unfortunate. Gannett ought to have been brought to trial and hanged.”

“I am not sorry that he wasn’t, all the same,” said Oldfield. “It would have been horrible for poor Mrs. Gannett.”

“Yes,” Thorndyke agreed, “a trial and a hanging would have ruined her life. I am inclined to feel that the suicide, or accident, was all for the best, especially as there are signs that very warm and sympathetic relations are growing up between her and our good friend Linnell. One likes to feel that the future holds out to her the promise of some compensation for all the trials and troubles that she has had to endure.”

“Still,” I persisted, “the fellow was a villain and ought to have been hanged.”

“He wasn’t the worst kind of villain,” said Thorndyke. “The murder of the constable was, if not properly accidental, at least rather in the nature of ‘chance medley.’ There could have been no intention to kill. And as to Boles, he probably offered considerable provocation.”

From this point the conversation tended to peter out, the company’s jaws being otherwise engaged. What there was ranged over a variety of topics—including Polton’s magnum opus, the regulator, now in a fair way of being completed—and kept us entertained until the last of the dishes had been dealt with and removed and the port and the dessert had been set on the table. Then, when Oldfield and I had filled our pipes (Polton did not smoke but took an occasional, furtive pinch of snuff), Thorndyke, in response to our insistent demands, put down his empty pipe and proceeded to the promised analysis.

“In order,” he began, “to appreciate the subtlety and imagination with which this crime was planned, it is necessary to recall the whole sequence of events and to note how naturally and logically it evolved. It begins with a case of arsenic poisoning; a perfectly simple and ordinary case with all the familiar features. A man is poisoned by arsenic in his food.
That food is prepared by his wife. The wife has a male friend to whom she is rather devoted, and she is not very devoted to her husband. Taken at its face value, there is no mystery at all. It appears to be just the old, old story.

"The poisoning is detected, the man recovers and returns home to resume his ordinary habits. But any observer, noting the facts, must feel that this is not the end. There will surely be a sequel. A murder has been attempted and has failed; but the will to murder has been proved, and it presumably still exists, awaiting a fresh opportunity. Anyone knowing what has happened, will naturally be on the lookout for some further attempt.

"Then, during his wife’s absence at the seaside, the man disappears. She comes home and finds that he is missing. He has not gone away in any ordinary sense, for he has taken nothing with him, not even a hat. In her alarm she naturally seeks the advice of the doctor. But the doctor, recalling the poisoning incident, at once suspects a tragedy, and the more so since he knows of the violent enmity existing between the husband and the wife’s friend. But he does not merely suspect a tragedy in the abstract. His suspicions take a definite shape. The idea of murder comes into his mind, and when it does it is associated naturally enough with the man who was suspected of having administered the poison. He is not, perhaps, fully conscious of his suspicions; but he is in such a state of mind that in the instant when the fact of the murder becomes evident, he confidently fills in the picture and identifies not only the victim but the murderer, too.

"Thus, you see how perfectly the stage had been set for the events that were to follow; how admirably the minds of all who knew the facts had been prepared to follow out a particular line of thought. There is the preliminary crime with Boles as the obvious suspect. There is the expectation that, since the motive remains, there will be a further attempt—by Boles. Then comes the expected sequel, and instantly, by the most natural and reasonable association, the dramatis personae of the first crime are transferred, in the same roles, to the second crime. It is all quite plain and consistent. Taking things at their face value, it seemed obvious that the murdered man must be Peter Gannet and his murderer, Frederick Boles. I think that I should have prepared to accept that view, myself, if there had been nothing to suggest a different conclusion.

"But it was just at this point that Oldfield made his valuable contribution to the evidence. Providence inspired him to take a sample of the bone-ash and test it for arsenic; and to his surprise, and still more to mine, he proved that the ash did contain arsenic. Moreover, the metal was present, not as a mere trace but in measurable quantities. And there could be no doubt about it. Oldfield’s analysis was carried out skilfully and with every precaution against error, and I repeated the experiment with the remainder of the sample and confirmed his results.

"Now here was a definite anomaly, a something which did not seem to fit in with the rest of the facts; and I am astonished that neither Blandy nor the other investigators appreciated its possible importance. To me an anomalous fact—a fact which appears unconnected, or even discordant with the body of known facts—is precisely the one on which attention should be focused. And that is what I did in this present case. The arsenic was undeniably present in the ashes, and its presence had to be accounted for.

"How did it come to be there? Admittedly, it was not in the body before the burning. Then it must have found its way into the ashes after their removal from the kiln. But how? To me there appeared to be only two possible explanations, and I considered each, comparing it with the other in terms of probability.

"First, there was the suggestion made at the inquest that the ashes might have become contaminated with arsenic in the course of grinding or transference to the bin. That, perhaps, sounded plausible if it was only a verbal formula for disposing of a curious but irrelevant fact. But when one tried to imagine how such contamination could have occurred, no reasonable explanation was forthcoming. What possible source of contamination was there? Arsenic is not one of the potter’s ordinary materials. It would not have been present in the bin, nor in the iron mortar nor in the grinding mills. It was a foreign substance, so far as the pottery studio was concerned, and the only arsenic known to exist in the place was that which was contained in a stoppered jar in Boles’s cupboard.

"Moreover, it had not the character of a mere chance contamination. Not only was it present in a measurable quantity; it appeared to be fairly evenly distributed throughout the ashes, as was proved by the fact that the Home Office chemist obtained results substantially similar to Oldfield’s and mine. After a critical examination of this explanation, I felt that it explained nothing, that it did not agree with the facts, and was itself inexplicable.

"Then, if one could not accept the contamination theory, what was the alternative? The only other explanation that could be suggested was that the arsenic had been intentionally mixed with the ashes. At the first glance this did not look very probable. But, if it was not the true explanation, it was at least intelligible. There was no impossibility; and in fact, the more I considered it, the less improbable did it appear.

"When this hypothesis was adopted provisionally, two further questions at once arose: if the arsenic was intentionally put into the ashes, who put it there and for what purpose? Taking the latter question first, a reasonable answer immediately suggested itself. The most obvious purpose would be that of establishing a connection between the present crime and the previous arsenic poisoning; and when I asked myself what could be the object of trying to establish such a connection, again a perfectly reasonable answer was forthcoming. In the poisoning crime, the victim was Peter Gannet, and the would-be murderer was almost certainly Frederick Boles. Then the introduction of the arsenic as a common factor linking together the two crimes would have the purpose of suggesting a repetition of the characters of victim and murderer. That is to say, the ultimate object of putting the arsenic into the ashes would be to create the conviction that the ashes were the remains of Peter Gannet, that he had been murdered by means of arsenic, and that the murderer was Frederick Boles.
"But who would wish to create this conviction? Remember that our picture contains only three figures: Gannet, his wife and Boles. If the arsenic had been planted, it must have been planted by one of those three. But by which of them? By Mrs. Gannet? Certainly not, seeing that she was under some suspicion of having been an accessory to the poisoning. And obviously Boles would not wish to create the belief that he was the murderer.

"Thus, of the three possible agents of this imposture, we had excluded two. There remained only Gannet. The suggestion was that he was dead and, therefore, could not have planted the arsenic. But could we accept that suggestion? The arsenic was (by the hypothesis) admittedly an imposture. But with the evidence of imposture, we could no longer take the appearances at their face value. The only direct evidence that the remains were those of Gannet was the tooth that was found in the ashes. It was, however, only a porcelain tooth and no more an integral part of Gannet’s body than his shirt button or his collar stud. If the arsenic had been planted to produce a particular belief, it was conceivable that the tooth might have been planted for the very same purpose. It was in fact conceivable that the ashes were not those of Gannet and that consequently Gannet was not dead.

"But if Gannet had not been the victim of this murder, then he was almost certainly the murderer; and if Boles had not been the murderer, then he must almost certainly have been the victim. Both men had disappeared and the ashes were undoubtedly the remains of one of them. Suppose the remains to be those of Boles and the murderer to be Peter Gannet? How does that affect our question as to the planting of the arsenic?

"At a glance we can see that Gannet would have had the strongest reasons for creating the belief that the remains were those of his own body. So long as that belief prevailed, he was absolutely safe. The police would have written him off as dead and would be engaged in an endless and fruitless search for Boles. With only a trifling change in his appearance—such as the shaving off of his beard and moustache—he could go his way in perfect security. Nobody would be looking for him; nobody would even believe in his existence. He would have made the perfect escape.

"This result appeared to me very impressive. The presence of the arsenic was a fact. The hypothesis that it had been planted was the only intelligible explanation of that fact. The acceptance of that hypothesis was conditional on the discovery of some motive for planting it. Such a motive we had discovered, but the acceptance of that motive was conditional on the assumption that Peter Gannet was still alive.

"Was such an assumption unreasonable? Not at all. Gannet’s death had rather been taken for granted. He had disappeared mysteriously, and certain unrecognisable human remains had been found on his premises. At once it had been assumed that the remains were his. The actual identification rested on a single porcelain tooth; but as that tooth was no part of his body and could, therefore, have been purposely planted in the ashes, the evidence that it afforded as to the identity of the remains was not conclusive. If any grounds existed for suspecting imposture, it had no evidential value at all. But apart from that tooth there was not, and never had been, any positive reasons for believing that those ashes were the remains of Peter Gannet.

"The completeness and consistency of the results thus arrived at, by reasoning from the hypothesis that the arsenic had been planted, impressed me profoundly. It really looked as if that hypothesis might be the true one and I decided to pursue the argument and see whether it led; and especially to examine one or two other slight anomalies that I had noticed.

"I began with the crime itself. The picture presented (and accepted by the police) was this: Boles had murdered Gannet and cremated his body in the kiln, after dismembering it, if necessary, to get it into the cavity. He had then pounded the incinerated bones and deposited the fragments in the bone-ash-bin. Then, after having done all this, he was suddenly overcome by panic and fled.

"But why had he fled? There was no reason whatever for him to flee. He was in no danger. He was alone in the studio and could lock himself in. There was no fear of interruption, since Mrs. Gannet was away at the seaside, and even if any chance visitor should have come, there was nothing visible to excite suspicion. He had done the difficult and dangerous part of the work and all that remained were the few finishing touches. If he had cleaned up the kiln and put it into its usual condition, the place would have looked quite normal, even to Oldfield; and as to the bone fragments, there was not only the grog-mill but also a powerful edge-runner mill in which they could have been ground to fine powder. If this powder had been put into the bone-ash-bin—the ordinary contents of which were powdered bone ash—every trace of the crime would have been destroyed. Then Boles could have gone about his work in the ordinary way or taken a holiday if he had pleased. There would have been nothing to suggest that any abnormal events had occurred in the studio or that Gannet was not still alive.

"Contrast this with the actual conditions that were found. The kiln had been left in a state that would instantly attract the attention of anyone who knew anything about the working of a pottery studio. The incinerated bones had been pounded into fragments, just too small to be recognizable as parts of any known person, but large enough to be recognized, not only as bones, but as human bones. After all the risk and labour of cremating the body and pounding the bones, there had still been left clear evidence that a man had been murdered.

"I think you will agree that the suggested behaviour of Boles is quite unaccountable; it is entirely at variance with reasonable probabilities. On the other hand, if you consider critically the conditions that were found, they will convey to you, as they did to me, the impression of a carefully arranged tableau. Certain facts, such as the murder and the cremation, were to be made plain and obvious, and certain issues, such as the identities of victim and murderer, were to be confused. But furthermore, they conveyed to me a very interesting suggestion, which was that the tableau had been set for a particular spectator. Let us consider this suggestion.
“The crime was discovered by Oldfield, and it is possible that he was the only person who would have discovered it. His potter’s eye, glancing at the kiln, noted its abnormal state and saw that something was wrong. Probably there was a good deal of truth, as well as politeness, in Blandy’s remark that if he had come to the studio without his expert guide and adviser, though he would have seen the visible objects, he would have failed to interpret their meaning. But Oldfield had just the right knowledge. He knew all about the kiln, he knew the various bins and what was in them, and what the mills were for. So, too, with the little finger bone. Most persons would not have known what it was; but Oldfield, the anatomist, recognizes it at once as the ungual phalanx of a human index finger. He would seem to have been the pre-appointed discoverer.

“The suggestion is strengthened by what we know of the previous events; of Gannet’s eagerness to cultivate the doctor’s friendship, to induct him into all the mysteries of the studio and all the routine of the work that was carried on there. There is an appearance of Oldfield’s being prepared to play the part of discoverer—a part that would naturally fall to him, since it was certain that when the blow fell, Mrs. Gannet would seek the help and advice of the doctor.

“The suggestion of preparation applies also to the arsenic in the ashes. If that arsenic was planted, the planting of it must have been a mere gamble, for it was most unlikely that anyone would think of testing the ashes for arsenic. But if there was any person in the world who would think of doing so, that person was most assuredly Oldfield. Any young doctor who has the misfortune to miss a case of arsenic poisoning is pretty certain thereafter to develop what the psychological jargonists would call ‘an arsenic complex.’ When any abnormal death occurs, he is sure to think first of arsenic.

“The whole group of appearances then suggested that Oldfield had been prepared to take a particular view and to form certain suspicions. But did not that suggestion carry us back still farther? What of the poisoning affair itself? If all the other appearances were false appearances, was it not possible that the poisoning was an imposture, too? When I came to consider that question, I recalled certain anomalies in the case which I had observed at the time. I did not attach great importance to them, since arsenic is a very erratic poison, but I noted them and I advised Oldfield to keep full notes of the case; and now that the question of imposture had arisen, it was necessary to reconsider them, and to review the whole case critically.

“We had to begin our review by reminding ourselves that practically the whole of our information was derived from the patient’s statements. The phenomena were virtually all subjective. Excepting the redness of the eyes, which could easily have been produced artificially, there were no objective signs; for the appearance of the tongue was not characteristic. Of the subjective symptoms we were told; we did not observe them for ourselves. The abdominal pain was felt by the patient, not by us. So with the numbness, the loss of tactile sensibility, the tingling, the cramps and the inability to stand; we learned of their existence from the patient and we could not check his statements. We accepted those statements as there appeared to be no reason for doubting them; but it was quite possible for them all to have been false. To an intelligent malingerer who had carefully studied the symptoms of arsenic poisoning, there would have been little difficulty in making up a quite convincing set of symptoms.”

“But,” Oldfield objected, “there really was arsenic in the body. You were not forgetting that?”

“Not at all,” replied Thorndyke. “That was the first of the anomalies. You will remember my remarking to you that the quantity of arsenic obtained by analysis of the secretions was less than I expected. Woodfield and I were both surprised at the smallness of the amount; which was, in fact, not much greater than might have been found in a patient who was taking arsenic medicinally. But it was not an extreme discrepancy, since arsenic is rapidly eliminated, though the symptoms persist, and we explained it by assuming that no considerable dose had been taken quite recently. Nevertheless, it was rather remarkable, as the severity of the symptoms would have led us to expect a considerable quantity of the poison.

“The next anomaly was the rapidity and completeness of Gannet’s recovery. Usually, in severe cases, recovery is slow and is followed by a somewhat long period of ill-health. But Gannet began to recover almost immediately, and when he left the hospital he seemed to be quite well.

“The third anomaly—not a very striking one, perhaps—was his state of mind on leaving hospital. He went back home quite happily and confidently, though his wife—and murder was still there; and he would not entertain any sort of inquiry or any measures to ascertain that murderer’s identity. He seemed to assume that the affair was finished and that there was nothing more to fear.

“Now, looking at the case as a whole with the idea of a possible imposture in our minds, what did it suggest? Was there not the possibility that all the symptoms were simulated? That Gannet took just enough arsenic to supply the means of chemical demonstration (a fairly full daily dose of Fowler’s solution would do) and on the appropriate occasion, put a substantial quantity of arsenic into the barley water? In short, was it not possible that the poisoning affair was a deception from beginning to end?

“The answer to this question obviously was that it was quite possible, and the next question was as to its probability. But the answer to this also appeared to be affirmative; for on our hypothesis, the appearances in the studio were false appearances, deliberately produced to create a certain erroneous belief. But those appearances were strongly supported by the previous poisoning crime and obviously connected with it. The reasonable conclusion seemed to be that the poisoning affair was a deception calculated to create this same erroneous belief (that an attempt had been made to murder Gannet) and to lead on naturally to the second crime.

“Now let us pause for a moment to see where we stand. Our hypothesis started with the assumption that the arsenic had
been put into the ashes for a definite purpose. But we found that the only person who could have had a motive for planting it was Peter Gannet. Thus we had to conclude that Gannet was the murderer and Boles the victim. We have examined this conclusion, point by point, and we have found that it agrees with all the known facts and that it yields a complete, consistent and reasonable scheme of the studio crime. Accordingly, we adopt that conclusion— provisionally, of course, for we are still in the region of hypothesis and have, as yet, actually proved nothing.

"But assuming that Gannet had committed this murder, it was evident that it must have been a very deliberate crime; long premeditated, carefully planned and carried out with extraordinary foresight and infinite patience. A crime of this kind implies a proportionate motive; a deep seated, permanent and intense motive. What could it have been? Was there anything known to us in Gannet's circumstances that might seem to account for his entertaining murder as a considered policy? Taking the usual motives for planned and premeditated murder, I asked myself whether any of them could apply to him. We may put them roughly into five categories: jealousy, revenge, cupidity, escape and fear. Was there any suggestion that Gannet might have been affected by any of them?

"As to jealousy, there was the undeniable fact that Mrs. Gannet's relations with Boles were unusual and perhaps indiscreet. But there was no evidence of any impropriety and no sign that the friendship was resented by Gannet. It did not appear to me that jealousy as a motive could be entertained.

"As to revenge, this is a common motive among Mediterranean peoples but very rare in the case of Englishmen. Boles and Gannet disliked each other to the point of open enmity. An unpremeditated murder might easily have occurred, but there was nothing in their mere mutual dislike to suggest a motive for a deliberately planned murder. So, too, with the motive of cupidity; there was nothing to show that either stood to gain any material benefit by the death of the other. But when I came to consider the last two motives—escape and fear—I saw that there was a positive suggestion which invited further examination; and the more it was examined, the more definite did it become."

"What, exactly, do you mean by escape?" I asked.

"I mean," he replied, "the desire to escape from some intolerable position. A man, for instance, whose life is being made unbearable by the conduct of an impossible wife, may contemplate getting rid of her, especially if he sees the opportunity of making a happy and desirable marriage; or who is haunted by a blackmailer who will never leave him to live in peace. In either case, murder offers the only means of escape, and the motive to adopt that means will tend to develop gradually. From a mere desirable possibility, it will grow into a definite intention; and then there will be careful consideration of practicable and safe methods of procedure. Now in the present case, as I have said, it appeared to me that such a motive might have existed; and when I considered the circumstances, that impression became strongly confirmed. The possible motive came into view in connection with certain facts which were disclosed by Inspector Blandy's activities, and which were communicated to me by Oldfield when he consulted me about Mrs. Gannet's difficulties.

"It appeared that Blandy, having finished with the bone fragments, proceeded to turn out Boles's cupboard. There he found fairly conclusive evidence that Boles was a common receiver, which was not our concern. But he also found a piece of gold plate on which were some very distinct finger-prints. They were the prints from a left hand, and there was a particularly fine and clear impression of a left thumb. Of this plate Blandy took possession with the expressed intention of taking it to the Finger-print Department at Scotland Yard to see if Boles happened to be a known criminal. Presumably, he did so, and we may judge of the result by what followed. Two days later he called on Mrs. Gannet and subjected her to a searching interrogation, asking a number of leading questions, among which were two of very remarkable significance. He wanted to know where Boles was on the 19th of last September, and when it was that his friendship with Gannet suddenly turned to enmity. Both these questions she was able to answer; and the questions and the answers were highly illuminating.

"First, as to the questions. The 19th of September was the date of the Newingstead murder; and the murdered constable's truncheon bore a very distinct print of a left thumb—evidently that of the murderer. At a glance, it appeared to me obvious that the thumb-print on the gold plate had been found to correspond with the thumb print on the truncheon and that Boles had been identified thereby as the murderer of the constable. That was the only possible explanation of Blandy's question. And this assumption was confirmed by the answer; by which it transpired that Boles was at Newingstead on that fatal day and that, incidentally, Gannet was with him, the two men, apparently, staying at the house of Boles's aunt.

"Blandy's other question and Mrs. Gannet's answer were also profoundly significant; for she recalled, clearly, that the sudden change in the relations of the two men was first observed by her when she met them after their return from Newingstead. They went there friends; they came back enemies. She knew of no reason for the change; but those were the facts.

"Here we may pause to fill in, as I did, the picture thus presented to us in outline. There are two men (whom we may conveniently call A and B) staying together at a house in Newingstead. On the 19th of September, one of them, A, goes forth alone. Between eight and nine in the evening he commits the robbery. At about nine o'clock he kills the constable. Then he finds Oldfield's bicycle and on it he peddls away some four miles along the London Road. Having thus got away from the scene of the crime, he dismounts and seeks a place in which to hide the bicycle. He finds a cart shed, and having concealed the bicycle in it, sets out to return to Newingstead. Obviously, he would not go back by the same route, with the chance of encountering the police, for he probably suspects that he has killed a man, and at any rate, he has the stolen diamonds on his person. He must necessarily make a detour so as to approach Newingstead from a different direction, and
his progress would not be rapid, as he would probably try to avoid being seen. The cart shed was over four miles from Newingstead along the main road, and his detour would have added considerably to that distance. By the time that he arrived at his lodgings it would be getting late; at least eleven o’clock and probably later. Quite a late hour by village standards.

"The time of his arrival home would probably be noted by B. But there is something else he would note. A had been engaged in a violent encounter with the constable and could hardly fail to bear some traces of it on his person. The constable was by no means passive. He had drawn his truncheon and was using it when it was snatched away from him. We may safely assume that A’s appearance, when he sneaked home and let himself into the house, must have been somewhat unusual.

"By the next morning the hue and cry was out. All the village knew of the robbery and the murder, and it would be inevitable that B should connect the crime with A’s late homecoming and disordered condition. Not only did the times agree but the man robbed, Arthur Kempster, was known to them both, and known personally at least by one of them. Then came the inquest with full details of the crime and the vitally important fact that a clear finger-print, left by the murderer, was in the possession of the police. Both the men must have known what was proved at the inquest for a very full report of it was published in the local paper, as I know from having read a copy that Kempster gave me. Both men knew of the existence of the thumb-print; and one knew, and the other was convinced, that it was A’s thumb-print.

"From these facts it was easy to infer what must have followed. For it appears that it was just at this time that the sudden change from mutual friendship to mutual enmity occurred. What did that change (considered in connection with the aforesaid facts) imply? To me it suggested the beginning of a course of blackmail. B was convinced that A was the robber and he demanded a share of the proceeds as the price of his silence. But A could not admit the robbery without also admitting the murder. Consequently, he denied all knowledge of either.

"Then began the familiar train of events that is characteristic of blackmail; that so commonly leads to its natural end in either suicide or murder. B felt sure that A had in his possession loot to the value of ten thousand pounds and he demanded, with menaces, his share of that loot; demands that A met with stubborn denials. And so it went on with recurring threats and recriminations and violent quarrels.

"But it could not go on forever. To A the conditions were becoming intolerable. A constant menace hung over him. He lived in the shadow of the gallows. A word from B could put the rope round his neck; a mere denunciation without need of proof. For there was the deadly thumb-print, and they both knew it. To A a simple accusation showed the way directly to the execution shed.

"Was there no escape? Obviously, mere payment was of no use. It never is of use in the case of blackmail. For the blackmailer may sell his silence but he retains his knowledge. If A had surrendered the whole of the loot to B he would still not have been safe. Still B would have held him in the hollow of his hand, ready to blackmail again when the occasion should arise. Clearly, there was no escape that way. As long as B remained alive, the life of A hung upon a thread.

"From this conclusion the corollary was obvious. If B’s existence was incompatible with the safe and peaceful existence of A, then B must be eliminated. It was the only way of escape. And having come to this decision, A could give his attention, quietly and without hurry, to the question of ways and means; to the devising of a plan whereby B could be eliminated without leaving a trace, or, at any rate, a trace that would lead in the direction of A. And thus came into being the elaborate, ingeniously devised scheme which I had been examining and which looked, at that time, so much like a successful one.

"The next problem was to give a name to each of the two men. A and B represented Boles and Gannet; but which was which? Was Boles, for instance, A the murderer, or B the blackmailer? By Blandy, Boles was confidently identified as the Newingstead murderer. But then Blandy accepted all the appearances at their face value. In his view Gannet was not in the picture. He was not a person: he was a mere basketful of ashes. The thumb-print had been found in Boles’s cupboard on Boles’s own material. Therefore it was Boles’s thumb-print.

"But was this conclusion in accordance with ordinary probabilities? From Blandy’s point of view it may have been, but from mine it certainly was not. So great was the improbability that it presented that, even if I had known nothing of the other facts, I should have approached it with profound scepticism. Consider the position: Here is a man whose thumb-print is filed at Scotland Yard. That print is capable of hanging him, and he knows it. Then is it conceivable that, if he were not an abject fool—which Boles was not—he would be dabbing that print on surfaces that anyone might see? Would he not studiously avoid making that print on anything? Would he not, when working alone, wear a glove on his left hand? And if by chance he should mark some object with that print, would he not be careful to wipe it off? Above all, if he were ascending as he was assumed to have ascended, would he leave a perfect specimen of that incriminating print in the very place which the police would be quite certain to search for the express purpose of discovering finger-prints? The thing was incredible. The very bluntness of it was enough to raise a suspicion of imposture.

"That, as I have said, is taking the thumb-print apart from any other facts or deductions. But now let us consider it in connection with what we have deduced. If we suggest that the thumb-print was Gannet’s and that he had planted it where it was certain to be found by the police, at once we exchange a wild improbability for a very striking probability. For thus he would have contrived to kill an additional, very important, bird with the same stone. He has got rid of Boles, the blackmailer. But now he has also got rid of the Newingstead murderer. He has attached the incriminating thumb-print to the person of Boles, and as Boles has ceased to exist, the fraud can never be discovered. He has made himself absolutely
safe; for the police have an exact description of Boles—who was at least three inches taller than Gannet and had brown eyes. So that even if, by some infinitely remote chance, Gannet should leave his thumb-print on some object and it should be found by the police, still he would be in no danger. They would assume as a certainty that it had been made by a tall, brown-eyed man, and they would search for that man—and never find him.

"Here, then, is a fresh agreement; and you notice that our deductions are mounting up, and that they conform to the great rule of circumstantial evidence; that all the facts shall point to the same conclusion. Our hypothesis is very largely confirmed, and we are justified in believing it to be the true one. That, at least, was my feeling at this stage. But still there remained another matter that had to be considered; an important matter, too, since it might admit of an actual experimental test. Accordingly I gave it my attention.

"I had concluded (provisionally) that Gannet was the Newingstead murderer. If he were, he had in his possession fifteen large diamonds of the aggregate value of about ten thousand pounds. How would he have disposed of those diamonds? He could not carry them on his person, for apart from their great value, they were highly incriminating. Merely putting them under lock and key would hardly be sufficient, for Boles was still frequenting the house and he probably knew all about the methods of opening drawers and cupboards. Something more secure would be needed; something in the nature of an actual hiding place. But he was planning to dispose of Boles and then to disappear; and naturally, when the time should come for him to disappear, he would want to take the diamonds with him. But still he might be unwilling to have them on his person. How was this difficulty to be met?

"Here, once more, enlightenment came from the invaluable Oldfield. In the course of his search of the deserted house he observed that the pottery which had been on the mantelpiece of Gannet’s bedroom had disappeared. Now this was a rather remarkable circumstance. The disappearance of the pottery seemed to coincide with the disappearance of Gannet, and one naturally asked oneself whether there could be any connection between the two events, and if so, what the nature of that connection might be. The pottery consisted, as I remembered, of a number of bowls and jars and a particularly hideous stoneware figure. The pots seemed to be of no special interest. But the figure invited inquiry. A pottery figure is necessarily hollow, for lightness and to allow of even shrinkage during the firing; and the cavity inside would furnish a possible hiding place, though not, perhaps, a very good one, if the figure were of the ordinary type.

"But this figure was not of the ordinary type. I ascertained the fact from Oldfield, who had examined it and who gave me an exact description of it. And a most astonishing it was; for it seemed to involve a physical impossibility. The figure, he informed me, had a flat base covered with some sort of white enamel on which was the artist’s signature. There was no opening in it, nor was there any opening either at the back or the top. That was according to his recollection, and he could hardly have been mistaken, for he had examined the figure all over and he was certain that there was no hole in it anywhere.

"Now, here was a most significant fact. What could be the explanation? There were only two possibilities, and one of them could be confidently rejected. Either the figure was solid or an opening in it had been filled up. But it could not be solid, for there must be some cavity in a pottery figure to allow for shrinkage without cracking. But if it was hollow, there must have been some opening in it originally. For a hollow figure in which there was no opening would be blown to pieces by the expansion of the imprisoned air during the firing. The only possible conclusion was that an opening originally existing had been filled up; and this conclusion was supported by the condition of the base. It is there that the opening is usually placed, as it is hidden when the figure is standing; and there it had apparently been in this case; for the white, glazed enamel looked all wrong, seeing that the figure itself was salt-glazed, and in any case, it was certainly an addition. Moreover, as it must have been added after the firing, it could hardly have been a ceramic enamel but was more probably some kind of hydraulic cement such as Keene’s. But whatever the material may have been, the essential fact was that the opening had been filled up and concealed, and the open cavity converted into a sealed cavity.

"Here, then, was an absolutely perfect hiding place, which had the additional virtue of being portable. But if it contained the diamonds, as I had no doubt that it did, it was necessary to find out without delay what had become of it. For wherever the diamonds were, sooner or later Gannet would be found there. In short, it seemed that the stoneware monkey might supply the crucial fact which would tell us whether our hypothesis was true or false.

"There was no difficulty in tracing the monkey, for Oldfield had learned that it had been sent, with the other pottery, to a loan exhibition at a museum in Hoxton. But before going there to examine it and check Oldfield’s description, I had to acquire a few preliminary data. From Mr. Kempster of the Bond Street gallery I obtained the name and address of the owner of a replica of the figure; and as the question of weight might arise, I took the opportunity to weigh and measure one of Gannet’s bowls.

"The owner of the replica, a Mr. Broomhill, gave us every facility for examining it, even to weighing it. We found that it was hollow and judging by the weight, that it had a considerable interior cavity. There was an oval opening in the base of about an inch and a half in the longer diameter, through which we could see the marks of a thumb, showing that the figure was a squeeze from a mould; and it was a little significant that all the impressions appeared to be those of a right thumb.

"Armed with these data, we went to the museum, where we were able to examine, handle and weigh Gannet’s figure. It corresponded completely with Oldfield’s description, for there was no opening in any part of it. The appearance of the base suggested that the original opening had been filled with Keene’s cement and glazed with cellulose varnish. That the figure was hollow was proved by its weight, but this was about six ounces greater than that of Broomhill’s replica; a difference that would represent, roughly, the weight of the diamonds, the packing and the cement stopping. Thus the observed facts
were in complete agreement with the hypothesis that the diamonds had been concealed in the figure; and you will notice that they were inexplicable on any other supposition.

"We now went into the office and made a few inquiries, and the answers to these—quite freely and frankly given by the curator, Mr. Sancroft—disclosed a most remarkable and significant group of facts. It appeared that the figure had been sold a short time before it had been sent to the museum. The purchaser, Mr. James Newman, had then gone abroad but expected to return in about three months, when he proposed to call at the museum and claim his property. The arrangements to enable him to do so were very simple but very interesting. As Mr. Newman was not known personally to Mr. Sancroft (who also, by the way, had never met Peter Gannet, he would produce a letter of introduction and a written order to Mr. Sancroft to deliver the figurine to Newman, who would then give a receipt for it.

“These arrangements presented a rather striking peculiarity. They involved the very minimum of contacts. There was no correspondence by which an address would have had to be disclosed. Mr. Newman, a stranger to Sancroft, would appear in person, would present his order, receive his figurine and then disappear, leaving no clue as to whence he had come or whither he had gone. The appearances were entirely consistent with the possibility that Mr. Newman and Peter Gannet were one and the same person. And this I felt convinced was the fact.

“But if Newman was Gannet, what might we predict as to his personal appearance? He would almost certainly be clean shaven and there might be a certain amount of disguise. But the possibilities of disguise off the stage are very limited, and the essential personal characteristics remain. Stature cannot be appreciably disguised, and eye colour not at all. Gannet’s height was about five feet eight and his eyes were of a pale grey. He had a scar across his left eyebrow and the middle finger of his right hand had an ankylosed joint. Neither the scar nor the stiff joint could be disguised, and it would be difficult to keep them out of sight.

“We learned from Sancroft that the three months had expired and that Mr. Newman might be expected at any moment. Evidently, then, whatever was to be done must be done at once. But what was to be done? The final test was the identity of Newman, and that test could be applied only by me. I had to contrive, if possible, to be present when Newman arrived, for no subsequent shadowing of him was practicable. Until he was identified as Gannet he could not be stopped or prevented from leaving the country.

“At first it looked almost like an impossible problem, but certain peculiar circumstances made it comparatively easy. I was able to install my man, Snuper, at the museum to hold the fort in my absence. I gave him the description of Gannet and certain instructions which I need not repeat in detail as it never became necessary to act on them. By good luck it happened that Newman arrived in the evening when Snuper was in charge alone. He had no authority to deliver up the figure so he made an appointment for the following morning. Then he sent me a message stating what had happened and that Mr. Newman seemed to answer my description; whereupon I got into communication with Blandy and advised him to come to the museum on the chance that Newman might be the man whom he wanted for the Newingstead affair.

“You know the rest. Jervis and I were at the museum when Newman arrived and Blandy was lurking in the entry. But, even then, the case was still only a train of hypothetical reasoning. Nothing had really been proved. Even when I stood behind Newman waiting for him to discover my presence, it was still possible that he might turn and reveal himself as a perfectly innocent stranger. Only at the very last moment, when he turned to face me and I recognized him as Gannet and saw that he recognized me, did I know that there had been no flaw in my reasoning. It was a dramatic moment, and a more unpleasant one I hope never to experience.”

"It was rather horrible," I agreed. "The expression on the poor devil’s face when he saw you, haunts me to this day. I was almost sorry for him."

"Yes," said Thorndyke, "it was a disagreeable duty. The pursuit had been full of interest, but the capture I would gladly have left to the police, if that had been possible. But it was not. Our mutual recognition was the crucial fact.

"And now, after all this logic chopping, perhaps a glass of wine would not come amiss. Let us pledge our colleague, Oldfield, who set our feet on the right track. And I may remark, Polton, that one fluid drachm is not a glass of wine within the meaning of the act."

The abstemious Polton crinkled guiltily and poured another thirty minims into the bottom of his glass. Then we solemnly pledged our friend, who received the tribute with a rather sheepish smile.

"It is very good of you, sir," said he, "to give me so much undeserved credit, and most kind of you all to drink my health. I realize my limitations, but it is a satisfaction to me to know that, if my wits are none of the most brilliant, I have at least been the occasion of wit in others."

There is little more to tell. The repentant Blandy, by way of making amends to his late victim (and possibly of casting a discreet veil over his own mistakes, so arranged matters with the coroner that the inquest on “a man who called himself James Newman” was conducted with the utmost tact and the minimum of publicity; whereby the future of Mrs. Gannet was left unclouded and the susceptibilities of our friend Linnell unoffended.

As to the monkey, it experienced various vicissitudes before it finally came to rest in appropriate surroundings. First, by Mrs. Gannet, it was presented to Thorndyke “as a memorial.” But we agreed that it was too ugly even for a memorial, and I secretly took possession of it and conveyed it to Oldfield; who accepted it gleefully with a cryptic grin which I did not, at the time, understand. But I understood it later when he informed me—with a grin which was not at all cryptic—that he had presented it to Mr. Bunderby.
MR. POLTON EXPLAINS
INTRODUCTORY OBSERVATIONS BY MR. POLTON

FRIENDS of Dr. Thorndyke who happen to have heard of me as his servant and technical assistant may be rather surprised to see me making my appearance in the character of an author. I am rather surprised, myself; and I don’t mind admitting that of all the tools that I have ever used, the one that is in my hand at the present moment is the least familiar and the most unmanageable. But mere lack of skill shall not discourage me. The infallible method, as I have found by experience, of learning how to do any thing is to do it, and keep on doing it until it becomes easy. Use is second nature, as a copy-book once informed me.

But I feel that some explanation is necessary. The writing of this record is not my own idea. I am acting on instructions; and the way in which the matter arose was this. My master, the Doctor, was commissioned to investigate the case of Cecil Moxdale deceased, and a very queer case it was. So queer that, as the Doctor assures me, he would never have been able to come to a definite conclusion but for one little fact that I was able to supply. I think he exaggerates my importance and that he would have found it out for himself. Still, that one little fact did certainly throw a new light on the case, so, when the time came for the record of it to be written, both the Doctor himself and Dr. Jervis decided that I was the proper person to set forth the circumstances that made the final discovery possible.

That was all very well, but the question was, What were the circumstances and when did they begin? And I could find no answer; for as soon as I thought that I had found the beginning of the train of circumstances, I saw that it would never have happened if something had not happened before it. And so it went on. Every event in my life was the result of some other event, and, tracing them back one after the other, I came to the conclusion that the beginning of the train of circumstances was also the beginning of me. For, obviously, if I had never been born, the experiences that I have to record could never have happened. I pointed this out to the Doctor, and he agreed that my being born was undoubtedly a contributory circumstance, and suggested that perhaps I had better begin with that. But, on reflection, I saw that this was impossible; for, although being born is undeniably a personal experience, it is, oddly enough, one which we have to take on hearsay and which it would therefore be improper to include in one’s personal recollections.

Besides, although this history seems to be all about me, it is really an introduction to the case of Cecil Moxdale deceased; and my little contribution to the solving of that mystery was principally a matter of technical knowledge. There were some other matters; but my connection with the case arose out of my being a clock-maker. Accordingly, in these recollections, I shall sort out the incidents of my life, and keep, as far as possible, to those which present me in that character.

There is a surprising amount of wisdom to be gathered from copy-books. From one I learned that the boy is father to the man, and from another, to much the same effect, that the poet is born, not made. As there were twenty lines to the page, I had to repeat this twenty times, which was more than it merited. For the thing is obvious enough, and, after all, there is nothing in it. Poets are not peculiar in this respect. The truth applies to all other kinds of persons, including fools and even clock-makers; that is, if they are real clock-makers and not just common men with no natural aptitude who have drifted into the trade by chance.

Now, I was born a clock-maker. It may sound odd, but such, I am convinced, is the fact. As far back as I can remember, clocks have always had an attraction for me quite different from that of any other kind of things. In later years my interests have widened, but I have still remained faithful to my old love. A clock (by which I mean a mechanical time-keeper of any kind) still seems to me the most wonderful and admirable of the works of man. Indeed, it seems something more: as if it were a living creature with a personality and a soul of its own, rather than a mere machine.

Thus I may say that by these beautiful creations my life has been shaped from the very beginning. Looking down the vista of years, I seem to see at the end of it the old Dutch clock that used to hang on the wall of our kitchen. That clock, and certain dealings with it on a particular and well-remembered day, which I shall mention presently, seem to mark the real starting-point of my journey through life. This may be a mere sentimental delusion, but it doesn’t appear so to me. In memory, I can still see the pleasant painted face, changing in expression from hour to hour, and hear the measured tick that never changed at all; and to me, they are the face and the voice of an old and beloved friend.

Of my first meeting with that clock I have no recollection, for it was there when my Aunt Gollidge brought me to her home, a little orphan of three. But in that curious hazy beginning of memory when the events of our childhood come back to us in detached scenes like the pictures of a magic lantern, the old clock is the one distinct object; and as memories become more connected, I can see myself sitting in the little chair that Uncle Gollidge had made for me, looking up at the clock with an interest and pleasure that were never exhausted. I suppose that to a child any inanimate thing which moves of its own accord is an object of wonder, especially if its movements appear to have a definite purpose.

But of explanations I have given enough and of apologies I shall give none; for if the story of my doings should appear to the reader as little worth as it does to me, he has but to pass over it and turn to the case to which it forms the introduction.
PART I. THE ANTECEDENTS

I. THE YOUNG HOROLOGIST

“DRAT that clock!” exclaimed my Aunt Judy. “Saturday night, too. Of course, it would choose Saturday night to stop.”

She looked up malevolently at the stolid face and the motionless pendulum that hung straight down like a plumb-bob, and then, as she hopped up on a chair to lift the clock off its nail, she continued: “Get me the bellows, Nat.”

I extricated myself with some difficulty from the little arm-chair. For dear Uncle Gollidge had over looked the fact that boys grow and chairs do not, so that it was now a rather tight fit with a tendency to become, like a saun’s shell, a permanent attachment. The separation accomplished, I took the bellows from the hook beside the fire-place and went to my aunt’s assistance; she having, in her quick, brisk way, unhooked the pendulum and opened the little side doors of the case. Then I held the clock steady on the table while she plied the bellows with the energy of a village blacksmith, blowing out a most encouraging cloud of dust through the farther door-opening.

“We will see what that will do,” said she, slapping the little doors to, fastening the catches and hooking on the pendulum. Once more she sprang up on the chair, replaced the clock on its nail, gave the pendulum a persuasive pat, and descended.

“What is the time by your watch, Dad?” she asked. Old Mr. Gollidge paused in the story that he was telling and looked at her with mild reproach. A great story-teller was old Mr. Gollidge (he had been a ship’s carpenter), but Aunt Judy had a way of treating his interminable yarns as mere negligible sounds like the ticking of a clock or the dripping of a leaky tap, and she now repeated her question; whereupon the old gentleman, having contributed to a large spittoon at his side, stuck his pipe in his mouth and hauled a bloated silver watch from the depths of his pocket as if he were hoisting out cargo from the lower hold.

“Watch seems to say,” he announced, after looking at it with slight surprise, “as it’s a quarter past six.”

“Six!” shrieked Aunt Judy. “Why, I heard the church clock strike seven a full half-hour ago.”

“Then,” said the old gentleman, “twould seem to be about three bells, say half-past seven. Watch must have stopped.”

He confirmed the diagnosis by applying it to his ear, and then, having fished up from another pocket an old-fashioned bronze, crank-shaped key, opened the front glass of the watch, which had the winding-hole in the dial like a clock, inserted the key and proceeded to wind as if he were playing a little barrel-organ.

“Half-past seven, you say,” said he, transferring the key to the centre square preparatory to setting the hands.

Aunt Judy looked up at the clock, which was still sluggishly wagging its pendulum but uttering no tick, and shook her head impatiently.

“It’s no use guessing,” said she. “We shall want to know the time in the morning. If you put on your slipper, Nat, you can run round and have a look at Mr. Abraham’s clock. It isn’t far to go.”

The necessity for putting on my slipper arose from a blister on my heel which had kept me a bootless prisoner in the house. I began cautiously to insinuate my foot into the slipper and had nearly completed the operation when Aunt Judy suddenly interposed.

“Listen,” said she; and as we all froze into immobility, the silence was broken by the church clock striking eight. Then old Mr. Gollidge deliberately set the hands of his watch, put it to his ear to make sure that it was going, and lowered it into his pocket; and Aunt Judy, mounting the chair, set the clock to time, gave the pendulum a final pat, and hopped down.

“We’ll give it another chance,” she remarked, optimistically; but I knew that her optimism was unfounded when I listened for the tick and listened in vain; and, sure enough, the oscillations of the pendulum slowly died away until it hung down as motionless as the weight.

In the ensuing silence, old Mr. Gollidge took up the thread of his narrative.

“And then the boy comes up from the cuddy and says he seemed to hear a lot of water washin’ about down below. So the mate he tells me for to sound the well, which I did; and, of course, I found there was a foot or two of water in it. There always was. Reg’ler old basket, that ship was. Always a-drainin’ in, a-drainin’ in, and the pumps a-goin’ something crool.”

“Ought to have had a windmill,” said Uncle Gollidge, taking a very black clay pipe from his mouth and expectorating skilfully between the bars of the grate, “same as what the Dutchmen do in the Baltic timber trade.”

The old gentleman shook his head. “Windmills is all right,” said he, “if you’ve got a cargo of soft timber what’ll float anyway. But they won’t keep a leaky ship dry. Besides—”

“Now, Nat,” said Aunt Judy, hooking a Dutch oven on the bar of the grate, “bring your chair over and keep an eye on the black pudding; and you, Sam, just mind where you’re spitting.”

Uncle Sam, who rather plumed himself on his marksmanship, replied with a scornful grunt; I rose to my feet (the chair rising with me) and took up my station opposite the Dutch oven, the back flap of which I lifted to make an interested inspection of the slices of black pudding (longitudinal sections, as the Doctor would say) which were already beginning to
perspire greasily, in the heat. Meanwhile, Aunt Judy whisked about the kitchen (also the general sitting-room) busily making ready for the morrow, and old Mr. Gollidge droned on tirelessly like the brook that goes on for ever.

Of the morrow’s doings I must say a few words, since they formed a milestone marking the first stage of my earthly pilgrimage. It had been arranged that the four of us should spend the Sunday with Aunt Judy’s younger Sister, a Mrs. Budgen, who lived with her husband in the country out Finchley way. But my unfortunate blistered heel put me out of the party, much to my regret, for these excursions were the bright spots in my rather drab existence. Aunt Budgen was a kindly soul who gave us the warmest of welcomes, as did her husband, a rather taciturn dairy-farmer. Then there was the glorious drive out of London on the front seat of the Finchley omnibus with its smart, white-hatted driver and the third horse stepping out gaily in front with jingling harness and swaying swingle-bar.

But the greatest delight of these visits was the meeting with my sister, Maggie, who had been adopted by Aunt Budgen at the time when Aunt Judy had taken me. These were the only occasions on which we met, and it was a joy to us both to ramble in the meadows, to call on the cows in the shippon, or to sit together on the brink of the big pond and watch the incredible creatures that moved about in its depths.

However, there were to be compensations. Aunt Judy expounded them to me as I superintended the black pudding, turning the Dutch oven when necessary to brown the opposite sides.

"I’m leaving you three pork sausages; they’re rather small ones, but you are rather a small boy; and there are some cold potatoes which you can cut into slices and fry with the sausages, and mind you don’t set the chimney on fire. Then there is a baked raisin pudding—you can hot that up in the oven—and a whole jar of raspberry jam. You can take as much of that as you like, so long as you don’t make yourself ill; and I’ve left the key in the book-cupboard, but you must wash your hands before you take any of the books out. I am sorry you can’t come with us, and Maggie will be disappointed, too; but I think you’ll be able to make yourself happy. I know you don’t mind being alone a bit."

Aunt Judy was right. I was a rather solitary boy; a little given to day-dreaming and, consequently, partial to my own society. But she prophesied better than she knew. Not only was I able to make myself happy in my solitude; but that Sunday stands out as one of the red-letter days of my life.

To be sure, the day opened rather cheerlessly. As I stood on the doorstep with my single boot and bandaged foot, watching the departure, I was sensible of a pang of keen disappointment and of something approaching loneliness. I followed the receding figures wistfully with my eyes as they walked away down the street in their holiday attire, Aunt Judy gorgeous in her silk dress and gaily-flowered bonnet and the two men in stiff black broadcloth and tall hats, to which old Mr. Gollidge’s fine, silver-topped malacca gave an added glory. At the corner Aunt Judy paused to wave her hand to me; then she followed the other two and was lost to view.

I turned back sadly into the house, which, when I had shut the door, seemed dark and gloomy, and made my way to the kitchen. In view of the early start to catch the omnibus, I had volunteered to wash up the breakfast things, and I now proceeded to get this job off my hands; but as I dabbled at the big bowl in the scullery sink, my thoughts still followed the holiday makers. I saw them mounting the omnibus (it started from St. Martin’s Church), and visualized its pea-green body with the blessed word "Finchley" in big gold letters. I saw the driver gather up the reins and the conductor spring up to the monkey-board; and then away the omnibus rattled, and my thoughts went on ahead to the sweet countryside and to Maggie, waiting for me at the stile, and waiting in vain. That was the most grievous part of the affair, and it wrung my heart to think of it; indeed, if it had not been beneath the dignity of a young man of nine to shed tears, I think I should have wept.

When I had finished with the crockery, put the plates in the rack and hung the cups on their hooks, I tidied up the sink and then drifted through into the kitchen, where I looked about me vaguely, still feeling rather miserable and unsettled. From the kitchen I wandered into the parlour, or “best room”, where I unlocked the book cupboard and ran my eye along the shelves. But their contents had no attractions for me. I didn’t want books; I wanted to run in the fields with Maggie and look on all the things that were so novel and strange to a London boy. So I shut the cupboard and went back to the kitchen, where, once more, I looked about me, wondering what I should do to pass the time. It was too early to think of frying the sausages, and, besides, I was not hungry, having eaten a substantial breakfast.

It was at this moment that my wandering glance lighted on the clock. There it hung, stolid-faced, silent, and motionless. What, I wondered, could be the matter with it? Often enough before had it stopped, but Aunt Judy’s treatment with the bellows had always set it ticking again. Now the bellows seemed to have lost their magic and the clock would have to have something different done to it.

But what? Could it be just a matter of old age? Clocks, I realized, grow old like men; and, thinking of old Mr. Gollidge, I realized also that old age is not a condition that can be cured. But I was loth to accept this view and to believe that it had “stopped short, never to go again “, like Grandfather’s Clock in the song.

I drew up a high chair, and, mounting it, looked up earnestly at the familiar face. It was a pleasant old clock, comely and even beautiful in its homely way, reflecting the simple, honest outlook of the Black Forest peasants who had made it; the wooden dial painted white with a circle of fine bold hour-figures (“chapters” they call them in the trade), a bunch of roses painted on the arch above the dial, and each of the four corner-spaces, or spandrels, decorated with a sprig of flowers, all done quite skilfully and with the unerring good taste of the primitive artist.

From inspection I proceeded to experiment. A gentle pat at the pendulum set it swinging, but brought no sound of life
from within; but when I turned the minute-hand, as I had seen Aunt Judy do, while the pendulum still swung, a faint tick was audible; halting and intermittent, but still a tick. So the clock was not dead. Then I tried a gentle pull at the chain which bore the weight, whereupon the tick became quite loud and regular, and went on for some seconds after I ceased to pull, when it once more died away. But now I had a clue to the mystery. The weight was not heavy enough to keep the clock going; but since the weight had not changed, the trouble must be something inside the clock, obstructing its movements. It couldn’t be dust because Aunt Judy had blown it out thoroughly. Then what could it be?

As I pondered this problem I was assailed by a great temptation. Often had I yearned to look into the clock and see what its mysterious “works” were really like, but beyond a furtive peep when the bellows were being plied, I had never had an opportunity. Now, here was a perfect opportunity. Aunt Judy, no doubt, would have disapproved, but she need never know; and, in any case, the clock wouldn’t go, so there could be no harm. Thus reasoning, I unhooked the weight from the chain and set it down on the chair, and then, without difficulty, reached up, lifted the clock off its nail, and, descending cautiously with my prize, laid it tenderly on the table.

I began by opening the little side doors and the lifting them bodily off the brass hooks that served as hinges. Now I could see how to take off the pendulum, and, when I had done this, I carried the clock to the small table by the window, drew up a chair, and, seating myself, proceeded to study the interior at my ease. Not that there was much to study in its simple, artless mechanism. Unlike most of these “Dutch” clocks, it had no alarum (or perhaps this had been removed), and the actual “train” consisted of no more than three wheels and two pinions. Nothing more perfect for the instruction of the beginner could be imagined. There were, it is true, some mysterious wheels just behind the dial in a compartment by them selves and evidently connected with the hands, but these I disregarded for the moment, concentrating my attention on what I recognized as the clock, proper.

It was here that my natural mechanical aptitude showed itself, for by the time that I had studied the train in all its parts, considering each wheel in connection with the pinion to which it was geared, I had begun to grasp the principle on which the whole thing worked. The next proceeding was to elucidate the matter by experiment. If you want to know what effects a wheel produces when it turns, the obvious thing is to turn the wheel and see what happens. This I proceeded to do, beginning with the top wheel, as the most accessible, and turning it very gently with my finger. The result was extremely interesting. Of course, the next wheel turned slowly in the opposite direction, but, at the same time, the wire pendulum-crutch wagged rapidly to and fro.

This was quite a discovery. Now I understood what kept the pendulum swinging and what was cause of the tick; but, more than this, I now had a clear idea as to the function of the pendulum as the regulator of the whole movement. As to the rest of the mechanism, there was little to discover. I had already noticed the ratchet and pawl connected with the pulley, and now, when I drew the chain through, the reason why it moved freely in the one direction and was held immovable in the other was perfectly obvious; and this made clear the action of the weight in driving the clock.

There remained the group of wheels in the narrow space behind the dial. From their position they were less easy to examine, but when I turned the minute-hand and set them in motion, their action was quite easy to follow. There were three wheels and one small pinion, and when I moved the hand round they all turned. But not in the same direction. One wheel and the pinion turned in the opposite direction to the hand, while the other two wheels, a large one and a much smaller one, turned with the hand; and as the large one moved very slowly, being driven by the little pinion, whereas the small one turned at the same speed as the hand, I concluded that the small wheel belonged to the minute-hand, while the large wheel turned the hour-hand. And at this I had to leave it, since the actual connections could not be ascertained without taking the clock to pieces.

But now that I had arrived at a general understanding of the clock, the original problem reappeared. Why wouldn’t it go? I had ascertained that it was structurally complete and undamaged. But yet when it was started it refused to tick and the pendulum did nothing but wag passively and presently cease to do even that. When it had stopped on previous occasions, the bellows had set it going again. Evidently, then, the cause of the stoppage had been dust. Could it be that dust had at last accumulated beyond the powers of the bellows? The appearance of the inside of the clock (and my own fingers) lent support to this view. Wheels and case alike presented a dry griminess that seemed unfavourable to easy running. Perhaps the clock simply wanted cleaning.

Reflecting on this, and on the difficulty of getting at the wheels in the narrow space, it suddenly occurred to me that my tooth-brush would be the very thing for the purpose. Instantly, I hopped off to my little bedroom and was back in a few moments with this invaluable instrument in my hand. Pausing only to make up the fire, which was nearly out, I fell to work on the clock, scrubbing wheels and pinions and what ever the brush would reach, with visible benefit to everything, excepting the brush. When the worst of the grime had been removed, I blew out the dislodged dust with the bellows and began to consider how I should test the results of my efforts. There was no need to hang the clock on its nail (and, indeed, I was not disposed to part with it so soon), but it must be fixed up somehow so that the weight and the pendulum could hang free. Eventually, I solved the problem by drawing the small table towards the large one, leaving a space of about nine inches between them, and bridging the space with a couple of narrow strips of wood from a broken-up packing-case. On this bridge I seated the clock, with its chain and the re-hung pendulum hanging down between the strips. Then I hooked on the weight and set the pendulum swinging.

The result was disappointing, but yet my labour had not been all in vain. Start of itself the clock would not, but a slight pull at the chain elicited the longed-for tick, and thereafter for a full minute it continued and I could see the scape wheel
turning. But there was no enthusiasm. The pendulum swung in a dead-alive fashion, its excursions growing visibly shorter, until, at length, the ticking stopped and the wheel ceased to turn.

It was very discouraging. As I watched the pendulum and saw its movements slowly die away, I was sensible of a pang of keen disappointment. But still I felt that I had begun to understand the trouble and perhaps I might, by taking thought, hit upon some further remedy. I got up from my chair and wandered restlessly round the room, earnestly cogitating the problem. Something in the clock was resisting the pull of the weight. Now, what could it be? Why had the wheels become more difficult to turn?

So delightfully absorbed was I in seeking the solution of this mystery that all else had faded out of my mind. Gone was all my depression and loneliness. The Finchley omnibus was forgotten; Aunt Budgen was as if she had never been; the green meadows and the pond, and even dear Maggie, had passed clean out of my consciousness. The clock filled the field of my mental vision and the only thing in the world that mattered was the question, What was hindering the movement of its wheels?

Suddenly, in my peregrinations I received an illuminating hint. Stowed away in the corner was Aunt Judy's sewing-machine. Now sewing-machines and clocks are not very much alike, but they both have wheels; and it was known to me that Aunt Judy had a little oil-can with which she used to anoint the machine. Why did she do that? Obviously, to make the wheels run more easily. But if the wheels of a sewing-machine needed oil, why should not those of a clock? The analogy seemed a reasonable one, and, in any case, there could be no harm in trying. Cautiously, and without some qualms of conscience, I lifted the cover of the machine, and, having found the little, long-snouted oil-can, seized it and bore it away with felonious gleam.

My proceedings with that oil-can will hardly bear telling; they would have brought tears to the eyes of a clock-maker. I treated my patient as if it had been an express locomotive with an unlimited thirst for oil. Impartially, I flooded every moving part, within and without: pallets, wheel-teeth, pivots, arbors, the chain-pulley, the “motion wheels” behind the dial, and the centres of the hands. I even oiled the pendulum rod as well as the crank that held it. When I had finished, the whole interior of the clock seemed to have broken out into a greasy perspiration, and even the woodwork was dark and shiny. But my thoroughness had one advantage: if I oiled all the wrong places, I oiled the right ones as well.

At length, when there was not a dry spot left any where, I put down the oil-can, and “in trembling hope” proceeded to make a fresh trial; and even now, after all these years, I can hardly record the incident without emotion. A gentle push at the pendulum brought forth at once a clear and resonant tick, and, looking in eagerly, I could see the scape wheel turning with an air of purpose and the centre wheel below it moving steadily in the opposite direction. And it was no flash in the pan this time. The swing of the pendulum, instead of dying away as before, grew in amplitude and liveliness to an extent almost beyond belief. It seemed that, under the magical influence of the oil-can, the old clock had renewed its youth.

To all of us, I suppose, there have come in the course of our lives certain moments of joy which stand out as unique experiences. They never come a second time; for though the circumstances may seem to recur, the original ecstasy cannot be recaptured. Such a moment was this. As I sat and gazed in rapture at the old clock, called back to vigorous life by my efforts, I enjoyed the rare experience of perfect happiness. Many a time since have I known a similar joy, the joy of complete achievement (and there is no pleasure like it); but this was the first of its kind, and, in its perfection, could never be repeated.

Presently, there broke in upon my ecstasy the sound of the church clock, striking two. I could hardly believe it; so swiftly had the hours sped. And yet certain sensations of which I suddenly became conscious confirmed it. In short, I realized that I was ravenously hungry and that my dinner had yet to be cooked. I set the hands of the clock to the incredible time and rose to seek the frying-pan. But, hungry as I was, I could not tear myself away from my darling, and in the end I compromised by substituting the Dutch oven, which required less attention. Thus I alternated between cookery and horology, clapping the pudding in the large oven and then sitting down once more to watch the clock until an incendiary sausage, bursting into flame with mighty sputterings, recalled me suddenly to the culinary department.

My cookery was not equal to my horology, at least in its results; yet never have I so thoroughly enjoyed a meal. Black and brittle the sausages may have been and the potatoes sodden and greasy. It was no matter. Hunger and happiness imparted a savour beyond the powers of the most accomplished chef. With my eyes fixed adoringly on the clock (I had “laid my place” where I could conveniently watch the movement as I fed), I devoured the unprepossessing viands with a relish that a gourmet might have envied.

Of the way in which the rest of the day was spent my recollection is rather obscure. In the course of the afternoon I washed up the plates and cleaned the Dutch oven so that Aunt Judy should be free when she came home; but even as I worked at the scullery sink, I listened delightedly to the tick of the clock, wafted to my ear through the open doorway. Later, I made my tea and consumed it, to an obbligato accompaniment of raspberry jam, seated beside the clock; and, when I was satisfied unto repletion, I washed the tea-things (including the tea-pot) and set them out tidily in their places on the dresser. That occupied me until six o’clock, and left me with a full three hours to wait before Aunt Judy should return.

Incredibly long hours they were, in strange contrast to the swift-footed hours of the morning. With anxious eyes I watched the minute hand creeping sluggishly from mark to mark. I even counted the ticks (and found them ninety-six to the minute), and listened eagerly for the sound of the church clock, at once relieved and disappointed to find that it told the same tale. For now my mood had changed somewhat. The joy of achievement became mingled with impatience for its
revelation. I was all agog to see Aunt Judy's astonishment when she found the clock going and to hear what she would say. And now, in my mind's eye, the progress of the Finchley omnibus began to present itself. I followed it from stage to stage, crawling ever nearer and nearer to St. Martin's Church. With conscious futility I went out, again and again, to look up the street along which the revellers would approach, only to turn back for another glance at the inexorable minute-hand.

At length, the sound of the church clock striking eight admonished me that it was time to return the clock to its place on the wall. It was an anxious business, for, even when I had unhooked the weight, it was difficult for me, standing insecurely on the chair, to reach up to the nail and find the hole in the back-plate through which it passed. But at last, after much fumbling, with up-stretched arm and my heart in my mouth, I felt the clock supported, and, having started the pendulum, stepped down with a sigh of relief and hooked on the weight. Now, all that remained to do was to put away the oil-can, wash my tooth-brush at the scullery and take it back to my bedroom; and when I had done this and lit the gas, I resumed my restless fittings between the kitchen and the street door.

Nine had struck when, at long last, from my post on the doorstep, I saw the home-corners turn the corner and advance up the lamp-lighted street. Instantly, I darted back into the house to make sure that the clock was still going, and then, returning, met them almost on the threshold. Aunt Judy greeted me with a kindly smile and evidently misinterpreted my eagerness for their return, for, as she stooped to kiss me, she exclaimed: "Poor old Nat! I'm afraid it has been a long, dull day for you, and we were all sorry that you couldn't come. However, there is something to make up for it. Uncle Alfred has sent you a shilling and Aunt Anne has sent you some pears; and Maggie has sent you a beautiful pocket-knife. She was dreadfully disappointed that she couldn't give it to you herself, because she has been saving up her pocket-money for weeks to buy it, and you will have to write her a nice letter to thank her."

Now this was all very gratifying, and when the big basket was placed on the kitchen table and the treasures unloaded from it, I received the gifts with proper acknowledgments. But they aroused no enthusiasm, nor even the pocket-knife, for I was bursting with impatience for someone to notice the clock.

"You don't seem so particularly grateful and pleased." said Aunt Judy, looking at me critically; and then, as I fidgetted about restlessly, she exclaimed, "What's the matter with the boy? He's on wires!"

She gazed at me with surprise, and Uncle Sam and the old gentleman turned to look at me curiously. And then, in the momentary silence, Aunt Judy's quick ear caught the tick of the clock. She looked up at it and then exclaimed: "Why, the clock's going; going quite well, too. Did you start it, Nat? But, of course, you must have done. How did you get it to go?"

With my guilty consciousness of the tooth-brush and the borrowed oil-can, I was disposed to be evasive.

"Well, you see, Aunt Judy," I explained, "it was rather dirty inside, so I just gave it a bit of a clean and put a little oil on the wheels. That's all."

Aunt Judy smiled grimly, but asked no further questions.

"I suppose," said she, "I ought to scold you for meddling with the clock without permission, but as you've made it go we'll say no more about it."

"No," agreed old Mr. Gollidge, "I don't see as how you could scold the boy for doing a useful bit of work. The job does him credit and shows that he's got some sense; and sense is what gets a man on in life."

With this satisfactory conclusion to the adventure, I was free to enter into the enjoyment of my newly-acquired wealth; and, having sampled the edible portion of it and tested the knife on a stick of fire-wood, spent the short remainder of the evening in rapturous contemplation of my new treasures and, the rejuvenated clock. I had never possessed a shilling before, and now, as I examined Uncle Alfred's gift and polished it with my handkerchief visions of its immense potentialities floated vaguely through my mind; and continued to haunt me, in company with the clock, even when I had blown out my candle and snuggled down into my narrow bed.

II. THE PICKPOCKET'S LEAVINGS

I T was shortly after my eleventh birthday that I conceived a really brilliant idea. It was generated by a card in the shop window of our medical attendant, Dr. Pope (in those days, doctors practising in humble neighbourhoods used to keep what were euphemistically described as "Open Surgeries", but which were, in effect, druggists' shops), bearing the laconic announcement, "Boy wanted." I looked at the card and debated earnestly the exact connotation of the word "wanted". It was known to me that some of my schoolfellows contrived to pick up certain pecuniary trifles by delivering newspapers before school hours or doing small jobs in the evenings. Was it possible that the boy wanted by Dr. Pope might thus combine remunerative with scholastic industry? There would be no harm in enquiring.

I entered, and, finding the Doctor secretly compounding medicine in a sort of hiding-place at the end of the counter, proceeded to state my case without preamble.

The Doctor put his head round the corner and surveyed me somewhat disparagingly.

"You're a very small boy," he remarked.

"Yes, sir," I admitted, "but I am very strong for my size."
He didn’t appear much impressed by this, but proceeded to enquire:

“Did Mrs. Gollidge tell you to apply?”

“No, sir,” I replied, “it’s my own idea. You see, sir, I’ve been rather an expense to Aunt Judy—Gollidge, I mean—and I thought that if I could earn a little money, it would be useful.”

“A very proper idea, too,” said the Doctor, apparently more impressed by my explanation than by my strength. “Very well. Come round this evening when you leave school. Come straight here, and you can have some tea, and then you can take a basket of medicine and see how you get on with it. I expect you will find it a bit heavy.”

“It will get lighter as I go on, sir,” said I; on which the Doctor smiled quite pleasantly, and, having admonished me to be punctual, retired to his hiding-place, and I departed in triumph.

But the Doctor’s prediction turned out to be only too correct; for when I lifted the deep basket, stacked with bottles of medicine, I was rather shocked by its weight and had to remind myself of my own prediction that the weight would be a diminishing quantity. That was an encouraging reflection. Moreover, there had been agreeable preliminaries in the form of a Gargantuan tea, including a boiled egg and marmalade, provided by Mrs. Stubbs, the Doctor’s fat and jovial housekeeper. So I hooked the basket boldly on my arm—and presently shifted it to the other one—and set forth on my round, consulting the written list provided for me and judiciously selecting the nearest addresses to visit first and thereby lighten the basket for the more distant ones.

Still, there was no denying that it was heavy work for a small boy, and when I had made a second round with a fresh consignment, I felt that I had had enough for one day; and when I returned the empty basket, I was relieved to learn that there was nothing more to deliver.

“Well,” said the Doctor as I handed in the basket, “how did you get on?”

“All right, thank you, sir,” I replied, “but I think it would be easier if I put rather less in the basket and made more journeys.”

The Doctor smiled approvingly. “Yes,” he agreed, “that’s quite a sensible idea. Give your legs a bit more to do and save your arms. Very well; you think you can do the job?”

“I am sure I can, sir, and I should like to.”

“Good,” said he. “The pay will be three and sixpence a week. That suit you?”

It seemed to me an enormous sum, and I agreed gleefully; which closed the transaction and sent me homewards rejoicing and almost oblivious of my fatigue.

A further reward awaited me when I arrived home. Aunt Judy, it is true, had professed disapproval of the arrangement as interfering with my “schooling”; but the substantial hot supper seemed more truly to express her sentiments. It recognized my new status as a working man and my effort to pull my weight in the family boat.

The next day’s work proved much less arduous, for I put my plan into operation by sorting out the bottles into groups belonging to particular localities, and thus contrived never to have the basket more than half full. This brought the work well within my powers, so that the end of the day found me no more than pleasantly tired; and the occupation was not without its interest, to say nothing of the dignity of my position as a wage-earner. But the full reward of my industry came when, returning home on Saturday night, I was able to set down my three shillings and sixpence on the kitchen table before Aunt Judy, who was laying the supper. The little heap of silver coins, a florin, a shilling, and a sixpence, made a quite impressive display of wealth. I looked at it with proud satisfaction—and also with a certain wistful curiosity as to whether any of that wealth might be coming my way. I had faint hopes of the odd sixpence, and watched a little anxiously as Aunt Judy spread out the heap with a considering air. Eventually, she picked up the florin and the sixpence, and, pushing the shilling towards me, suddenly put her arm round my neck and kissed me.

“You’re a good boy, Nat,” said she; and as she released me and dropped the money in her pocket, I picked up my shilling and turned away to hide the tears that had started to my eyes. Aunt Judy was not a demonstrative woman; but, like many undemonstrative persons, could put a great deal of meaning into a very few words. Half a dozen words and a kiss sweetened my labours for many a day thereafter.

My peregrinations with the basket had, among other effects, that of widening the range of my knowledge of the geography of London. In my early days that knowledge was limited to the few streets that I traversed on my way to and from school, to certain quiet back waters in which one could spin tops at one’s convenience or play games without undue interruption, and certain other quiet streets in which one was likely to find the street entertainer: the acrobat, the juggler, the fire-eater, or, best of all, the Punch and Judy show.

But now the range of my travels coincided with that of Dr. Pope’s practice and led me far beyond the limits of the familiar neighbourhood; and quite pleasant these explorations were, for they brought me into new streets with new shops in them which provided new entertainment. I think shops were more interesting then than they are in these days of mass-production and uniformity, particularly in an old-fashioned neighbourhood where the crafts were still flourishing. A special favourite was Wardour Street, with its picture-frame makers, its antique shops filled with wonderful furniture and pictures and statuettes and gorgeous clocks.
But the shop that always brought me to a halt was that of M. Chanot, the violin-maker, which had, hanging on the door-jamb by way of a trade sign, a gigantic bow (or fiddlestick, as I should have described it). It was stupendous. As I gazed at it with the fascination that the juvenile mind discovers in things gigantic or diminutive, my imagination strove to picture the kind of fiddle that could be played with it and the kind of Titan who could have held the fiddle. And then, as a foil to its enormity, there hung in the window an infant violin, a "kit" such as dancing-masters were wont to carry in the skirt pockets of their ample frock-coats.

A few doors from M. Chanot's was the shop of a second-hand bookseller which was also one of the attractions of the street; for it was from the penny and twopenny boxes that my modest library was chiefly recruited. On the present occasion, having paid my respects to the Lilliputian fiddle and the Brobdingnagian bow, I passed on to see what treasures the boxes had to offer. Naturally, I tried the penny box first as being more adapted to my financial resources. But there was nothing in it which specially attracted me; whereupon I turned my attention to the twopenny box.

Now, if I were disposed to moralize, I might take this opportunity to reflect on the momentous consequences which may emerge from the most insignificant antecedents. For my casual rooting about in the twopenny box started a train of events which profoundly influenced my life in two respects, and in one so vitally that, but for the twopenny box, this story could never have been written.

I had turned over nearly all the contents of the box when from the lowest stratum I dredged up a shabby little volume the spine of which bore in faded gold lettering the title, "Clocks and Locks; Denison." The words instantly rivetted my attention. Shifting the basket to free both my hands, I opened the book at random and was confronted by a beautiful drawing of the interior of a common house-clock, clearly displaying the whole mechanism. It was a wonderful drawing. With fascinated eyes I pored over it, comparing it rapidly with the well-remembered Dutch clock at home and noting new and unfamiliar features. Then I turned over the leaves and discovered other drawings of movements and escapements on which I gazed in rapture. I had never supposed that there was such a book in the world.

Suddenly I was assailed by a horrible doubt. Had I got twopence? Here was the chance of a lifetime; should I have to let it slip? Putting the basket down on the ground, I searched feverishly through my pockets; but search as I might even in the most unlikely pockets, the product amounted to no more than a single penny. It was an awful predicament. I had set my heart on that book, and the loss of it was a misfortune that I shuddered to contemplate. Yet there was the grievous fact; the price of the book was two pence and I had only a penny.

Revolving this appalling situation, I thought of a possible way out of the difficulty. Leaving my basket on the pavement (a most reprehensible thing to do; but no one wants to steal medicine, and there were only three bottles left), I stepped into the shop with the book in my hand and deferentially approached the book-seller, a stuffy-looking elderly man.

"I want to buy this book, sir," I explained, timorously, "but it is twopence, and I have only got a penny. Will you keep it for me if I leave the penny as a deposit? I hope you will, sir. I very much want to have the book."

He looked at me curiously, and, taking the little volume from me, glanced at the title and then turned over the leaves.

"Clocks, hey," said he. "Know anything about clocks?"

"Not much, sir," I replied, "but I should like to learn some more."

"Well," said he, "you'll know all about them when you have read that book; but it is stiffish reading for a boy."

He handed it back to me, and I laid my penny on it and put it down on the counter.

"I will try to call for it this evening, sir," said I, "and pay the other penny; and you'll take great care of it, sir, won't you?"

My earnestness seemed to amuse him, but his smile was a kindly and approving smile.

"You can take it away with you," said he, "and then you will make sure of it."

Tears of joy and gratitude rose to my eyes, so that I had nearly taken up the penny as well as the book. I thanked him shyly but warmly and, picking up the precious volume, went out with it in my hand. But even now I paused to take another look at my treasure before resuming charge of the neglected basket. At length I bestowed the book in my pocket, and, returning to my proper business, took up the basket and was about to sort out the remaining three bottles when I made a most surprising discovery. At the bottom of the basket, beside the bottles, lay a leather wallet. I gazed at it in astonishment. Of course, it was not mine, and I had not put it there, nor, I was certain, had it been there when I went into the shop. Some one must have put it in during my short absence. But why should anyone present me with a wallet? It could hardly have been dropped into the basket by accident; but yet— I picked it out and examined it curiously, noting that it had an elastic band to keep it closed but that nevertheless it was open. Then I ventured to inspect the inside, but, beyond a few stamps and a quantity of papers, it seemed to contain nothing of interest to me. Besides, it was not mine. I was still puzzling over it when I became aware of a policeman approaching down the street in company with a short, wrathful looking elderly gentleman who appeared to be talking excitedly while the constable listened with an air of resignation. Just as they reached me, the gentleman caught sight of the wallet and immediately rushed at me and snatched it out of my hand.

"Here you are, Constable," he exclaimed, "here is the stolen property and here is the thief, taken red-handed."

"Red-handed be blowed," said the constable. "You said just now that you saw the man run away, and you've led me a dance a-chasing him. You had better see if there is anything missing."
But the wrathful gentleman had already seen that there was.

“Yes!” he roared, “there were three five-pound notes, and they're gone! Stolen! Fifteen pounds! But I'll have satisfaction.

I give this young villain in charge. Perhaps he has the notes on him still. We'll have him searched at the station.”

“Now, now,” said the constable, soothingly, “don't get excited, sir. Softly, softly, you catch the monkey. You said that you saw the man run off.”

“So I did; but, of course, this young rascal is a confederate, and I give him in charge.”

“Wait a minute, sir. Let's hear what he's got to say. Now, young shaver, tell us how you came by that pocket-book.”

I described the circumstances, including my absence in the shop, and the constable, having listened patiently, went in and verified my statement by questioning the bookseller.

“There, sir, you see,” said he when he came out, “it’s quite simple. The pickpocket fished the notes out of your wallet and then, as he was making off, he looked for some place where he could drop the empty case out of sight, and there was this boy’s basket with no one looking after it, just the very place he wanted. So he dropped it in as he passed. Wouldn’t have done to drop it in the street where some one might have seen it and run after him to give it back.”

The angry gentleman shook his head. “I can’t accept that,” said he. “It’s only a guess, and an unlikely one at that.”

“But,” the constable protested, “it’s what they always do: drop the empty purses or pocket-books in a doorway or a dark corner or post them in pillar-boxes—anywhere to get the incriminating stuff out of sight. It's common sense.”

But the gentleman was obdurate. “No, no,” he persisted, “that won’t do. The common sense of it is that I found this boy with the stolen property in his possession, and I insist on giving him in charge.”

The constable was in a dilemma, but he was a sensible man and he made the best of it. “Well, sir,” he said, “if you insist, I suppose we must walk round to the station and report the affair. But I can tell you that the inspector won’t take the charge.”

“He’ll have to,” retorted the other, “when I have made my statement.”

The constable looked at him sourly and then turned to me almost apologetically.

“Well, sonny,” said he, “you’ll have to come along to the station and see what the inspector has to say.”

“Can’t I deliver my medicines first?” I pleaded. “The people may be wanting them, and there are only three bottles.”

The policeman grinned but evidently appreciated my point of view, for he replied, still half-apologetically: “You’re quite right, my lad, but I don’t suppose they’ll be any the worse for a few minutes more without their physic, and the station is quite handy. Come, now; step out.”

But even now the irate gentleman was not satisfied.

“Aren’t you going to hold him so that he doesn’t escape?” he demanded.

Then, for the first time, the patient constable showed signs of temper. “No, sir,” he replied, brusquely, “I am not going to drag a respectable lad through the streets as if he had committed a crime when I know he hasn’t.”

That settled the matter, and we walked on with the manner of a family party. But it was an uncomfortable experience. To a boy of my age, a police station is a rather alarming sort of place; and the fact that I was going to be charged with a robbery was a little disturbing. However, the constable’s attitude was reassuring, and, as we traversed Great Marlborough Street and at last entered the grim doorway, I was only moderately nervous.

The proceedings were, as my constabulary friend had foreseen, quite brief. The policeman made his concise report to the inspector, I answered the few questions that the officer asked, and the gentleman made his statement, incriminating me.

“Where did the robbery take place?” the inspector asked.

“In Berwick Street,” was the reply. “I was leaning over a stall when I felt myself touched, and then a man moved away quickly through the crowd; and then I missed my wallet and gave chase.”

“You were leaning over a stall,” the inspector repeated. “Now, how on earth did he get at your wallet?”

“It was in my coat-tail pocket,” the gentleman explained.

“IN your coat-tail pocket!” the inspector repeated, incredulously; “with fifteen pounds in it, and you leaning over a stall in a crowded street! Why, sir, it was a free gift to a pickpocket.”

“I suppose I can carry my wallet where I please,” the other snapped.

“Certainly you can—at your own risk. Well, I can’t accept the charge against this boy. There is no evidence; in fact, there isn’t even any suspicion. It would be only wasting the magistrate’s time. But I will take the boy's name and address and make a few inquiries. And I will take yours too and let you know if anything transpires.”

He took my name and address (and my accuser made a note of them), and that, so far as I was concerned, finished the business. I took up my basket and went forth a free boy in company with my friend the police man. In Great Marlborough Street we parted, he to return to his beat, and I to the remainder of my round of deliveries.
So ended an incident that had, at one time, looked quite threatening. And yet it had not really ended. Perhaps no incident ever does truly end. For every antecedent begets consequences. Coming events cast their shadows before them; but those shadows usually remain invisible until the events which have cast them have, themselves, come into view. Indeed, it befalls thus almost from necessity; for how can a shadow be identified otherwise than by comparison with the substance?

But I shall not here anticipate the later passages of my story. The consequences will emerge in their proper place. I may, however, refer briefly to the more immediate reactions, though these also had their importance later. The little book which I had purchased (and paid for the same evening) was a treatise on clocks and locks by that incomparable master of horology and mechanism, Edmund Beckett Denison (later to be known as Lord Grimthorpe). It was an invaluable book, and it became my chiefest treasure. Carefully wrapped in a protective cover of brown paper, the precious volume was henceforth my constant companion. The abstruse mathematical sections I had regretfully to pass over, but the descriptive parts were read and re-read until I could have recited them from memory. Even the drawings of the Great Westminster Clock, which had at first appeared so bewildering, became intelligible by repeated study, and the intricacies of gravity escapements and maintaining powers grew simple by familiarity.

Thus did the revered E. B. Denison add a new delight to my life. Not only was every clock-maker’s window a thing of beauty and a provider of quiet pleasure, but an object so lowly as the lock of the scullery door—detached by Uncle Sam and by me carefully dismembered—was made to furnish an entertainment compared with which even the Punch and Judy show paled into insignificance.

III. OUT OF THE NEST

A CERTAIN philosopher, whose name I cannot recall, has, I understand, discovered that there are several different kinds of time. He is not referring to those which are known to astronomers, such as sidereal mean or apparent time, which differ only in terms of measurement, but to time as it affects the young, the middle-aged and the old.

The discovery is not a new one. Shakespeare has told us that “Time travels in divers pace with divers persons”, and, for me, the poet’s statement is more to the point (and perhaps more true) than the philosopher’s. For I am thinking of one “who Time ambles withal”, or even “who he stands still withal”; to wit, myself in the capacity of Dr. Pope’s bottle-boy. That stage of my existence seemed, and still seems, looking back on it, to have lasted for half a life-time; whereas it occupied, in actual fact, but a matter of months.

It came to an end when I was about thirteen, principally by my own act. I had begun to feel that I was making unfair inroads on the family resources, for, though the school that I attended was an inexpensive one, it was not one of the cheapest. Aunt Judy had insisted that I should have a decent education and not mix with boys below our own class, and accordingly she had sent me to the school conducted by the clergy man of our parish, the Reverend Stephen Page, which was attended by the sons of the local shop-keepers and better-class working men. But modest as the school fees were, their payment entailed some sacrifice; for, though we were not poor, still Uncle Sam’s earnings as a journeyman cabinet-maker were only thirty shillings a week. Old Mr. Gollidge, who did light jobs in a carpenter’s shop, made a small contribution, and there was half-a-crown a week from my wages; but, when all was said, it was a tight fit and must have taxed Aunt Judy’s powers of management severely to maintain the standard of comfort in which we lived.

Moved by these considerations (and perhaps influenced by the monotonous alternation of school and bottle-basket), I ventured to put the case to Aunt Judy and was relieved to find that she took my suggestions seriously and was obviously pleased with me for making them.

“There is something in what you say, Nat,” she admitted. “But remember that your schooling has got to last you for life. It’s the foundation that you’ve got to build on, and it would be bad economy to skimp that.”

“Quite right,” Uncle Sam chimed in. “You can’t make a mahogany table out of deal. Save on the material at the start and you spoil the job.”

“Still,” I urged, “a penny saved is a penny earned,” at which Aunt Judy laughed and gave me a playful pat on the head.

“You are a queer, old-fashioned boy, Nat,” said she, “but perhaps you are none the worse for that. Well, I’ll see Mr. Page and ask him what he thinks about it, and I shall do exactly what he advises. Will that satisfy you?”

I agreed readily enough, having the profoundest respect and admiration for my schoolmaster. For the Reverend Stephen Page, though he disdained not to teach the sons of working men, was a distinguished man in his way. He was a Master of Arts—though of what arts I never discovered—and a Senior Wrangler. That is what was stated on the School prospectus, so it must have been true; but I could never understand it, for a less quarrelsome or contentious man you could not imagine. At any rate, he was a most unmistakable gentleman, and, if he had taught us nothing else, his example of good manners, courtesy and kindliness would have been a liberal education in itself.

I was present at the interview, and very satisfactory I found it. Aunt Judy stated the problem and Mr. Page listened sympathetically. Then he pronounced judgement in terms that rather surprised me as coming from a schoolmaster.

“Education and schooling, Mrs. Gollidge, are not quite the same thing. When a boy leaves school to learn a trade, he is not ending his education. Some might say that he is only beginning it. At any rate, the knowledge and skill by which he will
earn his living and maintain his family when he has one, and be a useful member of society, is the really indispensable knowledge. Our young friend has a good groundwork of what simple folk call book-learning, and, if he wants to increase it, there are books from which he can learn. Meanwhile, I don't think that he is too young to begin the serious business of life."

That question, then, was settled, and the next one was how the beginning was to be made. As a temporary measure, "while we were looking about", Uncle Sam managed to plant me on his employer, Mr. Beeby, as workshop boy at a salary of five shillings a week. So it came about that I made my final round with the bottles, handed in the basket for the last time, drew my wages and, on the following morning, set forth in company with Uncle Sam en route for Mr. Beeby's workshop in Broad Street. There was only one occupant when we arrived: a round-shouldered, beetle browed, elderly man with rolled-up shirt-sleeves, a linen apron and a square brown-paper cap such as workmen commonly wore in those days, who was operating with a very small saw on a piece of wood that was clamped in the bench-vice. He looked up as we entered and remarked:

"So this is the young shaver, is it? There ain't much of him. He'll have to stand on six pennorth of coppers if he is going to work at a bench. Never mind, youngster. You'll be a man before your mother," and with this he returned to his work with intense concentration (I discovered, presently, that he was cutting the pins of a set of dovetails), and Uncle Sam, having provided me with a broom, set me to work at sweeping up the shavings, picking up the little pieces of waste wood and putting them into the large open box in which they were thriftily stored for use in odd jobs. Then he took off his coat, rolled up his sleeves and put on his apron and paper cap; in which costume he seemed to me to be invested with a new dignity; and when he fell to work with a queer-looking, lean-bodied plane on the edge of a slab of mahogany; miraculously producing on it an elegant moulding, I felt that I had never properly appreciated him. Presently the third member of the staff arrived, a young journeyman named Will Foster. He had evidently heard of me, for he saluted me with a friendly grin and a few words of welcome while he was unrobing and getting into working trim. Then he, too, set to work with an air of business on his particular job, the carcasse of a small chest of drawers; and I noticed that each of the three men was engaged on his own piece of work, independently of the others. And this I learned later was Mr. Beeby's rule, so far as it was practicable. "If a man carries his own job right through," he once explained to me, "and does it well, he gets all the credit; and if he does it badly, he takes all the blame." It seemed a sensible rule. But that was an age of individualism.

I shall not follow in detail my experiences during the few months that I spent in Mr. Beeby's workshop. My service there was but an interlude between school and my real start in life. But it was a useful interlude, and I have never regretted it. As I was not an apprentice, I received no formal instruction. But little was needed when I had the opportunity of watching three highly expert craftsmen and following their methods from the preliminary sketch to the finished work; and I did, in fact, get a good many useful tips besides the necessary instruction in my actual duties.

As to these, they gradually extended as time went on from mere sweeping, cleaning and tidying to more technical activities, but, from the first, the glue-pots were definitely assigned to me. Once for all, the whole art and mystery of the preparation and care of glue was imparted to me. Every night I emptied and cleaned the glue-pots and put the fresh glue in to soak, for Mr. Beeby would have nothing to do with stale glue: and every morning, as soon as I arrived, I set the pots of fresh glue on the workshop stove. Then, by degrees, I began to learn the use of tools; to saw along a pencil line, to handle a chisel and a jack-plane (with the aid of an improvised platform to bring my elbows to the bench level) and to use the marking gauge and the try-square, so that, presently, I became proficient enough to be given small, rough jobs of sawing and planing to save the time of the skilled workmen.

It was all very interesting (what creative work is not?), and I was happy enough in the workshop with its pleasant atmosphere of quiet, unhurried industry. I liked to watch these three skilful craftsmen doing difficult things with unconscious ease and a misleading appearance of leisureliness, and I learned that this apparently effortless precision was really the result of habitual concentration. The fact was expounded to me by Mr. Beeby on an appropriate occasion.

"You've given yourself the trouble, my lad, of doing that twice over. Now the way to work quickly is to work carefully. Attend to what you are doing and see that you make no mistakes." It was a valuable precept, which I have never forgotten and have always tried to put into practice; indeed, I find myself, to this day, profiting from Mr. Beeby's practical wisdom.

But though I was interested and happy in my work, my heart was not in cabinet-making. Clocks and watches still held my affections, and, on most evenings, the short interval between supper and bedtime was occupied in reading and re-reading the books on horology that I possessed. I now had a quite respect able little library; for my good friend, Mr. Strutt, the Wardour Street bookseller, was wont to put aside for me any works on the subject that came into his hands, and I suspect that, in the matter of price, he frequently tempered the wind to the shorn lamb.

Thus, though I went about my work contentedly, there lurked always at the back of my mind the hope that some day a chance might present itself for me to get a start on the career of a clock-maker. Apprenticeship was not to be thought of, for the family resources were not equal to a premium. But there might be other ways. Meanwhile, I tended the glue-pots and cherished my dream in secret; and in due course, by very indirect means, the dream became a reality.

The chance came, all unperceived at first, on a certain morning in the sixth month of my servitude, when a burly, elderly man came into the workshop carrying a brown-paper parcel. I recognized him instantly as Mr. Abraham, the clock-maker, whose shop in Foubert's Place had been familiar to me since my earliest childhood, and I cast an inquisitive eye on the parcel as he unfastened it on the bench, watched impassively by Mr. Beeby. To my disappointment, the unwrapping disclosed only an empty clock-case, and a mighty shabby one at that. Still, even an empty case had a faint horological
flavour.

“Well,” said Mr. Beeby, turning it over disparagingly, “it’s a bit of a wreck. Shockingly knocked about, and some fool has varnished it with a brush. But it has been a fine case in its time, and it can be again. What do you want us to do with it? Make it as good as new, I suppose.”

“Better,” replied Mr. Abraham with a persuasive smile.

“Now, you mustn’t be unreasonable,” said Beeby. “That case was made by a first-class tradesman and no one could make it any better. No hurry for it, I suppose? May as well let us take our time over it.”

To this Mr. Abraham agreed, being a workman himself; and, after some brief negotiations as to the cost of the repairs, he took his departure. When he had gone, Mr. Beeby picked up the “wreck”, and, exhibiting it to Uncle Sam, remarked:

“It wants a lot of doing to it, but it will pay for a bit of careful work. Care to take it on when you’ve finished that table?”

Uncle Sam took it on readily, having rather a liking for renovations of good old work; and when he had clamped up some glued joints on his table, fell to work forthwith on the case, dismembering it, as a preliminary measure, with a thoroughness that rather horrified me, until it seemed to be reduced to little more than a collection of fragments. But I realized the necessity for the dismemberment when I saw him making the repairs and restorations on the separated parts, unhampered by their connections with the others.

I followed his proceedings from day to day with deep interest as the work grew; first, when all the old varnish had been cleaned off, the cutting away of damaged parts, then the artful insetting of new pieces and their treatment with stain until from staring patches they became indistinguishable from the old. So it went on, the battered old parts growing newer and smarter every day with no visible trace of the repairs, and, at last, when the fresh polish was hard, the separated parts were put together and the transformation was complete. The shabby old wreck had been changed into a brand-new case.

“Well, Sam,” said Mr. Beeby, looking at it critically as its restorer stood it on the newly finished table, “you’ve made a job of that. It’s good now for another hundred years. Ought to satisfy Abraham. Nat might as well run round presently and let him know that it’s finished.”

“Why shouldn’t he take it with him?” Uncle Sam suggested.

Mr. Beeby considered the suggestion and eventually, having admonished me to carry the case carefully, adopted it. Accordingly, the case was wrapped in one or two clean dusters and tied up with string, leaving the gilt top handle exposed for convenience of carrying, and I went forth all agog to see how Mr. Abraham would be impressed by Uncle Sam’s wizardry.

I found that gentleman seated at his counter writing on a card, and, as the inscription was in large Roman capitals, my eye caught at a glance the words, “Smart youth wanted.”. He rounded off the final D and then looked up at me and enquired: “You are Mr. Beeby’s apprentice, aren’t you? Is that the case?”

“This is the case, sir,” I replied, “but I am not an apprentice. I am the workshop boy.”

“Oh!” said he, “I thought you were an apprentice, as you were working at the bench. Well, let’s see what sort of a job they’ve made of the case. Bring it in here.”

He preceded me into a small room at the back of the shop which was evidently the place where he worked, and here, having cleared a space on a side bench, he took the case from me and untied the string. When the removal of the dusters revealed the case in all its magnificence, he regarded it with a chuckle of satisfaction.

“It looks a bit different from what it did when you saw it last, sir,” I ventured to remark.

He seemed a little surprised, for he gave me a quick glance before replying.

“You’re right, my boy; I wouldn’t have believed it possible. But there, every man to his trade, and Mr. Beeby is a master of his.”

“It was my uncle, Mr. Gollidge, that did the repairs, sir,” I informed him, bearing in mind Mr. Beeby’s rule that the doer of a good job should have the credit. Again Mr. Abraham looked at me, curiously, as he rejoined: “Then your uncle is a proper tradesman and I take my hat off to him.”

I thanked him for the compliment, the latter part of which was evidently symbolical, as he was bareheaded, and then asked: “Is that the clock that belongs to the case, sir?” and I pointed to a bracket clock with a handsome brass, silver-circled dial which stood on a shelf, supported by a movement-holder.

“You’re quite right,” he replied. “That’s the clock; all clean and bright and ready for fixing. Would you like to see it in its case? Because, if so, you may as well help me to put it in.”

I agreed, joyfully, and as he released the movement from the holder, I unlocked and opened the back door of the case and “stood by” for further instructions, watching intently every stage of the procedure. There was not much for me to do beyond steadying the case and fetching the screws and the screwdriver; but I was learning how a bracket clock was fixed into its case, and when, at last, the job was finished and the fine old clock stood complete in all its beauty and dignity, I had the feeling of at least, having been a collaborator in the achievement.

It had been a great experience. But all the time, a strong under-current of thought had been running at the back of my
mind. “Smart youth wanted.” Was I a smart youth? Honest self-inspection compelled me to admit that I was not. But perhaps the smartness was only a rhetorical flourish, and in any case, it doesn’t do to be too modest. Eventually I plucked up courage to ask: “Were you wanting a boy, sir?”

“Yes,” he replied. “Do you know of one who wants a job?”

“I was wondering, sir, if I should be suitable.”

“You!” he exclaimed. “But you’ve got a place. Aren’t you satisfied with it?”

“Oh, yes, sir, I’m quite satisfied. Mr. Beeby is a very good master. But I’ve always wanted to get into the clock trade.”

He looked down at me with a broad smile. “My good boy,” said he, “cleaning a clockmaker’s window and sweeping a clockmaker’s floor won’t get you very far in the clock trade.”

It sounded discouraging, but I was not put off. Experience had taught me that there are boys and boys. As Dr. Pope’s bottle boy I had learned nothing and gained nothing but the weekly wage. As Mr. Beeby’s workshop boy I had learned the rudiments of cabinet-making and was learning more every day.

“It would be a start, sir, and I think I could make myself useful,” I protested.

“I daresay you could,” said he (he had seen me working at the bench), “and I would be willing to have you. But what about Mr. Beeby? If you suit him, it wouldn’t be right for me to take you away from him.”

“Of course, I should have to stay with him until he had got another boy.”

“And there is your uncle. Do you think he would let you make the change?”

“I don’t think he would stand in my way, sir. But I’ll ask him.”

“Very well,” said he. “You put it to him, and I’ll have a few words with Mr. Beeby when I call to settle up.”

“And you won’t put that card in the window, sir,” I urged.

He smiled at my eagerness but was not displeased; indeed, it was evident to me that he was well impressed and very willing to have me.

“No,” he agreed, “I’ll put that aside for the present.”

Much relieved, I thanked him and took my leave; and as I wended homeward to dinner I prepared myself a little nervously, for the coming conference.

But it went off more easily than I had expected. Uncle Sam, indeed, was strongly opposed to the change (“just as the boy had got his foot in and was beginning to learn the trade”), and he was disposed to enlarge on the subject of rolling stones. But Aunt Judy was more understanding.

“I don’t know, Sam,” said she, “but what the boy’s right. His heart is set on clocks, and he’ll be happier working among things that he likes than going on with the cabinet-making. But I’m afraid Mr. Beeby won’t be pleased.”

That was what I was afraid of. But here again my fears proved to be unfounded. On the principle of grasping the nettle, I attacked him as soon as we returned to the workshop after dinner; and certainly, as he listened to my proposal with his great eyebrows lowered in a frown of surprise, he seemed rather alarming, and I began to “look out for squalls”. But when I had finished my explanations, he addressed me so kindly and in such a fatherly manner that I was quite taken aback and almost regretful that I had thought of the change.

“Well, my son,” said he, “I shall be sorry to lose you. If you had stayed with me I would have given you your indentures free, because you have got the makings of a good workman. But if the clock trade is your fancy and you have a chance to get into it, you are wise to take that chance. A tradesman’s heart ought to be in his trade. You go to Mr. Abraham and I’ll give you a good character. And you needn’t wait for me. Take the job at once and get a start, but look us up now and again and tell us how you are getting on.”

I wanted to thank Mr. Beeby, but was too overcome to say much. However, he understood. And now—such is human perversity—I suddenly discovered an unsuspected charm in the workshop and an unwillingness to tear myself away from it; and when “knocking-off time” came and I stowed my little collection of tools in the rush basket to carry away, my eyes filled and I said my last “good night” in an absurd, tremulous squeak.

Nevertheless, I took Mr. Abraham’s shop in my homeward route and found it still open; a fact which I noted with slight misgivings as suggestive of rather long hours. As I entered, my prospective employer rose from the little desk at the end of the counter and confronted me with a look of enquiry; whereupon I informed him briefly of the recent developments and explained that I was now a free boy.

“Very well,” said he; “then I suppose you want the job. It’s five shillings a week and your tea—unless,” he added as an afterthought, “you’d rather run round and have it at home. Will that suit you? Because, if it will, you can come to-morrow morning at half-past eight and I will show you how to take down the shutters.”

Thus, informally, were my feet set upon the road which I was to tread all the days of my life; a road which was to lead me, through many a stormy passage, to the promised land which is now my secure abiding place.
IV. THE INNOCENT ACCESSORY

The ancient custom of hanging out a distinctive shop sign still struggles for existence in old-fashioned neighbourhoods. In ours there were several examples. A ham-and-beef merchant proclaimed the nature of his wares by a golden ham dangled above his shop front; a gold-beater more appropriately exhibited a golden arm wielding a formidable mallet; barbers in different streets displayed the phlebotomist’s pole with its spiral hint of blood and bandages; and Mr. Abraham announced the horologer’s calling by a large clock projecting on a bracket above his shop.

They all had their uses, but it seemed to me that Mr. Abraham’s was most to the point. For whereas the golden ham could do no more for you than make your mouth water, leaving you to seek satisfaction within, and the barber’s offer to “let blood” was a pure fiction (at least, you hoped that it was), Mr. Abraham’s sign did actually make you a free gift of the time of day. Moreover, for advertising purposes the clock was more efficient. Ham and gold leaf supply only occasional needs; but time is a commodity in constant demand. Its sign was a feature of the little street observed by all wayfarers, and thus conferred distinction on the small, antiquated shop that it surmounted.

At the door of that shop the tenant was often to be seen, looking up and down the street with placid interest and something of a proprietary air; and so I found him, refreshing himself with a pinch of snuff, when I arrived at twenty-six minutes past eight on the morning after my engagement. He received me with unexpected geniality, and, putting away the tortoise shell snuff-box and glancing up approvingly at the clock, proceeded forthwith to introduce me to the art and mystery of taking down the shutters, including the secret disposal of the padlock. The rest of the daily procedure—the cleaning of the small-paned window, the sweeping of the floor, and such dusting as was necessary—he indicated in general terms, and, having shown me where the brooms and other cleaning appliances were kept, retired to the little workshop which communicated with the retail part of the premises, seated himself at the bench, fixed his glass in his eye, and began some mysterious operations on a watch. I observed him furtively in the intervals of my work, and when I had finished, I entered the workshop for further instructions; but by that time the watch had dissolved into a little heap of wheels and plates which lay in a wooden bowl covered by a sort of glass dish-cover, and that was the last that I saw of it. For it appeared that, when not otherwise engaged, my duty was to sit on a stool behind the counter and “mind the shop”.

In that occupation, varied by an occasional errand, I spent the first day; and mighty dull I found it after the life and activity of Mr. Beeby’s establishment, and profoundly was I relieved when, at half-past eight, Mr. Abraham instructed me to put up the shutters under his supervision. As I took my way home, yawning as I went, I almost wished myself back at Beeby’s.

But it was a false alarm. The intolerable dullness of that first day was never repeated. On the following morning I took the precaution to provide myself with a book, but it was not needed; for, while I was cleaning the window, Mr. Abraham went forth, and presently returned with an excessively dirty “grandfather” clock—without its case—which he carried into the workshop and at once began to “take down” (i.e., to take to pieces). As I had finished my work, I made bold to follow him and hover around to watch the operation; and, as he did not seem to take my presence amiss, but chatted in quite a friendly way as he worked, I ventured to ask one or two questions, and meanwhile kept on the alert for a chance to “get my foot in.”

When he had finished the “taking down” and had put away the dismembered remains of the movement in a drawer, leaving the two plates and the dial on the bench, he proceeded to mix up a paste of rotten-stone and oil, and then, taking up one of the plates, began to scrub it vigorously with a sort of overgrown tooth brush dipped in the mixture. I watched him attentively for a minute or two, and then decided that my opportunity had come.

“Wouldn’t it save you time, sir, if I were to clean the other plate?” I asked.

He stopped scrubbing and looked at me in surprise. “That’s not a bad idea, Nat,” he chuckled. “Why shouldn’t you? Yes, get a brush from the drawer. Watch me and do exactly as I do.”

Gleefully, I fetched the brush and set to work, following his methods closely and observing him from time to time as the work progressed. He gave an eye to me now and again, but let me carry out the job completely, even to the final polishing and the “pegging out” of the pivot-holes with the little pointed sticks known as peg-wood. When I had finished, he examined my work critically, testing one or two of the pivot-holes with a clean peg, and finally, as he laid down the plate, informed me that I had made quite a good job of it.

That night I went home in a very different frame of mind. No longer did I yearn for Beeby’s. I realized that I had had my chance and taken it. I had got my foot in and was now free of the workshop. Other jobs would come my way and they would not all be mere plate-cleaning. I should see to that. And I did. Cautionously and by slow degrees I extended my offers of help from plates to wheels and pinions, to the bushing of worn pivot-holes and the polishing of pivots on the turns. And each time Mr. Abraham viewed me with fresh surprise, evidently puzzled by my apparent familiarity with the mechanism of clocks, and still more by my ability to make keys and repair locks, an art of which he knew nothing at all.

Thus, the purpose that had been in my mind from the first was working out according to plan. My knowledge of the structure and mechanism of time-keepers was quite considerable. But it was only paper knowledge, book-learning. It had to be supplemented by that other kind of knowledge that can be acquired only by working at the bench, before I could hope to become a clock-maker. The ambition to acquire it had drawn me hither from Mr. Beeby’s, and now the opportunity seemed to be before me.
In fact, my way was made unexpectedly easy, for Mr. Abraham's inclinations marched with mine. Excellent workman as he was, skilful, painstaking and scrupulously conscientious, he had no enthusiasm. As Mr. Beeby would have said, his heart was not in his trade. He did not enjoy his work, though he spared no pains in doing it well. But by nature and temperament he was a dealer, a merchant, rather than a craftsman, and it was his ability as a buyer that accounted for the bulk of his income. Hence he was by no means unwilling for me to take over the more laborious and less remunerative side of the business, in so far as I was able, for thereby he was left with more free time to devote to its more profitable aspects.

Exactly how he disposed of this free time I could never quite make out. I got the impression that he had some other interests which he was now free to pursue, having a deputy to carry on the mere retail part of the business and attend to simple repairs. But how ever that may have been, he began occasionally to absent himself from the shop, leaving me in charge; and as time went on and he found that I managed quite well without him, his absences grew more frequent and prolonged until they occurred almost daily, excepting when there were important repairs on hand. It seemed an anomalous arrangement, but there was really nothing against it. He had instructed me in the simple routine of the business, had explained the artless "secret price marks" on the stock, and ascertained (I think from Beeby) that I was honest and trustworthy, and if he was able to employ his free time more profitably, there was nothing further to be said.

It was on the occasion of one of these absences that an incident occurred which, simple as it appeared to be at the time, was later to develop unexpected consequences. This was one of the days on which Mr. Abraham went down into the land of Clerkenwell to make purchases of material and stock. Experience had taught me that a visit to Clerkenwell meant a day off; and, there being no repairs on hand, I made my arrangements to pass the long, solitary day as agreeably as possible. It happened that I had recently acquired an old lock of which the key was missing; and I decided to pass the time pleasantly in making a key to fit it. Accordingly, I selected from the stock of spare keys that I kept in my cupboard a lever key the pipe of which would fit the drill-pin of the lock, but of which the bit was too long to enter; and with this and a small vice and one or two tools, I went out into the shop and prepared to enjoy myself.

I had fixed the vice to the counter, taken off the front plate of the lock (it was a good but simple lock with three levers), clamped the key in the vice and was beginning to file off the excess length of the bit, preparatory to cutting the steps, when a man entered the shop, and, sauntering up to the counter, fixed an astonished eye on the key.

"Guvnor in?" he enquired.

I replied that he was not.

"Pity," he commented. "I've broke the glass of my watch. How long will he be?"

"I don't think he will be back until the evening. But I can fit you a new glass."

"Can you, though?" said he. "You seem to be a handy sort of bloke for your size. How old are you?"

"Getting on for fourteen," I replied, holding out my hand for the watch which he had produced from his pocket.

"Well, I'm blowed," said he; "fancy a blooming kid of fourteen running a business like this."

I rather resented his description of me, but made no remark. Besides, it was probably meant as a compliment, though unfortunately expressed. I glanced at his watch, and, opening the drawer in which watch-glasses were kept, selected one of the suitable size, tried it in the bezel after removing the broken pieces, and snapped it in.

"Well, I'm sure!" he exclaimed as I returned the watch to him. "Wonderful handy cove you are. How much?"

I suggested sixpence, whereupon he fished a handful of mixed coins out of his pocket and began to sort them out. Finally he laid a sixpence on the counter and once more fixed his eyes on the vice.

"What are you doing to that lock?" he asked.

"I am making a key to fit it," I replied.

"Are you, really?" said he with an air of surprise. "Actoally making a key? Remarkable handy bloke you are. Perhaps you could do a little job for me. There is a box of mine what I can't get open. Some thing gone wrong with the lock. Key goes in all right but it won't turn. Do you think you could get it to open if I was to bring it along here?"

"I don't know until I have seen it," I replied. "But why not take it to a locksmith?"

"I don't want a big job made of it," said he. "It's only a matter of touching up the key, I expect. What time did you say the guvnor would be back?"

"I don't expect him home until closing time. But he wouldn't have anything to do with a locksmith's job, in any case."

"No matter," said he. "You'll do for me. I'll just cut round home and fetch that box"; and with this he bustled out of the shop and turned away towards Regent Street.

His home must have been farther off than he had seemed to suggest, for it was nearly two hours later when he reappeared, carrying a brown-paper parcel. I happened to see him turn into the street, for I had just received a shop dial from our neighbour, the grocer, and had accompanied him to the door, where he paused for a final message.

"Tell the governor that there isn't much the matter with it, only it stops now and again, which is a nuisance."

He nodded and turned away, and at that moment the other customer arrived with the unnecessary announcement that
“here he was “. He set the parcel on the counter, and, having untied the string, opened the paper covering just enough to expose the keyhole; by which I was able to see that the box was covered with morocco leather and that the keyhole guard seemed to be of silver. Producing a key from his pocket, he inserted it and made a show of trying to turn it.

“You see?” said he. “It goes in all right, but it won’t turn. Funny, isn’t it? Never served me that way before.”

I tried the key and then took it out and looked at it, and, as a preliminary measure, probed the barrel with a piece of wire. Then, as the barrel was evidently clean, I tried the lock with the same piece of wire. It was a ward lock, and the key was a warded key, but the wards of the lock and those of the key were not the same. So the mystery was solved; it was the wrong key.

“Well, now,” my friend exclaimed, “that’s very singular. I could have sworn it was the same key what I have always used, but I suppose you know. What’s to be done? Do you think you can make that key fit?”

Now, here was a very interesting problem. I had learned from the incomparable Mr. Denison that the wards of a lock are merely obstructions to prevent it from being opened with the wrong key, and that, since the fore edge of the bit is the only acting part of such a key, a wrong key can be turned into a right one by simply cutting away the warded part and leaving the fore edge intact. I had never tried the experiment; but here was an opportunity to put the matter to a test.

“I’ll try, if you like,” I replied, “that is, if you don’t mind my cutting the key about a little.”

“Oh, the key is no good to me if it won’t open the lock. I don’t care what you do to it.”

With this, I set to work gleeously, first making a further exploration of the lock with my wire and then carrying the key into the workshop, where there was a fixed vice. There I attacked it with a hack-saw and a file, and soon had the whole of the bit cut away excepting the top and fore edge. All agog to see how it worked, I went back to the shop with a small file in my hand in case any further touches should be necessary, and, inserting the key, gave a gentle turn. It was at once evident that there was now no resistance from the wards, but it did not turn freely. So I withdrew it and filed away a fraction from the fore edge to reduce the friction. The result was a complete success, for when I re-inserted it and made another trial, it turned quite freely and I heard the lock click.

My customer was delighted (and so was I). He turned the key backwards and forwards several times and once opened the lid of the box; but only half an inch—just enough to make sure that it cleared the lock. Then he took out the key, put it in his pocket, and proceeded to replace the paper cover and tie the string.

“Well,” said he, “you are a regler master craftsman, you are. How much have I got to pay?”

I suggested that the job was worth a shilling, to which he agreed.

“But who gets that shilling?” he enquired.

“Mr. Abraham, of course,” I replied. “It’s his shop.”

“So it is,” said he, “but you have done the job, so here’s a bob for yourself, and you’ve earned it.”

He laid a couple of shillings on the counter, picked up his parcel and went out, whistling gleeously.

Now, all this time, although my attention had been concentrated on the matter in hand, I had been aware of something rather odd that was happening outside the shop. My customer had certainly had no companion when he arrived, for I had seen him enter the street alone. But yet he seemed to have some kind of follower; for hardly had he entered the shop when a man appeared, looking at the window and seeming to keep a watch on what was going on within. At first he did not attract my attention—for a shop window is intended to be looked in at. But presently he moved off, and then returned for another look; and while I was working at the key in the workshop, I could see him on the opposite side of the street, pretending to look in the shop windows there, but evidently keeping our shop under observation.

I did not give him much attention while I was working at my job; but when my customer departed, I went out to the shop door and watched him as he retired down the street. He was still alone. But now, the follower, who had been fidgeting up and down the pavement opposite, and looking in at shop windows, turned and walked away down the street, slowly and idly at first, but gradually increasing his pace as he went, until he turned the corner quite quickly.

It was very queer; and, my curiosity being now fairly aroused, I darted out of the shop and ran down the street, where, when I came to the corner, I could see my customer striding quickly along King Street, while the follower was “legging it” after him as hard as he could go. What the end of it was I never saw, for the man with the parcel disappeared round the corner of Argyll Place before the follower could come up with him.

It was certainly a very odd affair. What could be the relations of these two men? The follower could not have been a secret watcher, for there he was, plainly in view of the other. I turned it over in my mind as I walked back to the shop, and as I entered the transaction in the day-book (“key repaired, 1/-”) and dropped the two shillings into the till, having some doubt as to my title to the “bob for myself”. (But its presence was detected by Mr. Abraham when we compared the till with the day-book, and it was, after a brief discussion, restored to me.) Even when I was making a tentative exploration of the shop dial and restoring the vanished oil to its dry bearings and pallets, I still puzzled over this mystery until, at last, I had to dismiss it as insoluble.

But it was not insoluble, though the solution was not to appear for many weeks. Nor, when my customer disappeared round the corner, was he lost to me for ever. In fact, he re-visited our premises less than a fortnight after our first meeting,
shambled into the shop just before dinner-time and greeting me as before with the enquiry:

“Guvnor in?”

“No,” I replied, “he has just been called out on business, but he will be back in a few minutes.” (He had, in fact, walked round, according to his custom about this time, to inspect the window of the cook’s shop in Carnaby Street.) “Is there anything that I can do?”

“Don’t think so,” said he. “Something has gone wrong with my watch. Won’t go. I expect it is a job for the guvnor.”

He brought out from his pocket a large gold watch, which he passed across the counter to me. I noted that it was not the watch to which I had fitted the glass and that it had a small bruise on the edge. Then I stuck my eyeglass in my eye, and having opened, first the case and then the dome, took a glance at the part of the movement that was visible. That glance showed me that the balance-staff pivot was broken, which accounted sufficiently for the watch’s failure to go. But it showed me something else—something that thrilled me to the marrow. This was no ordinary watch. It was fitted with that curious contrivance that English watchmakers call a “tourbillion”—a circular revolving carriage on which the escapement is mounted, the purpose being the avoidance of position errors. Now, I had never seen a tourbillion before, though I had read of them as curiosities of advanced watch construction, and I was delighted with this experience, and the more so when I read on the movement the signature of the inventor of this mechanism, Breguet á Paris. So absorbed was I with this mechanical wonder that I forgot the existence of the customer until he, somewhat brusquely, drew my attention to it. I apologized and briefly stated what was the matter with the watch.

“That don’t mean nothing to me,” he complained. “I want to know if there’s much wrong with it, and what it will cost to put it right.”

I was trying to frame a discreet answer when the arrival of Mr. Abraham relieved me of the necessity. I handed him the watch and my eyeglass and stood by to hear his verdict.

“Fine watch,” he commented. “French make. Seems to have been dropped. One pivot broken; probably some others. Can’t tell until I have taken it down. I suppose you want it repaired.”

“Not if it is going to be an expensive job,” said the owner. “I don’t want it for use. I got a silver one what does for me. I bought this one cheap, and I wish I hadn’t now. Gave a cove a flyer for it.”

“Then you got it very cheap,” said Mr. Abraham.

“S’pose I did, but I’d like to get my money back all the same. That’s all I ask. Care to give me a flyer for it?”

Mr. Abraham’s eyes glistened. All the immemorial Semitic passion for a bargain shone in them. And well it might. Even I could tell that the price asked was but a fraction of the real value. It was a tremendous temptation for Mr. Abraham.

But, rather to my surprise, he resisted it. Wistfully, he looked at the watch, and especially at the hall-mark, or its French equivalent, for nearly a minute; then, with a visible pang of regret, he closed the case and pushed the watch across the counter.

“I don’t deal in second-hand watches,” said he.

“Gor!” exclaimed our customer, “it ain’t second hand for you. Do the little repairs what are necessary, and it’s a new watch. Don’t be a mug, Mister. It’s the chance of a lifetime.”

But Mr. Abraham shook his head and gave the watch a further push.

“Look here!” the other exclaimed, excitedly, “the thing’s no good to me. I’ll take four pund ten. That’s giving it away, that is. Gor! You ain’t going to refuse that! Well, say four pund. Four blooming jimmies! Why, the case alone is worth more than double that.”

Mr. Abraham broke out into a cold sweat. It was a frightful temptation, for what the man said was literally true. But even this Mr. Abraham resisted; and eventually the owner of this priceless timepiece, realizing that “the deal was off”, sulkily put it in his pocket and slouched out without another word.

“Why didn’t you buy it, sir?” I asked. “It was a beautiful watch.”

“So it was,” he agreed, “and a splendid case—twenty-two carat gold; but it was too cheap. I would have given him twice what he asked if I had known how he came by it.”

“You don’t think he stole it, sir, do you?” I asked.

“I suspect someone did,” he replied, “but whether this gent was the thief or only the receiver is not my affair.”

It wasn’t mine either; but as I recalled my former transaction with this “gent” I was inclined to form a more definite opinion; and thereupon I decided to keep my own counsel as to the details of that former transaction. But circumstances compelled me to revise that decision when the matter was reopened by someone who took a less impersonal view than that of Mr. Abraham. That someone was a tall, military-looking man who strode into our shop one evening about six weeks after the watch incident. He made no secret of his business, for, as he stepped up to the counter, he produced a card from his pocket and introduced himself with the statement:

“You are Mr. David Abraham, I think. I am Detective Sergeant Pitts.”
Mr. Abraham bowed graciously, and, disregarding the card, replied that he was pleased to make the officer's acquaintance; whereupon the sergeant grinned and remarked: “You are more easily pleased than most of my clients.”

Mr. Abraham smiled and regarded the officer with a wary eye. “What can I have the pleasure of doing for you?” he asked.

“That’s what I want to find out,” said the sergeant. “I have information that, on or about the thirteenth of May, you made a skeleton key for a man named Alfred Coomey, alias John Smith. Is that correct?”

“No,” Abraham replied, in a startled voice, “certainly not. I never made a skeleton key in my life. Don’t know how to, in fact.”

The officer’s manner became perceptibly more dry. “My information,” said he, “is that on the date mentioned, the said Coomey, or Smith, brought a jewel case to this shop and that you made a skeleton key that opened it. You say that is not true.”

“Wait a moment,” said Abraham, turning to me with a look of relief; “perhaps the sergeant is referring to the man you told me about who brought a box here to have a key fitted when I was out. It would be about that date.”

The sergeant turned a suddenly interested eye on me and remarked:

“So this young shaver is the operator, is he? You’d better tell me all about it; and first, what sort of box was it?”

“I couldn’t see much of it, sir, because it was wrapped in brown paper, and he only opened it enough for me to get at the keyhole. But it was about fifteen inches long by about nine broad, and it was covered with green leather and the keyhole plate seemed to be silver. That is all that I could see.”

“And what about the key?”

“It was the wrong key, sir. It went in all right, but it wouldn’t turn. So I cut away part of the bit so that it would go past the wards and then it turned and opened the lock.”

The sergeant regarded me with a grim smile.

“You seem to be a rather downy young bird,” said he. “So you made him a skeleton key, did you? Now, how did you come to know how to make a skeleton key?”

I explained that I had read certain books on locks and had taken a good deal of interest in the subject, a statement that Mr. Abraham was able to confirm.

“Well,” said the sergeant, “it’s a useful accomplishment, but a bit dangerous. Don’t you be too handy with skeleton keys, or you may find yourself taking a different sort of interest in locks and keys.”

But here Mr. Abraham interposed with a protest.

“There’s nothing to make a fuss about, Sergeant. The man brought his box here to have a key fitted, and my lad fitted a key. There was nothing incorrect or unlawful in that.”

“No, no,” the sergeant admitted, “I don’t say that there was. It happens that the box was not his, but, of course, the boy didn’t know that. I suppose you couldn’t see what was in the box?”

“No, sir. He only opened it about half an inch, just to see that it would open.”

The sergeant nodded. “And as to this man, Coomey; do you think you would recognize him if you saw him again?”

“Yes, sir, I am sure I should. But I don’t know that I could recognize the other man.”

“The other man!” exclaimed the sergeant. “What other man?”

“The man who was waiting outside;” and here I described the curious proceedings of Mr. Coomey’s satellite and so much of his appearance as I could remember.

“Ha!” said the sergeant, “that would be the foot man who gave Coomey the jewel-case. Followed him here to make sure that he didn’t nip off with it. Well, you’d know Coomey again, at any rate. What about you, Mr. Abraham?”

“I couldn’t recognize him, of course. I never saw him.”

“You saw him later, you know, sir, when he came in with the watch,” I reminded him.

“But you never told me—” Abraham began, with a bewildered stare at me; but the sergeant broke in, brusquely: “What’s this about a watch, Mr. Abraham? You didn’t mention that. Better not hold anything back, you know.”

“I am not holding anything back,” Abraham protested. “I didn’t know it was the same man;” and here he proceeded to describe the affair in detail and quite correctly, while the sergeant took down the particulars in a large, funereal note-book.

“So you didn’t feel inclined to invest,” said he with a sly smile. “Must have wrung your heart to let a bargain like that slip.”

“It did,” Abraham admitted, “but, you see, I didn’t know where he had got it.”

“We can take it,” said the sergeant, “that he got it out of that jewel-case. What sort of watch was it? Could you recognize it?”
“I am not sure that I could. It was an old watch. French make, gold case, engine-turned with a plain centre. No crest or initials.”

“That’s all you remember, is it? And what about you, young shaver? Would you know it again?”

“I think I should, sir. It was a peculiar watch; made by Breguet of Paris, and it had a tourbillion.”

“Had a what?” exclaimed the sergeant. “Sounds like some sort of disease. What does he mean?” he added, gazing at Mr. Abraham.

The latter gave a slightly confused description of the mechanism, explaining that he had not noticed it, as he had been chiefly interested in the case; whereupon the sergeant grinned and remarked that the melting-pot value was what had also interested Mr. Coomey.

“Well,” he concluded, shutting up his note-book, “that’s all for the present. I expect we shall want you to identify Coomey, and the other man if you can; and when the case comes up for the adjourned hearing, you will both have to come and give evidence. But I will let you know about that later.” With this and a nod to Mr. Abraham and a farewell grin at me, he took his departure.

Neither to my employer nor myself was the prospect of visiting the prison and the court at all alluring, especially as our simultaneous absence would entail shutting up the shop; and it was a relief to us both when the sergeant paid us a second, hurried visit to let us know that, as the accused men had decided to plead guilty, our testimony would not be required. So that disposed of the business so far as we were concerned.

V. MR. PARRISH

It has been remarked, rather obviously, that it is an ill wind that blows nobody good, and also that one man’s meat is another man’s poison. The application of these samples of proverbial wisdom to this history is in the respective effects of a severe attack of bronchitis upon Mr. Abraham and me. The bronchitis was his, with all its attendant disadvantages, an unmitigated evil, whereas to me it was the determining factor of a beneficial change.

While he was confined to his bed, under the care of the elderly Jewess who customarily “did for him “, my daily procedure was, when I had shut up the shop, to carry the contents of the till with the day-book to his bedroom that he might compare them and check the day’s takings; and it was on one of these occasions, when he was beginning to mend, that the change in my prospects came into view.

“I have been thinking about you, Nat,” said he. “You’re an industrious lad, and you’ve done your duty by me since I’ve been ill, and I think I ought to do something for you in return. Now, you’re set on being a clock-maker, but you can’t get into the trade without serving an apprenticeship in the regular way. Supposing I were willing to take you on as my apprentice, how would you like that?”

I jumped at the offer, but suggested that there might be difficulties about the premium.

“There wouldn’t be any premium,” said he. “I should give you your indentures free and pay the lawyer’s charges. Think it over, Nat, and see what your uncle and aunt have to say about it.”

It didn’t require much thinking over on my part, nor, when I arrived home in triumph and announced my good fortune, was there any difference of opinion as to the practical issue, though the respective views were differently expressed. Uncle Sam thought it “rather handsome of the old chap” (Mr. Abraham was about fifty-five), but Aunt Judy was inclined to sniff.

“He hasn’t done badly all these months,” said she, “with a competent journeyman for five shillings a week; and he’d be pretty well up a tree if Nat left him to get another job. Oh, he knows which side his bread’s buttered.”

There may have been some truth in Aunt Judy’s comment, but I thought there was more wisdom in old Mr. Gollidge’s contribution to the debate.

“It may be a good bargain for Mr. Abraham,” said he, “but that don’t make it a worse bargain for Nat. It’s best that both parties should be suited.”

In effect, it was agreed that the offer should be accepted; and when I conveyed this decision to Mr. Abraham, the necessary arrangements were carried through forthwith. The indentures were drawn up, on Mr. Abraham’s instructions, by his solicitor, a Mr. Cohen, who brought them to the shop by appointment; and when they had been submitted to and approved by Aunt Judy, they were duly signed by both parties on a small piece of board laid on the invalid’s bed, and I was then and there formally bound apprentice for the term of seven years to “the said David Abraham hereinafter called the Master”, who, for his part, undertook to instruct me in the art and mystery of clock-making. I need not recite the terms of the indenture in detail, but I think Aunt Judy found them unexpectedly liberal. To my surprise, I was to be given board and lodging; I was to receive five shillings a week for the first year and my wages were to increase by half-a-crown annually, so that in my last year I should be receiving the full wage of a junior journeyman, or improver.

These were great advantages; for henceforth not only would Aunt Judy be relieved of the cost of maintaining me, but she would now have an additional room to dispose of profitably. But beyond these material benefits there were others that I appreciated even more. Now, as an apprentice, I was entitled to instruction in that part of the “art and mystery” which was
indeed, but for that those of friendly young graduates explaining the principles replaced by a austere but pleasant class railway station is not a suitable place for the display of the emotions.

felt some receding train, from a window of which Aunt Judy's arm slid past, all too quickly; a circle, and, worst of all, no Aunt Judy.

during working hours. But henceforth I should since my infancy. I

Dutch clock and listening to old Mr. Gollidge's interminable

an even evening had passed which did not see me seated in the familiar kitchen (but not in my original chair) facing the old Dutch clock and listening to old Mr. Gollidge's interminable yarns. That kitchen had still been my home as it had been since my infancy. I had still been a member, not only of the family, but of the household, absent, like Uncle Sam, only during working hours. But henceforth I should have no home—for Mr. Abraham's house was a mere lodging; no family circle, and, worst of all, no Aunt Judy.

It was a dismal prospect. With a sinking heart I watched the preparations for the departure and counted the days as they slid past, all too quickly; and when the last of the sands had run out and I stood on the platform with my eyes fixed on the receding train, from a window of which Aunt Judy's arm protruded, waving her damp handkerchief, I felt as might have felt some marooned mariner following with despairing gaze the hull of his ship sinking below the horizon. As the train disappeared round a curve, I turned away and could have blubbered aloud; but I was now a young man of sixteen, and a railway station is not a suitable place for the display of the emotions.

But in the days that followed, my condition was very desolate and lonely; and yet, as I can now see, viewing events with a retrospective eye, this shattering misfortune was for my ultimate good. Indeed, it yielded certain immediate benefits. For, casting about for some way of disposing of the solitary evenings, I discovered an institution known as the Working Men's College, then occupying a noble old house in Great Ormond Street; whereby it came about that the homely kitchen was replaced by austerse but pleasant class rooms, and the voice of old Mr. Gollidge recounting the mutiny on the Mar' Jane by those of friendly young graduates explaining the principles of algebra and geometry, of applied mechanics and machine-drawing.
On a certain morning at the beginning of the fourth year of my apprenticeship, my master and I were in the shop together reviewing the stock when a rather irate-looking elderly gentleman entered, and, fixing a truculent eye on Mr. Abraham, demanded:

“Do you know anything about equatorial clocks?” Now, I suspect that Mr. Abraham had never heard of an equatorial clock, all his experience having been in the ordinary trade. But it would never do to say so. Accordingly he temporized.

“Well, sir, they don’t, naturally, come my way very often. Were you wanting to purchase one?”

“No, I wasn’t, but I’ve got one that needs some slight repair or adjustment. I am a maker of philosophical instruments and I have had an equatorial sent to me for overhaul. But the clock won’t budge; won’t start at all. Now, clocks are not philosophical instruments and I don’t pretend to know anything about ‘em. Can you come round and see what’s the matter with the thing?”

This was, for me, a rather disturbing question. For our visitor was none other than the gentleman who had accused me of having stolen his pocket-book. I had recognized him at the first glance as he entered, and had retired discreetly into the background lest he should recognize me. But now I foresaw that I should be dragged forth into the light of day. And so it befell.

“I am afraid,” Mr. Abraham said, apologetically, “that I can’t leave my business just at the moment. But my assistant can come round with you and see what is wrong with your equa—with your clock.”

Our customer looked at me, disparagingly, and my heart sank. But either I had changed more than I had supposed in the five years that had elapsed, or the gentleman’s eyesight was not very acute (it turned out that he was distinctly near-sighted). At any rate, he showed no sign of recognition, but merely replied gruffly: “I don’t want any boys monkeying about with that clock. Can’t you come yourself?”

“I am afraid I really can’t. But my assistant is a perfectly competent workman, and I take full responsibility for what he does.”

The customer grunted and scowled at me.

“Very well,” he said, with a very bad grace. “I hope he’s better than he looks. Can you come with me now?”

I replied that I could; and, having collected from the workshop the few tools that I was likely to want, I went forth with him, keeping slightly in the rear and as far as possible out of his field of view. But, to my relief, he took no notice of me, trudging on doggedly and looking straight before him.

We had not far to go, for, when we had passed half way down a quiet street in the neighbourhood of Oxford Market, he halted at a door distinguished by a brass plate bearing the inscription, “W. Parrish, Philosophical Instrument Maker,”, and, inserting a latch-key, admitted himself and me. Still ignoring my existence, he walked down a long passage ending in what looked like a garden door but which, when he opened it, proved to be the entrance to a large workshop in which were a lathe and several fitted benches, but, at the moment, no human occupants other than ourselves.

“There,” said he, addressing me for the first time, but still not looking at me, “that’s the clock. Just have a look at it, and mind you don’t do any damage. I’ve got a letter to write, but I’ll be back in a few minutes.”

With this he took himself off, much to my satisfaction, and I proceeded forthwith to make a preliminary inspection. The “patient” was a rather large telescope mounted on a cast-iron equatorial stand. I had never seen an equatorial before except in the form of a book-illustration, but from this I was able easily to recognize the parts and also the clock, which was perched on the iron base with its winding-handle within reach of the observer. This handle I tried, but found it fully wound (it was a spring-driven clock, fitted with governor balls and a fly, or fan), and I then proceeded to take off the loose wooden case so as to expose the movement. A leisurely inspection of this disclosed nothing structurally amiss, but it had an appearance suggesting long disuse and was desperately in need of cleaning.

Suspecting that the trouble was simply dirt and dry pivots, I produced from my bag a little bottle of clock-oil and an oiler and delicately applied a small drop of the lubricant to the empty and dry oil-sinks and to every point that was exposed to friction. Then I gave the ball-governor a cautious turn or two, whereupon my diagnosis was immediately confirmed; for the governor, after a few sluggish revolutions as the oil worked into the bearings, started off in earnest, spinning cheerfully and in an obviously normal fashion.

This was highly satisfactory. But now my curiosity was aroused as to the exact effect of the clock on the telescope. The former was geared by means of a long spindle to the right ascension circle, and on this was a little microscope mounted opposite the index. To the eyepiece of this microscope I applied my eye, and was thrilled to observe the scale of the circle creeping almost imperceptibly past the vernier. It was a great experience. I had read of these things in the optical text books, but here was this delightful mechanism made real and active before my very eyes. I was positively en tranced as I watched that slow, majestic motion; in fact I was so preoccupied that I was unaware of Mr. Parrish’s re-entry until I heard his voice; when I sprang up with a guilty start.

“Well,” he demanded, gruffly, “have you found out—Oh, but I see you have.”

“Yes, sir,” I said, eagerly, “it’s running quite well now, and the right ascension circle is turning freely, though, of course, I haven’t timed it.”
"Ho, you haven't, hey?" said he. "Hm. Seem to know all about it, young fellow. What was the matter with the clock?"

"It only wanted a little adjustment," I replied, evasively, for I didn't like to tell him that it was only a matter of oil. "But," I added, "it really ought to be taken to pieces and thoroughly cleaned."

"Ha!" said he, "I'll let the owner do that. If it goes, that is all that matters to me. You can tell your master to send me the bill."

He still spoke gruffly, but there was a subtle change in his manner. Evidently, my rapid performance had impressed him, and I thought it best to take the undeserved credit though I was secretly astonished that he, a practical craftsman, had not been able to do the job himself.

But I had impressed him more than I realized at the time. In fact, he had formed a ridiculously excessive estimate of my abilities, as I discovered some weeks later when he brought a watch to our shop to be cleaned and regulated, and stipulated that I should do the work myself "and not let the old fellow meddle with it". I assured him that Mr. Abraham (who was fortunately absent) was a really skilful watchmaker, but he only grunted incredulously.

"I want the job done properly," he insisted, "and I want you to do it yourself."

Evidently Mr. Abraham's evasions in the matter of equatorial clocks had been noted and had made an unfavourable impression. It was unreasonable—but Mr. Parrish was an unreasonable man—and, like most unreasonable beliefs, it was unshakable. Nor did he make any secret of his opinion when, on subsequent occasions during the next few months, he brought in various little repairs and renovations and sometimes interviewed my principal. For Mr. Parrish had no false delicacy—nor very much of any other kind. But Mr. Abraham took no offence. He knew (as Aunt Judy had observed) which side his bread was buttered; and as he was coming more and more to rely on me, he was willing enough that my merits should be recognized.

So, through those months, my relations with Mr. Parrish continued to grow closer and my future to shape itself invisibly. Little did I guess at the kind of grist that the Mills of God were grinding.

VI. FICKLE FORTUNE

"THE best-laid plans of mice and men gang aft agley." The oft-quoted words were only too apposite in their application to the plans laid by poor Mr. Abraham for the future conduct of his own affairs and mine. Gradually, as the years had passed, it had become understood between us that, when the period of my apprenticeship should come to an end, I should become his partner and he should subside into the partial retirement suitable to his increasing age.

It was an excellent plan, advantageous to us both. To him it promised a secure and restful old age, to me an assured livelihood, and we both looked forward hope fully to the time, ever growing nearer, when it should come into effect.

But, alas! it was never to be. Towards the end of my fourth year, his old enemy, bronchitis, laid its hand on him and sent him, once more, to his bedroom. But this was not the customary sub-acute attack. From the first it was evident that it was something much more formidable. I could see that for myself; and the doctor's grave looks and evasive answers to my questions confirmed my fears. Nor was evasion possible for long. On the fifth day of the illness, the ominous word "pneumonia" was spoken, and Miriam Goldstein, Mr. Abraham's housekeeper, was directed to summon the patient's relatives.

But, promptly as they responded to the call, they were too late for anything more than whispered and tearful farewells. When they arrived, with Mr. Cohen the solicitor, and I conducted them up to the sick room, my poor master was already blue-faced and comatose; and it was but a few hours later, when they passed out through the shop with their handkerchiefs to their eyes, that Mr. Cohen halted to say to me in a husky under tone, "You can put up the shutters, Polton," and then hurried away with the others.

I shall not dwell on the miserable days that followed, when I sat alone in the darkened shop, vaguely meditating on this calamity, or creeping silently up the stairs to steal a glance at the shrouded figure on the bed. Of all the mourners, none was more sincere than I. Quiet and unemotional as our friendship had been, a genuine affection had grown up between my master and me. And not without reason. For Mr. Abraham was not only a kindly man; he was a good man, just and fair in all his dealings, scrupulously honest, truthful and punctual, and strict in the discharge of his religious duties. I respected him deeply and he knew it; and he knew that in me he had a faithful friend and a dependable comrade. Our association had been of the happiest and we had looked forward to many years of pleasant and friendly collaboration. And now he was gone, and our plans had come to nought.

In those first days I gave little thought to my own concerns. It was my first experience of death, and my mind was principally occupied by the catastrophe itself, and by sorrow for the friend whom I had lost. But on the day after the funeral I was suddenly made aware of the full extent of the disaster as it affected me. The bearer—sympathetic enough—of the ill tidings was Mr. Cohen, who had called to give me my instructions.

"This is a bad look-out for you, Polton," said he. "Mr. Abraham ought to have made some provision on your behalf, and I think he meant to. But it was all so sudden. It doesn't do to put off making your will or drafting a new one."

"Then, how do I stand, sir?" I asked.
“The position is that your apprenticeship is dissolved by your master’s death, and I, as the executor, have to sell the business as a going concern, according to the provisions of the will, which was made before you were apprenticed. Of course, I shall keep you on, if you are willing, to run the business until it is sold; perhaps the purchaser may agree to take over your indentures or employ you as assistant. Meanwhile, I will pay you a pound a week. Will that suit you?”

I agreed, gladly enough, and only hoped that the purchaser might not make too prompt an appearance. But in this I was disappointed, for, at the end of the third week, Mr. Cohen notified me that the business was sold, and on the following day brought the new tenant to the premises; a rather raffish middle-aged man who smelt strongly of beer and bore the name of Stokes.

“I have explained matters to Mr. Stokes,” said Mr. Cohen, “and have asked him if he would care to take over your indentures; but I am sorry to say that he is not prepared to. However, I leave you to talk the matter over with him. Perhaps you can persuade him to change his mind. Meanwhile, here are your wages up to the end of the week, and I wish you good luck.”

With this he departed, and I proceeded, forthwith, to try my powers of persuasion on Mr. Stokes. “It would pay you to take me on, sir,” I urged. “You’d get a very cheap assistant. For, though I am only an apprentice, I have a good knowledge of the trade. I could do all the repairs quite competently. I can take a watch down and clean it; in fact, Mr. Abraham used to give me all the watches to clean.”

I thought that would impress him, but it didn’t. It merely amused him.

“My good lad,” he chuckled, “you are all behind the times. We don’t take watches down, nowadays, to clean ’em. We just take off the dial, wind ’em up, wrap ’em in a rag soaked in benzine, and put ’em in a tin box and let ’em clean, themselves.”

I gazed at him in horror. “That doesn’t seem a very good way, sir,” I protested. “Mr. Abraham always took a watch down to clean it.”

“Ha!” Mr. Stokes replied with a broad grin, “of course he would. That’s how they used to do ’em at Ur of the Chaldees when he was serving his time. Hey? Haw haw! No, my lad. My wife and I can run this business. You’ll have to look elsewhere for a billet.”

“And about my bedroom, sir. Could you arrange to let me keep it for the present? I don’t mean for nothing, of course.”

“You can have it for half-a-crown a week until you have found another place. Will that do?”

I thanked him and accepted his offer; and that concluded our business, except that I spent an hour or two showing him where the various things were kept, and in stowing my tools and other possessions in my bedroom. Then I addressed myself to the problem of finding a new employer; and that very afternoon I betook myself to Clerkenwell and began a round of all the dealers and clock-makers to whom I was known.

It was the first of many a weary pilgrimage, and its experiences were to be repeated in them all. No one wanted a half-finished apprentice. My Clerkenwell friends were all master craftsmen and they employed only experienced journeymen, and the smaller tradesmen to whom the dealers referred me were mostly able to conduct their modest establishments without assistance. It was a miserable experience which, even now, I look back on with discomfort. Every morning I set out, with dwindling hope, to search unfamiliar streets for clockmakers’ shops or to answer obviously inapplicable advertisements in the trade journals; and every evening I wended—not homewards, for I had no home—but to the hospitable common room of the Working Men’s College, where, for a few pence, I could get a large cup of tea and a slab of buttered toast to supplement the scanty scraps of food that I had allowed myself during the day’s wanderings. But presently even this was beyond my means, and I must needs, for economy, buy myself a half-quarter “household” loaf to devour in my cheerless bedroom to the accompaniment of a draught from the water-jug.

In truth, my condition was becoming desperate. My tiny savings—little more than a matter of shillings—were fast running out in spite of an economy in food which kept me barely above the starvation level. For I had to reserve the rent for my bedroom, that I might not be shelterless as well as famished, so long as any fraction of my little hoard remained. But as I counted the pitiful collection of shillings and sixpences at the bottom of my money-box—soon they needed no counting—I saw that even this was coming to an end and that I was faced by sheer destitution. Now and again the idea of applying for help to Aunt Judy or to Mr. Beeby drifted through my mind; but either from pride or obstinacy or some more respectable motive, I always put it away from me. I suppose that, in the end, I should have had to pocket my pride, or whatever it was, and make the appeal; but it was ordained otherwise.

My capital had come down to four shillings and sixpence, which included the rent for my bedroom due in five days’ time, when I took a last survey of my position. The end seemed to be fairly in sight. In five days I should be penniless and starving, without even a night’s shelter. I had sought work in every likely and unlikely place and failed ever to come within sight of it. Was there anything more to be done? Any possibility of employment that I had overlooked? As I posed the question again and again, I could find no answer but a hopeless negative. And then, suddenly, I thought of Mr. Parrish. He at least knew that I was a workman. Was it possible that he might find me something to do?

It was but a forlorn hope; for he was not a clock-maker, and of his trade I knew nothing. Nevertheless, no sooner had the idea occurred to me than I proceeded to give effect to it. Having smartened myself up as well as I could, I set forth for Oxford Market as briskly as if I had a regular appointment; and having the good luck to find him at home, put my case to him as persuasively as I was able in a few words.
He listened to me with his usual frown of impatience, and, when I had finished, replied in his customary gruff manner:

“But, my good lad, what do you expect of me? I am not a clock-maker and you are not an instrument-maker. You’d be no use to me.”

My heart sank, but I made one last, despairing effort. “Couldn’t you give me some odd jobs, sir, such as filing and polishing, to save the time of the skilled men? I shouldn’t want much in the way of wages.”

He began to repeat his refusal, more gruffly than before. And then, suddenly, he paused; and my heart thumped with almost agonized hope.

“I don’t know,” he said, slowly and with a considering air. “Perhaps I might be able to find you a job. I’ve just lost one of my two workmen and I’m rather short-handed at the moment. If you can use a file and know how to polish brass, I might give you some of the rough work to do. At any rate, I’ll give you a trial and see what you can do. But I can’t pay you a workman’s wages. You’ll have to be satisfied with fifteen shillings a week. Will that do for you?”

Would it do? It was beyond my wildest hopes. I could have fallen on his neck and kissed his boots (not simultaneously, though I was fairly supple in the joints in those days). Tremulously and gratefully, I accepted his terms, and would have said more, but he cut me short.

“Very well. You can begin work to-morrow morning at nine, and you’ll get your wages when you knock off on Saturday. That’s all. Off you go.”

I wished him “good morning!” and off I went, in an ecstasy of joy and relief reflecting incredulously on my amazing good fortune. Fifteen shillings a week! I could hardly believe that my ears had not deceived me. It was a competence. It was positive affluence.

But it was prospective affluence. My actual possessions amounted to four shillings and sixpence; but it was all my own, for the half-crown that had been ear marked for rent was now available for food. Still, this was Monday morning and wages were payable on Saturday night, so I should have to manage on nine pence a day until then. Well, that was not so bad. In those days, you could get a lot of food for ninepence if you weren’t too particular and knew where to go. At the cook’s shop in Carnaby Street where I used to buy Mr. Abraham’s mid-day meal and my own, we often fed sumptuously on sixpence apiece; and now the recollection of those simple banquets sent me hurrying thither, spurred on by ravenous hunger and watering at the mouth as imagination pictured that glorious, steamy window.

As I turned into Great Marlborough Street, I en countered Mr. Cohen, just emerging from the Police Court, where he did some practice as advocate. He stopped to ask what I was doing; and, when I had announced my joyful tidings, he went on to cross-examine me on my experiences of the last few weeks, listening attentively to my account of them and looking at me very earnestly.

“Well, Polton,” he said, “you haven’t been putting on a great deal of flesh. How much money have you got?”

I told him, and he rapidly calculated the possibilities of expenditure.

“Ninepence a day. You won’t fatten a lot on that. Where did you get the money?”

“I used to put by a little every week when I was at work, sir,” I explained; and I could see that my thrift commended itself to him.

“Wise lad,” said he, in his dry, legal way. “The men who grow rich are the men who spend less than they earn. Come and have a bit of dinner with me. I’ll pay,” he added, as I hesitated.

I thanked him most sincerely, for I was famished, as I think he had guessed, and together we crossed the road to a restaurant kept by a Frenchman named Paragot. I had never been in it, but had sometimes looked in with awe through the open doorway at the sybarites within, seated at tables enclosed in pews and consuming unimaginable delicacies. As we entered, Mr. Cohen paused for a few confidential words with the proprietor’s sprightly and handsome daughter, the purport of which I guessed when the smiling damsel deposited our meal on the table and I contrasted Mr. Cohen’s modest helping with the Gargantuan pile of roast beef. Yorkshire pudding and baked potatoes which fairly bulged over the edge of my plate.

“Have a drop of porter,” said Mr. Cohen. “Do you good once in a way;” and, though I would sooner have had water, I thought it proper to accept. But if the taste of the beer was disagreeable, the pleasant pewter tankard in which it was served was a refreshment to the eye. And I think it really did me good. At any rate, when we emerged into Great Marlborough Street, I felt like a giant refreshed; which is something to say for a young man of four feet eleven.

As we stood for a moment outside the restaurant, Mr. Cohen put his hand in his pocket and produced a half sovereign.

“I’m going to lend you ten shillings, Polton,” said he. “Better take it. You may want it. You can pay me back a shilling a week. Pay at my office. If I am not there, give it to my clerk and make him give you a receipt. There you are. That’s all right. Wish you luck in your new job. So long.”

With a flourish of the hand, he hustled off in the direction of the Police Court, leaving me grasping the little gold coin and choking with gratitude to this—I was going to say “Good Samaritan”, but I suppose that would be a rather left-handed compliment to an orthodox Jew with the royal name of Cohen.
I spent a joyous afternoon rambling about the town and looking in shop windows, and, as the evening closed in, I repaired to a coffee-shop in Holborn and consumed a gigantic cup of tea and two thick slices of bread and butter (“pint of tea and two doorsteps”, in the vernacular). Then I turned homeward, if I may use the expression in connection with a hired bedroom, resolving to get a long night’s rest so as to be fresh for the beginning of my new labours in the morning.

VII. INTRODUCES A KEY AND A CALENDAR

WHEN I entered the workshop which was to be the scene of my labours for the next few months, I found in it two other occupants: an elderly workman who was engaged at a lathe and a youth of about my own age who was filing up some brass object that was fixed in a vice. They both stopped work when I appeared, and looked at me with evident curiosity, and both greeted me in their respective ways; the workman with a dry “good morning”, and the other with a most peculiar grin.

“You’re the new hand, I suppose,” the former suggested, adding, “I don’t know what sort of a hand you are. Can you file flat?”

I replied that I could, whereupon he produced a rough plate of brass and handed it to me.

“There,” said he, “that casting has got to be filed smooth and true and then it’s got to be polished. Let’s see what you can do with it.”

Evidently, he had no extravagant expectations as to my skill, for he watched me critically as I put my tool-bag on the bench and selected a suitable file from my collection (but I could see that he viewed the bag with approval); and every few minutes he left his work to see how I was getting on. Apparently, the results of his observations were reassuring, for his visits gradually became less frequent, and finally he left me to finish the job alone.

During that first day I saw Mr. Parrish only once, for he did his own work in a small private workshop, which was always kept locked in his absence, as it contained a very precious dividing machine, with which he engraved the graduations on the scales of measuring instruments such as theodolites and sextants. This, with some delicate finishing and adjusting, was his province in the business, the larger, constructive work being done by his workmen. But on this occasion he came into the main workshop just before “knocking-off time” to hear the report on my abilities.

“Well, Kennet,” he demanded in his gruff way, “How has your new hand got on? Any good?”

Mr. Kennet regarded me, appraisingly, and after a brief consideration, replied: “Yes, I think he’ll do.”

It was not extravagant praise; but Mr. Kennet was a man of few words. That laconic verdict established me as a permanent member of the staff.

In the days that followed, a quiet friendliness grew up between us. Not that Mr. Kennet was a specially prepossessing person. Outwardly a grey-haired, shrivelled little man, dry and taciturn in manner and as emotionless as a potato, he had his kindly impulses, though they seldom came to the surface. But he was a first-class craftsman who knew his trade from A to Z, and measured the worth of other men in terms of their knowledge and skill. The liking that, from the first, he took to me, arose, I think, from his observation of my interest in my work and my capacity for taking pains. At any rate, in his undemonstrative way, he made me aware of his friendly sentiments, principally by letting me into the mysteries and secrets of the trade and giving me various useful tips from the storehouse of his experience.

My other companion in the workshop was the youth whom I have mentioned, who was usually addressed and referred to as Gus, which I took to represent Augustus. His surname was Haire, and I understood that he was some kind of relation of Mr. Parrish’s; apparently a nephew, as he always spoke of Mr. Parrish as his uncle, though he addressed him as “Sir.” His position in the workshop appeared to be that of a pupil, learning the business—as I gathered from him—with a view to partnership and succession. He lived on the premises, though he frequently went away for the week-ends to his home, which was at Malden in Essex.

The mutual liking of Mr. Kennet and myself found no counterpart in the case of Gus Haire. I took an instant distaste of him at our first meeting; which is rather remarkable, since I am not in the least addicted to taking sudden likes or dislikes. It may have been his teeth, but I hope not; for it would be unpardonable to allow a mere physical defect to influence one’s judgment of a man’s personal worth. But they were certainly rather unpleasant teeth and most peculiar. I have never seen anything like them, before or since. They were not decayed. Apparently, they were quite sound and strong, but they were covered with brown spots and mottlings which made them look like tortoise-shell. They were also rather large and prominent; which was unfortunate, as Gus was distinctly sensitive about them. Whence the remarkable grin which had so impressed me when we first met. It was habitual with him, and it startled me afresh every time. It began as a fine broad grin displaying the entire outfit of tortoise-shell. Then suddenly, he became conscious of his teeth, and in an instant the grin was gone. The effect was extraordinary, and not by any means agreeable.

Still, as I have said, I hope it was not the teeth that prejudiced me against him. There were other, and much better, reasons for my disliking him. But these developed later. My initial distaste of him may have been premonitory. In some unimaginable way, I seemed instinctively to have recognized an enemy.

As to his hardly-concealed dislike of me, I took it to be merely jealousy of Kennet’s evident preference. For that thorough-going craftsman had no use for Gus. The lad was lazy, inattentive, and a superlatively bad workman; faults enough to damn him in Kennet’s eyes. But there were other matters, which will transpire in their proper place.
In these early days I was haunted by constant anxiety as to the security of my position. There was really not enough for me to do. Mr. Parrish was getting on in years and some of his methods were rather obsolete. Newer firms with more up-to-date plant were attracting orders that would formerly have come to him, so that his business was not what it had been. But even of the work that was being done I could, at first, take but a small share. Later, when I had learned more of the trade, Kennet was able to turn over to me a good deal of his own work, so that I became, in effect, something like a competent journeyman. But in the first few weeks I often found myself with nothing to do, and was terrified lest Mr. Parrish should think that I was not earning my wage.

It was a dreadful thought. The idea of being set adrift once more to tramp the streets, hungry and despairing, became a sort of permanent nightmare. I worked with intense care and effort to learn my new trade and felt myself making daily progress. But still "Black Care rode behind the horseman". Something had to be done to fill up the hours of idleness and make me seem to be worth my pay. But what?

I began by taking down the workshop clock and cleaning it. Then I took off the lock of the workshop door, which had ceased to function, and made it as good as new; which seemed at the time to be a fortunate move, for, just as I was finishing it, Mr. Parrish came into the workshop and stopped to watch my proceedings.

"Ha!" said he, "so you are a locksmith, too. That's lucky, because I have got a job for you. The key of my writing-table has broken in the lock and I can't get the drawer open. Come and see what you can do with it."

I picked up my tool-bag and followed him to his workshop (which also served as an office), where he showed me the closed drawer with the stem of the broken key projecting about a quarter of an inch.

"There must be something wrong with the lock," said he, "for the key wouldn't turn, and when I gave it an extra twist it broke off. Flaw in the key, I expect."

I began by filing a small flat on the projecting stump, and then, producing a little hand-vice from my bag, applied it to the stump and screwed it up tight. With this I was able to turn the key a little backwards and forwards, but there was evidently something amiss with the lock, as it would turn no further. With my oiler, I insinuated a touch of oil on to the bit of the key and as much of the levers as I could reach and continued to turn the key to and fro, watched intently by Mr. Parrish and Gus (who had left his work to come and look on). At last, when I ventured to use a little more force, the resistance gave way and the key made a complete turn with an audible click of the lock.

As I withdrew the key, Mr. Parrish pulled out the drawer, which, as I saw, contained, among other things, a wooden bowl half-filled with a most untidy collection of mixed money: shillings, half-crowns, coppers, and at least two half-sovereigns. I looked with surprise at the disorderly heap and thought how it would have shocked poor Mr. Abraham.

"Well," said Mr. Parrish, "what's to be done? Can you make a new key?"

"Yes, sir," I replied, "or I could braze the old one together."

"No," he replied, "I've had enough of that key. And what about the lock?"

"I shall have to take that off in any case, because the ironmonger won't sell me a key-blank unless I show the lock. But it will have to be repaired."

"Very well," he agreed. "Take it off and get the job done as quickly as you can. I don't want to leave my cash-drawer unlocked."

I had the lock off in a few moments and took it away, with the broken key, to the workshop, where I spent a pleasant half-hour taking it to pieces, cleaning it, and doing the trifling repairs that it needed; and all the time, Gus Haire watched me intently, following me about like a dog and plying me with questions. I had never known him to be so interested in anything. He even accompanied me to the ironmonger's and looked on with concentrated attention while I selected the blank. Apparently, locksmithing was more to his taste than the making of philosophical instruments.

But the real tit-bit of the entertainment for him was the making of the new key. His eyes fairly bulged as he followed the details of the operation. I had in my bag a tin box containing a good-sized lump of stiff moulding-wax, which latter I took out, and, laying it on the bench, rolled it out flat with a file-handle. Then, on the flat surface, I made two impressions of the broken key, one of the profile of the bit and the other of the end, showing the hole in the "pipe"; and, having got my pattern, I fell to work on the blank. First, I drilled out the bore of the pipe, then I filed up the blank roughly to the dimensions with the aid of calipers, and, when I had brought it to the approximate size, I began carefully to shape the bit and cut out the "steps" for the levers, testing the result from time to time by fitting it into the impressions.

At length, when it appeared to fit both impressions perfectly, I tried it in the lock and found that it entered easily and turned freely to and fro, moving the bolt and levers without a trace of stiffness. Naturally, I was quite pleased at having got it right at the first trial. But my satisfaction was nothing compared with that of my watcher, who took the lock from me and turned the key to and fro with as much delight as if he had made it himself. Even Kennett, attracted by Gus's exclamations, left his work (he was making a reflecting level—just a simple mirror with a hole through it, mounted in a suspension frame) to come and see what it was all about.

But Gus's curiosity seemed now to be satisfied, for, when I took the lock and the new key to Mr. Parrish's workroom, he did not accompany me. Apparently, he was not interested in the mere refixing of the lock; whereas Mr. Parrish watched that operation with evident relief. When I had finished, he tried the key several times, first with the drawer open and then
with it closed, finally locking the drawer and pocketing the key with a grunt of satisfaction.

“Where’s the broken key?” he demanded as I prepared to depart. “I’d better have that.”

I ran back to the workshop, where I found Gus back at his vice, industriously filing something, and Kennet still busy with his level. The latter looked round at me as I released the key from the hand-vice, and I explained that I had forgotten to give the broken key to Mr. Parrish. He nodded and still watched me as I retired with it in my hand to return it to its owner; and when I came back to the workshop he put down his level and strolled across to my bench, apparently to inspect the slab of wax. I, also, inspected it, and saw at once that it was smaller than when I had left it; and I had no doubt that the ingenious Gus had “pinched” a portion of it for the purpose of making some private experiments. But I made no remark; and, having obliterated the key-impressions with my thumb, I peeled the wax off the bench, squeezed it up into a lump, and put it into my bag. Whereupon Kennet went back to his level without a word.

But my suspicions of Master Gus’s depredations were confirmed a few days later when, Kennet and I happening to be alone in the workshop, he came close to me and asked, in a low tone: “Did you miss any of that wax of yours the other day?”

“Yes, I did; and I’m afraid I suspected that Gus had helped himself to a bit.”

“You were right,” said Kennet. “He cut a piece off and pocketed it. But before he cut it off, he made two impressions of the key on it. I saw him. He thought I didn’t, because my back was turned to him. But I was working on that level, and I was able to watch him in the mirror.”

I didn’t much like this, and said so.

“More don’t I,” said Kennet. “I haven’t said anything about it, because it ain’t my concern. But it may be yours. So you keep a look-out. And remember that I saw him do it.”

With this and a significant nod he went back to the lathe and resumed his work.

The hardly-veiled hint that “it might be my concern” was not very comfortable to reflect on, but there was nothing to be done beyond keeping my tool-bag locked and the key in my pocket, which I was careful to do; and as the weeks passed, and nothing unusual happened, the affair gradually faded out of my mind.

Meanwhile, conditions were steadily improving. I had now learned to use the lathe and even to cut a quite respectable screw, and, as my proficiency increased, and with it my value as a workman, I began to feel my position more secure. And even when there was nothing for me to do in the workshop, Mr. Parrish found me odd jobs about the house, repairing locks, cleaning his watch, and attending to the various clocks, so that I was still earning my modest wage. In this way I came by a piece of work which interested me immensely at the time and which had such curious consequences later that I ventured to describe it in some detail.

It was connected with a long-case, or “grandfather” clock, which stood in Mr. Parrish’s workroom a few feet from his writing-table. I suspect that it had not been cleaned within the memory of man, and, naturally, there came a time when dirt and dry pivots brought it to a standstill. Even then, a touch of oil would probably have kept it going for a month or two, but I made no such suggestion. I agreed emphatically with Mr. Parrish’s pronouncement that the clock needed a thorough overhaul.

“And while you’ve got it to pieces,” he continued, “perhaps you could manage to fit it with a calendar attachment. Do you think that would be possible?”

I pointed out that it had a date disc, but he dismissed that with contempt.

“Too small. Want a microscope to see it. No, no, I mean a proper calendar with the day of the week and the day of the month in good bold characters that I can read when I am sitting at the table. Can you do that?”

I suggested that the striking work would be rather in the way, but he interrupted: “Never mind the striking work. I never use it. I hate a jangling noise in my room. Take it off if it’s in the way. But I should like a calendar if you could manage it.”

Of course, there was no difficulty. A modification of the ordinary watch-calendar movement would have answered. But when I described it, he raised objections.

“How long does it take to change?” he asked.

“About half an hour, I should think. It changes during the night.”

“That’s no use,” said he. “The date changes in an instant, on the stroke of midnight. A minute to twelve is, say, Monday; a minute after twelve is Tuesday. That ought to be possible. You make a clock strike at the right moment; why couldn’t you do the same with a calendar? It must be possible.”

It probably was; but no calendar movement known to me would do it. I should have to invent one on an entirely different principle if my powers were equal to the task. It was certainly a problem; but the very difficulty of it was an attraction, and in the end I promised to turn it over in my mind, and meanwhile I proceeded to take the clock out of its case and bear it away to the workshop. There, under the respectful observation of Gus and Mr. Kennet, I quickly took it down and fell to work on the cleaning operations; but the familiar routine hardly occupied my attention. As I worked, my thoughts were busy with the problem that I had to solve, and gradually my ideas began to take a definite shape. I saw, at once, that the
mechanism required must be in the nature of an escapement; that is to say, that there must be a constant drive and a periodic release. I must not burden the reader with mechanical details, but it is necessary that I should give an outline of the arrangement at which I arrived after much thought and a few tentative pencil drawings.

Close to the top of the door of the case I cut two small windows, one to show the date numbers and the other the days of the week. Below these was a third window for the months, the names of which were painted in white on a band of black linen which travelled on a pair of small rollers. But these rollers were turned by hand and formed no part of the mechanism. There was no use in complicating the arrangements for the sake of a monthly change.

And now for the mechanism itself! The names of the days were painted in white on a black drum, or roller, three inches in diameter, and the date numbers were painted on an endless black ribbon which was carried by another drum of the same thickness but narrower. This drum had at each edge seven little pins, or pegs; and the ribbon had, along each edge, a series of small eyelet holes which fitted loosely on the pins, so that, as the drum turned, it carried the ribbon along for exactly the right distance. Both drums were fixed friction-tight on a long spindle, which also carried at its middle a star wheel with seven long, slender teeth, and at its end a ratchet pulley over which ran a cord carrying the small driving-weight. Thus the calendar movement had its own driving-power and made no demands on that of the clock.

So much for the calendar itself; and now for its connection with the clock. The mechanism “took off” from the hour-wheel which carries the hour-hand and makes a complete turn in twelve hours, and which, in this clock, had forty teeth. Below this, and gearing with it, I fixed another wheel, which had eighty teeth, and consequently turned once in twenty-four hours. I will call this “the day-wheel.” On this wheel I fixed, friction-tight, so that it could be moved round to adjust it, what clockmakers call a “snail”; which is a flat disc cut to a spiral shape, so that it looks like the profile of a snail’s shell. Connecting the snail with the calendar was a flat, thin steel bar (I actually made it from the blade of a hack saw) which I will call “the pallet-bar.” It moved on a pivot near its middle and had at its top end a small pin which rested against the edge of the snail and was pressed against it by a very weak spring. At its lower end it had an oblong opening with two small ledges, or pallets, for the teeth of the star-wheel to rest on. I hope I have made this fairly clear. And now let us see how it worked.

We will take the top end first. As the clock “went,” it turned the snail round slowly (half as fast as the hour-hand); and as the snail turned, it gradually pushed the pin of the pallet-bar, which was resting against it, farther and farther from its centre, until the end of the spiral was reached. A little further turn and the pin dropped off the end of the spiral (“the step”) down towards the centre. Then the pushing-away movement began again. Thus it will be seen that the rotation of the snail (once in twenty-four hours) caused the top end of the pallet-bar to move slowly outwards and then drop back with a jerk.

Now let us turn to the lower end of the pallet-bar. Here, as I have said, was an oblong opening, interrupted by two little projecting ledges, or pallets. Through this opening the star-wheel projected, one of its seven teeth resting (usually) on the upper pallet, and held there by the power of the little driving weight. As the snail turned and pushed the top end of the pallet-bar outwards, the lower end moved in the opposite direction, and the pallet slid along under the tooth of the wheel. When the tooth reached the end of the upper pallet, it dropped off on to the lower pallet and remained there for a few minutes. Then, when the pin dropped into the step of the snail, the lower pallet was suddenly withdrawn from under the tooth, which left the wheel free to turn until the next tooth was stopped by the upper pallet. Thus the wheel made the seventh of a revolution; but so, also, did the two drums which were on the same spindle, with the result that a new day and date number were brought to their respective windows; and the change occupied less than a second.

The above is only a rough sketch of the mechanism, omitting the minor mechanical details, and I hope it has not wearied the reader. To me, I need not say, the work was a labour of love which kept me supremely happy. But it also greatly added to my prestige in the workshop. Kennet was deeply impressed by it, and Gus followed the construction with the keenest interest and with a display of mechanical intelligence that rather surprised me. Even Mr. Parrish looked into the workshop from time to time and observed my progress with an approving grunt.

When the construction was finished, I brought the case into the workshop and there set the clock up—at first without the dial—to make the final adjustments. I set the snail to discharge at twelve noon, as midnight was not practicable, and the three of us used to gather round the clock as the appointed hour approached, for the gratification of seeing the day and date change in an instant at the little windows. When the adjustment was perfect, I stopped the clock at ten in the morning and we carried it in triumph to its usual abiding place, where, when I had tried the action to see that the tick was even, I once more stopped the pendulum and would have left it to the care of its owner. But Mr. Parrish insisted that I should come in in the evening and start it myself and further, that I should stay until midnight and see that the date did actually change at the correct moment. To which I agreed very readily; whereby I not only gained a supper that was a banquet compared with my customary diet and had the satisfaction of seeing the date change on the very stroke of midnight, but I received such commendations from my usually undemonstrative employer that I began seriously to consider the possibility of an increase in my wages in the not too distant future.

But, alas! the future had something very different in store for me.

VIII. MR. PARRISH REMEMBERS

FOR a month or two after the agreeable episode just recounted, the stream of my life flowed on tranquilly and perhaps rather monotonously. But I was quite happy. My position in Mr. Parrish’s establishment seemed fairly settled and I had the
feeling that my employer set some value on me as a workman. Not, however, to the extent of increasing my salary, though of this I still cherished hopes. But I did not dare to raise the question; for at least I had an assured livelihood, if a rather meagre one, and so great was my horror of being thrown out of employment that I would have accepted the low wage indefinitely rather than risk my security. So I worked on contentedly, poor as a church mouse, but always hoping for better times.

But at last came the explosion which blew my security into atoms. It was a disastrous affair and foolish, too; and what made it worse was that it was my own hand that set the match to the gunpowder. Very vividly do I recall the circumstances, though, at first, they seemed trivial enough. A man from a tool-maker's had come into the workshop to inspect a slide-rest that his firm had fitted to the lathe. When he had examined it and pronounced it satisfactory, he picked up the heavy bag that he had brought and was turning towards the door when Mr. Parrish said:

"If you have got the account with you, I may as well settle up now."

The man produced the account from his pocket-book and handed it to Mr. Parrish, who glanced at it and then, diving into his coat-tail pocket, brought out a leather wallet (which I instantly recognized as an old acquaintance) and, extracting from it a five-pound note, handed the latter to the man in exchange for the receipt and a few shillings change. As our visitor put away the note, Mr. Parrish said to me: "Take Mr. Soames's bag, Polton, and carry it out to the cab."

I picked up the bag, which seemed to be filled with tool-makers' samples, and conveyed it out to the waiting "growler," where I stowed it on the front seat, and, waiting with the door open, saw Mr. Soames safely into the vehicle and shut him in. Returning into the house, I encountered Mr. Parrish, who was standing at the front door; and then it was that some demon of mischief impelled me to an act of the most perfectly asinine folly.

"I see, sir," I said with a fatuous smirk, "that you still carry your wallet in your coat-tail pocket."

He halted suddenly and stared at me with a strange, startled expression that brought me to my senses with a jerk. But it was too late. I saw that the fat was in the fire, though I didn't guess how much fat there was or how big was the fire. After a prolonged stare, he commanded, gruffly:

"Come into my room and tell me what you mean." I followed him in, miserably, and when he had shut the door, I explained:

"I was thinking, sir, of what the inspector at the police station said to you about carrying your wallet in your tail pocket. Don't you remember, sir?"

"Yes," he replied, glaring at me ferociously, "I remember. And I remember you, too, now that you have reminded me. I always thought that I had seen you before. So you are the young rascal who was found in possession of the stolen property."

"But I didn't steal it, sir," I pleaded.

"Ha!" said he. "So you said at the time. Very well. That will do for the present."

I sneaked out of the room very crest-fallen and apprehensive. "For the present!" What did he mean by that? Was there more trouble to come? I looked nervously in at the workshop, but as the other occupants had now gone to dinner, I took myself off and repaired to an a-la-mode beef shop in Oxford Market, where I fortifed myself with a big basinful of the steaming compound and "topped up" with a halfpennyworth of apples from a stall in the market. Then I whiled away the remainder of the dinner hour rambling about the streets, trying to interest myself in shop windows, but unable to rid myself of the haunting dread of what loomed in the immediate future.

At length, as the last minutes of the dinner hour ran out, I crept back timorously, hoping to sink unnoticed along the passage to the workshop. But even as I entered, my forebodings were realized. For there was my employer, evidently waiting for me, and a glance at his face prepared me for instant dismissal. He motioned to me silently to follow him into his room, and I did so in the deepest dejection; but when I entered and found a third person in the room, my dejection gave place to something like terror. For that third person was Detective Sergeant Pitts.

He recognized me instantly, for he greeted me drily by name. Then, characteristically, he came straight to the point.

"Mr. Parrish alleges that you have opened his cash drawer with a false key and have, from time to time, taken certain monies from it. Now, before you say anything, I must caution you that anything you may say will be taken down in writing and may be used in evidence against you. So be very careful. Do you wish to say anything?"

"Certainly I do," I replied, my indignation almost overcoming my alarm. "I say that I have no false key, that I have never touched the drawer except in Mr. Parrish's presence, and that I have never taken any money whatsoever."

The sergeant made a note of my reply in a large black note-book and then asked: "Is it true that you made a key to fit this drawer?"

"Yes, for Mr. Parrish; and he has that key and the broken one from which it was copied. I made no other key."

"How did you make that key? By measurements only, or did you make a squeeze?"

"I made a squeeze from the broken key, and, as soon as the job was finished, I destroyed it."

"That's what he says," exclaimed Mr. Parrish, "but it's a lie. He kept the squeeze and made another key from it."
The sergeant cast a slightly impatient glance at him and remarked, drily: “We are taking his statement,” and continued:

“Now, Polton, Mr. Parrish says that he marked some, or all, of the money in that drawer with a P. scratched just behind the head. If you have got any money about you, perhaps you would like to show it to us.”

“Like, indeed!” exclaimed Mr. Parrish. “He'll have to be searched whether he likes it or not.”

The sergeant looked at him angrily, but, as I proceeded to turn out my pockets and lay the contents on the table, he made no remark until Mr. Parrish was about to pounce on the coins that I had laid down, when he said, brusquely: “Keep your hands off that money, Mr. Parrish. This is my affair.”

Then he proceeded to examine the coins, one by one, laying them down again in two separate groups. Having finished, he looked at me steadily and said:

“Here, Polton, are five coins: three half-crowns and a shilling and a sixpence. All the half-crowns are marked with a P. The other coins are not marked. Can you explain how you came by those half-crowns?”

“Yes, sir. I received them from Mr. Parrish when he paid me my wages last Saturday. He gave me four half-crowns, two forms and a shilling; and he took the money from that drawer.”

The sergeant looked at Mr. Parrish. “Is that correct?” he asked.

“I paid him his wages—fifteen shillings—but I don’t admit that those are the coins I gave him.”

“But,” the sergeant persisted, “did you take the money from that drawer?”

“Of course I did,” snapped Parrish. “It’s my petty-cash drawer.”

“And did you examine the coins to see whether they were marked?”

“I expect I did, but I really don’t remember.”

“He did not,” said I. “He just counted out the money and handed it to me.”

The sergeant gazed at my employer with an expression of bewilderment.

“Well, of all—” he began, and then stopped and began again: “But what on earth was the use of marking the money and then paying it out in the ordinary way?”

The question stumped Mr. Parrish for the moment. Then, having mumbled something about “a simple precaution”, he returned to the subject of the squeeze and the key. But the sergeant cut him short.

“It’s no use just making accusations without proof. You’ve got nothing to go on. The marked money is all bunkum, and as to the key, you are simply guessing. You’ve not made out any case at all.”

“Oh, haven’t I?” Parrish retorted. “What about that key and the lock that he repaired and the stolen money? I am going to prosecute him, and I call on you to arrest him now.”

“I’m not going to arrest him,” said the sergeant; “but if you still intend to prosecute, you’d better come along and settle the matter with the inspector at the station. You come, too, Polton, so that you can answer any questions.”

Thus did history repeat itself. Once more, after five years, did I journey to the same forbidding destination in company with the same accuser and the guardian of the law. When we arrived at the police station and were about to enter, we nearly collided with a smartly dressed gentleman who was hurrying out, and whom I recognized as my late benefactor, Mr. Cohen. He recognized me at the same moment and stopped short with a look of surprise at the sergeant.

“Why, what’s this, Polton?” he demanded. “What are you doing here?”

“He is accused by this gentleman,” the sergeant explained, “of having stolen money from a drawer by means of a false key.”

“Bah!” exclaimed Mr. Cohen. “Nonsense. He is a most respectable lad. I know him well and can vouch for his excellent character.”

“You don’t know him as well as I do,” said Mr. Parrish, viciously.

Mr. Cohen turned on him a look of extreme disfavour and then addressed the sergeant.

“If there is going to be a prosecution, Sergeant, I shall undertake the defence. But I should like to have a few words with Polton and hear his account of the affair before the charge is made.”

To this Mr. Parrish was disposed to object, muttering something about “collusion”, but, as the inspector was engaged at the moment, the sergeant thrust my adviser and me into a small, empty room and shut the door. Then Mr. Cohen began to ply me with questions, and so skilfully were they framed that in a few minutes he had elicited, not only the immediate circumstances, but also the material antecedents, including the incident of the wax squeeze and Mr. Kennet’s observations with the reflecting level. I had just finished my recital when the sergeant opened the door and invited us to step into the inspector’s office.

Police officers appear to have astonishing memories. The inspector was the same one who had taken—or rather refused—the charge on my former visit, and I gathered that not only was his recognition of accused and accuser instantaneous, but
that he even remembered the circumstances in detail. His mention of the fact did not appear to encourage Mr. Parrish, who began the statement of his case in a rather diffident tone; but he soon warmed up, and finished upon a note of fierce denunciation. He made no reference to the marked coins, but the sergeant supplied the deficiency with a description of the incident to which the inspector listened with an appreciative grin.

“it comes to this, then,” that officer summed up. “You have missed certain money from your cash-drawer and you suspect Polton of having stolen it because he is able to make a key.”

“And a very good reason, too,” Mr. Parrish retorted, defiantly.

“You have no proof that he did actually make a key?”

“He must have done so, or he wouldn’t have been able to steal the money.”

The inspector exchanged glances of intelligence with the sergeant and then turned to my adviser.

“Now, Mr. Cohen, you say you are acting for the accused. You have heard what Mr. Parrish has said. Is there any answer to the charge?”

“There is a most complete and conclusive answer,” Mr. Cohen replied. “In the first place I can prove that Polton destroyed the wax squeeze immediately when he had finished the key. Further, I can prove that, while Polton was absent, trying the key in the lock, some other person abstracted a piece of the wax and made an impression on it with the broken key. He thought he was unobserved, but he was mistaken. Someone saw him take the wax and make the squeeze. Now, the person who made that squeeze was a member of Mr. Parrish’s household, and so would have had access to Mr. Parrish’s office in his absence.”

“He wouldn’t,” Mr. Parrish interposed. “I always lock my office when I go away from it.”

“And when you are in it,” the inspector asked, “where is the key?”

“In the door, of course,” Mr. Parrish replied impatiently.

“On the outside, where anyone could take it out quietly, make a squeeze and put it back. And somebody must have made a false key if the money was really stolen. The drawer couldn’t have been robbed when you were in the office.”

“That is exactly what I am saying,” Mr. Parrish protested. “This young rogue made two keys, one of the door and one of the cash-drawer.”

The inspector took a deep breath and then looked at Mr. Cohen.

“You say, Mr. Cohen, that you can produce evidence. What sort of evidence?”

“Absolutely conclusive evidence, sir,” Mr. Cohen replied. “The testimony of an eye-witness who saw Polton destroy his squeeze and saw the other person take a piece of the wax and make the impression. If this case goes into Court, I shall call that witness and he will disclose the identity of that person. And then I presume that the police would take action against that person.”

“Certainly,” replied the inspector. “If Mr. Parrish swears that money was stolen from that drawer and you prove that some person, living in the house, had made a squeeze of the drawer-key, we should, naturally, charge that person with having committed the robbery. Can you swear, Mr. Parrish, that the money was really stolen and give particulars of the amounts?”

“Well,” replied Mr. Parrish, mightily flustered by these new developments, “to the best of my belief—but if there is going to be a lot of fuss and scandal, perhaps I had better let the matter drop and say no more about it.”

“That won’t do, Mr. Parrish,” my champion said, sharply. “You have accused a most respectable young man of a serious crime, and you have actually planted marked money on him and pretended that he stole it. Now, you have got, either to support that accusation—which you can’t do, because it is false—or withdraw the charge unconditionally and acknowledge your mistake. If you do that, in writing, I am willing to let the matter drop, as you express it. Otherwise, I shall take such measures as may be necessary to establish my client’s innocence.”

The pretty obvious meaning of Mr. Cohen’s threat was evidently understood, for my crestfallen accuser turned in dismay to the inspector with a mumbled request for advice; to which the officer replied, briskly:

“Well. What’s the difficulty? You’ve been guessing, and you’ve guessed wrong. Why not do the fair thing and admit your mistake like a man?”

In the end, Mr. Parrish surrendered, though with a very bad grace; and when Mr. Cohen had written out a short statement, he signed it, and Sergeant Pitts attested the signature and Mr. Cohen bestowed the document in his wallet; which brought the proceedings to an end. Mr. Parrish departed in dudgeon; and I—when I had expressed my profound gratitude to Mr. Cohen for his timely help—followed him, in considerably better spirits than when I had arrived.

But as soon as I was outside the police station, the realities of my position came back to me. The greater peril of the false charge and possible conviction and imprisonment, I had escaped; but the other peril still hung over me. I had now to return to my place of employment, but I knew that there would be no more employment for me. Mr. Parrish was an unreasonable, obstinate man, and evidently vindictive. No generous regret for the false accusation could I expect, but rather an exacerbation of his anger against me. He would never forgive the humiliation that Mr. Cohen had inflicted on
him.

My expectations were only too literally fulfilled. As I entered the house, I found him waiting for me in the hail with a handful of silver in his fist.

"Ha!" said he, "so you have had the impudence to come back. Well, I don’t want you here. I’ve done with you. Here are your week’s wages, and now you can take yourself off."

He handed me the money and pointed to the door, but I reminded him that my tools were in the workshop and requested permission to go and fetch them.

"Very well," said he, "you can take your tools, and I will come with you to see that you don’t take anything else."

He escorted me to the workshop, where, as we entered, Kennet looked at us with undissembled curiosity, and Gus cast a furtive and rather nervous glance over his shoulder. Both had evidently gathered that there was trouble in the air.

"Now," said Mr. Parrish, "look sharp. Get your things together and clear out."

As the order was given, in a tone of furious anger, Gus bent down over his bench and Kennet turned to watch us with a scowl on his face that suggested an inclination to take a hand in the proceedings. But if he had had any such intention, he thought better of it, though he continued to look at me, gloomily, as I packed my bag, until Mr. Parrish noticed him and demanded, angrily:

"What are you staring at, Kennet? Mind your own business and get on with your work."

"Polton got the sack?" asked Kennet.

"Yes, he has," was the gruff reply.

"What for?" Kennet demanded with equal gruffness.

"That’s no affair of yours," Parrish replied. "You attend to your own job."

"Well," said Kennet, "you are sending away a good workman, and I hope he’ll get a better billet next time. So long, mate." and with this he turned back sulkily to his lathe, while I, having now finished packing my bag, said "good-bye" to him and was forthwith shepherded out of the workshop.

As I took my way homeward—that is, towards Foubert’s Place—I reflected on the disastrous change in my condition that a few foolish words had wrought. For I could not disguise from myself the fact that my position was even worse than it had been when poor Mr. Abraham’s death had sent me adrift. Then, I had a reasonable explanation of my being out of work, just now I should not dare to mention my last employer. I had been dismissed on suspicion of theft. It was a false suspicion and its falsity could be proved. But no stranger would go into that question. The practical effect was the same as if I had been guilty. I should have to evade any questions as to my last employment.

A review of my resources was not more encouraging. I had nine shillings left from my last wages and the fifteen shillings that Mr. Parrish had just paid me, added to which was a small store in my money-box that I had managed to put by from week to week. I knew the amount exactly, and, casting up the entire sum of my wealth, found that the total was two pounds, three shillings and sixpence. On that I should have to subsist and pay my rent until I should obtain some fresh employment; and the ominous question as to how long it would last was one that I did not dare to consider.

When I had put away my tool-bag in the cupboard and bestowed the bulk of my money in the cash-box, I took a long drink from the water-jug to serve in lieu of tea and set forth towards Clerkenwell to use what was left of the day in taking up once more the too-familiar quest.

IX. STORM AND SUNSHINE

OVER the events of the succeeding weeks I shall pass as lightly as possible. There is no temptation to linger or dwell in detail on these dismal recollections, which could be no more agreeable to read than to relate. Nevertheless, it is necessary that I should give at least a summary account of them, since they were directly connected with the most important event of my life.

But it was a miserable time, repeating in an intensified form all the distressing features of that wretched interregnum that followed Mr. Abraham’s death. For then I had at least begun my quest in hope, whereas now something like despair haunted me from the very beginning. I knew from the first how little chance I had of finding employment, especially since I could not venture to name my last employer; but that difficulty never arose, for no one ever entertained my application. The same old obstacle presented itself every time: I was not a qualified journeyman, but only a half-time apprentice.

Still I went on doggedly, day after day, trapesing the streets until I think I must have visited nearly every clockmaker in London and a number of optical-instrument makers as well; and as the days passed, I looked forward with ever-growing terror to the inevitable future towards which I was drifting. For my little store of money dwindled steadily. From the first I had cut my food down to an irreducible minimum.

Tea and butter I never tasted; but even a loaf of bread with an occasional portion of cheese, or a faggot or a polony, cost something; and there was the rent to pay at the end of every week. Each night, as I counted anxiously the shrinking
Meanwhile, my distress of mind must have been aggravated by my bodily condition; for though the meagre scraps of food that I doled out to myself with miserly thrift were actually enough to support life, I was in a state of semi-starvation. The fact was obvious to me, not only from the slack way in which my clothes began to hang about me, but from the evident signs of bodily weakness. At first I had been able to tramp the streets for hours at a time without resting, but now I must needs seek, from time to time, some friendly doorstep or window-ledge to rest awhile before resuming my fruitless journeyings.

Occasionally, as I wandered through the streets, realizing the hopelessness of my quest, there passed through my mind vaguely the idea of seeking help from some of my friends: from Mr. Beeby or Mr. Cohen, or even Aunt Judy. But always I put it off as a desperate measure only to be considered when everything else had failed; and Aunt Judy I think I never considered at all. I had last written to her just after I had finished the calendar: a buoyant, hopeful letter, conveying to her the impression that a promising future was opening out to me, as I indeed believed. She would be quite happy about me, and I could not bear to think of the bitter disappointment and disillusionment that she would suffer if I were to disclose the dreadful reality. Besides, she and dear, honest Uncle Sam were but poor people, living decently, but with never a penny to spare. How could I burden them with my failure? It was not to be thought of.

But, in fact, as the time ran on, I seemed to become less capable of thought. My alarm at the approaching catastrophe gave place to a dull, fatalistic despair almost amounting to indifference. Even when I handed Mr. Stokes my last half-crown for rent—in advance—and knew that another week would see me without even a night’s shelter, I seemed unable clearly to envisage the position. There still remained an uncounted handful of coppers. I was not yet penniless.

But there was something more in my condition than mere mental dulness. At intervals I became aware of myself. Not only did my thoughts tend to ramble in a confused, dreamlike fashion, mingling objective realities with things imagined; I was conscious of bodily sensations that made me suspect the onset of definite illness: a constant, distressing headache, with attacks of shivering (though the weather was warm) and a feeling as if a stream of icy water were being sprayed on my back. And now the gnawing hunger from which I had suffered gave place to an intense repugnance to food. On principle, I invested the last but one of my pence in a polony. But I could not eat it; and when I had ineffectively nibbled at one end, I gave up the attempt and put it in my pocket for future use. But I had a craving for a drink of tea, and my last penny was spent at a coffee-shop, where I sat long and restfully in the old-fashioned “pew” with a big mug of the steaming liquor before me.

That is my last connected recollection of this day. Whither I went after leaving the coffee-shop I have no idea. Hour after hour I must have wandered aimlessly through the streets, for the night had fallen when I found myself sitting on the high step of a sheltered doorway with my aching head supported by my hands. A light rain was pattering down on the pavement, and no doubt it was to escape this that I had crept into the doorway. But I do not remember. Indeed, my mind must have been in a very confused state, for I seemed to wake up as from a dream or a spell of unconsciousness when a light shone on me and a voice addressed me.

“Now, young fellow, you can’t sit there. You must move on.”

I raised my head and received the full glare of the lantern in my face, which caused me instantly to close my eyes. There was a short pause, and then the voice resumed, persuasively: “Come, now, my lad, up you get.”

With the aid of my hands on the step, I managed to rise a little way, but then sank down again with my back against the door. There was another pause, during which the policeman—now faintly visible—stooped over me for a closer inspection. Then a second voice interposed: “What’s this? He can’t be drunk, a kid like that.”

“No, he isn’t,” the first officer replied. He grasped my wrist, gently, in a very large hand, and exclaimed: “God! The boy’s red-hot. Just feel his wrist.”

The other man did so and brought his lantern to bear on me. Then they both stood up and held a consultation of which I caught only a few stray phrases such as, “Yes, Margaret’s is nearest,” and, finally, “All right. Run along to the stand and fetch one. Four-wheeler, of course.”

Here, one of the officers disappeared, and the other, leaning over me, asked in a kindly tone what my name was and where I lived. I managed to answer these questions, the replies to which the officer entered in a book, but the effort finished me, and I dropped forward again with my head in my hands. Presently a cab drew up opposite the doorway, and the two officers lifted me gently and helped me into it, when I saw by the light of its lamps that they were a sergeant and a constable. The latter got in with me and slammed the door with a bang that seemed like the blow of a hammer on my head, and the cab rattled away noisily, the jar of its iron tyres on the granite setts shaking me most abominably.

Of that journey I have but the haziest recollection. I know that I huddled in the corner with my teeth chattering, but I must have sunk into a sort of stupor, for I can recall nothing more than a muddled, dream like, consciousness of lights and people, of being lifted about and generally discommoded, of having my clothes taken off, and, finally, of being washed by a white-capped woman with a large sponge—a proceeding that made my teeth chatter worse than ever.

Thenceforward time ceased to exist for me. I must have lain in a dull, torpid condition with occasional intervals of more definite consciousness. I was dimly aware that I was lying in a bed in a large, light room in which there were other people, and which I recognized as a hospital ward. But mostly my mind was a blank, conscious only of extreme bodily discomfort.
and a dull headache that never left me a moment of ease.

How long I continued in this state, indifferent to, and hardly conscious of my surroundings, but always restless, weary and suffering, I have no idea (excepting what I was told afterwards). Days and nights passed uncounted and unperceived, and the memory of that period which remains is that of a vague, interminable dream.

The awakening came, I think, somewhat suddenly. At any rate, I remember a day when I, myself, was conscious of a change. The headache and the restlessness had gone, and with them the muddled, confused state of mind. I was now clearly aware of what was going on around me, though too listless to take particular notice, lying still with my eyes closed or half-closed, in a state of utter exhaustion, with a sensation of sinking through the bed. Vaguely, the idea that I was dying presented itself; but it merely floated through my mind without arousing any interest. The effort even of thinking was beyond my powers.

In the afternoon of this day the physician made his periodical visit. I was aware of droning voices and the tread of many feet as he and the little crowd of students moved on from bed to bed, now passing farther away and now coming nearer. Presently they reached my bed, and I opened my eyes sleepily to look at them. The physician was a short, pink-faced gentleman with upstanding silky white hair and bright blue eyes. At the moment he was examining the chart and case paper and discussing them with a tall, handsome young man whom I recognized as one of the regular disturbers of my peace. I took no note of what they were saying until he handed the chart-board to a white-capped lady (another of the disturbers) with the remark: "Well, Sister, the temperature is beginning to remit, but he doesn't seem to be getting any fatter."

"No, indeed," said the sister. "He is an absolute skeleton, and he's most dreadfully weak. But he seems quite sensible to-day."

"I'm. Yes," said the physician. Then, addressing the students, he continued: "A rather difficult question arises. We are in a dilemma. If we feed him too soon we may aggravate the disease and send his temperature up; if we don't feed him soon enough we may—well, we may feed him too late. And in this case there is the complication that the patient was apparently in a state of semi-starvation when he was taken ill; so he had no physiological capital to start with. Now, what are we to do? Shall we take the opinion of the learned house physician? He smiled up at the tall young gentleman and continued: "You've had him under observation, Thorndyke. Tell us what you'd agree."

"I should take what seems to be the lesser risk," the house physician replied, promptly, "and begin feeding him at once."

"There!" chuckled the physician. "The oracle has spoken, and I think we agree. We usually do agree with Mr. Thorndyke, and when we don't, we're usually wrong. Ha! ha! What? Very well, Thorndyke. He's your patient, so you can carry out your own prescription."

With this, the procession moved on to the next bed; and I closed my eyes and relapsed into my former state of dreamy half-consciousness. From this, however, I was presently aroused by a light touch on my shoulder and a feminine voice addressing me.

"Now, Number Six, wake up. I've brought you a little supper, and the doctor says you are to take the whole of it."

I opened my eyes and looked sleepily at the speaker, a pleasant-faced, middle-aged nurse who held in one hand a glass bowl, containing a substance that looked like pomade, and in the other a spoon; and with the latter she began to insinuate very small quantities of the pomade into my mouth, smilingly ignoring my feeble efforts to resist. For though the taste of the stuff was agreeable enough, I still had an intense repugnance to food and only wanted to be left alone. But she was very patient and very persistent, giving me little rests and then rousing me up and coaxing me to make another effort. And so, I suppose, the pomade was at last finished; but I don't know, for I must have fallen asleep and must have slept several hours, since it was night when I awoke and the ward was in semi-darkness. But the pomade had done its work. The dreadful sinking feeling had nearly gone and I felt sufficiently alive to look about me with a faintly-awakening interest; which I continued to do until the night sister espied me and presently bore down on me with a steaming bowl and a feeding cup.

"Well, Number Six," said she, "you've had quite a fine, long sleep, and now you are going to have some nice, hot broth; and perhaps, when you have taken it, you'll have another sleep." Which turned out to be the case, for though I recall emptying the feeding-cup, I remember nothing more until I awoke to find the sun light streaming into the ward and the nurse and Mr. Thorndyke standing beside my bed.

"This is better, Number Six," said the latter. "They tell me you have been sleeping like a dormouse. How do you feel this morning?"

I replied in a ridiculous whisper that I felt much better; at which he smiled, pleasantly, and remarked that it was the first time he had heard my voice, "if you can call it a voice," he added. Then he felt my pulse, took my temperature, and, having made a few notes on the case-paper, departed with another smile and a friendly nod.

I need not follow my progress in detail. It was uninterrupted, though very slow. By the end of the following week my temperature had settled down and I was well on my way to recovery. But I was desperately weak and wasted to a degree of emaciation that I should have supposed to be impossible in a living man. However, this seemed to be a passing phase, for now, so far from feeling any repugnance to food, I hailed the appetizing little meals that were brought to me with voracious joy.

As my condition improved, Mr. Thorndyke's visits tended to grow longer. When the routine business had been
dispatched, he would linger for a minute or two to exchange a few words with me (very few on my side and mostly playful or facetious on his) before passing on to the next bed; and whenever, during the day or night, he had occasion to pass through the ward, if I were awake, he would always greet me, at least, with a smile and a wave of the hand. Not that he specially singled me out for these attentions, for every patient was made to feel that the house physician was interested in him as a man and not merely as a “case”.

Nevertheless, I think there was something about me that attracted his attention in a particular way, for on several occasions I noticed him looking over in an appraising sort of fashion, and I thought that he seemed especially interested in my hands. And apparently I was right, as I learned one afternoon when, having finished his round, he came and sat down on the chair by my bedside to talk to me. Presently he picked up my right hand, and, holding it out before him, remarked:

“This is quite a lady-like hand, Polton;” (he had dropped “Number Six”) “very delicate and soft. And yet it is a good, serviceable hand, and I notice that you use it as if you were accustomed to do skilled work with it. Perhaps I am wrong; but I have been wondering what your occupation is. You are too small for any of the heavy trades.”

“I am a clockmaker, sir,” I replied, “but I have put in some time at cabinet-making and I have had a turn at making philosophical instruments, such as levels and theodolites. But clockmaking is my proper trade.”

“Then,” said he, “Providence must have foreseen that you were going to be a clockmaker and furnished you with exactly the right kind of hands. But you seem to have had a very varied experience, considering your age.”

“I have, sir, though it wasn’t all of my own choosing. I had to take the job that offered itself, and when no job offered, it was a case of wearing out shoe-leather.”

“Ha!” said he, “and I take it that you had been wearing out a good deal of shoe-leather at the time when you were taken ill.”

“Yes, sir. I had been having a very bad time.”

I suppose I spoke somewhat dismally, for it had suddenly dawned on me that I should leave the hospital penniless and with worse prospects than ever. He looked at me thoughtfully, and; after a short pause, asked: “Why were you not able to get work?”

I considered the question and found it difficult to answer; and yet I wanted to explain, for something told me that he would understand and sympathize with my difficulties, and we all like to pour our troubles into sympathetic ears.

“There were several reasons, sir, but the principal one was that I wasn’t able to finish my apprenticeship. But it’s rather a long story to tell to a busy gentleman.”

“I’m not a busy gentleman for the moment,” said he with a smile. “I’ve finished my work for the present; and I shall be a very interested gentleman if you care to tell me the story. But perhaps you would rather not recall those bad times.”

“Oh, it isn’t that, sir. I should like to tell you if it wouldn’t weary you.”

As he once more assured me of his interest in my adventures and misadventures, I began, shyly and awkwardly, to sketch out the history of my apprenticeship, with scrupulous care to keep it as short as possible. But there was no need. Not only did he listen with lively interest; but when I became unduly sketchy he interposed with questions to elicit fuller details, so that, becoming more at my ease, I told the little story of my life in a consecutive narrative, but still keeping to the more significant incidents. The last, disastrous, episode, however, I related at length—mentioning no names except that of Mr. Cohen—as it seemed necessary to be circumstantial in order to make my innocence perfectly clear; and I was glad that I did so, for my listener followed that tragedy of errors with the closest attention.

“Well, Polton,” he said when I had brought the narrative up to date, “you have had only a short life, but it has been a pretty full one—a little too full, at times. If experience makes men wise, you should be bursting with wisdom. But I do hope you have taken in your full cargo of that kind of experience.”

He looked at his watch, and, as he rose, remarked that he must be getting back to duty; and having thanked me for “my most interesting story,” walked quickly but silently out of the ward, leaving me with a curious sense of relief at having unburdened myself of my troubles to a confessor so kindly and sympathetic.

That, however, was not the last of our talks, for thenceforward he adopted the habit of making me little visits, sitting on the chair by my bedside and chatting to me quite familiarly without a trace of patronage. It was evident that my story had greatly interested him, for he occasionally put a question that showed a complete recollection of all that I had told him. But more commonly he drew me out on the subject of clocks and watches. He made me explain, with drawings, the construction and mode of working of a gravity escapement and the difference between a chronometer and a lever watch. Again, he was quite curious on the subject of locks and keys and of instruments such as theodolites, of which he had no experience; and though mechanism would seem to rather outside the province of a doctor, I found him very quick in taking in mechanical ideas and quite keen on acquiring the little items of technical knowledge that I was able to impart.

But these talks, so delightful to me, came to a rather sudden end, at least for a time; for one afternoon, just as he was leaving me, he announced: “By the way, Polton, you will be handed over to a new house physician tomorrow. My term of office has come to an end.” Then, observing that I looked rather crestfallen, he continued: “However, we shan’t lose sight of each other. I am taking charge of the museum and laboratory for a week or two while the curator is away, and, as the
laboratory opens on the garden, where you will be taking the air when you can get about, I shall be able to keep an eye on you.”

This was some consolation for my loss, and something to look forward to, and it begot in me a sudden eagerness to escape from bed and see what I could do in the way of walking. Apparently, I couldn’t do much; for when the sister, in response to my entreaties, wrapped me in a dressing-gown, and, with a nurse’s aid, helped me to totter to the nearest armchair, I sat down with alacrity, and, at the end of half an hour, was very glad to be conducted back to bed.

It was not a very encouraging start, but I soon improved on it. In a few days I was crawling about the ward unassisted, with frequent halts to rest in the armchair; and by degrees the rests grew shorter and less frequent, until I was able to pace up and down the ward quite briskly. And at last came the joyful day when the nurse produced my clothes (which appeared to have been cleaned since I last saw them) and help me to put them on; and, it being a warm, sunny morning, the sister graciously acceded to my request that I might take a little turn in the garden.

That was a red-letter day for me. Even now I recall with pleasure the delightful feeling of novelty with which I took my journey downwards in the lift, swathed in a dressing-gown over my clothes and fortified by a light lunch (which I devoured, wolfishly), and the joy with which I greeted the sunlit trees and flower-beds as the nurse conducted me along a path and deposited me on a seat. But better still was the sight of a tall figure emerging from the hospital and advancing with long strides along the path. At the sight of him my heart leaped, and I watched him anxiously lest he should take another path and pass without seeing me. My eagerness surprised me a little at the time; and now, looking back, I ask myself how it had come about that Mr. Thorndyke was to me so immeasurably different from all other men. Was it some prophetetic sense which made him dimly aware of what was to be? Or could it be that, an insignificant, ignorant lad, had somehow instinctively divined the intellectual and moral greatness of the man? I cannot tell. In a quiet, undemonstrative way he had been gracious, kindly and sympathetic; but beyond this there had seemed to be a sort of magnetism about him which attracted me, so that to the natural respect and admiration with which I regarded him was unaccountably added an actual personal devotion.

Long before he had drawn near, he saw me and came straight to my seat. “Congratulations, Polton,” he said, cheerfully, as he sat down beside me. “This looks like the beginning of the end. But we mustn’t be impatient, you know. We must take things easily and not try to force the pace.”

He stayed with me about five minutes, chatting pleasantly, but principally in a medical strain, advising me and explaining the dangers and pitfalls of convalescence from a severe and exhausting illness. Then he left me, to go about his business in the laboratory, and I followed him with my eyes as he entered the doorway of a range of low buildings. But in a few moments he reappeared, carrying a walking-stick, and, coming up to my seat, handed the stick to me.

“Here is a third leg for you, Polton,” said he; “a very useful aid when the natural legs are weak and unsteady. You needn’t return it. It is an ancient derelict that has been in the laboratory as long as I have known the place.”

I thanked him, and, as he returned to the laboratory, I rose and took a little walk to try the stick, and very helpful I found it; but even if I had not, I should still have prized the simple ash staff for the sake of the giver, as I have prized it ever since. For I have it to this day; and the silver band that I put on it bears the date on which it was given.

A few days later Mr. Thorndyke overtook me as I was hobbling along the path with the aid of my “third leg.”

“Why, Polton,” he exclaimed, “you are getting quite active and strong. I wonder if you would care to come and have a look at the laboratory.”

I grasped eagerly at the offer, and we walked together to the building and entered the open doorway—left open, I presumed when I was inside, to let out some of the smell. The premises consisted of the laboratory proper, a large room with a single long bench and a great number of shelves occupied by stoppered glass jars of all sizes, mostly filled with a clear liquid in which some very queer-looking objects were suspended (one, I was thrilled to observe, was a human hand). On the lower shelves were ranged great covered earthenware pots which I suspected to be the source of the curious, spirituous odour. Beyond the laboratory was a work room furnished with a lathe, two benches and several racks of tools.

When he had shown me round, Mr. Thorndyke seated me in a Windsor armchair close to the bench where he was working at the cutting, staining and mounting of microscopical sections for use in the medical school. When I had been watching him, for some time, he looked round at me with a smile.

“I suspect, Polton,” said he, “that you are itching to try your hand at section-mounting. Now, aren’t you?”

I had to confess that I was; whereupon he, most good-naturedly, provided me with a glass bowl of water and a pile of watch-glasses and bade me go ahead, which I did with the delight of a child with a new toy. Having cut the sections on the microtome and floated them off into the bowl, I carried out the other processes in as close imitation of his methods as I could, until I had a dozen slides finished.

“Well, Polton,” said he, “there isn’t much mystery about it, you see. But you are pretty quick at learning—quicker than some of the students whom I have to teach.”

He examined my slides with the microscope, and, to my joy, pronounced them good enough to go in with the rest; and he was just beginning to label them when I perceived, through the window, the nurse who had come to shepherd the patients in to dinner. So, with infinite regret, I tore myself away, but not until I had been rejoiced by an invitation to come again on the morrow.
The days that followed were among the happiest of my life. Every morning—and, later, every afternoon as well—I presented myself at the laboratory and was greeted with a friendly welcome. I was allowed to look on at, and even to help in, all kinds of curious, novel and fascinating operations. I assisted in the making of a plaster cast of a rickety boy's deformed legs; in the injecting with carmine gelatine of the blood-vessels of a kidney; and in the cutting and mounting of a section of a tooth. Every day I had a new experience and learned something fresh; and in addition was permitted and encouraged to execute repairs in the workroom on various invalid instruments and appliances. It was a delightful time. The days slipped past in a dream of tranquil happiness.

I have said "the days," but I should rather have said the hours that I spent in the laboratory. They were hours of happiness unalloyed. But with my return to the ward came a reaction. Then I had to face the realities of life, to realize that a dark cloud was rising, ever growing darker and more threatening. For I was now convalescent; and this was a hospital, not an almshouse. My illness was over and it was nearly time for me to go. At any moment now I might get my discharge; and then—but I did not dare to think of what lay before me when I should go forth from the hospital door into the inhospitable streets.

At last the blow fell. I saw it coming when, instead of sending me out to the garden, the sister bade me stay by my bed when the physician was due to make his visit. So there I stood, watching the procession of students moving slowly round the ward with the feelings of a condemned man awaiting the approach of the executioner. Finally, it halted opposite my bed. The physician looked at me critically, spoke a few kindly words of congratulation, listened to the sister's report, and, taking the chart-board from her, wrote a few words on the case paper, returned the board to her and moved on to the next bed.

"When do I go out, Sister?" I asked, anxiously, as she replaced the board on its peg.

She evidently caught and understood the note of anxiety, for she replied very gently, with a quick glance at my downcast face, "The day after to-morrow," and turned away to rejoin the procession.

So the brief interlude of comfort and happiness was over and once more I must go forth to wander, a wretched Ishmaelite, through the cheerless wilderness. What I should do when I found myself cast out into the street, I had no idea. Nor did I try to form any coherent plan. The utter hopelessness of my condition induced a sort of mental paralysis, and I could only roam about the garden (whither I had strayed when sentence had been pronounced) in a state of vague, chaotic misery. Even the appetizing little supper was swallowed untasted, and, for the first time since the dawn of my convalescence, my sleep was broken and troubled.

On the following morning I presented myself as usual at the laboratory. But its magic was gone. I pottered about in the workroom to finish a repairing job that I had on hand, but even that could not distract me from the thought that I was looking last on this pleasant and friendly place. Presently, Mr. Thorndyke came in to look at the instrument that I was repairing—it was a rocking microtome—but soon transferred his attention from the instrument to me.

"What's the matter, Polton?" he asked: "You are looking mighty glum. Have you got your discharge?"

"Yes, sir," I replied. "I am going out to-morrow."

"Ha!" said he, "and from what you have told me, I take it that you have nowhere to go."

I admitted, gloomily, that this was the case.

"Very well," said he. "Now I have a little proposal that I want you to consider. Come and sit down in the laboratory and I'll tell you about it."

He sat me in a Windsor armchair, and, seating himself on the bench stool, continued: "I am intending to set up in practice; not in an ordinary medical practice, but in that branch of medicine that is connected with the law and is concerned with expert medical and scientific evidence. For the purposes of my practice I shall have to have a laboratory, somewhat like this, with a workshop attached; and I shall want an assistant to help me with the experimental work. That assistant will have to be a skilled mechanic, capable of making any special piece of apparatus that may be required, and generally handy and adaptable. Now, from what you have told me and what I have seen for myself I judge that you would suit me perfectly. You have a working knowledge of three crafts, and I have seen that you are skilful, painstaking and quick to take an idea, so I should like to have you as my assistant. I can't offer much of a salary at first, as I shall be earning nothing, myself, for a time, but I could pay you a pound a week to begin with, and, as I should provide you with food and a good, big bed sitting room, you could rub along until something better turned up. What do you say?"

I didn't say anything. I was speechless with emotion, with the sudden revulsion from black despair to almost delirious joy. My eyes filled and a lump seemed to rise in my throat.

Mr. Thorndyke evidently saw how it was with me, and, by way of easing the situation, he resumed: "There is one other point. Mine will be a bachelor establishment. I want no servants; so that, if you come to me, you would have to render a certain amount of personal and domestic services. You would keep the little household in order and occasionally prepare a meal. In fact, you would be in the position of my servant as well as laboratory assistant. Would you object to that?"

Would I object! I could have fallen down that instant and kissed his boots. What I did say was that I should be proud to be his servant and only sorry that I was not more worthy of that honourable post.

"Then," said he, "the bargain is struck; and each of us must do his best to make it a good bargain for the other."
He then proceeded to arrange the details of my assumption of office, which included the transfer of five shillings “to chink in my pocket and pay the cabman,” and, when all was settled, I went forth, at his advice, to take a final turn in the garden; which I did with a springy step and at a pace that made the other patients stare.

As I entered the ward, the sister came up to me with a rather troubled face.

“When you go out to-morrow, Number Six, what are you going to do? Have you any home to go to?”

“Yes, Sister,” I replied, triumphantly. “Mr. Thorndyke had just engaged me as his servant.”

“Oh, I am so glad,” she exclaimed. “I have been rather worried about you. But I am quite happy now, for I know that you will have the very best of masters.”

She was a wise woman, was that sister.

I pass over the brief remainder of my stay in hospital. The hour of my discharge, once dreaded, but now hailed with joy, came in the middle of the forenoon; and, as my worldly goods were all on my person, no preparations were necessary. I made the round of the ward to say farewell to my fellow-patients, and, when the sister had given me a hearty handshake (I should have liked to kiss her), I was conducted by the nurse to the secretary’s office and there formally discharged. Then, pocketing my discharge ticket, I made my way to the main entrance and presented myself at the porter’s lodge.

“Oh!” said the porter when I had introduced myself “so you are Mr. Thorndyke’s young man. Well, I’ve got to put you into a hansom and see that you know where to go. Do you?”

“Yes,” I answered, producing the card that my master had given me and reading from it. “The address is Dr. John Thorndyke, 4A King’s Bench Walk, Inner Temple, London, E.G.”

“That’s right,” said he; “and remember that he’s Doctor Thorndyke now. We call him Mister because that’s the custom when a gentleman is on the junior staff, even if he is an M.D. Here’s a hansom coming in, so we shan’t have to fetch one.”

The cab came up the courtyard and discharged its passenger at the entrance, when the porter hailed the driver, and, having hustled me into the vehicle, sang out the address to which I was to be conveyed and waved his hand to me as we drove off and I returned his salutation by raising my hat.

I enjoyed the journey amazingly, surveying the busy streets over the low doors with a new pleasure and thinking how cheerful and friendly they looked. I had never been in a hansom before and I suppose I never shall again. For the hansom is gone; and we have lost the most luxurious and convenient passenger vehicle ever devised by the wit of man.

That cabman knew his business. Londoner as I was, the intricacies of his route bewildered me completely; and when he came to the surface, as it were, in Chancery Lane, which I recognized, he almost immediately finished me off by crossing Fleet Street and passing through a great gateway into a narrow lane bordered by ancient timber houses. Half-way down this lane he turned into another, at the entrance to which I read the name, “Crown Office Row,” and this ended in a great open square surrounded by tall houses. Here I was startled by a voice above my head demanding:

“You said Five A, didn’t you?”

I looked up, and was astonished to behold a face looking down on me through a square opening in the roof; but I promptly answered “Yes,” whereupon the face vanished and I saw and heard a lid shut down, and a few moments later the cab drew up opposite the portico of a house on the eastern side of the square. I hopped out, and, having verified the number, asked the cabman what there was to pay; to which he replied, concisely, “Two bob,” and, leaning down, held out his hand. It seemed a lot of money, but, of course, he knew what his fare was, so, having handed up the exact amount, I turned away and stepped into the entry, on the jamb of which was painted: “First pair, Dr. John Thorndyke.”

The exact meaning of this inscription was not quite clear to me, but as the ground floor was assigned to another person, I decided to explore the staircase; and having ascended to the first-floor landing, was reassured by observing the name “Dr. Thorndyke” painted in white lettering over a doorway, the massive, iron-bound door of which was open, revealing an inner door garnished by a small and very tarnished brass knocker. On this I struck a single modest rap, when the door was opened by Dr. Thorndyke, himself.

“Come in, Polton,” said he, smiling on me very kindly and shaking my hand. “Come into your new home—which is my home, too; and I hope it will be a happy one for us both. But it will be what we make it. Perhaps, if your journey hasn’t tired you, you would like me to show you over the premises.”

I said that I was not tired at all, so he led me forth at once and we started to climb the stairs, of which there were four flights to the third-floor landing.

“I have brought you to the top floor,” said the Doctor, “to introduce you to your own domain. The rest of the rooms you can explore at your leisure. This is your bedroom.”

He threw open a door, and when I looked in I was struck dumb with astonishment and delight. It was beyond my wildest dreams—a fine, spacious room with two windows, furnished in a style of which I had no previous experience. A handsome carpet covered the floor, the bed surpassed even the hospital beds, there were a wardrobe, a chest of drawers, a set of book shelves, a large table by one of the windows and a small one beside the bed, a fine easy chair and two other chairs. It was magnificent. I had thought that only noblemen lived in such rooms. And yet it was a very picture of homely comfort.
I was striving to express my gratitude when the Doctor hustled me down to the second floor to inspect the future laboratory and workshop. At present they were just large, empty rooms, but the kitchen was fully furnished and in going order, with a gas-cooker and a dresser filled with china, and the empty larder was ready for use.

“Now,” said the Doctor, “I must run off to the hospital in a few minutes, but there are one or two matters to settle. First, you will want some money to fit yourself out with clothes. I will advance you ten pounds for that purpose. Then, until we are settled down, you will have to get your meals at restaurants. I will give you a couple of pounds for those and any stores that you may lay in, and you will keep an account and let me know when you want any more money. And remember that you are a convalescent, and don’t stint your diet. I think that is all for the present except the latch-keys, which I had better give you now.”

He laid the money and the two keys on the table, and was just turning to go when it occurred to me to ask if I should get an evening meal prepared for him. He looked at me with a smile of surprise and replied: “You’re a very enterprising convalescent, Polton, but you mustn’t try to do too much at first. No, thank you. I shall dine in the board-room to-night and get home about half-past nine.”

When he had gone, I went out, and, having taken a substantial lunch at a restaurant near Temple Bar, proceeded to explore the neighbourhood with a view to household stores. Eventually I found in Fetter Lane enough suitable shops to enable me to get the kitchen and the larder provided for a start, and, having made my purchases, hurried home to await the delivery of the goods. Then I spent a delightful afternoon and evening rambling about the house, planning the work shop, paying repeated visits to my incomparable room, and inaugurating the kitchen by preparing myself an enormous high tea; after which, becoming extremely sleepy, I went down and paced up and down the Walk to keep myself awake.

When The Doctor came home I would have expounded my plans for the arrangement of the workshop. But he cut me short with the admonition that convalescents should be early birds, and sent me off to bed; where I sank at once into a delicious slumber and slept until it was broad daylight and a soft-toned bell informed me that it was seven o’clock.

This day is the last that I shall record; for it saw the final stage of that wonderful transformation that changed the old Nathaniel Polton, the wretched, friendless outcast, into the pampered favourite of Fortune.

When I had given the Doctor his breakfast (which he praised, warmly, but begged me to remember in future that he was only one man) and seen him launched on his way to the hospital, I consumed what he had left on the dish—one fried egg and a gammon rasher—and, having tidied up the Doctor’s bedroom and my own, went forth to wind up the affairs of Polton, the destitute, and inaugurate Polton, the opulent; to “ring out the old and ring in the new”. First, I visited a “gentlemen’s outfitters”, where I purchased a ready-made suit of a sober and genteel character (I heard the shopman whisper something about “medium boy’s size”) and other garments appropriate to it, including clerical grey socks, a pair of excellent shoes and a soft felt hat. The parcel being a large and heavy one I bought a strong rug-strap with which to carry it, and so was able, with an occasional rest, to convey it to Foubert’s Place, where I proposed to settle any arrears of rent that Mr. Stokes might claim. However, he claimed none, having let my room when I failed to return. But he had stored my property in an attic, from which he kindly assisted me to fetch it, so that I had, presently, the satisfaction of seeing all my worldly goods piled up on the counter: the tool-chest that I had made in Mr. Beeby’s workshop, my whole collection of clockmaker’s tools, and my beloved books, including Mr. Denison’s invaluable monograph. When they were all assembled, I went out and chartered a four-wheeled cab, in which I stowed them all—chest, tools, books, and the enormous parcel from the out-fitters. Then I bade Mr. Stokes a fond farewell, gave the cabman the address (at which he seemed surprised; and I am afraid that I was a rather shabby little ragamuffin) shut myself in the cab and started for home.

Home! I had not known the word since Aunt Judy and Uncle Sam had flitted away out of my ken. But now, as the cab rattled over the stones until it made my teeth chatter, I had before me the vision of that noble room in the Temple which was my very own, to have and to hold in perpetuity, and the gracious friend and master whose presence would have turned a hovel into a mansion.

As soon as we arrived, I conveyed my goods—in relays—upstairs; and when I had paid off the cabman, I proceeded to dispose of them. The tools I deposited in the future workshop as the first instalment of its furnishing, the books and parcel I carried up to my own apartment. And there the final scene was enacted. When I had arranged my little library lovingly in the bookshelves, I opened the parcel and laid out its incredible contents on the bed. For a while I was so overcome by their magnificence that I could only gloat over them in ecstasy. I had never had such clothes before, and I felt almost shy at their splendour. However, they were mine, and I was going to wear them; and so reflecting, I proceeded boldly to divest myself of the threadbare, frayed and faded habiliments that had served me so long until I had stripped to the uttermost rag (and rag is the proper word). Then I induced myself cautiously into the new garments, finishing up (in some discomfort) with a snowy and rather stiff collar, a silk neck-tie, and the sober but elegant black coat.

For quite a long time I stood before the mirror in the wardrobe door surveying, with something of amused surprise and a certain sense of unreality, the trimly-dressed gentleman who confronted me. At length, I turned away with a sigh of satisfaction, and, having carefully put away the discarded clothing for use in the workshop, went down to await the Doctor’s return.

And here I think I had better stop, leaving Dr. Jervis to relate the sequel. Gladly would I go on—having now got into my stride—to tell of my happy companionship with my beloved master, and how he and I fitted out the workshop, and then, working on our joiner’s bench, gradually furnished the laboratory with benches and shelves. But I had better not. My tale is told; and now I must lay down my pen and hold my peace. Yet still I love to look back on that wonderful morning in the
hospital laboratory when a few magical words banished in an instant the night of my adversity and ushered in the dawn.

But it was not only the dawn; it was the sunrise. And the sun has never set. A benevolent Joshua has ordained that I shall live the days of my life in perpetual sunshine; and that Joshua’s name is John Thorndyke.
PART II. THE CASE OF MOXDALE DECEASED.

Narrated by Christopher Jervis, M.D.

X. FIRE

To an old Londoner, the aspect of the town in the small hours of the morning, in “the middle watch” as those dark hours are called in the language of the mariner, is not without its attractions. For however much he may love his fellow-creatures, it is restful, at least for a time, to take their society in infinitesimal doses, or even to dispense with it entirely, and to take one’s way through the empty and silent streets free to pursue one’s own thoughts undistracted by the din and hurly-burly that prevail in the daylight hours.

Thus I reflected as I turned out of Marylebone Station at about half-past two in the morning, and, crossing the wide, deserted road, bore away south-east in the direction of the Temple. Through what side streets I passed I cannot remember, and in fact never knew, for, in the manner of the born-and-bred Londoner, I simply walked towards my destination without consciously considering my route. And as I walked in a silence on which my own footfalls made an almost startling impression, I looked about me with something like curiosity and listened for the occasional far-off sounds which told of some belated car or lorry wending its way through some distant street.

I was approaching the neighbourhood of Soho and passing through a narrow street lined by old and rather squalid houses, all dark and silent, when my ear caught a sound which, though faint and far-away, instantly attracted my attention: the clang of a bell, not rung, but struck with a hammer and repeating the single note in a quick succession of strokes—the warning bell of a fire-engine. I listened with mild interest—it was too far off to concern me—and compared the sound with that of the fire-engines of my young days. It was more distinctive, but less exciting. The bell gave its message plainly enough, but it lacked that quality of urgency and speed that was conveyed by the rattle of iron tyres on the stones and the sound of galloping horses.

Ding, ding, ding, ding, ding. The sound was more distinct. Then the engine must be coming my way; and even as I noted the fact, the clang of another bell rang out from the opposite direction, and suddenly I became aware of a faintly pungent smell in the air. Then, as I turned a corner, I met a thin cloud of smoke that was drifting up the street and noticed a glow in the sky over the house-tops; and presently, reaching another corner, came into full view of the burning house, though it was still some distance away, near the farther end of the street.

I watched it with some surprise as I walked quickly towards it, for there seemed to be something unusual in its appearance. I had not seen many burning houses but none that I had seen had looked quite like this one. There was a furious intensity in the way that it flared up that impressed me as abnormal. From the chimneys, flames shot up like the jets from a gas-blowpipe, and the windows emitted tongues of fire that looked as if they were being blown out by bellows. And the progress of the fire was frightfully rapid, for even in the short time that it took me to walk the length of the street there was an evident change. Glowing spots began to appear in the roof flames poured out of the attic windows, and smoke and flame issued from the ground floor, which seemed to be some kind of shop.

No crowd had yet collected, but just a handful of chance wayfarers like myself and a few policemen, who stood a little distance away from the house, looking on the scene of destruction and listening anxiously to the sounds of the approaching engines, now quite near and coming from several different directions.

“It’s a devil of a blaze,” I remarked to one of the constables. “What is it? An oil-shop?”

“It’s worse than that, sir,” he replied. “It’s a film dealer’s. The whole place chalk full of celluloid films. It’s to be hoped that there isn’t anybody in the house, but I’m rather afraid there is. The caretaker of the offices next door says that there is a gentleman who has rooms on the first floor. Poor look-out for him if he is in there now. He will be burned to a cinder by this time.”

At this moment the first of the engines swung round the corner and swept up to the house with noiseless speed, discharging its brass-helmeted crew, who began immediately to prepare for action: opening the water-plugs, rolling out lengths of hose, and starting the pumps. In a minute or two, four other engines arrived, accompanied by a motor fire-escape; but the latter, when its crew had glanced at the front of the house, was trundled some distance up the street out of the way of the engines. There was obviously no present use for it, nor did there seem to be much left for the engines to do, for, almost at the moment when the first jet of water was directed at the flaming window-space, the roof fell in with a crash and a roar, a volume of flame and sparks leaped up into the sky, and through the holes which had once been windows an uninterrupted sheet of fire could be seen from the top of the house to the bottom. Evidently, the roof in its fall, had carried away what had been left of the floors, and the house was now no more than an empty shell with a mass of flaming debris at its base.

Whether the jets of water that were directed in through the window-holes had any effect, or whether the highly inflammable material had by this time all been burnt, I could not judge, but, after the fall of the roof, the fire began almost suddenly to die down, and a good deal of the firemen’s attention became occupied by the adjoining house, which had already suffered some injury from the fire and now seemed likely to suffer more from the water. But in this I was not
greatly interested, and, as the more spectacular phase of the disaster seemed to have come to an end, I extricated myself from the small crowd that had now collected and resumed my progress towards the Temple and the much-desired bed that awaited me there.

To a man who has turned in at past four o’clock in the morning, competition with the lark is not practicable. It was getting on for eleven when I emerged from my bedroom and descended the stairs towards the breakfast-room, becoming agreeably conscious of a subtle aroma which memory associated with bacon and coffee.

“I heard you getting up, sir,” said Polton with a last, satisfied glance at the breakfast-table, “and I heard you come in last night, or rather this morning, so I have cooked an extra rashier. You did make a night of it, sir.”

“Yes,” I admitted, “it was rather a late business, and what made me still later was a house on fire some where near Soho which I stopped for a while to watch. A most tremendous blaze. A policeman told me that it was a celluloid film warehouse, so you can imagine how it flared up.”

I produced this item of news designedly, knowing that it would be of interest; for Polton, the most gentle and humane of men, had an almost morbid love of the horrible and the tragic. As I spoke, his eyes glistened, and he commented with a sort of ghoulish relish: “Celluloid films! And a whole warehouse full of them, too! It must have been a fine sight. I’ve never seen a house on fire—not properly on fire; only just smoke and sparks. Was there a fire-escape?”

“Yes, but there was nothing for it to do. The house was like a furnace.”

“But the people inside, sir. Did they manage to get out in time?”

“It’s not certain that there was anybody in the house. I heard something about a gentleman who had rooms there, but there was no sign of him. It is not certain that he was there, but if he was, he is there still. We shall know when the firemen and salvage men are able to examine the ruins.”

“Ha!” said Polton, “there won’t be much of him left. Where did you say the place was, sir?”

“I can’t tell you the name of the street, but it was just off Old Compton Street. You will probably see some notice of the fire in the morning paper.”

Thereupon, Polton turned away as if to go in search of the paper, but at the door he paused and looked back at me.

“Speaking of burning houses, sir,” said he, “Mr. Stalker called about half an hour ago. I told him how things were, so he said he would probably look in again in an hour’s time. If he does, will you see him downstairs or shall I bring him up?”

“Oh, bring him up here. We don’t make a stranger of Mr. Stalker.”

“Yes, sir. Perhaps he has come to see you about this very fire.”

“He could hardly have got any particulars yet,” said I. “Besides, fire insurance is not in our line of business.”

“No, sir,” Polton admitted; “but it may be about the gentleman who had the rooms. A charred body might be in your line if they happen to know that there is one among the ruins.”

I did not think it very likely, for there had hardly been time to ascertain whether the ruins did or did not contain any human remains. Nevertheless, Polton’s guess turned out to be right; for when Stalker (having declined a cup of coffee and then explained, according to his invariable custom, that he happened to be passing this way and thought he might as well just look in) came to the point, it appeared that his visit was concerned with the fire in Soho.

“But, my dear Stalker,” I protested, “we don’t know anything about fires.”

“I know,” he replied with an affable smile. “The number of things that you and Thorndyke don’t know anything about would fill an encyclopaedia. Still, there are some things that you do know. Perhaps you have forgotten that fire at Brattle’s oil-shop, but I haven’t. You spotted something that the fire experts had overlooked.”

“Thorndyke did. I didn’t until he pointed it out.”

“I don’t care which of you spotted it,” said he. “I only know that, between you, you saved us two or three thousand pounds.”

I remembered the case quite well, and the recollection of it seemed to justify Stalker’s attitude.

“What do you want us to do?” I asked.

“I want you just to keep an eye on the case. The question of fire-raising will be dealt with by the Brigade men and the Salvage Corps. They are experts and they have their own methods. You have different methods and you bring a different sort of expert eye to bear on the matter.”

“I wonder,” said I, “why you are so Nosey-Parkerish about this fire. There hasn’t been time for you to get any particulars.”

“Indeed!” said he. “We don’t all stay in bed until eleven o’clock. While you were slumbering I was getting a report and making enquiries.”

“Ha!” I retorted. “And while you were slumbering I was watching your precious house burning; and I must say that it did you credit.”
Here, in response to his look of surprise, I gave him a brief account of my morning’s adventure.

“Very well,” said he when I had finished. “Then you know the facts and you can understand my position. Here is a house, full of inflammable material, which unaccountably bursts into flames at three o’clock in the morning. That house was either unoccupied or had a single occupant who was presumably in bed and asleep, as he apparently made no attempt to escape.”

I offered a vague suggestion of some failure of the electric installation such as a short circuit or other accident, but he shook his head.

“I know that such things are actually possible,” said he, “but it doesn’t do to accept them too readily. A man who has been in this business as long as I have acquires a sort of intuitive perception of what is and what is not a normal case; and I have the feeling that there is something a little queer about this fire. I had the same feeling about that oil-shop case, which is why I asked Thorndyke to look into it. And then there are rumours of a man who was sleeping in the house. You heard those yourself. Now, if that man’s body turns up in the debris, there is the possibility of a further claim, as there was in the oil-shop case.”

“But, my dear Stalker!” I exclaimed, grinning in his face. “This is foresight with a vengeance. This fire may have been an incendiary fire. There may have been a man sleeping in the house and he may have got burned to death; and that man may have insured his life in your Society. How does that work out by the ordinary laws of chance? Pretty long odds, I think.”

“Not so long as you fancy,” he replied. “Persons who lose their lives in incendiary fires have a tendency to be insured. The connection between the fire and the death may not be a chance connection. Still, I will admit that, beyond a mere suspicion that there may be something wrong about this fire, I have nothing to go on. I am asking you to watch the case ‘ex abundantia cautela’ as you lawyers say. And the watching must be done now while the evidence is available. It’s no use waiting until the ruins have been cleared away and the body—if there is one—buried.”

“No,” I agreed; “Thorndyke will be with you in that. I will give him your instructions when I see him at lunch-time, and you can take it that he won’t lose any time in collecting the facts. But you had better give us something in writing, as we shall have to get authority to inspect the ruins and to examine the body if there is one to examine.”

“Yes,” said Stalker, “I’ll do that now. I have some of our letter-paper in my case.”

He fished out a sheet, and, having written a formal request to Thorndyke to make such investigations as might be necessary in the interests of the Griffin Assurance Company, handed it to me and took his departure. As his footsteps died away on the stairs, Polton emerged from the adjacent laboratory and came in to clear away the breakfast-things. As he put them together on the tray, he announced:

“I’ve read the account of the fire, sir, in the paper, but there isn’t much more than you told me. Only the address—Billington Street, Soho.”

“And now,” said I, “you would like to go and have a look at it, I suppose?”

“Well,” he admitted, “it would be interesting after having heard about it from you. But you see, sir, there’s lunch to be got ready. The Doctor had his breakfast a bit earlier than you did, and not quite so much of it.”

“Never mind about lunch,” said I. “William can see to that.” (William, I may explain, was a youth who had lately been introduced to assist Polton and relieve him of his domestic duties; and a very capable under-study he had proved. Nevertheless, Polton clung tenaciously to what he considered his privilege of attending personally to “The Doctor’s” wants, which, in effect, included mine.) “You see, Polton,” I added by way of overcoming his scruples, “one of us ought to go, and I don’t want to. But The Doctor will want to make an inspection at the earliest possible moment and he will want to know how soon that will be. At present, the ruins can’t have cooled down enough for a detailed inspection to be possible, but you could find out from the man in charge how things are and when we could make our visit. We shall want to see the place before it has been considerably disturbed, and, if there are any human remains, we shall want to know where the mortuary is.”

On this Polton brightened up considerably. “Of course, sir,” said he, “If could be of any use, I should like to go; and I think William will be able to manage, as it is only a cold lunch.”

With this he retired, and a few minutes later I saw him from the window hurrying along Crown Office Row, carefully dressed and carrying a fine, silver-topped cane and looking more like a dignitary of the Church than a skilled artificer.

When Thorndyke came in, I gave him an account of Stalker’s visit as well as of my own adventure.

“I don’t quite see,” I added, “what we can do for him or why he is in such a twitter about this fire.”

“No,” he replied. “But Stalker is enormously impressed by our one or two successes and is inclined to over-estimate our powers. Still, there seem to be some suspicious features in the case, and I notice, on the placards, a rumour that a man was burned to death in the fire. If that is so, the affair will need looking into more narrowly. But we shall hear more about that when Polton comes back.”

We did. For when, just as we had finished lunch, our deputy returned, he was able to give us all the news up to the latest developments. He had been fortunate enough to meet Detective Sergeant Wills, who was watching the case for the police, and had learned from him that a body had been discovered among the debris, but that there was some mystery about its
identity, as the tenant of the rooms was known to be away from home on a visit to Ireland. But it was not a mere matter of hearsay, for Polton had actually seen the body brought out on a stretcher and had followed it to the mortuary.

“You couldn’t see what its condition was, I suppose?” said I.

“No, sir,” he replied, regretfully. “Unfortunately, it was covered up with a waterproof sheet.”

“And as to the state of the ruins; did you find out how soon an examination of them will be possible?”

“Yes, sir. I explained matters to the Fire Brigade officer and asked him when you would be able to make your inspection. Of course, everything is too hot to handle just now. They had the greatest difficulty in getting at the corpse; but the officer thought that by to-morrow morning they will be able to get to work, and he suggested that you might come along in the forenoon.”

“Yes,” said Thorndyke, “that will do. We needn’t be there very early, as the heavier material—joists and beams and the debris of the roof—will have to be cleared away before we shall be able to see anything. We had better make our visit to the mortuary first. It is possible that we may learn more from the body than from the ruins. At any rate, it is within our province, which the ruins are not.”

“Judging from what I saw,” said I, “there will be mighty little for anyone to learn from the ruins. When the roof fell, it seemed to go right through to the basement.”

“Will you want anything got ready, sir?” Polton asked, a little anxiously.

Thorndyke apparently noted the wistful tone, for he replied: “I shall want you to come along with us, Polton; and you had better bring a small camera with the adjustable stand. We shall probably want photographs of the body, and it may be in an awkward position.”

“Yes, sir,” said Polton. “I will bring the extension as well; and I will put out the things that you are likely to want for your research-case.”

With this, he retired in undissembled glee, leaving us to discuss our arrangements.

“You will want authorities to examine the body and the ruins,” said I. “Shall I see to them? I have nothing special to do this afternoon.”

“If you would, Jervis, it would be a great help,” he replied. “I have some work which I should like to finish up, so as to leave to-morrow fairly free. We don’t know how much time our examinations may take.”

“No,” said I, “especially as you seem to be taking the case quite seriously.”

“But, my dear fellow,” said he, “we must. There may be nothing in it at all, but, in any case, we have got to satisfy Stalker and do our duty as medico-legal advisers to The Griffin.”

With this he rose and went forth about his business, while I, having taken possession of Stalker’s letter, set out in quest of the necessary arrangements.

XI. THE RUINS

IN the medico-legal mind the idea of horror, I suppose, hardly has a place. It is not only that sensibilities tend to become dulled by repeated impacts, but that the emotions are, as it were, insulated by the concentration of attention on technical matters. Speaking, however, dispassionately, I must admit that the body which had been disinterred from the ruins of the burned house was about as horrible an object as I had ever seen. Even the coroner’s officer, whose emotional epidermis might well have grown fairly tough, looked at that corpse with an undisguised shudder, while as to Polton, he was positively appalled. As he stood by the table and stared with bulging eyes at the dreadful thing, I surmised that he was enjoying the thrill of his life. He was in a very ecstasy of horror.

To both these observers, I think, Thorndyke’s proceedings imparted an added touch of gruesomeness; for my colleague—as I have hinted—saw in that hideous object nothing but a technical problem, and he proceeded in the most impassive and matter-of-fact way to examine it feature by feature and note down his observations as if he were drawing up an inventory. I need not enter into details as to its appearance. It will easily be imagined that a body which had been exposed to such intense heat that not only was most of its flesh reduced to mere animal charcoal, but the very bones, in places, were incinerated to chalky whiteness, was not a pleasant object to look on. But I think that what most appalled both Polton and the officer was the strange posture that it had assumed: a posture suggesting some sort of struggle or as if the man had been writhing in agony or shrinking from a threatened attack. The body and limbs were contorted in the strangest manner, the arms crooked, the hands thrust forward, and the skeleton fingers bent like hooks.

“Good Lord, sir!” Polton whispered, “how the poor creature must have suffered! And it almost looks as if someone had been holding him down.”

“It really does,” the coroner’s officer agreed; “as if somebody was attacking him and wouldn’t let him escape.”

“It does look rather horrid,” I admitted, “but I don’t think you need worry too much about the position of the limbs. This contortion is almost certainly due to shrinkage of the muscles after death as the heat dried them. What do you think,
Thorndyke?

“Yes,” he agreed. “It is not possible to draw any conclusions from the posture of a body that has been burned to the extent that this has, and burned so unequally. You notice that, whereas the feet are practically incinerated, there are actually traces of the clothing on the chest; apparently a suit of pyjamas, to judge by what is left of the buttons.”

At this moment the door of the mortuary opened to admit a newcomer, in whom we recognized a Dr. Robertson, the divisional surgeon and an old acquaintance of us both.

“I see,” he remarked, as Thorndyke laid down his tape-measure to shake hands, “that you are making your examination with your usual thoroughness.”

“Well,” Thorndyke replied, “the relevant facts must be ascertained now or never. They may be of no importance, but one can’t tell that in advance.”

“Yes,” said Robertson, “that is a sound principle. In this case, I don’t much think they are. I mean data in proof of identity, which are what you seem to be collecting. The identity of this man seems to be established by the known circumstances, though not so very clearly, I must admit.”

“That seems a little obscure,” Thorndyke remarked. “Either the man’s identity is known, or it isn’t.”

The divisional surgeon smiled. “You are a devil for accuracy, Thorndyke,” said he, “but you are quite right. We aren’t here to make guesses. But the facts as to the identity appear to be pretty simple. From the statement of Mr. Green, the lessee of the house, it seems that the first-floor rooms were let to a man named Gustavus Haire, who lived in them, and he was the only person resident in the house; so that, when the business premises closed down for the day and the employees went home, he had the place to himself.”

“Then,” said Thorndyke, “do we take it that this is the body of Mr. Gustavus Haire?”

“No,” replied Robertson, “that is where the obscurity comes in. Mr. Haire has—fortunately for him—gone on a business visit to Dublin, but, as Mr. Green informs us, during his absence he allowed a cousin of his, a Mr. Cecil Moxdale, to occupy the rooms, or at least to use them to sleep in to save the expense of an hotel. The difficulty is that Moxdale was not known personally to Mr. Green, or to anybody else, for that matter. At present, he is little more than a name. But, of course, Haire will be able to give all the necessary particulars when he comes back from Ireland.”

“Yes,” Thorndyke agreed, “but meanwhile there will be no harm in noting the facts relevant to the question of identity. The man may have made a will, or there may be other reasons for establishing proof of his identity independently of Haire’s statements. I have made notes of the principal data, but I am not very happy about the measurements. The contorted state of the body makes them a little uncertain. I suggest that you and Jervis take a set of measurements each, independently, and that we compare them afterwards.”

Robertson grinned at me, but he took the tape measure without demur and proceeded quite carefully to take the principal dimensions of the contorted body and the twisted limbs, and, when he had finished, I repeated the measurements, noting them down in my pocket-book. Then we compared our respective findings—which were in substantial agreement—and Thorndyke copied them all down in his note-book.

“When you came in, Robertson,” said he, “we were discussing the posture of the body, and we had concluded that the contortion was due to shrinkage and had no significance. Do you agree?”

“I think so. It is not an unusual condition, and I don’t see what significance it could have. The cause of death is practically established by the circumstances. But it certainly is a queer posture. The head especially. The man looks as if he had been hanged.”

“He does,” Thorndyke agreed, “and I want you to take a careful look at the neck. I noticed Jervis looking at it with a good deal of interest. Has my learned friend formed any opinion?”

“The neck is certainly dislocated,” I replied, “and the odontoid process is broken. I noted that, but I put it down to the effects of shrinkage of the neck muscles, and possibly to some disturbance when the body was moved.”

Robertson stooped over the body and examined the exposed neck-bones narrowly, testing the head for mobility and finding it quite stiff and rigid.

“Well,” said he, “the neck is undoubtedly broken, but I am inclined to agree with Jervis, excepting that, as the neck is perfectly rigid, I don’t think that the dislocation could have been produced by the moving of the body. I should say that it is the result of shrinkage; in fact, I don’t see how else it could have been caused, having regard to the circumstances in which the body was found.”

Thorndyke looked dissatisfied. “It always seems to me,” said he, “that when one is examining a particular fact, it is best to forget the circumstances; to consider the fact without prejudice and without connection with anything else, and then, as a separate proceeding, to relate it to the circumstances.”

The divisional surgeon chuckled. “This,” said he, “is what the Master instils into his pupils. And quite right, too. It is sound doctrine. But still, you know, we must be reasonable. When we find the body of a man among the debris of a house which has been burned out, and the evidence shows that the man was the only occupant of that house, it seems a little pedantic to enquire elaborately whether he may not have died from the effects of manual strangulation or homicidal
hanging."

"My point," Thorndyke rejoined, as a parting shot, "is that our function is to ascertain the objective facts, leaving their interpretation to the coroner and his jury. Looking at that odontoid process, I find that the appearance of the fragments where the break took place is more consistent with the fracture having occurred during life than after death and during the subsequent shrinkage. I admit that I do not see how the fracture can have happened in the known—or assumed—circumstances, and I further admit that the appearances are not at all decisive."

I took another careful look at the fractured bone and was disposed to agree with Thorndyke; but I had also to agree with Robertson when he closed the discussion with the remark: "Well, Thorndyke, you may be right, but in any case the point seems to be of only academic interest. The man was alone in the house, so he couldn't have died from homicide; and I have never heard of anyone committing suicide by dislocating his neck."

Nevertheless, he joined us in a very thorough examination of the body for any other traces of injury (of which I need hardly say there were none) and for any distinctive appearances which might help to determine the identity in case the question should arise. I noticed him closely examining the teeth, and as they had already attracted my attention, I asked: "What do you make of those teeth? Is that roughening and pitting of the enamel due to the heat, or to some peculiarity of the teeth, themselves?"

"Just what I was wondering," he replied. "I think it must be the result of the fire, for I don't recognize it as a condition that I have ever seen on living teeth. What do you think, Thorndyke?"

"I am in the same position as yourself," was the reply. "I don't recognize the condition. It is not disease, for the teeth are quite sound and strong. On the other hand, I don't quite understand how that pitting could have been produced by the heat. So I have just noted the appearance in case it should have any significance later."

"Well," said Robertson, "if Thorndyke is reduced to an open verdict, I suppose we may follow suit," and with this we returned to the general examination. When we had finished, he helped us to lift the stretcher, on which the body had been left, from the table to the floor to enable Polton to expose the photographs that Thorndyke required as records, and, when these had been taken, our business at the mortuary was finished.

"I suppose," said Robertson, "you are going to have a look at the ruins, now. It seems a trifle off the medico-legal track, but you may possibly pick up some information there. I take it that you are acting for the insurance company?"

"Yes," replied Thorndyke, "on instructions. As you say, it seems rather outside our province, as the company appears to be interested only in the house. But they asked me to watch the case, and I am doing so."

"You are indeed," Robertson exclaimed. "All that elaborate examination of the body seems to be completely irrelevant, if the question is only, How did the house catch fire? You carry thoroughness to the verge of fanaticism."

Thorndyke smiled. "Not fanaticism," said he; "merely experience, which bids us gather the rosebuds while we may. The question of to-day is not necessarily the question of to-morrow. At present we are concerned with the house; but there was a dead body in it. A month hence that body may be the problem, but by then it will be underground."

Robertson grinned at me. "'Twas ever thus," he chuckled. "You can't get a rise out of Thorndyke—for the reason, I suppose, that he is always right. Well, I wish you luck in your explorations and hope to meet you both at the inquest."

With this, he took his departure, and, as Polton had now got his apparatus packed up, we followed him and made our way to what the papers described as "the Scene of the Conflagration."

It was a rather melancholy scene, with a tinge of squalor. The street was still wet and muddy, but a small crowd stood patiently, regardless of the puddles, staring up at the dismal shell with its scorched walls and gaping windows—the windows that I had seen belch forth flames but which now showed only the cold light of day. A rough hoarding had been put up to enclose the ground floor, and at the wicket of this a Salvage Corps officer stood on guard. To him Thorndyke addressed himself, producing his authority to inspect the ruins.

"Well, sir," said the officer, "you'll find it a rough job, with mighty little to see and plenty to fall over. And it isn't over-safe. There's some stuff overhead that may come down at any moment. Still, if you want to look the place over, I can show you the way down."

"Your people, I suppose," said Thorndyke, "have made a pretty thorough inspection. Has anything been discovered that throws any light on the cause or origin of the fire?"

The officer shook his head. "No, sir," he replied. "Not a trace. There wouldn't be. The house was burned right out from the ground upwards. It might have been lighted in a dozen places at once and there would be nothing to show it. There isn't even part of a floor left. Do you think it is worth while to take the risk of going down?"

"I think I should like to see what it looks like," said Thorndyke, adding, with a glance at me, "but there is no need for you and Polton to risk getting a brick or a chimney-pot on your heads."

Of course, I refused to be left out of the adventure, while, as to Polton, wild horses would not have held him back.

"Very well, gentlemen," said the officer, "you know your own business," and with this he opened the wicket and let us through to the brink of a yawning chasm which had once been the cellars. The remains of the charred beams had been mostly hauled up out of the way, but the floor of the cellars was still hidden by mountainous heaps of bricks, tiles, masses
of charred wood and all-pervading white ash, amidst which three men in leather, brass-bound helmets were working with forks and shovels and with their thickly-gloved hands, removing the larger debris such as bricks, tiles, and fragments of boards and joists, while a couple of large sieves stood ready for the more minute examination of the dust and small residue.

We made our way cautiously down the ladder, becoming aware of a very uncomfortable degree of warmth as we descended and noting the steam that still rose from the wet rubbish. One of the men stopped his work to look at us and offer a word of warning.

“You’d better be careful where you are treading,” he said. “Some of this stuff is still red underneath, and your boots aren’t as thick as mine. You’d do best to stay on the ladder. You can see all there is to see from there, which isn’t much. And mind you don’t touch the walls with your hands.”

His advice seemed so reasonable that we adopted it, and seated ourselves on the rungs of the ladder and looked about the dismal cavern as well as we could through the clouds of dust and steam.

“I see,” said Thorndyke, addressing the shadowy figure nearest to us, “that you have a couple of sieves. Does that mean that you are going to sift all the small stuff?”

“Yes,” was the reply. “We are going to do this job a bit more thoroughly than usual on account of the dead man who was found here. The police want to find out all they can about him, and I think the insurance people have been asking questions. You see, the dead man seems to have been a stranger, and he hasn’t been properly identified yet. And I think that the tenant of the house isn’t quite satisfied that everything was according to Cocker.”

“And I suppose,” said Thorndyke, “that whatever is found will be kept carefully and produced at the inquest?”

“Yes. Everything that is recovered will be kept for the police to see. The larger stuff will be put into a box by itself, and the smaller things which may be important for purposes of identification are to be sifted out and put into a separate box so that they don’t get mixed up with the other things and lost sight of. But our instructions are that nothing is to be thrown away until the police have seen it.”

“Then,” Thorndyke suggested, “I presume that some police officer is watching the case. Do you happen to know who he is?”

“We got our instructions from a detective sergeant—name of Wills, I think—but an inspector from Scotland Yard looked in for a few minutes this morning; a very pleasant-spoken gentleman he was. Looked more like a dissenting minister than a police officer.”

“That sounds rather like Blandy,” I remarked; and Thorndyke agreed that the description seemed to fit our old acquaintance. And so it turned out; for when, having finished our survey of the cellars, we retired up the ladder and came out of the wicket, we found Sergeant Wills and Inspector Blandy in conference with the officer who had admitted us. On observing us, Blandy removed his hat with a flourish and made demonstrations of joy.

“Well, now,” he exclaimed, “this is very pleasant. Dr. Jervis, too, and Mr. Polton with photographic apparatus. Quite encouraging. No doubt there will be some crumbs of expert information which a simple police officer may pick up.”

Thorndyke smiled a little wearily. Like me, he found Blandy’s fulsome manner rather tiresome. But he replied amiably enough: “I am sure, Inspector, we shall try to be mutually helpful, as we always do. But at present I suspect that we are in much the same position: just observers waiting to see whether anything significant comes into sight.”

“That is exactly my position,” Blandy admitted. “Here is a rather queer-looking fire and a dead man in the ruins. Nothing definitely suspicious, but there are possibilities. There always are when you find a dead body in a burned house. You have had a look at the ruins, sir. Did you find anything suggestive in them?”

“Nothing whatever,” Thorndyke replied; “nor do I think anyone else will. The most blatant evidences of fire-raising would have been obliterated by such total destruction. But my inspection was merely formal. I have no expert knowledge of fires, but, as I am watching the case for the Griffin Company, I thought it best to view the ruins.”

“Then,” said Blandy with a slightly disappointed air, “you are interested only in the house, not in the body?”

“Officially, that is so; but, as the body is a factor in the case, I have made an examination of it, with Dr. Robertson, and if you want copies of the photographs that Polton has just taken at the mortuary, I will let you have them.”

“But how good of you!” exclaimed Blandy. “Certainly, Doctor, I should like to have them. You see,” he added, “the fact that this dead man was not the ordinary resident makes one want to know all about him and how he came to be sleeping in that house. I shall be most grateful for the photographs; and if there is anything that I can do—”

“There is,” Thorndyke interrupted. “I learn that you are, very wisely, making a thorough examination of the debris and passing the ashes through a sieve.”

“I am,” said Blandy, “and what is more, the sergeant and I propose to superintend the sifting. Nothing from a pin upwards will be thrown away until it has been thoroughly examined. I suppose you would like to see the things that we recover.”

“Yes,” replied Thorndyke, “when you have finished with them, you might pass them on to me.”

Blandy regarded Thorndyke with a benevolent and slightly foxy smile, and, after a moment’s pause, asked deferentially:
“Was there anything in particular that you had in your mind, Doctor? I mean, any particular kind of article?”

“No,” Thorndyke replied. “I am in the same position as you are. There are all sorts of possibilities in the case. The body tells us practically nothing, so we can only pick up any stray facts that may be available, as you appear to be doing.”

This brought the interview to an end. Blandy and the sergeant disappeared through the wicket, and we went on our way homewards to see what luck Polton would have with his photographs.

XII. LIGHT ON THE MYSTERY

FOR the reader of this narrative, the inquest on the body that had been recovered from the burnt house will serve, as it did to me, to present the known facts of the case in a coherent and related group—a condition which had been made possible by the stable and mummified state of the corpse. For, as the body was now virtually incorruptible, it had been practicable to postpone the inquiry until the circumstances had been investigated by the police and the principal facts ascertained, at least sufficiently for the purpose of an inquest.

When we arrived, the preliminaries had just been completed; the jury, having viewed the body, had taken their places and the coroner was about to open the proceedings. I need not report his brief address, which merely indicated the matters to be inquired into, but will proceed to the evidence. The first witness was Mr. Henry Budge, and he deposed as follows: “On the 19th of April, about a quarter to three in the morning, I started with my neighbour, James Place, to walk home from the house of a friend in Noel Street, where we had been spending the previous evening playing cards. My way home to Macclesfield Street lay through Billington Street, and Mr. Place walked that way with me. All the houses that we passed were in darkness with the exception of one in Billington Street in which we noticed a light showing through the Venetian blinds of two of the windows. Mr. Place pointed them out to me, remarking that we were not the only late birds. That would be about three o’clock.”

“Was the light like ordinary lamp, or electric light? the coroner asked.

“No. It looked more like fire-light—rather red in colour and not very bright. Only just enough to make the windows visible.”

“Will you look at this photograph of the house, in which the windows are marked with numbers, and tell us which were the ones that were lighted up?”

The witness looked at the photograph and replied that the lighted windows were those marked 8 and 9, adding that the one marked 7 seemed to be quite dark.

“That,” said the coroner, “is important as showing that the fire broke out in the bed-sitting room on the first floor. Number seven is the window of the store or workroom. Yes?”

“Well, we didn’t take any particular notice. We just walked on until we came to Little Pulteney Street, where Place lives, and there we stopped at a corner talking about the evening’s play. Presently, Place began to sniff, and then I noticed a smell as if there was a chimney on fire. We both crossed the road and looked up over the tops of the houses, and then we could see smoke drifting across and we could just make out the chimney that it seemed to be coming from. We watched it for a few minutes, and then we saw some sparks rising and what looked like a reddish glow on the smoke. That made us both think of the house with the lighted window, and we started to walk back to have another look. By the time we got into Billington Street we could see the chimney quite plain with lots of sparks flying out of it, so we hurried along until we came opposite the house, and then there was no mistake about it. All three windows on the first floor were brightly lighted up, and in one of them the Venetian blinds had caught; and now small flames began to show from the top of the chimney. We consulted as to what we should do, and decided that Place should run off and find a policeman while I tried to knock up the people of the house. So Place ran off, and I crossed the road to the front door of the house at the side of the shop.”

“And did you make a considerable noise?”

“I am afraid I didn’t. There was no proper knocker, only one of these new things fixed to the letter-box. I struck that as hard as I could and I pressed the electric bell, but I couldn’t tell whether it sounded or not. So I kept on with the silly little knocker.”

“Did you hear any sounds of any kind from within the house?”

“No sign, though I listened at the letter-box.”

“How long were you there alone?”

“Three or four minutes, I should think. Perhaps a little more. Then Place came running back with a policeman, who told me to go on knocking and ringing while he and Place roused up the people in the houses next door. But by this time the house was fairly alight, flames coming out of all three first-floor windows and a light beginning to show in the windows of the floor above. And then it got too hot for me to stay at the door, and I had to back away across the street.”

“Yes,” said the coroner, glancing at the jury, “I think the witness has given us a very clear and vivid description of the way and the time at which the fire broke out. The rest of the story can be taken up by other witnesses when we have heard Mr. Place.”
The evidence of James Place, given quite briefly, merely confirmed and repeated that of Mr. Budge, with the addition of his description of his meeting with the policeman. Then the latter, Edwin Pearson by name, was called and, having been sworn, deposed that on the 19th of April at about 3.14 a.m. he was accosted at the corner of Meard Street, Soho, by the last witness, who informed him that there was a house on fire in Billington Street. He immediately ran off with Place to the nearest fire alarm and sent off the warning. That was at 3.16 a.m. by his watch. Then he and the last witness hurried off to Billington Street, where they found the house alight as Mr. Budge had described it, and had endeavoured to rouse the inmates of the burning house and the two adjoining houses, and were still doing so when the first of the engines arrived. That would be about 3.24 a.m.

Here the narrative passed to the officer in charge of the engine which had been the first on the scene; and, when he had been sworn, the coroner remarked: "You realize that this is an inquiry into the death of the man whose body was found in the burnt house. The information that we want is that which is relevant to that death. Otherwise, the burning of the house is not specially our concern."

"I understand that," replied the witness—whose name had been given as George Bell. "The principal fact bearing on the death of deceased is the extraordinary rapidity with which the fire spread, which is accounted for by the highly inflammable nature of the material that the house contained. If deceased was asleep when the fire broke out, he might have been suffocated by the fumes without waking up. A mass of burning cellulose would give off volumes of poisonous gas."

"You have made an examination of the ruins. Did you find any evidence as to how the fire started?"

"No. The ruins were carefully examined by me and by several other officers, but no clue to the origin of the fire could be discovered by any of us. There was nothing to go on. Apparently, the fire started in the first-floor rooms, and it would have been there that the clues would be found. But those rooms were completely destroyed. Even the floors had been carried away by the fall of the roof; so that there was nothing left to examine."

"Does it appear to you that there is anything abnormal about this fire?"

"No. All fires are, in a sense, abnormal. The only unusual feature in this case is the great quantity of inflammable material in the house. But the existence of that was known."

"You find nothing to suggest a suspicion of fire-raising? The time, for instance, at which it broke out?"

"As to the time, there is nothing remarkable or unusual in that. The beginning of a fire may be something which makes no show at first: a heap of soot behind a stove or a spark on some material which will smoulder but not burst into flame. It may go on smouldering for quite a long time before it reaches some material that is really inflammable. A spark on brown paper, for instance, might smoulder slowly for an hour or more; then, if the glowing part spread and came into contact with a celluloid film, there would be a burst of flame and the fire would be started; and in such a house as this, the place might be well alight in a matter of minutes."

"Then you have no suspicion of incendiarism?"

"No, there is nothing positive to suggest it. Of course, it can't be excluded. There is simply no evidence either way."

"In what way might the fire have originated?"

The witness raised his eyebrows in mild protest, but he answered the rather comprehensive question without comment.

"There are a good many possibilities. It might have been started by the act of some person. That is possible in this case, as there was a person in the house, but there is no evidence that he started the fire. Then there is the electric wiring. Something might have occurred to occasion a short circuit—a mouse or a cock roach connecting two wires. It is extremely uncommon with modern wiring, and in this case, as the fuses were destroyed, we can't tell whether it happened or not. And then there is the possibility of spontaneous combustion. That does occur occasionally. A heap of engineer's cotton waste soaked with oil will sometimes start burning by itself. So will a big bin of sawdust or a large mass of saltpetre. But none of these things are known to have been in this house."

"As to human agency. Suppose this person had been smoking in bed?"

"Well, that is a dangerous habit; but, after all, it would be only guess-work in this case. I have no evidence that the man was smoking in bed. If there is such evidence, then the fire might have been started in that way, though, even then, it would not be a certainty."

This concluded Mr. Bell's evidence, and, when he had been allowed to retire, the coroner commented: "As you will have observed, members of the jury, the expert evidence is to the effect that the cause of the fire is unknown; that is to say that none of the recognized signs of fire-raising were found. But possibly we may get some light on the matter from consideration of the circumstances. Perhaps we had better hear what Mr. Green can tell us before we take the medical evidence."

Accordingly, Mr. Walter Green was called, and, having been sworn, deposed: "I am the lessee of the premises in which the fire occurred, and I carried on in them the business of a dealer in films of all kinds: kine films, X-ray films and the ordinary films for use in cameras. I do not manufacture but I am the agent for several manufacturers; and I also deal to some extent in projectors and cameras, both kine and ordinary. I always kept a large stock of films. Some were kept in the ground-floor shop for immediate sale, and the reserve stock was stored in the rooms on the second and third floors."
“Were these films inflammable?”
“Nearly all of them were highly inflammable.”
“Then this must have been a very dangerous house. Did you take any special precautions against fire?”
“Yes. The store-rooms were always kept locked, and the rule was that they were only to be entered by daylight and that no smoking was allowed in them. We were naturally very careful.”
“And were the premises insured?”
“Yes, both the building and the contents were fully insured. Of course, the rate of insurance was high in view of the special risk.”
“How many persons were ordinarily resident in the house?”
“Only one. Formerly the premises used to be left at night entirely unoccupied, but, as there was more room than we needed, I decided to let the first floor. I would sooner have let it for use as offices, but my present tenant, Mr. Gustavus Haire, applied for it as a residential flat, and I let it to him, and he has resided in it for the last six months.”
“Was he in residence at the time of the fire?”
“No. Fortunately for him, he was absent on a visit to Ireland at the time. The gentleman who met his death in the fire was a relative of Mr. Haire’s to whom he had lent the flat while he was away.”
“We will come to the question of deceased presently, but first we might have a few particulars about Mr. Haire; as to his occupation, for instance.”
“I really don’t know very much about him. He seems to be connected with the film and camera trade, mostly. I think, as a traveller and agent for some of the wholesale firms. But he does some sort of dealing on his own account, and he seems to be something of a mechanic. He has done some repairs on projectors for me, and once he mended up a gramophone motor that I bought second hand. And he does a little manufacturing, if you can call it by that name: he makes certain kinds of cements and varnishes. I don’t know exactly how much or what he does with them, but I presume that he sells them, as I can’t think of any use that he could have for the quantities that he makes.”
“Did he carry on this industry on your premises?”
“Yes, in the small room that adjoined the bedroom, which he also used as a workroom for his mechanical jobs. There was a cupboard in it in which he used to keep his stocks of varnish and the solvents for making them—mostly acetone and amyl acetate.”
“Aren’t those solvents rather inflammable?”
“They are very inflammable; and the varnish is still worse, as the basis is cellulose.”
“You say that you don’t know how much of this stuff he used to make in that room. Haven’t you any idea?”
“I can’t suggest a quantity, but I know that he must have made a good deal of it, because he used to buy some, at least, of his material from me. It consisted mostly of worn-out or damaged films, and I have sold him quite a lot from time to time. But I believe he had other sources of supply.”
“And you say he used to store all this inflammable material—the celluloid, the solvents and the varnish—in that small room?”
“Yes; but I think that when the little room got full up, he used to overflow into the bedroom—in fact, I know he did, for I saw a row of bottles of varnish on the bedroom mantelpiece, one of them a Winchester quart.”
“Then you have been into Mr. Haire’s rooms? Perhaps you could give us a general idea as to their arrangement and what was in them.”
“I have only been in them once or twice, and I didn’t take very much notice of them, as I just went in to talk over some matters which we had been discussing. There were two rooms; a small one—that would have the window marked 7 in the photograph. It was used as a workroom and partly as a store for the cements and varnishes. It contained a smallish deal table which had a vice fixed to it and served as a work bench. It was littered with tools and bits of scrap of various kinds and there was a gas-ring on a sheet of iron. Besides the table, there was a stool and a good-sized cupboard, rather shallow and fitted with five or six shelves which seemed to be filled principally with bottles.
“The other room was quite a fair size—about twenty feet long and twelve feet wide. It was used as a bed-sitting room and was quite comfortably furnished. The bed was at the end opposite window number 9, with the dressing-table and washstand near it. At the other end was a mahogany table, a small side board, a set of book-shelves, three single chairs, an easy chair by the fireplace, and a grandfather clock against the wall in the corner. There was some sort of carpet on the floor and a rug before the fireplace. That is all I remember about the furniture of the room; but what dwells in my memory is the appalling untidiness of the place. The floor was littered with newspapers and magazines, the mantelpiece and the sideboard were filled up with bottles and boxes and pipes and all sorts of rubbish, and there were brown-paper parcels all over the place: stacked along the walls and round the clock and even under the bed.”
“Do you know what was in those parcels?”
“I don’t know, but I strongly suspect that they contained his stock of films. I recognized one as a parcel that he had had from me.”

The coroner looked at the witness with a frown of astonishment.

“It seems incredible,” he exclaimed. “These rooms must have been even more dangerous than the rest of the house.”

“Much more,” the witness agreed; “for, in the business premises, the films were at least securely packed. We didn’t keep them loose in paper parcels.”

“No. It is perfectly astonishing. This man, Haire, might as well have been living and sleeping in a powder magazine. No wonder that the fire started in his flat. The necessary conditions seem to have been perfect for the start of a fire. But still we have no evidence as to what actually started it. I suppose, Mr. Green, you have no suggestion to offer on that question?”

“Oh, I just cautioned him to be careful.”

“That struck me as a rather curious remark, so I said: ‘How do you mean? What did you caution him about?’ and he replied: ‘Oh, I just cautioned him not to do himself too well in the matter of drinks in the evening, and I made him promise not to smoke in bed.’

‘Does he usually smoke in bed?’ I asked; and he replied: ‘I think he likes to take a book to bed with him and have a read and a smoke before going to sleep. But he has promised solemnly that he won’t.’

‘Well,’ I said, ‘I hope he won’t. It is a shockingly dangerous habit. He might easily drop off to sleep and let his cigarette fall on the bed-clothes.’

‘He doesn’t smoke cigarettes in bed,’ said Haire. ‘He smokes a pipe; his favourite is a big French clay bowl in the form of a death’s head with glass eyes and a cherry-wood stem. He loves that pipe. But you need not worry; he has sworn not to smoke in bed.’

“I was not very happy about the affair, but I didn’t like to make a fuss. So I made no further objection.”

“I think,” said the coroner, “that you ought to have forbidden him to lend the rooms. However, you didn’t. Did you learn what this man’s name was?”

“Yes, I asked Mr. Haire, in case I should see the man and have occasion to speak to him. His name was Moxdale—Cecil Moxdale.”

“Then we may take it that the body which is the subject of this inquiry is that of Cecil Moxdale. Did you ever see him?”

“I think I saw him once. That would be just before six in the evening of the 14th of April. I was standing inside the doorway of my premises when Mr. Haire passed with another man, whom I assumed to be Mr. Moxdale from his resemblance to Mr. Haire. The two men went to the street door which is the entrance to Mr. Haire’s staircase and entered together.”

“Could you give us any description of Moxdale?”

“He was a biggish man—about five feet nine or ten—with dark hair and a rather full dark moustache. That is all I noticed. I only took a passing glance at him.”

“From what you said just now,” the coroner suggested, “I suppose we may assume that you connect the outbreak of the fire with this unfortunate man?”

“I do,” the witness replied. “I have no doubt that he lit up his pipe notwithstanding his promise, and set his bedclothes
on fire. That would account for everything, if you remember that there were a number of parcels under the bed which were almost certainly filled with inflammable films."

"Yes," the coroner agreed. "Of course, it is only a surmise, but it is certainly a very probable one. And that, I suppose, Mr. Green, is all that you have to tell us."

"Yes, sir," was the reply, "that is about all I know of the case."

The coroner glanced at the jury and asked if there were any questions, and, when the foreman replied that there were none, the witness was allowed to retire when the depositions had been read and signed.

There was a short pause, during which the coroner glanced at the depositions and, apparently, reflected on the last witness's evidence. "I think," he said at length, "that, before going further into the details of this deplorable affair, we had better hear what the doctors have to tell us. It may seem, having regard to the circumstances in which deceased met his death and the condition of the body, that the taking of medical evidence is more or less of a formality; but, still, it is necessary that we should have a definite statement as to the cause of death. We will begin with the evidence of the divisional surgeon, Dr. William Robertson."

As his name was mentioned, our colleague rose and stepped up to the table, where the coroner's officer placed a chair for him.

---

**XIII. THE FACTS AND THE VERDICT**

"You have, I believe," said the coroner when the I preliminary questions had been answered, "made an examination of the body which is now lying in the mortuary?"

"Yes, I examined that body very thoroughly. It appears to be that of a strongly-built man about five feet ten inches in height. His age was rather difficult to judge, and I cannot say more than that he was apparently between forty and fifty, but even that is not a very reliable estimate. The body had been exposed to such intense heat that the soft tissues were completely carbonized, and, in some parts, entirely burned away. Of the feet, for instance, there was nothing left but white incinerated bone."

"The jury, when viewing the body, were greatly impressed by the strange posture in which it lay. Do you attach any significance to that?"

"No. The distortion of the trunk and limbs was due to the shrinkage of the soft parts under the effects of intense heat. Such distortion is not unusual in bodies which have been burned."

"Can you make any statement as to the cause of death?"

"My examination disclosed nothing on which an opinion could be based. The condition of the body was such as to obliterate any signs that there might have been. I assume that deceased died from the effects of the poisonous fumes given off by the burning celluloid—that he was, in fact, suffocated. But that is not properly a medical opinion. There is, however, one point which I ought to mention. The neck was dislocated and the little bone called the odontoid process was broken."

"You mean, in effect," said the coroner, "that the neck was broken. But surely a broken neck would seem to be a sufficient cause of death."

"It would be in ordinary circumstances; but in this case I think it is to be explained by the shrinkage. My view is that the contraction of the muscles and the soft structures generally displaced the bones and broke off the odontoid process."

"Can you say, positively, that the dislocation was produced in that way?"

"No. That is my opinion, but I may be wrong. Dr. Thorndyke, who examined the body at the same time as I did, took a different view."

"We shall hear Dr. Thorndyke's views presently. But doesn't it seem to you a rather important point?"

"No. There doesn't seem to me to be much in it. The man was alone in the house and must, in any case, have met his death by accident. In the circumstances, it doesn't seem to matter much what the exact, immediate cause of death may have been."

The coroner looked a little dissatisfied with this answer, but he made no comment, proceeding at once to the next point.

"You have given us a general description of the man. Did you discover anything that would assist in establishing his identity?"

"Nothing beyond the measurements and the fact that he had a fairly good set of natural teeth. The measurements and the general description would be useful for identification if there were any known person with whom they could be compared. They are not very specific characters, but if there is any missing person who might be the deceased, they might settle definitely whether this body could, or could not, be that of the missing person."

"Yes," said the coroner, "but that is of more interest to the police than to us. Is there anything further that you have to tell us?"
“No,” replied the witness, “I think that is all that I have to say.”

Thereupon, when the depositions had been read and signed the witness retired and his place was taken by Thorndyke.

“You examined this body at the same time as Dr. Robertson, I think?” the coroner suggested.

“Yes, we made the examination together, and we compared the results so far as the measurements were concerned.”

“You were, of course, unable to make any suggestion as to the identity of deceased?”

“Yes. Identity is a matter of comparison, and there was no known person with whom to compare the body. But I secured, and made notes of, all available data for identification if they should be needed at any future time.”

“It was stated by the last witness that there was a dislocation of the neck with a fracture of the odontoid process. Will you explain that to the jury and give us your views as to its significance in this case?”

“The odontoid process is a small peg of bone which rises from the second vertebra, or neck-bone, and forms a pivot on which the head turns. When the neck is dislocated, the displacement usually occurs between the first and the second vertebra, and then, in most cases, the odontoid process is broken. In the case of deceased, the first and second vertebrae were separated and the odontoid process was broken. That is to say that deceased had a dislocated neck, or, as it is commonly expressed, a broken neck.”

“In your opinion, was the neck broken before or after death?”

“I should say that it was broken before death; that, in fact, the dislocation of the neck was the immediate cause of death.”

“Do you say positively that it was so?”

“No. I merely formed that opinion from consideration of the appearances of the structures. The broken surfaces of the odontoid process had been exposed to the fire for some appreciable time, which suggested that the fracture had occurred before the shrinkage. And then it appeared to me that the force required to break the process was greater than the shrinkage would account for. Still, it is only an opinion. Dr. Robertson attributed the fracture to the shrinkage, and he is as likely to be right as I am.”

“Supposing death to have been caused by the dislocation, what significance would you attach to that circumstance?”

“None at all, if the facts are as stated. If the man was alone in the house when the fire broke out, the exact cause of death would be a matter of no importance.”

“Can you suggest any way in which the neck might have been broken in the circumstances which are believed to have existed?”

“There are many possible ways. For instance, if the man was asleep and was suddenly aroused by the fire, he might have scrambled out of bed, entangled the bedclothes, and fallen on his head. Or again, he might have escaped from the bedroom and fallen down the stairs. The body was found in the cellar. There is no evidence as to where the man was when death took place.”

“At any rate, you do not consider the broken neck in any way incompatible with accidental death?”

“Not in the least; and, as I said before, Dr. Robertson’s explanation may be the correct one, after all.”

“Would you agree that, for the purposes of this inquiry, the question as to which of you is right is of no importance?”

“According to my present knowledge and belief, I should say that it is of no importance at all.”

This was the sum of Thorndyke’s evidence, and, when he had signed the depositions and returned to his seat, the name of Inspector Blandy was called; whereupon that officer advanced to the table and greeted the coroner and the jury with his habitual benevolent smile. He polished off the preliminaries with the readiness born of long experience and then, having, by the coroner’s invitation, seated himself, he awaited the interrogation.

“I believe, Inspector,” the coroner began, “that the police are making certain investigations regarding the death of the man who is the subject of this inquiry. Having heard the evidence of the other witnesses, can you give us any additional facts?”

“Nothing very material,” Blandy replied. “The inquiries which we are making are simply precautionary. A dead man has been found in the ruins of a burnt house, and we want to know who that man was and how he came to be in that house, since he was admittedly not the tenant of the premises. As far as our inquiries have gone, they have seemed to confirm the statement of Mr. Green that the man was the one referred to by Mr. Haire as Cecil Moxdale. But our inquiries are not yet complete.”

“Then,” said the coroner, “is a general statement. Could you give us the actual facts on which your conclusions are based?”

“The only facts bearing on the identity of deceased have been obtained by an examination of various things found among the ashes of the burned house. The search was made with the greatest care, particularly that for the smaller objects which might have a more personal character. When the larger objects had been removed, the fine ash was all passed through sieves so that nothing should be overlooked. But everything that was found has been preserved for further examination if it should be necessary.”
"You must have got a rather miscellaneous collection," the coroner remarked. "Have you examined the whole lot?"

"No. We have concentrated on the small personal articles, and these seem to have yielded all the information that we are likely to get, and have practically settled the question of identity. We found, for instance, a pair of cuff-links of steel, chromium plated, on which the initials C.M. were engraved. We also found a clay pipe-bowl in the form of a death's head which had once had glass eyes and still had the remains of the glass fused in the eye-sockets. This had the initials C.M. scratched deeply on the under-surface of the bowl."

"That was a very significant discovery," the coroner remarked, "having regard to what Mr. Green told us. Yes?"

"There was also a stainless-steel plate which seemed to have belonged to an attaché-case or a suit-case and which had the initials C.M. engraved on it, and a gold watch, of which the case was partly fused, but on which we could plainly make out the initials G.H."

"G.H.," the coroner repeated. "That, then, would be Mr. Haire's watch. Isn't that rather odd?"

"I think not, sir," replied Blandy. "These were Mr. Haire's rooms, and they naturally contained articles belonging to him. Probably he locked up this valuable watch before going on his travels."

"Did you find any other things belonging to him?"

"Nothing at all significant. There was a vice and some tools and the remains of an eight-day clock which apparently belonged to him, and there were some other articles that might have been his, but they were mixed up with the remains of projectors and various things which had probably come from the shop or the stores above. But the small personal articles were the really important ones. I have brought those that I mentioned for your inspection."

Here he produced from his attaché-case a small glass-topped box in which the links, the steel name plate, the death's-head pipe-bowl, and the half-fused gold watch were displayed on a bed of cotton wool, and handed it to the coroner, who, when he had inspected it, passed it to the foreman of the jury.

While the latter and his colleagues were poring over the box, the coroner opened a fresh line of inquiry.

"Have you tried to get in touch with Mr. Haire?" he asked.

"Yes," was the reply, "and I am still trying, unsuccessfully up to the present. The address that Mr. Haire gave to Mr. Green was that of Brady & Co, a firm of retail dealers in photographic materials and appliances. As soon as I got it from Mr. Green, I communicated with the Dublin police, giving them the principal facts and asking them to find Mr. Haire, if they could, and pass on to him the information about the fire and also to find out from him who the man was whose body had been found in the burnt house.

"The information that I have received from them is to the effect that they called on Bradys about mid-day on the 19th, but Mr. Haire had already left. They learned that he had made a business call on Bradys on the morning of the 16th, having arrived in Dublin the previous night. He called again on the 18th, and then said that he was going on to Cork, and possibly from there to Belfast. In the interval, it seemed that he had made several calls on firms engaged in the photographic trade, but Bradys had the impression that he had left Dublin on the evening of the 18th.

"That is all that I have been able to discover so far, but there should be no great difficulty in tracing Mr. Haire; and even if it should not be possible, he will probably be returning from Ireland quite soon, and then he will be able to give us all the particulars that we want about this man, Cecil Moxdale—if that is his name."

"Yes," said the coroner, "but it will be too late for this inquiry. However, there doesn't seem to be any great mystery about the affair. The man's name was given to us by Mr. Green, and the identity seems to be confirmed by the initials on the articles which were recovered from the ruins; particularly the pipe, which had been described to us by Mr. Green as belonging to Cecil Moxdale. We know practically nothing about the man; but still we know enough for the purpose of this inquiry. It might be expedient to adjourn the proceedings until fuller particulars are available, but I hardly think it is necessary. I suppose, Inspector, you have nothing further to tell us?"

"No, sir," replied Blandy. "I have told you all that I know about the affair."

"Then," said the coroner, "that completes the evidence; and I think, members of the jury, that there is enough to enable you to decide on your verdict."

He paused for a moment, and then proceeded to read the depositions and secure the signature, and, when this had been done and Blandy had retired to his seat, he opened his brief summing up of the evidence.

"There is little that I need say to you, members of the jury," he began. "You have heard the evidence, all of which has been quite simple and all of which points plainly to the same conclusion. You have to answer four questions: Who was deceased? and where, when, and by what means did he come by his death?"

"As to the first question, Who was he? The evidence that we have heard tells us no more than that his name was Cecil Moxdale and that he was a cousin of Mr. Gustavus Haire. That is not much, but, still, it identifies him as a particular individual. As to the conclusiveness of the evidence on this point, that is for you to judge. To me, the identity seems to be quite clearly established."

"As to the time and place of his death, it is certain that it occurred in the early morning on the 19th of April in the house
known as 34, Billington Street, Soho. But the question as to how he came by his death is not quite so clear. There is some conflict of opinion on the part of the two medical witnesses respecting the immediate cause of death. But that need not trouble us; for they are agreed that, whatever we have been the immediate cause of death, the ultimate cause—with which we are concerned—was some accident arising out of the fire. There appears to be no doubt that deceased was alone in the house at the time when the fire broke out; and, that being so, his death could only have been due to some misadventure for which no one other than himself could have been responsible.

“There is, indeed, some evidence that he may, himself, have been responsible both for the outbreak of the fire and for his own death. There is a suggestion that he may, in spite of his promise to Mr. Haire, have indulged in the dangerous practice of smoking in bed. But there is no positive evidence that he did, and we must not form our conclusions on guesses or inferences.

“That is all that I need say; and with that I shall leave you to consider your verdict.”

There was, as the coroner had justly remarked, very little to consider. The facts seemed quite plain and the conclusion perfectly obvious. And that was evidently the view of the jury, for they gave the matter but a few minutes’ consideration, and then returned the verdict to the effect that the deceased, Cecil Moxdale, had met his death by misadventure due to the burning of the house in which he was sleeping.

“Yes,” the coroner agreed, “that is the obvious conclusion. I shall record a verdict of Death by Misadventure.”

On this, the Court rose; and, after a few words with the coroner and Robertson, Thorndyke and I, accompanied by Polton (who had been specially invited to attend), took our departure and shaped a course for King’s Bench Walk.

---

XIV. A VISIT FROM INSPECTOR BLANDY

WITH the close of the inquest, our connection with the case of the burnt house in Billington Street and Cecil Moxdale, deceased, seemed to have come to an end. No points of doubt or interest had arisen, or seemed likely to arise hereafter. We appeared to have heard the last of the case, and, when Thorndyke’s notes and Polton’s photographs had been filed, we wrote it off as finished with. At least, I did. But later events suggested that Thorndyke had kept it in mind as a case in which further developments were not entirely impossible.

My view of the case was apparently shared by Stalker; for when, being in the City on other business, we dropped in at his office, he expressed himself to that effect.

“An unsatisfactory affair from our point of view,” he commented, “but there was nothing that we could really boggle at. Of course, when an entire insured stock is destroyed, you have to be wary. A trader who has a redundant or obsolete or damaged stock can make a big profit by burning the whole lot out and recovering the full value from the insurance society. But there doesn’t seem to be anything of that kind. Green appears to be perfectly straight. He has given us every facility for checking the value of the stock, and we find it all correct.”

“I suppose,” said I, “you couldn’t have raised the question of negligence in allowing a casual stranger to occupy a bedroom in his box of fireworks. He knew that Moxdale wasn’t a very safe tenant.”

“There is no evidence,” Thorndyke reminded me, “that Moxdale set fire to the house. He probably did, but that is a mere guess on our part.”

“Exactly,” Stalker agreed, “and even if he did, he certainly did not do it consciously or intentionally. And, by the way, speaking of this man Moxdale, it happens, oddly enough, that his life was insured in this office. So he has let us in for two payments.”

“Anything considerable?” Thorndyke asked.

“No. Only a thousand.”

“Have you paid the claim?”

“No yet; in fact, no claim has been made up to the present, and it isn’t our business to hunt up the claimants. But we shall have to pay, for I suppose that even you could not make out a case of suicide.”

“No,” Thorndyke admitted, “I think we can exclude suicide. At any rate, there was nothing to suggest it. You accept the identity?”

“There doesn’t seem to be much doubt,” replied Stalker, “but the next of kin, or whoever makes the claim, will have to confirm the statements of Green and Haire. But I don’t think there is anything in the question of identity. Do you?”

“So far as I know, the question was fairly well settled at the inquest, and I don’t think it could be contested unless some positive evidence to the contrary should be produced. But we have to bear in mind that the identity was based on the statement of Walter Green and that his evidence was hearsay evidence.”

“Yes,” said Stalker, “I will bear that in mind when the claim is put in, if it ever is. If no claim is made, the question will not be of any interest to me.”

So that was the position. Stalker was not interested and, consequently, we, as his agents, had no further interest in the
Our interest in the affair manoeuvres? Probably it would transpire presently; to talk this balderdash which they have withheld from me.”

“Inspector Blandy.”

The question was answered by Polton, who, as he opened the door and peered out, stepped back and announced: “Inspector Blandy.”

We both stood up, and Thorndyke, with his customary suavity, advanced to greet the visitor and offer him a chair.

“Pray, gentlemen,” exclaimed Blandy, casting an inquisitive glance over the collection on the table, “do not let me disturb you, though, to be sure, I can see that I am disturbing you. But the disturbance need be only of the briefest. I have come—very improperly, without an appointment—merely to tender apologies and to make all too tardy amends. When I have done that, I can go, and leave you to pursue your investigations.”

“They are not investigations,” said Thorndyke. “We are just going over our stock of test specimens and re-arranging them. But what do you mean by apologies and reparations? We have no grievance against you.”

“You are kind enough to say so,” replied Blandy, “but I am, nevertheless, a defaulter. I made a promise and have not kept it. Mea culpa.” He tapped his chest lightly with his knuckles and continued: “When I had the pleasure of meeting you in the ruins of the burned house I promised to let you have an opportunity of examining the various objects that were retrieved from the debris. This evening, it suddenly dawned on me that I never did so. I was horrified, and, in my impulsive way, I hurried, without reflection, to seek your forgiveness and to make such amends as were possible.”

“I don’t think, Blandy,” said Thorndyke, “that the trifling omission mattered. We seemed to have all the information that we wanted.”

“So we did, but perhaps we were wrong. At any rate, I have now brought the things for you to see, if they are still of any interest. It is rather late, I must admit.”

“Yes, by Jove!” I agreed. “It is the day after the fair. But what things have you brought, and where are they?”

“The exhibits which you saw at the inquest, I have here in my attaché-case. If you would like me to leave them with you for examination at your leisure, I can do so, but we shall want them back. The other things are a box in my car, and, as we have finished with them, you can dispose of them as you please when you have examined them, if you think the examination worth while.”

“I take it,” said Thorndyke, “that you have been through them pretty thoroughly. Did you find any thing in any way significant?”

The inspector regarded Thorndyke with his queer, benevolent smile as he replied: “Not significant to me; but who knows what I may have overlooked? I could not bring to bear on them either your intellect, your encyclopaedic knowledge, or your unrivalled means of research.” Here he waved his hand to wards the table and seemed to bestow a silent benediction on the microscopes and the trays of slides. “Perhaps,” he concluded, “these simple things might have for you some message which they have withheld from me.”

As I listened to Blandy’s discourse, I found myself speculating on the actual purpose of his visit. He could not have come to talk this balderdash or to deliver the box of trash that he had brought with him. What object, I wondered, lay behind his manoeuvres? Probably it would transpire presently; but, meanwhile, I thought it as well to give him a lead.

“It is very good of you, Blandy,” said I, “to have brought us these things to look at, but I don’t quite see why you did it. Our interest in the affair ended with the inquest, and I take it that yours did too. Or didn’t it?”

“When did not,” he replied. “We were then making certain inquiries through the Irish police, and we have not yet obtained
the information that we were seeking. The case is still incomplete."

"Do you mean," Thorndyke asked, "that Mr. Haire has not been able to tell you all that you wanted to know?"

"We have not been able to get into touch with Mr. Haire; which is a rather remarkable fact, and becomes still more remarkable as the time passes and we get no news of him."

"In effect, then," said Thorndyke, "Mr. Haire has disappeared. Have you taken any special measures to trace him?"

"We have taken such measures as were possible," replied Blandy. "But we are in a difficult position. We have no reliable description of the man, and, if we had, we could hardly proceed as if we were trying to trace a 'wanted' man. It is curious that he should not have turned up in his usual places of resort, but there is nothing incriminating in the fact. We have no reason to suppose that he is keeping out of sight. There is nothing against him. No one could suspect him of having had any hand in starting the fire, as he was not there and another man was. But still, it is a little mysterious. It makes one wonder whether there could have been something that we overlooked."

"Yes," Thorndyke agreed, "there does certainly seem to be something a little queer about the affair. As I understand it, Haire went away with the stated intention of making a short visit to Dublin. He was known to have arrived there on a certain day and to have made two calls at a business house. He is said to have announced his intention to go on to Belfast, but it is not known whether he did, in fact, go there. Nothing at all is known as to his movements after he had left the dealer's premises. From that moment, no one, so far as we know, ever saw him again. Isn't that the position?"

"That is the position exactly, sir," replied Blandy, "and a very curious position it is if we remember that Haire was a man engaged in business in London and having a set of rooms there containing his household goods and personal effects."

"Before the fire," I remarked. "There wasn't much left of either after the flare up. He hadn't any home then to come back to."

"But, sir," Blandy objected, "what reason is there for supposing that he knew anything about the fire? He was somewhere in Ireland when it happened. But a fire in a London by-street isn't likely to be reported in the Irish papers."

"No," I admitted, "that is true; and it only makes the affair still more queer."

There was a short silence. Then Thorndyke raised a fresh question. "By the way, Inspector," said he, "there was a legal notice in The Times a few days ago referring to a certain Moxdale deceased. Did you happen to observe it?"

"Yes, my attention was called to it by one of my colleagues, and, on the chance that there might be some connection with the other Moxdale deceased, I called on the solicitors to make a few enquiries. They are quite a respectable firm—Home, Croner, and Home of Lincoln's Inn—and they were as helpful as they could be, but they didn't know much about the parties. The testator, Harold Moxdale, was an old gentleman, practically a stranger to them, and the other parties were nothing more than names. However, I learned that the principal beneficiary was the testator's nephew, Cecil Moxdale, and that, if he had not had the misfortune to be burned, he would have inherited a sum of about four thousand pounds."

"It is possible," I suggested, "that it may not be the same Cecil Moxdale. You say that they did not know anything about him. Did you try to fix the identity?"

"It wasn't necessary," replied Blandy, "for the next beneficiary was another nephew named Gustavus Haire; and as we knew that Haire and Moxdale were cousins, that settled the identity."

As Blandy gave this explanation, his habitual smile became tinged with a suggestion of foxiness, and I noticed that he was furtively watching Thorndyke to see how he took it. But there was no need, for my colleague made no secret of his interest.

"Did you learn whether these two bequests were in any way mutually dependent?" he asked.

Blandy beamed on him almost affectionately. It was evident that Thorndyke's reactions were those that had been desired.

"A very pertinent question, sir," he replied. "Yes, the two bequests were mutually contingent. The entire sum to be divided between the two nephews was about six thousand pounds. Of this, four thousand went to Cecil and two thousand to Gustavus. But it was provided that if either of them should pre-deecease the testator, the whole amount should go the survivor."

"My word, Blandy!" I exclaimed. "This puts quite a new complexion on the affair. As Harold Moxdale died, if I remember rightly, on the 30th of April, and Cecil died on the 10th of the same month, it follows that the fire in Billington Street was worth four thousand pounds to Mr. Gustavus Haire. A decidedly illuminating fact."

Blandy turned his benign smile on me. "Do you find it illuminating, sir?" said he. "If you do, I wish you would reflect a few stray beams on me."

Thorndyke chuckled, softly. "I am afraid, Jervis," he said, "that the inspector is right. This new fact is profoundly interesting—even rather startling. But it throws no light whatever on the problem."

"It establishes a motive," I retorted.

"But what is the use of that?" he demanded. "You, as a lawyer, know that proof of a motive to do some act is no evidence, by itself, that the person who had the motive did the act. Haire, as you imply, had a motive for making away with Moxdale. But..."
But before you could even suggest that he did actually make away with him, you would have to prove that he had the opportunity and the intention; and even that would carry you no farther than suspicion. To support a charge, there would have to be some positive evidence that the act was committed.”

“Exactly, sir,” said Blandy; “and the position is that we have not a particle of evidence that Haire had any intention of murdering his cousin, and there is clear evidence that he had no opportunity. When the fire broke out, he was in Ireland and had been there five days. That is, for practical purposes, an absolutely conclusive alibi.”

“But,” I persisted, “aren’t there such things as time-fuses or other timing appliances?”

Blandy shook his head. “Not in a case like this,” he replied. “Of course, we have considered that question, but there is nothing in it. In the case of a man who wants to set fire to a lock-up shop or empty premises, it is possible to use some such appliance—a time-fuse, or a candle set on some inflammable material, or an alarm clock—to give him time to show himself a few miles away and establish an alibi; and even then the firemen usually spot it. But here you have a flat, with somebody living in it, and the owner of that flat on the other side of the Irish Channel, where he had arrived five days before the fire broke out.

“No, sir, I don’t think Mr. Haire is under any suspicion of having raised the fire. The thing is a physical impossibility. And I don’t know of any other respect in which he is under suspicion. It is odd that we can’t discover his whereabouts, but there is really nothing suspicious in it. There is no reason why he should let anyone know where he is.”

I did not contest this, though my feeling was that Haire was purposely keeping out of sight, and I suspected that Blandy secretly took the same view. But the inspector was such an exceedingly downy bird that it was advisable not to say too much. However, I now understood—or thought I did—why he had made this pretext to call on us; he was at a dead end and hoped to interest Thorndyke in the case and thereby get a lead of some kind. And now, having sprung his mine, he reverted to the ostensible object of his visit.

“As to this salvage stuff,” said he. “Would you like me to leave these small things for you to look over?”

I expected Thorndyke to decline the offer, for there was no mystery about the things, and they were no affair of ours in any case. But, to my surprise, he accepted, and, having checked the list, signed the receipt which Blandy had written out.

“And as to the stuff in the box; perhaps Mr. Polton might show my man where to put it.”

At this, Polton, who had been calmly examining and sorting the test-slides during the discussion (to which I have no doubt he had given close attention), rose and suggested that the box should be deposited in the laboratory in the first place; and when Thorndyke had agreed, he departed to superintend the removal.

“I am afraid,” said Blandy, “that you will find nothing but rubbish in that box. That, at least, is what it appeared like to me. But, having studied some of your cases, I have been deeply impressed by your power of extracting information from the most unpromising material, and it is possible that these things may mean more to you than they do to me.”

“It is not very likely,” Thorndyke replied. “You appear to have extracted from them all the information that one could expect. They have conveyed to you the fact that Cecil Moxdale was apparently the occupant of the rooms at the time of the fire, and that is probably all that they had to tell.”

“It is all they had to tell me,” said Blandy, rising and picking up his attaché-case, “and it is not all that I want to know. There is still the problem of how the fire started, and they throw no light on that at all.”

“You have got the clay pipe,” I suggested. “Doesn’t that tell the story?”

He smiled at me with amiable reproach as he replied:

“We don’t want the material for plausible guesses. We want facts, or at least a leading hint of some kind, and I still have hopes that you may hit on something suggestive.”

“You are more optimistic than I am,” replied Thorndyke; “but I shall look over the material that you have brought, and, if it should yield any facts that are not already known to you, I promise to let you have them without delay.”

Blandy brightened up appreciably at this, and, as he turned to depart, he expressed his gratitude in characteristic terms.

“That, sir, is most generous of you. It sends me on my way rejoicing in the consciousness that my puny intelligence is to be reinforced by your powerful intellect and your encyclopaedic knowledge. I thank you, gentlemen, for your kindly reception of an intruder and a disturber of your erudite activities, and I wish you a very good evening.”

With this, the inspector took his departure, leaving us both a little overpowered by his magniloquence and me a little surprised by Thorndyke’s promise which had evoked it.

V. POLTON ON THE WAR PATH

As the inspector’s footsteps died away on the stairs, we looked at one another and smiled.

“That was a fine peroration, even for Blandy,” I remarked. “But haven’t you rather misled the poor man? He is evidently under the delusion that he has harnessed you firmly to his chariot.”
“I only promised to look over his salvage; which I am quite ready to do for my own satisfaction.”

“I don’t quite see why. You are not likely to learn anything from it; and even if you were, this affair is not our concern.”

“I don’t know that we can say that,” he replied. “But we needn’t argue the point. I don’t mind admitting that mere professional curiosity is a sufficient motive to induce me to keep an eye on the case.”

“Well, that would be good news for Blandy, for it is obvious that he is completely stumped; and so am I, for that matter, assuming that there is anything abnormal about the case. I don’t feel convinced that there is.”

“Exactly,” said Thorndyke; “that is Blandy’s difficulty. It is a very odd and puzzling case. Taking the group of circumstances as a whole, it seems impossible to accept it as perfectly normal; but yet, when one examines the factors separately, there is not one of them at which one can cavil.”

“I am not sure that I follow that,” said I. “Why can we not accept the circumstances as normal? I should like to hear you state the case as it presents itself to you.”

“Well,” he replied, “let us first take the facts as a whole. Here is a house which, in some unknown way, catches fire in the small hours of the morning. In the debris of that house is found the body of a man who has apparently been burned to death.”

“Yes,” I agreed, with a grin, “the body certainly had that appearance.”

“It transpires later,” Thorndyke continued, disregarding my comment, “that the death of that man, A, benefits another man, B, to the extent of four thousand pounds. But the premises in which the fire occurred belong to and are controlled by B; and they had been lent by B to A for his occupation while B should be absent in Ireland. The event by which the benefit accrues to B—the death of Harold Moxdale—has occurred quite a short time after the fire. Finally, the tenant, B, who had ostensibly gone away from his residence to make a short visit to Ireland, has never returned to that residence or made any communication to his landlord—has, in fact, disappeared.”

“Blandy doesn’t admit Haire has disappeared,” I objected.

“We mustn’t take Blandy’s statements too literally. In spite of his disclaimers, it is evident that he is hot on the trail of Mr. Gustavus Haire; and the fact is that, in the ordinary sense of the word, Haire has disappeared. He has absented himself from his ordinary places of resort, he has communicated with nobody, and he has left no traces by which the police could discover his whereabouts.

“But now take the facts separately. The origin of the fire is a mystery, but there is not a particle of evidence of incendiarism. The only person who could have been suspected had been overseas several days before the fire broke out.”

“Do you consider that his absence at the time puts him quite outside the picture? I mean, don’t you think that the fire could have been started by some sort of timing apparatus?”

“Theoretically, I have no doubt that it could. But it would have had to be a rather elaborate apparatus. The common alarm clock would not have served. But really the question seems to be of only academic interest for two reasons. First, the fire experts were on the look-out for some fire-raising appliance and found no trace of any; second, the presence of Moxdale in the rooms seems to exclude the possibility of any such appliance having been used, and, third, even the appliance that you are postulating would not have served its purpose with anything like calculable certainty.”

“You mean that it might not have worked, after all?”

“No. What I mean is that it could not have been adjusted to the actual purpose, which would have been to cause the death of the man. It would have been useless to fire the house unless it were certain that the man would be in it at the time and that he would not be able to escape. But neither of these things could be foreseen with any degree of certainty. No, Jervis, I think that, on our present knowledge, we must agree with Blandy and the others that no suspicion of arson stands against Gustavus Haire.”

“That is what he says, but it is obvious that he does suspect Haire.”

“I was speaking in terms of evidence,” Thorndyke rejoined. “Blandy admits that he has nothing against Haire and therefore cannot treat the disappearance as a flight. If he met Haire, he couldn’t detain him or charge him with any unlawful act. But he feels—and I think quite rightly—that Haire’s disappearance is a mystery that needs to be explained. Blandy, in fact, is impressed by the case as a whole; by the appearance of a connected series of events with the suggestion of a purpose behind it. He won’t accept those events as normal events, brought about merely by chance, but he sees no way of challenging them so as to start an inquiry. That is why he came to us. He hopes that we may be able to give him some kind of leading fact.”

“And so you are proposing to go over the box of rubbish that he has brought on the chance that you may find the leading fact among it?”

“I think we may as well look over it,” he replied. “It is wildly improbable that it will yield any in formation, but you never know. We have, on more than one occasion, picked up a useful hint from a most unlikely source. Shall we go up and see what sort of rubbish the box contains?”

We ascended to the laboratory floor, where we found Polton looking with undissembled distaste at a large packing-case
filled to the brim with miscellaneous oddments, mostly metallic, and all covered with a coating of white ash.

“Looks as if Mr. Blandy has turned out a dust bin,” Polton commented, “and passed the contents on to us. A rare job it was getting it up the stairs. Shall I put the whole of the stuff out on the bench?”

“You may as well,” replied Thorndyke, “though I think Blandy might have weeded some of it out. Door-handles and hinges are not likely to yield much information.”

Accordingly, we all set to work transferring the salvage to the large bench, which Polton had tidily covered with newspaper, sorting it out to some extent as we did so, and making a preliminary inspection. But it was a hopeless-looking collection, for the little information that it conveyed we possessed already. We knew about the tools from the little workshop, the projectors and the remains of gramophones and kinematograph cameras, and, as to the buttons, studs, keys, pen-knives, and other small personal objects, they were quite characterless and could tell us nothing.

Nevertheless, Thorndyke glanced at each item as he picked it out of its dusty bed and laid it in its appointed place on the bench, and even Polton began presently to develop an interest in the proceedings. But it was evidently a merely professional interest, concerning itself exclusively with the detached fragments of the gramophone motors and other mechanical remains and particularly with the battered carcass of the grandfather clock, and I strongly suspected that he was simply on the look-out for usable bits of scrap. Voicing my suspicion, I suggested:

“This ought to be quite a little windfall for you, Polton. A lot of this clockwork seems to be quite sound—I mean as to the separate parts.”

He laid down the clock (as tenderly as if it had been in going order) and regarded me with a cunning and crinkly smile.

“It’s an ill wind, sir, that blows nobody good. My reserve stock of gear-wheels and barrels and other spare parts will be all the richer for Mr. Blandy’s salvage. And you can’t have too many spares; you never know when one of them may be the very one that you want. But might I suggest that, as this is a rather dirty job, you let me finish setting the things out and come and look over them at your leisure in the morning, when I have been through them with a dusting-brush.”

As I found the business not only dirty but rather boresome—and in my private opinion perfectly futile—I caught at the suggestion readily, and Thorndyke and I then retired to the sitting-room to resume our operations on the test-slides, after cleansing our hands.

“We seem to have been ejected,” I remarked as we sat down to the table. “Perhaps our presence hindered the collection of scrap.”

Thorndyke smiled. “That is possible,” said he. “But I thought that I detected an awakening interest in the inspection. At any rate, it will be as well to let him sort out the oddments before we go through them. He is a good observer, and he might notice things that we should overlook and draw our attention to them.”

“You don’t really expect to get any information out of that stuff, do you?” I asked.

“No,” he replied. “The inspection is little more than a formality, principally to satisfy Blandy. Still, Jervis, we have our principles, and one of them—and a very important one—is to examine everything, no matter how insignificant. This won’t be the first rubbish-heap that we have inspected; and it may be that we shall learn something from it, after all.”

Thorndyke’s suggestion of “an awakening interest” on Polton’s part was curiously confirmed on the following day and thereafter. For, whereas I made my perfunctory inspection of the rubbish and forthwith—literally—washed my hands of it, and even Thorndyke looked it over with little enthusiasm, Polton seemed to give it a quite extraordinary amount of attention. By degrees, he got all the mechanical oddments sorted out into classified heaps, and once I found him with a small sieve, carefully sifting the ash and dirt from the bottom of the box. And his interest was not confined to the contents of that unclean receptacle; for, having been shown the gold watch which the inspector had left with us, he skilfully prised it open and examined its interior through his eyeglass with the most intense concentration.

Moreover, I began to notice something new and unusual in his manner and appearance: a suggestion of suppressed excitement and a something secret and conspiratorial in his bearing. I mentioned the matter to Thorndyke, but, needless to say, he had noticed it and was waiting calmly for the explanation to transpire. We both suspected that Polton had made some sort of discovery, and we both felt some surprise that he had not communicated it at once.

And then, at last, came the disclosure; and a most astonishing one it was. It occurred a few mornings after Blandy’s visit, when Thorndyke and I, happening to go up together to the laboratory, found our friend at the bench, poring over one of the heaps of mechanical fragments with a pair of watchmaker’s tweezers in his hand.

“Well, Polton,” I remarked, “I should think that you have squeezed the inspector’s treasures nearly dry.”

He looked up at me with his queer, crinkly smile and replied: “I am rather afraid that I have, sir.”

“And now, I suppose, you know all about it?”

“I wouldn’t say that, sir, but I know a good deal more than when I started. But I don’t know all that I want to know.”

“Well,” I said, “at any rate, you can tell us who set fire to that house.”

“Yes, sir,” he replied, “I think I can tell you that, without being too positive.”

I stared at him in astonishment, and so did Thorndyke. For Polton was no jester, and, in any case, was much too well-
mannered to let off jokes at his principals.

"Then," said I, "tell us. Who do you say it was?"

"I say that it was Mr. Haire," he replied with quiet conviction.

"But, my dear Polton," I exclaimed. "Mr. Haire was in Dublin when the fire broke out, and had been there five days. You heard the inspector say that it was impossible to suspect him."

"It isn't impossible for me," said Polton. "He could have done it quite well if he had the necessary means. And I am pretty sure that he had the means."

"What means had he?" I demanded.

"Well, sir," he replied, "he had an eight-day long-case clock."

Of course, we knew that. The clock had been mentioned at the inquest. Nevertheless, Polton's simple statement impinged on me with a quite startling effect, as if some entirely new fact had emerged. Apparently it impressed Thorndyke in the same way, for he drew a stool up to the bench and sat down beside our mysterious little friend.

"Now, Polton," said he, "there is something more than that. Tell us all about it."

Polton crinkled nervously as he pondered the question.

"It is rather a long and complicated story," he said, at length. "But I had better begin with the essential facts. This clock of Mr. Haire's was not quite an ordinary clock. It had a calendar movement of a very unusual kind, quite different from the simple date disc which most of these old clocks have. I know all about that movement because it happens that I invented it and fitted it to a clock; and I am practically certain that this is the very clock.

"However, that doesn't matter for the moment, but I must tell you how I came to make it and how it worked. In those days, I was half-way through my time as apprentice, and I was doing some work for a gentleman who made philosophical instruments—his name was Parrish. Now, Mr. Parrish had a clock of this kind—what they call a 'grandfather' nowadays—and it had the usual disc date in the dial. But that was no use to him because he was rather near-sighted. What he wanted was a calendar that would show the day of the week as well as the date, and in good big characters that he could read when he was sitting at his writing-table; and he asked me if I could make one. Well, of course, there was no difficulty. The simple calendar work that is sometimes fitted to watches would have done perfectly. But he wouldn't have it because it works rather gradually. It takes a few minutes at least to make the change."

"But," said I, "surely that is of no consequence."

"Not the slightest, sir. The change occurs in the night when nobody can see it, and the correct date is shown in the morning. But Mr. Parrish was a rather precise, pernickety gentleman, and he insisted that the change ought to be made in an instant at the very moment of midnight, when the date does really change. So I had to set my wits to work to see what could be done; and at last I managed to design a movement that changed instantaneously.

"It was quite a simple affair. There was a long spindle, or arbor, on which were two drums, one having the days of the week in half-inch letters on it and the other carrying a ribbon with the thirty-one numbers painted the same size. I need not go into full details, but I must explain the action, because that is what matters in this case. There was a twenty-four hour wheel—we will call it the day-wheel—which took off from the hour-wheel, and this carried a snail which turned with it."

"You don't mean an actual snail, I presume," said I.

"No, sir. What clockmakers call a snail is a flat disc with the edge cut out to a spiral shape, the shape of one of those flat water-snails. Resting against the edge of the snail by means of a projecting pin was a light steel bar with two pallets on it, and there was a seven-toothed star-wheel with long, thin teeth, one of which was always resting on the pallets. I may say that the whole movement excepting the day-wheel was driven by a separate little weight, so as to save the power of the clock.

"And now let me explain how it worked. The day-wheel, driven by the clock, made a complete turn in twenty-four hours, and it carried the snail round with it. But as the snail turned, its spiral edge gradually pushed the pallet-bar away. A tooth of the star-wheel was resting on the upper pallet; but when the snail had nearly completed its turn, it had pushed the bar so far away that the tooth slipped off the upper pallet on to the lower one—which was quite close underneath. Then the snail turned a little more and the pin came to the end of the spiral—what we call 'the step'—and slipped off, and the pallet-bar dropped back and let the tooth of the star-wheel slip off the lower pallet. Then the star-wheel began to turn until the next tooth was stopped by the upper pallet; and so it made a seventh of a turn, and, as it carried the two drums round with it, each of those made the seventh of a turn and changed the date in less than a second. Is that clear, sir?"

"Quite clear," replied Thorndyke (speaking for himself), "so far as the mechanism goes, but not so clear as to your deductions from it. I can see that this quite innocent calendar movement could be easily converted into a fire-raising appliance. But you seem to suggest that it was actually so converted. Have you any evidence that it was?"

"I have, sir," replied Polton. "What I have described is the calendar work just as I made it. There is no doubt about that, because when I took off the copper dial, there was the day-wheel with the snail on it still in place. Perhaps you noticed it."
“I did, but I thought it was part of some kind of striking-work.”

“No, sir. The striking-work had been removed to make room for the calendar-work. Well, there was the day-wheel and the snail, and I have found the pallet-bar and the star-wheel and some of the other parts, so it is certain that the calendar movement was there. But there was something else. Somebody had made an addition to it, for I found another snail and another pallet-bar almost exactly like those of the calendar. But there was this difference: the day-snail had marked on it twelve lines, each denoting two hours; but this second snail had seven lines marked on it, and those seven lines couldn’t have meant anything but seven days.”

“That is a reasonable assumption,” said Thorndyke.

“I think, sir, that it is rather more than an assumption. If you remember that the star-wheel and the spindle that carried the two drums made one complete revolution in seven days, you will see that, if this snail had been fixed on to the spindle, it would also have made a revolution in seven days. But do you see what follows from that?”

“I don’t,” said I, “so you may as well explain.”

“Well, the day-snail turned once a day and, at the end of its turn, it suddenly let the pin drop into the step, released the star-wheel and changed the date in an instant. But this second snail would take a week to turn, and, at the end of the week, the pin would drop into the step, and in an instant some thing would happen. The question is, what was it that would have happened?”

“Yes,” Thorndyke agreed, “that is the question, and first, can you think of any normal and innocent purpose that the snail might have served?”

“No, sir. I have considered that question, and I can’t find any answer. It couldn’t have been anything connected with the calendar, because the weeks aren’t shown on a calendar. There’s no need. When Sunday comes round, you know that it is a week since last Sunday; and no one wants to number the weeks.”

“It is conceivable,” I suggested, “that someone might have had some reason for keeping count of the weeks, though it does seem unlikely. But could this addition be connected with the phases of the moon? They are sometimes shown on clocks.”

“They are, usually, on these old clocks,” replied Polton, “but this movement would have been of no use for that purpose. The moon doesn’t jump from one phase to the next. It moves gradually; and the moon-disc on a clock shows the changes from day to day. Besides, this snail would have been unnecessary. A moon-disc could have been taken directly off the spindle and moved forward one tooth at each change of date. No, sir, I can think of no use for that snail but to do some particular thing at a given time on a given day. And that is precisely what I think it was made for.”

I could see that Thorndyke was deeply impressed by this statement, and so was I. But there were one or two difficulties, and I proceeded to point them out.

“You speak, Polton, of doing something at a given time on a given day. But your calendar gave no choice of time. It changed on the stroke of midnight. But this fire broke out at three o’clock in the morning.”

“The calendar changed at midnight,” replied Polton, “because it was set to that time. But it could have been set to any other time. The snail was not fixed immovably on the pivot. It was held fast by a set-screw, but if you loosened the screw, you could turn the snail and set it to discharge at any time you pleased.”

“And what about the other snail?” Thorndyke asked.

“That was made in exactly the same way. It had a thick collet and a small set-screw. So you see, sir, the movement was easily controllable. Supposing you wanted it to discharge at three o’clock in the morning in five days’ time; first you set the hands of the clock to three hours after midnight, then you set the day-snail so that the step was just opposite the pin, and you set the week-snail so that the pin was five marks from the step. Then both the snails would be in the correct position by the day-wheel, and at three in the morning on the fifth day both snails would discharge together and whatever you had arranged to happen at that time would happen to the moment. And you notice, sir, that until it did happen, there would be nothing unusual to be seen or heard. To a stranger in the room, there would appear to be nothing but an ordinary grand father clock with a calendar—unless the little windows for the calendar had been stopped up, as I expect they had been.”

Here Thorndyke anticipated a question that I had been about to put; for I had noticed that Polton had described the mechanism, but had not produced the parts for our inspection, excepting the carcase of the clock, which was on the bench.

“I understand that you have the two snails and pallet-bars?”

“Yes, sir, and I can show them to you if you wish. But I have been making a model to show how the mechanism worked, and I thought it best for the purposes of evidence, to make it with the actual parts. It isn’t quite finished yet, but if you would like to see it—”

“No,” replied Thorndyke, instantly realizing, with his invariable tact and sympathy, that Polton wished to spring his creation on us complete, “we will wait until the model is finished. But to what extent does it consist of the actual parts?”

“As far as the calendar goes, sir, almost entirely. The day-wheel was on the clock-plate where you saw it. Then I found the snail and the spindle with the star-wheel still fixed to it. That is practically the whole of it excepting the wooden drums, which, of course, have gone.
"As to the week-mechanism, I have got the snail and the pallet-bar only. There may not have been much else, as the week-snail could have been set on the spindle and would then have turned with the star-wheel."

"There would have to be a second star-wheel, I suppose," Thorndyke suggested.

"Not necessarily, sir. If it was required for only a single discharge, a pivoted lever, or something that would drop right out when the pallet released it, would do. I have found one or two wheels that might have been used, but they may have come from the gramophone motors or the projectors, so one can’t be sure."

"Then," said I, "you can’t say exactly what the week-mechanism was like, or that your model will be a perfect reproduction of it?"

"No, sir," he replied, regretfully. "But I don’t think that really matters. If I produce a model, made from the parts found in the ruins, that would be capable of starting a fire, that will dispose of the question of possibility."

"Yes," said Thorndyke, "I think we must admit that. When will your model be ready for a demonstration?"

"I can promise to have it ready by to-morrow evening," was the reply.

"And would you be willing that Inspector Blandy should be present at the demonstration?"

The answer was most emphatically in the affirmative; and the gratified crinkle with which the permission was given suggested keen satisfaction at the chance of giving the inspector a shock.

So the matter was left; and Thorndyke and I retired, leaving our ingenious friend to a despairing search among the rubbish for yet further traces of the sinister mechanism.

---

**XVI. POLTON ASTONISHES THE INSPECTOR**

POLTON’S revelation gave us both a good deal of material for thought, and, naturally, thought generated discussion.

"How does Polton’s discovery impress you?" I asked. "Is it a real one, do you think, or is it possible that he has only found a mare’s nest?"

"We must wait until we have seen the model," Thorndyke replied. "But I attach great weight to his opinions for several reasons."

"As, for instance—?"

"Well, first there is Polton himself. He is a profound mechanician, with the true mechanician’s insight and imagination. He reads a certain function into the machine which he has mentally reconstructed, and he is probably right. Then there is the matter which we were discussing recently: the puzzling, contradictory nature of the case. We agreed that the whole group of events looks abnormal; that it suggests a connected group of events, intentionally brought about, with an unlawful purpose behind it, but there is not a particle of positive evidence connecting anyone with those events in the character of agent. The crux of the matter has been from the first the impossibility of connecting Haire with the outbreak of the fire. His alibi seemed to be unchallengeable; for not only was he far away, days before the fire broke out; not only, was there no trace of any fire-raising appliance; but the presence of the other man in the rooms seemed to exclude the possibility of any such appliance having been used.

"But if Polton’s discovery turns out to be a real one, all these difficulties disappear. The impossible has become possible and even probable. It has become possible for Haire to have raised the fire while he was hundreds of miles away; and the appliance used was so ordinary in appearance that it would have passed unnoticed by the man who was living in the rooms. If Polton is right, he has supplied the missing link which brings the whole case together."

"You speak of probability," I objected. "Aren’t you putting it too high? At the most, Polton can prove that the mechanism could have been used for fire-raising; but what is the evidence that it was actually so used?"

"There is no direct evidence," Thorndyke admitted. "But consider all the circumstances. The fire, itself, looked like the work of an incendiary, and all the other facts supported that view. The fatal objection was the apparent physical impossibility of the fire having been purposely raised. But Polton’s discovery—if we accept it provisionally—removes the impossibility. Here is a mechanism which could have been used to raise the fire, and for which no other use can be discovered. That, I say, establishes a probability that it was so used; and that probability would remain even if it could be proved that the mechanism had some legitimate function."

"Perhaps you are right," said I. "At any rate, I think Blandy will agree with you. Is he coming to the demonstration?"

"Yes. I notified him and invited him to come. I couldn’t do less; and, in fact, though I have no great love for the man, I respect his abilities. He will be here punctually at eight o’clock to-night."

In effect, the inspector was more than punctual, for he turned up, in a state of undisguised excitement, at half-past seven. I need not repeat his adulatory greeting of my colleague nor the latter’s disclaimer of any merit in the matter. But I noted that he appeared to be genuinely grateful for Thorndyke’s help and much more frank and open in his manner than he had usually been.

As the demonstration had been arranged for eight, we occupied the interval by giving him a general outline of the
mechanism while he fortified himself with a glass of sherry (which Thorndyke had, in some way, ascertained to be his particular weakness) and listened with intense attention. At eight o’clock, exactly, by Polton’s newly-completed regulator, the creator of that incomparable time-keeper appeared and announced that the model was ready for inspection, and we all, thereupon, followed him up to the laboratory floor.

As we entered the big workroom, Blandy cast an inquisitive glance round at the appliances and apparatus that filled the shelves and occupied the benches; then he espied the model, and, approaching it, gazed at it with devouring attention.

It was certainly an impressive object, and at the first glance I found it a little confusing, and not exactly what I had expected; but as the demonstration proceeded, these difficulties disappeared.

“Before I start the movement,” Polton began, “I had better explain one or two things. This is a demonstration model, and it differs in some respects from the actual mechanism. That mechanism was attached to an eight-day clock, and it moved once in twenty-four hours. This one moves once in an abbreviated day of thirty seconds.”

“Good gracious!” exclaimed Blandy. “How marvellous are the powers of the horologist! But I am glad that it is only a temporary arrangement. At that rate, we should all be old men in about twenty minutes.”

“Well, sir,” said Polton, with an apologetic and crinkly smile, “you wouldn’t want to stand here for five days to see it work. But the calendar movement is exactly the same as that in Mr. Haire’s clock; in fact, it is made from the actual parts that I found in your box, excepting the two wooden drums and the ratchet pulley that carries the cord and weight. Those I had to supply; but the spindle that carries the drums, I found with the star-wheel on it.

“As we haven’t got the clock, I have made a simple little clock to turn the snail, like those that are used to turn an equatorial telescope. You can ignore that. But the rest of the movement is driven by this little weight, just as the original was. Then, as to the addition that someone had made to the calendar, I have fixed the week-snail to the end of the spindle. I don’t suppose that is how it was done, but that doesn’t matter. This shows how the snail and pallet-bar worked, which is the important point.”

“And what is that contraption in the bowl?” asked Blandy.

“That,” Polton replied a little evasively, “you can disregard for the moment. It is a purely conjectural arrangement for starting the fire. I don’t suggest that it is like the one that was used. It is merely to demonstrate the possibility.”

“Exactly,” said Blandy. “The possibility is the point that matters.”

“Well,” Polton continued, “that is all that I need explain. I have fitted the little clock with a dial and one hand so that you can follow the time, and, of course, the day of the week and the day of the month are shown on the two drums. And now we can set it going. You see that the day-drum shows Sunday and the date-drum shows the first, and the hand on the dial shows just after three o’clock; so it has just turned three o’clock on Sunday morning. And, if you look at the week-snail, you will see that it is set to discharge on the fifth day—that is, at three o’clock on Friday morning. And now here goes.”

He pulled up the little weight by its cord and released some sort of stop. Forthwith the little conical pendulum began to gyrate rapidly, and the single hand to travel round the dial, while Polton watched it ecstatically and chanted out the events as they occurred.

“Six a.m., nine a.m., twelve noon, three p.m., six p.m., nine p.m., midnight.”

Here he paused with his eye on the dial, and we all watched expectantly as the hand moved swiftly towards the figure three. As it approached there was a soft click accompanied by a slight movement of the two drums. Then the hand reached the figure and there was another click; and, immediately, the two drums turned, and Sunday, the first, became Monday, the second.

So the rather weird-looking machine went on. The little pendulum gyrated madly, the hand moved rapidly round the dial, and at each alternate three o’clock there came the soft click, and then the two drums moved together and showed a new day. Mean while, Polton continued to chant out his announcements—rather unnecessarily, as I thought, for the thing was obvious enough.

“Tuesday, the third; Wednesday, the fourth; Thursday, the fifth, six a.m., nine a.m., noon, three p.m., six p.m., nine p.m., midnight—now, look out for Friday morning.”

I think we were all as excited as he was, and we gazed at the dial with the most intense expectancy as the hand approached the figure, and the first warning click sounded. Then the hand reached the hour mark, and, immediately, there was a double click, followed by a faint whirring sound; and suddenly a cloud of white smoke shot up from the bowl and was instantly followed by a sheet of flame.

“My word!” exclaimed Blandy, “there’s no nonsense about that. Would you mind showing us how that was done, Mr. Polton?”

“It was quite a simple and crude affair,” Polton replied, apologetically, “but, you see, I am not a chemist.”

“The simpler, the better,” said Blandy, “for it was quite effectual. I wish you had shown it to us before you let it off.”

“That’s all right, sir,” said Polton. “I’ve got another ready to show you, but I thought I would like you to see how it worked before I gave you the details.”
"Quite right, too, Polton," said I. "The conjurer should always do the trick first, and not spoil the effect by giving the explanation in advance. But we want to see how it was done, now."

With a crinkly smile of satisfaction, Polton went to a cupboard, from which he brought out a second enamelled iron bowl, and, with the greatest care, carried it across to the bench.

"It is quite a primitive arrangement, you see," said he. "I have just put a few celluloid films in the bowl, and on the top one I have put a ring of this powder, which is a mixture of loaf sugar and chlorate of potash, both finely powdered and thoroughly stirred together. In the middle of the ring is this little wide mouthed bottle, containing a small quantity of strong sulphuric acid. Now, as soon as any of the acid touches the mixture, it will burst into flame; so all that is necessary to start the fire is to capsize the bottle and spill the acid on the chlorate mixture.

"You see how I did that. When the escapement discharged, it released this small wheel, which was driven by a separate spring, and the wheel then began to spin and wind up this thin cord, the other end of which was attached to this spindle carrying this long wire lever. As soon as the cord tightened up, it carried the lever across the bowl until it struck the little bottle and knocked it over. You notice that I stood the bottle inside an iron washer so that it couldn't slide, but must fall over when it was struck."

"A most remarkable monument of human ingenuity," commented Blandy, beaming benevolently on our gratified artificer. "I regard you, Mr. Polton, with respectful astonishment as a worker of mechanical miracles. Would it be possible to repeat the experiment for the benefit of the less gifted observer?"

Polton was only too delighted to repeat his triumph. Removing the first bowl, in which the fire had now died out, he replaced it with the second one and then proceeded to wind up the separate spring.

"There is no need to set it to the exact day," said he, "as it is only the ignition that you want to see. I will give you notice when it is ready to discharge; and you had better not stand too close to the bowl in case the acid should fly about. Now, there are two days to run; that is one minute."

We gathered round the bowl as near as was safe, and I noticed with interest the perfect simplicity of the arrangement and its infallible efficiency—so characteristic of Polton. In a couple of minutes the warning was given to "look out" and we all stepped back a pace. Then we heard the double click, and the cord—actually bookbinder's thread—which had fallen slack when the spring had been re-wound—began to tighten. As soon as it was at full tension the spindle of the long wire lever began to turn, carrying the latter at increasing speed towards the bowl. Passing the rim, it skimmed across until it met the bottle, and, giving it a little tap, neatly capsized it. Instantly, a cloud of white smoke shot up; the powder disappeared and a tongue of flame arose from the heap of films at the bottom of the bowl.

Blandy watched them with a smile of concentrated benevolence until the flame had died out. Then he turned to Polton with a ceremonious bow.

"Sir," said he, "you are a benefactor to humanity, an unraveller of criminal mysteries. I am infinitely obliged to you. Now I know how the fire in Billington Street arose, and who is responsible for the lamented death of the unfortunate gentleman whose body we found."

Polton received these tributes with his characteristic smile, but entered a modest disclaimer. "I don't suggest, sir, that this is exactly the method that was used."

"No," said Blandy, "but that is of no consequence. You have demonstrated the possibility and the existence of the means. That is enough for our purposes. But as to the details; have you formed any opinion on the methods by which the fire was communicated to the room from its starting-point?"

"Yes, sir," Polton replied; "I have considered the matter and thought out a possible plan, which I feel sure must be more or less right. From Mr. Green's evidence at the inquest we learned that the whole room was littered with parcels filled with used films; and it appeared that these parcels were stacked all round the walls, and even piled round the clock and under the bed. It looked as if those parcels, stacked round and apparently in contact, formed a sort of train from the clock round the room to the heap under the bed.

"Now, I think that the means of communication was celluloid varnish. We know that there was a lot of it about the room, including a row of bottles on the mantelpiece. This varnish is extremely inflammable. If some of it got spilt on the floor, alight, it would run about, carrying the flame with it and lighting up the films as it went. I think that is the way the fire was led away from the clock. You probably know, sir, that the cases of these tall clocks are open at the bottom. The plinth doesn't make a watertight contact with the floor; and, even if it did, it would be easy to raise it an eighth of an inch with little wedges. My idea is that the stuff for starting the fire was in the bottom of the clock-case. It must have been; for we know that the mechanism was inside the clock, and there couldn't have been anything showing outside. I think that the bottom of the clock was filled with loose films, but underneath them were two or three bottles of celluloid varnish, loosely corked, and on top, the arrangement that you have just seen, or some other.

"When the escapement tipped the bottle over—or started the fire in some other way—the films would be set alight, and the flames would either crack the varnish-bottles right away or heat the varnish and blow out the corks. In any case, there would be lighted varnish running about inside the clock, and it would soon run out under the plinth, stream over the floor of the room and set fire to the parcels of films; and when one parcel was set alight, the fire would spread from that to the next, and so all over the room. That is my idea as to the general arrangement. Of course, I may be quite wrong."
“I don’t think you are, Polton,” said Thorndyke, “at least in principle. But, to come to details; wouldn’t your suggested arrangement take up a good deal of space? Wouldn’t it interfere with the pendulum and the weights?”

“I think there would be plenty of room, sir,” replied Polton. “Take the pendulum first. Now, these tall-case clocks are usually about six feet high, sometimes a little more. The pendulum is about forty-five inches over all and suspended from near the top. That brings the rating-nut to about twenty-four inches above the floor level—a clear two feet to spare for the films and the apparatus. Then as to the weights; there was only one weight, as the striking-gear had been taken away. It is a rule that the weight ought not to touch the floor even when the clock is quite run down. But supposing it did; there would be about four feet from the bottom of the weight to the floor when the clock was fully wound—and we can assume that it was fully wound when the firing mechanism was started. As the fall per day would be not more than seven inches, the weight would be thirteen inches from the floor at the end of the fifth day, or at three a.m. on the fifth day, twenty inches.

“That leaves plenty of room in any case. But you have to remember that the weight, falling straight down, occupies a space of not more than four inches square. All round that space there would be the full two feet or even more at the sides, keeping clear of the pendulum. I don’t think, sir, that the question of space raises any difficulty.”

“I agree with you, Polton,” said Thorndyke. “You have disposed of my objection completely. What do you say, Inspector?”

The inspector smiled benignly and shook his head. “What can I say?” he asked. “I am rendered almost speechless by the contemplation of such erudition, such insight, and such power of mental synthesis. I feel a mere dilettante.”

Thorndyke smiled appreciatively. “We are all gratified,” said he, “by your recognition of Mr. Polton’s merits. But, compliments apart, how does his scheme strike you?”

“It strikes me,” replied Blandy, subsiding into a normal manner (excepting his smile, which was of the kind that “won’t come off”), “as supplying an explanation that is not only plausible but is probably the true explanation. Mr. Polton has shown that our belief that it was impossible for Mr. Haire to have raised the fire was a mistaken belief, that the raising of the fire was perfectly possible, that the means and appliances necessary for raising it were there, and that those means and appliances could have had no other purpose. From what we are entitled to infer that those means were so used, and that the fire was actually raised, and was raised by Mr. Gustavus Haire.”

“Yes,” Thorndyke agreed, “I think that is the position; and with that we retire, temporarily, at any rate, and the initiative passes to you. Mr. Haire is a presumptive fire-raiser. But he is your Haire, and it is for you to catch him, if you can.”

XVII. FURTHER SURPRISES

The air of finality with which Thorndyke had, so to speak, handed the baby back to Inspector Blandy might have been deceptive; but I don’t think it even deceived the inspector. Certainly it did not deceive me. Never had I known Thorndyke to resign from an unsolved problem, and I felt pretty certain that he was at least keeping this particular problem in view, and, in his queer, secretive way, trying over the various possible solutions in his mind.

This being so, I made no pretence of having dismissed the case, but took every opportunity of discussing it, not only with Thorndyke but especially with Polton, who was the actual fountain of information. And there were, about this time, abundant opportunities for discussion, for we were still engaged, in our spare time, in the great work of re-arranging and weeding out our large collection of microscopical slides for which Polton had recently made a new set of cabinets. Naturally, that artist assisted us in sorting out the specimens, and it was in the intervals of these activities that I endeavoured to fill in the blanks of my knowledge of the case.

“I have been thinking,” I remarked on one of these occasions, “of what you told us, Polton, about that clock of Mr. Haire’s. You are of opinion that it is actually the clock to which you fitted the calendar for Mr. Parrish. I don’t know that it is a point of any importance, but I should like to know what convinces you that this is the identical clock, and not one which might have been copied from yours, or invented independently.”

“My principal reason for believing that it is the same clock is that it is made from the same kind of oddments of material that I used. For instance, I made the pallet-bar from an old hack-saw blade which I happened to have by me. It was not specially suitable, and an ordinary clock-maker would almost certainly have used a strip of brass. But the pallet-bar of this clock has been made from a hack-saw blade.”

He paused and seemed to reflect for a while. Then he continued: “But there is another point; and the more I have thought about it the more it has impressed me. Mr. Parrish had a nephew who lived with him and worked as a pupil in the workshop; a lad of about my own age or a little younger. Now this lad’s name was Haire, and he was always called Gus. I supposed at the time that Gus stood for Augustus, but when I heard at the inquest the name of Gustavus Haire, I wondered if it might happen to be the same person. You can’t judge by a mere similarity of names, since there are so many people of the same name. But when I saw this clock, I thought at once of Gus Haire. For he was in the workshop when I made the calendar, and he watched me as I was working on it and got me to explain all about it; though the principle on which it worked was obvious enough to any mechanic.”

“Should you describe Gus Haire as a mechanic?” I asked.

“Yes, of a sort,” Polton replied. “He was a poor workman, but he was equal to a simple job like the making of this
calendar, especially when he had been shown; and certainly to the addition that had been made to it.”

“And what sort of fellow was he—morally, I mean?” Polton took time to consider this question. At length he replied: “It is not for me to judge any man’s character, and I didn’t know very much about him. But I do know this as a fact: that on a certain occasion when I was making a new key for Mr. Parrish’s cash drawer to replace one which was broken, Gus pinched a piece of my moulding wax and took a squeeze of the broken key; and that, later, Mr. Parrish accused me of having opened that drawer with a false key and taken money from it. Now, I don’t know that Gus made a false key and I don’t know that any money was actually stolen; but when a man takes a squeeze of the key of another man’s cash drawer, he lays himself open to a reasonable suspicion of an unlawful intention.”

“Yes, indeed,” said I. “A decidedly fishy proceeding; and from what you have just told us, it looks as if you were right—as if the clock were the original clock and Mr. Gustavus Haire the original Gus, though it is not quite clear how Mr. Parrish’s clock came into his possession.”

“I don’t think, sir,” said he, “that it is difficult to imagine. Mr. Parrish was his uncle, and, as he was an old man even then, he must be dead long since. The clock must have gone to someone, and why not to his nephew?”

“Yes,” I agreed, “that is reasonable enough. However, we don’t know for certain, and, after all, I don’t see that the identity of either the clock or the man is of much importance. What do you think, Thorndyke?”

My colleague removed his eye from the microscope, and, laying the slide in its tray, considered the question. At length he replied: “The importance of the point depends on how much Polton remembers. Blandy’s difficulty at the moment is that he has no description of Gustavus Haire sufficiently definite for purposes of identification. Now, can we supply that deficiency? What do you say, Polton? Do you think that if you were to meet Gus Haire after all these years you would recognize him?”

“I think I should, sir,” was the reply. And then he added as an afterthought: “I certainly should if he hadn’t lost his teeth.”

“His teeth!” I exclaimed. “Was there anything very distinctive about his teeth?”

“Distinctive isn’t the word, sir,” he replied. “They were most extraordinary teeth. I have never seen anything like them. They looked as if they were made of tortoiseshell.”

“You don’t mean that they were decayed?”

“Lord, no, sir. They were sound enough; good strong teeth and rather large. But they were such a queer colour. All mottled over with brown spots. And those spots wouldn’t come off. He tried all sorts of things to get rid of them—Armenian bole, charcoal, even jeweller’s red stuff—but it was no use. Nothing would shift those spots.”

“Well,” I said, “if those teeth are still extant, they would be a godsend to Blandy, for a written description would enable a stranger to identify the man.”

“I doubt if it would, sir,” Polton remarked with a significant smile. “Gus was extremely sensitive about those teeth, and showed them as little as possible when he talked or smiled. In those days he couldn’t produce much in the way of a moustache, but I expect he does now, and I’ll warrant he doesn’t crop it too close.”

“That is so,” Thorndyke confirmed. “The only description of Haire that the police have, as I understand, is that given by Mr. Green and that of the man who interviewed Haire in Dublin. Green’s description is very vague and sketchy, while the Dublin man hardly remembered him at all except by name, and that only because he had kept the card which Haire had presented. But both of these men mentioned that Haire wore a full, drooping moustache.”

“Still,” I persisted, “the teeth are a very distinctive feature, and it would seem only fair to Blandy to give him the information.”

“Perhaps it might be as well,” Thorndyke agreed. Then, returning to the subject of Polton’s old acquaintance, he asked: “You say that Gus lived with his uncle. Why was that? Was he an orphan?”

“Oh, no, sir. Only his people lived in the country, not very far away, for he used to go down and stay with them occasionally at week-ends. It was somewhere in Essex. I have forgotten the name of the place, but it was a small town near the river.”

“It wouldn’t be Maldon?” Thorndyke suggested.

“That’s the place, sir. Yes, I remember now.” He stopped suddenly and, gazing at his principal with an expression of astonishment, exclaimed: “Now, I wonder, sir, how you knew that he lived at Maldon.”

Thorndyke chuckled. “But, my dear Polton, I didn’t know. I was only making a suggestion. Maldon happens to agree with your description.”

Polton shook his head and crinkled sceptically. “It isn’t the only waterside town in Essex,” he remarked, and added: “No, sir. It’s my belief that you knew that he lived at Maldon, though how you knew I can’t imagine.”

I was disposed to agree with Polton. There was something a little suspicious in the way in which Thorndyke had dropped pat on the right place. But further questions on my part elicited nothing but an exasperating grin and the advice to me to turn the problem over in my mind and consider any peculiarities that distinguished Maldon from other Essex towns; advice that I acted upon at intervals during the next few days with disappointingly negative results.
Nevertheless, Polton's conviction turned out to be justified. I realized it when, one morning about a week later, I found Polton laying the breakfast-table and placing the "catch" from the letter-box beside our respective plates. As I entered the room, he looked at me with a most portentous wrinkle and pointed mysteriously to a small package which he had just deposited by my colleague's plate. I stooped over to examine the typewritten address, but at first failed to discover anything significant about it; then, suddenly, my eye caught the postmark, and I understood. That package had been posted at Maldon.

"The Doctor is a most tantalizing person, sir," Polton exclaimed. "I don't mind admitting that I am bursting with curiosity as to what is in that package. But I suppose we shall find out presently."

Once more he was right; in fact, the revelation came that very evening. We were working our way through the great collection of test specimens, examining and discussing each slide, when Thorndyke looked up from the microscope and electrified Polton and me by saying:

"By the way, I have got a specimen of another kind that I should like to take your opinion on. I'll show it to you."

He rose and stepped across the room to a cabinet, from which he took a small cardboard box of the kind that dentists use for the packing of dental plates. Opening this, he took from it the wax model of an upper denture, complete with teeth, and laid it on the table.

There was a moment's silence as we both gazed at it in astonishment and Thorndyke regarded us with a quizzical smile. Then Polton, whose eyes seemed ready to drop out, exclaimed:

"God bless my soul! Why, they are Mr. Haire's teeth!"

Thorndyke nodded. "Good!" said he. "You recognize these teeth as being similar to those of Gus Haire?

"They aren't similar," said Polton; "they are identically the same. Of course, I know that they can't actually be his teeth, but they are absolutely the same in appearance: the same white, chalky patches, the same brown stains, and the same little blackish-brown specks. I recognized them in a moment, and I have never seen anything like them before or since. Now, I wonder how you got hold of them."

"Yes," said I, "that is what I have been wondering. Perhaps the time has come for the explanation of the mystery."

"There is not much mystery," he replied. "These teeth are examples of the rare and curious condition known as 'mottled teeth'; of which perhaps the most striking feature is the very local distribution. It is known in many different places, and has been studied very thoroughly in the United States, but wherever it is met with it is confined to a quite small area, though within that area it affects a very large proportion of the inhabitants; so large that it is almost universal. Now, in this country, the most typically endemic area is Maldon; and, naturally, when Polton described Gus Haire's teeth and told us that Gus was a native of Essex, I thought at once of Maldon."

"I wonder, sir," said Polton, "what there is about Maldon that affects people's teeth in this way. Has it been explained?"

"Yes," Thorndyke replied. "It has been found that wherever mottled teeth occur, the water from springs and wells contains an abnormal amount of fluorine, and the quantity of the fluorine seems to be directly related to the intensity of the mottling. Mr. Ainsworth, whose admirable paper in the British Dental Journal is the source of my information on the subject, collected samples of water from various localities in Essex and analysis of these confirmed the findings of the other investigators. That from Maldon contained the very large amount of five parts per million."

"And how did you get this specimen?" I asked.

"I got into touch with a dental surgeon who practises in Maldon and explained what I wanted. He was most kind and helpful, and, as he has taken an interest in mottled teeth and carefully preserved all his extractions, he was able to supply me not only with this model to produce in court if necessary, but with a few spare teeth for experiments such as section-cutting."

"You seem to have taken a lot of trouble," I remarked, "but I don't quite see why."

"It was just a matter of verification," he replied. "Polton's description was clear enough for us as we know Polton; but for the purposes of evidence, the actual identification on comparison is infinitely preferable. Now we may say definitely that Gus Haire's teeth were true mottled teeth; and if Gus Haire and Gustavus Haire are one and the same person, as they appear to be, then we can say that Mr. Haire has mottled teeth."

"But," I objected, "does it matter to us what his teeth are like?"

"Ah!" said he, "that remains to be seen. But if it should turn out that it does matter, we have the fact."

"And are we going to pass the fact on to Blandy? It seems to be more his concern than ours."

"I think," he replied, "that, as a matter of principle, we ought to, though I agree with Polton that the information will not be of much value to him. Perhaps we might invite him to drop in and see the specimen and take Polton's depositions. Will you communicate with him?"

I undertook to convey the invitation; and when the specimen had been put away in the cabinet, we dismissed the subject of mottled teeth and returned to our task of revision.

But that invitation was never sent; for, on the following morning, the inspector forestalled it by ringing us up on the
telephone to ask for an interview, he having, as he informed us, some new and important facts which he would like to discuss with us. Accordingly, with Thorndyke’s concurrence, I made an appointment for that evening, which happened to be free of other engagements.

It was natural that I should speculate with some interest on the nature of the new facts that Blandy had acquired. I even attempted to discuss the matter with Thorndyke, but he, I need not say, elected to postpone discussion until we had heard the facts. Polton, on the other hand, was in a twitter of curiosity, and I could see that he had made up his mind by hook or by crook to be present at the interview; to which end, as the hour of the appointment drew near, he first placed an easy-chair for the inspector, flanked by a small table furnished with a decanter of sherry and a box of cigarettes, and then covered the main table with a portentous array of microscopes, slide-trays, and cabinets. Having made these arrangements, he seated himself opposite a microscope and looked at his watch; and I noticed thereafter that the watch got a good deal more attention than the microscope.

At length, punctually to the minute, the inspector’s modest rat-tat sounded on the knocker, and Polton, as if actuated by a sudden spring, shot up from his chair like a Jack-in-the-box and tripped across to the door. Throwing it open, with a flourish, he announced “Inspector Blandy”; whereupon Thorndyke and I rose to receive our guest, and, having installed him in his chair, filled his, glass and opened the cigarette-box while Polton stole back to his seat and glued his eye to the microscope.

My first glance at the inspector as he entered assured me that he expected to spring a surprise on us. But I didn’t intend to let him have it all his own way. As he sipped his sherry and selected a cigarette from the box, I anticipated his offensive and took the initiative. “Well, Blandy, I suppose we may assume that you have caught your Haire?”

“I deprecate the word ‘caught’ as applied to Mr. Haire,” he answered, beaming on me, “but, in fact, we have not yet had the pleasure of meeting him. It is difficult to trace a man of whom one has no definite description.”

“Oh!” said I, “that is where we are going to help you. We can produce the magic touchstone which would identify the man instantly.”

Here I took the denture-box from the table, where it had been placed in readiness, and, having taken out the model, handed it to him. He regarded it for a while with an indulgent smile and then looked enquiringly at me.

“This is a very singular thing, Dr. Jervis,” said he. “Apparently a dentist’s casting-model. But the teeth look like natural teeth.”

“They look to me like deuced unnatural teeth,” said I, “but, such as they are, they happen to be an exact facsimile of Mr. Haire’s teeth.”

Blandy was visibly impressed, and he examined the model with a new interest.

“I am absolutely astounded,” said he; “not so much at the strange appearance of the teeth, though they are odd enough, as by your apparently unbounded resources. May I ask how you made this extraordinary discovery?”

Thorndyke gave him a brief account of the investigation which Polton confirmed and amplified, to which he listened with respectful attention.

“Well,” he commented, “it is a remarkable discovery and would be a valuable one if the identity had to be proved. In the existing circumstances it is not of much value, for Mr. Haire is known to wear a moustache, and we may take it that his facial expression is not at all like that of the Cheshire Cat. And you can’t stop a stranger in the street and ask him to show you his teeth.”

He handed the model back to me, with a sip of wine, opened the subject of his visit.

“Speaking of identity, I have learned some new facts concerning the body which was found in Mr. Haire’s house. I got my information from a rather unexpected source. Now, I wonder whether you can guess the name of my informant.”

Naturally, I could not, and, as Thorndyke refused to hazard a guess, the inspector disclosed his secret with the air of a conjuror producing a goldfish from a hat box. “My informant,” said he, “is Mr. Cecil Moxdale.”

“What!” I exclaimed, “the dead man!”

“The dead man,” he repeated; “thereby refuting the common belief that dead men tell no tales.”

“This is most extraordinary,” said I, “though, as a matter of fact, the body was never really identified. But why did Moxdale not come forward sooner?”

“It seems,” replied Blandy, “that he was travelling in the South of France at the time of the fire and, naturally, heard nothing about it. He has only just returned, and, in fact, would not have come back so soon but for the circumstance that he happened to see a copy of The Times in which the legal notice appeared in connection with his uncle’s death.”

“Then I take it,” said Thorndyke, “that he made his first appearance at the solicitor’s office.”

“Exactly,” replied Blandy; “and there he learned about his supposed death, and the solicitors communicated with me. I had left them my address and asked them to advise me in the case of any new developments.”

There was a short pause, during which we all considered this “new development.” Then Thorndyke commented: “The reappearance of Moxdale furnishes conclusive negative evidence as to the identity of the body. Could he give any positive
evidence?"

"Nothing that you could call evidence," replied Bandy. "Of course, he knows nothing. But he has done a bit of guessing; and there may be something in what he says."

"As to the identity of the body?" Thorndyke asked.

"Yes. He thinks it possible that the dead man may have been a man named O'Grady. The relations between Haire and O'Grady seem to have been rather peculiar; intimate but not friendly. In fact, Haire appears to have had an intense dislike for the other man, but yet they seem to have associated pretty constantly, and Moxdale has a strong impression that O'Grady used to 'touch' Haire for a loan now and again, if they were really loans. Moxdale suspects that they were not; in short, to put it bluntly he suspects that Haire was being blackmailed by O'Grady."

"No details, I suppose?"

"No. It is only a suspicion. Moxdale doesn't know anything and he doesn't want to say too much; naturally, as Haire is his cousin."

"But how does this bear on the identity of the body?"

"Doesn't it seem to you to have a bearing? The blackmailing, I mean, if it can be established. Blackmailers have a way of dying rather suddenly."

"But," I objected, "it hasn't been established. It is only a suspicion, and a rather vague one at that."

"True," he admitted, "and very justly observed. Yet we may bear the suspicion in mind, especially as we have a fact which, taken in connection with that suspicion, has a very direct bearing on the identity of the body. Moxdale tells me that O'Grady had an appointment with Haire at his, Haire's, rooms in the forenoon of the fourteenth of April; the very day on which Haire must have started for Dublin. He knows this for a fact, as he heard O'Grady make the appointment. Now, that appointment, at that place and on that date, strikes me as rather significant."

"Apprently, Moxdale finds it significant, too," said I. "The suggestion seems to be that Haire murdered O'Grady and went away, leaving his corpse in the rooms."

"Moxdale didn't put it that way," said Bandy.

"He suggested that O'Grady might have had the use of the rooms while Haire was away. But that is mere speculation, and he probably doesn't believe it himself. Your suggestion is the one that naturally occurs to us; and if it is correct, we can understand why Haire is keeping out of sight. Don't you think so?"

The question was addressed to Thorndyke with a persuasive smile. But my colleague did not seem to be impressed.

"The figure of O'Grady," he said, "seems to be rather shadowy and elusive, as, in fact, does the whole story. But perhaps Moxdale gave you a more circumstantial account of the affair."

"No, he did not," replied Bandy. "But my talk with him was rather hurried and incomplete. I dropped in on him without an appointment and found him just starting out to keep an engagement, so I only had a few minutes with him. But he voluntarily suggested a further meeting to go into matters in more detail; and I then ventured to ask if he would object to your being present at the interview, as you represent the insurance people, and he had no objection at all."

"Now, how would you like me to bring him along here so that you could hear his account in detail and put such questions as you might think necessary to elucidate it? I should be glad if you would let me, as you know so much about the case. What do you say?"

Thorndyke was evidently pleased at the proposal and made no secret of the fact, for he replied: "It is very good of you, Bandy, to make this suggestion. I shall be delighted to meet Mr. Moxdale and see if we can clear up the mystery of that body. Does your invitation include Jervis?"

"Of course it does," Bandy replied, heartily, "as he is a party to the inquiry; and Mr. Polton, too, for that matter, seeing that he discovered the crucial fact. But, you understand that Moxdale knows nothing about that."

"No," said Thorndyke; "but if it should seem expedient for the purposes of the examination to let him know that the fire was raised by Haire, do you agree to my telling him?"

The inspector looked a little dubious. "We don't want to make any unnecessary confidences," said he. "But, still, I think I had better leave it to your discretion to tell him anything that may help the inquiry."

Thorndyke thanked him for the concession, and, when one of two dates had been agreed on for the interview, the inspector took his leave, wreathed in smiles and evidently well satisfied with the evening's work.

XVIII. THORNDYKE ADMINISTERS A SHOCK

"I WONDER, sir," said Polton, as the hour approached I for the arrival of our two visitors, "how we had better arrange the room. Don't want it to look too much like a committee meeting. But there's rather a lot of us for a confidential talk."

"It isn't so particularly confidential," I replied. "If there are any secrets to be revealed, they are not Moxdale's. He didn't
pose as a dead man. The deception was Haire's."

"That's true, sir," Polton rejoined with evident relief. "Still, I think I won't make myself too conspicuous, as he may regard me as an outsider."

The plan that he adopted seemed to me to have exactly the opposite effect to that intended, for, having arranged four chairs around the fireplace with a couple of small tables for wine and cigars, he placed a microscope and some trays of slides on the large table, drew up a chair and prepared to look preoccupied.

At eight o'clock precisely our visitors arrived, and, as I admitted them, I glanced with natural curiosity at "the deceased", and was impressed rather favourably by his appearance. He was a good-looking man, about five feet nine or ten in height, broad-shouldered, well set-up, and apparently strong and athletic; with a pleasant, intelligent face, neither dark nor fair, a closely-cropped dark moustache and clear grey eyes. He greeted me with a friendly smile, but I could see that, in spite of Polton's artful plans, he was a little taken aback by the size of the party, and especially by the apparition of Polton, himself; seated necromantically behind his microscope.

But Thorndyke soon put him at his ease, and, when the introductions had been effected (including "Mr. Polton, our technical adviser"), we took our seats and opened the proceedings with informal and slightly frivolous conversation.

"We should seem to be quite old acquaintances, Mr. Moxdale," said Thorndyke, "seeing that I have had the honour of testifying to a coroner's jury as to the cause of your death. But that sort of acquaintanceship is rather one-sided." "Yes," Moxdale agreed, "it is a queer position. I come back to England to find myself the late Mr. Moxdale and have to introduce myself as a resurrected corpse. It is really quite embarrassing."

"It must be," Thorndyke agreed, "and not to you alone; for, since you have resigned from the role of the deceased, you have put on us the responsibility of finding a name for your understudy. But the inspector tells us that you can give us some help in our search."

"Well," said Moxdale, "it is only a guess, and I may be all abroad. But there was someone in that house when it was burned, and, as I was not that someone, I naturally ask myself who he could have been. I happen to know of one person who might have been there, and I don't know of any other. That's the position. Perhaps there isn't much in it, after all."

"A vulgar saying," Blandy remarked, "has it that half a loaf is better than no bread. A possible person is at least something to start on. But we should like to know as much as we can about that person. What can you tell us?"

"Ah!" said Moxdale, "there is the difficulty. I really know nothing about Mr. O'Grady. He is little more than a name to me, and only a surname at that. I can't even tell you his Christian name."

"That makes things a bit difficult," said Blandy, "seeing that we have got to trace him and find out whether he is still in existence. But at any rate, you have seen him and can tell us what he was like."

"Yes, I have seen him—once, as I told you—and my recollection of him is that he was a strongly-built man about five feet nine or ten inches high, medium complexion, grey eyes, dark hair and moustache and no beard. When I saw him, he was wearing a black jacket, striped trousers, grey overcoat, and a light-brown soft felt hat."

"That is quite a useful description," said Blandy, "for excluding the wrong man, but not so useful for identifying the right one. It would apply to a good many other men; and the clothes were not a permanent feature. You told me about your meeting with him. Perhaps you wouldn't mind repeating the account for Dr. Thorndyke's benefit."

"It was a chance meeting," said Moxdale. "I happened to be in the neighbourhood of Soho one day about lunch-time and it occurred to me to drop in at a restaurant that Haire had introduced me to; Moroni's in Wardour Street. I walked down to the further end of the room and was just looking for a vacant table when I caught sight of Haire, himself; apparently lunching with a man who was a stranger to me. As Haire had seen me, I went up to him and shook hands, and then, as I didn't know his friend, was going off to another table when he said: 'Don't go away, Cecil. Come and take a chair at this table and let me introduce you to my friend, O'Grady. You've heard me speak of him and he has heard me speak of you.'"

"Accordingly, as O'Grady stood up and offered his hand, I shook it and sat down at the table and ordered my lunch; and in the interval before it arrived we chatted about nothing in particular, especially O'Grady, who was very fluent and had a rather pleasant, taking manner. By the time my food was brought, they had finished their lunch, and, having got their bills from the waiter, settled up with him. Then O'Grady said: 'Don't let me break up this merry party, but Time and Tide, you know—I must be running away. I am glad to have had the pleasure of meeting you, Moxdale, and turning a mere name into a person.'"

"With this he got up and put on his overcoat and hat—I noticed the hat particularly because it was rather a queer colour—and when he had shaken hands with me, he said to Haire, just as he was turning to go: 'Don't forget our little business on Thursday. I shall call for you at eleven o'clock to the tick, and I shall bring the stuff with me. Better make a note of the time. So long.' and with a smile and a wave of the hand to me, he bustled away."

"When he had gone, I remarked to Haire that O'Grady seemed to be rather a pleasant, taking sort of fellow. He smiled grimly and replied: 'Yes, he is a plausible rascal, but if you should happen to meet him again, I advise you to keep your pockets buttoned. He is remarkably plausible.'"

"I tried to get him to amplify this statement, but he didn't seem disposed to pursue the subject and presently he looked at
his watch and then he, too, took his departure. That is the whole story, and there isn’t much in it excepting the date of the appointment. The Thursday referred to would be the fourteenth of April, and that, I understand, is the day on which Haire started for Dublin.”

“You say, you understand,” said Thorndyke. “Have you not seen the account of the inquest?”

“No. But Mr. Home, my solicitor, has given me a summary of it with all the material facts, including my own untimely decease. But I needn’t have said I understand, because I happen to know.”

“That Mr. Haire did start on that day?” Thorndyke queried.

“Yes. I actually saw him start.”

“That is interesting,” said Blandy. “Could you give us the particulars?”

“With pleasure,” replied Moxdale “It happened that on that day—or rather that night—I was starting for the South of France. I had left my luggage in the cloak-room at Victoria, earlier in the day, as I had some calls to make, and when I had done all my business, I strolled to Wardour Street and dropped in at Moroni’s for a late dinner or supper. And there I found Haire, who had just come in on the same errand. He was taking the night train for Holyhead, and as I was travelling by the night train to Folkestone, we both had plenty of time. So we made our dinner last out and we dawdled over our coffee until it was past ten o’clock. Then Haire, who had a heavy suit-case with him, said he thought he would take a taxi across to Euston, so, when we had paid our bills, we went out together to look for a cab. We found one disengaged in Shaftesbury Avenue, and, when Haire had put his suit-case inside, he called out ‘Euston’ to the driver, got in, said ‘good-night’ to me and off he went.”

“Did he say whether O’Grady had kept his appointment?” Thorndyke asked.

“He just mentioned that he had called. Nothing more; and of course I asked no questions.”

“You seemed to think,” said Thorndyke, “that the body that was found after the fire might be that of O’Grady. What made you think that?”

“Well, really,” Moxdale replied, “I hardly know. It was just an idea, suggested, I suppose, by the fact that O’Grady went to the rooms and I didn’t know of anybody else. I thought it possible that Haire might have let him use the rooms while he was away, as O’Grady lives out of town—somewhere Enfield way.”

The inspector looked dissatisfied. “Seems rather vague,” he remarked. “You were telling me some thing about a suspicion of blackmailing. Could you give us some particulars on that subject?”

“My dear Inspector,” exclaimed Moxdale, “I haven’t any particulars. It was just a suspicion, which I probably ought not to have mentioned, as I had nothing definite to go upon.”

“Still,” Blandy persisted, “you must have had some reasons. Is Haire a man who could be blackmailed?”

“That I can’t say. He isn’t a pattern of all the virtues, but I know of nothing that a blackmailer could fix on. And he is my cousin, you know. I think what raised the suspicion was the peculiar relations between the two men. They were a great deal together, but they were not really friends. Haire seemed to me to dislike O’Grady intensely, and I gathered from chance remarks that he let drop that O’Grady had got a good deal of money out of him from time to time. In what way I never knew. It may have been in the form of loans, but if not, it would rather look like blackmail.”

There was a short silence. Then Blandy, dropping his oily manner for once, said, rather brusquely:

“Now, Mr. Moxdale, you have suggested that the burned body might have been that of O’Grady. You have told us that O’Grady was in those rooms on the fourteenth of April, and you have suggested that O’Grady was blackmailing Haire. Now I put it to you that what you really suspect is that, on that day, Haire made away with O’Grady and concealed his body in the rooms.”

Moxdale shook his head. “I never suspected any thing of the kind. Besides, the thing wasn’t practicable. Is it likely that he would have gone off to Ireland leaving his body in his rooms?”

“You are not forgetting the fire,” Blandy reminded him.

“I don’t see that the fire has anything to do with it. Haire couldn’t foresee that someone would set his rooms on fire at that particularly opportune moment.”

“But that is precisely what he did foresee,” said Thorndyke. “That fire was not an accident. It was carefully prepared and started by a timing mechanism on a pre-arranged date. That mechanism was discovered and reconstructed by our colleague, Mr. Polton.”

The statement was, no doubt, a startling one, but its effect on Moxdale was beyond what I should have expected. He could not have looked more horrified if he had been accused of setting the mechanism himself.

“So you see,” Thorndyke continued, “that Haire is definitely implicated; and, in fact, the police are prepared to arrest him on charges connected with both the fire and the body.”

“Yes,” said the inspector, “but the trouble is that we have no photograph or any sufficient description by which to identify him.”
“Speaking of identification,” said Thorndyke, “we learn that his teeth are rather peculiar in appearance. Can you tell us anything about them?”

Moxdale looked distinctly uncomfortable at this question, though I could not imagine why. However, he answered, somewhat hesitatingly: “Yes, they are rather queer-looking teeth; as if they were stained by tobacco. But it isn’t tobacco-staining, because I remember that they were just the same when he was a boy.”

Having given this answer, he looked from Blandy to Thorndyke, and, as neither asked any further question, he remarked, cheerfully: “Well, I think you have squeezed me pretty dry; unless there is something else that you would like me to tell you.”

There was a brief silence. Then Thorndyke said in a very quiet, matter-of-fact tone: “There is one other question, Mr. Moxdale. I have my own opinion on the subject, but I should like to hear your statement. The question is, What made you go to Dublin after you had killed Mr. Haire?”

A deathly silence followed the question. Moxdale was thunder-struck. But so were we all. Blandy sat with dropped jaw, staring at Thorndyke, and Polton’s eyes seemed ready to start from their sockets. At length, Moxdale, pale as a corpse, exclaimed in a husky voice:

“I don’t understand you, sir. I have told you that I saw Mr. Haire start in a taxi for Euston.”

“Yes,” Thorndyke replied. “But at the moment when you saw Mr. Haire get into the cab, his dead body was lying in his rooms.”

Moxdale remained silent for some moments. He seemed completely overwhelmed; and, watching him, I saw that abject terror was written in every line of his face. But he made one more effort. “I assure you, sir,” he said, almost in a whisper, “that you have made some extraordinary mistake. The thing is monstrous. You are actually accusing me of having murdered my cousin!”

“Not at all,” replied Thorndyke. “I said nothing about murder. I referred simply to the physical fact that you killed him. I did not suggest that you killed him feloniously. I am not accusing you of a crime. I merely affirm an act.”

Moxdale looked puzzled and yet somewhat reassured by Thorndyke’s answer. But he was still evasive.

“It seems,” said he, “that it is useless for me to repeat my denial.”

“It is,” Thorndyke agreed. “What I suggest is that you give us a plain and truthful account of the whole affair.”

Moxdale looked dubiously at the inspector and said in a half-interrogative tone: “If I am going to be charged with having compassed the death of my cousin it seems to me that the less I say, the better.”

The inspector, thus appealed to, suddenly recovered his self-possession, even to the resumption of his smile; and I could not but admire the quickness with which he had grasped the position. “As a police officer,” he said, “I am not permitted to advise you. I can only say that if you choose to make a statement you can do so; but I have to caution you that any statement that you may make will be taken down in writing and may be used in evidence against you. That doesn’t sound very encouraging; but I may remind you that you are, at present, not charged with any offence, and that a statement made voluntarily in advance is more effective than the same statement made in answer to a charge.”

“And I,” said Thorndyke, “not being a police officer, may go farther and suggest that a statement may possibly obviate the necessity for any charge at all. Now, come, Mr. Moxdale,” he continued, persuasively, taking from his pocket a foolscap envelope, “I will make you a proposal. In this envelope is a signed statement by me setting forth briefly my reconstruction, from evidence in my possession, of the circumstances of Mr. Haire’s death. I shall hand this envelope to the inspector. Then I suggest that you give us a straightforward account of those circumstances. When he has heard your account, the inspector will open the envelope and read my statement. If our two statements agree, we may take it that they are both true. If they disagree, we shall have to examine the discrepancies. What do you say? I advise you, strongly, to give us a perfectly frank statement.”

The persuasive and even friendly tone in which Thorndyke spoke evidently made a considerable impression on Moxdale, for he listened attentively with a thoughtful eye on the speaker, and when Thorndyke had finished he reflected awhile, still keeping his eyes fixed on my colleague’s face. At length, having made up his mind, he said, with something like an air of relief: “Very well, sir, I will take your advice. I will give you a full and true account of all that happened on that dreadful day, suppressing nothing.”

He paused for a few moments to collect his thoughts and then continued: “I think I should begin by telling you that my cousin stood to gain four thousand pounds by my death if I should die before my uncle, Harold Moxdale.”

“We knew that,” said Blandy.

“Aha! Well, then, there is another matter. I don’t like to speak ill of the dead, but the truth is that Haire was an unscrupulous rascal—a downright bad man.”

“We knew that, too,” said Blandy, “when we learned that he had set fire to the house.”

“Then I need not dwell on it; but I may add that he had a deep grudge against me for being the more favoured beneficiary of my uncle’s will. In fact, his jealousy had induced a really virulent hatred of me which was apt to break out at
times, though we usually preserved outwardly decent relations.

"And now to come to the actual incident. I am the part proprietor of a sort of international trade directory and I do a good deal of the canvassing for advertisements, particularly in France. I live out at Surbiton and only go to the office occasionally. Now, a few days before the disaster—the eleventh of April, I think it was—I had a letter from Haire telling me that he was making a business trip to Dublin to try to arrange some agencies and suggesting that he should do some business for me at the same time. I wasn't very keen, as I knew that I was not likely to see any of the money that he might collect. However, I agreed, and eventually arranged to meet him on the fourteenth, on which day I proposed to start by a night train for the South of France. He suggested that he should call for me at my office at half-past four, that we should have some tea and then go to his rooms to talk things over.

"In due course, he turned up at the office; I finished my business, took my bag, and went with him to some tea-rooms, where we had a leisurely tea, and we then went on to his rooms, which we reached about ten minutes to six. As we passed the entrance of the business premises, I saw a man standing just inside, and he saw us, too, for he called out 'good evening' to Haire, who returned his greeting, addressing him as Mr. Green; and it struck me that Mr. Green looked rather hard at me, as if he thought he recognized me. Then Haire opened the street door with his latch-key and conducted me up the stairs to the first-floor where he opened the door of his rooms with another latch-key, which looked like a Yale.

"Now, all the time that I had been with Haire, and especially at the tea-rooms, I had been aware of something rather queer in his manner; a suggestion of suppressed excitement, and he seemed nervous and jumpy. But when we got inside his rooms and he had shut the door, it grew much more marked; so much so that I watched him rather closely, noticing that he appeared restless and flustered, that there was a wild look in his eyes and that his hands were trembling quite violently.

"I didn't like the look of him at all, and I don't mind admitting that I began to get the wind up; for I couldn't forget that four thousand pounds, and I knew that poor old Uncle Harold was in a bad way and might die at any moment. But he was not dead yet. There was still time for me to die before him. So I kept an eye on Haire and held myself in readiness in case he really meant mischief.

"But he nearly had me, after all. He had given me a list of the Dublin firms to look at, and, while I was reading it, he got behind me to look over my shoulder. Suddenly, he made a quick move and I felt him slip a noose of soft cord over my head. I was only just in time to thrust my right hand up inside the noose when he pulled it tight. But, of course, he couldn't strangle me while my hand was there, and, seeing that, he made violent efforts to drag it away while I struggled for my life to keep hold of the noose.

"It was a horrible business. Haire was like a mad man. He tugged and wrenched at the cord, he clawed at me with his free hand, he kicked me and drove his knee into my back while I hung on for dear life to the noose. By degrees I worked round until I faced him, and tried to grab his arm with my left hand while he tugged with all his might at the cord. Then we began to gyrate round the room in a kind of hideous waltz, each pounding at the other with his free hand.

"At last; in the course of our gyrations, we collided with a chair, and he fell backwards on the seat with me on top of him, his head overhanging the seat and my left hand at his throat. When we fell, the whole of my weight must have been on that left hand, for it slid under his chin and thrust it violently upwards. And as his chin went up, I felt and heard a faint click; his head fell loosely to one side, and, in a moment, his grasp on the cord relaxed. For an instant or two his arms and legs moved with a sort of twitching motion, then he lay quite still.

"Cautiously, I picked myself up and looked down at him. He was sprawling limply across the chair, and a glance at his face told me that he was dead. Evidently, the sudden drive of my left hand had broken his neck.

"Shaken as I was, I drew a deep breath of relief. It had been a near thing. An instant's hesitation with my right hand and I should now have been lying with blackening face and starting eyes and the fatal noose secured tightly around my neck. It was a horrible thought. Only by a hair's-breadth had I escaped. Still, I had escaped; and now I was free of that peril for ever.

"But my relief was short-lived. Suddenly, I realized that, if I had escaped one danger, I was faced by another. Haire was dead; but it was my hand that had brought about his death. Who was to know that I had not murdered him? Very soon, relief gave way to alarm, alarm to panic. What was I to do for my own safety? My first impulse was to rush out and seek a policeman; and that is what I ought to have done. But I dared not. As I took off the noose and held it in my hand, it seemed to whisper a terrible warning of what might yet befall me.

"Suppose I were just to steal away and say nothing to anyone of what had happened. Haire lived alone. No one ever came to his rooms. It might be months before the body should be discovered. Why not go away and know nothing about it? But, no; that wouldn't do. Mr. Green had seen me enter the rooms and perhaps he knew who I was. When the body was found, he would remember that I had been with Haire the last time he was seen alive.

"I sat down with my back to the corpse and thought hard, trying to decide what I should do. But for a while I could think of no reasonable plan. The figure of Mr. Green seemed to block every way of escape. Suddenly, my wandering gaze lighted on the list of Dublin firms lying where I had dropped it. I looked at it idly for a few moments; then, in a flash, I saw a way of escape.

"Haire had intended—so he had told me—to start for Ireland that very night. Well, he should start—by proxy. The people
whom he was going to call on were strangers, for he had never been in Dublin before. I would make those calls for him, announcing myself by his name and presenting his card. Thus Haire would make an appearance in Dublin, and that appearance could be cited as evidence that he was alive on that day. Then, when at some later date, his body should be found, it would be beyond question that he must have died at some time after his return from Ireland. My connection with his death would have disappeared and I could snap my fingers at Mr. Green.

"As soon as the scheme was clear in my mind I set to work to execute it; and as I worked, I thought out the details. First I stripped the corpse and dressed it in the pyjamas from the bed. Then, having thrown the bed-clothes into disorder, I placed the body half in the bed, half outside, with the head bent sideways and resting on the floor. The obvious suggestion would be that he had fallen out of bed and broken his neck—a mere accident implicating nobody.

"When I had folded his clothes and put them away tidily on a chair, I looked at my watch. It was barely twenty past six. The whole of this horrid drama had been played out in less than half an hour. I sat down to rest awhile—for it had been a strenuous affair while it lasted—and looked about the room to see that I was leaving no traces, but there were none, excepting my bag, and that I should take away with me. The Venetian blinds were lowered—I had noticed that when we came in—and I decided to leave them so, as that was probably how Haire was accustomed to leave them when he went away. So I sat and thought out the rest of my plan. The place was strangely quiet, for, by now Mr. Green and his people had apparently shut up their premises and gone away, and there was not a sound in the room save the solemn tick of the big clock in the corner.

"Presently I rose and began, at my leisure, to complete my preparations. There was no need for hurry. It was now only half-past six by the big clock, and I knew that the Holyhead express did not leave Euston until eight forty-five. I looked over an open bureau and took from it a few of Haire’s business cards and a little sheaf of his bill-heads. When I had stowed these in my bag, I had finished; and as all was still quiet, I picked up the bag, turned away with a last, shuddering glance at the grotesque figure that sprawled over the side of the bed, let myself out as silently as I could, and stole softly down the stairs.

"I need not follow the rest of my proceedings in detail. I caught my train and duly arrived in Dublin about seven o’clock the next morning. I went to a small private hotel—Connolly’s—where I wrote in the visitors’ book, ‘G. Haire, Billington Street, London’, and when I had washed and shaved and had breakfast, I went out and made the first of my calls, Brady & Co., where I stayed quite a long time gossiping with the manager. We didn’t complete any definite transaction, but I left one of Haire’s cards with some particulars written on the back. I made two more calls on that day, the 15th, and, during the next three days I visited several other firms, always leaving one of Haire’s cards. I stayed in Dublin until the 18th, which I thought was long enough to give the proper impression of a business tour, and, in the evening of that day, just before closing time, I made a second call at Brady’s, to impress myself on the manager’s memory. Then, having already settled up at the hotel, I went straight to the station and caught the 7.50 train which runs in connection with the Holyhead express. I arrived at Euston in the early morning, about 5.55, and took a taxi straight across to Victoria, where, after a wash and a leisurely breakfast, I caught the nine o’clock Continental train, embarking at Folkestone about eleven.

"After that I followed my usual route and went about my ordinary business, canvassing the Bordeaux district for renewals. But I didn’t complete the tour, for it happened that in an hotel at Bordeaux I came across a rather out-of-date copy of The Times, and, glancing through the legal notices, I was startled to see that of Home, Cronin & Home, announcing the death of my uncle. As this was some weeks old, I thought I had better pack up and start for home at once to get into touch with the solicitors.

"But I had to go warily, for I didn’t know what might have happened while I had been abroad. Had Haire’s body been discovered? And, if so, what had been done about it? These were questions that would have to be answered before I could safely present myself at Home’s office. I thought about it during the journey and decided that the first thing to do was to go and have a look at the house and see whether the Venetian blinds were still down; and if they were not, to try to pick up some information in the neighbourhood. So when I got to Victoria I put my bag in the cloak room and took a bus to Piccadilly Circus, from whence I made my way to Billington Street. I walked cautiously down the street, keeping a sharp look-out in case Mr. Green should be at his door, and avoiding the appearance of looking for the house. But my precautions were unnecessary, for, when I came to the place, behold! there was no house there! Only some blackened walls, on which the housebreakers were operating with picks.

"As I was standing gazing at the ruins, an idler approached me.

"‘Proper old blaze, that was, Mister. Flared up like a tar barrel, it did.’

"‘Ah!’ said I, ‘then you actually saw the fire?’

"‘Well, no,’ said he, ‘I didn’t see it, myself; but I heard all about it. I was on the coroner’s jury.’

"‘The coroner’s jury!’ I exclaimed. ‘Then there were some lives lost?’

"‘Only one,’ he replied; ‘and the queer thing was that he wasn’t the proper tenant, but just a stranger what had had the rooms lent to him for a few days. He was identified by a clay pipe what had his initials, C.M., scratched on it.’

"‘C.M.!’ I gasped. ‘What did those letters stand for?’

"‘Cecil Moxdale was the poor chap’s name; and it seemed that he had been smoking that pipe in bed and set the bed-clothes alight. Probably a bit squiffy, too.’
“Now, here was a pretty state of affairs. Mysterious, too. For the clay pipe wasn’t mine. I never smoke a pipe. But, obviously, my calculations had been completely upset, and I was in a pretty tight place, for my trip to Dublin had only introduced a fresh complication. I should have to announce myself as alive, and then the fat would be in the fire. For if the body wasn’t mine, whose was it? If the dead man was Haire, then who was the man in Dublin? And if the man in Dublin was Haire, then who the deuce was the dead man? It was a regular facer.

“Of course, I could have maintained that I knew nothing about the affair. But that wouldn’t do; for there was that infernal Mr. Green. No, I should have to make up some story that would fit the facts; and, turning it over in my mind, I decided to invent an imaginary person and let the police find him if they could. He must be virtually a stranger to me, and he must be sufficiently like me to pass as the man whom Green saw going into the rooms with Haire. So I invented Mr. O’Grady and told a pretty vague story about him—but I needn’t say any more. You know the rest; and now, Inspector, what about that statement that you have?”

Blandy smiled benignly, and, opening the envelope, drew from it a single sheet of paper; and when he had quickly glanced at its contents, he positively beamed. “Dr. Thorndyke’s statement,” said he, “is, in effect, a very brief summary of your own.”

“Well, let’s have it,” said Moxdale.

“You shall,” said Blandy, and he proceeded, with unctuous relish, to read the document.

“Summary of the circumstances attending the death of Gustavus Haire as suggested by evidence in my possession.

“Haire had planned to murder Cecil Moxdale, presumably, to secure the reversion of a bequest of four thousand pounds, and then, by means of a certain mechanism, to start a fire in the rooms while he was absent in Dublin. He prepared the rooms by filling them with inflammable material and planted certain marked, uninflammable objects to enable Moxdale’s body to be identified. On the 14th of April, he set the mechanism to discharge in the early morning of the 19th. At about six p.m. on the 14th he brought Moxdale to the rooms and attempted to murder him. But the attempt failed; and in the struggle which ensued, Haire’s neck became dislocated. Then Moxdale, knowing that he had been seen to enter the premises with Haire, and fearing that he would be accused of murder, decided to go to Dublin and personate Haire to make it appear that Haire was then alive. He started for Dublin in the evening of the 14th and remained there until the evening of the 18th, when he apparently returned to England.

“That is all that is material,” Blandy concluded, “and, as your statement is in complete agreement with Dr. Thorndyke’s—which I have no doubt is supported by conclusive evidence—I, personally, accept it as true.”

Moxdale drew a deep breath. “That is a blessed relief,” he exclaimed. “And now what is to be done? Are you going to arrest me?”

“No,” replied Blandy, “certainly not. But I think you had better walk back with me to Head Quarters and let us hear what the senior officers propose. May I take your summary with me, Doctor?”

“By all means,” Thorndyke replied; “and make it clear that I am ready to produce the necessary evidence.”

“I had taken that for granted, Doctor,” said Blandy as he put the envelope in his pocket. Then he rose to depart, and Moxdale stood up.

“I am thankful, sir,” said he, “that I took your advice, and eternally grateful to you for having dissipated this nightmare. Now, I can look to the future with some sort of confidence.”

“Yes,” Thorndyke agreed, “I don’t think that you need feel any great alarm; and I wish you an easy passage through any little difficulties that may arise.”

With this, Moxdale shook our hands all round, and, when the inspector had done likewise, the two men moved towards the door, escorted by Polton.

XIX. THE EVIDENCE REVIEWED

“BRILLIANT finish to a most remarkable case,” I commented as our visitors’ footsteps died away upon the stairs, “and a most magnificent piece of bluff on the part of my revered senior.”

Thorndyke smiled and Polton looked shocked.

“I shall not contest your description, Jervis,” said the former, “but, in fact, the conclusion was practically a certainty.”

“Probability,” I corrected.

“In practice,” said he, “we have to treat the highest degrees of probability as certainties; and if you consider the evidence in this case as a whole, I think you will agree that only one possible conclusion emerged. The element of bluff was almost negligible.”

“Probably you are right,” I admitted. “You usually are, and you certainly were in this case. But the evidence was so complex and conflicting that I find it difficult to reconstitute it as a whole. It would interest me very much to hear you sort it out into a tidily arranged argument.”
“It would interest me, too,” said he, “to retrace our investigation and observe the curious way in which the different items of evidence came to light. Let us do so, taking the events in the order of their occurrence and noting the tendency of the evidence to close in on the final conclusion.

“This was a very singular case. The evidence did not transpire gradually but emerged in a number of successive and perfectly distinct stages, each stage being marked by the appearance of a new fact which reacted immediately on our previous conclusions. There were seven stages, each of which we will examine separately, noting how the argument stood at the end of it.

“The first is the inquest, including the post mortem. Perhaps we had better deal with the body first. There were only two points of interest, the neck and the teeth. The dislocation of the neck appeared to me to have occurred before death and I took it to be, most probably, the immediate cause of death. As to the teeth, there was nothing very striking in their appearance; just a little pitting of the enamel. But from the arrangement of the little pits in irregular transverse lines, corresponding roughly to the lines of growth, I did not believe them to have been due to the heat but to have existed during life. I thought it possible that deceased might have had mottled teeth which had been bleached out in the fire; but, as I had never seen a case of mottled teeth, I could not form a definite opinion. I just noted the facts and satisfied myself that the pitting showed clearly in Polton’s photograph of the dead man’s face.

“And now let us consider the body of evidence which was before us when the inquest was finished and the inferences that it suggested. To me—and also to Blandy—the appearances as a whole conveyed the idea of deliberate arson; of a fire which had been arranged and started for a definite purpose. And since the death of Cecil Moxdale seemed to be part of the plan—if there was a plan—it was reasonable to suspect that this was the purpose for which the fire was raised.

“What especially led me to suspect arson was the appearance of preparation. The room, itself crammed with highly inflammable material, seemed to have been expressly prepared for a fire. But most suspicious to me was the information given by Haire to Green. It seemed designed to create in Green’s mind (as it actually did) the fear that a fire might occur. But more than this; it prepared him, if a fire should occur, to decide at once upon the way in which it had been caused. Nor was that all. Haire’s statement even suggested to Green the possibility of a fatal accident; and in the event of such a fatality occurring, it provided Green in advance with the data for identifying any body that should be found.

“Then there were the objects found in the ruins which confirmed Green’s identification. They were marked objects composed of highly refractory material.”

“They would have to be,” I objected, “if they were found. All the combustible objects would have been destroyed.”

“True,” he admitted. “But still it was a striking coincidence that these imperishable objects should happen to bear the initials of a man whose corpse was unrecognizable. The clay pipe was especially significant, seeing that people do not usually incise their initials on their pipe-bowls. But a clay pipe is, as nearly as possible, indestructible by heat. No more perfect means of identification, in the case of a fire, could be devised than a marked clay pipe. To me, these most opportune relics offered a distinct suggestion of having been planted for the very purpose which they served.

“But there is one observation to make before finishing with the positive aspects of the case. It was assumed that the man who was in the house when the fire broke out was a live man; and it was agreed that that live man was Cecil Moxdale. Now, I did not accept, unreservedly, either of these assumptions. To me, the appearances suggested that the man was already dead when the fire started. As to the identity, the probability seemed to be that the man was Moxdale; but I did not regard the fact as having been established conclusively. I kept in my mind the possibility of either a mistake or deliberate deception.

“And now, what conclusions emerged from these considerations? To me—and to Blandy—they suggested a crime. My provisional hypothesis was that Haire had made away with Moxdale and raised the fire to cover the murder; that the crime had been carefully planned and prepared; and that, for some reason, Haire was especially anxious that the body should be identified as that of Cecil Moxdale. That, as I said, was the positive aspect of the case. Now let us look at the negative.

“There were two facts that conflicted with my hypothesis. The first was that when the fire broke out, Haire was in Dublin and had been there for five days. That seemed to be an unanswerable alibi. There was no trace of any sort of fire-raising apparatus known to the experts or the police; indeed, no apparatus was known which would have been capable of raising a fire after an interval of five days. The large and complicated appliances used for the automatic lighting of street lamps do not come into the problem; they would not have been available to Haire, and, in fact, no trace of anything of the kind was found. Apparently, it was a physical impossibility that the fire could have been started by Haire.

“The second objection to my hypothesis was in the nature of the injury. A dislocation of the neck is, in my experience, invariably an accidental injury. I have never heard of a homicidal case. Have you?”

“No,” I answered; “and, in fact, if you wanted to dislocate a man’s neck, I don’t quite know how you would go about it.”

“Exactly,” he agreed. “It is too difficult and uncertain a method for a murderer to use. So that, in this case, if the broken neck was the cause of death, the man would appear to have died from the effects of an accident.

“Thus, the position at the end of the first stage was that, although the case as a whole looked profoundly suspicious, there was not a particle of positive evidence of either arson or murder.

“The second stage was introduced by the disappearance of Haire. This was most mysterious. Why did Haire not return at the expected time? There was no reason why he should not, even if my hypothesis were true. For if he had raised a fire to
cover a murder, his plan had succeeded to perfection. The fire had been accepted as an accident, the body had been identified, and the man’s death had been attributed to misadventure. And not only was there no reason why Haire should not have come home; there was a very good reason why he should. For his absence tended to start inquiries, and inquiries were precisely what he would have wished to avoid. I could think of no explanation of his disappearance. There was a suggestion that something had gone wrong; but there was no suggestion whatever as to what it was. Nevertheless, the fact of the disappearance tended to make the already suspicious group of events look even more suspicious.

“The third stage was reached when we learned that Moxdale senior was dead and heard of the provisions of his will. Then it appeared that Haire stood to benefit to the extent of four thousand pounds by the death of Cecil Moxdale. This, of course, did not, by itself, establish a probability that Haire had murdered Moxdale; but if that probability had already been suggested by other facts, this new fact increased it by supplying a reasonable and adequate motive. At this stage, then, I definitely suspected Haire of having murdered Moxdale, though still not without some misgivings. For the apparently insuperable difficulty remained. It seemed to be a physical impossibility that Haire could have started the fire.

“Then came Polton’s astonishing discovery; and immediately the position was radically altered. Now, it was shown, not only that it was possible for Haire to have started the fire, but that it was nearly certain that he had done so. But this new fact reacted on all the others, giving them an immensely increased evidential value. I had now very little doubt that Haire had murdered Moxdale.

“But the mystery of Haire’s disappearance remained. For he was all unaware of Polton’s discovery. To him, it should have seemed that all had gone according to plan and that it was perfectly safe for him to come back. Then why was he keeping out of sight? Why did he not return, now that his uncle was dead and the stake for which he had played was within his grasp? I turned this problem over and over in my mind. What was keeping him away? Some thing had gone wrong. Something of which we had no knowledge. What could it be?

“Once more, that dislocated neck presented itself for consideration. It had always seemed to me an anomaly, out of character with the known circum stances. How came Moxdale to have a broken neck? All the evidence pointed to a murder, long premeditated, carefully planned, and elaborately pre pared. And yet the murdered man seemed to have died from an accidental injury.

“Here another point recurred to me. The body had been identified as that of Cecil Moxdale. But on what evidence? Simply on the hearsay evidence of Green and the marked objects found in the ruins. Of actual identification there had been none. The body probably was Moxdale’s. The known facts suggested that it was, but there was no direct proof. Suppose, after all, that it was not. Then whose body could it be? Evidently, it must be Haire’s, for our picture contained only these two figures. But this assumption involved an apparent impossibility; for, at the time of the fire, Haire was in Dublin. But the impossibility disappeared when we realized that again there had been no real identification. The men whom Haire called upon in Dublin were strangers. They knew him as Haire simply because he said that he was Haire and presented Haire’s card. He might, quite easily, have been some other man, personating Haire. And if he were, that other person must have been Moxdale.

“It seemed a far-fetched suggestion, but yet it fitted the facts surprisingly well. It agreed, for instance, with the dislocated neck; for if Haire had been killed, he had almost certainly been killed accidentally. And it explained the disappearance of the Dublin ‘Haire’; for Moxdale’s object in personating Haire would have been to prove that Haire had been alive after the 14th of April, when the two men had been seen to enter Haire’s premises together; and for this purpose it would be necessary only for him to ‘enter an appearance’ at Dublin. When he had done that, he would naturally return from Ireland to his ordinary places of resort.

“Thus the fourth stage of the investigation left us with the virtual certainty that Haire had raised the fire, the probability that he had murdered Moxdale, but the possibility that the murder had failed and that Haire had been killed accidentally in the struggle. There were two alternatives, and we had no means of deciding which of them was the true one.

“Then, once more, Polton came to our help with a decisive fact. Haire had mottled teeth and was a native of Maldon. Instantly, as he spoke, I recalled the teeth of the burned corpse and my surmise that they might have been mottled teeth. At once, I got into communication with a dental practitioner at Maldon, who, though I was a stranger to him, gave me every possible assistance, including a wax denture of mottled teeth and some spare teeth for experimental purposes. Those teeth I examined minutely, comparing them with those of the body as shown in Polton’s enlarged photograph of the face; and, disregarding the brown stains, which the fire had bleached out, the resemblance was perfect. I did, as a matter of extra precaution, incinerate two of the spare teeth in a crucible. But it was not necessary. The first comparison was quite convincing. There was no doubt that the burnt body was that of a man who had mottled teeth and very little doubt that it was Haire’s body.”

“But,” I objected, “Moxdale might have had mottled teeth. He was Haire’s cousin.”

“Yes,” Thorndyke agreed, “there was that element of uncertainty. But there was not much in it. The mere relationship was not significant, as mottled teeth are not transmitted by heredity but are purely environmental phenomena. But, of course, Moxdale might also have been born and grown up at Maldon. Still, we had the definite fact that Haire was known to have had mottled teeth and that the dead man had had teeth of the same, very rare, kind. So this stage left us with the strong probability that the body was Haire’s, but the possibility that it might be that of Moxdale.

“But at the next stage this question was settled by the reappearance of Moxdale in the flesh. That established the identity
of the body as a definite fact. But it also established the identity of the personator. For if the dead man was Haire, the live man at Dublin must have been Moxdale. There appeared to be no alternative possibility.

"Nevertheless, Moxdale essayed to present us with one in the form of a moderately plausible story. I don't know whether Blandy believed this story. He professed to; but then Blandy is—Blandy. He was certainly puzzled by it, as we can judge by his anxiety to bring Moxdale here that we might question him, and we have to remember that he did not know what we knew as to the identity of the body. For my part, I never entertained that story for a moment. It sounded like fiction pure and simple; and a striking feature of it was that no part of it admitted of verification. The mysterious O'Grady was a mere shadow, of whom nothing was known and nothing could be discovered, and the alleged blackmailing was not supported by a single tangible fact. Moreover, O'Grady, the blackmailer, did not fit the facts. The murder which had been so elaborately prepared was, specifically, the murder of Cecil Moxdale. Not only was it Moxdale whose identification was prepared for; the motive for the murder was connected with Moxdale.

"However, it doesn't do to be too dogmatic. One had to accept the infinitely remote possibility that the story might be true, at least in parts. Accordingly I grasped at Blandy's suggestion that he should bring Moxdale here and give us the opportunity to put the story to the test of comparison with the known facts.

"We need not consider that interview in detail. It was an ingenious story that Moxdale told, and he told it extremely well. But still, as he went on, its fictional character became more and more pronounced and its details more and more elusive. You probably noticed that when I asked for a description of O'Grady, he gave an excellent one—which was an exact description of himself. It had to be; for O'Grady must needs correspond to Green's description of the man whom he saw with Haire, and that description applied perfectly to Moxdale.

"I followed the narrative with the closest attention, waiting for some definite discrepancy on which one could fasten. And at last it came. Moxdale, unaware of what we knew, made the inevitable false step. In his anxiety to prove that Haire was alive and had gone to Dublin, he gave a circumstantial account of his having seen Haire into the taxi en route for Euston at past ten o'clock at night. Now, we knew that Haire had never gone to Dublin. Moreover we knew that, by ten o'clock, Haire had been dead some hours; and we knew, also, that, by that time, the personator must have been well on his way to Holyhead, since he appeared in Dublin early the next morning.

"Here, then, was a definitely false statement. It disposed at once of any possibility that the story might be true; and its effect was to make it certain that the Dublin personator was Moxdale, himself. I was now in a position to tax Moxdale with having killed Haire and carried out the personation, and I did so with studied abruptness in order to force him to make a statement. You see there was not very much bluff about it, after all."

"No," I admitted. "It was not really bluff. I withdraw the expression. I had not realized how complete the evidence was. But your question had a grand dramatic effect."

"That, however, was not its object," said Thorndyke. "I was anxious, for Moxdale's own sake, that he should make a true and straightforward statement. For if he had stuck to his fictitious story, he would certainly have been charged with having murdered Haire; and, as Blandy very justly observed, a story told by an accused man from the witness-box is much less convincing than the same story told voluntarily before any charge has been made. Fortunately, Moxdale, being a sensible fellow, realized this and took my advice."

"What do you suppose the police will do about it?" I asked.

"I don't see why they should do anything," he replied. "No crime has been committed. A charge of manslaughter could not be sustained, since Moxdale's action was purely defensive and the death was the result of an accident."

"And what about the question of concealment of death?"

"There doesn't seem to be much in that. Moxdale did not conceal the body; he merely tried to dissociate himself from it. He did not, it is true, report the death as he ought to have done. That was rather irregular and so was the personation. But I think that the police will take the view that, in the absence of any criminal intention, there is no need, on grounds of public policy, for them to take any action."

Thorndyke's forecast proved to be correct. The Assistant Commissioner asked us for a complete statement of the evidence, and when this had been supplied (including a demonstration by Polton) he decided that no proceedings were called for. It was, however, necessary to amend the finding of the coroner's jury, not only for the purposes of registration, but for that of obtaining probate of Harold Moxdale's will. Accordingly, Thorndyke issued a certificate of the death of Gustavus Haire, and thereby put the finishing touch to one of the most curious cases that had passed through our hands.

---

THE END
THE JACOB STREET MYSTERY - THE UNCONSCIOUS WITNESS

PART I. — A PLOT IN THE MAKING

I. — THE EAVESDROPPER

ON a pleasant, sunny afternoon near the end of May, when the late spring was just merging into early summer, Mr. Thomas Pedley (Tom Pedley to his friends, or more usually plain Tom) was seated on a substantial sketching stool before a light bamboo easel on which was fixed an upright canvas measuring eighteen inches by twelve. To an expert eye, his appearance, his simple, workmanlike outfit, the leisurely ease with which he handled his brush, and the picture which was growing into shape on the canvas, would all have suggested a competent and experienced landscape painter.

And such, in fact, was Tom Pedley. From his early boyhood, some forty-odd years ago, drawing and painting had been his one absorbing passion, coupled with that love of the countryside that marks the born landscape artist. To him that countryside, largely unspoiled in his early days, was an inexhaustible source of delight and a subject of endless study and meditation. In his daily rambles through meadow or woodland, by farmyards or quiet hamlets, every journey was a voyage of exploration yielding fresh discoveries; new truths of characteristic form and subtle, unexpected colour to be added to his growing store of knowledge of those less obvious aspects of nature which it is the landscape painter’s mission to reveal. And as the years passed and the countryside faded away under the withering touch of mechanical transport, that knowledge grew more and more precious. Now, the dwindling remnants had to be sought and found with considered judgment and their scanty material eked out with detail brought forth from the stores of the remembered past.

The picture which was shaping itself on the canvas was an example of this application of knowledge gained by experience. On the wall of a gallery it would have suggested to the spectator an open glade in some vast woodland. In fact, the place was no more than a scrubbly little copse, the last surviving oasis in the squalid desert of a “developing” neighbourhood. From his “pitch,” ensconced in a clump of bushes, Tom could hear, faint and far away, the strident hoots of motor cars, the rumble of omnibuses, and the clatter of lorries; and but a hundred yards distant was the path by which he had come, a rutted track that led from a half-built street at one end to a dismantled farmyard at the other.

The rough path seemed to be un trodden by the foot of man, for, during the two hours that Tom had been at work, not a soul had passed along it.

At length, as he paused to fill his pipe and take a thoughtful survey of his picture, the sound of voices was followed by the appearance of two men walking slowly along the path, conversing earnestly though in low tones. Tom could not hear what they were saying, though the impression conveyed to him was that their manner was rather the reverse of amicable. But in fact he gave them little attention beyond noting the effect of the dark, sharply defined shapes against the in definite background; and even this interested him but little as his subject required no figures, and certainly not one in a bowler hat. So he continued filling his pipe and appraising his afternoon’s work as they walked by without noticing him—actually, he was almost invisible from the path—and as they passed out of sight he produced his matchbox and was about to strike a light when a third figure, that of a woman, made its appearance, moving in the same direction as the others.

This time Tom’s attention was definitely aroused, and he sat motionless with the unlighted match in his hand, peering out through the chinks in the bushes which concealed him. The woman’s behaviour was very peculiar. She was advancing rather more quickly than the two men, but with a silent, stealthy tread; and from her movements she seemed to be listening and trying to keep the men in sight while keeping out of sight, herself.

Tom watched her disapprovingly. He disliked “snoopers” of all sorts, but especially those who were eavesdroppers as well. However, this was none of his business, and, when she had passed out of his field of vision, he lit his pipe, took up his brush, and straightway forgot all about her.

But he had not finished with her after all. He had been painting but a few minutes when she reappeared; and now her behaviour was still more odd. She was returning at a quicker pace but with the same stealthy movements, listening and looking back over her shoulder with something like an air of alarm. Suddenly, when she was nearly opposite Tom’s pitch, she slipped into an opening in the bushes and disappeared from his sight.

This was really rather queer. Once more he transferred his brush to the palette hand, and, as he listened intently, felt in his pocket for the matchbox; for, of course, his pipe had gone out, as a painter’s pipe continually does. Very soon his ear caught the sound of footsteps; light, quick footsteps approaching from the direction of the farmyard. Then a man came into view, walking quickly but with a soft and almost stealthy tread and looking about him watchfully as he went.

Tom, sitting stock-still in his leafy ambush, followed the retreating figure with an inquisitive eye, recognizing him as the shorter of the two men who had passed down the path and wondering what had become of the other. Then the man disappeared in the direction of the street; and still Tom sat like a graven image, waiting to see if there were any further developments.

He had not long to wait. Hardly had the sound of the man’s footsteps died away when the woman stole forth from her hiding-place and stood for a few seconds listening intently and peering up the path in the direction in which the man had
gone. Then she began slowly and warily to follow; and presently she, too, passed out of sight among the trees.

Tom thoughtfully lit his pipe and reflected. It was a queer affair. What was it all about? The woman was obviously spying on the men; apparently listening to their talk, and mighty anxious to keep out of sight. That was all there was to it so far as he was concerned; and as he was not really concerned in it at all, he decided that it was a "dam' rum go" and dismissed it from his mind.

But the dismissal was not quite effective. The incident had broken the continuity of his ideas and he found it difficult to start afresh. For a few minutes he struggled to pick up the threads, adding a touch here and there; then, once more, he leaned back and surveyed his work, finally getting up from his stool and stepping back a pace or two to see it better as a whole. Now, one of the most important things that experience teaches a painter is when to leave off; and Tom, having considered his picture critically, decided that the time had come. He had painted steadily for a full two hours, and he was a rapid worker in spite of his leisurely manner; rapid because he knew what he wanted to do, made few mistakes, and painted very directly with a rigid economy of work.

Having decided that his picture was finished, excepting perhaps for a little work in the studio to "pull it together," he proceeded forthwith to pack up, closing the folding palette and stowing it in the light wooden colour box, stripping the painting in the canvas carrier, and rolling the used brushes in the painting rag. When he had put these things tidily in his satchel, he folded up the easel and stool, fixed them in the carrying-strap, slung the satchel on his shoulder, and, having taken a last look at his subject, pushed his way through the undergrowth towards the path.

Arriving at the rutted track, he stood for a few seconds looking up and down it as he refilled his pipe. He was not an inquisitive man, but he felt a mild curiosity as to what had become of the man who had passed and had not returned. His previous explorations had given him the impression that the path, or cart track, came to a dead end where the wood petered out and the new devastations began. Apparently, he had been wrong; there must be some continuation of the track, perhaps holding out possibilities for the landscape painter.

Having lit his pipe, he strolled along the path for some three hundred yards until he emerged from the shade of the wood into open daylight. And then both his questions were disposed of. The track, or at least the cart-ruts, was visible, passing through the remains of a gateway and meandering through the devastated farmyard towards an area in which stacks of bricks and dumps of various building material foreshadowed a new eruption of houses similar to those that were to be seen beyond. Hard by, on his right hand, was an old, rat-eaten hayrick, and, a few yards farther away, a ruinous cart-shed of which the thatched roof had rotted away, exposing the decayed rafter. At these melancholy relics of the vanished farm Tom glanced regretfully; then he turned back and retraced his steps along the path.

He had trudged some two hundred yards when there was borne to his ear the sound of horse's hoofs and the rumble of wheels, evidently approaching from the direction of the Street; and as he came nearly opposite his "pitch," a two-wheeled cart appeared round a curve. He stopped to watch it and to note the interesting effect of the rustic-looking vehicle on the winding track, standing out sharply in dark silhouette against its back ground of sun-lighted foliage. As it drew near, he backed into the wood to make way for it and exchanged greetings with the man who was leading the horse; and when it had passed, he turned to look at it and make a mental note of its changed appearance in the altered conditions of light, until it disappeared round a bend of the track; whereupon he resumed his advance to wards the town, stepping out briskly and becoming aware of an increasing interest in the meal which was awaiting him at the end of his journey. At the top of the path where it opened on the half-built street, he paused for a few moments to look disparagingly on the unlovely scene, which but a year ago had still been country; then, having exchanged a few words with an elderly bricklayer who appeared to be standing guard over a stack of bricks, he strode away towards the main road to take up his position at the bus stop.

Here he had a considerable time to wait, and he spent it pacing up and down, looking expectantly at each turn in the direction whence the omnibus would come. From a young policeman who presently strolled past, he obtained a rather vague statement as to the time when it was due, with the discouraging addition that the last one had passed about five minutes ago. So Thomas resumed his sentry-go and meanwhile turned over in his mind once again that very queer episode in the wood; and he was still cogitating on it when the omnibus appeared and put a welcome end to his vigil.

It was not a long journey, in terms of modern transport, and the rather squalid domain of the speculative builder soon gave place to the established town. Tom's natural stopping-place would have been the Hampstead Road, but he elected to alight at Marylebone Church and approach his destination by way of Osnaburgh Street and Cumberland Market; whereby he presently emerged into a quiet, shabby street of tall, shabby, but commodious old houses, and so to a green-painted wooden gate bearing the number 38A and flanked by a small brass plate on the jamb inscribed "T. Pedley" and surmounted by a big brass bell-pull.

As Thomas inserted his latch-key and opened the gate, he disclosed a feature common to many of the adjacent houses; a narrow passage opening into a paved yard. For Jacob Street was largely a street of studios. Once it had been a fashionable street, the abode of famous painters and sculptors. Now, the famous artists had gone, but the studios remained; some tenanted by artists of humbler status, but most of them converted into workshops. In either case, Jacob Street was a highly eligible place for persons of small means who wanted roomy premises; for, as studios are in little demand nowadays and are useless for residential purposes, the rents were surprisingly low, though the accommodation was, of its special kind, admirable.

The studio into which Tom admitted himself after crossing the yard was better adapted for residence than some of the others, being more moderate in height, and he had further adapted it by erecting a light wooden partition in one corner,
enclosing a large cubicle which served him as a bedroom. With this and a tall folding screen to enclose the fireplace in winter, or to conceal the sink and the gas cooking-stove when he had visitors, Tom had converted the great bare studio into a convenient and fairly comfortable flat.

Having cleaned his palette, washed his brushes, and washed himself in a big bowl in the sink, he opened a hay-box (disguised by an upholstered top to look like, and serve as, an ottoman) and took out a couple of casserole dishes which he set on the neatly laid dinner table, opened a bottle of beer and decanted the contents into a fine white stoneware jug, drew up a chair, sat down with a sigh of contentment, and lifted off the lids of the casserole; one of which proved to contain potatoes (cooked in their jackets) and the other a nondescript kind of stew based on a dismembered fowl.

The table and its appointments offered a summary of Tom Pedley’s character and personality. His simple philosophy of life was fairly expressed in his own statement that “a man’s wealth can be estimated in terms of what he can do without.” Now, the things that Tom could do without were the luxuries and extras that consume money. For entertainments other than museums and public galleries he had no use. He had hardly ever ridden in a taxi, he never smoked cigars, and his single bottle of whisky had lain unopened for a couple of years. He lived plainly, spent little, wasted nothing, and took care of what he had.

By thus thriftyly ordering his life, he was able to indulge himself in the things that mattered to him. The beer-jug was a museum piece, as was also the fine ale-glass with its charming engraved design of hops and barley. The little French cheese reposed in a covered dish of Moorcroft ware, the pile of apples in a hand some bowl of beaten bronze, and a finely carved wooden trencher supported the brown loaf. Every object on the table, even including the casserole, was pleasant and comely to look at, though not necessarily costly, and had been the subject of carefully considered choice. For Tom was an artist to his finger-tips. To him art was no Sunday religion. He loved to have beautiful things around him, not merely to look at but to live with; and he could afford to indulge his fancy, since he did his own domestic work and knew that his treasures were safe from the devastating duster of servant maid or charwoman.

So Tom sat in the fine “Chippendale Windsor” chair at the picturesque gate-leg table and consumed his dinner with placid enjoyment, keeping himself entertained, as is the way of solitary men, with a train of reflections. Principally, his thoughts tended to concern themselves with the curious episode in the wood, which seemed to haunt him to a quite unreasonable extent. For it had been but a trivial affair, and he was not deeply interested in it. Nevertheless, his memory persisted in recalling the incident and filling in details of which he had been unaware at the time, until he was able to visualize a curiously complete picture of the scene and the action. Then his lively imagination took charge and wove a little story around those three figures; and this interested him so much that it presently occurred to him that here was the making of quite a good subject picture of a simple kind, and he decided to try an experimental sketch and see what he could make of it.

When he had finished his dinner, he proceeded to wash up, still turning the project over in his mind. The washing up was not a protracted business, for he had learned to economize in the use of plates and dishes. There was, in fact, only one plate and a knife and fork, and, when these had been dealt with and tidily stowed away, together with the casserole, in a great French armoire, he was ready to begin. Taking his fresh painting from the canvas-carrier, he set it on an easel, and, selecting a smaller spare canvas, put that on another easel alongside, set his palette and fell to work, first roughing in some of the background from his painting and then proceeding to the disposition of the figures.

The subject of the projected picture was to be “The Eavesdropper,” and this seemed to require that the woman should be the principal figure, placed as near as possible in the foreground and painted in some detail on a sufficient scale. Accordingly, he began with her, first blocking in a flat grey silhouette to get the form and the pose and then proceeding to colour and detail. And as he worked he was surprised to find how much he remembered and how little he had to invent. The gleam of sunlight which had fallen on the woman as she retired, lighting up her hair like burnished gold and picking out bright spots on her clothing, came back to him vividly, and when he had put in a few lively touches of positive colour to render the effect, there seemed little more to do. Roughly as the figure was indicated, it recalled the appearance of the woman exactly as he had seen her.

The same was true of the male figures, though as they were more distant they could be painted more simply. In their definitely urban dress they were not very pictorial, but, as this was only a preliminary sketch, Tom decided to keep to the actual facts. And here again he was surprised to note how much he had seen in those casual glances without conscious observation. In fact, when he had put in the two figures from memory not only had he rendered admirably the argumentative pose and action but he had put in more distinctive detail than the distance of the figures required.

For over an hour he worked away with great enjoyment until the little sketch was completed so far as it need be. Then he “knocked off,” cleaned his palette, washed his brushes, and, after a glance at the old “hood” clock on the wall, proceeded to smarten him self up with a view to an informal call on his bachelor friend, Dr. Oldfield, who lived hard by in Osnaburgh Street; with whom it was his custom to spend an occasional evening in pleasant, companionable gossip and perhaps a game of chess. But they were not often reduced to that resource, for the doctor was something of an artist, and they had plenty of material for interesting and sympathetic conversation.

When he had refilled his tobacco pouch from a tin and brushed his hat, Tom stood awhile before the easel considering critically the newly finished sketch. It had been interesting enough in the doing but, now that it was done, he found it a little disappointing. As a subject picture, it was somewhat indefinite and lacking in matter; in short, it was hardly a subject picture at all, but rather a landscape with figures. However, it could be reconsidered and perhaps elaborated if that should
seem worthwhile; and, having reached this conclusion, Tom took his gloves and stick and set forth on route for Osnaburgh Street.

II. — MR. BLANDY

ONE afternoon about a week after his expedition to the wood, Tom Pedley was engaged in his studio in tidying up the painting that he had done on that occasion. At the moment he was working with a sharp scraper, cutting off objectionable lumps of paint and generally levelling down the surface preparatory to some further touches to “pull the painting together.” He had just stepped back to take a look at the picture as a whole when the jangling of the studio bell in the yard outside announced a visitor; whereupon he went out, and, traversing the yard and the passage, threw open the large outer gate, disclosing a small person carrying a leather bag.

“Why, it’s Mr. Polton,” he exclaimed in a tone of relief.

“Yes, sir,” said the small gentleman, greeting him with a pleasant and curiously crinkly smile. “I thought I might take the liberty of calling—”

“Now, don’t talk nonsense,” Tom interrupted. “You know quite well that I am always delighted to see you. Come along in.”

“It is very good of you, sir, to say that,” said Polton, as Tom shut the gate and led the way down the passage, “but I hope I am not disturbing you. I see,” he added with a glance at the scraper, “that you are at work.”

“Only doing a scrape down,” said Tom, “and you wouldn’t disturb me if I wanted to go on. But it’s close on tea-time. I should have been knocking off in any case.”

As he spoke, he glanced up at the old clock, and Polton, following his glance, drew out a large watch and remarked that the clock was about ten seconds fast; “Which,” he added, “is not bad going for a timepiece that is nearly three hundred years old.”

As Tom proceeded to fill the kettle and put a match to the gas-ring, Polton placed his bag on the table, and, opening it, brought forth a green baize bundle tied up with tape. Unfastening this, he produced a brilliantly burnished tankard which, after a gentle rub with his handkerchief, he held out for Tom’s inspection.

“This, sir,” he said, “is what brought me here. You said some time ago that you were on the look-out for a pewter tankard, and you made a drawing, if you remember, sir, to show me the shape that you wanted. Now I happened to see this one on a junk-stall in Shoreditch, so I ventured to get it for you.”

“But how good of you to think of me!” exclaimed Tom. “And what a perfectly magnificent specimen! And a junk-stall, too, of all unlikely places. By the way, what am I in your debt for it?”

“I got it for a shilling,” Polton replied.

Tom looked at him in amazement. “A shilling!” he repeated incredulously. “You don’t really mean a shilling. Why, it’s quite a valuable piece.”

“Well, you see, sir,” Polton explained in an apologetic tone, “it had had some bad usage. It was very dirty and it had been all battered out of shape, so it really was not worth more than a shilling. I didn’t take advantage of the man. But pewter is a kindly material if you know how to deal with it. I just took out the bruises, put it back into shape, and cleaned up the surface. That was all. I am glad you like it, sir.”

“I am perfectly delighted with it,” said Tom. He paused, and for one instant—but only one—he thought of offering a consideration for the time and labour that had wrought the transformation. Then he continued, “Here is the shilling, Polton. But it isn’t payment. I take the tankard as a gift. You have turned a bit of worthless junk into a museum piece which will be an abiding joy to me, and I am more grateful than I can tell you.”

Polton crinkled shyly, and, by way of closing the subject, wandered round to the easel to inspect the painting. For some seconds he stood, regarding the picture with a sort of pleased surprise. At length he remarked:

“A wonderful art, sir, is that of the painter. To me it looks almost like a kind of magic. Here is a beautiful woodland glade that you have made to appear so real that I seem to feel as if I could walk into it. You must have gone a long way from the bricks and mortar to find a scene like that.”

Tom laughed. “A very natural delusion, Polton, but, as a matter of fact, I was almost in sight of the bricks and mortar when I was painting. That bit of woodland is just the last remnant of the country in the midst of a new housing estate. It is within a bus ride of this place, and not a long ride at that.”

“Indeed, sir,” exclaimed Polton. “Now whereabouts would that be?”

“It is out Hendon way. A place called Linton Green; and the wood is still known by its old name, Gravel-pit Wood.”

As Tom spoke the name, Polton started and gazed at the picture with a most singular expression.

“Gravel-pit Wood, Linton Green,” he repeated in a strange hushed voice; “the very wood in which that poor gentleman was murdered!”
“Oh!” said Tom in a tone of mild interest. “I never heard of that. How long ago was it?”

“The murder was committed last Tuesday.”

“Last Tuesday!” Tom repeated incredulously. “Why, that is the day on which I painted the picture. Do you know what time it happened?”

“It would have been somewhere about four o’clock in the afternoon.”

“Then,” Tom exclaimed, “I must have actually been in the wood at the very time when the murder was being committed!”

“Yes, sir,” Polton agreed. “I rather thought you must when you mentioned the wood, because the police have issued a description of a man who was seen there about that time; and it seems to be a description of you.”

The two men looked at each other in silence for some moments; then Tom commented with a grim smile:

“Well, this is a pretty kettle of fish. Do you happen to remember any of the details? I hardly ever see a newspaper, so this is the first that I have heard of the affair.”

“I remember all about it,” replied Polton, “but I needn’t trust to my memory, as I have cut out all the reports of the case and I have got the cuttings in my pocket. You see, sir,” he added deprecatingly, “I am rather interested in murders. Perhaps it is because I have the honour of serving a very eminent criminal lawyer. At any rate, I always cut out the reports and paste them into a book for reference.”

With this explanation, he produced from his pocket a large wallet from which he extracted a sheaf of newspaper cuttings. Sorting them out rapidly, he selected one, which he handed to Tom.

“That, sir,” said he, “is one which will serve your purpose best. It is from a weekly paper and it gives a summary of the case with all that is known at present. Perhaps you would like to glance through it while I get the tea ready. I know where you keep all the things.”

Tom thanked him and sat down to study the cutting while Polton, having examined the kettle, opened the big armoire and began noislessly to set out the tea-things on the table. The report was headed “Mysterious Crime in a Wood,” and ran as follows:

“In the new and rising suburb of Linton Green, near Hendon, there still exists a small patch of woodland, now little more than a dozen acres in extent, known as Gravel-pit Wood. Here, about five o’clock in the afternoon of last Tuesday, a most shocking discovery was made by a labourer who was engaged on the new buildings. This man, Albert Whiffin by name, was sent by the foreman with a message to the clerk of the works whose temporary office was in the half-built street on the other side of the wood. He approached along the cart-track which crosses the wood and had nearly reached the entrance when his attention was attracted by a white object among the grass at the corner of a disused cart-shed, and he went off the path to see what it was. Drawing near, he saw that it was the ivory handle of an umbrella and naturally advanced to pick it up; but as he reached the corner of the shed and was just stooping to pick up the umbrella, he was horrified to perceive the body of a man lying among the nettles and rubbish in one of the stalls of the shed. A single glance convinced him that the man was dead, and he made no further examination, but hurried away with the umbrella in his hand, ran across the wood, and reported his discovery to the clerk of the works. The latter sent off a messenger on a bicycle to the police station, and within a few minutes a sergeant and an inspector arrived and were conducted by Whiffin to the shed where the body was lying. It was seen to be that of a well-dressed man about sixty years of age, and the identity was at once established by visiting cards in the pocket, confirmed by the initials engraved on the silver band of the umbrella. These showed the deceased to be Mr. Charles Montagu, of The Birches, Hall Road, Linton Green.

“But how had he met with his death? The circumstances plainly pointed to murder; and this was confirmed by evident signs of a struggle in the nettles and the long grass. But, strangely enough, there were no wounds or other injuries. The clothing was somewhat disordered, the collar was crumpled, and there appeared to be slight bruises on the neck; but nothing that would serve to account for death. When, however, the divisional surgeon arrived and made his examination, he decided, provisionally, that death was due to poisoning either by prussic acid or some cyanide. Thereupon a search was made for some container, which resulted in the discovery among the nettles of a small bottle bearing traces of a liquid which had the smell of bitter almonds.

“As to the time at which death occurred, as the surgeon made his examination at 5:35 p.m. and he decided that deceased had been dead not more than two hours, it would seem that it must have taken place about four o’clock. The time is important in connection with the only clue to the mystery. About half-past four, a carter taking a load of bricks along the track through the wood, met a man coming from the direction of the cart-shed. This man was seen also by a bricklayer’s labourer, emerging from the wood into the half-built street; and he was seen again by a young constable, who noticed him particularly and has given a description of him which agrees exactly with that of the other two witnesses, and which has been circulated by the police, with a request to the man to communicate with them.

“The description is as follows: Height about five feet ten, strongly built, age from forty-five to fifty, grey eyes, brown hair and short brown moustache, dressed in a buff tweed knickerbocker suit with buff stockings and brown shoes, buff soft felt hat with rather broad brim; brown canvas satchel over left shoulder, folding stool and some kind of stand or easel strapped together and carried by a handle in the left hand and a couple of wooden frames, apparently picture canvases, in a holder carried in the right hand.
“The constable, who encountered the man at the bus stop in the Linton Green Road, waiting for the east-bound omnibus, reports that he seemed to be rather anxious to get on, as he inquired when the next omnibus was due and was apparently annoyed to learn that the last one had only just passed. He spoke in a deep, strong voice with the accent of an educated man. The conductor of the omnibus also noticed the man and remembered that he alighted at Marylebone Church but did not see which way he went after alighting.

"At the inquest, which was held on Friday, little further light was thrown on the mystery. The medical evidence proved that deceased died from poisoning by a strong solution of potassium cyanide, either taken by himself or forcibly administered by some other person. There were slight bruises on the neck but nothing to indicate extreme violence, and, in a medical sense, there was nothing to show that the poison was not taken by deceased himself. The police evidence, however, was more definite. The poison bottle bore a number of finger-prints, but although these were very imperfect, the experts were able to say, positively, that they were not those of deceased or of any person known to the police. This fact, as the coroner pointed out in his summing-up, taken with the signs of a struggle, made it nearly certain that the poison was forcibly administered to deceased by some other person. The coroner also commented on the significance of deceased’s profession. Mr. Montagu was a financier; in effect, a moneylender; and a moneylender is apt to have enemies with strong reasons for compassing his death. In the present case, no such person was at present known. As to the mysterious artist, his identity had not yet been ascertained as they had not been traced and had not come forward, and nothing was known of his connection, if any, with the tragedy.

"At the conclusion of the summing-up, the jury promptly returned a verdict of Wilful Murder by some person or persons unknown; and that is how the matter stands. Perhaps, when the police are able to get in touch with the elusive artist, some fresh facts may come to light."

As Tom finished his reading, he handed the cutting back to Polton, who returned it carefully to his wallet, and, having put the teapot on the table, silently awaited comments.

"Well," said Tom, "as I remarked before, it’s a pretty kettle of fish. I am the mysterious and elusive artist and a possible title of murderer. However, the elusiveness can be mended. I had better pop along to the police station tomorrow morning and let them know who I am."

"Yes, sir," Polton agreed earnestly. "That is very necessary. But why wait till tomorrow? Why not go round this evening? The police may succeed at any moment in tracing you, and it would be so much better if you were to go to them of your own accord than to leave them to find you. Don’t forget that they have reasonable grounds for suspicion. This murder has been the talk of the town for nearly a week. The papers have been full of it, including the excellent description of you. Probably you are the only person in London who has not heard of it."

Tom laughed, grimly. "By Jove, Polton," said he, "you are talking like a prosecuting counsel. But you are quite right. I am a suspected person, and it won’t do for me to look as if I were in hiding. I will amble round to the police station this very evening."

But Tom’s wise decision came too late. Less than half an hour later, when they had finished tea, and Polton, having insisted on washing up, was in the act of stowing the tea-things in the great armoire, the jingling of the studio bell was heard from without and Tom went forth to answer the summons. When he opened the gate he discovered on the threshold a tall, clerical-looking man, who saluted him with a deferential bow and a suave smile.

"Have I the pleasure," the stranger inquired, "of addressing Mr. Thomas Pedley?"

"You have," Tom replied with a faint grin. "At any rate, I am Thomas Pedley."

"So I had supposed," the other rejoined, glancing at the brass plate, "and I am delighted to make your acquaintance, as I believe that you may be able to help me in certain investigations in which I am engaged. Perhaps I should explain that I am a police officer, and if you would like to see my authority—"

"No, thanks," replied Tom. "I think I know what your business is, and, in fact, I was going to call at the police station this very evening. However, this will be better. Come along in."

He preceded the officer across the yard and ushered him into the studio, where Polton was discovered standing on a stool setting the clock to time by his watch.

"Well, I’m sure!" the officer exclaimed. "Here is a delightful surprise. My old and esteemed friend, Mr. Polton! And what a singular coincidence. Have you known Mr. Pedley long?"

"A good time," replied Polton. "We first met in an antique shop in Soho; Parrott’s. You remember Parrott—his name was really Pettigrew, and he was the villain who murdered Mr. Penrose."

"I remember the case," said the officer, "though I was not concerned in it. But there is another coincidence; for, by a strange chance, it is a murder case that is the occasion of my visit here."

Tom did not quite perceive the coincidence but he made no remark, waiting for the officer to open the proceedings. Meanwhile Polton tentatively approached his hat, with the suggestion that "perhaps they would rather discuss their business alone."

"You needn’t go on my account," said the officer. "There are no secrets; " and as Tom expressed himself to the same effect, Polton gladly relinquished the hat and sat down with undisguised satisfaction to listen.
“Now, Mr. Pedley,” the officer began, “I am going to ask you a few questions, and it is my duty to explain that you are not bound to answer any if the answer would tend—in the silly official phrase—to incriminate you.”

“I’ll bear that in mind,” said Tom, with a broad grin.

“Yes,” said the officer, with a responsive smile. “Ridiculous expression, but we must observe the formalities. Well, as a start; can you remember where you were and what you were doing on Tuesday, the eighteenth of May?”

“Last Tuesday. Yes. In the afternoon I was in Gravel-pit Wood, Linton Green. I got there about two o’clock and I came away about half-past four, or perhaps a little earlier. In the interval I was painting a picture of the wood, which I will show you if you care to see it.”

“Thank you,” said the officer. “I should like very much to see it, presently. But meanwhile another question arises. It appears from what you tell me that you must actually have been in the wood while the murder was being committed, and yet, although there was an urgent broadcast appeal for information and similar appeals in the Press, you never came forward or made any sign whatever; not even though those appeals were coupled with a description of yourself, and so, in effect, addressed to you personally. Now, why did you not communicate with the police?”

“The explanation is perfectly simple,” replied Tom. “Until a couple of hours ago, when Mr. Polton told me about it, I had no knowledge that any murder had been committed.”

The officer received this statement with a bland and benevolent smile.

“A perfectly simple explanation,” he agreed; “and yet, if I were disposed to cavil—which I am not—I might think of the broadcast and the daily papers with their staring headlines and wonder—but, as I say, I am not.”

“I dare say,” said Tom, “that it sounds odd. But I have no wireless and I hardly ever see a paper. At any rate, it is the fact that I had never heard of the crime until Mr. Polton mentioned it and showed me an account of it which he had cut out of a newspaper.”

Here Polton interposed with a deferential crinkle. “If it would not seem like a liberty, sir, I should like to say that Mr. Pedley showed me the picture and told me where and when he had painted it; and he seemed very much shocked and surprised when I informed him about the murder.”

The officer regarded the speaker with a smile of concentrated benevolence.

“Thank you, Mr. Pedley,” said he. “Your very helpful statement disposes of the difficulty completely. Now, perhaps, I may have the privilege of seeing the picture.”

Tom rose, and, fetching a rough studio frame from a stack by the wall, slipped the canvas into it and replaced it on the easel.

“There it is,” said he; “not quite finished but perhaps all the better for that as a representation.”

“Yes,” the officer agreed, “as my interest in it is merely topographical, though I can see that it is a very lovely work of art.” He stood before the easel beaming on the picture as if pronouncing a benediction on it, but nevertheless scrutinizing it minutely. Presently he produced from a roomy inner pocket a small portfolio from which he took a section of the six-inch Ordnance map pasted on thin card. “Here, Mr. Pedley,” said he, “is a large-scale map of the wood. Do you think you could show me the position of the spot which this picture represents?”

Tom took the map from him and studied it for a few moments while he felt in his pocket for a pencil.

“I think,” said he, indicating a spot with the pencil point, “that this will be the place. I am judging by the curve of the footpath, as the individual trees are not shown. Shall I make a mark?”

“If you please,” the officer replied; and when Tom had marked a minute cross and handed the card back to its owner, the latter produced a boxwood scale and a pair of pocket dividers, with which he took off the distance from the cross to the nearest point on the path and measured it on the scale.

“A hundred and seven yards, I make it,” said he. “What do you say to that?”

“Yes,” Tom answered, “that seems about right.”

“Very well. You were about a hundred yards from the path. From where you were, could you see any person that might pass along that path?”

“I could, and I did. Not very clearly, because I was sitting on a low stool and I could only see out through the chinks in the foliage. But while I was working there I saw three persons pass down the path, and two of them came back.”

“And do you suppose that those persons saw you?”

“I am pretty certain that they didn’t. They couldn’t, you know. Sitting low among the bushes, as I was, I must have been quite invisible from the path.”

“Yes,” the officer agreed; “but you could see them. Now, what can you tell me about them?”

“All I can tell you is that they behaved in a rather queer way. At least, one of them did;” and here Tom proceeded to give a minute and circumstantial account of what he had seen.
“But, my dear Mr. Pedley,” the officer exclaimed, beaming delightedly on the narrator, “this is most important and illuminating. The woman is a new feature of the case. By the way, did anyone else pass?”

“No. These were the only people that I saw until just as I was coming away, when I met a man bringing a cart full of bricks through the wood.”

“Then there can be no doubt as to who those people were. One was Mr. Montagu, the other was the murderer, and the woman must have been connected with one or both of the men. What time was it when they passed down?”

“About four o’clock or perhaps a few minutes earlier. It would be about ten minutes or a quarter of an hour later when the man came back.”

“Yes,” said the officer, “that seems to agree with the evidence. And now we come to the most important point of all; can you give us any description of them, and do you think you would recognize them if you saw them again?”

“As to recognizing them, I am very doubtful. Certainly I couldn’t swear to any of them. And I don’t think I could give much of a description. They were a good distance away and I saw them only through the chinks between the branches, and wasn’t taking very much notice. However, I will see what I can remember.”

With this he embarked on a description of the three persons, rather vague and general though helped out by questions from the officer, who jotted down the answers in his note-book.

“Yes,” the latter remarked as Tom concluded, “not so bad. But yet, Mr. Pedley, I feel that you must have seen more than that. You are not an ordinary observer. You are a painter. Now, a painter’s eye is a noticing eye and a remembering eye. Supposing you were to try to paint the scene from memory—”

“By Jove!” Tom interrupted, “I’m glad you said that, for it happens that that is just what I did do, and on the very day, while my memory was fresh. I thought the incident might make the subject for a picture, ‘The Eavesdropper,’ and that evening I roughed out a trial sketch. I will show it to you.”

From a collection of unfinished works on a shelf he produced the sketch and set it on the easel beside the larger picture, from which the background had been copied.

“Ha!” said the officer. “Now you see that I was right. The brush is mightier than the word. This tells us a lot more than your description. It shows us what the people really looked like. This figure is evidently Mr. Montagu, hat and coat quite correct, and you have even shown the ivory handle of the umbrella. And the other two are not mere figures; they look like particular persons.”

“Yes,” agreed Polton, who had been gazing at the sketch with delighted interest, “Mr. Blandy is quite right. But it is really very wonderful. Those two men have their backs to us, and the woman’s face has practically no features; and yet I feel that they are real persons and that I should know them again if I were to meet them. Can you explain it, Mr. Pedley?”

“Well,” Tom replied, “I can only say that this is an impression of the scene at a particular moment, and that is how these people looked at that moment. You identify a person not only by his face but by his size, shape, proportions, and characteristic posture and movements. You can often recognize a man by his walk long before you can distinguish his features.”

“Exactly,” said Blandy, “and that is why our recognizing officers like to watch the remand prisoners in the exercise yard. They can often spot a disguised man by his general make-up and the way he walks or stands, and I am inclined to think that this sketch might be useful to a specialist of that kind. Would it be possible to borrow it and have a photograph made to accompany your description?”

Before Tom could reply, Polton broke in eagerly.

“Why not let me do the photograph for you, Inspector? I could bring my camera here so that you wouldn’t have to borrow the sketch. I should like to do it, if you’d let me.”

Inspector Blandy beamed on him with ineffable amiability.

“How very good of you, Mr. Polton,” said he. “Always so helpful. But it would be a good photograph, and you would have a copy to add to your little collection. I am inclined to accept gratefully if Mr. Pedley will grant us permission.”

Mr. Pedley granted his permission without demur, whereupon the inspector, having arranged a date of delivery with Polton, prepared to take his leave.

“By the way,” said he, picking up his hat and putting it down again, “there are two little points that we may as well clear up. First, as to the stature of the unknown man and the woman. The man looks distinctly shorter than Mr. Montagu, who was about five feet ten. What do you say?”

“Yes,” replied Tom. “I should put him at about five feet seven. The woman looked taller, but then women do. I should say that she was about the same height.”

The inspector made a note of the answer and then said:

“When you met the carter, you seemed to be coming from the bottom of the wood.”

“I was. As one of the men had not come back, it seemed that the path, which I had supposed ended at the bottom of the
wood, must continue beyond, so I went down to see if it did. When I saw that it crossed the farmyard I came back and started homeward."

"Then you must have passed the cart-shed. Isn’t it rather remarkable that you should not have noticed the body, or, at any rate, the umbrella?"

"Not at all. There is an old hayrick between the path and the cart-shed. I never saw more than a corner of the shed, and it was the wrong corner. Whiffin, you remember, was coming from the farmyard."

"Yes," said the inspector. "I had forgotten the rick; but I suspect the lady found it useful for stalking purposes. Well," he added, once more taking up his hat, "I think that is all; excepting that it remains for me to offer my most humble and hearty thanks for your invaluable help. It has been a great privilege for me to listen to your very illuminating observations and to be made the beneficiary of your remarkable technical knowledge and skill."

With this final flourish he made his way to the door escorted by Tom, who conducted him to the gate and launched him into the outer world.

"Rather an oily customer, that, for a police officer," Tom remarked when he returned to the studio, to find Polton still gloatting over the sketch. "Don’t you think so?"

Polton crinkled knowingly, as he replied:

"Mr. Blandy is an exceedingly polite gentleman. But he is a very able detective officer; as sharp as a needle and as slippery as an eel. You’ve got to be very careful with Mr. Blandy. I hope, sir, that you didn’t mind my offering to do the photograph. You see, sir, I thought it best that a valuable thing like that should not go out of your possession."

"That was very good of you, Polton. But, bless you, it isn’t a valuable thing. It is practically a throw-out."

"Oh, don’t say that, sir. I have been admiring it and thinking what a charming little picture it is and how wonderfully full of interest. When will it be convenient for me to come and take the photograph?"

"You needn’t trouble to bring the camera here. Take the canvas with you and do the job in your own place; and, as it seems to have taken your fancy, you had better keep it and let me have a photograph, in case I should decide to paint the subject. The photograph will do just as well for me."

Polton was disposed to protest, but Tom stolidly wrapped the canvas in paper and handed it to him, and a few minutes later he departed, crinkling with pleasure and gratitude, with the little parcel under his arm.

III. — MRS. SCHILLER

In all the busy town that seethed around him, there can have been but few persons whose lives were as untroubled as was that of Thomas Pedley. He had, in fact, not a care in the world. His work yielded a modest income which was more than enough to supply his modest needs, and the doing of that work was a pleasure that time could not stale. He never tired of painting. If he had come into a fortune, he would still have gone on painting for the mere joy of the occupation, and might then have missed the added satisfaction of living by his industry. At any rate, he craved no fortune and envied no one, except, perhaps, those artists whose work he considered better than his own.

Thus, through the uneventful years, Tom pursued "the noiseless tenor of his way" in quiet happiness and perfect contentment, up to the period at which this history now arrives, when we have to record the appearance of a cloud upon his usually serene horizon. It was only a small cloud; but its little shadow was enough to cause a sensible disturbance of his habitually placid state of mind.

The trouble was not connected with the Gravel-pit Wood incident. That had never occasioned him any anxiety, even though he had been aware—with a slightly amused interest—that the police had by no means forgotten his existence. But as the weeks had passed and the "Unsolved Mystery" had gradually faded from the pages of the daily papers, so had it faded from his own memory and ceased to be of any concern to him.

The cloud was, in fact, a feminine cloud. His troubles, like those of Milton Perkins, were connected with the female of his species. For Tom, as the reader has probably inferred, was a bachelor; and it was his considered intention to remain a bachelor. Wherefore, though he liked women well enough, he avoided all feminine intimacies and kept a wary eye on any unattached spinsters who came his way, and as for widows, he viewed them with positive alarm.

Now it happened that, on a certain afternoon, Tom was working with great enjoyment at a subject picture which his dealer had commissioned when the jangling of the studio bell announced a visitor. With a snort of annoyance he laid down his palette and brushes and went forth to confront the disturber of his peace; when he discovered on the threshold a rather tall woman, dressed—and painted—in the height of fashion, who turned at the sound of the opening gate, and greeted him with a smile that made his flesh creep.

"You are Mr. Pedley, I think," said she.

Tom was of the same opinion, and said so.

"I hope you won’t consider me troublesome," she said in a wheedling tone, "but I should be so grateful if you would lend me a sheet of Whatman. I have a piece of work to do, and I want to start on it at once, but I have run out of paper."
Now, if the smile had made Tom's flesh creep, the request positively made it crawl. For he knew—and so must she if she were a painter—that there was an excellent artists' colourman's shop within five minutes' walk of the place where they were standing, from whence, indeed, Tom got most of his supplies. It looked suspiciously like a pretext for making his acquaintance.

"Perhaps I should explain," she continued, "that I am your next-door neighbour—Mrs. Schiller."

Tom bowed. He had observed the recent appearance of a brass plate bearing this name, and was now slightly reassured. At least, she was a married woman—unless she was a widow! In any case, he couldn't keep her waiting on the doorstep.

"I'll let you have a sheet with pleasure," said he. "Won't you come in?"

She complied with alacrity, and, as he conducted her along the passage, he asked: "What sort of surface would you like? I generally use 140, Net."

"That will do perfectly, if you can spare me a sheet. I will let you have it back; at least, not the same sheet, you know, but an equivalent."

"You needn't," said Tom, with a view to heading her off from another visit. "I have a good stock. Just laid in a fresh quire, and I don't use a lot as I work mostly in oil. This is my show."

He indicated the open door, and, as she stepped into the studio, his visitor looked around with a little squeak of surprise.

"But how enormous!" she exclaimed. "And how magnificent! I do envy you. My studio isn't really a studio at all. It is just my sitting-room, though it is quite a good room, with a nice big window. You must let me show it to you, sometime."

Tom groaned inwardly. A very pushing young person, this. He began to suspect that she must be a widow, and decided that he must "mind his eye."

"Well," he replied, "you don't really need a place of this size to paint in, though, of course, it's a convenience to have plenty of elbow-room."

He went to a set of wide shelves and, drawing out the imperial size portfolio in which he kept his stock of paper, opened it on the table and selected a sheet, which he rolled slightly and secured with a turn of string.

Meanwhile, his visitor had taken her stand before the easel and was inspecting the nearly finished picture; a simple, open-air subject such as Tom liked to paint, showing a group of gipsies on a heathy common, tending their fire, with a couple of vans in the background.

"But how wonderful!" she exclaimed. "And how curious and interesting."

Tom paused in the act of tying the knot and looked round suspiciously.

"Why curious?" he asked.

"I mean," she explained, "the extraordinary representationalism. It might almost be a photograph. Do you always paint like this?"

Now Tom held privately the opinion that the comparison of a finished, realistic painting to a photograph was the hallmark of the perfect ignoramus. But he did not say so. He merely answered the question.

"I try to get as near as I can to the appearances of nature; but, of course, the best of us fall a long way short."

"Exactly," said she. "Imitative painting must be very difficult, and after all, you can't compete with the photographer. That is the advantage of abstract art. You are not trying to imitate anything in particular; you just let your personality express itself in terms of abstract form and colour. Have you ever experimented in the new progressive art?"

"No," replied Tom. "This is the way I paint, and it seems to me to be the right way; and I suppose my dealers and private clients take the same view, as they are willing to buy my pictures at a fair price. At any rate, such as it is, I had better get on with it."

By way of enforcing this blunt refusal of the attempted discussion, he held out the roll of paper and glanced wistfully at his palette.

"Yes," she agreed, taking the paper from him with an engaging smile, "I mustn't waste your time now, though I should like to talk this question over with you some day. But now I will take myself off, and thank you so much for the loan of the paper. I promise faithfully to repay it."

Once more Tom assured her that no repayment was necessary, though he now realized, hopelessly, that the promise would certainly be kept. Nevertheless, as he bade her adieu on the doorstep and watched her trip round to her own door, he resolved afresh to "mind his eye" and ward off any attempt to establish more definitely intimate relations; an admirable resolution but one which, to a scrupulously polite gentleman such as Tom Pedley, presented certain difficulties in practice, as he was very soon to discover. For, of course, the loan of the paper was repaid promptly; on the following day, in fact; and Tom's efforts, as he received the rolled sheet, to "close the incident" failed ignominiously. He did not on this occasion invite his fair visitor to come in. But though he conducted the transaction on the doorstep, the closure of the incident was but the prelude to the opening of another.

"I won't detain you now," said she with a smile that displayed between her scarlet lips a fine set of teeth, "but I do want..."
you to see my studio, and especially I want you to tell me what you think of my work. A few words of criticism from an experienced artist like you would be so helpful. Now, you will come, won't you? Any time that suits you. This afternoon if you like, say about four o'clock. How would that do?"

Of course, it wouldn't do at all if there were any possibility of escape. But there was not. Tom looked at her helplessly, mumbling polite acknowledgments and thinking hard. But what could he say? Obviously he could not refuse; and this being clear to him, he decided to get the visit over at once and take precautions against its repetition.

"Very well," said she, "then we will say four o'clock; and if you are very good and don't slate my pictures too much, I will give you a nice cup of tea."

With a friendly nod and a further display of teeth she tripped away briskly in the direction of Hampstead Road, and Tom, muttering objurgations, retired to bestow the sheet of paper in the portfolio.

It need hardly be said that the afternoon's visit did nothing towards "closing the incident." As she opened the street door in response to his ring at the bell, removing a cigarette to execute a smile of welcome, his hostess received him as though he had been "the companion of her childhood and the playmate of her youth." She shook his hand with affectionate warmth, and, still holding it, led him into a large front room where a brand new easel, flanked by a small table, stood close to the window. Tom cast a comprehensive glance around and rapidly assessed the occupant in professional terms. Apart from the easel and the colour-box, brushes and water-pot on the table, it was just a typical woman's sitting-room, in which the tea-table with its furnishings seemed more at home than the easel.

"This is my humble workshop," said his hostess; "a poor affair compared with your noble studio, but still—"

"It would probably have been good enough for Turner or DeWint," said Tom. "It's the painter that matters, not the studio. Shall we have a look at some of your work?"

"Yes, let's," she replied brightly, leading him towards the easel. "This is my latest. I am not quite satisfied with it but I don't think I will carry it any further for fear of spoiling it. What do you think?"

Tom stared at the object on the easel and gibbered inarticulately. A half-sheet of Whatman had been pinned untidily on a board and covered with curved streaks of bright colour, evidently laid, very wet, on damped paper, producing an effect like that of an artist's colourman's sheet of samples.

"Well," he stammered, recovering himself slightly, "I don't see what more you could do to it. Perhaps the—er—the subject is—er—just a little obscure. Not perfectly obvious, you know. Possibly—er—"

"Oh, there isn't any subject," she explained; "not in an imitative sense, that is. It is just an essay in abstract colour. I propose to call it 'A Symphony in Green and Blue.' Do you think it sounds pretentious to call it a symphony?"

"I wouldn't say pretentious," he replied, "but I don't much like calling things by wrong names. It isn't a symphony, you know. A symphony is a combination of sounds, whereas this work is a—is a—well, it's a painting."

Mrs. Schiller laughed softly. "You were going to say 'it's a picture,' and then you thought better of it. Now didn't you?"

"Well," Tom admitted with an apologetic grin, "it isn't quite what I should call a picture, but then I really don't know anything about this new form of art. I suppose it is an abstract picture."

"That is just what it is; an entirely non-representational abstraction of colour. Rather an extreme example, perhaps, so we will change it for something more representational."

She fished out a portfolio from under a sette and took from it a small mounted drawing which she stood up on the easel.

"The first one," she explained, "is a study of abstract colour. Now this one is an essay in abstract form. But it has a subject. I have called it 'Adam and Eve.' How do you like it?"

Tom considered this new masterpiece with knitted brows and a feeling of growing bewilderment. It represented two human figures such as might have been drawn by an average child of nine or ten with no natural aptitude for art, in a heavy, clumsy pencil outline filled in with daubs of colour; As the serious production of a sane adult, the thing was incredible.

"They are a good deal alike," Tom remarked, by way of saying something.

"Yes," she agreed, "but of course they would be, as they haven't any clothes, poor things. The bigger one would naturally be Adam, though it really doesn't matter. The title is only a convention. The picture is really a study in essential form."

"I see," said Tom, though he didn't; but he continued to gaze at the work with bulging eyeballs while the lady looked over his shoulder with a curious cryptic smile—which vanished instantly when he turned towards her. After a prolonged inspection with no further comment, he cast a furtive glance at the portfolio, whereupon his hostess removed the figure subject and replaced it by another painting, apparently representing a human head and shoulders, and, in character, very much like those "portraits" with which untalented schoolchildren adorn blank spaces in their copybooks. Such, in fact, Tom at first assumed it to be, but the artist hastily corrected him.

"Oh, no," said she. "It is not imitative. I have called it 'Madonna,' but it is just a study in simplification based on the architectural structure of the human head, with all the irrelevant details eliminated."

"Yes," Tom commented, "I noticed that there had been a good deal of elimination. Those brown patches, I suppose,
represent the hair?"

“They don’t represent it,” she replied. “They merely acknowledge and connote its existence. Perhaps, in a non-representational work, they are really superfluous, but they are useful in elucidating the pattern.”

This explanation left Tom speechless as did the other selections from the portfolio. They were all much of the same kind; either meaningless streaks of colour or childish drawings of men and animals. Some of them he judged to be landscapes from the appearance in them of green, mop-like shapes, which might have “connoted” trees, and in one the simplified landscape was inhabited by abstract animals suggesting the cruder productions of a toy-shop.

“Well,” said Mrs. Schiller as she returned the last of them to the portfolio, “that is my repertoire; and now that you have seen them all, I want you to tell me frankly what you think of them. You need not mind being outspoken. Candid criticism is what I want from you.”

“But my dear Mrs. Schiller,” Tom exclaimed despairingly, “I am quite incompetent to criticize your work. I know nothing whatever about this modernist art excepting that it is a totally different thing from the art which I have always known and practised. And we can’t discuss it because we are not speaking the same language. When I paint a picture I aim at beauty and interest; and since there is nothing so beautiful as nature, I keep as close to natural appearances as I can. And as a picture is a work of imagination and not a mere representation like an illustration in a scientific textbook, I try to arrange my objects in a pleasing composition and to make them convey some interesting ideas. But, apparently, modernist art avoids truth to nature and any kind of intellectual or emotional interest. I don’t understand it at all.”

“But,” she objected, “don’t you find beauty in abstract form?”

“I have always supposed,” he replied, “that abstract form appertains to mathematics, whereas painting and sculpture are concerned with visible and tangible things. But really, Mrs. Schiller, it’s of no use for me to argue the question. We are talking and thinking on different planes.”

“I suppose we really are,” she agreed, “but it’s rather disappointing. I had hoped to profit by your experience, but I see now that it has no bearing on modern art. But never mind, we will drown our disagreements in the teapot. Will you take this chair while I boil the kettle, or would you prefer a softer one?”

“I like a hard chair,” replied Tom.

“So do I. Odd, isn’t it, that women seem to want a chair stuffed like a feather bed and piled up with cushions? I could never understand why, seeing that they are lighter than men, as a rule, and better covered.”

“Perhaps,” Tom suggested, as he subsided on to the wooden-seated chair, “it is because they wear less clothes and want the cushions for warmth.”

“Well, at any rate,” said she, as she put a match to the gas-ring on the hearth which supported a handsome copper kettle, “we are on the same plane in the matter of chairs, so we have one agreement to start with.”

She drew up a light mahogany armchair, and, seating herself, gave her attention to the kettle; and while it was heating she continued the discussion with a whimsical mock-seriousness that Tom found quite pleasant. In fact, there was no denying that Mrs. Schiller’s personality was distinctly attractive if one could forget the atrocities of her painting; and Tom, who liked women well enough so long as they did not want him to marry them, realized with some surprise that he was finding the little informal function quite agreeable (though he was still resolved that this visit should “close the incident”). The excellent China tea was brewed to perfection, the table appointments, including the kettle, were pleasant to look on, and her hostess’s bright flippancies kept him mildly amused.

Presently the conversation reverted to the subject of painting, and Tom ventured to seek some solution of the mystery that had perplexed him.

“Have you always painted in the modernist manner?” he asked.

“Always!” she repeated with a smile. “I haven’t always painted at all. It is a completely new venture on my part, and it came about quite by chance; a very odd chance it seems when I look back on it. A girl friend of mine asked me to go with her to a show at a gallery in Leicester Square; an exhibition of works of modern masters. I didn’t want to go, because I had never felt the least interest in pictures and didn’t know anything about them, but she insisted that I must go because everybody was talking about these pictures, and the art critics declared they were the latest discoveries in art.

“So I went, and, to my surprise, I was tremendously impressed and interested. The pictures were so different from anything that I had ever seen before; so quaint and curious. They looked as if they might have been done by children. I was really charmed with them; so much so that I decided to try if I could do anything like them. And I found that I could. Isn’t it strange? I had never drawn or painted before, and yet I found it quite easy to do. Don’t you think it is very remarkable?”

“Very remarkable,” Tom agreed quite sincerely, though not quite in the sense that she meant. For him the mystery was now completely solved, though there were other matters concerning which he was curious.

“Do you send in to the exhibitions?” he asked. “It is rather necessary if you expect to make a living by your work.”

“I haven’t actually exhibited,” she replied, “but I am getting a collection together in readiness, and I go to see the modernist shows to see what sort of prices works of my kind fetch, or, at least, are offered at. They seem to me rather high, but I notice that very few of the pictures are sold.”
“Yes,” said Tom, “there are not many picture-buyers nowadays, and the few picture-lovers who do buy mostly prefer work of the traditional kind. But your best plan would be to try some of the dealers who specialize in modernist works. They would know what your pictures are worth in their market, and they might be able to give you some useful advice. They might even buy some of your works—at their own price, of course.”

“That’s an excellent idea,” she said. “I will certainly try it. Perhaps you could give me the names of one or two dealers. Would you?”

Tom shook his head. “My dealers would be no good for you. They are old-fashioned fellows who deal in old-fashioned work. No modernist stuff for them. They’d be afraid of frightening away their regular customers.”

“That doesn’t sound very encouraging,” she remarked with a wry smile.

“I suppose it doesn’t,” Tom admitted; and in the pause that followed it was suddenly borne in on him that these comradely confidences were not very favourable to the “closure of the incident.” And then, in the vulgar but convenient phrase, he “put the lid on it.”

“You appear,” said he, “to work exclusively in water colour. Do you find that more suitable than oil?”

“The truth is,” she replied, “that I have never tried oil painting because I don’t quite know how to go about it; I mean as to mixing the paint and putting it on with those queer-looking stiff-haired brushes. But I should like to paint in oil, or at least give the medium a trial.” She paused for a few moments. Then in an insinuating tone she continued, “I wonder whether my kind and helpful neighbour would come to my assistance.”

Tom looked at her apprehensively. “I suppose I’m the neighbour,” said he, “but I don’t quite see what you want me to do.”

“It is only a modest request,” she urged, “but I should be so grateful if, sometime when you are at work, you would let me come and look on.”

“But to what purpose?” he demanded. “My painting and your painting are not the same kind of thing at all.”

“I know,” she agreed. “But, after all, modernist painters use the same materials and implements as artists of the more old-fashioned type. Now, you know all about the methods of oil painting, and, if I could watch you when you are working, I should see how you do it, and then I should be able, with a little practice, to do it myself. Won’t you let me come once or twice? I promise not to waste your time or interrupt you by talking.”

Tom looked at the smiling, wheedlesome face and realized that he was cornered. It would be churlish to refuse, and indeed, utterly unlike him to withhold any help from a fellow artist, no matter how bad. But still it was necessary for him to “mind his eye.” It would never do to give this enterprising young woman the run of his studio.

“When I am at work,” he said at length, “I like to be alone and concentrate on what I am doing, but I shall be very pleased to give you a demonstration of the technique of oil painting. What I would suggest is that you bring in one of your pictures, and that I make a copy of it in oil, while you look on. Then you can ask as many questions as you please and I will give you any tips as to the management of the medium that seem necessary. How will that do?”

“But it is the very thing that I would have asked for if I had dared. I am delighted, and more grateful than I can tell you. Perhaps you will let me know when I may come for the demonstration.”

“I will,” he replied. “It won’t be for a day or two, but when I have finished the picture that I have in hand, I will drop a note into your letter-box giving one or two alternative dates. And I hope,” he continued as he rose to depart, “that you will like the medium and do great things in it.”

As he re-entered his studio and occupied himself in cleaning his palette and brushes and doing a few odd jobs, he cogitated profoundly on the events of the afternoon. One thing was plain to him; the “closure of the incident” was “off.” The good lady had fairly taken possession of him. Already she had established herself definitely as an acquaintance, and he saw clearly that the next interview would put her on the footing of a friend. It was an unfortunate affair, but he must make the best of it and continue to “mind his eye”—if the word “continue” was strictly applicable.

As to the woman herself, he was completely puzzled. He could make nothing of her. Was she simply an impostor or did she suffer from some extraordinary delusion? The plain and obvious facts were that she could not draw at all, that her water-colour painting was that of an untaleted child and that she seemed to have no artistic ideas or the capacity to invent a subject. But was it possible that she had some kind of artistic gifts which he was unable to gauge? The supposition seemed to be negatived by her own admission that she had never felt any interest in pictures. For the outstanding characteristic of real talent is the early age at which it shows itself. Pope “lisped in numbers, for the numbers came;” Mozart and Handel were accomplished musicians, and even composers, when they were small children; John Millais was a masterly draughtsman at the age of five; Bonington died in the twenties with a European reputation; and so with Fred Walker, Chantrey, and a host of others. No, a person who reaches middle age without showing any sign of artistic aptitude is certainly not a born artist.

The only possible conclusion seemed to be that Mrs. Schiller was either a rank impostor or the subject of some strange delusion; and at that he had to leave it. After all, it was not his affair. His concern was to see that he was not involved in any entanglements; and the lady’s masterful ways promised to give him full occupation in that respect without troubling about her artistic gifts.
IV. — MR. VANDERPuye

THERE are persons, unfortunately too common, who seem to be incapable of doing anything well. Impatience to get the job finished and inability to concentrate on the doing, beget slipshod work and faulty results. Conversely, there are some more happily constituted who cannot bring themselves to do anything badly. Of this type Tom Pedley was a representative specimen. To the simplest task he gave his whole attention and would not leave it until it was done to a finish, even though the task was no more than the washing of a teacup or the polishing of a spoon. Hence the demonstration of oil technique, though he secretly regarded it as a waste of time, was carried out with as much thoroughness as if Mrs. Schiller had been a pupil of the highest promise.

"I have brought two of my pictures," the lady explained when she made her appearance on the appointed day; "the Symphony in Green and Blue the Adam and Eve subject. Which do you think will be the more suitable?"

"May as well do them both," replied Tom, "as one has some sort of shape in it and the other hasn't. We'll begin with the Symphony. You seem to have used mighty big brushes and kept the paper uncommonly wet."

"Oh, I didn't use any brushes at all. I just soaked the paper in water, mixed up some emerald oxide and French ultramarine in separate saucers and poured it on in long streaks. When I tilted the board, of course, the streaks ran together and produced those subtle gradations of colour that I have tried to express by the word Symphony."

"I see," said Tom with an appreciative grin. "Deuced good method. Labour-saving, too. Well, you can't do that sort of thing in oil. Got to do the blending with the brush unless you work with the knife. I'll show you."

He set up the "Symphony" on the easel with a fourteen by twelve canvas by its side. Then, on a clean palette, he squeezed out three blobs of colour, emerald oxide, French ultramarine and flake white, and, taking up the palette knife, mixed one or two tints to match those of the "Symphony."

"We'll follow your methods as far as we can in oil," said he. "We begin with streaks of the deepest colour, add lighter tints at the edges, and then paint them into one another to produce the subtle gradations. Like this."

He fell to work with a couple of large brushes, keeping an attentive eye on the "Symphony" and giving from time to time a few words of explanation as to the management of the brush and the mixing of the tints. At the end of a quarter of an hour's work he had produced a copy of the "Symphony" which might have been a facsimile but for the difference in the medium. His pupil watched him and listened to his explanations without saying a word until he had finished. Then, as he stepped back and laid down his palette, she exclaimed:

"How extraordinary! You've made a perfect copy; and so quickly, too. It is really wonderful; and it looks so easy."

"Easy!" Tom repeated. "Of course it's easy. Any—er—anyone—" (he had nearly said "any fool") "can put streaks of colour on a canvas and paint their edges into one another. But, of course," he added hurriedly, "you've got to invent the streaks. Now we'll have a go at Adam and Eve."

This, however, presented more difficulty. Try as he would, he could not quite attain the childish effect of the original. His figures persisted in looking slightly human and even in differentiating themselves into a recognizable man and woman.

"There," he said as he stepped back and regarded his performance with a grim smile, "I think that will do, though it isn't a fair copy. I seem to have missed some of the 'essential form,' but that doesn't matter. You see the method. And now, as a wind up, I'll just show you how to work with the knife. That may suit you better than the brush."

He placed on the easel a slab of millboard, and, taking a couple of small, thin-bladed, trowel-shaped knives, rapidly executed another rendering of the "Symphony," while his pupil watched with delighted surprise. Finally, he showed her how to clean the palette and wash the brushes, admonishing her that a tidy worker takes care of his tools and doesn't waste his materials.

"And now," he concluded, "you know all about it. Facility will come with practice, and the ideas you have already, so all you've got to do is to provide yourself with the materials and fire away."

"I will certainly do that," said she. "But I can't tell you how grateful I am." She came close up to him, looking earnestly in his face and laying her hands on his arms (and for one awful moment he thought she was going to kiss him) and exclaimed: "It was so kind of you to take all this trouble for a mere stranger. I think you are a perfect dear. But we aren't really strangers, are we?"

"Well," Tom admitted cautiously, "I've certainly seen you before."

"Now, don't be an old bear," she protested smilingly. "Seen me before, indeed! But never mind. You haven't done with me yet. I want you to come with me to the artists' colourman and show me what I must get for a start. You will do that for me, won't you? Say yes, like a duck."

"Can't very well do that," objected Tom, "as I've never heard a duck say yes; but I'll come to the shop with you and see that you don't waste your money on foolishness. Might as well nip along now and get it done with. Shop's close by. Only take us a few minutes. What do you say?"

She said "yes" with a sly and very understanding smile; and Tom realized too late that his studied gruffness, so far from
fending her off, had only put her on a more intimate footing. So they went forth together, and when Tom had superintended her purchases and seen her provided with the bare necessities for a beginning, he took up the bulky parcel and escorted her home; and as he handed her the parcel and said “good-bye” on her doorstep, the effusiveness of her gratitude made him thankful that the farewells were exchanged in a public thoroughfare.

He turned away with a troubled face and a sinking heart. No self-delusion was now possible. He had failed utterly to “mind his eye” and had been definitely adopted, willy-nilly, by this remarkable young woman as her special friend and comrade. And there seemed to be no escape. A coarser and less genial man would have administered an effective rebuff; but Tom was a kindly soul, courteous and considerate by nature and habit and with all the old bachelor’s deference to women. Unwillingly, he had to accept the conviction that this unwanted friendship was an established fact to which, henceforth, his old simple, self-contained way of life should be subject.

And so it proved. His new friend was not actually intrusive. She recognized that he was a solitary man who liked to work alone. But somehow it happened that hardly a day passed in which she did not make some kind of appearance. Of course, he had to go in to see her experiments in the new medium (at which he gazed stolidly, his capacity for astonishment having been exhausted) and give her further purely technical advice. Then she would drop in at the studio now and again to ask a question, to offer some little service or to bring some small gift, and the number of chance meetings in the neighbouring streets was such as to confound all the known laws of probability. Thus, insensibly, the intimacy grew and with it the space which she occupied in his life.

Tom observed the process with anxious foreboding and cursed the ill luck that had brought her into his orbit. But presently he began to realize that things were not so bad as he had feared. In the first place, she was not a widow. There was a husband in the background—apparently a German background; a dim figure, but still an undeniable bar to matrimony. So the principal danger was excluded. Then certain other reassuring facts became evident. At first her astonishing familiarity had horrified him, and the endearing phrases and epithets she used had seemed positively alarming, but he soon grew accustomed to being addressed as “Tom” or even “Tommy”; and as to the endearments, they appeared to be no more than a playful habit. He realized this as he noted the essential correctness of her conduct when they were together. Never was there the slightest tendency to sentimentality or philandering.

She might call him “my dear” or “duck” or even “Tommy, darling,” but the mere words seemed harmless enough—though foolish—in view of her perfectly matter-of-fact behaviour; and Tom, now reassured and satisfied that no real entanglement threatened, made shift to put up with what he regarded as a “damn silly and rather objectionable habit.”

As to the woman herself, her personality was not unpleasing. Sprightly, humorous and amusing, she might have been a quite acceptable companion if he had wanted one—which he emphatically did not—and if she had shown any glimmer of sensibility to art as he understood it. But, though she soon dropped the art-journalist’s jargon and tried to interest herself in his work, she really knew nothing and cared nothing about normal art; and lacking that interest, they had nothing in common.

Her appearance, on the other hand, rather interested him, and, in his capacity as an occasional portrait painter, he gave it some attention. He would have described her as a luridly picturesque woman; blonde, showy, and made up in the height of an ugly fashion, with vermilion lips, rouged and powdered cheeks, pencilled eyebrows, and a remarkable mass of fuzzy hair, which had apparently once been bobbed and was now in process of being unbobbed. That hair interested him especially. He had never seen anything quite like it. In colour it was a very light brown, approaching flaxen, but there was something unusual in its texture; something that gave it a peculiar shimmering character when it caught the light and seemed to make the colour variable. Considering the problem of rendering it in a portrait, Tom studied its changing lights and compared it with the greenish hazel eyes and as much of the complexion as he could make out; finally reaching the conclusion that it was some sort of fake, but what sort of fake he could not imagine.

For the rest, she was a rather tall woman, perhaps five feet seven without her high heels, fairly good-looking, with rather small features but a prominent chin and a strong lower jaw. Her most attractive aspect was undoubtedly the profile, and Tom, studying this with a professional eye, decided that it would make quite a good medallion. He even made one or two trial sketches from memory in his notebook with a half-formed intention of offering to paint a medallion portrait; but he abandoned that idea as he realized that the necessary sittings would tend further to cement a friendship that was already too close.

By which it will be seen that Tom was still, so to speak, fighting a rearguard action; still seeking to limit this unsought intimacy. Although he now knew that she could have no matrimonial designs on him, and he no longer feared any attempt to establish a questionable relationship, he disliked the association. He had never wanted a female friend and he resented the way in which this woman had attached herself to him. An eminently self-contained and rather solitary man, his principal wish was to be left alone to live his own life, and, as time went on, he found it more and more irksome to have that life pervaded by another personality, and not even a sympathetic one at that. But he saw no prospect of escape, short of a definite snub, of which he was incapable; and in the end he gave up the struggle, and, with a sigh of regret for the peace and freedom that were gone, resigned himself to making the best of the new conditions.

But the hour of his deliverance was at hand, little as he could have foreseen it, and little as he suspected the benign character of the agent when he arrived bearing, all unknown, the order of release. And as the darkest hour is that before the dawn, so the beginning of his emancipation occurred at a moment when he felt that the nuisance of this forced intimacy was becoming intolerable.
It was about four o'clock in the afternoon and the lady had just dropped in at the studio with an invitation to tea, which he had firmly declined.

“Oh, rubbish,” she protested. “You are always too busy to come and have tea with me; at least you say you are, and I don’t believe you. It’s just an excuse. Is it my tea or my society you that don’t like?”

“My dear Mrs. Schiller—” Tom began, but she cut him short.

“Oh, not Mrs. Schiller! Haven’t I told you again and again not to call me by that horrible name? Call me Lotta. I’m sure it’s a very nice name.”

“It’s a most admirable name. Well—er—Lotta—”

“Well, my dear, if you won’t come to have tea with me, I shall stay here and make yours for you and help you to drink it; and then I’ll take myself off and leave my darling old bear to the peaceful enjoyment of his den. You’ll let me stay, Tom, dear, won’t you?”

It was at this moment that the studio bell, jangling imperatively out in the yard, broke into the discussion.

“Shall I run out and see who it is?” asked Lotta.

“No. I’d better go. May be able to settle the business on the doorstep.”

He strode out along the passage, hoping that it might be so. But when he opened the door and discovered on the threshold his old friend, Mr. Polton, accompanied by a stranger, he knew that no evasion was possible. He would have to invite them in.

“Good afternoon, sir,” said Polton, greeting him with a cheerful and crinkly smile. “I have taken the liberty of bringing you a client who would like you to paint his portrait. Am I right in using the word ‘client’?”

“Well, we usually call them sitters, though that does sound a little suggestive of poultry. But it doesn’t matter. Won’t you come in?”

They came in, and as they walked slowly along the passage, Polton completed the introductions. The prospective sitter, a light-coloured, good-looking African gentleman, was a Mr. William Vanderpuye, a native of Elmina on the Gold Coast, who was at present attending a course of lectures on Medical Jurisprudence at St. Margaret’s Hospital.

“He is also doing some practical work in our laboratory,” Polton explained further, “as Dr. Thorndyke’s pupil. That is how I came to have the pleasure of making his acquaintance.”

At this point they reached the studio door, which Tom threw open, inviting them to enter. Accordingly they entered, and then, becoming aware of the other occupant of the studio, they both stopped short, and, for a moment, three inquisitive pairs of eyes made a rapid mutual inspection. Sweating with embarrassment and cursing under his breath, Tom haste to introduce his three guests, and then, by way of giving the lady an opportunity to retire, explained:

“Mr. Vanderpuye is going to do me the honour of sitting to me for his portrait.”

“Oh, how interesting!” she exclaimed. “But now I expect you will want to arrange about the sittings, so I suppose I had better run away and leave you to your consultation.”

As she spoke, she directed a subtly appealing glance at Mr. Vanderpuye, who replied instantly and with emphasis:

“Not at all, Mrs. Schiller. You mustn’t let me drive you away. We are not going to talk secrets but just to arrange about the portrait. Besides,” he added, a little ambiguously, “it seems that you paint yourself, so you may be able to advise us.”

“That is very gracious of you,” said she; “and if you would really like me to stay, I should be delighted to hear all about the portrait; and I will make you a nice cup of tea as a thank offering for the invitation.”

She began, forthwith, to set out the tea-things while Polton filled the kettle and put it on the gas-ring, and Tom looked on with mixed feelings which changed from moment to moment. He could easily have dispensed with Lotta's company; but as he noted the way in which his new patron’s eyes followed her movements, he began to suspect that it might be all for the best. Apparently, he was Lotta’s only male friend. It would be a great relief to him if she should get another.

With this idea in his mind, he observed the trend of events while tea was being consumed (as also did Mr. Polton, to whom the lady was a startling mystery) and found it encouraging. Of a set purpose, as it seemed, Lotta kept the ball of conversation rolling almost entirely between herself and Mr. Vanderpuye, addressing him in a tone of deference which he evidently found flattering. Indeed, the African gentleman was obviously much impressed by the fair Lotta, and openly admiring; which was not unnatural, for she was a good-looking woman (if one did not object to the “abstract colour”), who could make herself extremely agreeable when she tried. And she was obviously trying now.

“I am inclined to envy Mr. Pedley his opportunity,” said she. “You are such an admirable subject for a portrait.”

“Do you really think so?” he exclaimed, delighted. “I was rather afraid that the complexion—and the hair, you know—”

“Oh, but that is what I meant by the opportunity. Your warm olive complexion creates all sorts of possibilities in the way of colour harmonies; so unlike the pale, relatively colourless European face. Perhaps,” she continued reflectively, “that may account for the fact that the African peoples seem to be born colourists. Don’t you think so?”
“It may be so,” Vanderpuye agreed. “They certainly like colour, and plenty of it. My steward, at home, used to wear a scarlet flannel suit and green carpet slippers.”

“But what a lovely combination!” exclaimed Lotta. “Such a subtle and delicate contrast! Don’t you agree with me?”

Mr. Vanderpuye was prepared to agree to anything, and did so with a genial smile; thereby revealing such a set of teeth as seldom gladdens the eye of the modern European.

“But, of course,” he added, “I don’t know much about the matter except that I like bright colours myself, whereas you are an artist and have, no doubt, studied the subject profoundly.”

“I have,” she admitted. “Colour is the engrossing interest of my life. So much do I love it that I am often impelled to paint pictures consisting entirely of colour without any other motive. Symphonies and concertos in colour, you know.”

“They must be very beautiful, I am sure,” said Vanderpuye, “though I don’t quite understand how you can make a picture of colour alone. Perhaps, some day, I may have the privilege of seeing your works.”

“Would you like to? If you would, I should be only too proud and delighted to show them to you. I live next door to Mr. Pedley, so you could easily drop in sometime after one of your sittings.”

“It would be better to make an appointment,” suggested Vanderpuye. “What time would you like me to attend for the sitting, Mr. Pedley?”

“I should prefer the morning light,” replied Tom; “say from nine to twelve. How would that suit you, Mr. Vanderpuye?”

“Admirably,” was the reply. “And as to the date? When would you like to begin?”

“The sooner the better, so far as I am concerned. How would to-morrow do?”

“It would do perfectly for me. Then we will say to-morrow morning at nine. And as to you, Mrs. Schiller; if I should look in at your studio shortly after twelve, would that be convenient?”

“Quite,” she replied. “I shall have just finished my morning’s work. And now,” she added, “as we have emptied the teapot, and I expect that you have some further arrangements to discuss, I had better make myself scarce.”

She rose and, having shaken hands with the two visitors and announced that she would let herself out, bestowed a parting smile on Mr. Vanderpuye and bustled away.

The sound of the closing outer door brought the conversation back to the portrait and the “further arrangements”; but with the details of these we are not concerned. Finally it was decided that the portrait should be a three-quarter length presenting the subject in his barrister’s wig and gown, standing with a brief in his hand as if addressing the court; and having settled this and the question of costs, the two visitors rose to depart.

“Au revoir, then,” said Mr. Vanderpuye, “or, as the Hausa men say in my country, Sei Gobe’—’Until To-morrow.’ Nine o’clock sharp will see me on your doorstep.”

“And twelve o’clock sharp on Mrs. Schiller’s,” added Tom, with a sly smile.

Mr. Vanderpuye smiled in return. Whether he also blushed there was no means of judging.
THE vague hopes which Tom Pedley had conceived that a friendship between his new patron and Lotta Schiller might relieve him to some extent of the lady's society were more than fulfilled. For very soon it began to appear that Mr. Vanderpuye was not merely to share the burden of that intimacy; he had in effect stepped into the reversion of Tom's status as Lotta's sole male friend. Not that Tom was totally discarded by her. She still made occasional appearances in the studio; but those appearances tended in a most singular manner to coincide with the presence there of Mr. Vanderpuye.

There was no mistaking the position, nor, indeed, was there any concealment of it. The impulsive and susceptible African gentleman made no secret of his admiration of the fair and sprightly Lotta or of the fact that they spent a good deal of time together; while, as to the lady herself, she was at no pains whatever to disguise the new relationship. Thus Tom, guided by the light of experience, watched with grim amusement the development of the familiar symptoms; noted that Mr. William Vanderpuye had been promoted to the style and title of Billy—with or without the customary enrichments—and that Mrs. Lotta Schiller had ceased to command a surname.

The portrait progressed steadily, but, being a nearly complete life-size figure with some accessories, its execution involved a considerable number of sittings, though Tom often saved time by working at the accessories in the intervals; and as it grew towards completion its quality began to show itself. It was a tactful and sympathetic portrait. There was no flattery. The likeness was faithfully rendered, but it was an eminently becoming likeness, presenting the sitter at his best; and if there was any tendency to stress the more favourable points, that merely reflected Tom Pedley's ordinary attitude towards his fellow creatures.

From time to time Lotta dropped in at the studio (usually about twelve) to inspect and criticize, and Tom listened to her with delighted amusement. Gone was all the clap-trap about representationalism and imitative art. She was now the frank and honest Philistine. Unlike the art critics from whom she had borrowed her "highbrow" phrases, who dismiss the "mere resemblance" in a portrait as a negligible irrelevancy, she was out for the likeness and nothing but the likeness and as it approached the final stage, even she was satisfied.

"Do you think it is like me, Lotta?" Vanderpuye asked anxiously as they stood before the canvas. "I hope it is, but it seems a little flattering."

"You are a silly, self-depreciating little ass, Billy," said she (Billy stood a trifle over six feet in his stockings). "You don't realize what a good-looking fellow you are."

"Well, my dear," he rejoined, regarding her with a fond smile, "I am always willing to learn, especially from you."

"Then," said she, "you can take it from me that the handsome legal gentleman in the picture is a faithful representation of my friend Bill, and not flattened in the least. Isn't that so, Tom?"

"I think so," he replied. "I have painted him as I see him and as his friends see him, and I hope I have done him impartial justice."

Tom's view was confirmed by another of "Bill's" friends, to wit, Mr. Polton, who made occasional visits and followed the progress of the work with the deepest interest; a sort of proprietary interest, in fact, for it transpired that it was at his instigation that the portrait had been commissioned when photographs had been tried and found wanting (photographs of coloured people tend to be eminently unflattering). The confirmation came on a certain occasion when the four interested parties were gathered around the portrait, now practically finished, to discuss its merits.

"The art of painting," Mr. Polton moralized, "seems to me almost like a supernatural power. Of course, I can do scale drawings to work from, but they are only diagrams. They don't look like the real objects; whereas with this picture, if I stand a little way off and look at it with one eye closed, I seem to be actually looking at Mr. Vanderpuye."

"Yes," Lotta agreed, "it is a perfect representation; almost as perfect as a photograph."

"I beg your pardon, ma'am," Polton objected, "but it is a good deal more perfect. You can't do this sort of thing by photography."

"Not the colour, of course, but I meant the representation of form."

"But, ma'am," Polton persisted, "there is something more than form in this portrait; something that photography can't do. I tried one or two photographs of Mr. Vanderpuye when I was teaching him the technique, but they were quite a failure. The form was perfectly correct and they would have been excellent for identification; but there was something lacking, and that something was what we might call the personality. But that is just what the portrait has got. It is Mr. Vanderpuye himself, whereas the photographs were mere representations of his shape."

Tom nodded approvingly. "Mr. Polton is right," said he. "Photography can give a perfect representation of an object, such as a statue or a building, which is always the same. But a living person changes from moment to moment. A photograph can only show the appearance at a given instant, but the portrait painter must disregard the accidents of the moment and seek out the essential and permanent character."

This seemed to be quite a new idea to Lotta, for she exclaimed:

"Really! Now I never thought of that; and I am rather sorry, too, because I had meant to ask Mr. Polton to take a
photograph of Bill just as he is posed for the painting. But if it would not be a true likeness, I shouldn’t care to have it. Still, it’s very disappointing.”

“There’s no need for you to be disappointed, ma’am,” Polton interposed. “If Mr. Pedley would allow me to take a photograph of the painting, you would have a portrait with all the qualities of the original except the colour. It would be a true copy.”

Lotta was delighted, and most profuse in her thanks. She even informed Mr. Polton, much to his surprise, that he was a duck.

“What size, ma’am,” he asked when the permission had been obtained, “would you wish the photograph to be?”

“Oh, quite small,” she replied, “so that I could have it mounted in a little case that I could carry about with me, or perhaps in a brooch or pendant that I could wear. Would that be possible, Mr. Polton?”

“Oh, certainly, ma’am; but, if you will excuse my mentioning it, a brooch or a pendant would not be so very suitable for your purpose because, when you were wearing it, the portrait would be visible to everybody but yourself.”

Lotta laughed. “Of course,” said she. “How silly of me; and exhibiting the sacred portrait to strangers is just what I don’t want to do. But what would you suggest?”

“I think,” he replied, “that the old-fashioned locket would answer the purpose best.”

“A locket,” interposed Vanderpuye. “What is a locket? You will pardon me, but I am only a poor ignorant African.”

“A locket, sir,” Polton explained, “is a sort of pendant, usually of gold, forming a little flat case which opens by a hinge, and displays two little frames. Sometimes there used to be two portraits, one in each frame, but more commonly one frame contained a portrait and the other a lock of the—er—the selected person’s hair either plaited and made up into a tiny coil or arranged in a flat spiral.”

Vanderpuye chuckled gleefully. “I like the idea of the locket,” said he, “but I am afraid you would get into difficulties with my hair.”

“But at all, sir,” replied Polton. “Each of your hairs forms a natural spiral like a little watch-spring. That is one of the African racial characteristics. Shall I show you?”

He produced from his pocket a pair of watchmaker’s tweezers and a pair of folding scissors, and, having picked up a single hair from Vanderpuye’s wool, cut it off neatly, laid it on a white card, and passed it round for inspection.

“How perfectly lovely!” Lotta exclaimed. “It is, as you say, exactly like a tiny watch-spring. Yes, I will certainly have a locket.”

“If you wished to extend the spiral,” Polton suggested, “so as to fill the frame, it could easily be done by using two or three hairs.”

“Oh, but that would spoil it,” she protested, “and it is so beautiful. No, just one perfect little watch-spring in the middle of the space. Don’t you agree with me, Bill?”

“Certainly, my dear,” he replied with a broad smile, “especially as it would exhibit a racial characteristic. But how are we going to get the locket? Are they still to be obtained in the shops?”

“I expect they are. But I don’t want a shop locket. It would be a soulless, machine-made thing, unworthy of my beloved Bill and his charming little watch-spring. What do you suggest, Mr. Polton? I suppose you couldn’t make a locket for me, yourself?”

“So far as the mere construction is concerned, of course, I could make a locket. But I am not a goldsmith. The design would have to be made by an artist. If Mr. Pedley would make the design, I would carry it out for you with great pleasure.”

“Oh, but how kind of you, Mr. Polton! You are really too sweet. I think I have already remarked that you are a duck.”

“I think you have, ma’am,” he replied with a somewhat wry crinkle, “and I beg to thank you for the—er—for the compliment.”

“But not at all, Mr. Polton. And now, Tom, about this locket. Can you design it?”

“Yes,” he replied. “I have done some designing for goldsmith’s work and a simple locket would present no difficulty, especially as I should be collaborating with Mr. Polton. If you like, I will make one or two sketches for you to see, and we can then discuss the question of ornament.”

“Yes, that would be very nice of you, Tom; and you must let me know what it will cost.”

“That is not your concern, Lotta,” said Vanderpuye. “It is to be a gift from me.”

“How very noble of you, Bill. Of course that will make it much more precious, and I accept gratefully on one condition; which is that you have a locket, too, and that you let me give it to you.”

“But men don’t wear lockets, do they?” he asked.

“They used to,” said Tom, “before the arrival of the wrist-watch. The locket was usually suspended from the watch-chain.”
“Well,” said Vanderpuye, “as you see, I carry a pocket watch on a chain, as a wrist-watch is not very suitable for the Tropics, so I am eligible for a locket, and I should very much like to have one with a portrait of Lotta and a lock of her beautiful golden hair. Would you two gentleman accept the commission?”

The two gentlemen agreed that they would, whereupon Lotta objected:

“But you have no business to offer the commission. That is my affair, seeing that the locket is to be a gift from me.”

Vanderpuye smiled blandly. “The commission,” said he, “was offered and accepted without prejudice as we say in the law. The other question is for separate consideration. Now we have to arrange details. The locket is to contain a portrait and a lock of golden hair. The hair presents no difficulty, as it is obviously available. But what about the portrait? Should we ask Mr. Polton to do us a little photograph?”

“No you don’t,” exclaimed Lotta; “and I am surprised at you, Bill, when you’ve just heard what these two experts said about portrait photographs. No, it shall be a real painted portrait. I will paint it myself; and then I shall ask dear Mr. Polton to make a little photograph of the painting, and I am sure he won’t refuse.”

“Certainly not, ma’am,” said Polton. “It will give me great pleasure, and I think it a most excellent idea. It will be a memento in a double sense; a portrait of the giver and a specimen of her handiwork.”

Vanderpuye, however, was less enthusiastic. (He had seen “the giver’s handiwork” and Polton hadn’t.) “Why not let me commission Mr. Pedley to paint a portrait?” he suggested.

“You’ll do nothing of the kind,” she replied. “The locket is to be my gift and I want the portrait to be my very own work.”

There was nothing more to be said. Vanderpuye looked a little glum, and Tom, too good-natured to be simply amused, was regretful. A vivid recollection of “The Madonna” suggested breakers ahead and a disappointment for Mr. Vanderpuye. But he made no comment. Perhaps the future might develop some way out of the dilemma.

A few days later at the last of the sittings a few final touches were added; and the portrait being now entirely finished, Tom escorted the sitter to the frame maker’s to advise him as to a suitable frame. When this business had been disposed of, Tom produced one or two sketches which he had roughed out in the interval showing alternative designs for the two lockets. The one for the standing figure was a rather long ellipse, while the other, to hang on the watch-guard, was considerably smaller and circular in shape. Both forms were shown with alternative designs of decoration, in simple embossed metal, in coloured enamel, and with set stones.

“If you will be seeing Mrs. Schiller you might show her the sketches,” said Tom, “and talk them over with her; and if you both approve of the circular shape for the smaller one, you might remind her to design her portrait to fill the circular space so that the head is not too small.”

“I shall be seeing her in about half an hour’s time,” said Vanderpuye. “We are lunching at a place which she has discovered in Soho, so we shall have an opportunity to discuss the designs. But I think we should both like take your advice on the matter.”

“Yes,” Tom agreed, “a little discussion and explanation might be useful as the sketches are rather slight. Perhaps, when Mrs. Schiller has finished her portrait, we might all four meet at the studio and make the final arrangements.”

“I will suggest that to her,” said Vanderpuye, “and I will let you and Mr. Polton know when the portrait is ready. I wish,” he added, confidentially, “that she had agreed to your painting. Her style of work doesn’t seem to me very suitable for a portrait, but, of course, I am no judge. What do you think?”

Tom’s opinions on the subject were perfectly definite; but his reply was discreetly evasive.

“I have never seen a portrait by her, so I can hardly judge; but we will hope for the best.”

With this, by way of avoiding a dangerous topic, he shook Vanderpuye’s hand cordially and the two men went their respective ways.

The meeting took place about a week later, the day and hour having been decided by Polton, and, somewhat before the appointed time that cunning artificer made his appearance and forthwith set to work. From one of his numerous and capacious pockets he produced a small folding camera which, when it was opened, was seen to be fitted with a level and a sighting frame.

“I haven’t brought a stand,” said he, “as I thought that an easel would be more convenient and more rigid. Can you lend me one?”

“Yes,” replied Tom. “I have one unoccupied; a heavy one with a lifting screw, which will answer your purpose perfectly. It is as steady as a rock.”

He drew it out from its corner and trundled it across to a place opposite the portrait, when Polton took charge of it, placing his camera on the tray, and, with the aid of the sighting frame, adjusting the relative positions of the camera and the portrait until the latter exactly filled the space of the frame. Then he made the exposure, and was in the act of winding on the exposed film when the sound of the studio bell announced the arrival of the other two parties to the symposium. As they entered and Polton made his bow, it seemed to him that Vanderpuye’s expression lacked its usual geniality; in fact, the African gentleman looked undeniably sulky. On the other hand, the fair and volatile Lotta was in the best of spirits, and
apparently quite pleased with herself.

"Why," she exclaimed as she bounced into the studio, "here is my dear Mr. Polton, improving the shining hour like a punctual duck and all ready to begin work." She shook his hand warmly and continued, "And what a darling little camera. But isn’t it rather small for that big portrait?"

"It is going to be quite a small photograph, you will remember, ma’am; not more than an inch and a half high."

"Yes, of course. How silly of me. Are you going to take the photograph now?"

"I have taken it already, ma’am, and I shall have great pleasure in taking your own when it is available."

"It is available now," said Lotta, opening her handbag and taking out an envelope about eight inches by six. "I made it quite a small painting as you see, but I dare say it will be big enough."

"The size is amply sufficient," Polton replied, "as it has to be reduced so much."

He took the envelope which she handed to him, and, opening the flap, tenderly drew out a small mounted water-colour, which he regarded with a reverential smile. It emerged with the back uppermost, but, as he quickly turned it over, the smile faded from his countenance and gave place to an expression of astonishment and dismay. For some moments he stood speechless and rigid, staring incredulously at the thing which he held in his hand. Then he cast a furtive glance at the artist and was reassured to find her watching him with a sly smile. Obviously it was a joke, he decided, but he was too discreet to say so. He would lie low and let the situation develop.

"Well, Mr. Polton," said Lotta, "how do you like it?"

"Since you ask me, ma’am," he replied with a cautious crinkle, "I really don’t think you have done yourself justice."

"You wouldn’t have me flatter myself, would you?" she demanded.

"Oh, no, ma’am," he replied. "But there was no need to. You had only to represent yourself exactly as you are to produce a very charming portrait."

Lotta laughed gaily. "Thank you, Mr. Polton, for a very neatly turned compliment."

"It’s no compliment at all," Vanderpuyue burst in. "Mr. Polton is perfectly right. What I wanted was a likeness; but this portrait isn’t like you a bit. I should never have recognized it. What do you say, Mr. Pedley?" But Tom, who was looking at the portrait over Polton’s shoulder, emulated the latter gentleman’s caution.

"Of course," said he, "it is not a literal representation. But then it isn’t meant to be.

"Exactly," Lotta agreed. "The mere physical resemblance is not what I was aiming at. This portrait is not a work of imitative art. It is a work of self-expression."

The argument between Lotta and Vanderpuyue was pursued for some time with some heat, not to say bitterness. But it led nowhere. Lotta was immovable, and Vanderpuyue had at length to retire defeated. Meanwhile Polton, having realized to his amazement that this preposterous thing had to be taken seriously, took it seriously, and, without further comment, stuck it up on the easel beside the other portrait and gravely proceeded with the photograph. When he had finished and handed the portrait back to its creator, the sketches for the lockets were produced and discussed at some length; the conclusion reached being that both should be decorated with a simple design in champlevé enamel and that the details should be left to the designer and the executant.

"And that appears to be all," said Lotta, bestowing the "self-portrait" in her handbag.

"Excepting the hair, ma’am," Polton reminded her. "If I may be permitted to take a sample for each locket I shall be able to get on with the work without troubling you further."

From his inexhaustible pockets he brought forth a couple of seed envelopes, a pair of tweezers, and a pair of folding scissors, all of which he laid on the table. Then, beginning with Vanderpuyue, he separated one of the little crisp curls and cut it off with the skin, putting it at once into one of the envelopes, on which, having sealed it, he wrote, "W. Vanderpuyue, Esq."

Lotta watched him with a smile and commended his caution.

"It would be a bit awkward if you had two unlabelled envelopes and didn’t know which was which. Now, how much of mine do you want? Be thrifty, if you please. I can’t have you leaving a bald patch."

"Certainly not, ma’am," Polton assured her. "A dozen hairs will be enough, and they will never be missed."

By way of confirmation, he counted them out one by one, and then, gathering up the little strand, cut it through close to the roots. Having twisted the strand into a loose yarn, he coiled it neatly and slipped it into the envelope, which he sealed and inscribed with the name of "Mrs. Lotta Schiller."

This brought the proceedings to an end, and, when Polton had put the two precious envelopes into a stout leather wallet and stowed the latter in a capacious inner pocket, Lotta and Mr. Vanderpuyue rose together to take their departure, and, having shaken hands with Polton, went out escorted by their host.

When the latter returned to the studio, he discovered his collaborator seated opposite the clock, apparently regarding it
with intense concentration. He looked round as Tom entered, and, gazing at him with wrinkled brows, exclaimed solemnly:

"This is a most extraordinary thing, sir."

"What is?" asked Tom, looking at the clock and not perceiving anything unusual about it.

"I am referring, sir, to this portrait of Mrs. Schiller's. I am utterly bewildered. At first, I took for granted that it was a joke."

"Vanderpuye didn't," Tom remarked with a grin.

"No, indeed. But do you understand it, sir? To me, it looked exactly like the sort of portraits that I used to draw when I was a boy of ten, and that other little boys used to draw. But I suppose I must have been mistaken. Was I, sir?"

"No," replied Tom. "You were perfectly right."

"But," Polton protested, "Mrs. Schiller is a professional artist, as I understand. Can she really paint or draw?"

"Since you ask me, Polton, I should say that she can't. She draws in that way because she can't draw in any other."

"But what an amazing thing, sir. If she can't draw or paint, how does she manage to practise as an artist?"

"I don't know," replied Tom, "that is quite correct to describe her as practising as an artist. She has never sold any of her work and never exhibited any. By the term 'practising artist' one usually means an artist who gets a living by his work. Still, there are painters whose work is no better than hers who exhibit and even sell. You can see their stuff in the various freak exhibitions that appear from time to time in London. That is how Mrs. Schiller got her ideas. She went to one of these freak shows which was being boosted by the art journalists, and she thought that the stuff looked so easy to do that she decided to try whether she couldn't do something like it. So she tried, and found that she could. Naturally. Anyone could; even a child; and some children can do a good deal better."

"But does anyone take these works seriously?"

" Seriously!" exclaimed Tom. "My dear Polton, you should read the art critics' notices of them and then see the mugs, who want to be thought 'highbrow,' crowding into the galleries and staring, open-mouthed, at what they believe to be the last word in progressive art. But, to do them justice, they don't often buy any of the stuff."

"And the painters, sir, who produce them; are they impostors or only cranky?"

"It is difficult to say," replied Tom. "The early modernists were, I think, quite sincere cranks. Some of them were admittedly insane. But nowadays it is impossible to judge. For the mischief is, you see, Polton, that if once you accept incompetent, childish, barbaric productions as genuine works of art, you have thrown the door wide open to impostors."

"And what about Mrs. Schiller, sir?"

"Well, Polton, you have seen her. She certainly isn't mad, and she certainly can't paint; and my impression is that she knows it as well as you and I do. But what her motive may be for keeping up the pretence is known only to herself."

Polton pondered awhile on this answer; then he raised another question.

"I am rather puzzled, sir, as to her relations with Mr. Vanderpuye. She is, I understand, a married woman, so those relations are not very proper in any case. But there seems to me something rather unreal about them. From their behaviour you would take these two persons for very devoted friends, if not actually lovers, and that, I feel sure, is genuinely the case with Mr. Vanderpuye. But I have my doubts about the lady; and if she is an impostor in one thing, she can be in another. But I am like you; I can't imagine a motive for imposture. Of course, Mr. Vanderpuye is a rich man, but I don't, somehow, suspect her of trying to get money out of him. And yet I can't think of any other motive. In fact, I can't make it out at all."

"Is there any need to make it out?" asked Tom. "It isn't our affair, you know."

"Excepting that Mr. Vanderpuye is my friend, and a very worthy, lovable gentleman. I shouldn't like him to get involved in any unpleasantness."

"Quite right, Polton," Tom agreed, "but I don't see what you can do beyond keeping your weather eyelid lifting; and that you seem to have been doing."

Which observation having closed the discussion, the two parties to it transferred their attention to the sketches and the consideration of the technical details connected with the goldsmith's art.

VI. — THE FOREST OF ESSEX

ON a certain evening early in November Tom Pedley, having put down his canvas-carrier to free one hand, inserted his latch-key and pushed the gate open. Then, according to his invariable custom, he withdrew the key and pocketed it before entering; and as he did so, happening to glance up the street, he perceived Lotta Schiller and her friend Billy just turning the corner and approaching. He had not seen either of them for more than a fortnight; not, in fact, since the frame-maker had carted away the portrait and the two lockets had been delivered to their respective owners. So he thought it proper to pause at the open gate to exchange greetings, especially as they had already seen him and notified the fact.
“Where have you been all this time, Tom?” exclaimed Lotta as they met on the doorstep. “I haven’t seen you for ages.”

“Well, I haven’t been in the same place all the time,” Tom replied. “To-day I have been in Epping Forest. Doing a bit of landscape painting for a change after the portrait.”

“Epping Forest,” repeated Lotta. “How delightful. I’ve never been to Epping Forest. May we come in and have a look at what you’ve been painting?”

“Do, by all means,” Tom replied heartily. “The picture isn’t finished, but it will give you an idea of the place.”

They entered together, and Tom, having unstrapped the carrier, placed the canvas on the easel at an angle to the great window.

“The light isn’t very good,” said he, “but you can see what the forest is like.”

“Yes, indeed,” she exclaimed enthusiastically, “and it is perfectly lovely. It looks like a real forest.”

“It is a real forest,” said Tom. “It is a surviving remnant of the primeval forest of Britain; and there is quite a lot of it, still.”

“But how thrilling! A primeval forest! Have you ever seen a primeval forest, Bill?”

“Yes,” said Vanderpuye. “I have seen the great forest that covers Ashanti, and it is something like this painting. The African forest. trees are probably a good deal more lofty than these, but it is difficult to judge from a picture.”

“It is almost impossible,” said Tom, “without figures or animals to give a scale. I think of putting in one or two deer.”

“But there aren’t really any deer there, are there?” asked Lotta.

“Bless you, yes,” he replied. “Deer, foxes, badgers, and all sorts of wild beasts. It is a genuine forest, not a mere park. And there are two ancient British camps. I pass one of them on the way to my pitch.”

“It sounds like a most heavenly place!” said Lotta. “And to think that I have never seen it, though it is so near London. It would be delightful to spend a day there. Don’t you think so, Bill?”

Bill agreed with enthusiasm, as he usually did to Lotta’s suggestions.

“Then that is settled. We will have a day rambling and picnicking in the forest, and Tom shall show us the way. Oh, you needn’t look like that. We shan’t hang about and hinder you.”

“I wasn’t looking like that,” Tom protested. “I shall be very pleased to show you the way there and start you on your ramble. My picture will be ready to go on with in three or four days; say next Thursday. How will that suit you?”

“It will suit me perfectly,” she replied; and Bill having concurred, she added: “I suppose we shall have to take some food with us. How do you manage, Tom?”

“I take my lunch with me, but you needn’t. There is an excellent inn near High Beach called the King’s Oak, where you can get refreshment for man and beast.”

“I don’t quite like that expression,” said Lotta, “as only one of us is a man. But never mind. Now let us settle our arrangements. I think we had better meet and start from here, as I am here already and Bill isn’t a Londoner. Give us a time, and then we will go and leave you in peace.”

Tom suggested nine o’clock on Thursday morning, and, this having been agreed to, his visitors departed; whereupon, having cleaned his palette and washed his brushes and himself, he proceeded to lay the table—including in its furnishings Polton’s incomparable tankard—opened the haybox, and settled himself with deep satisfaction to the disposal of his evening meal.

Punctually, on Thursday morning, the two ramblers made their appearance at the rendezvous, and a few minutes later the party set forth for Fenchurch Street, Vanderpuye carrying the strapped stool and easel. An empty first-class compartment being easily obtainable at this time in the day, they took possession of one, and, having deposited Tom’s impedimenta on the hat rack, lit pipes and cigarettes and prepared to enjoy the journey. And a very pleasant journey it was (excepting the stop at Stratford, when mephitic fumes from some chemical works poured into the compartment and caused them hastily to pull up the window-glasses). Lotta was in buoyant spirits and rattled away gaily between the puffs of her cigarette, while the two men smoked their pipes and allowed themselves to be entertained.

“For a painter, Tom,” she remarked, as the train drew out of Woodford Station, “I consider you extraordinarily unobservant. You actually haven’t noticed my beautiful new locket.”

As a matter of fact he had, and thought it slightly unsuitable to the occasion.

“You are quite wrong, Lotta,” said he. “My eyes have been glued to it ever since we started, and I have been thinking what a remarkable genius the fellow must have been who designed it.”

“Now listen to that, Bill,” said she, selecting a fresh cigarette from her case. “Isn’t he a conceited fellow? Brazenly fishing for a compliment; and he won’t get one.”

“I knew that,” retorted Tom, “so I supplied the compliment myself. But it really does look rather fine, thanks to the brilliant way in which Polton carried it out.”
Lotta laughed scornfully. “Now he’s pretending to be modest. But it’s no use, Tom. We know you. Still, I agree that the little man did his part beautifully, and I am grateful to both of you, to say nothing of the generous giver.”

Here she bestowed an affectionate smile on the gratified Vanderpuye, who smiled in return as a man can afford to smile who has such a magnificent set of teeth. There followed a brief interlude in Lotta’s babblings while she lit and smoked the fresh cigarette. A few minutes later the train slowed down, and Tom, reaching down his property from the rack and slipping the strap of the satchel over his shoulder, announced:

“This is our station,” and prepared to open the door.

As the train came to rest, Vanderpuye once more relieved Tom of the folded easel and the three emerged on to the platform. Passing out of the station, they walked up the rather dull village street until they came to a large pond on the border of the forest. Here Tom turned off into a path which skirted the pond and presently entered a broad green ride. A short distance along this he entered a narrow green ride that led off to the left up a gentle incline and then down across the end of a little valley, the marshy bottom of which was covered with beds of rushes.

“This hollow,” Tom announced, “is called Debden Slade. May as well remember the name in case you have to ask the way. This path—what they call in the forest a green ride—leads, as you see, up the hill and directly to the corner of the ancient British fortification, called Loughton Camp, and passes round two sides of it.”

“But you are going to show us the way to it,” Lotta stipulated.

“Yes, I am coming with you as far as the camp, and, when you have seen it, I will set you on your road before we separate.”

“I suppose,” said Vanderpuye, “you know your way about the forest quite well?”

“Yes,” Tom replied. “I have done a lot of sketching and painting here in the last few years. It is quite easy to find your way about the forest after a little experience, but at first I always used to bring a large-scale map and a compass. This is the camp that we are approaching; the south side. We shall pass round it to the north-west side, and there our roads diverge.”

“But I don’t see any camp,” said Lotta, looking vaguely into the dense wood which seemed to close the green path that they had been ascending. “I can only see a high bank covered with a mass of funny little trees that look as if they wanted their hair cut.”

“It isn’t very distinct,” Tom admitted, “except on the map. But you must bear in mind that it was built two or three thousand years ago or more, and that it has probably not been occupied since the Roman invasion. In all those centuries the forest has grown over it and more or less covered it up. But you can make it out quite well if you climb up the bank through the trees and let yourself down into the enclosure. Then you can see that there is a roughly four-sided space enclosed by high earth walls or ramparts. But as it is all covered by a dense mass of those small trees, you can only see it a bit at a time.”

“But why are the trees so small?” Lotta asked. “There doesn’t seem to be a single full-grown tree among them, though, from what you say, they have had plenty of time to grow.”

“They are not young trees,” said Tom. “They are old dwarfs. The people of this manor used to have lopping rights. Consequently all the trees, as they grew up, were pollarded, and, every year the new branches that sprouted from the crown were lopped off for firewood, with the result that the trees are gnarled and stunted. They are rather uncanny in appearance, but not very beautiful.”

“No,” agreed Lotta, “uncanny is the word. They look like little witches with their hair standing on end. But the whole place is rather weird and solemn, especially when one thinks of the dead and gone Britons and the centuries that the camp has been lying desolate and forgotten. Those holes in the bank, I suppose, have been made by animals of some kind.”

“Yes. The small holes are usually rabbit burrows; the larger ones are fox earths.”

As they had been talking they had walked slowly along the green path in the deep shade cast by the pollard beeches that crowded the high bank of the old rampart. Presently they turned the corner of the camp and passed along the north-western side, until they reached a more open space where the green ride grew broader and turned sharply to the left while a narrower path led on straight ahead. At the point where the two paths separated Tom halted and held out his hand for the easel which Vanderpuye was still carrying.

“This is where we part company,” said he. “My way is by the little green path to Great Monk Wood, about three-quarters of a mile farther on. Yours is by the green ride along the crest of the hill; a pleasant walk with a delightful view all the way.”

“Yes,” said Lotta, looking across the open forest that stretched away from the foot of the hill, “it is a lovely view; and it seems a relief to be out in the open, away from that gloomy old camp and those unearthly, weird little trees. And yet, somehow, I find a curious fascination in that ancient fortress. I should like to get inside the walls and see what a British camp was really like. Wouldn’t you like to explore it, Bill?”

The amiable and accommodating Bill expressed the strongest desire to explore the camp and the profoundest interest in the Ancient Britons and their works.

“Well,” said Tom, “you can’t explore it to-day, because you would want a map and a compass and you ought to have a copy of the plan that was made when the Essex Field Club surveyed the camp. I have one filed away somewhere, so, if you
propose to make a serious exploration, I can lend it to you with a map of the forest and a compass. But now you had better stroll across to High Beach and learn to find your way about.”

“Yes,” agreed Vanderpuye, “that will be best, especially as we have brought no refreshment, and you say that there is an inn at High Beach where we can get some lunch. But we shall want you to direct us.”

“It is perfectly plain sailing,” replied Tom. “You see that clump of elms in the distance?”

“I see a clump of trees, and I take your word for it that they are elms.”

“Well, they are at High Beach, so, if you keep your eye on them you can’t go wrong. You have to follow this green ride along, the crest of the hill. About half a mile from here you will cross the Epping Road and half a mile farther on you will come to a green ride at right angles to this. Turn to the left and go along it and you will come to the King’s Oak inn, where you can stoke up if you want to. High Beach is only a few minutes’ walk from the pub along the same ride. So now you know all about it.”

He put the easel and canvas-carrier down on the turf and shook hands with the two ramblers, wishing them adieu and a pleasant journey. Lotta smiled slyly as she shook his hand and remarked to her companion:

“That means that he has had enough of our society, so we had better make ourselves scarce. Come along, Bill.”

The pair turned away to start on their walk, but Tom did not immediately resume his journey. His hands being free, he took the opportunity to fill his pipe in a leisurely fashion. But when it was full and ready for lighting, he still stood at the parting of the ways, following with a meditative eye the progress of the two adventurers as they stepped out briskly along the broad green ride. Once more Polton’s question recurred to him. What were the relations of these two persons? They had the manner of an engaged couple which they certainly were not; but were they lovers or only friends? In his own case, Lotta’s behaviour—apart from the verbal endearments—had been scrupulously correct. True, he had given her no opening for anything different, but still the fact remained that she had never made the slightest approach. Were her relations with Vanderpuye of the same platonic order? It seemed doubtful, for the conditions were not the same. Vanderpuye was no unwilling partner to this intimacy. From the first he had been Lotta’s ardent admirer; but from admiration to passion is but a short step; and passion, in his case and hers, could but lead straight to disaster.

Thus Tom cogitated as he stood looking at the two receding figures. Many a time in the months that followed did that scene recur to him; the long, straight, grassy ride with the figures of the man and woman stepping forward gaily and now growing small in the distance. And still his eyes followed them with an interest which he could not explain, until they reached a point where the ride described a curve; and here Lotta, glancing back and seeing him still standing there, waved her hand to him, and Vanderpuye executed a flourish with his hat. Tom returned their farewell greeting, and a few moments later they entered the curve and vanished behind the roadside bushes; where upon he lit his pipe, picked up his fardels, and set forth along the little green path for his pitch in Great Monk Wood.

He had told himself, and Polton, that the nature of Lotta’s relations with her African friend was no affair of his. And it was not. Nevertheless, as he strode along the narrow track through the silent and lonely forest, the question still occupied his thoughts; especially the question as to what was to be the end of it. For neither of the pair—and certainly not for Lotta—had he any strong personal regard; but he was a kindly man and it irked him to think of these two, heading, as he feared, for trouble. Particularly was he concerned for Vanderpuye; who, as an African, probably passionate and impulsive, and inexperienced in European ways, was the more likely to get himself into difficulties and to bear the brunt of any unpleasant consequences. For he was a barrister with a position to maintain and a future to consider. It would be a grievous thing if he should be involved in a scandal at the very start of his career.

At this point in his reflections he arrived at the forest opening which was the subject of his painting. He laid down his burdens, took off his satchel, and, having identified the holes in the ground made at his last sitting by the feet of his stool and easel, unpacked the latter and set them up in the old position. Then he fixed up the canvas, set his palette, made a careful and critical survey of his subject and compared it with the half-finished painting; and straightforward Lotta Schiller and her African friend faded from his thoughts and left him to the untroubled consideration of his work.

It was a lovely day despite the lateness of the month, and a beautiful scene. The noble beeches still bore many of their leaves, though these had now exchanged the tender green of summer for the gorgeous tints—all too fleeting—that marked the waning year. For four delightful hours Tom worked industriously, painting at the top of his form and enjoying every moment. Not a human creature came near him in all that time, though he received occasional visits from the non human people of the forest, as the landscape painter commonly does. An inquisitive squirrel played peep-bo with him round a tree and then came down and danced around him within a few feet of the easel. A pair of friendly blackbirds pursued their business close by, and once or twice a couple of the dark-coated forest deer stole across the opening, apparently oblivious of his presence.

At the end of the second hour he took what workmen call a “beaver”; a modest meal of bread and cheese (whereby the squirrel benefited to the extent of some morsels of bread and a piece of cheese rind), with a draught of beer from a large flask. Then once more he took up his palette and brushes and worked away steadily until the changing light told him that it was time to go; when he packed up tidily, lit his pipe, picked up his kit, and started back by the way he had come. At the junction of the two paths he paused to look along the green ride, though the afternoon was still young and his friends would hardly be returning so early. Nevertheless, as he took his way round the camp and back past the pond, he kept a half-unconscious look-out for them, and even at the station as he paced the platform they were still in his mind until the
train came in and bore him away alone.

During the next few days his thoughts turned occasionally to his two friends, with vague speculations as to how they had fared in the forest. He had rather expected a visit from Lotta, and, on the strength of that speculation, had looked out the map, the compass, and the plan of the camp to hand to her when she should call. But to his surprise—almost to his disappointment—she made no appearance, and, eventually he decided that she had given up the project of exploring the camp, and, having put the things back in their usual receptacles, he dismissed the matter from his mind.

Yet, as the days passed without the expected visit or even the customary chance meetings in the street, her complete disappearance from his orbit impressed him as a little odd. He was even faintly displeased; a state of mind which he, himself, recognized as rather strange and perverse. For it was only a few weeks ago, when he had been the unwilling cher ami, that his chief desire in life had been to be rid of her; whereas now, though he felt no great concern, still, he would have been quite pleased to find her on his doorstep. Once he had even contemplated calling to make inquiries, but discretion prevailed. He had no desire to revive that troublesome intimacy.

It is probable that, if nothing further had happened, the passing of Lotta out of his life would have been accepted and presently ceased to be noticed. But a new circumstance tended to revive his curiosity. Returning one day by way of Cumberland Market, and thus passing her house, he noticed that her brass plate was not in its usual place. It was not a fixed plate permanently secured to the wall, but was held in place by removable fastenings, and it had been Lotta's custom to take it down in the evening and replace it in the morning. Thus, when he noticed its absence, he assumed that she had merely forgotten to fix it up and thought no more about it. But, happening on the following day to glance at her door and again noting the absence of the plate, he gave the matter more attention; with the result that, after several daily observations, he decided that the plate had disappeared for good. Then, again, he had thought of calling, but now he was restrained by a fresh consideration. Possibilities which he had dimly envisaged might have become realized, and if so, it were well for him not to meddle in Lotta's affairs. On the other hand, he was now definitely anxious and a little disturbed, particularly on Vanderpuye's account, and it seemed to him that a few discreet inquiries through a third party might elicit the facts without committing him in any way.

Now the obvious third party was Mr. Polton. He was in touch with Vanderpuye and was certainly keeping an eye on the course of events. But the question was, how to get at Mr. Polton. Tom had never ventured to call on him as he resided on the premises of his employer, Dr. Thorndyke, and an uninvited visit would have seemed somewhat of an intrusion. Of course, he could have written to Mr. Polton, but that would have involved a direct inquiry, which he wished to avoid. His idea was that if he could contrive a meeting with his ingenious friend, the required information could be made to transpire naturally in a judiciously managed conversation, without his asking any questions at all.

The problem was, therefore, to find a pretext for a visit to Polton; a convincing pretext which would account for his having called rather than written. To the solution of this problem Tom addressed himself, and, being an eminently straightforward man, little addicted to pretexts of any kind, he had to give it a disproportionate amount of attention. And then the problem solved itself. Happening to pull out a drawer in which he kept miscellaneous oddments, he discovered in it the pedometer which he had been accustomed to carry on his expeditions in search of landscape subjects. For years it had served him well, but latterly it had become erratic in its action and so unreliable that he had ceased to carry it. So he had put it aside, intending some time to take Mr. Polton's opinion on it. But out of sight had been out of mind and the matter had been forgotten. Now, however, it gave him not a mere pretext but a reasonable occasion for the visit.

Accordingly he dispatched a short note to Polton, announcing his intention to call, and, if an interview should not be convenient, to leave the pedometer for a diagnostic inspection; to which Polton replied by return with a cordial invitation and the necessary directions to his domain in the premises.

VII. — OF A PEDOMETER AND A TRAGEDY

AT four o'clock precisely, on a bright December afternoon, Tom Pedley arrived at the entry of Number 5A King's Bench Walk, having made his way thither very pleasantly through the old-world courts of the Temple.

For a few moments he paused to examine with an artist's appreciation the fine red brick portico (commonly attributed to Wren), then he entered, and, following Polton's directions, ascended the stairs to the landing of the "Second Pair." As he reached it a door opened and his host came out to meet him.

"This is very pleasant, sir," said Polton, shaking hands warmly. "I don't often have a visitor, being a solitary worker like yourself, so your visit will be quite a little treat for me. Will you come into the laboratory? We are going to have tea in my room upstairs, but I am boiling the kettle here to avoid smoking it on the fire."

As they entered the large room Tom glanced about him curiously, noting that some of the appointments, such as a joiner's bench, a lathe, and a large copying camera, hardly accorded with his conception of a laboratory, and that a handsome copper kettle, mounted on a tripod over a Bunsen burner and a fine old silver teapot seemed to have strayed in from elsewhere.

"Perhaps, sir," suggested Polton, "we might have a look at the pedometer while the kettle is getting up steam."

Tom fished the instrument out of his pocket and handed it to him, whereupon, having opened the glass back, he stuck a
watchmaker’s eyeglass in his eye and examined the visible part of the mechanism.

“There doesn’t seem to be much amiss with it,” he reported, dancing the instrument up and down to test the lever; “just a matter of wear. The little spring click has worn short and tends to slip over the teeth of the ratchet wheel. That is a fatal defect, but it’s easily mended; and I may find some other faults when I come to take it down, as we say in the trade—that is, take it to pieces. At any rate it will be none the worse for a clean up and a touch of fresh oil.”

“I am afraid I am giving you a lot more trouble than I expected,” said Tom.

Polton looked up at him with his queer, crinkly smile.

“Trouble, sir!” he exclaimed. “It is no trouble; it isn’t even work. It will give me several hours’ pleasant entertainment, and I am much obliged to you for bringing me the instrument.”

In confirmation he produced from one of his innumerable pockets a small portable screwdriver and seemed about to attack the pedometer forthwith, when the kettle intervened by blowing out a jet of steam; whereupon he replaced the cap of the screwdriver, returned it to his pocket, and proceeded methodically to make the tea.

As he led the way upstairs, carrying the teapot while his guest followed with the kettle, Tom remarked on the comeliness of the latter.

“Yes, sir,” replied Polton, “it’s a fine old kettle. They don’t make them like that nowadays. I found it in a marine store in Portugal Street. Came from some old lawyer’s chambers in Lincoln’s Inn, I expect; and very shabby and battered it was, but I put a bit of work into it and made it as good as new. You see, sir, I rather take after you; I like the common things that I use and live with to be good and pleasant to look at.”

His statement was borne out by the aspect of the spacious room on the “Third Pair” which they now entered, where a tea-table, flanked by two easy chairs, stood before the fire. Tom, having deposited the kettle on a trivet, out of reach of the smoke or flame, sat down in the chair allocated to him and surveyed the prospect, while Polton did the honours of the tea-table; noting the well-filled book-shelves, the one or two pictures on the walls (including his sketch for “The Eavesdropper,” simply but tastefully framed) and a four-fold screen which he suspected of concealing a bed. It was all simple and plain, but the room and everything that was in it appealed quietly to Tom’s rather fastidious taste, even to the quaint old cottage clock that hung on the wall and hardly disturbed the silence by its homely tick.

“This is my private domain, sir,” said Polton, “but I don’t spend much time in it. The laboratory is really my home. I am an inveterate mechanic, always happiest at my bench. That pedometer of yours is quite a wind fall for me. May I ask how long you have had it?”

“I should say about a dozen years,” replied Tom.

“And do you find it fairly accurate? The experts on surveying dismiss the pedometer as a mere useless toy. What is your experience of it?”

“It is accurate enough for my purpose,” Tom replied. “I’m not a surveyor. I don’t deal in inches, but I find that it agrees pretty closely with maps and milestones, and that is enough for me.”

“The reason that I asked is that I had thought of getting one for Mr. Vanderpuye to take back with him. There won’t be many milestones in his country.”

“Is Mr. Vanderpuye going back to Africa soon?” Tom asked with suddenly awakened interest.

“Not very soon,” replied Polton, “because he has joined the Bar Mess at the Central Criminal Court and is attending the court regularly; that is, he has been since Mrs. Schiller went away.”

“Oh, she has gone away, has she?” asked Tom, considerably startled.

“Yes, sir; and I hope she will stop away, for, before she went, he used to neglect his work terribly. I am very much relieved that she has gone.”

“Do you know whether she has gone for good?”

“I am afraid not, sir. Of course, I couldn’t ask any questions, but I gathered from Mr. Vanderpuye that she had gone to stay with some friends at Birmingham. How long she will be away I have no idea, and I don’t believe he has.”

“I suppose you don’t know whether he corresponds with her?”

“I don’t actually know, sir, but I think not. My impression is that he doesn’t even know her address. Queer, isn’t it? But then she’s a queer woman. With all her flighty ways, she is uncommonly good at keeping her own counsel.”

This last observation rather impressed Tom; for now, reflecting on it, he suddenly realized how very little he knew about this strange woman. However, she was not his concern now that his anxieties on Vanderpuye’s account had been dispelled; and, as he had obtained the information that he had come to seek, he began to consider whether it was not time for him to go. Polton had duties of some kind, and a prolonged visit might be inconvenient. But when he made tentative signs of departure, his host protested:

“You are not going on my account, sir, I hope; because the Doctor is dining out to-night and I’ve got the evening to myself. Besides, now that he has given me an understudy to carry on in my absence, I am much freer than I used to be. Of
course, I mustn't detain you if you can't spare the time, but—"

In effect, Tom was very glad to stay, and said so, and, accordingly, having filled his pipe (at Polton’s invitation), settled down to spend a very pleasant and interesting evening. For his host, although an inveterate mechanic,” possessed a wealth of information on all sorts of curious and unexpected subjects; and when they had examined the remarkable technical library, the pictures on the wall, and the picturesque old clock (Polton’s chiefest treasure; a relic of the home of his childhood, which had come to him on the demise of a certain Aunt Judy), they subsided into their respective chairs to gossip discursively on the various subjects in which they had a common interest, with a general leaning towards “antiques.”

“To return to your pedometer, sir,” said Polton, when Tom finally rose to depart, “I shall look it over in my spare time, but it won’t take long. When it is done I will bring it round to your studio, if you will tell me when I shall find you at home.”

“It’s very good of you, Polton, but I think you had better settle the time. I can always stay in if I want to.”

“Then, sir, I would suggest next Thursday, about three o’clock if that will suit you.”

“It will suit me perfectly,” said Tom, taking up his hat and stick; and, having thus made the assignation, he shook hands with his host who, nevertheless, escorted him as far as the laboratory floor where they parted, Tom to make his way homeward and Polton, probably, to launch the attack on the pedometer.

During the next few days Tom gave only an occasional passing thought to Lotta. He was completely reassured. There had been no elopement or scandal of any kind, and that was all that mattered to him. As to the woman herself, he could only echo Polton’s wish that she might stay away as long as possible; and if she should never come back, her absence would create a void not entirely unacceptable. In fact he began to hope that she had passed out of his life, that he had, at last, really finished with her; and from vaguely hoping came gradually to believe that it might be so.

The disillusionment was sudden and violent. It synchronized with the arrival on the appointed day of his pedometer-bearing friend. At three o’clock to the minute on Thursday afternoon the studio bell rang, and Tom, hurrying out at the summons, found Mr. Polton on the wide doorstep. But he was not alone. Sharing the doorstep with him was an anxious-looking woman whom he recognized as his next-door neighbour, Mrs. Mitchens, who was also Lotta’s landlady. He had been on bowing terms with her for some years but had never spoken to her except to wish her good morning, and he now wondered what her business with him might be. But he was soon enlightened, for almost as he appeared at the door she asked in an agitated tone:

“Could I have a few words with you, Mr. Pedley?” (On which Polton tried to efface himself and prepared to sink in by the half-open door.) “It’s about Mrs. Schiller, sir.”

As she spoke the name Polton halted suddenly, and tried to look as if he were not listening.

“I have come to you, Mr. Pedley,” Mrs. Mitchens continued, “because you were a friend of hers and I thought you might know what has become of her. I haven’t seen or heard of her for quite a long time.”

“Oh, that’s all right, Mrs. Mitchens,” Tom answered cheerfully. “She has just gone away to stay with some friends at Birmingham.”

But Mrs. Mitchens did not look satisfied. “It’s very strange,” she objected. “She never said anything to me about going away, and the rent hasn’t been paid, though she was always so punctual. You are sure she has gone to Birmingham?”

Tom reflected for a moment and then, turning to Polton, asked:

“What do you say? Are we sure?”

“Well, sir,” was the reply. “I wouldn’t put it as high as that. I was told by Mr. Vanderpuye that Mrs. Schiller had told him that she was going to stay with friends at Birmingham. That is all. We don’t actually know whether she has or has not gone.”

“Then,” said Mrs. Mitchens, “I am afraid she has not gone.”

“Why do you say that?” Tom asked.

Mrs. Mitchens appeared to be in difficulties. “I hardly know how to express it,” she replied, “but there’s something wrong in her rooms. My husband and I have both noticed it, and it seems to be getting worse.”

“I don’t quite understand,” said Tom. “What is getting worse?”

“It is difficult to explain,” she replied, “but if you will be so good as to step into the hall, you will understand what I mean.”

Tom showed no eagerness to accept this invitation, but Polton, now all agog, requested the lady to lead the way and followed her with a purposeful air while Tom brought up the rear, and watched her gloomily as she inserted her latch-key.

But Mrs. Mitchens was right. No sooner had they entered the hall and shut the outer door than they both understood perfectly what she had meant. But the realization affected them differently. Tom shrank back with an expression of horrified disgust towards the outer door, whereas Polton, having sampled the air by a little diagnostic sniff, took the definite initiative.
"I presume, madam," said he, "that this door is locked?"

"Yes," she replied. "Locked from the inside."

"Well," said Polton, "that room ought to be entered; at once."

"That is what my husband said, and he tried it with one of our keys, but unfortunately the key is in the lock, and he didn't like to break the door open."

"No," Polton agreed, "it is better to use a key if possible. May I ask whether the lock has been used much?"

"Yes," she replied, "constantly. Mrs. Schiller always locked the door at night and whenever she went out."

"Ha," said he, "then it should turn pretty easily. It is sometimes possible," he continued reflectively, with his hand in an inner pocket, "to persuade a key round from the outside if it isn't too stiff. Now, I wonder if I happen to have anything in my pocket that would answer the purpose."

Apparently he had; for as he stooped to peer into the keyhole, his hand came out of the pocket holding an object that looked somewhat like a rather unusual pocket corkscrew fitted with some stout angular wire levers. One of these he inserted into the keyhole and pried about the interior of the lock while Mrs. Mitchens gazed expectantly at his hand, which concealed both the keyhole and the instrument.

"Yes," said he, "the 'thing'; and, as he spoke, the lock clicked, the instrument was withdrawn (disappearing instantly into the pocket whence it had come), and Polton turned the handle and tried the door, shutting it again immediately.

"It isn't bolted, you see, madam," said he, stepping back to make way for her.

She showed a natural reluctance to enter that mysterious and ominous room, but after a few moments' hesitation she grasped the knob, turned it softly, opened the door and stepped in. But even as she entered she uttered a low scream and stood stock still with the doorknob in her hand, staring before her with an expression of horror.

"Oh, the poor thing!" she exclaimed. "She has made away with herself. Do, please, come in and look at her."

On this, Polton entered the room followed by Tom, and for a while both stood by the door gazing at the tragic figure sitting limply with dropped head in a little elbow chair that had been drawn up to the table. The right arm hung straight down while the left lay on the table, and, close to the discoloured hand was an empty tumbler, and, a few inches away, a small glass water-jug and a little bottle containing white tablets.

"Poor creature!" moaned Mrs. Mitchens. "I wonder why she did it, so bright and cheerful as she always seemed. And how dreadful she looks, poor dear. I should never have recognized her."

Polton, meanwhile, had cast a keen glance round the room, and now, stepping forward, leaned over the table to scrutinize the tumbler and the bottle of tablets.

"What is in that bottle?" Tom asked.

"Cyanide of potassium," was the reply.

"That is a strong poison, isn't it?"

"A most deadly poison," Polton replied, "and extremely rapid in its action; quite easy to obtain, too, as you see from the label on this bottle—'Photographic Tablets'; easy to get and hard to trace."

"The tracing of them won't be of much importance in this case," remarked Tom, "as she poisoned herself. The question is, Why on earth did she do it?"

From the poison Polton turned his attention to the corpse; and, as he stood gazing at the dead woman, an expression of surprise and perplexity stole over his face. At this moment a beam of pale autumn sunlight shone in through the window, lighting up the fair hair to the brightness of burnished gold. This appearance seemed further to surprise Polton, for, with a distinctly startled expression, he stepped close to the corpse, and, delicately picking up a small tress of the golden hair, held it close to his face and scrutinized it intently. Then as if still unsatisfied, he gently raised the bowed head and looked long and intently into the poor bloated, discoloured face. Tom and the landlady both watched him in astonishment, and the former demanded:

"What is it, Polton?"

Polton, still holding the head erect, replied impressively:

"This woman, sir, is not Mrs. Schiller."

"Not Mrs. Schiller!" the landlady echoed. "But she must be. Who else could she be, locked in here in Mrs. Schiller's room?"

"This is certainly not Mrs. Schiller," Polton persisted. "I ask you, sir, to come and see for yourself. You knew her better than I did. You will see that the hair is the wrong colour and the features are different."

"I noticed the hair when the sun shone on it," said Tom, "and it struck me as being somehow changed. But as to the features, I should say that they are quite unrecognizable."

"Not at all, sir," replied Polton. "The skin is bloated, but there is the nose. That is unchanged, and so, more or less, is the..."
chi. And there are the ears; they are hardly affected at all. You had better come and have a look at her as the identification is most important.”

Thus urged, Tom plucked up courage to make a close inspection; and as Polton held the head up, he examined first the profile and then the ears. A very brief scrutiny satisfied him, for, as he backed away from the corpse, he announced:

“Yes, Polton, you are right. This is not Lotta Schiller. The nose and chin look the wrong shape, but the ears are quite conclusive. They are of an entirely different type from Lotta’s, and differently set on the head.”

“You really think, sir,” said the landlady, “that this poor creature is not Mrs. Schiller?”

“I feel no doubt whatever,” he replied; “and very much relieved I am that she is not.”

“So am I, for that matter,” said Mrs. Mitchens. “But how on earth does she come to be here? Locked herself in, too. It’s an absolute mystery.”

“It certainly is,” Tom agreed. “But it isn’t our mystery. It will be for the police to solve it.”

“That is true, sir,” said Polton, “though perhaps it may be more of our mystery than you think. But, of course, the police will have to be informed at once, and it will be for them to find out who this poor woman is, and how she came to be here. But there is one question that I should like to settle now; that is whether she took the poison herself, or whether it was given to her by someone else.”

“But,” Tom objected, “the police will deal with that question. It isn’t our affair.”

“It is not, sir,” Polton admitted. “But I should like to know, just for my own satisfaction. Do you happen to have a piece of fairly stiff smooth paper about you?”

With a rather puzzled air Tom brought out of his pocket the artist’s notebook that he always carried.

“Will that do?” he asked. “If it will, you can tear a leaf out, but don’t take one with a drawing on it.”

“I won’t tear the leaf out,” said Polton. “It will be handier in the book, and I shan’t want to keep it.”

He took the little canvas-bound volume, and, watched curiously by Tom and the landlady, went over to a small writing-table on which lay, beside the blotter, a rubber stamp and an inking-pad.

Taking up the latter, he carried it across to the table at which the dead woman was sitting, when he once more examined the tumbler as well as he could without touching it.

“The finger marks,” he observed, “look like those of a left hand; and as the left hand is near the tumbler we will try that first.”

Very gently, to avoid disturbing the body, he raised the hand, and, grasping the thumb, pressed it on the inking-pad. Then, laying down the pad and taking up the book, he brought the inked thumb over a blank page, pressed it down lightly and withdrew it. In the same way he took an impression of each of the four fingers, the group of prints being arranged in a line in their correct order, and, as soon as he had finished, he carefully wiped the traces of ink from the fingertips with his handkerchief. Softly laying down the hand, he placed the open book by the side of the tumbler and carefully compared the prints on each.

“Well,” said Tom, “what do you make of it?”

“The prints on the tumbler are her finger-prints all right,” replied Polton. “Would you like to see them?”

Tom’s principal desire now was to escape from the charnel-house atmosphere of this room, but, as Polton evidently wished him to see the prints, he went over to the table.

“My prints are very poor, smeary impressions,” said Polton, “but you can see the patterns quite well. Look at the thumb-print with that spiral whorl on it, and compare it with the one on the tumbler. You can see plainly that it is the same pattern.”

“Yes,” Tom agreed, “I can make that out quite clearly; but the patterns of the fingers don’t seem so distinctive.”

“No,” Polton admitted, “they are rather indistinct for some reason, especially in the middle of each print. But still, if you compare them with the tumbler, you can see that the patterns are the same.”

“I’ll take your word for it,” said Tom, “as you know more about it than I do. And, after all, it isn’t our affair whether she took the poison herself or not. Of course, the police will settle that question, and if you take my advice, you will say nothing about these finger-prints. The authorities don’t much like outside interference.”

“I think Mr. Pedley is right,” said Mrs. Mitchens. “We don’t want to appear officious or meddlesome, and we certainly don’t want to offend the police.”

“No, ma’am,” Polton agreed, “we do not. It will be much better to keep our own counsel; which, in fact, is what I had intended to suggest. I made the trial just to satisfy my curiosity as to whether it was a case of suicide or murder.”

“Well,” said Tom, edging towards the door, “now we know; and the next question is, who is to inform the police?”

As he raised the question he looked significantly at Mrs. Mitchens, who replied gloomily, as they retired to the hail:
"I suppose, as I am the householder and Mrs. Schiller’s landlady, I had better go. But I can’t tell them much, and I expect they will want to question you about Mrs. Schiller."

"I expect they will," said Tom, "but, meanwhile, I think you are the proper person to give the information."

With this view Polton agreed emphatically, and, by way of closing the discussion, softly drew the key out of the lock, closed the door, and, having locked it, withdrew the key and handed it to the landlady. Then he and Tom, after a few words of condolence with Mrs. Mitchens, took their leave and made their way to the studio.

"Pah!" exclaimed Tom, taking several deep breaths as they emerged into the open air. "What a horrible affair! But I suppose you are used to this sort of thing."

"To some extent, sir," replied Polton. "I have learned from the Doctor not to allow my attention to be distracted by mere physical unpleasantness. But what a mysterious affair this is. I can make nothing of it. Here is a woman, apparently a stranger, locked in Mrs. Schiller’s room with Mrs. Schiller’s key. All sorts of questions arise. Who is she? How did she get that key? Why did she come to that place to commit suicide—if she really did commit suicide? And where is Mrs. Schiller? The police will want to find answers to those questions, and some of them will take a good deal of answering, I fancy."

"Yes," Tom agreed gloomily, "and they’ll look to us to find some of the answers. It is going to be an infernal nuisance."

When they had washed—which Tom did with exhaustive thoroughness—in a big bowl in the studio sink, they resumed the discussion while they laid the table for tea and boiled the kettle. But nothing came of it beyond bringing to light, the curious difference in their points of view. To Tom, the tragedy was repulsively horrible and his connection with it profoundly distasteful. Interest in it or curiosity he had none.

Polton, on the other hand, so far from being shocked or disgusted, seemed to savour the details with a sort of ghoulish relish and fairly to revel in the mystery and obscurity of the case; so much so that Tom’s repeated efforts to divert the conversation into more agreeable channels failed utterly, and, for the first time in his experience, he was almost relieved when the time came for Polton to return to his duties.

"Well," the departing guest remarked as he wriggled into his overcoat, "this has been an eventful afternoon. I have enjoyed it immensely." Here he paused suddenly in his wrigglings, gazing at Tom in ludicrous consternation. "God bless me, sir," he exclaimed, "I had nearly forgotten the pedometer. I have cleaned it up and put it in going order, and I have fitted a new regulator with a micrometer screw and attached a watch-key to turn it with. You will see at once how it works, but I have written down a few directions."

He produced the instrument, wrapped in tissue paper, and laid it with the little document on the table. Then, deprecating Tom’s grateful acknowledgments, he shook hands and bustled away, en route for the Temple.

---

**VIII. — REVELATIONS**

WHEN Polton’s departure had left him to the peaceful enjoyment of his own society, Tom Pedley tried to dismiss from his mind the gruesome experience of the afternoon and settle down to his ordinary occupations. But try as he would to forget it, that dreadful figure, seated at the table, intruded constantly into his thoughts and refused to be dislodged; and when, later in the evening, the studio bell announced a visitor, he resigned himself to the inevitable, and went out to the gate, where, as he had expected, he found a police officer waiting on the threshold.

"You’ll guess what I have come about, sir," the latter said, genially, as Tom conducted him to the studio; "just to make a few preliminary inquiries. I am the coroner’s officer and it is my job to find out what evidence is available for the inquest."

"Well, Sergeant," said Tom, "I will give you all the help I can, though I am afraid it will be mighty little. However, if you will take a seat and tell me what you want to know, I’ll do my best. Perhaps a glass of beer might be helpful."

The sergeant agreed that it might; and when he had been settled in an easy chair by the fire with a jug of beer and a couple of glasses on a small table by his side, and had—by invitation—filled and lighted his pipe, the inquisition began.

But we know what Tom’s information amounted to. Of the material facts of the case he knew nothing. The dead woman was a stranger to him, and even Lotta Schiller was little more; indeed, as he strove vainly to answer the sergeant’s questions, he was surprised to find how completely ignorant he was of her antecedents, her position in the world, her friends and relations, of everything, in fact, concerning her except the little that he had gathered from direct observation.

"Seems rather a mysterious sort of lady," the sergeant remarked as Tom refilled his glass. "Pretty discreet, too; not given to babbling. Is there anybody that knows more about her than you do?"

Tom suggested Mr. Vanderpuye, but as the latter’s address was unknown to him, he referred the sergeant to Mr. Polton.

"That’s the gentleman who unlocked the door from the outside," commented the sergeant. "Handy gentleman he must be. Yes, I’d like to have a word with him if you would tell me where to find him."

"He is a laboratory assistant to Dr. Thorndyke of 5A King’s Bench Walk, and he lives on the premises."

At the mention of “The Doctor’s” name the sergeant pricked up his ears.

“Oh, that’s who he is," said he. "Would be a handy gentleman, naturally. I’ll just pop along and see what he can tell me."
Do you think it is too late to call on him to-night?"

Bearing in mind Polton’s intense interest in the case, Tom thought that it was not; whereupon the sergeant, having finished his beer and removed his pipe, prepared to depart.

“We shall want his evidence,” said he as he moved towards the door, “to prove that the door was really locked from the inside; and as to yourself, sir, although you don’t seem to have much to tell, I expect you’ll get a summons. Something new might arise which you could throw light on. However, the inquest won’t be opened for some days as time has to be allowed for the analysis after the post-mortem.”

Events justified the sergeant’s forecast. In due course the summons was served, and, at the appointed place and time Tom presented himself to give evidence if called upon. He arrived a little before time and thereby secured a reasonably comfortable Windsor armchair, in which he sat at his ease and observed the arrival of the other witnesses, among whom were Mrs. Mitchens, his friend, Dr. Oldfield, Polton and Vanderpuye—who arrived together—and last, no less a person than his old acquaintance, Detective-inspector Blandy.

“Hallo, Pedley,” said the doctor, taking the adjoining chair, “sorry to see you mixed up in a disreputable affair like this. Extraordinary business, though, isn’t it? Ha, here comes the coroner and the jury; they’ve been to view the body, I suppose, and look as if they hadn’t enjoyed it. Well, how are you? I haven’t seen anything of you for quite a long time; not since you took up with that painted Judy that I have seen you gadding about with.”

Tom reddened slightly. He had, in fact, rather neglected his friends since Lotta had taken possession of him. However, there was no opportunity to rebut the accusation, for the coroner, having taken his seat and glanced round at the witnesses and the reporters, proceeded to open the inquiry with a brief address. It was a very brief address; no more than a simple statement that “we are here to inquire into the circumstances in which a woman, whose name appears to be Emma Robey, met with her death. I need not,” he continued, “go into any particulars, as these will transpire in the depositions of the witnesses; and by way of introducing you to the circumstances I will begin by taking the evidence of Sergeant Porter.”

On hearing his name mentioned, Tom’s new acquaintance took up his position at the table and stood at attention while he disposed of the preliminaries with professional swiftness and precision and waited for the next question.

“I think, Sergeant,” said the coroner, “that you had better just tell us what you know about this affair”; whereupon the officer proceeded, with the manner of one reading from a document, to recite the facts.

“On Thursday the 30th of December 1930 at 3.46 p.m., Mrs. Julia Mitchens came to the police station and reported that she had found in a room in her house the dead body of a woman who was a stranger to her, and who had apparently committed suicide by taking poison. She stated that the room had been let to, and was ordinarily occupied by, a Mrs. Schiller, but that the said tenant had been absent from her rooms for some time and that her present whereabouts was unknown. In answer to certain questions from me, she gave the following further particulars”—here the sergeant gave a more detailed account of the events, including the unlocking of the door by Mr. Polton “with some kind of instrument,” which we need not report since they are already known to the reader.

On receiving these particulars, he had accompanied Mrs. Mitchens to her house and had been admitted by her to the room, where he found the corpse and the other objects as she had described them. Having given a vivid and exact description of the room, the seated corpse, the tumbler and the poison bottle, he continued:

“As the circumstances were very remarkable, I decided to make no detailed examination without further instructions, and, accordingly I came away, having locked the door and taken possession of the key, and returned to the station, where I made my report to the Superintendent. When he had heard it, he decided that it would be advisable to inform the authorities at headquarters of the facts so far known and directed me to telephone to the Criminal Investigation Department at Scotland Yard, which I did, and was informed in reply that an officer was being dispatched immediately. I also telephoned to the Divisional surgeon, acquainting him with the facts and asking him to attend as soon as possible.

“In about twenty minutes, Inspector Blandy of the C.I.D. arrived by car, and, almost at the same moment, the Divisional Surgeon, Dr. Oldfield. Acting on instructions, I conducted them to the house, number thirty-nine Jacob Street, and admitted them to the room. When the doctor had made his examination he went away, but I stayed for about ten minutes to assist the inspector with his examination. Then I handed him the key and came away, leaving him to continue his investigations.”

At this point the sergeant made a definite pause, looking inquiringly at the coroner, who said, in answer to the implied question:

“Yes, Sergeant; and, as Inspector Blandy is here to give evidence, I don’t think we need trouble you for any further particulars, unless the jury wish to ask any questions.”

The jury did not, and accordingly, when the depositions had been read and signed, the sergeant retired to his place behind the coroner, and the name of the next witness, Dr. Oldfield, was called.

The doctor, like the sergeant, made short work of the preliminaries, and, having been accommodated with a chair and started by the coroner, reeled off his evidence with similar ease and precision. But we need not report it verbatim. The general description of the corpse and its surroundings merely repeated that of the previous witness, but from this the doctor continued:
“I examined the body carefully as I found it, especially in relation to its position in the chair. It seemed very insecurely balanced, in fact it appeared to be supported almost entirely by the arm which was extended on the table. When I lifted this clear and let it hang down, the body slipped forward in the chair and would have slid to the floor if I had not propped it up.”

“You seem to attach some significance to this condition,” said the coroner. “What did it suggest to you?”

“I think it is a fact worth noting,” the doctor replied cautiously, “but I would rather not go beyond that, except to say that it seemed somewhat against the probabilities. I should have expected that at the moment of death, when all the muscles suddenly relaxed, the body would have slipped forward out of the chair.”

The coroner pondered this careful answer for a few moments and then asked:

“Could you judge how long deceased had been dead?”

“Only approximately. I would say about three weeks.”

“Did you discover anything further?”

“Not on this occasion, but I examined the body very thoroughly at the mortuary and drew up a detailed description, mainly for use by the police. Do you wish me to give those details?”

“It is not actually necessary,” the coroner replied, “but perhaps it would be as well to put the description on record in the depositions. Yes, let us have the full details.”

The witness accordingly proceeded: “The body was that of a woman of about thirty, apparently married, as she was wearing a wedding ring, but there were no indications of her having borne a child. Her height was five feet six and a quarter inches, weight one hundred and twenty-four pounds—eight stone twelve. Figure spare, in fact definitely thin. Complexion fair, hair flaxen or golden. Its length suggested that it had been bobbed some time ago; now a little below the shoulders. Eyes apparently grey, but it was impossible to judge the exact tint owing to the condition of the body. For the same reason, the features were a little obscure but it could be seen that the nose was rather small, of the concave type with a slight prominence on the bridge. The mouth medium sized and apparently well shaped. The ears were more distinctive and less changed; they were slightly outstanding, thin in all parts with hardly any lobule, and set obliquely on the head. The line of the jaw was also markedly slanting and the chin was pointed and slightly receding.

“As to the identity of deceased, I was present when the clothing was removed from the body and I examined each garment. Two of them were marked in ink with the initials ‘ER.’; one was marked in ink ‘E. Robey’; and a small fancy handkerchief in the skirt pocket bore the name ‘Emma’ embroidered in white silk. That completes the description of deceased.”

“Yes,” said the coroner, “and a very full and clear description it is. There ought not to be any difficulty in getting the body identified. And now we come to the question of the cause of death. Were you able to ascertain that?”

“Yes. The cause of death was poisoning by potassium cyanide. The dose taken was very large, fully sixty grains, and death probably occurred almost instantaneously, or, at most, within a minute or two.”

“Is potassium cyanide a very powerful poison?”

“Yes, very. It contains prussic acid in a concentrated form and acts in the same way and with the same violence and rapidity.”

“What is the lethal dose?”

“It is usually given as less than five grains, probably as little as two and a half grains, but, as in the case of most poisons, the effects vary in different individuals. But a dose of sixty grains is enormous.”

“Did you make the analysis yourself?”

“Yes, in conjunction with Professor Woodfield. When I made the post mortem, I removed the organs and took them in sealed and marked receptacles to the laboratory of St. Margaret’s Hospital, where the professor and I made the analysis together.”

“The poison was derived, I suppose, from the tablets of which we have heard?”

“So one would have assumed, and analysis proved that the tablets were really composed of potassium cyanide. But when we came to make the examination, a very curious fact transpired. The quantity of the poison taken was at least sixty grains; the tablets were shown by the label on the bottle to contain five grains each, and we verified this by analysis. The quantity taken was therefore equal to twelve tablets. But there were not twelve tablets missing from the bottle. The label showed that the bottle, when full, had contained fifty tablets of five grains each, so that if twelve had been consumed there should have remained thirty eight. But there were forty-three, or five more than there should have been.”

“That doesn’t seem to me very conclusive,” the coroner objected. “There might have been some error in filling the bottle. Don’t you think so?”

“No, sir,” Oldfield replied firmly. “We excluded that possibility. I purchased two fresh bottles from the makers, and the professor and I each counted the tablets. There were exactly fifty in each bottle; and the important fact is that each bottle was quite full. Neither would hold another tablet. Then we tried the bottle that was found on the deceased’s table, and the
result was the same; it would hold fifty tablets and not one more. A single extra tablet prevented the complete insertion of the cork.

The coroner appeared deeply impressed. “It is a most extraordinary thing,” said he, “but there seems to be no doubt of the facts. Can you suggest any explanation?”

“The only explanation that occurs to me is that the poison taken was not derived from the tablets at all. Part of it certainly was not, and if a part came from another source it is most probable that the whole of it did. The facts suggest to me that a solution of the cyanide was prepared in advance, and that it was this solution which was swallowed by deceased. But that is only my opinion.”

“Exactly. But if your view is correct, why were the tablets there?”

“That,” Oldfield replied, “is not strictly a medical question.”

“No,” the coroner agreed with a smile, “but we needn’t be too pedantic. You have considered the question, I think, and we should like to hear your conclusion.”

“Then I may say that the tablets appeared to me to have been put there designedly to support the idea of suicide.”

The coroner apparently considered this a rather lame conclusion, for he did not pursue the subject, but returned to the analysis.

“Did your chemical examination bring out anything more?”

“Yes, another very significant fact. At my suggestion, Professor Woodfield tested the material for morphine, and I assisted him. The result was that we discovered undoubted traces of the drug, though the condition of the body did not admit of anything like a reliable estimate of quantity. But morphine was certainly there, and in an appreciable amount, as was proved by our getting a positive reaction. A very small quantity would not have been discoverable at all.”

“Can you give us any idea as to the amount that had been taken?”

“We agreed that our results suggested a full, but not very large dose; not more than a third of a grain, or at the outside, half a grain.”

“But isn’t half a grain rather a large dose?”

“It is a very large dose if given hypodermically, but not so excessive if swallowed. Still, one doesn’t usually give more than a quarter of a grain.”

“You said just now that the morphine test was made at your suggestion. What made you suspect the presence of morphine?”

“It was hardly a suspicion. The possibility occurred to me, and it seemed worth while to test it.”

“But what suggested the possibility?”

“The idea arose from a consideration of the extraordinary circumstances of this case. Taken at their face value, the appearances point definitely to suicide. But yet it is impossible to rule out the alternative of homicide by the forcible administration of poison. It is very difficult, however, to compel a person to swallow even a liquid against his will, and the attempt would involve considerable violence, which would leave its marks on the body. But if the victim could be given a full dose of morphine beforehand, he would become so lethargic and passive that the poison could be administered quite easily.

“In this case, I searched carefully for bruises or other signs of violence but I found none; which seemed to exclude the suggestion of homicide, but only on the condition that no narcotic had been taken. It was then that I decided to test for the most likely and most suitable narcotic—morphine.”

“And having found it, what do you infer? You seem to imply that its presence suggests homicidal poisoning.”

“I would not put it as high as that; but if there should be other evidence creating a presumption of homicide, the presence of the morphine would be strong corroboration.”

This completed the doctor’s evidence, and, when the depositions had been read and signed, he was informed that he was free to go about his business. He elected, however, to return to his seat to hear the rest of the evidence, and to jot down a few notes.

“I think,” said the coroner, “that if we take the inspector’s evidence next, we shall have all the known facts of the case and can fill in details later from the evidence of the other witnesses.”

Accordingly, Inspector Blandy, having, at the coroner’s invitation, taken possession of the vacated chair, bestowed a benevolent smile on the jury and ran off the preliminaries with the air of one pronouncing a benediction. Then, in reply to the opening question, he introduced his evidence by a general statement which, in effect, repeated those of the preceding witnesses. Having described the room, the corpse, the table, and the various objects on it, he continued:

“When the doctor had finished his examination, I proceeded with my own, beginning with the tumbler and the water-jug. On these were a number of finger prints, mostly very distinct, and apparently, all made by the same hands. Those on the water-jug were from a right hand and those on the tumbler were from the left. I took the finger-prints of deceased on
small cards and compared them with those on the tumbler and the water-jug, and I can say, positively, that they were the same. All the prints on the jug and the tumbler were certainly those of deceased’s fingers, and there were no others.

"Would you regard that as conclusive evidence that deceased took the poison herself?"

"No, certainly not. Anyone having control of the dead body could easily have taken the finger-prints of deceased on the jug and the glass. The evidential value of the finger-prints is dependent on the other evidence."

"You have heard that deceased was locked in the room and that the key was on the inside."

"Yes," the inspector agreed, beaming benignly on the coroner, "but I have also heard that the door was unlocked from the outside by Mr. Polton; and he could as easily have locked it from the outside, leaving the key inside. In fact, the thing is frequently done by criminals, especially by hotel thieves, who have a special instrument made for the purpose, somewhat like a dentist’s root-forceps. With this they can grasp the key from the outside, unlock the door, commit their robbery, and, when the go away, relock the door from outside, leaving the key inside."

"Have you any reason to believe that the door of the deceased’s room was locked from the outside in this way?"

"Not with the instrument that I have mentioned. That instrument, having roughened jaws, usually leaves little scratches on the key. I examined the key for scratches, but there were none. Nevertheless, I believe that the door was locked from the outside and that a very simple improvised apparatus was used. Perhaps I had better explain the method before giving the reasons for my belief. The procedure—which is well known to the police—is this: The key is placed in the lock so that a quarter turn will be enough to shoot the bolt; then a small rod such as a thick match, a skewer, or a lead pencil, is passed through the bow, or handle, of the key and a loop at the end of a length of string is hitched on to the rod. The string has to be kept fairly tight to prevent the loop from falling off. The operator now goes out, closing the door after him, keeping the tightened string in the space between the edge of the door and the jamb, and well above the level of the key; then he gives a steady pull at the string with the result that the leverage of the little rod turns the key and shoots the bolt of the lock. When the key has made a quarter turn and locked the door, the loop slips off the rod, the string is pulled out through the crack of the door, and the little rod either drops on the floor or is flicked out of the key and falls some distance away."

The coroner looked a little dubious. "It sounds very ingenious," said he, "but rather risky for a person who has just committed a murder. Suppose the plan should fail."

"But it couldn’t fail, sir," the inspector replied. "If it did not work the first time, all he would have to do would be to open the door and try again. Perhaps a demonstration will make it clear."

He opened the attaché-case that he had brought with him and took out a flat slab of wood to which a lock had been attached and a through keyhole made. Inserting a key, he produced a thick match and a length of string with a loop at the end. Passing the match through the bow of the key, he held it there while he slipped the loop over it and drew the string fairly taut.

"Now," said he, "observe what happens. The key is towards you and I am on the outside of the door."

He held the slab firmly on the table, brought the tightened string round to the back, and gave a steady pull. Instantly, the key was seen to turn, the bolt shot out, the loop slipped off the match, and the latter, flicked out of the key, flew along the table.

The effect of the experiment was unmistakable. The jurymen smiled and nodded, and even the coroner admitted his conviction.

"And now, sir," said the inspector, picking up the match and viewing it through a lens, "I will ask you to examine this match. Near the middle you will see a little indented curved line on one side, and, on the opposite side, about half an inch nearer the head, a smaller, less distinct mark. Then, at the other end of the match, where the loop of the string caught it, you will see four little dents, one at each corner; and if you place the match in the key, as it was when I pulled the string, you will see that the two dents on the side correspond exactly with the sharp edges of the key-bow."

He illustrated the method and then passed the match together with his magnifying glass to the coroner, who examined it with intense interest and then passed it to the jury.

"Well, Inspector," said the coroner when the match had gone the round, "you have given us a most conclusive demonstration, and I am sure that we are all convinced of the practicability of the method. The next question is, Have you any evidence that it was actually used?"

The inspector’s answer was to open once more his attaché-case and take from it a corked glass tube containing a single large match, the end of which bore a spot of red sealing-wax. Then from his pocket he produced a key, and, taking the match from its tube, laid it and the key on the table before the coroner.

"This match," said he, "which I have marked with sealing-wax to prevent mistakes, is, as you see, a large-size Bryant and May. I found it on the floor of the room (which I will call ‘deceased’s room’) under a small cabinet, two feet, three inches from the door. This is the key with which that door was locked. On the match are six indentations exactly like those on the other match, which you have. The two side indentations correspond exactly with the sharp edges of the key-bow. I have no doubt that this match was used to lock that door; and I am confirmed in this by having found on the arris, or sharp corner of the edge of the door, an indented mark at exactly the spot where the string would have passed round, as proved by actual trial. I can’t produce the door, but I have here a heel-ball rubbing which shows the mark distinctly."
He handed the sheet of paper to the coroner, who, having examined the rubbing, and passed it to the foreman of the jury, turned once more to the witness.

“You have given us, Inspector, a very complete and convincing demonstration; and there now arises from it another question. This key which you have shown us apparently belongs to the door of the room in which the body of deceased was found. But whose property is it? The presumption is that it belongs to the tenant of the room, Mrs. Schiller. But is it actually her key, or only one similar to hers? Can you tell us that?”

“Only by hearsay. I am informed by Mrs. Mitchens that this key is the actual key that she gave to Mrs. Schiller. She can identify it by a mark that was made on it. As she is one of the witnesses, she can give you the particulars first-hand; but I think there is no doubt that this is Mrs. Schiller’s own key.”

“Then the next question is, Where is Mrs. Schiller?”

The inspector smiled a pensive smile. “I wish,” he replied, “that I could answer that question. Ever since the discovery, we have been trying to get into touch with her, but we cannot learn anything as to her whereabouts. She is said to be in Birmingham, but that is a rather vague address even if it is correct. We have advertised in the papers, asking, her to communicate with us, but there has been no reply.”

“In effect, then, she has disappeared?”

“That is what it seems to amount to. At any rate she is missing.”

“The importance of the matter is,” said the coroner, “that if this is her key, there must have been some kind of contact between her and deceased.”

“Precisely, sir,” Blandy agreed. “That is why we are so anxious to get into touch with her.”

This was the inspector’s final contribution, and, when he had signed the depositions and retired to his seat, the name of Julia Mitchens was called, and that lady proceeded to give her evidence, which was largely negative. She had never seen or heard of a person named Emma Robey. Of her tenant, Mrs. Schiller, she knew practically nothing. The lady had engaged the ground-floor rooms, furnished, but had added some furniture. No references were given but the rent was paid—in cash—monthly, in advance. She had said that she needed no attendance but wanted to be left alone to do her work, which was that of an artist. Witness seldom saw her excepting when she paid the rent. She was pleasant in manner but not intimate. She had a separate electric bell with a small brass name-plate for it, and a removable brass plate on the wall, which she took down every evening. She had her own latch-key and keys of the bedroom and the sitting-room. The bedroom door was kept locked, and she always locked the sitting-room door when she went out.

Witness never saw any visitors except Mr. Pedley and a coloured gentleman, and them very rarely. Had known Mr. Pedley by sight for some years. Does not know whether Mrs. Schiller ever stayed away from home. Had noticed the absence of the plate from the wall for about three weeks, and, later, had become aware of an unpleasant odour in the hall.

“To come back to the subject of the keys,” said the coroner. “A key was found in the lock of the sitting-room door. If Inspector Blandy will lend us that key for a moment, can you tell us for certain whether it is the one that you gave to Mrs. Schiller?”

“I am sure I can, sir,” was the reply.

Here the inspector produced the key, and, having taken the precaution to tie a small piece of string round the bow, passed it to the coroner who handed it to the witness.

“Yes, sir,” said Mrs. Mitchens after a single glance at it, “this is Mrs. Schiller’s own key.”

“You speak quite confidently,” said the coroner. “How are you able to distinguish this key from all other keys?”

“It is this way, sir,” she replied. “When Mrs. Schiller engaged the rooms there was a big old-fashioned lock on the sitting-room door with a large clumsy key. Mrs. Schiller found this very inconvenient, so I got the locksmith to fix a more modern lock with a smaller key. He supplied two keys with the lock and I decided to keep one in reserve in case the other should be lost; but I thought it better to mark the two keys to prevent mistakes, so my husband filed a nick on the handle of the one that Mrs. Schiller was to have, and two nicks on the other to show that it was the duplicate. This key has one nick, so it must be Mrs. Schiller’s, and here is the duplicate with the two nicks on it.”

As she spoke, she took a key from her handbag and laid it, with the other, on the table.

The coroner took up the two keys and having rapidly compared their bows, passed them to the jury, from whom they presently found their way back to their respective owners.

“This evidence,” said the coroner, “is very important and perfectly conclusive. We now know for certain that the key which was found in the door was Mrs. Schiller’s own key. How it came there, Mrs. Schiller alone can explain. I suppose,” he added, turning to the witness, “you cannot give us any hint as to where she may possibly be?”

“No, indeed, sir,” was the reply. “I had no idea that she had gone away; and when I first noticed the—er—unpleasantness, I thought she was lying dead in her room.”

“By the way, you had the duplicate key. Why did you not try to enter that room?”

“We did try, sir; but the other key was in the lock.”
“Yes, of course. Well, Mrs. M itchens, you have given us some very important evidence, and now, if nothing else occurs to you I think we need not detain you any longer.”

The next witness was Tom Pedley. But Tom knew nothing about anything, and said so. To his relief no questions were asked about Lotta’s artistic abilities; and the only contribution that he made was a brief history of his acquaintance with Lotta, a very definite statement of his relations with her and a rather sketchy description of the expedition to Epping Forest, that being the last occasion on which he had seen her. He was followed by Nathaniel Polton, who testified that the door was undoubtedly locked when he tried it, and, from the smoothness with which the key turned, he inferred that the lock had been kept oiled. He had had no difficulty in unlocking it with a simple bent wire appliance (which he had unfortunately forgotten to bring with him) and could with equal ease have re-locked it. He knew nothing of Mrs. Schiller, who was virtually a stranger to him.

The evidence of the last two witnesses had been “harkened to” by the jury with somewhat languid interest; but when the name of the next witness was called and the rather commanding figure of Mr. William Vanderpuye arose, attention was visibly sharpened. Realizing this, the new witness, striking in appearance and faultlessly “turned out,” seemed, naturally, a little self-conscious as he walked across to the table; but, having been sworn, he stated his personal particulars—as a barrister of the Inner Temple—confidently enough and thereafter gave his evidence clearly and with perfect dignity and composure.

Of the tragedy, itself, he knew nothing and had heard of it first from the coroner’s officer. He had never seen or heard of a person named Emma Robey, and the circumstances connected with her death were entirely unknown to him. This closed the first part of his examination and the rest of his evidence was concerned exclusively with Lotta Schiller. Having described the opening of his acquaintance with her in Tom Pedley’s studio, he answered the coroner’s questions frankly and fully though he volunteered nothing.

“Did you see much of Mrs. Schiller?” the coroner asked.
“Yes; for a time I used to see her almost daily, and we often spent whole days together.”
“And how did you spend your time on these occasions?”
“Principally in seeing the sights of the town: theatres, concerts, cinemas, museums and picture galleries. We took our meals at restaurants.”
“Did you usually meet by appointment?”
“No, I nearly always called for her at her rooms, and saw her home at night.”
“When you saw her home, did you go into the house?”
“No, never. I just saw her to her door. When I called for her I used sometimes to go in for a few minutes, but never at night.”
“I am going to ask you a question which you are not bound to answer if you have any reasons for objecting. It is this: What were your exact relations with Mrs. Schiller? Were you just friends, or were you on affectionate terms, or were you, in effect, lovers? Remember, I am not pressing you for an answer.”
“There is nothing that I need conceal,” Vanderpuye replied calmly. “We were rather more than ordinary friends. I may say that our relations were affectionate, at least on my side; I can’t answer for her, though she seemed rather devoted to me. But we certainly were not lovers.”
“You were not, for instance, on kissing terms?”
“No, I never kissed her. She made it quite clear that kissing was not permissible.”
“Reference has been made to certain lockets that were exchanged. You would not regard them as love-tokens?”
“No. They were made at her suggestion to serve as souvenirs when I should have gone back to Africa.”
“When did you last see Mrs. Schiller?”
“On the eighteenth of November, the day of our trip to Epping Forest which Mr. Pedley has spoken of.”
“Would you give us some particulars of what happened after you parted from Mr. Pedley?”
“We walked across to High Beach, as he had directed us, and had lunch at the King’s Oak. Then we went for a ramble in the forest and soon lost our way. After wandering about for a long time we met a forester who directed us to Loughton, and, with some difficulty, as it was then getting dark, we found our way there and eventually caught a train to London. I saw her home and said good-night to her on her doorstep at about half-past nine. It was in the train that she first told me that she was going to stay with some friends at Birmingham.”
“Did she give you her address there?”
“No. She said that it would be best that no letters should pass between us and that she might be visiting friends elsewhere; but she promised to let me know when she would be returning, though she did not know when that might be. Since then I have neither seen her nor heard from her.”

This was the substance of Vanderpuye’s evidence, and, after one or two further questions, which elicited nothing new,
the coroner glanced through his notes.

“I think the witness has told us all that he knows about this strange affair, and, unless the members of the jury wish to put any questions, we need not detain him any longer.”

He glanced inquiringly at the jurors, and, as no one made any sign, the depositions were read, the signature added, and the coroner, having thanked the witness for the frank and helpful way in which he had given his evidence, released him; whereupon he retired to his chair beside Mr. Polton.

The next witness—who proved also to be the last—was a small elderly woman of somewhat foxy aspect who advanced to the table with a complacent smirk and gave her evidence readily and with obvious enjoyment. Her name was Jane Bigham, address, 98 Jacob Street, no occupation except that she supplemented the small income left to her by her late husband by knitting socks and other articles for sale. She usually sat at the window, partly for the sake of the light, but principally because, being an expert knitter who had no need to keep her eyes on her work, she could entertain herself by observing what was going on in the street. She knew all her neighbours by sight and a good deal about their habits and doings; and as her house was exactly opposite that of Mrs. Mitchens, she had often seen Mrs. Schiller. She remembered that lady moving in with her little bits of furniture about six months ago, and the brass plate being fixed up (“which I went across the very same day to read the name on it”).

“You seem to have taken an interest in Mrs. Schiller,” the coroner remarked with a smile.

“I did sir. I wondered what a woman like her was doing in our quiet street with her paint and her powder and her high-heeled shoes; in fact I suspected that she was no better than she ought to be.”

“Very few of us are, Mrs. Bigham,” said the coroner, “but it is not a crime to wear high-heeled shoes or to paint and powder. Most women do nowadays.”

“So they do, sir, the more shame to them. At any rate, within a week of her coming, I saw her go to Mr. Pedley’s door and ring the bell, and when he opened the door I could see that he didn’t know her, and looked as if he didn’t want to. But she went in and stayed half an hour. After that she often used to go there, and once or twice Mr. Pedley went to her rooms about tea-time, and sometimes they used to come home together as if they’d met somewhere.

“Then, a month or two later, a coloured gentleman appeared on the scene—the one that has just given evidence, Mr. Vanderboy. At first he used to go to Mr. Pedley’s, and she seemed to know that he was there for she would slip round and ring the bell and then she and Mr. Vanderboy would come out together. Then he took to calling for her and they would go off together and not come back until night—sometimes quite late.”

Here an intelligent juryman protested that “we had all this before,” and the coroner agreed that “we had better get on. Will you kindly tell us,” he continued, “when you last saw Mrs. Schiller.”

The witness directed a baleful glance at the jurymen and replied after a resentful sniff:

“About three weeks ago, it would be. I saw her come home with Mr. Vanderboy about half-past nine at night, and, by the look of her I reckoned she’s had a drop too much.”

“What made you think that?” the coroner demanded.

“Well, sir, she looked a bit unsteady on her legs, and she held on to his arm; which was not her ‘abit. And then when they came to the door, it was him that put in the latch-key and opened it and helped her in.”

“Did, he go into the house?”

“Yes, and he stayed there about an hour and a half, for I saw him come out at a few minutes past eleven. I just chanced to go to the window at that time” (the coroner smiled grimly at the coincidence) “and there he was coming out carrying a bag—or a small suitcase it might have been—which he hadn’t got when he went in; and mighty careful he was not to make a noise, for, instead of slamming the door, he put in the latch-key and closed the door without a sound. Which was curious, for it seemed as if he had a latch-key of his own.”

“Did you ever see Mr. Vanderpuye go into the house on any other occasion?”

“Well, I can’t say that I ever did. But if he had a latch-key—”

Here the intelligent jurymen interrupted with the question:

“Can the witness swear, sir, that the man she saw was Mr. Vanderpuye?”

“What do you say, Mrs. Bigham?” the coroner asked. “Are you perfectly certain that the man was Mr. Vanderpuye?”

“Well, sir, he certainly looked like him. Besides, who else could he have been?”

“The question is, did you clearly and definitely recognize him as Mr. Vanderpuye?”

“Why, as to clearly and definitely recognizing a person across the street on a dark December night, and no street lamp near, it’s hardly possible. Of course, I couldn’t see the colour of his features, but he looked to me like Mr. Vanderboy. Besides, who else could he—”

“Never mind who he might be. Can you swear that he was Mr. Vanderpuye and not some other man; Mr. Pedley, for instance?”
“Lord! I never thought of that. Perhaps you’re right, sir, being next door, too. But no, it couldn’t have been, because I saw him walk away towards Hampstead Road.”

“I was not suggesting that the man was Mr. Pedley. I was merely giving an instance. The fact is that you did not actually recognize him at all. You assumed that he was Mr. Vanderpuye. Is that not so?”

The witness reluctantly admitted that it was; and the coroner then proceeded to the identification of the woman with a similar result. There had been no actual recognition. The witness had taken it for granted that she was Mrs. Schiller because “she certainly looked like her, and then who else could she be?” etc.

By this time the coroner and the jury had had enough of Mrs. Bigham, who was, accordingly, dethroned and sent back regretfully to her chair. Then Mrs. Mitchens and Vanderpuye were recalled and briefly re-examined, but neither could throw any light on the incident. Mrs. Mitchens and her husband were early birds and usually retired to their bedroom in the second-floor back at ten o’clock; and Vanderpuye repeated his statement that he had never entered the house at night. This completed the evidence and the coroner proceeded at once to his brief but lucid summing up.

“I need not, members of the jury,” he began, “weary you with a recapitulation of the evidence which you have listened to so attentively, but merely suggest to you the conclusions which seem to emerge from it. Our function is to ascertain when, where, and how deceased, a woman of whom we know nothing but that her name was Emma Robey, came by her death. The place we know was 39 Jacob Street; the exact date is less certain; but the death occurred about three weeks before the discovery of the body on the thirtieth of December, that is approximately on the ninth of December. The cause of death was a very large dose of potassium cyanide either taken by deceased herself, or given to her by some other person. If she took the poison, herself, she may have done so inadvertently, or with the deliberate intention of taking her own life. If it was given to her by some other person, that person is guilty of wilful murder.

“There are thus three possibilities: accident, suicide, and murder. Accident we may dismiss since there is no evidence suggesting it; and we are left with the alternatives of suicide and murder. Now what evidence is there to support the theory of suicide? There are two facts which, taken together, seem at the first glance to point conclusively to self-destruction. First, the finger-marks on the tumbler and water-jug were undoubtedly those of deceased’s own fingers. Secondly, deceased was found alone in a locked room, the door, itself, locked from the outside and could as easily have locked it destroys at once the conclusive significance of that item of evidence. It proves that it was possible for the door to have been locked from the outside. But the inspector’s evidence goes further. It goes to prove that the door was, in fact, locked from the outside. I need not remind you of his convincing demonstration, but I must impress on you the enormous evidential value of the match which he found. That match bore marks that exactly fitted the bow of that particular key and also the clear impression of a loop of string. It was found close to the door in the position in which one would have expected to find it if it had been used in the way which he described and demonstrated; and the door, itself, bore a mark of the exact kind and in the exact place in which it would have been made by a taut string used in that way. On the supposition that the door had been locked from the outside with a match and string, all those appearances are perfectly consistent and understandable. On any other supposition they are completely incomprehensible. I submit that there is no escape from the evidence of that match. We are compelled to believe that the door was locked from the outside and therefore that it could not have been locked by deceased.

The doctor’s evidence concerning the morphia—or morphine, as it is now usually called—which he found in the body, and the significance which he attached to it, was very striking; but it became much more so when we had heard the evidence of Mrs. Bigham. We may disregard her identification of the two persons whom she saw as a mere guess, and probably wrong at that. But what her evidence did prove was that on a certain dark night about three weeks before the discovery of the body (which had been dead about three weeks), a man and a woman entered that house by means of a latch-key.

“Now, who were these two persons? Let us first consider the woman. Mrs. Bigham assumed that she was Mrs. Schiller, from which we may infer that she either was Mrs. Schiller or a woman who might have been mistaken for her. But deceased was actually mistaken for Mrs. Schiller by Mrs. Mitchens and Mr. Pedley, both of whom knew the latter well. It is thus possible that the woman seen by Mrs. Bigham was Emma Robey; and it is here that the doctor’s evidence is so important. The woman looked to Mrs. Bigham as if she were the worse for drink; and the medical witness swore that deceased had taken a considerable dose of morphia. But a person under the influence of morphia might easily be mistaken for one under the influence of alcohol. So that the evidence establishes a rather strong probability that the woman Mrs. Bigham saw was actually the deceased.

“Now let us consider the man. Of his personal appearance we can say no more than that Mrs. Bigham took him to be Mr. Vanderpuye and that there was probably some general resemblance as to age and figure. That, however, is a mere surmise. But there are three facts which seem to be profoundly significant. This man opened the door with a latch-key; but as he might have received it from the woman, that circumstance has no great importance. The three strikingly significant facts
that I allude to are: first, that he still had the key in his possession when he came out; second, that he took extraordinary precautions against noise by easing the door to with the key; third, that when he came out he was carrying a bag or suitcase which he was not carrying when he went in.

“What was he doing with that latch-key, which was certainly not his, whoever he was? The strong suggestion is that he had kept it for the express purpose of shutting the door silently. But why that strange, stealthy exit? Why was he so anxious that his departure should not be known to the inmates of the house? Finally, whose bag was it that he was carrying, and what was in it? When we ask ourselves those questions, remembering that this man had been in the house, apparently alone with the woman, for an hour and a half, the answer seems to be that his behaviour is singularly suggestive of that of one escaping from the scene of a crime and taking with him certain inculminating objects connected with it. That, I say, is the suggestion. It is nothing more, taken alone. But taken together with the evidence of the doctor and the inspector, it is, perhaps, more than suggestion. That is for you to judge. When you consider your verdict you will have to decide between two alternatives: did deceased meet her death by her own act or by the act of another; did she commit suicide or was she murdered? That is the issue, and I leave you to consider it.”

The silence that settled down on the court as the coroner concluded his address was of short duration; so short as to suggest that the jury had already made up their minds; for within a couple of minutes the foreman announced that they had agreed on their verdict.

“We find,” said he, in answer to the coroner’s question, “that deceased died from the effects of poison, administered to her by some person unknown.”

“Yes,” said the coroner, “that is a verdict of wilful murder. I shall enter it as such, and I may say that I am in full agreement with you.”

This brought the proceedings to an end. The witnesses, spectators, and reporters rose and began to file out of the court: Dr. Oldfield bustled out to his waiting car with the inspector, and Tom Pedley, Polton, and Vanderpuye went off together en route for the studio.

IX. — WHERE IS LOTTA?

The inquest and the events which had preceded it had broken in on the quiet current of Tom Pedley’s life leaving him somewhat unsettled, and as the day following the inquiry found him disinclined for regular work he devoted it to a survey of his stock of materials and the drawing up in his note-book of a list of deficiencies. The process disclosed the fact that the book which he was using was nearly full and that he had no other to replace it. Now, Tom’s note-books were no mere ready-made productions which could be bought when required. They had been designed by, him with careful thought as to suitability of size, shape, thickness, and binding, and were specially made for him, of a selected paper which was good for pen or pencil, or, at a pinch, a wash of colour, by the artists’ colourman in the Hampstead Road. He usually ordered a dozen at a time, and each one, as it became used up, was provided with a date label on the back and was stowed away on a shelf with its predecessors to form part of an ever-growing series.

It was an admirable plan; for not only did the series furnish a store of material for reference, but, since Tom invariably dated his sketches no matter how slight, and even the written notes, the collection served as a fairly complete diary and a record of his doings and his whereabouts on a given date. Accordingly, having added to his list a dozen of the indispensable note books, he set forth at once for the establishment of the provider.

As he turned the corner of Jacob Street into the Hampstead Road, he perceived, a short distance ahead, his old acquaintance Inspector Blandy in earnest conversation with Mrs. Bigham; and as he had no desire for a meeting with either the inspector or Mrs. Bigham (whom he privately regarded as an inveterate “Nosy Parker”), he mended his pace and assumed an air of intense preoccupation. But it was of no use. Both saw him at the same moment; and the inspector, hastily detaching himself from the lady, advanced to meet him, holding out his hand and beaming with benevolence.

“This is a stroke of good fortune for me,” he exclaimed, pressing Tom’s hand affectionately, “I have been wanting to have a word with you and now here you are.”

Tom agreed, cautiously, that there he was and waited for developments.

“The matter is this,” the inspector explained: “We have been trying to get into touch with Mrs. Schiller but we haven’t succeeded. Either she hasn’t seen our advertisements or she is keeping out of the way; and, as she won’t, or at least, doesn’t, come forward, we must take more active measures. To do that, we must have a full and exact description of her, and the question has arisen, how are we to get it? Now, as soon as that question arose, my thoughts naturally turned to you. Mr. Pedley, I said, with his remarkable powers of observation and his wonderful visual memory, will be able to give us a description that will be as good as, or even better than, a photograph.”

“Is Mrs. Schiller under suspicion?” Tom asked, warily.

“Suspicion!” the inspector repeated in a shocked tone. “Certainly not. Why should she be? But she could give us invaluable information respecting that key, for instance, and perhaps about Mrs. Robey and those other unknown persons. I trust you won’t refuse us your help. It is to her interest as well as being a matter of public policy that this mystery should be cleared up.”
“I shouldn’t be prepared to give a description offhand,” said Tom.

“Of course you wouldn’t,” Blandy agreed. “The visual memory must have time to operate—but not too much time, as the matter is urgent. I suggest that you think it over and jot down a few notes.”

“And post them to you,” Tom suggested, hopefully; but the inspector amended:

“Hand them to me, personally. You see, they might need some explanation and amplification. Would it be possible for me to call for them at your studio this evening?”

Deciding that it would be best to get the business over at once, Tom assented, and, when the hour of 7.30 had been agreed on, he shook the inspector’s hand and left him to rejoin Mrs. Bigham (who had been lurking observantly in the offing) while he hurried away to the shop of the artists’ colourman.

Having transacted his business there, he came away, and turning northward, started on a brisk walk through the quiet squares to consider the situation. The whole affair was extremely distasteful to him. He had no love for Lotta Schiller, but she had been in a sense his friend, and his natural loyalty revolted against the idea of his aiding the police in their pursuit of her; for that was what it amounted to in spite of Blandy’s indignant protest. Obviously, she was under suspicion; but to what extent and how justly Tom did not like to ask himself. However, he had no choice. A crime had been committed and it was his duty as a good citizen to give what help he could to the police in their investigation of it; and having reached this conclusion, he turned his face homeward to give effect to it.

Once embarked on the description, he carried it out with his customary thoroughness. On one of the few remaining pages of his note-book, he jotted down his recollections of Lotta, point by point, referring back to the memory sketches that he had made of her for details of the profile, and trying to visualize her as completely as was possible. The result rather surprised him; for though he had seen her often enough and observed her with a certain disapproving interest, he had not expected that his memory would have yielded a description so vivid and so full of detail.

When he had completed his notes, he took a sheet of paper and wrote out a fair copy, thereby making the production of the note-book unnecessary; and he had but just finished this when, punctually to the minute, the studio bell rang, whereupon he pocketed the note book and went out to admit the inspector.

“This is extraordinarily kind of you, Mr. Pedley,” said Blandy as he entered and smiled a general benediction on the premises, “to let me take up your valuable time in this way. But I mustn’t take up too much of it. Are these the notes?”

He picked up the copy which Tom had placed on the table, and, laying down a portfolio that he had brought (which Tom instantly recognized as Lotta’s) glanced rapidly through the notes, while Tom speculated anxiously on the significance of the portfolio.

“Astonishing!” Blandy exclaimed as he finished the preliminary reading. “One might have thought that you had the lady before you as you wrote. What a wonderful thing is the artist’s visual memory. You seem to have observed and remembered everything, even to the difference between the two ears. By the way, what exactly does a Darwinian tubercle look like? Perhaps a slight sketch on the back of this paper—”

Tom took the copy from him, and, turning it over made a rapid but careful pencil sketch of a right ear, showing the feature in question.

“Oh, thank you,” said Blandy, taking the paper from him. “I see. This little projection on the edge is the tubercle. But tell me; does this drawing represent that particular ear in other respects?”

“It does as nearly as I can remember.”

“That is good enough for me. And now with regard to the hair; I am not quite clear about that. You say, ‘Hair unusual in colour; between light brown and flaxen, but of a peculiar texture which makes the colour seem variable.’ Could you amplify that description?”

“Well,” said Tom, “I am not very clear about it myself, as I have never seen any other hair quite like it. I might compare it to shot silk. You know what that looks like; changes in colour when you move it about and let the light fall on it differently; green, it may be, in one position, and violet in another. Of course, Mrs. Schiller’s hair doesn’t change to that extent, but it does seem to change; quite golden in one light and almost brown in another.”

“You don’t think it may have been dyed or faked in some way?”

“That is possible. Light hair dyed black sometimes looks red or purple when the light shines through it, but I never got the impression that her hair was dyed. However, I expect you know more about faked hair than I do.”

The inspector admitted that it might be so, and, having entered the “amplification” on the back of the sheet, put one or two questions concerning the other items of the description. When these had been disposed of, he carefully put away the document, and, after a few moments’ reflection, asked:

“By the way, Mr. Pedley, when did you last see Mrs. Schiller?”

“On the day of the Epping Forest jaunt, I parted from her and Vanderpuye close by the Ancient British camp, they taking the green ride towards High Beach and I going on to Great Monk Wood. We said ‘good bye’ at the corner, and I never saw her again.”
“Rather odd, that. Don’t you think so?”

“I did at the time, but then I didn’t know she was going away. In fact, I expected that she would look me up within a day or two, and I even got out a map of the forest and a large-scale plan of the British camp to show or lend her.”

“Why did you do that?” asked Blandy.

“I thought she intended to make another visit there. She seemed greatly interested in the camp, and she proposed to Vanderpuye that they should come another day and explore it; and, as he agreed, I took it as a settled thing.”

“You don’t happen to know whether they did make another visit there?”

“They couldn’t have done, as Vanderpuye never saw her again after that night. You heard him say so at the inquest. But what I can’t understand is why she made the proposal when she had already decided to go to Birmingham.”

“Yes,” the inspector agreed, thoughtfully, “it does seem a bit inconsistent. I wonder—”

But what he wondered never transpired, as he left the sentence unfinished and Tom did not pursue the subject. A brief silence followed. Then the inspector said, taking up the portfolio:

“I am going still further to trespass on your forbearance. Would you be so very kind as to look at these paintings of Mrs. Schiller’s and give me your opinion of them?”

“I am not a critic, you know, Inspector,” Tom protested. “My job is to paint pictures, not to judge other people’s work.”

“I know,” said Blandy, “and I understand your delicacy. But the point is this: is Mrs. Schiller an artist at all or is she an impostor? Now, look at that.” He drew forth the painting of Adam and Eve and laid it on the table. “It looks to me like a child’s drawing, and not a clever child at all.”

Tom had to admit that it did, “but,” he added, “there is a new fashion in art which accepts childish drawing as the real thing. I don’t understand it, but the highbrow journalists do. Why not get an opinion from an art critic?”

Blandy shook his head. “That is no use to me, Mr. Pedley. I don’t want to hear a man expound theories or spin phrases. I am out for facts. Now you are a genuine artist. I can see that for myself. You know what a competent artist is like, and I ask you to tell me, in confidence, whether Mrs. Schiller is a bona fide artist or only an impostor. Remember, I am a police officer seeking information, and I think you ought to be frank with me.”

“Well, Inspector,” said Tom, “if it will help you, I will tell you what I know, but I don’t want to offer mere opinions. I know that Mrs. Schiller can’t draw and can’t paint, and that she seems to have no natural aptitude for painting. Whether she is or is not an impostor, I can’t tell you. If she honestly believes that she is an artist, she is suffering from a delusion; if she knows that she is not an artist, but pretends that she is, she is an impostor. That is all I can say.”

“It’s enough for me,” said Blandy. “I can answer the other question for myself. And now I will just pop round and put this portfolio back where I found it; and I can’t thank you enough, Mr. Pedley, for the generous way in which you have placed at my disposal your vast stores of knowledge and experience and your really astonishing powers of memory.”

With this final flourish, he shook Tom’s hand affectionately and allowed himself to be escorted to the gate.

Having launched his visitor into the street, Tom returned to the studio breathing more freely and hoping that he had now heard the last of the unpleasant affair in which he had become involved. And, in the days that followed, that hope seemed to be justified. Gradually he drifted back into his ordinary ways of life, now working in the studio at a new subject picture and now going forth in overcoat and warm gloves to make a rapid winter sketch in some accessible country district. An occasional glance at a newspaper told him that the mysterious Emma Robey was still unidentified and that the search for the equally mysterious Mrs. Schiller had yielded no results. But, beyond a faint curiosity as to what part Lotta had played in the crime and a hope that she was not in for serious trouble, he was not much interested. His principal desire was to be left alone to get on with his painting.

About three weeks later he made a fresh contact with the case, but it was such a slight one that, at the moment, it caused him no concern. It is true that when, in answer to the summons of the bell, he went out to the gate and found Inspector Blandy on the threshold, he was slightly disturbed that officer announced his harmless mission.

“I am ashamed, Mr. Pedley, to come pestering you in this way, but I won’t detain you a minute. You were so kind as to mention, when I last called on you, that you had put out a plan of the British camp at Loughton to show or lend to Mrs. Schiller. Now I have come to ask if you would be so very good as to let me see that plan.”

“But, of course, Inspector,” Tom replied, ushering him into the studio. “Do you want to look at it here, or would you like to take it away with you to study at your leisure?”

“That is a most generous suggestion, sir,” said Blandy (who had obviously come to borrow the plan). “I didn’t dare to make it myself, but if you would be so extremely kind—”

“Not at all,” Tom replied, opening a cupboard and running his eye along the shelves. “Ah, here we are. It’s really a pamphlet, you see, with a folded plan bound up with the text, so you’ve got all the information together. I hope you will find it useful, and you needn’t be in any hurry about returning it.”

He handed the little volume to the inspector, who, having glanced at it, slipped it into his pocket and then tactfully retired, discharging volleys of thanks on the way to the gate. When he had gone, Tom returned to the studio and prepared
to resume his work; but, for once, his curiosity was definitely aroused. It had really been a rather odd transaction. For what purpose could the inspector require the plan? And why had he suddenly developed this curious "interest" in the British camp? These questions Tom continued to revolve in his mind at intervals for the rest of the evening, but answer there was none. He could make nothing of it, and at last put it away with the reflection that he could only wait and see what came of it.

He had not long to wait. On the following morning when he went forth to do his modest shopping, he was confronted with a staring poster outside the newsagent’s announcing in enormous type: "Jacob Street Murder: Dramatic Development," and straightway went in and bought a paper. A single glance at the scare headlines on the front page enlightened him sufficiently as to the purpose of the inspector’s visit and he folded up the paper and pocketed it for more leisurely perusal when he had finished his shopping.

At length, having completed his round, he re-entered the studio; deposited his parcels on the table, drew out the paper, and subsiding into the easy-chair, read through the account in all its detail. Omitting the typographical flourishies, it ran as follows:

"Yesterday morning a forester, making his round through that part of Epping Forest which constitutes Loughton Manor, made a startling discovery. Following the green path that skirts the ancient British earthworks known as Loughton Camp, he noticed among the roots of the trees half-way up the bank, and nearly hidden by the fallen leaves, a lady’s handbag. Climbing up the bank and brushing aside the leaves, he picked it up, and, having noted the initials, L. S., on the outside, opened it to see if it bore any clue to the identity of the owner. Inside it he found, among other things, a leather card-case containing a number of visiting cards, and on drawing one out he read on it, 'Mrs. L. Schiller, 39 Jacob Street, Hampstead Road, London.'

"Recognizing the name from the Press notices that he had read, he immediately realized the importance of the discovery and proceeded without delay to Loughton Police Station where he delivered the bag to the officer in charge and described exactly the place where he had found it. A preliminary inspection showed that the bag contained, in addition to the visiting cards, two objects of considerable interest. One was a small blue handkerchief bearing the name, 'Lotta,' embroidered in blue silk, in one corner, and closely resembling the handkerchief found on the person of the murdered woman, Emma Robey; the other was a leather key-pouch with a separate swivel for each key. There were six swivels but only four keys; and it could be seen, by the distinct impressions on the leather, that the two missing keys were, respectively, a latch-key and the key of a room door or the door of a large cupboard. Having made his inspection, the superintendent reported by telephone to headquarters at Scotland Yard, and meanwhile dispatched a detective officer to accompany the forester to the place where the bag was found, to mark the spot and to keep it under observation until he was relieved.

"In reply to the telephone message, the superintendent was informed that a C.I.D. officer was being sent down to conduct inquiries; and about an hour later a police car arrived bearing Detective-inspector Blandy and Sergeant Hill, both of the C.I.D. These two officers, having seen and taken possession of the bag, were conducted to the spot where the local detective was waiting, and, with his assistance and that of the forester, they made a systematic search of the immediate locality. As nothing further came to light there, they climbed the bank and descended into the area of the camp, where they separated and carried out a methodical search of the ground, which was covered by a dense growth of pollard hornbeams and a thick mantle of dead leaves.

"For some time the search was without result; but at length it was rewarded by a new and most significant discovery. Tucked away in a hollow between the roots of a small hornbeam, the sergeant espied a gold locket, whereupon he signalled to the inspector and meanwhile made a distinguishing mark on the tree. Examination of the locket showed it to be a handsome and valuable trinket, richly ornamented with enamel and bearing the engraved initials, 'L. S.,' and when it was opened, one side was seen to be occupied by a portrait of a coloured gentleman in a wig and gown while the other held what at first looked like the hair-spring of a watch but was in fact a single coiled hair of the African type, presumably from the head of the legal gentleman.

"The rest of the search yielded no further discoveries, but these two relics of the missing woman furnish abundant material for speculation; for instance—"

Here the writer illustrated the point by various speculative suggestions, which we need not quote, and to which Tom paid little attention as they contained nothing that he did not know. But as he reflected on the facts disclosed, certain uncomfortable questions presented themselves and demanded answers.

What had really happened to Lotta? Had she been lured to that solitary place and made away with? That was the plain suggestion; and it seemed to be the one adopted by the police, judging by the inspector’s sudden interest in the plan—after the finding of the locket—which hinted at a further and more thorough exploration. But what could she have been doing in the forest? When and why had she gone there? Who was her companion, and what was the connection between the new tragedy and the murder of Emma Robey? That there was some connection seemed to be proved by the vanished keys and the curious resemblance of the two handkerchiefs; and this latter seemed to hint at some complicity on Lotta’s part.

But it was all very obscure and confusing. Tom could make nothing of it and finally decided to wait for further developments, and meanwhile to avoid as far as was possible letting his thoughts dwell on it. Which was a decision more easily formed than carried out. For though he had never had any great liking for Lotta, it troubled him deeply to think that any mischance might have befallen her and still more to suspect her of a guilty connection with a most atrocious crime.
X. — THE CAMP REVISITED

ONCE again, Tom Pedley stood at the parting of the ways outside the ancient British camp looking thoughtfully along the broad green ride that leads towards High Beach. Under the grey winter sky the scene lacked the beauty and gaiety that had charmed him when he had last looked on it, with the late autumn sunshine lighting up the gorgeous raiment of the beech-trees and sprinkling the bushes with gold and the turf with emerald, yet the picture came back to him, not for the first time, with singular vividness; the two figures stepping out gaily and babbling cheerfully as they went, dwindling to the eye with every pace, and at last, halting at the curve to make their farewells. Little had he thought as he returned Lotta's greeting that he was looking his last on her; that the wave of her hand was a final farewell and that as she turned and disappeared round the bend, she had passed out of his ken for ever.

His presence in the forest was not entirely voluntary. He had not wanted to come. But his friend, Polton, had entreated him so earnestly to seize this opportunity (which he, the said Polton, had secured), that Tom had not the heart to disappoint him. So here he was, taking as little advantage of the opportunity as he could decently manage with due regard to his friend's feelings.

The occasion was the complete and final exploration of the ten or twelve acres of land enclosed by the ramparts, with the object of clearing up the mystery of Lotta Schiller's disappearance. The prima facie appearances strongly suggested that she had been murdered; and if she had, the overwhelming probability was that her body had been concealed in this enclosed space. Hence, the police, feeling that all doubts on the subject should be set at rest as soon as possible, had decided that the suspected area must be examined with such conclusive thoroughness as to settle the question finally.

But there was a difficulty. Since the camp was scheduled as an ancient monument, promiscuous digging was inadmissible. That difficulty, however, was easily disposed of. To an expert eye, any disturbance of the surface, no matter how artfully disguised, is instantly discernible, and there is no lack of expert eyes in the Criminal Investigation Department. Eventually it was arranged that the Office of Works should send a representative and that the C.I.D. officers, under Inspector Blandy, should be assisted by certain competent volunteers from the Essex Field Club, and by Mr. Elmhurst, the eminent Kentish archaeologist, whose great experience in the excavation of ancient sites had commended him both to the police and the Office of Works. Thus was ensured a most complete exploration of the precincts with security against possible damage to the camp from an antiquarian point of view.

Now, it happened that Mr. Polton got wind of the proposed investigation and was forthwith all agog to be present; for that cunning artificer had followed with eager, almost ghoulish, interest every phase of the crime whose discovery he had witnessed. And now the final act of the tragedy was about to be played with the possible exhumation of a corpse as its climax. It was too much for him. By hook or by crook he must manage to secure a front seat. And he did. By an artful and persuasive offer to his old acquaintance, Inspector Blandy, of assistance in the matter of photography and plaster moulding, he succeeded in extracting an invitation from that suave and polite officer. But more than this; representing to the inspector the invaluable service that Tom Pedley might render in identifying objects or remains (and really convincing him this time), he got the invitation extended, much more to his own satisfaction than to Tom's. So here they were with the assembled explorers, Polton following every movement with devouring interest while Tom browsed about in the neighbourhood of the camp and made occasional visits of inspection.

The examination was conducted with professional thoroughness. The precincts being marked out into sections by pencil lines on the plan, each section was pegged out on the ground and dealt with exhaustively before passing on to the next. No labourers were employed, the whole procedure being carried out by the skilled explorers, who tenderly removed the thick mantle of dead leaves, almost leaf by leaf, to ensure that the actual surface should be exposed quite undisturbed. And it was well that they did; for the very first section uncovered showed the traces, faint but quite recognizable, of two pairs of feet, those of a man and a woman.

"They are not very good prints," said Blandy when Polton offered to take casts and a photograph. "Made through the leaves, apparently. We'll cover them up for the present and see if anything better turns up."

Accordingly an empty sack was laid, carefully, on the footprints and the examination proceeded. The next section showed more prints, but these also were rather shallow and blurred, suggesting some thickness of dead leaves between the feet and the earth; and so it went on for two more sections, each showing faint impressions of the two pairs of feet, and all of them displaying the prints of those feet in parallel pairs, implying that the two persons were walking side by side.

At this point the inspector, who had been anxiously poring over the plan, called out to Sergeant Hill:

"Aren't we getting near the tree that we marked, Sergeant? I put a pencilled cross on the plan, but that was only guesswork, away from the place."

"I think you are right, sir," the sergeant replied, "it was somewhere about here. I'll just go on ahead and see if I can find it."

He walked forward, treading delicately on the russet carpet of leaves and peering among the weird-looking dwarf beeches and hornbeams that jostled one another in the precincts, like a crowd of fantastic hamadryads, and spread out their contorted roots over the surface. Then he disappeared into the miniature forest, and for a time, soft rustlings from the coppice announced his unseen activities. Suddenly, a louder sound, as of a falling body, with expletory accompaniments, was borne to the inspector's ears, and a few moments later the sergeant reappeared with a slightly uneven gait.
“Tripped over one of those damned roots,” he explained, stooping to rub his right foot, “but I found the tree, sir, and laid my handkerchief at the foot of the trunk so that we can’t possibly miss it.”

Meanwhile the explorers went on steadily with their work, and, having at length uncovered the surface of the whole section and minutely examined every square inch of it, proceeded to peg out the next under the direction of Mr. Elmhurst, who wielded a surveyor’s tape and entered the particulars on his copy of the plan. In the course of his measurements he encountered the marked tree, which was contained in the new section and which, having been exactly located by means of the land-tape, acquired “a local habitation and a name” on the plan.

“Now,” said the sergeant, “we ought to see what that locket meant. Something must have happened, and it must have happened just about here; and I think it would be as well to lay down some sacks for the workers to stand on.”

This suggestion was adopted, and, when the sacks had been spread on the ground, the whole company of explorers concentrated on this region, clearing a broad track towards the tree and scrutinizing each handful of leaves as it was removed. The ground thus uncovered still bore the imprints, faint and blurred, of the two pairs of feet, which continued evenly side by side until they had been traced to a point within a few yards of the tree. Then there was a sudden change in two respects. No longer dim and faint, the footprints were now clear, sharp, and deeply impressed in the moist, clayey soil; and in place of the orderly, parallel lines, there appeared a confused welter of footprints pointing in all directions and overlapping and partially obliterating one another over a considerable area. From this a line of prints led in the direction of the tree, but although both pairs of feet could be distinguished, they were no longer side by side. Both led straight ahead and both had conspicuously deep toe-marks; but whereas the woman’s footprints were in some places trodden into, those of the man were all whole and undisturbed.

“Seem to tell their story pretty plainly, don’t they?” said the sergeant, viewing the whole group critically from his sack, and addressing Mr. Elmhurst.

“So it appears to me,” the latter replied. “My reading of them is that the couple walked together to this place, side by side and apparently quite amicably; then the man made a sudden attack and there was a struggle which ended in the woman escaping and running off, pursued by the man.”

“That’s about what it amounts to,” the sergeant agreed; “and now the question is, what was the next act? For the Lord’s sake be careful in uncovering the rest of the tracks.”

But the caution was unnecessary, for all the explorers were now on the tiptoe of expectation, and the position of the tracks being known, they were able to work from the sides and avoid the risk of treading on the prints.

“It is a bit of luck for us, sir,” the sergeant remarked to Blandy, “that the prints that matter most should happen to be the clearest. The ground here must have been uncovered at the time, and the leaves blown over it afterwards. I only hope the rest of the tracks will be as distinct.”

“It’s of no great importance,” the inspector replied. “We know they were here, and we know who one of them was. The real question is, What has become of the woman?”

A couple of minutes later, that question seemed on the way to being answered; for, opposite the marked tree and extending several yards beyond it, was an area of heavily trampled ground on which the impressions of the two pairs of feet were so intermingled and confused that hardly a complete footprint was distinguishable. And the sergeant’s hopes were realized. The imprints had evidently been made on bare ground and the few that were whole were deep and remarkably distinct.

“Well, sir,” said the sergeant, “there seems to have been a pretty considerable dust-up. He didn’t have it all his own way. I wonder how—”

He did not finish the sentence, for the inspector was not listening. His sharp eye had apparently noticed something ahead, for after one long and intent look accompanied by the inevitable smile, he advanced over the uncleared leaves with a sack in either hand to a spot beyond the tree where the clearance was still in progress. Here he laid down one sack, and standing on it, stooped low and pore over the ground at his feet. After a full minute’s scrutiny, he stood up and looked significantly at the sergeant, who had followed him.

“Yes, sir,” said the sergeant, “I see what you mean. This is where it ended. There’s a clean-cut groove made by her heel as she slipped, and there are two marks that show, plainly, the heel ends of her shoes. She must have been lying down on her back to make those marks. And I seem to make out an impression of the body.”

“Seem,” the inspector repeated impatiently. “It’s as plain as a pikestaff. She came down on that group of footprints and flattened some of them out. You can see where her shoulders came, and beyond them a faint mark where the head would have been; and right underneath us is a slight flattening of the footprints where the hips would have rested. It is not very clear but it is just in the right place.”

He drew a spring tape from his pocket and, stooping down, measured the distance from the two heel impressions to the middle of the ill-defined flattening.

“Yes,” he reported with his thumb on the tape, “thirty-three inches, and her height was about five feet seven. And now the question is, What happened next? She couldn’t have got up without making some very characteristic foot-marks; and there aren’t any. But there are one or two very distinct prints of the man’s feet and they seem to be on top of the others. Let
us see where they go to."

He picked up his sacks, and, followed by the sergeant, moved forward over the heaped-up leaves by the side of the uncovered track, following eagerly with his eyes the footprints that the clearance had disclosed, until he reached the place where the work of clearing was still going on.

"Only a single line of footprints, you see," he remarked. "Not a sign of the woman, though, if she had come this way, her heels at least would have shown plainly. What do you think of these prints? Do they strike you as specially deep?"

"I was just wondering," the sergeant replied. "They ought to be if he was carrying a woman who might have been nearly as heavy as himself. But it’s rather hard to judge."

"It is," Blandy agreed; "and when you have judged, it’s only an opinion. What we want is an actual measurement. I wonder if Mr. Polton has brought his plaster outfit."

"If he hasn’t, we have," said the sergeant, who slightly resented the presence of the unofficial interloper; "and we are quite competent to do the job."

"Of course we are," said Blandy, tactfully using the first person, "but Polton isn’t only competent, he is a first-class expert. We must see if he has brought his kit."

There was no difficulty in finding out, for Polton, thrilled by the discovery of the "signs of a struggle," had been unobtrusively following the inspector with a glistening eye fixed on the tell-tale markings. When the inspector broached the subject to him, his eyes glistened.

"Yes, sir," he replied eagerly. "I’ve got a good supply of the best sculptor’s plaster and enough water to start with. As you want the moulds for measurement, it will be necessary to include the surface of the ground immediately surrounding the footprint."

"Exactly," replied Blandy; "that’s the idea. Give us an edge that can be measured."

"And as to a control, sir? When I have made a mould of one of these prints, would you like me to do one of those where the two parties were walking together?"

"Certainly, if you will be so good. We must have the means of comparison to ascertain whether these prints are deeper than the others."

With these instructions, Polton hastened away to the entrance to the camp, where he had deposited his kit, and returned carrying a heavy suitcase and a three-pint can of water. The inspector selected a sample footprint, Mr. Elmhurst marked its position on his copy of the chart, with a distinguishing letter, and Polton opened his case and fell to work. Meanwhile, the explorers, still following the tracks, had uncovered another fifty yards, along which the solitary walker could be traced, now with difficulty where he had apparently trodden over the thick coating of leaves, now quite easily where he had trodden on the bare earth. But for the moment the inspector let them work unheeded while he and the sergeant and Mr. Elmhurst stood by and watched Polton’s rapid and skilful manipulation of the plaster.

"Don’t you usually spray some varnish into the footprint before pouring the plaster?" the inspector asked.

"Not in clay, sir," Polton replied. "Clay—moist clay like this—takes the plaster quite kindly and gives a beautifully sharp mould. Besides, sir, there are the measurements. They will be very delicate, and even a thin film of varnish might affect them."

"Very true, Mr. Polton," Blandy agreed. "We must be correct to a hair’s breadth."

Accordingly the moulder proceeded with his task, and having poured the plaster and put in the iron wire reinforcements was watching the surface as it solidified when one of the explorers approached hurriedly, holding some object daintily between his finger and thumb.

"We found this, Inspector, among the leaves just at the foot of the bank," he announced as he delivered the object—a painted wooden button—to Blandy. "I thought I had better bring it along at once."

"You are extremely kind," said Blandy, taking the button from him and regarding it with mild interest. "Then you have actually reached the bank?"

"Yes; and there are footmarks on it—rather indistinct but quite unmistakable—and there is a broken branch which seems to have given way when the man caught hold of it climbing up the slope."

"And the footmarks? Any trace of the woman?"

"No; unless that button belonged to her, which seems rather probable."

"It does," said Blandy, "but probability isn’t much good." He looked at the button reflectively and then held it out towards Polton, who took it from him and, having examined it minutely, handed it back.

"I can’t identify it, sir," he announced regretfully; "but then I shouldn’t be likely to, having seen so little of the lady. But Mr. Pedley might. He used to see her pretty often—and there he is, coming up the track at this very moment."

As Tom approached rather wearily along the uncleared border of the track, the inspector hailed him and held out the button; whereupon Tom quickened his pace.
“This button has just been picked up, Mr. Pedley,” said Blandy. “Can you tell us anything about it?”

Tom took it from him, and after one brief glance, replied,

“Yes. It is a button from Mrs. Schiller’s jacket.”

“You speak quite positively,” said Blandy. “Do you mean that she had buttons of this kind on her jacket or that you can definitely identify this button? To me, it looks like an ordinary trade button such as you can see at Woolworth’s.”

“That is what it was, originally,” replied Tom; “just a plain wooden button covered with a pink cellulose glaze. But she had a fancy for decorating the set with a painted design, and she consulted me about the method of doing it. I recommended her to use ordinary oil paint varnished with copal; and when she had painted them, as she hadn’t any copal varnish, she brought them to me and I put a coat of varnish over them. This is certainly one of those buttons. I recognized it at a glance by the material, the technique, and the design, which I think represents some sort of flower.”

“Then,” said Blandy, "you could swear, positively, in a court of law, that this button was actually on Mrs. Schiller’s jacket?"

“Certainly I could,” Tom replied. “I saw the buttons on the jacket—which, by the way, was a green jacket; and here is a thread of green silk still sticking in the eye of the button.”

“Yes,” said the inspector, verifying the fact as Tom returned the button, “very complete, very conclusive. I wish some of the other evidence was as good.”

He carefully wrapped the button in an envelope from his wallet, and having bestowed it in an inner pocket, turned to the volunteer who had brought it.

“I will come back with you and get you to show me exactly where you found this button. Have they completed the clearance of the bank?”

“No, Inspector. They had only begun; but we could see the footmarks on the slope as the leaves hadn’t settled there very thickly.”

“Then perhaps there may be something more to see by this time,” said Blandy; and with that he started off along the edge of the track, accompanied by his informant and followed by the sergeant and Mr. Elmhurst, but not by Polton, who dared not leave his half-made mould.

When the party arrived at the bank, the inspector’s hopeful surmise was justified. The footmarks on the steep slope, indistinctive as they were, told their story plainly enough. The unknown man had climbed the bank more than once, apparently helping himself by the lower branches of a pollard beech, one of which had broken under his weight. In one place, an elongated mark showed where he had slipped, and in another, deep heel-marks furnished evidence that he had descended the bank into the camp at least once.

“Looks as if he had gone to the top of the bank to see if all was clear on the other side,” the sergeant remarked, “and then come back to fetch something; and we can guess what that something was.”

“There is no need to guess,” said Blandy. “Look at this.”

Standing on the sweep-up leaves at the side, he pointed to two small and faint impressions on the cleared ground, each of which was accompanied by a little sharp-edged dent.

“You’re right, sir,” agreed the sergeant, craning forward eagerly. “Those are the prints of the back parts of a pair of feet, and those little sharp-edged marks show that they were a woman’s feet. No man’s heel would make a mark like that.”

At this moment Polton came bustling up with his suitcase and water-can. Setting the former down on the leaves, he opened it and took out a bundle of lint, from which he extracted the newly made mould, and offered it for inspection.

The sergeant looked at it and chuckled. “It’s quite uncanny,” said he; “looks just like the sole of a white shoe, and for purposes of comparison it is as good as the shoe itself. How would it be, sir, for Mr. Polton to make a plaster mould of these two impressions?”

“Just what I was thinking, sergeant. What do you say, Mr. Polton? Have you got a fair supply of plaster?”

“I’ve got enough for three or four more moulds if I’m careful,” Polton replied; “and these little shallow impressions wouldn’t take much. I should have plenty for those other prints that have to be done.”

“Thank you,” said Blandy. “It’s rather important, as the moulds will probably show the forms of the heels more clearly.”

Accordingly, Polton set to work at once while the inspector resumed his examination of the bank, climbing to the top and scrutinizing the ground narrowly. Here he found obscure traces of something having been dragged across the top, and, what was more significant, a tiny thread of green silk caught on the ragged end of a broken twig. This he put in the envelope with the button and wrote on the outside a short descriptive note. Then he descended the outer slope of the bank and anxiously surveyed the ground at its base. But here the appearances were unpromising in the extreme, for he was now on the green ride, the ancient and well-trodden turf of which yielded no impressions whatever, as he ascertained by walking a few paces and noting the total absence of any resulting footprints.

“Well,” he said gloomily to Mr. Elmhurst, who, with the sergeant, had followed him down, “this looks like the end of the
Elmhurst shook his head. “Nothing lighter than a horse would leave visible traces on this turf. We shall have to try to pick up the tracks farther afield, if he really carried the body out of the camp. It isn’t certain that he did. We haven’t finished clearing the surface yet, and until the whole of the camp has been examined we can’t be sure that the body is not concealed in it, after all.”

But the inspector was not comforted by this faint encouragement.

“No,” he admitted, “but we’ve followed the tracks to the top of the bank and it’s pretty clear that he came out that way. Still, you are quite right. We mustn’t leave any possibility untested.”

The pursuit was accordingly suspended for the moment. Elmhurst went back to the explorers and resumed the systematic examination of the camp; Polton, having finished the small moulds (which showed clearly the backs of a woman’s high-heeled shoes) returned along the tracks and made a “control” mould of the man’s footprints, where he was walking with his companion, one of the woman’s at the same place, and one of the two feet of the prostrate figure near the tree; and in all these cases he photographed the impressions before making the moulds.

All this, with necessary adjournments for refreshment, took time, and the daylight was already failing when Mr. Elmhurst sought out the inspector to make his report.

“Well, Inspector,” said he, “she isn’t here. Every inch of the camp has been examined, and there is no trace whatever of any disturbance of the surface. Of course, this elaborate procedure was hardly necessary, but it is all to the good. It settles the question beyond any possible doubt.”

“It does,” Blandy agreed gloomily. “But it is a disappointing result.”

“I am afraid it is,” Elmhurst admitted. “Still, it is conclusive, and it doesn’t close the inquiry. If she isn’t here, she must be somewhere else; and,” he added encouragingly, “you’ve got all the rest of the forest, with the ponds and lakes, as a possibility.”

Blandy smiled, less benevolently than usual. “The idea of a man,” said he, “strolling about the forest, even at night, carrying the body of a good-sized woman, doesn’t appeal to me. However, I suppose we shall have to consider the possibility.”

Thus, unsatisfactorily, ended the exploration which had seemed in the morning so promising. It was not the end of the search. On succeeding days, the police, aided by the foresters and local members of the field club, roamed through glades and thickets, now carpeted with fallen leaves, seeking in vain some trace of the missing woman. The ponds at the Cuckoo Pits and various other sheets of water were dragged, the margins of streams searched for footprints, but nothing came of it. When all was done, and the search was at last abandoned, Inspector Blandy’s verdict was justified. The marks on the summit of the rampart were “the end of the trail.” There Lotta Schiller, dead or alive, had vanished; whither or in what state no man could tell. She had gone, taking with her the secret (if it had been known to her) of the mysterious death of Emma Robey and of the name of her murderer.

Doubtless the police kept her in mind and continued their inquiries; but if so, no faintest whisper of any discovery ever transpired. To Mr. Polton with his dossier of newspaper cuttings, now tidily put away its appropriate shelf, the failure was a deep disappointment which he hoped was not final. To Tom Pedley it was something of a relief; and as the weeks passed into months and the months into years, the memory of those tragic incidents faded by degrees until it was almost too dim to be painful.
PART II. — THE UNKNOWN FACTOR
NARRATED BY CHRISTOPHER JERVIS, M.D.

XI. — MR. PENFIELD OPENS THE BALL

THE mountain that was in labour and brought forth a mouse is familiar to us all; but none of us, I suspect, and certainly not I, have ever heard of a mouse that was in labour and brought forth a mountain. Yet, since we are dealing with impossibilities, the one metaphor seems as good as the other. But I shall not argue the question. The second metaphor occurs to me only as illustrating the truth that trivial actions of unimportant persons may generate disproportionately momentous results; a proposition that is obvious enough to be grasped without any metaphor at all. And as to its application to the strange and tragic story that I have to tell, perhaps I had better leave that to develop in due course, merely remarking that the name of the super-prolific mouse was Nathaniel Polton, and that he happened to be our laboratory assistant and Dr. Thorndyke’s devoted henchman.

Our direct contact with the case occurred quite casually. The occasion was a visit of our old friend, Mr. Joseph Penfield, of George Yard, Lombard Street, to our chambers at 5A King’s Bench Walk. Ostensibly, it was a professional consultation, but conducted with Thorndyke’s habitual informalcy; an informality which at once scandalized and delighted our legal friends.

At the moment, Mr. Penfield was seated cosily in an easy-chair drawn up before the fire, with his toes on the kerb and his silver snuff-box and a glass of sherry on a small table by his side.

“Well,” he said, “that seems to dispose of all my difficulties. Now I know all about it, or think I do, thanks to your learned and lucid exposition. I suppose that a solicitor of nearly forty years standing and experience ought not to have required it, but somehow, when I come here to discuss points of law with you, I feel like a mere schoolboy.”

“It is a very misleading feeling,” said Thorndyke. “The fact is that you usually consult us on problems that are outside your own special province and inside ours. On questions of property law or conveyancing you could probably make us feel like schoolboys, whereas on subjects such as survivorship or presumption of death, in which medical or scientific knowledge is helpful, the advantage is with us.”

“That is true,” Mr. Penfield agreed, with more emphasis than the rather obvious explanation seemed to merit. “Very true.”

He paused with a reflective air, looking steadily at the fire. Then, having refreshed himself with a delicate pinch of snuff and an infinitesimal sip of sherry, he continued:

“I am glad you mentioned the subject of presumption of death, because it happens to be one in which I am somewhat interested at the moment.”

“Are you proposing to make an application?” Thorndyke asked.

“No,” replied Penfield. “On the contrary, I am considering the expediency of contesting one. I have not quite made up my mind, but, as I am executor and trustee for the person whose death it is sought to presume, the onus seems to rest on me to contest the application. My duty is obviously to consider the interests of my client; and, since the presumption of death is not the same thing as the fact of death, there is always the possibility that the person who is presumed dead may be in fact alive. It would be exceedingly unpleasant if, when death had been presumed and the estate distributed, the client should turn up alive and demand an account of my stewardship. I should feel very unhappy if I had acquiesced passively in the application.”

“I suppose,” Thorndyke suggested, “there are substantial grounds for believing the person to be dead?”

“There must be. The case for the application is that there is good reason to believe that the person was murdered; and, though there is no direct evidence of the murder and the body was never found, the person has never been seen or heard of since the date of the presumed crime. As that date is so recent—only about two years ago—a substantial body of circumstantial evidence must be available to render the application possible. But I have not gone into that question.”

“And as to the collateral circumstances; I suppose you know all about them?”

“Indeed I don’t; and I am not much interested in them, since they can hardly be material to the issue. The question is whether this woman is or is not presumably dead. That is all that the court has to decide, and that is all that interests me.”

“So,” I remarked, “your client is, or was, a woman.”

“Yes; a Mrs. Schiller.”

“Not Lotta Schiller!” I exclaimed.

“Ah. Then you know the name, and perhaps some of the circumstances?”

“We do, indeed. Polton was acquainted with the lady, and he took an almost morbid interest in the circumstances of her disappearance. He has collected every scrap of information bearing on it and he was actually present at the search for the body, making moulds and photographs of the footprints. He probably has the photographs still.”
“Ha,” said Mr. Penfield, “very interesting; though a footprint seems rather to connote a living person. However, what you tell me puts an end to my hesitation, I shall contest the application if I can secure your support. What do you say?”

“I say, yes, certainly,” replied Thorndyke. “The case is entirely within our province.”

“It is more than that. You not only have the general knowledge and experience but you have the particular knowledge of the facts of this case, which should be invaluable in cross-examination. And then,” he added with his queer wry smile, “you have the further attraction to me that you are able to prepare your own brief.”

“Let us rather say, part of it,” said Thorndyke. “We must depend on you for the general facts of the case. There is the motive, for instance. Why does someone want to presume this woman’s death? Who are the parties? Is the husband one of them?”

“He is not. No doubt he would be interested to know whether he is a husband or a widower, but he is not interested in the legal sense. He has nothing to gain, and he is not a party to the application. The motive is a sum of about twenty thousand pounds, and the applicant is the sole beneficiary under Mrs. Schiller’s will, who stands to gain that sum of money if the application succeeds. These facts do not seem very relevant to the issue, which is simply whether the woman is alive or dead; but I agree that you will want a general outline of the case. Perhaps a brief sketch of the history of my relations with Mrs. Schiller might do for a start. The details could be filled in later.”

Thorndyke having agreed to this suggestion, Mr. Penfield took a pinch of snuff and began his narration.

“About five years ago—I can’t give you exact dates or figures as I am speaking from memory—but a little over five years ago, Mrs. Schiller came to my office to ask me to draw up her will and to take custody of it and of certain monies in her possession. She was a stranger to me, but she brought a letter of introduction from one of my clients—now deceased—and I agreed to undertake the business, though I was not very favourably impressed by the lady herself; a flashy, golden-haired baggage, painted like a clown and powdered like a miller, and very free and easy in her manners. However, it was a small affair and perfectly simple; a matter of about three hundred pounds, left by the will to one sole beneficiary; so I drafted a short will in her presence, read it over to her, and, at her request, appointed myself sole executor. Having made an appointment for the following morning, I got the will engrossed and made the necessary arrangements with the bank.

“When she arrived on the following morning, bringing with her the money in notes, some further arrangements had to be made. As she was in the habit of moving about a good deal and had no permanent address, she wished me to act as her man of business and manage her financial affairs, such as they were. I need not go into details. The arrangement constituted me her agent with power to receive and pay monies on her account; and when the will and the other document had been signed and witnessed in my office, the transaction was complete. She left my office immediately and I never saw her again or received any communication from her.”

“She left you her address, I suppose?” said Thorndyke.

“Yes. She was then living in lodgings at a place called Linton Green—Corby Street, I think, was the exact address—and I remember that the landlady’s name was Wharton. But that is of no consequence as she had left those lodgings when I made my inquiries and the landlady did not know where she had gone. She had promised to keep me informed of her whereabouts when she changed her address, but she never did; which, for a time, was no concern of mine, as I had no occasion to communicate with her.

“But then there came a new development. A certain rather wealthy man—a Mr. Charles Montagu—died (I regret to say that he, also, was murdered. It is a distinctly unsavoury case altogether). Well, this man had bequeathed to a certain Miss Dalton a sum of about twenty thousand pounds. There was some delay in regard to the probate of his will owing to the fact that some large payments—over a thousand pounds—had been made in cash and not accounted for in the books. Another unsavoury detail; for there could hardly be a doubt that those payments represented blackmail, especially as the man was murdered. However, the will was eventually proved; but the probate was barely completed when Miss Dalton died.

“It then appeared that she had made a will leaving the bulk of her property to Mrs. Schiller; who, as the residuary legatee, became entitled, also, to the twenty thousand pounds. But now there was a fresh difficulty. Not only was the whereabouts of Mrs. Schiller unknown; it was not certain that she was alive, or even that she had been alive at the time of Miss Dalton’s death. On this question I could, of course, give no information. I tried to get into touch with her through the usual channels but had no success; and so this matter remained in abeyance for a time.

“Then the position was clarified in a very startling manner. There was yet another murder (I must really apologize for these sordid details) and it appeared that Mrs. Schiller was under some suspicion of being at least an accessory. That, however, does not concern us. The material fact is that she was proved to be alive, and, consequently, the bequest took effect; and I duly notified the claim on her behalf, disregarding the criminal details. But the astonishing thing that now transpired was that she had been living all this time at a place called Jacob Street within a short bus ride of my office.

“But the uncertainty which had just been cleared up was almost immediately succeeded by another; which is the one that concerns us. First, Mrs. Schiller disappeared. Then traces of her were discovered which led the police to believe that she had been murdered. But no body was found and no actual proof of death was obtained. On the other hand, the woman has never been seen or heard of since the disappearance. It appears that the police have made all possible inquiries, but have not been able to discover any traces of her. Their attitude, I understand, is entirely noncommittal; she may be dead or she may be alive, but there is no positive evidence either way.
“So that is the position; and our function—or perhaps I should say yours—will be to examine the known facts and assess the probabilities. If there are clearly good grounds for presuming death, it might not be worth while to do more than watch the case in my absent client’s interest. We shall be better able to judge when we know exactly what facts the applicant relies on.”

“Then,” said Thorndyke, “I take it that you have not yet received copies of the affidavits?”

“No. I have had no formal notice of motion; only an informal, and quite friendly, notice of the proposed application. And, for my part, I am not going to be unnecessarily contentious. I don’t particularly care whether the woman is alive or dead. I am only doing what I conceive to be my duty to an absent client, and I shall certainly not oppose the application if, when you have examined the facts, you think it ought to succeed. As soon as I receive the copies of the affidavits, I will let you have them, and you can then advise me as to our further proceedings.”

This concluded the business, and, shortly afterwards, Mr. Penfield rose, and having pocketed his snuff-box and waved away the proffered decanter, shook our hands and departed.

“Quite a promising case,” I remarked when he had gone, “though Penfield does not seem enthusiastic. But he never is if there is any criminal element. It will be interesting to see what sort of case the applicant’s lawyers have made out.”

“I expect,” said Thorndyke, “that they will take the same line as Penfield has taken.”

“Yes,” I agreed, “and, after all, it seems a perfectly logical view, though I suspect that you won’t concur. But really all that the court has to decide is whether the probability that the woman is dead is so great as to justify the presumption that she is dead. The various collateral circumstances do seem, as Penfield maintains, to be irrelevant.”

“The question is,” Thorndyke replied, “what is meant by collateral circumstances? Penfield is assuming that facts and circumstances which appear to have no bearing on the main issue are irrelevant and may be disregarded. But until those facts are examined, it is impossible to say whether they are or are not relevant. It is a capital mistake to classify facts in advance as relevant and irrelevant, and to limit consideration of them to those which appear relevant.”

“Still,” I persisted, “there are the plain physical facts; and if they are such as to establish an overwhelming probability that the woman was murdered, the various other facts, such as her personal character and way of life, for instance, do really seem to have no bearing. The simple issue is whether she is dead or alive. If she is dead, that issue is settled. How she came to die or what were the factors that brought about her death are interesting questions, but not material to the issue. However, the known facts may not be conclusive enough to justify a decision. We shall be better able to judge when we have seen the affidavits.”

“I don’t expect that they will tell us anything new,” said Thorndyke. “We have heard the whole story of the search from Polton and Elmhurst, and we read the account of what happened at the time. We probably know all the facts on which the applicant will rely, judging from what Penfield said.”

“You may, but my recollection of them is rather dim. I am afraid I did not quite share Polton’s enthusiasm. After all, it was no special concern of ours.”

“Then,” said Thorndyke, “let me refresh your memory. Put in a nutshell, the case amounts to this: A woman was murdered in Lotta Schiller’s rooms at Thirty-nine Jacob Street. The person who committed the murder let himself in with Lotta Schiller’s keys.”

“Or perhaps with some similar, or skeleton keys,” I suggested.

“No. One key was found in the lock and conclusively identified as Lotta’s own key. At the time of the discovery of the murder, Lotta had already disappeared and could not be found or heard of by the police. Some time later—I have forgotten the dates—her handbag was found on the bank enclosing the British Camp in Epping Forest. It contained a key-pouch from which two keys were missing, one being the latch-key and the other the key of the room in which the murder seemed to have taken place. Inside the camp the police found a locket belonging to Lotta, and, incidentally, made by Polton, and containing a portrait of our friend, Vanderpuye.”

“Yes, I remember that. Poor Vanderpuye! He will wish he had gone back to Africa when he hears that the scandal is going to be revived.”

“ Probably,” Thorndyke agreed, “though his evidence will refer only to the date on which he last saw Lotta. But to continue: as the finding of these things indicated the probability that the woman had been murdered and her body disposed of in the neighbourhood, the police arranged an exhaustive search of the camp for further traces of her, dead or alive. The result of that search was the discovery of a series of footprints, apparently of a man and a woman, which proceeded side by side to a point near the place where the locket was found. Here the ground was trampled in a way that suggested a struggle, and there was a rather obscure impression of a woman’s body lying in a supine position. From this point the footprints continued, but they were those of the man only. There were no further footprints of the woman; and it is suggested that the impressions of the man’s feet were somewhat deeper than they had been before.

“The single track of footprints crossed the camp to the north-west side until they reached the enclosing bank, and here some further discoveries were made. It was seen that the man had climbed up the bank twice—the first time apparently to reconnoitre. Near the foot of the bank was another, very obscure, impression of a woman’s body lying on the ground. Near it a button was picked up. It was a very distinctive button, painted by hand, and was conclusively identified by a Mr. Pedley...
as a button from Lotta’s jacket. On a broken twig, half-way up the bank, a wisp of a green material was clinging, and this shred Mr. Pedley identified as exactly similar to the material of her jacket and dress. Finally, at the top of the bank, the earth showed marks as if some heavy object had been dragged across the summit.

“That, as Inspector Blandy put it at the time, was ‘the end of the trail.’ On the outer side of the bank was the turf of the green ride, which would not have shown impressions in any case; but the fact is that no tracks or traces of any kind were found outside the camp, while inside the enclosure, there was no sign anywhere of the ground having been disturbed. It can be taken as certain that the body—if there was a body—was not buried in the camp; and no traces of either the man or the woman could be discovered anywhere else.

“Those are the facts that I think we shall find embodied in the affidavits, together with evidence that the woman has not been seen or heard of since her visit to the forest with Vanderpuye. On them will be based the application for the court’s permission to presume that Lotta Schiller is dead; and I ask you, Jervis, as an experienced medico-legal practitioner, whether you still think that collateral facts, such as the woman’s personal character and way of life, are not material to the issue.”

“I still don’t see that they are,” said I, “though, as you apparently do, I suppose I am wrong. But it seems to me that the facts that you have stated point very strongly to the conclusion that the woman was murdered and her body concealed somewhere in the forest. There appears to have been an adequate motive for the murder; to get possession of the keys and to eliminate a person who might have been dangerous. For it is practically certain that Lotta Schiller would either have known or guessed who committed the murder in her rooms.

“The prima facie evidence that she was murdered seems to me extremely strong; and when we add to it the fact that she has never since been seen or heard of, the probability becomes overwhelming, and certainly enough, in my opinion, to warrant the presumption that she is dead.”

“Q.E.D.,” Thorndyke commented with an appreciative chuckle. “You have put the case for the applicant with admirable lucidity. Unfortunately, it is that case that we have to demolish if we can do so by fair means and consistently with what we believe to be the truth. Wherefore I now call upon my learned friend to bring his mighty intellect to bear on the opposite proposition. Come, now, Jervis, here is an opportunity to exercise your wits and utilize your experience. You have just given a masterly exposition of the reasons for presuming that Lotta Schiller is dead. Now cross over to the other side and see what reasons you can find for presuming that she is alive.”

With a strong and growing suspicion that I had, as usual, overlooked some material fact, I promised to reconsider the case, and, as a first indispensable step, to refresh my memory as to the whole set of circumstances; to which end I repaired to Polton’s lair, and, having conveyed to him the tidings of the proposed application, had no difficulty in obtaining the loan of his voluminous collection of newspaper cuttings, which I bore off to study at my leisure.

——

XII. — TOM PEDLEY RECEIVES VISITORS

THE question with which Thorndyke had closed his narration had rather taken me aback; but what had really surprised me was his clear and complete recollection of the case in all its details. Yet it ought not to have surprised me, for the thing had often happened before, but I always failed to allow for a fundamental difference between us; Thorndyke was a genuine criminologist and I was not. By me, the report of a criminal case was read with mild interest, and then, if it did not concern us, was straightforward dismissed and forgotten.

Not so Thorndyke. To him, every case was a problem; and if there was any element of mystery or obscurity, he would study it, evolve one or more possible solutions, and retain the case in his memory until it was cleared up—if ever it was—and the actual solution was disclosed. It was a useful habit, for, apart from the mental exercise amounting in effect to experience, there was the practical advantage that if an obscure case was ultimately referred to us—as often happened—it found Thorndyke fully informed as to the facts and perhaps with a solution already arrived at.

This, I suspected, was the present position. Reading attentively through Polton’s collection of reports, I realized that the whole case, including the murder of Emma Robey, was profoundly mysterious. But I also realized the significance of Thorndyke’s question. Lotta Schiller was definitely implicated in the murder.

This, Penfield would have said, was not material to the question whether she was dead or alive. But it was material. The disappearance of a person who is under suspicion in regard to a murder, calls for a much more critical consideration than that of a person who has no known motive for disappearing.

In due course the notice of motion was served on Mr. Penfield, and copies of the affidavits were sent on to us; and as I read them through, I saw that Thorndyke had been right. The facts sworn to were concerned exclusively with evidence of Lotta Schiller’s death. The murder of Emma Robey was referred to only incidentally (in an affidavit by a Mrs. Bigham) in connection with the man who, accompanied by a woman, had let himself into the premises of 39 Jacob Street with a latch-key. Evidently, the inference advanced by the applicant would be that this man had already murdered Lotta Schiller and possessed himself of her keys.

Thus the case for the application was fairly clear. We could see what “the other side” proposed to prove; and, taking the facts at their face value, it was a reasonably good case. But the next question was, What did Thorndyke propose to prove,
and what was he going to do about it? Assuming—as I did—that he had already considered the case and probably arrived at some provisional conclusions, my expectation was that he would follow his usual practice and begin by seeking to enlarge his knowledge; by searching for some new facts to supplement those already known; and mighty curious I was as to what line his investigations would take, and not a little surprised when his intentions were disclosed.

"So," he remarked on the following day, "my learned friend has studied the affidavits and the Poltonian dossier and now knows all the available facts? Probably he has found them a little sketchy?"

"On the contrary," I replied, "I thought that we had a pretty full account of the case. What more do you want to know?"

"I want to know all that I can learn. For instance, there is Lotta Schiller, the central figure in the case. What do we know about her? She is little more than a name; a sort of algebraical symbol. I want to turn her into a real person; to know what she was like, physically, mentally, and morally."

I was about to object that such knowledge was not likely to help us much in opposing the application, but fortunately I saw the red light in time.

"And how do you propose to get that knowledge?" I asked

"The most likely source is Mr. Thomas Pedley. He, apparently, knew her quite intimately and should be able to tell us quite a lot about her. So I wrote to him a day or two ago, and he has kindly given me an appointment for to-morrow afternoon. May I take it that I shall have your support at the interview?"

As it happened, fortunately, that I had the afternoon free, I accepted gladly—indeed, I may say eagerly. For my curiosity about this visit was intense. That its object was simply to get a description of Lotta Schiller’s appearance and personality seemed incredible; and I hoped that by listening attentively to Thorndyke’s questions I might get some inkling of what was really in his mind.

Jacob Street we found to be a shabby, old-fashioned Street turning out of the Hampstead Road, in which Mr. Thomas Pedley’s studio was distinguishable by a green-painted wooden gate bearing the number 38A in well-polished brass characters, and by a small brass plate at the side inscribed "T. Pedley" surmounted by a shining brass bell-knob. A tug at this resulted in the distant jangling of a large bell, followed by the opening of the gate and the appearance thereat of a big, hearty, pleasant-faced man who surveyed us for a moment with a friendly blue eye and then, apparently recognizing us or taking our identities for granted, bade us "come along in"; whereupon we followed him along a stone passage and across a small yard to the studio, the size of which, and especially of the great north window, I found quite impressive.

"It is very good of you, Mr. Pedley," said Thorndyke, "to let us come here occupying your time with matters in which I don’t suppose you are much interested."

"Oh, I am interested enough," replied Pedley, "but I am afraid you will find me rather disappointing, for I really know nothing about Lotta Schiller or her affairs."

"Well," Thorndyke rejoined with a smile, "that is a fact, to begin with, and not entirely without significance. But at any rate, you know more about her than I do. So I stand to learn something."

"I am afraid it will be mighty little," said Pedley. "But perhaps a cup of tea may brighten my wits. Yours probably don’t need any brightening."

He led us across to the tea-table which had been placed, with three armchairs, in front of the fire, and, having installed us, proceeded to make the tea at a gas-ring by the large sink; and while he was thus occupied I cast inquisitive glances around, and was not a little impressed by the fine china and elegant table appointments and the various signs of a refined and fastidious taste in the furnishing of the place, which contrasted rather oddly with the sink, the cooking stove, and the working appliances.

"I think," said Pedley when he had poured out the tea and taken his seat, "that, as you know what information you want and I don’t, you had better treat me as a witness. You ask your questions, and I will answer as well as I can."

"Very well," said Thorndyke, producing a note-book and opening it, "then, as I have never seen Mrs. Schiller and have no idea what she was like, we will begin with her personal appearance. Can you give me a description of her?"

Pedley was obviously astonished—as well he might have been—but he replied readily enough:

"Yes, I can do that all right, for it happens that Inspector Blandy made the same request, and I drafted out an exhaustive description and gave him a copy. I can show you the original draft."

He went to a shelf on which was a long row of linen-bound books, each having on its back a paper label bearing a date.

"Let me see," said he, running his eye along the row, "it would be about 1930. Yes, here we are."

He picked out the little volume and brought it to the table, explaining, as he turned over the leaves:

"This is the note-book that I was using at the time. It contains all sorts of notes; sketches, drawings, and written memoranda, and, as I date every entry, it serves well enough as a diary. This is the draft that I made for Blandy."

He handed the open book to Thorndyke, who glanced through it rapidly though with close attention and, I thought, some signs of surprise.
“But, Mr. Pedley,” he exclaimed, “this is an extraordinarily complete description. You seem to have observed everything and forgotten nothing.”

“Well, you see,” Pedley replied, “that is an artist’s job; to look at things attentively and remember what he has seen. But I am glad you approve. Blandy was quite pleased, though he wanted one or two points elucidated.”

“For instance?”

“Well, there were the ears. He asked me if I could draw them from memory, which, of course, I could and did.”

“He was quite right,” said Thorndyke. “A drawing is better than the best verbal description. I wonder if you would kindly do the same for me?”

Though still looking a little puzzled, Pedley complied readily. On a small cartridge paper block he drew, very deliberately and yet quickly, a pair of ears, facing each other.

“There,” he said, taking off the sheet and handing it to Thorndyke, “you see they are just normal, well-shaped ears with a small Darwinian tubercle on the right one. I have marked in the line of the jaw to show how they were set.”

Thorndyke thanked him for the drawing, and, having examined it, put it away carefully in his wallet. Then, glancing once more at the description, he said:

“There is one point here that seems to require some amplification. You say that the hair had some peculiarity of texture that made it seem variable in colour. I don’t quite understand that.”

Pedley grinned. “Blandy again,” said he. “He didn’t understand it and neither do I. So I couldn’t tell him anything beyond the bare fact that it certainly did seem to change colour in different lights. The change was very slight and I don’t suppose the majority of people would have noticed it at all. But there it was; and I’ve never seen any other hair like it before or since.”

“Do you think,” I suggested, “that it might have been dyed or faked in some way? Women do all sorts of queer things to their hair in these days.”

“I thought of that,” replied Pedley, “but there was one circumstance that seemed to exclude it. Dyed or faked hair, as you know, won’t bear close inspection, especially at the roots. But Mrs. Schiller had no objection at all to a close inspection. When Polton wanted a sample of her hair, she made no difficulty but let him cut it off himself. He separated out a little tress and cut it off close to the roots, exposing the skin of the scalp, and, apparently, he noticed nothing unusual there.”

“Did you ever mention the peculiarity to her?” asked Thorndyke.

“No; and I don’t think she was aware of it herself.”

“By the way,” said I, “what did Polton want a lock of her hair for?”

“He was making a locket for Mr. Vanderpuye, and it was arranged that there should be a specimen of her hair set in one side to face the portrait in the other.”

“Oh, yes, I remember the locket—the two lockets, in fact—but they were empty when I saw them. I never heard what was to be put in them.”

“As to the portrait in Vanderpuye’s locket,” said Thorndyke; “was it a miniature or a photograph?”

“It was a photograph; but not from life. She painted a self-portrait in water-colour and Polton did a reduced photograph of it.”

“Was it a fairly good likeness?”

Pedley grinned. “It wasn’t a likeness at all. There was no resemblance whatever to Lotta, and hardly any to a human being.”

“But I wonder Vanderpuye didn’t object,” said I, “seeing that a likeness was what he wanted.”

“He did; in fact he was really angry. He wanted me to paint or draw a portrait of Lotta of which Polton could make a reduced photograph to fit the locket. But she would not have it, nor would she allow Polton to do a photograph of her. She insisted that the portrait should be her own work, and from that she wouldn’t budge. So poor Vanderpuye had to accept her drawing; but I shall never forget Polton’s face when he first set eyes on it. He thought that it was a practical joke, but he realized his mistake in time.”

“But what was it like?” I asked, a little bewildered by his account of the incident.

“It was a drawing of a woman’s head such as might be done by a child of nine or ten—not a clever child, mind you, but just an ordinary child with no natural aptitude for drawing.”

“But,” I exclaimed, “I don’t understand this. Wasn’t she a professional artist?”

“She claimed to be one, but, of course, anyone can call himself an artist. The fact is that she couldn’t draw and she couldn’t paint.”

“Do you mean that she drew badly,” Thorndyke asked, “or that she, literally, couldn’t draw at all?”
“Her drawing,” replied Pedley, “was like that of an ordinary child; and I am quite sure that she couldn’t do anything different.”

“This is rather remarkable,” said Thorndyke, “and it suggests one or two questions. The first is as to her state of mind. Was she cranky enough to believe that she really could paint?”

Pedley chuckled. “Blandy again,” said he. “That is what he wanted to know and I rather dodged his questions. But I won’t hedge with you because I have thought the matter over since, and I have come to the conclusion that she was a rank impostor. There was nothing cranky about her. She was a pretty shrewd, level-headed young woman, and I am sure that she had no delusions about her painting. It was a deliberate fraud. What her object was in posing as an artist, I have no idea; but what I am quite clear about is that she just took advantage of the present fashion for freak pictures and started producing freaks. Anybody can do it. All you have to do is to paint something quite unlike a normal picture and leave it to the highbrows to explain it to the multitude. But she knew all about it, and she had got all the highbrow jargon at her finger-ends.”

“That,” said Thorndyke, “partly disposes of the next question, which is how she maintained the pose. Did she ever offer her work for sale?”

“No. She spoke of an intention to send some of her stuff to an exhibition, but she never did send any.”

“I suppose she signed her pictures with her own name?”

“She didn’t sign them at all, properly speaking. She used a cipher—a sort of conventionalized flower with a little circle on each side of the stalk.”

“It all sounds rather tortuous and secretive,” I remarked.

“Yes,” Pedley agreed, “but she was secretive in everything. Polton first drew my attention to her capacity for keeping her own counsel. But the secrecy about her paintings I don’t understand. It looks rather as if the artist pose was a temporary stunt which she meant to drop when it had served her purpose, whatever that may have been.”

“It does,” said Thorndyke, “and yet the brass plate by her door seems to exclude the idea of secrecy. It was a public announcement.”

“It wasn’t very public,” replied Pedley. “It was only a small plate, about six inches by four, with just the bare name in small copper-plate script. It wasn’t very easy to read from the pavement even when it was new, and, by the time she had kept it polished for a few weeks and rubbed most of the black out of the engraving, it was nearly illegible. No passing stranger could have read it.”

“That seems to answer my objection,” said Thorndyke. “And now, to come back to the description. I suppose you don’t possess a photograph of her?”

“No,” replied Pedley, “and I never saw one.”

“Did you ever draw a portrait of her?”

“Not from life. I had thought of suggesting that I should paint her portrait and then I decided that I had better not. But I made one or two trial sketches from memory to see how a profile portrait would look. They are in that note-book that you have. Would you like to see them?”

“I should, very much,” replied Thorndyke, handing him the book and watching him, expectantly, as he turned over the leaves.

“This is the best one,” said Pedley, passing the book back, “and as the others were preliminary trials, we can disregard them.”

Thorndyke examined the drawing with deep interest, as also did I, though what chiefly interested me was the liveliness of the representation and its finished character. It might have been a careful drawing done direct from the model.

“This is rather more than a sketch, Mr. Pedley,” said Thorndyke. “It gives the impression of an actual portrait, but, of course, I can’t judge as to the likeness. What do you say about it? Is it really like her?”

“Yes,” replied Pedley. “I should say it is quite a good likeness.”

“Do you think it would be recognized by anyone who had known her?”

“Oh, certainly. Looking at it now, after all this time, it recalls her to me perfectly. You see, in drawing from memory one instinctively chooses the most characteristic and easily remembered aspect.”

“Yes, I see that,” said Thorndyke. “But you seem to have a rather remarkable memory.”

“Not remarkable,” replied Pedley. “I have a good memory, and I have made a point of training it. But, in effect, all drawing is memory drawing. You can’t look at the model and draw at the same time. You have, first, to look at the model with concentrated attention and try to memorize the part you are working on. Then, as a separate act, you draw it; and then you compare what you have drawn with the actual facts and correct your drawing if necessary. Memory drawing is only the same thing with a longer interval between seeing and drawing.”

Thorndyke pondered this with his eyes fixed on the portrait. At length he said:
“If this is a perfectly recognizable likeness of Lotta Schiller it may be of some importance as the only existing record of her personal appearance. I wonder if you would allow Polton to bring a camera here and take a photograph of it.”

“Of course I would, with the greatest pleasure. But why take all that trouble? Better just slip the book in your pocket and let me have it back when you have done with it.”

“That is very gracious of you, Mr. Pedley,” said Thorndyke, “and it will certainly be much more convenient. I didn’t like to ask you for the loan as I understood that the book contained some private memoranda.”

“You needn’t have been so punctilious,” Pedley replied with a smile. “I have no secrets, and, if I had, I shouldn’t write them in my note-book. No, Doctor, I give you the free run of the book if the sketches and notes are of any interest to you. Perhaps you might like to see the finger-prints that Polton took from that poor murdered woman. They are in the book some where. Shall I see if I can find them?”

“I don’t know that they are of much interest now,” said Thorndyke, handing him the book nevertheless, “excepting as to Polton’s improvised method of taking them.”

“And his motive for doing it,” I added. “It wasn’t a very correct proceeding, and I never understood why he wanted to meddle.”

“I think that is pretty clear,” said Pedley. “He wanted to know, then and there, whether it was a case of suicide or murder. Ah, here are the prints.”

He returned the book to Thorndyke, who, notwithstanding what he had said, looked at the rather feeble impressions with some interest; which seemed to deepen as he looked, for, presently he produced his lens from his pocket and made a closer examination, finishing up by viewing the prints with the book held at arm’s length.

“Quite a creditable performance,” he remarked, “considering the very inadequate means. What do you think of them, Jervis?”

He handed me the book with his lens, and I examined the prints with some curiosity.

“Yes,” I agreed, “they are not bad; rather weak and faint, but you can make out the pattern quite clearly, even in the last three fingers, where the impression seems to have partly failed. I shall make a note of the method for use in a similar emergency. And, by the way, the method is not new to us. The original Thumbograph was provided with an inking-pad.”

I returned the book to him, and, when he had closed it and slipped it into his pocket, I waited expectantly for the next question. But there was none. Apparently the “examination in chief” was finished.

I say “apparently,” for with Thorndyke you never knew when the examination had really ended. He had a way of directing a conversation without appearing to and thus allowing the information that he was seeking to transpire, as it seemed, spontaneously; and I had a faint suspicion that, on the present occasion, Pedley was being gently guided along the paths of reminiscence in the desired direction.

And yet it seemed incredible; for though Pedley’s account of his relations with Lotta Schiller was amusing enough, described in his quaintly humorous way, it was utterly trivial and seemed to have no bearing whatever on our problem. The way in which she had opened the acquaintance by a transparent pretext and thereafter adopted him as her dearest friend, in spite of his struggles to escape, was rather funny, but relevant to nothing that concerned us. At least, so I judged; though even then my judgment was confounded by Thorndyke’s concentrated attention to these trifling reminiscences and by the little aids to amplification that he applied.

“It is a quaint picture,” he remarked with an appreciative chuckle; “the masterful lady and the lover malgré lui.”

“Not lover,” protested Pedley. “There was not even a pretence of that.”

“But you seem to have been on quite affectionate terms,” Thorndyke maintained.

“On her side only,” said Pedley, “and that was all bunkum. It was just a pose, like her painting. But it was very queer. I never understood what her game was. She called me ‘Tom’ from the very beginning, and soon it came to Tom, dear, or darling or duck. But it was all verbal; there was no demonstration of affection. Anyone listening in an adjoining room might have taken us for an engaged couple; but our actual behaviour was perfectly matter-of-fact.”

“Do you mean that there were no physical endearments? Did she, for instance, never kiss you?”

“Lord, no! I shouldn’t have let her. But she never made any approach to that sort of thing. As I say, it was purely verbal. I took it to be just a silly habit of speech, especially as she used the same terms to others. Why, she even called Polton a duck, and as to poor Vanderpuye—but his case was different. He took the endearments quite seriously. Still, even he was not on kissing terms. He swore, at the inquest, that he had never kissed her, and I suspected that he had made an attempt and not brought it off.”

“Very odd,” Thorndyke commented, “particularly as the modern woman seems to be so far from squeamish in such matters. Did the verbal endearments extend to written communications? How did she address you in writing?”

“She never did, and I am glad she didn’t; for if her handwriting was at all like her drawing, it would have taken some deciphering. But she never wrote to me, and I gather that she never wrote to Vanderpuye. It almost looks as if she avoided putting any of her nonsense down in black and white, though there was nothing very incriminating in it.”
“Not incriminating,” said Thorndyke, “but, after all, she was a married woman, and compromising letters are apt to be dangerous things if there happens to be an unfriendly husband in the background.”

“I don’t think her husband was unfriendly. The position seemed to be that they had separated by mutual agreement and gone their respective ways, simply ignoring the marriage. On the few occasions when she referred to him, she did so without the slightest trace of animosity.”

“Apparently she was not very communicative about him.”

“No; he was rather a shadowy figure. All I learned from her was that his name was Carl, that by profession he was a sort of travelling wine merchant, that he was, in a sense, domiciled somewhere in Germany, but spent most of his time rambling about the Continent with occasional visits to this country and the United States. That is all that she let drop. Of course, I never asked any questions.”

This apparently exhausted Pedley’s store of reminiscences, for the conversation now drifted in the direction of his work and mode of life; and when he had shown us some of his paintings and taken us on a personally conducted tour of his premises, including the very pleasant little cubicle bedroom that he had built in a corner of the studio, we felt that we had stayed long enough.

“It is most kind of you, Mr. Pedley,” said Thorndyke, “to have let us take up so much of your time and to give us so much help in our inquiry.”

“I am glad to hear that I have been helpful,” replied Pedley, as he escorted us along the paved passage. “It seemed to me that I was ladling out some rather small beer. But I enjoyed doing it. To a solitary man a real good chin-wag comes as a refreshing novelty.”

With this exchange of courtesies and a hearty handshake we took our departure, and, crossing the Hampstead Road, set a course for the Temple by way of the less-frequented back streets. For some time we walked on in silence; but presently, according to custom, I ventured to put out a cautious feeler.

“Pedley’s estimate of the conversation was rather like my own, and we are probably both wrong; but, apart from the description and the portrait (the value of which is not obvious to me), I don’t see that we have learned anything very significant.”

“That,” replied Thorndyke, “must be because you have not got the issues in this case clear in your mind.”

“But I think I have. The simple issue is whether or not Lotta Schiller is presumably dead.”

“Yes, but put it another way. Either the woman is dead and her body concealed in some unknown place, or she is alive and keeping out of sight. The issue is between the alternatives of a concealed dead body or a concealed living person.”

“She would be mightily well concealed to keep out of sight for two years with the police on the look-out for her all the time. I should have thought it practically impossible considering all the modern means and facilities at their disposal.”

“Still,” said he, “the possibility of her being alive is the one that concerns us, and the value of the information that we have got from Pedley is in its bearing on that question. What I recommend you to do is this: when you get home, while the matter is fresh in your memory, take a sheet of paper and write down a full report of our conversation with Pedley. Then read it over and extract from it any facts, explicitly stated or implied, without regard to their significance, and write them down on another sheet. Finally, consider those facts, separately and together, in relation to the two alternatives that I mentioned. I think you will find Mister Pedley’s small beer more nourishing than it appeared at the time.”

XIII. — THORNDYKE BECOMES SECRETIVE

THORNDYKE’S suggested procedure for extracting the nourishment from Mr. Pedley’s “small beer”—which I duly put into practice—proved highly effective. But yet it was not effective enough. For while it brought into view several facts which might be important in certain circumstances, it threw no light on their application to our present problem; wherefore, and because the reader, quicker in the uptake than I, has no doubt already noted them, I shall make no further reference to them. But if not very enlightening, my study had the effect of stimulating my curiosity as to what was in Thorndyke’s mind. That he had a definite theory concerning Lotta Schiller’s disappearance, and that his theory was strictly relevant to the main problem, I had no doubt, and since I could make no guess as to the nature of that theory, I could only seek enlightenment by observing his proceedings and trying to deduce their object. This, however, turned out a complete failure, for the more I saw of his methods, the more bewildered I became, and the less able to connect them in any way with Mr. Penfield’s case. I shall therefore put my observations briefly and baldly on record without unnecessary comments.

A few days after our visit to Pedley, Thorndyke, when he came in to lunch, took from an inner pocket a couple of documents and deposited them in the cabinet in which such things were usually kept; and I noticed that they went into the drawer which contained Mr. Penfield’s papers.

“You have been to Somerset House,” said I, having recognized the official copies.

“Yes,” he replied. “An unnecessary visit, perhaps, but one never knows what unexpected questions may arise during the hearing; so I have provided myself with certified copies of two of the wills concerned in Penfield’s case. We have a copy of
the third, Lotta Schiller’s.”

“Whose are the other two?” I asked.

“One is that of Barbara Dalton who left the twenty thousand pounds to Lotta. The other is that of a Mr. Charles Montagu, which contains, among many other legacies, the bequest of twenty thousand pounds to Barbara. Would you like to look over them?”

“No, thanks,” I replied. “They don’t interest me, unless they contain something unexpected or curious. Do they?”

“No, they are quite simple and straightforward, and, of course, they are not disputed.”

“But I think we can leave them to Penfield, if they come into the case at all.”

Thus the matter was dismissed, leaving me with a faint feeling of surprise that even Thorndyke should have concerned himself with such remote antecedents. But apparently it was only another instance of his almost fanatical insistence on knowing all the facts.

The next proceeding of his that attracted my attention had, at least, some connection with Penfield’s case, though I failed utterly to discover any relevancy. It took the form of an exhaustive interrogation of Vanderpuye, of whom we now saw a good deal as the Long Vacation had brought him back from his travels on the South-eastern Circuit. It was not, of course, a formal interrogation, which would have been quite alien to Thorndyke’s usual methods. But Vanderpuye was perfectly willing to talk about his liaison with Lotta Schiller—it had been the great adventure of his life—and a little skilful guidance of the conversation brought out all the details. But of these conversations, which seemed to elicit nothing that was new even to me, I shall record only one; and that one chiefly because it led to further activities on Thorndyke’s part. We had been discussing Pedley’s portrait of Vanderpuye and the incidents connected with the painting of it, when my colleague led off in a new direction with the remark:

“It was a very successful portrait; a faithful likeness and an extremely becoming one, too. I am rather surprised that you did not get Pedley to paint one of Lotta. I should have thought that you would have liked to have a portrait of her.”

“I should,” Vanderpuye replied emphatically, “and I begged her to let him paint one of her, but she refused flatly. It was at the time when the lockets were being made, and I wanted him to paint her portrait so that I could have the original to hang beside my own and a little photograph of it to carry about with me in my locket. But she was most obstinate and perverse. She insisted on painting the portrait herself, and she wouldn’t even agree to letting Polton take a photograph of her for the locket. It was really very awkward. I had seen her work and I knew that she couldn’t paint a portrait. But she stuck to her decision and I had to accept her self-portrait. But I was very annoyed.”

“Then I infer that it was not a very good likeness?” Thorndyke suggested.

“Bah!” exclaimed Vanderpuye. “It was not a likeness at all. But you can see for yourself”; and, as he spoke, he unshackled the locket from his watch-guard and handed it to Thorndyke, who carefully prised it open and looked curiously at the little portrait.

“I was going to remark,” said he, “that as I have never seen the lady, I could hardly judge the likeness. But I see that I was wrong. This drawing only faintly resembles a human being and certainly could not be a recognizable likeness of any particular person. By the way, did she give you the original drawing?”

“No, she never offered it to me, and I should not have accepted it if she had.”

“I ask,” said Thorndyke, “because her work as an artist may have some bearing on the case that is pending and I should have liked to produce a specimen. But this is rather small, particularly if the judge’s eyesight should happen to be at all defective. What do you think, Jervis?”

I took the locket from him and gazed in astonishment at the incredibly crude and childish drawing—though Pedley’s description had prepared me for something abnormal—which, small as it was (about the size of a shilling) offered evidence enough of the artist’s incompetence. But I couldn’t understand Thorndyke’s difficulty, and said so.

“I don’t see that the size matters. It would be quite simple to make an enlarged photograph; that is, if Vanderpuye would give his permission.”

“But of course,” protested Vanderpuye. “I should be delighted to help in any way. By all means take the locket and let me have it back when you have done with it.”

Hereupon, having thanked the owner warmly, Thorndyke slipped the little bauble into an envelope and folded it up securely; but I noticed that instead of locking it up in the cabinet according to his usual custom, he stowed it carefully in an inner pocket. It was a small matter but it attracted my attention; and when, on reflection, I realized how adroitly Thorndyke had managed to obtain possession of the trinket without asking for the loan, I began to suspect that there was more in the transaction than met the eye. Accordingly, I followed the fortunes of the locket closely to see whether any ulterior purpose should come into view. But apparently there was none. On the following day Thorndyke handed the locket to Polton, who gazed at it fondly and then returned it.

“I don’t want the locket, sir,” said he. “You are forgetting that I did the miniature. I have the original negative that I made from the drawing, which will be much better for doing the enlargement as it is a good size already.”
“Of course,” said Thorndyke. “My wits must have been woolgathering. Why didn’t you remind me, Jervis?”

I replied that my wits were probably on the same quest, as I had suggested the borrowing of the locket, but protested that no harm had been done.

“No,” he agreed, turning the locket over in his hand; “and I am glad to have seen the little bauble again. It is a charming specimen of goldsmith’s work and it does Mr. Pedley and his executant very great credit. How on earth did you manage, Polton, to work the hair into that beautifully regular spiral? Hair isn’t a very kindly material, is it?”

“It’s all right, sir, if you know how to manage it. I just soaked two of the hairs from the little tress that I had cut off and wound each of them tightly on a thin steel spindle. Then I carefully heated the spindle, and, when it was cool, the hair slipped off in a little close cylinder like a cylindrical spring. After that, it was quite easy to work it into a flat spiral on the card.”

“So you used only two of the hairs. What did you do with the remainder of the tress? Did you throw it away?”

Polton crinkled slyly. “No, sir,” said he, “I’ve got the regular craftsman’s vice. I never throw anything away. You see, even a hair comes in handy, if it’s long enough, to string a small bow for use on the turns. Would you like to see what’s left of it?”

Without waiting for an answer he went to one of his innumerable cabinets, and, from a labelled drawer produced a seed envelope inscribed in pencil “Mrs. Schiller’s hair,” which he handed to Thorndyke; who drew out of it a little tress of pale brown or dull flaxen hair neatly tied up with bands of thread.

“I don’t see anything unusual in it,” said I, as Thorndyke held it at arm’s length in the light of the window.

“No,” he agreed, “but we haven’t Pedley’s trained colour sense; and probably the peculiarity that he described would be noticeable only in large masses. But it couldn’t have been very conspicuous even then, as nobody else seems to have observed it.”

He pulled the tress out taut, and, having measured it against a two-foot rule on the bench, wrote the length (nine and a half inches) on the envelope. Then he re-coiled the tress and slipped it back into its receptacle.

“I am going to rob you, Polton,” said he. “This specimen had better go with the rest of the possible exhibits; and on the remote chance of its having to be produced in court, you may as well sign your name on the envelope under the description.”

This ceremony was duly performed, and, when Thorndyke had declined my derisive offer to witness the signature, he put the envelope in his wallet and we then reverted to the enlargement of the portrait.

I make no comment on these proceedings, having already said that I found myself utterly unable to connect any of them with Mr. Penfeld’s problem. Nor shall I, for obvious reasons, say anything about certain other activities which Thorndyke carried on in his private laboratory with the door locked; which from experience I judged to be experiments connected with his inferences from the facts known to me. No doubt they would have been highly revealing if I had known what they were; but, in accordance with the queer convention that existed between us, by which Thorndyke gave me every opportunity to observe the facts but refused to disclose his inferences or hypotheses until the case was concluded, I was left in the dark; and even Polton, bursting with curiosity, could only gaze wistfully at the locked door.

Of what went on, then, in the private laboratory, I had no knowledge at all; but in two other instances I was permitted, so to speak, to inspect the backs of the cards. Thus, on a certain day, returning at lunch time I perceived my colleague pacing up and down the lower end of King’s Bench Walk in earnest conversation with one Mr. Snuper. Now, Mr. Snuper was a very remarkable man. Originally a private inquiry agent, he had been employed by Thorndyke on one or two occasions to collect information or to keep certain persons under observation; but he had proved so ingenious, resourceful, and dependable, that Thorndyke had engaged him permanently; and a very valuable member of our staff he had proved in making inquiries and observations where it was undesirable for us to appear.

But what could this meeting portend? Usually, Mr. Snuper’s appearance foreshadowed some more or less sensational developments. But at present the Schiller case was the only one that we had on hand in which sensational developments were possible; but of that case we seemed to be in possession of all the relevant facts. Our problem was concerned with the application of those facts and seemed to offer no opening for Mr. Snuper’s activities.

But my bewilderment reached a climax that very evening when, entering our sitting-room, I found Polton placing an easy-chair before the fireplace and setting beside it a little table on which were a whisky decanter and a box of cigars. I watched him with growing suspicion, and when he added an awl, borrowed from the workshop, suspicion grew into certainty.

“Expecting the superintendent?” I asked.

“Yes, sir,” he replied. “Mr. Miller is coming by appointment at half-past eight.”

“You don’t know what about, I suppose?”

“No, sir, I do not. I suspect it is that Schiller case, but that is only a guess; and I don’t mind telling you, sir, that I am fairly eaten up with curiosity. I can see that there is something in the wind, and that somebody is going to get a surprise.”

“What makes you say that?”
“Oh, I know the symptoms of old, sir. The Doctor is in one of his exasperating moods; as secret as an oyster and as busy as a bee. He has been locked in his laboratory doing all sorts of things that are really my job; developing photographs, mounting specimens for the microscope, making micro-photographs, and the Lord knows what else. I know that much, because I’ve done the clearing up after him.”

I laughed at his undisguised inquisitiveness, but not without sympathy.

“It seems to me,” I remarked, “that you have been doing Snuper’s job; keeping what the plain-clothes men call ‘obbo’ on the Doctor.”

“Well, sir, there’s no harm in keeping him under observation when his actions seem to invite it; and I believe he likes to be watched. It’s part of the game. Why, only this morning I saw him colloquing with Mr. Snuper on the Walk. He knew I could see him from the window. And now there’s Mr. Miller coming, and he isn’t giving much away. And what do you make of that?”

He produced from his pocket a little slip of mahogany about four inches by two in which was a shallow, elongated cavity about two and a half inches by one, with straight sides and rounded ends, and a little round hole about a sixteenth of an inch wide, just outside the middle of the cavity.

“I made it from the Doctor’s own full-scale drawing,” Polton continued, “and, as he said nothing about its purpose, I suspect it is part of the surprise packet.”

“It looks rather like some sort of a microscope slide,” I suggested; but at this moment, as a quick footstep became audible ascending the stair, Polton picked up the slide and returned it to his pocket, smiling guiltily as the door opened and Thorndyke entered.

“I see we are to have the pleasure of a visit from Miller,” I remarked.

He glanced at the little table and then asked with a smile:

“Is that information received or observation and inference?”

“Both,” I replied, “but the inference first. It was the awl that clinched the diagnosis.”

“Yes,” Thorndyke chuckled, “it is wonderful how Polton remembers all the likes and dislikes of our visitors. He would have made a perfect innkeeper. How do you do it, Polton?”

“Well, sir,” he replied with a gratified crinkle, “the proper study of mankind is man, and that includes Mr. Miller—and by the same token, here he is.”

The crescendo of approaching footsteps culminated in the characteristic knock, and, as Polton threw the door open, the superintendent entered and saluted us with a comprehensive smile, which took in the three easy-chairs and the small table.

“It’s nice to see you all again,” said he, when the preliminary greetings and hand-shakings—which included Polton—had been disposed of. “Quite a long time since I was here. Don’t get many excuses to come now that I am kept bottled up in the office.”

We chatted inconsequently for a minute or two and then adjourned to the chairs, when Thorndyke and I lit our pipes while Miller carefully selected a cigar and Polton poured out the whisky.

“Well, Doctor,” said the superintendent, thoughtfully operating with the awl on the proximal end of the cigar, “I’ve managed your little business. Rare job it was, too. Had to get the Assistant Commissioner’s permission, of course, and he wasn’t at all ready to give it. But I showed him your letter and coaxed him a bit and at last he gave way. But he wouldn’t have done it for anyone else, and no more would I for that matter; and he stipulated that the information was to be considered strictly confidential and personal to you.”

“You know that you can depend on my discretion, Miller. But supposing it were required to be used in evidence? May I take it that he would consent?”

“That you would have to settle with him. You weren’t proposing to challenge the conviction, I suppose?”

“No. The conviction, whether good or bad, is no affair of mine.”

“I wonder what is your affair—and so did the A.C., especially what you wanted the finger-prints for. How ever, I suppose we shall know in due course, as you seem to hint that you may need our collaboration later. At any rate,” he concluded, producing a bulky, sealed envelope from his pocket, “here is the dossier of the worthy Louisa Saunders, if that was her name—apparently it was, as it agreed with the initials on her clothing—all complete; personal particulars, finger prints, prison portraits, summary of the police-court proceedings, everything that you asked for; and you notice that the envelope is sealed with wax and marked ‘Secret documents.’

He delivered the package to Thorndyke, with a malicious leer in my direction, and, when my colleague had thanked him very warmly for his friendly offices, the transaction was concluded and the conversation drifted into other channels, mostly connected with the work of the Criminal Investigation Department. But though the superintendent’s “shop” talk was highly interesting to listen to, it does not belong to this history. Nor was I very attentive to it; for my mind was occupied with the questions, Who the deuce was Louisa Saunders, what concern was she of ours, and what could Thorndyke possibly want
with her finger-prints?

These questions, and the mystery surrounding the dossier, gave me abundant material for thought during the next few days; as, apparently, in a different way, they did to Thorndyke. For, once more, to Polton’s exasperation, he locked himself in his laboratory and resumed his mysterious doings; and as these appeared, from Polton’s reports, to be mainly of a photographic nature, I surmised that he was making reproductions of the “secret documents,” but for what purpose I could not even guess.

Thus the time ran on, the Long Vacation ran out, and the day fixed for the hearing drew nearer. Once or twice we had communications from Mr. Penfield, chiefly relating to Thorndyke’s request that certain witnesses should be summoned to appear in court for cross-examination on their affidavits; and once I observed among the letters delivered by the first post a large, well-filled envelope addressed to Thorndyke which looked to me like a report from Mr. Snuper. But that was only a guess, though Snuper’s handwriting was a good deal more distinctive than his person.

Otherwise Thorndyke’s preparations seemed to be complete, so far as I could judge with no knowledge whatever as to their nature; and I looked forward eagerly to the approaching date of the hearing, when, as I hoped, the obscurities in which I groped vainly should be made clear.

XIV. — THE PROBATE COURT

THE morning of the day appointed for the hearing found us with all preparations completed and—speaking for myself and Polton—all agog for the opening of the play. As the Law Courts were close at hand Thorndyke and I put on our wigs and gowns before starting, and, thus figged out and accompanied by Polton carrying a small suitcase, we set forth betimes, crossing the Temple by way of Crown Office Row and Fountain Court and finally emerging from Devereux Court into the Strand opposite to the main entrance of the Royal Courts of Justice, and, crossing the road, entered those august premises and made our way to the court in which the hearing was to take place.

With the exception of the usher and Mr. Turner, Penfield’s managing clerk, we were the first arrivals; but shortly after us came Mr. Longford, the applicant’s solicitor, escorting his client, Miss Dalton, and a gentleman whom I correctly diagnosed as Mr. Carl Schiller. As we knew Mr. Longford slightly, we exchanged a few words of greeting, and he then introduced us to his two companions; and as we were making polite, but not too topical, conversation, we accompanied it by a mutual inspection.

Miss Dalton, “the applicant,” was a decidedly good looking woman of about thirty-five; but I was not much interested in her, my attention being more attracted by Mr. Schiller, whom I took the opportunity to examine as closely as good manners permitted. Not that he was a particularly striking personality, but he was (or had been) the husband of the mysterious Lotta, and he had the added interest of being present to learn whether he was a presumptive widower or only a mere husband. So I looked him over as we talked (as also, I noticed, did Thorndyke) and listened critically to his speech, in which I detected a faint German accent which seemed to agree with his rather Teutonic appearance. He was a smallish man, about five feet seven, spare and slight in figure, long-necked and bottle-shouldered, blond in complexion, with a rather scanty moustache and beard of a delicate ginger tint and eyes of a peculiar greenish hazel. His eyebrows were considerably darker than his beard, rather broad, and set in an almost straight horizontal line. As to his hair, it was probably of a similar colour to his beard or perhaps lighter, but as he had greased it with grease in order to comb it smoothly back over the crown of his head, I was unable to judge. On the whole, I considered him a fairly good-looking man, and our brief contact left me with a rather favourable impression.

During our short talk there had been other arrivals. Mr. Lorimer, the applicant’s counsel, had entered in wig and gown and was now in close conference with Mr. Longford at the solicitor’s table. Mr. Pedley had slipped in and quietly seated himself on a back bench where, presently, he was joined by Inspector Blandy and by two middle-aged women who arrived together and who, having espied Pedley, at once seated themselves beside him. But the most interesting arrival to me was a rustic-looking gentleman who drifted in by the swing door, and, having gazed about him vaguely, wandered slowly up the court towards the solicitor’s table; for in him, with my usual start of surprise, I suddenly recognized the inscrutable Mr. Snuper.

He certainly enacted the part of a country cousin to a finish. The mixture of curiosity and boredom with which he stared about him was absolutely convincing, and the dropical watch which he drew from his pocket and solemnly compared with the clock might have been an heirloom from some ancestral yeoman. But what was he doing here, masquerading under our very noses? Unable to imagine what his function could possibly be, I determined to keep an eye on him and try to solve this mystery for myself. But now the clock on the gallery announced the near approach to the hour and bade us take our seats, which we accordingly did; Miss Dalton was given a chair at the solicitor’s table; Mr. Schiller selected a front bench with a restfully high back; Snuper shuffled into a seat behind him, and Mr. Lorimer joined us at the counsels’ bench; and hardly had we taken our places when the usher threw open the door beside the bench and the judge bustled in and took his seat.

I looked at him with a good deal of interest since, as there was no jury, the decision of the case lay with him. But apart from this, I was attracted and interested by his personality; which was in several respects of an unusual type. He had none of that monumental repose that one associates with the occupants of the judicial bench. In fact he was the liveliest judge that I have ever met. He bobbed up and down in his chair, he turned to confront each speaker whether witness or counsel and leaned out sideways to address them with a curiously friendly and confidential air in keeping with his general conduct
of the proceedings, which was that of carrying on a sort of family consultation.

Nor was his vivacity only bodily. He was very much alive mentally and seemed to follow every stage of the proceedings with intense, almost eager interest, watching the speaker and dropping in occasional comments in a quick emphatic manner entirely free from judicial solemnity. But he was an excellent judge, attentive, helpful and friendly, and as informal as was permissible in the circumstances.

When his Lordship had settled himself in his chair and had taken a rapid survey of the court, he turned expectantly towards Mr. Lorimer, the applicant's counsel, who thereupon rose to open his case.

"Is the application opposed?" the judge asked, when Mr. Lorimer had set forth the nature of the case.

"I am not quite clear, my Lord, as to the extent of the opposition. No affidavits have been filed in answer, and there have been no pleadings."

The judge glanced inquiringly at Thorndyke, who thereupon rose to explain: "The position, my Lord, is this: the executor of Lotta Schiller's will is also her solicitor and man of affairs, and, as the legal presumption at present is that she is alive, he has thought it necessary to safeguard her interests by ensuring that all facts adverse to the presumption of death are brought to the notice of the court."

"But you have filed no affidavits?"

"No, my Lord; but, if, in the course of the hearing, it should seem to be necessary, I shall ask for an adjournment to enable me to file affidavits in answer or to call witnesses."

The judge smiled pleasantly. "I see. The good old principle of not leaping before you come to the stile. Very well."

He nodded to Mr. Lorimer, who continued: "As this is an application to presume death, the facts in issue are those relating to the probability of death; but it seems to me desirable that I should, very briefly, explain the circumstances which have made this application necessary.

"About five years ago—on the 16th August 1928, to be exact—Lotta Schiller executed a will leaving the whole of her very small property, about £300 in all, to her friend, Barbara Dalton; or, if Barbara should die before her, to Barbara's younger sister Linda. At about the same time, Barbara made a will in similar terms with the difference that she gave her chattels, excepting her violin, to Linda. The violin, with the residue of her estate, about £250, was left to Lotta. Thus, at the time, these two wills were quite unimportant. But on the 28th of May 1930, a certain Mr. Charles Montagu died, and it then appeared that by his will a sum of £20,000 was left to Barbara Dalton and a similar sum to Linda. These bequests seem to have been quite unexpected by the beneficiaries, and it may have been that Barbara might have made some modification of her will if there had been time. But there was not. For some reason, a considerable delay occurred in the probate of Mr. Montagu's will, and in the meantime Barbara died. Then, since Lotta Schiller was the residuary legatee under Barbara's will, the further sum of £20,000 accrued to her.

"But now a new difficulty arose. When it came to distributing Mr. Montagu's estate, the whereabouts of Lotta could not be discovered. The usual advertisements were issued but there was no response. So, for a time, the matter remained in abeyance; it was not certain that she was alive and there was the added difficulty that, not only could the money not be paid to her, but no evidence existed that she was entitled to it, since it could not even be proved that she had been alive at the time of Barbara's death.

"Then came an announcement in the papers of Lotta's sensational disappearance and the suspicion that she had been murdered; and the astonishing fact transpired that, all this time, she had been living in lodgings at 39 Jacob Street, Hampstead Road. Either she had never seen the advertisements or—which seems incredible—had ignored them. But, however that may have been, as soon as Barbara's executor became aware that Lotta either was, or had recently been, alive, he endeavoured to get into touch with her, but without success. Nor have his efforts, repeated from time to time, had any better results; and now, after the lapse of two years, since it appears nearly certain that Lotta Schiller is dead, Miss Linda Dalton, the surviving beneficiary under Lotta's will, acting on the advice of her solicitor, is applying to the court for permission to presume the death of the testatrix in order that the will may be proved. As the facts on which we rely in support of the application are principally those connected with the disappearance of the testatrix, I shall now proceed to a more detailed account of that incident.

"On the 16th of July 1930, Lotta Schiller engaged furnished rooms at 39 Jacob Street, Hampstead Road. She gave no references but paid a month's rent in advance; and that payment and all subsequent payments were made in cash although she had a banking account, which suggests that, for some reason unknown to us, she did not wish to disclose her whereabouts to any of her friends. This suggestion is supported by the fact that during the whole of her residence in Jacob Street she made no local acquaintances excepting Mr. Pedley, an artist who lived next door, and Mr. Polton and Mr. Vanderpuye, both of whom were introduced to her by Mr. Pedley.

"During this time she seems to have made a pretense of practising as an artist. But this must have been a mere pose, as we have evidence that her work was quite incompetent, which is not surprising, seeing that she had never previously been known to paint or even to draw. However, it enabled her to strike up an acquaintanceship with Mr. Pedley which soon grew into definite friendship, and thereafter she used frequently to visit his studio. In this way she presently made the acquaintance of Mr. William Vanderpuye, a barrister of the Inner Temple, who came to the studio to have his portrait painted by Mr. Pedley. This new acquaintance soon ripened into a quite intimate friendship, accompanied on her side by
unabashed flirtation and on his, perhaps, by real affection."

I need not report the rest of Mr. Lorimer’s opening, since it dealt with matters with which we are familiar and which have already been recorded. In close and conscientious detail he described all the circumstances connected with Lotta Schiller’s disappearance, including the murder of the ill-fated Emma Robey and the search by the police for Lotta, the discovery of the relics, and, finally and at considerable length, the exploration of the ancient British camp and the various efforts which had been made during the last two years to get into communication with Lotta.

Meanwhile, since I was not much concerned with the speech, I entertained myself by observing what was going on in the court; watching the judge, who was listening with an air of intense concentration to the counsel’s recital, the one or two strangers who drifted in by the swing door and soon drifted out again, and especially Mr. Snuper. Not that he offered much entertainment. At first he had seated himself directly behind Mr. Schiller, but had gradually worked his way along the bench, apparently to get nearer to the speaker, and there he sat listening open-mouthed, seeming to be as much engrossed with Lorimer’s recital as the judge himself. As to Mr. Schiller, after the opening statement, he appeared to take little interest in the proceedings, having, no doubt, heard it all before. Most of the time he sat with his eyes closed, his head reposing restfully against the high back of the seat as if he were asleep; though, from time to time, he opened his eyes and even raised his head to look about him, but subsided almost immediately into his former semi-somnolent state.

It was during one of these temporary awakenings that a very odd thing happened. Mr. Lorimer had come to the end of his narrative and was just beginning his argument, when Mr. Schiller opened his eyes and looked drowsily at the counsel. Then, suddenly, his eyes opened wide and a most strange expression of dismay appeared on his face. I looked at him in astonishment. He seemed to be making an effort to move, but his head remained fixed as if it were attached to the back of the seat. Almost immediately his predicament was observed by Mr. Snuper, who hastily slid along the seat towards him, at the same time fumbling in his pocket. I heard him murmur, “Don’t move, sir,” and some other words which I could not make out, and, as he spoke, I saw him quickly open a pair of folding pocket scissors. Then, with these in his hand, he leaned over the back of the seat, and the next moment the prisoner was free, smiling a little wryly, tenderly feeling the back of his head, and looking round curiously at the spot on the bench-back which Snuper was now carefully scraping with a pocket knife.

What he was scraping I could not see, but there must have been some foreign matter on the bench-back, for I saw him hold up the knife for Mr. Schiller’s inspection and then wipe it on an envelope which he produced from his pocket and returned there after having folded it. But even then he was not satisfied, for he continued his scraping, wiping the knife on another piece of paper, and finally, having felt the surface with his hand, gave it a vigorous rub with his handkerchief. Meanwhile, Mr. Schiller, having acknowledged Snuper’s services with a smile, moved along the bench, and, taking the precaution to examine the surface by sweeping his hand over it, leaned back and once more closed his eyes.

It was a queer episode, trivial enough to a casual observer and over in less than a minute; apparently unobserved, too, excepting that the judge cast one quick, inquisitive glance during the scraping operation. But its triviality was not quite convincing to me, and I continued to keep an eye on Mr. Snuper notwithstanding that he was now once more the open-mouthed listener, and I noticed that he seemed to be imperceptibly creeping along the bench towards its farther end. He had just reached his goal when Mr. Lorimer’s speech came to an end, and, as the counsel sat down and preparations were being made for the reading of the affidavits, I saw him rise, and, having anxiously consulted the ancestral turnip, steal away quietly towards the swing door and vanish without a sound. So whatever his purpose might have been in attending at the hearing, it had apparently been achieved.

The first of the affidavits to be read was that of Thomas Pedley, and, as it set forth all the material facts, I did not quite see why Thornodyke had asked for his attendance for cross-examination. Nor did my colleague elicit any new facts of importance. His purpose was evidently to stress the significance of those facts that had been stated, and this he did most effectually.

“You have said, Mr. Pedley,” he began, “that you were somewhat intimately acquainted with Mrs. Schiller for about five months. During that time, did you learn much about her as to her past history, her former places of abode, her friends and her relatives?”

“No,” replied Pedley. “She never referred to her past at all, and she never mentioned any friends or relatives except her husband, and she only referred to him on one or two occasions, and then very slightly.”

“Would you be able to recognize her handwriting?”

“No. I have never seen any writing of hers.”

“But the signature on her pictures?”

“She did not sign her pictures. She used a conventional mark somewhat like a flower.”

“Did you ever see a portrait of her husband or of herself?”

“I never saw a portrait of her husband, and the only portrait of herself that I ever saw was one that she drew for reduction to put into a locket that she was to give to Mr. Vanderpuye.”

“Was Mr. Vanderpuye satisfied with her portrait?”

“No. He begged her either to let me paint her portrait or to ask Mr. Polton to take her photograph. But she refused
absolutely. She insisted on painting the portrait herself, and did so."

"Was her portrait a good likeness?"

"It was not a likeness at all. It bore no resemblance to her."

"Do you recognize this?" Thorndyke asked, handing a mounted photograph to the usher, who passed it to the witness.

"Yes," Pedley replied with a faint grin. "It is a photograph of Mrs. Schiller's portrait of herself."

"And do you recognize this locket?"

As he spoke, Thorndyke produced from the suitcase Polton's mysterious wooden slide, on which Vanderpuye's locket had been fixed by a clip, opened to show the miniature and the hair, and provided with a pair of lenses, one over the portrait and the other (a coddington) over the hair.

"Yes," replied Pedley as the usher handed it to him, "it is Mr. Vanderpuye's locket, and it contains Mrs. Schiller's portrait of herself and a specimen of her hair."

Here the locket, and the photograph were passed up to the judge, who looked first at the photograph and smiled broadly and then peered through the lens at the miniature and compared it with the photograph.

"Yes," he remarked, "one can readily believe that this is not a good likeness, unless the testatrix was a very unusual-looking woman." Before returning the "exhibit" he applied his eye to the other lens and examined the hair. Then he turned sharply towards Pedley and asked:

"Was there anything at all peculiar about Mrs. Schiller's hair?"

"Yes, my Lord," was the reply, "but I can't say exactly what it was. There seemed to be something unusual in its texture."

"Ha," said the judge, "so it appeared to me. However—"

Here he handed the locket to the usher, and, as the latter conveyed it to Mr. Lorimer, he seemed to reflect on the circumstance as if it had suggested some idea to him. Lorimer, on the other hand, was not interested at all, bestowing only an impatient glance at the two exhibits and pushing them along the desk to Thorndyke, who passed them on to me. Naturally, remembering Pedley's description of Lotta's hair, I examined it with keen interest, but the light was not good enough, and the magnification not sufficient to show much detail. All that I could make out was a faintly speckled appearance quite unlike that of normal human hair. Reluctantly I returned the exhibits to Thorndyke, who, when he had put them back into the suitcase, resumed his cross-examination.

"Apart from this drawing of Mrs. Schiller's, have you ever seen any portrait of her?"

"No portrait drawn from life. I once drew a portrait of her from memory."

"Is this the portrait that you drew?" asked Thorndyke, handing to the usher Pedley’s own note-book, fixed open with a rubber band, and a photograph.

Pedley looked at them with a shy grin and replied:

"Yes. The original drawing is in the book, and this is a photograph of it."

"Is the portrait a good likeness?"

"I should say that it is a fairly good likeness. I think it would be recognizable by anyone who knew her."

The book and the photograph were passed up to the judge, who inspected them with apparent interest, and from him they were conveyed to Lorimer, who glanced at them almost contemptuously and pushed them along to Thorndyke. Evidently the learned counsel regarded my colleague’s proceedings as a regrettable waste of time, and he made no secret of his relief when Thorndyke sat down, indicating that his cross-examination was finished.

As Lorimer made no sign of re-examining the witness, and it was now within a few minutes of the luncheon hour, the judge announced the adjournment; whereupon we all stood up; his Lordship whisked out by the private door, Polton hurried forward to seize the suitcase, and the occupants of the court trooped out by the swing door. We followed almost immediately, and, issuing into the Strand, set a course for our chambers by way of Devereux Court.

------------------

**XV. — MR. LORIMER OBJECTS**

AS we approached the end of Crown Office Row I observed with interest, but no surprise, a rustic-looking person who appeared to be making a leisurely survey of the old houses in King’s Bench Walk. Needless to say it was Mr. Snuper, apparently unconscious of our existence until Thorndyke, with the nearest approach to eagerness of which he was capable, accosted him. Then he turned with a start of surprise and he and my colleague drifted down the Walk together, apparently in earnest conversation. I slowed down my own progress to keep an eye on them, for I was devoured by curiosity as to Snuper’s proceedings in court. But there was little to see and less to hear, for neither of them was addicted to shouting, and they were near the garden end of the Walk before any visible action took place. Then I thought I saw Snuper hand something to Thorndyke, but I could not see what it was, and, as it disappeared instantly into my friend’s pocket, I judged that it was lost to me, at least for the time being; whereupon I abandoned my spying and hurried indoors in quest of lunch.
As the table had been laid by Polton's deputy, who was in the act of bringing in the food, I sat down to wait for Thorndyke's arrival; but when he looked in a few minutes later, it was only to beg me to proceed with the meal in his absence.

“I have a little job to do in the laboratory,” he explained. “It will only take me a minute or two, but there is no need for you to wait.”

Accordingly, as we had to be back in court punctually, I lifted the cover and fell to; but in less than five minutes Thorndyke joined me; and, looking at him critically, I seemed to detect, under his habitual impassiveness, an expression of satisfaction and even of elation, suggesting that the “little job” had turned out a success. Which led to speculations on my part as to the nature of that little job, and in particular, whether it had any connection with Mr. Snuper’s activities. But, of course, I asked no questions, and, equally of course, Thorndyke volunteered no information.

When the reading was resumed after lunch, Mr. Lorimer rose to request that Miss Linda Dalton’s evidence might be taken next, to enable her to catch a train; and, as the judge raised no objection, she took her place in the witness-box and her affidavit was read. Most of it was concerned with her claim under the will, but it finished up with the statement that she had last seen Lotta Schiller early in June 1930, and that since then she had received no communication from her nor had any knowledge of her until she heard of the disappearance.

When the reading was finished, Thorndyke rose to cross-examine.

“Do you happen to remember what kind of dress the testatrix was wearing when you last saw her?”

Miss Dalton smiled. “I do, indeed,” she replied. “It was a very ugly dress and I thought it rather eccentric. The bodice and skirt were a sort of dull violet and there was a broad turn-down collar of a deep orange and sleeves of the same colour. It was a dress that one could not forget.”

“Did the testatrix play any musical instrument?”

“Yes. She played the violin.”

“Did she spend much time practising?”

“Latterly, she did. My sister Barbara used to make a little income by playing in a small orchestra—at a cinema, I think—and she got Lotta an engagement at the same place, and they used to practise together; and, of course, she was playing for some hours every day in the orchestra.”

“You will, of course, remember her appearance quite well. Will you look at this portrait and tell me whether you consider it a good likeness?” As he spoke he handed to the usher a photograph which I saw was the reproduction of Pedley’s drawing.

Miss Dalton looked at it rather blankly.

“Is this supposed to be a portrait of Lotta?” she asked; “because I don’t think it can be. I can’t discover the faintest resemblance to her.”

Glancing at Lorimer, I thought I detected a faint smile on his face. The judge, on the other hand, looked surprised and keenly interested; and, when the photograph was passed up to him, he examined it closely, turned it over to examine the back, on which a number had been pencilled, and made a note.

Meanwhile, Thorndyke had produced a small portfolio which was handed to the witness.

“In that portfolio,” said Thorndyke, “are half a dozen photographs. Will you look through them and see whether any of them resemble Lotta Schiller?”

Miss Dalton glanced quickly at the first two which came hand to hand but at the third she paused. Then she took it out and said:

“This is a portrait of Lotta Schiller; a very odd one, but an excellent likeness. And so is this other one,” she added, taking it out and holding it up.

“You feel no doubt that those two photographs are portraits of Lotta Schiller?”

“None whatever. They are both unmistakable.”

The two portraits were now passed up to the judge, who examined them with intense interest and compared them minutely with Pedley’s drawing. When he had looked at the backs and made his notes, he passed them down but still seemed to reflect with a rather puzzled air, and when they reached me I could understand his surprise, for the discrepancy between the drawing and the photograph seemed incredible in the case of a competent artist like Pedley. However, there was no time to consider the point, for Thorndyke had finished his cross-examination, and, a minute later Miss Dalton left the box, and, with a wave of the hand to Mr. Schiller, tripped out of the court.

The next witness was Mrs. Mitchens, whose affidavit set forth concisely the facts known to her relating to the case from the 16th of July 1930, when Lotta engaged the rooms, to the time of her disappearance, including the finding of Emma Robey’s body. When the reading was finished, Thorndyke rose and led off with the question:

“Would you recognize Mrs. Schiller’s handwriting if you saw it?”
“No,” was the reply. “I have never seen her hand writing; she had no occasion to write to me—at least she never did write, and, as she always paid her rent in cash, there were no cheques.”

“Did she ever play any musical instrument?”

“No; but she had a violin. I didn’t know it until after she had left, but then, as I was going through her things to store them, I found it under the bed.”

“When you were going through her things, did you come across a dress with a violet bodice and skirt and orange-coloured sleeves and a broad collar of the same colour?”

“No indeed, sir; and I don’t think Mrs. Schiller would have worn such a dress. Her costumes were usually rather quiet and tasteful. But I only found one or two dresses and I am sure there was nothing of that kind among them.”

“When Mrs. Schiller engaged your rooms, did she give you any references?”

“No. She paid a month’s rent in advance—in cash.”

Here Thorndyke again produced the portfolio, and, when it had been handed to the witness, said:

“I want you to look through those portraits and see if you can find any that you think is like Mrs. Schiller.”

Mrs. Mitchens turned over the first two portraits and then, as she came to the third, she picked it out, and, holding it up triumphantly, announced:

“That is Mrs. Schiller.”

The judge, who had been watching eagerly, now held out his hand for the identified portrait; and when it was passed up to him, he looked at it with intense interest, and, leaning out towards the witness, said:

“Now, Mrs. Mitches, are you perfectly sure that this portrait is really like Mrs. Schiller?”

“I am perfectly sure, my Lord,” she replied. “It’s a speaking likeness.”

On this his Lordship scribbled a note and then asked to have the portfolio handed up to him. When this had been done, he picked out two photographs and passed them down to the witness.

“Did you look at these two portraits?” he asked.

“Yes, my Lord,” she replied, “but they are not Mrs. Schiller. They are not the least bit like her.”

The judge noted down the answer and then, having passed the portfolio back, nodded to Thorndyke, who now put his final question.

“Did Mrs. Schiller ever receive visitors?”

“Only Mr. Pedley and Mr. Vanderpuye. I never saw anybody else.”

On this, Thorndyke sat down, and when Mrs. Mitches had been released from the box, the name of the next witness—Mrs. Bigham—was called, and a very unprepossessing woman advanced with something of a swagger. The evidence contained in her affidavit was of some importance in regard to the disappearance, but when it came to cross-examination, Thorndyke confined himself to the question of identification. Producing the inevitable portfolio, and passing it to her, he asked:

“You say that you knew Mrs. Schiller well by sight; do you think you would be able to recognize a portrait of her?”

“I am quite sure I should. I’ve got a rare memory for faces.”

“Then will you look at the portraits in that portfolio and tell me whether any of them appears to be a portrait of Mrs. Schiller?”

Mrs. Bigham opened the portfolio with a judicial air, and, pursing up her lips, glared critically at the top photograph and thrust it over with the remark, “That ain’t her,” and passed on to the next, which she dealt with in the same fashion, and so on with the others until she came to the fifth; at which she gazed intently for an instant and then, picking it out and holding it aloft with the face towards us, exclaimed, “That’s her.”

I recognized it as the reproduction of Pedley’s drawing, and so did the judge, who listened with rapt attention for the next question.

“You are quite sure that that portrait is really like Mrs. Schiller?”

“Lord, yes,” was the reply. “It’s her spit image. I reckernized it at the first glance.”

“There are two others that I want you to look at very carefully. They are numbered three and four.”

The witness turned over the photographs and selecting two, held them up for our and the judge’s inspection. They were the portraits that had been identified by Miss Dalton.

“If you mean them,” said Mrs. Bigham, “I can tell you that they ain’t Mrs. Schiller. Nothink like her.”

“You are quite sure of that?”
“Positive. They ain’t no more like her than what I am.” With this answer Thorndyke appeared to be satisfied, for he asked no further questions; and, when he had sat down and Mrs. Bigham had—somewhat reluctantly, I thought—vacated the box, I waited with some interest for the next item; and when it came, it was not altogether unexpected. For some time past I had noticed signs of restiveness on the part of the learned counsel for the applicant; and I was not surprised. For I had an uneasy feeling that Thorndyke had been taking some slight liberties with the legal proprieties. That was evidently Mr. Lorimer’s view, and he now gave expression to it.

“I am unwilling, my Lord,” he began, “to occasion delay in the hearing, but there seems to have been a departure from customary procedure on the part of the opposition to which I feel bound to object. My learned friend appears to be raising an entirely new issue, of which we have had no notice, and supporting it by the production of documents—to wit, photographs—the existence of which has not been disclosed to us.”

“Yes,” the judge agreed with a smile; “the learned counsel does certainly seem to have sprung a little surprise on us.”

Here he cast a somewhat quizzical glance at Thorndyke, who thereupon rose to reply.

“I shall not deny, my Lord, that some apology seems to be due to my learned friend, but I would submit that the raising of a new issue is only apparent. There are really two issues in this case; one is whether the person known as Lotta Schiller, who disappeared in Epping Forest is, or is not, presumably dead; the other is whether that person was the testatrix. We have all assumed that Lotta Schiller of Jacob Street and Lotta Schiller, the testatrix, were one and the same person. There seemed to be no reason to question the identity. Nevertheless, I considered it desirable, ex abundancia cauteae, to test the correctness of our assumption; with the surprising result that there now seems to be some doubt whether we are not dealing with two different persons.”

Lorimer and the judge both smiled appreciatively at Thorndyke’s ingenious evasion, and his Lordship replied:

“That is quite true, though it does not answer the learned counsel’s objection. But the question of identity has been raised, and it has evidently got to be settled before the other issue can be considered. So the problem now is, what is to be done about it? You mentioned at the opening that you might ask for an adjournment to enable you to file affidavits in answer or to call witnesses. Are you going to apply for an adjournment now?”

“I think, my Lord,” replied Thorndyke, “that, in view of the conflict of testimony, some new evidence is required, and I should wish to call witnesses; but, as those witnesses would have to attend for cross-examination, there seems to be no object in filing affidavits, and time would be saved by not doing so. We are now at the week-end, and I submit that if your Lordship would consent and my learned friend would agree, he and I might confer in the interval and thereby avoid the necessity for an adjournment.”

The judge looked a little dubious at this suggestion, but, as Lorimer signified his agreement and was evidently anxious to get on with the case, his Lordship consented to the arrangement and adjourned the hearing for the week-end.

As the court rose, Lorimer turned to Thorndyke, and spoke to him in a low tone. Then they walked together to the solicitors’ table and apparently held a short discussion with Turner and Longford; at the end of which they came back and we set forth in company towards the Temple.

“We have arranged about the conference,” said Thorndyke. “The solicitors prefer to leave the matter for counsel to settle, so Lorimer and I are going to dine together and then adjourn to his chambers for the pow-wow. That will leave us a free week-end.”

Accordingly, when he had shed his wig and gown, he went off with his learned opponent and I saw him no more until about eleven o’clock, when he turned up at our chambers in obviously good spirits.

“Well,” I asked, “how did you get on with Lorimer?”

“Admirably,” he replied. “He is quite a reasonable fellow and I had no difficulty in getting him to see my point of view. I had to tell him more than I wanted to, but as we were alone it didn’t matter.”

“And what did you arrive at?”

“We agreed to treat the question of identity as a separate issue to be settled definitely before going on to the main issue. I made him understand that whichever way it went the result would not affect his case.”

“The devil you did!” I exclaimed. “I should like you to make me understand that. It seems to me that if you make out your contention of two different persons, his case collapses at once.”

He regarded me with an exasperating smile. “That, you know, Jervis, is because you have not been following the evidence in this case, or have not reflected sufficiently on its significance. Turn it over in your mind between this and next Monday and see if you cannot anticipate the revelation that I hope to make at the next hearing.”

With that tantalizing hint I had to be content. Of course, I did not trouble to “turn it over in my mind.” I realized that Polton had been right as usual. Thorndyke’s devilish machinations in his laboratory had been the prelude to “a little surprise for somebody”; and I was going to be one of the surprised.

XVI.—SUPERINTENDENT MILLER INTERVenes
OF what took place during the week-end I am not very clear. On the Saturday Thorndyke was out and about most of the day making, as I assumed, his final arrangements; which assumption was confirmed by a late telephone message from Superintendent Miller asking me to "let the Doctor know that Miss Rendell had been warned and would attend in court on Monday." Who Miss Rendell might be I had no idea and I did not inquire. For the time being my curiosity was in abeyance.

One small piece of enlightenment I did indeed acquire. Finding Polton at a loose end in the laboratory, I attacked him facetiously on the subject of Mr. Snuper’s watch, which I suggested was a disgrace to an establishment that included on its staff a first-class artificer. “Really,” I concluded, “I think you ought to provide him with something less prehistoric for the credit of the house. Just get him to show it to you.”

Polton regarded me with a cunning and crinkly smile. “I’ve seen it, sir; in fact I made it. But it isn’t a watch, though it has hands that you can set to time for the sake of appearances. It is really a camera; but Mr. Snuper carries his watch in another compartment of the same pocket.”

“A camera!” I exclaimed. “But it can only be a mere toy.”

“Well,” Polton admitted, “it isn’t much of a camera; just a makeshift. But it answers Mr. Snuper’s purpose, as you can use it anywhere without being noticed, and a poor photograph is, for him, better than no photograph. It is a record, you know, sir.”

“And what sort of picture does it give?”

“Better than you would think, sir. The negative is half an inch by five-eighths, and it will bear enlarging up to four inches by five. It has a beautiful little lens and the definition is perfect. Perhaps you would like to see it. I’ve got it in for recharging.”

He produced the illusive turnip from a drawer and exhibited it with excusable pride; for it was a miracle of ingenuity, with its arrangement for changing the film, which also set the shutter, and that for setting the hands. But almost more surprising were the tiny negatives, microscopically sharp, which Polton also showed me, and the clear and admirable enlargements; which caused me to view the turnip and its creator with a new respect.

The following day Thorndyke spent mostly in his private laboratory, making, as I supposed, some final preparations for the resumed hearing. But I had no idea what they might be, nor did I speculate on the subject. I had given the problem up, and reserved my curiosity for the promised revelation on the morrow.

Apparently I was not alone in this attitude, for, when we took our places in court on the Monday morning, I detected in Mr. Lorimer an air of lively expectancy; and the judge, as soon as he had nipped into his seat, glanced at the counsel for the applicant with evident curiosity; whereupon Lorimer rose to make his announcement.

“During the week-end, my Lord, I have conferred with my learned friend, and we have agreed, with your Lordship’s consent, to treat the question of identity as a separate issue, to be disposed of before taking any further evidence on the main issue.”

“That seems a reasonable proceeding,” said the judge. “Evidently it would be futile to consider the presumption of death until we know whose death it is sought to presume. Are there any new witnesses?”

“Yes, my Lord. I am calling Mr. Carl Schiller, the testatrix’s husband, whose affidavit has been filed. When he has given his evidence, as I have no other witnesses to identity, I have agreed that my learned friend should, with your Lordship’s consent, produce his evidence forthwith.”

The judge nodded, and thereupon Mr. Schiller stepped into the witness-box and stood there, listening attentively while his affidavit was read. It was quite short, setting forth merely that he had not seen or heard of, or from, his wife for more than three years, and that he had no knowledge whether she was alive or dead. When the reading was finished, Lorimer took the portfolio, which was handed to him by Thorndyke, and passed it across to the witness.

“There is some conflict of testimony, Mr. Schiller,” said he, “as to which of the portraits in this portfolio is a true portrait of your wife. Will you kindly look through them and see whether you can settle the question for us?”

Mr. Schiller opened the portfolio and went systematically through the whole of its contents—some seven or eight photographs. Having looked at them all, he selected one and held it up for inspection; and I saw that it was Pedley’s drawing, or rather the reproduction of it.

“This,” said he, speaking with a perceptible German accent, “is the only one that seems to me to resemble my wife, and it is quite a fair likeness. The others I do not recognize at all.”

I was a good deal surprised, and so, I think, was the judge; for Schiller’s evidence directly contradicted that of Miss Dalton (who was not present on this occasion). However, there was nothing to be said as the witness had looked carefully through the whole set of photographs, and, as neither the judge nor Thorndyke questioned the evidence, the witness was released and returned to his seat, or rather to a seat at the extreme end of the bench, and Thorndyke called his first witness, a Mrs. Matilda Wharton; whereupon a pleasant-looking elderly woman stepped into the box.

“What is your full address, Mrs. Wharton?” Thorndyke asked.

“I live at 16 Corby Street, which is a turning out of the Linton Green Road.”
"Have you ever been acquainted with Mrs. Lotta Schiller?"

"Yes. She lodged with me for about three years."

"Did her husband live with her?"

"No. He travelled about a good deal, but when he was in London he used to call on her and they used to go out together. But he never lived in the house. I think he used to stay at hotels."

"On what kind of terms were they?"

"They seemed quite friendly though not affectionate; but shortly before she left there seemed to have been some sort of disagreement, for she became rather strange in her manner and appeared to avoid him."

"When, and in what circumstances, did she leave you?"

"She left me on the 13th of June 1930. She went out one morning and never came back; but she sent me a telegram saying that she had gone away and would write. She never did write, but a couple of days later her husband came to the house and told me that she had been suddenly called abroad and that she would not be coming back for some months. He paid what was owing and took away her belongings, including her violin. I have never seen or heard of her since."

"Was there anything remarkable about the manner of her departure?"

"Well, it was rather strange. She said nothing about going away before she went out, and she had nothing with her but the things that she stood up in."

"During the time that she lodged with you, did she receive many visitors?"

"No. The two Miss Daltons used sometimes to call to see her or to take her out; and once or twice Mr. Montagu—the poor gentleman who was murdered—came to see her or to fetch her out."

Here Thorndyke gave me—and not me alone—the first of the surprises by producing from the suitcase a small oil painting, which I recognized as a sketch of Pedley’s that I had seen hanging on the wall of Polton’s private room.

"I want you, Mrs. Wharton,” said he, passing it across to her, “to look at this painting and tell me whether the figures in it suggest any particular persons to you."

The witness examined the painting closely and then at arm's length.

"Of course,” she said cautiously, "I can’t recognize any of these people, but the woman looks to me very much like Mrs. Schiller."

"In what respect is she like Mrs. Schiller?"

"I think it is chiefly the dress. It’s rather a peculiar dress and Mrs. Schiller had one just like it; in fact she was wearing that very dress on the morning that she went away. But the figure is like her, too, and the colour of her hair. Still, it is only a resemblance. I don’t say it actually is her. You see, there are no features to recognize it by."

"And as to the other figures; do they seem to suggest anybody that you have known?"

Mrs. Wharton again looked at the picture critically. At length she replied, in a rather doubtful tone:

"It’s only a mere guess as they have their backs to us, but I think the taller of the two men rather reminds me of Mr. Montagu. I often used to see him in the street and he was always dressed in this way, and he had a habit of gesticulating with his umbrella as he talked, as this man seems to be doing; and the umbrella in the picture seems to have an ivory handle as his had. And he seems to be about the right height, comparing him with the other man. Still, I don’t profess to be able to recognize him."

"Of course you can’t,” said Thorndyke; "but I must compliment you on your memory and powers of observation. And now I will try you with something that it is more possible to be certain about."

Here he produced the inevitable portfolio and passed it across to her. Meanwhile the picture was handed up to the judge, who looked at it curiously and returned it; and I noticed that Lorimer examined it with more than his usual faint interest in exhibits. But attention was now focused on Mrs. Wharton, who, at Thorndyke’s request, was looking very carefully through the collection of portraits. When she had examined them all, she very deliberately selected two, which she held up with their faces towards us, and which I could see were the two that Miss Dalton had recognized.

"These,” said she, "are portraits of Mrs. Schiller. They aren’t very flattering, but they are quite good likenesses."

The judge inspected them with a surprised and rather puzzled expression and then glanced at Thorndyke; who, as he received the portfolio, took from it Pedley’s drawing and passed it across to the witness.

"What do you say to this? It is supposed to be a portrait of Mrs. Schiller. Is it a good likeness?"

The witness looked at it with evident surprise. After a prolonged inspection she handed it back, shaking her head.

"I don’t think it can have been meant for Mrs. Schiller,” said she. "It doesn’t seem to me to be like her at all. It looks like quite a different person."

This evidently completed his Lordship’s perplexity, for he asked that the portfolio should be passed up to him, and, when
he had it, he laid the three portraits in a row on his desk and made a prolonged and careful comparison. But clearly he could make nothing of them, for he finally gathered them up, and, glancing at Thorndyke with raised eyebrows, handed back the portfolio.

Among the new arrivals in court I had noticed a rather prim-looking lady dressed in a neat and becoming uniform which associated itself in my mind with the idea of "chokee"—formerly known familiarly as "the jug." And so it turned out to be; for, when Mrs. Wharton had vacated the box—there being no cross-examination—the lady in question took her place, and, facing Thorndyke with professional composure, introduced herself as Miss Julia Rendell, a Female Officer at Holloway Prison. Thereupon, Thorndyke produced the everlasting portfolio; but he did not on this occasion pass it across to the witness. Instead, he opened it, and, selecting from the collection the two photographs which Mrs. Wharton had identified, sent them across for the lady's inspection.

"Do you recognize those two photographs, Miss Rendell?" he asked.

"Yes," she replied promptly. "They are incomplete copies of two prison portraits of a prisoner named, or known as, Louisa Saunders."

"Do you recognize these two?" he asked, handing over two other photographs which he had just fished out of the suitcase.

"Yes. They are the original portraits, or facsimile copies of them."

"Are they good likenesses of Louisa Saunders?"

"Yes, quite good. I recognized them at once."

"When did you first see Louisa Saunders?"

"On the 13th of June 1930 at the evening receptions. She had been arrested that morning and remanded in custody."

"Do you know any particulars of the charge on which she was arrested?"

"Yes. I accompanied her, with some other remands, to the police court and was present at the hearing. She was charged with having uttered a forged one-pound note and with having in her possession four other forged notes."

"Did she plead 'Guilty' or 'Not guilty'?"

"Not guilty.' She said that the notes had been given to her in a bundle and that she had no suspicion of their being bad notes."

"Was any evidence given to show that she knew the notes to be bad notes?"

"No. The only evidence against her was that she had offered the bad note in payment for some goods that she had bought, and that she had the other notes in her possession. But, as she would not give any account of herself or say where she had obtained the notes or who had given them to her, she was convicted and sentenced to six months' imprisonment."

"Is that, in your experience, a usual sentence for this offence?"

"No. I should say that it was an unusually lenient one."

"Did the prisoner give any address?"

"No. She would give no account of herself whatever except her name."

"Was there any evidence that Louisa Saunders was her real name?"

"None beyond the fact that her clothing was marked with the initials 'L. S.'"

"Was she a married woman or a spinster?"

"She refused any information about herself, but, as she was wearing a wedding ring, we entered her as a married woman."

"While she was in prison, was her hair cut?"

"No. It was rather short when she came in, and, as she was perfectly clean, there was no necessity."

"Do you remember how long it was when she was discharged?"

"So far as I remember, it was about down to her shoulders."

"On what date was she discharged?"

"On the 12th of December 1930, at noon."

"I suppose you don't know whether anybody met her when she left the prison?"

"As a matter of fact, I do. I happened to be going out of the prison at the same time, and I saw a man who seemed to be waiting for her at the corner of Hilmarton Road. At any rate, she crossed the road and joined him."

"Do you remember what he was like?"

"Not very clearly. I did not notice him particularly and should not know him if I were to see him. All that I remember
about him is that he seemed to be a fairly well-dressed man and rather short.”

“You saw the prisoner, Saunders, at receptions on the day of her arrest; you accompanied her to the police court; and you saw her in the street when she left the prison. Do you remember how she was dressed on those occasions?”

“I remember that she was wearing a rather conspicuous dress with sleeves a different colour from the bodice and skirt.”

Here Thorndyke produced Pedley’s sketch and passed it across to the witness.

“I want you,” said he, “to look carefully at that picture and tell me whether it recalls anything to your memory.”

The witness looked at the painting attentively for a few moments, and then replied:

“The woman in the picture reminds me strongly of Louisa Saunders. She is like her in figure and in the colour of her hair, and the dress is exactly like the one that Saunders was wearing when she came to the prison and when she left it. Of course, I can’t identify her as Saunders because the face is not recognizable, but otherwise the resemblance seems to be complete.”

This concluded the examination-in-chief, and, as Thorndyke sat down, Lorimer rose to cross-examine.

“Is it not rather remarkable,” he asked, “that you should have so clear a recollection of this prisoner after the lapse of so long a time?”

“I don’t think so,” she replied. “A prison officer is expected to be able to remember and recognize persons, and Saunders was a rather unusual prisoner. Most of the women who come in at receptions are of the lowest class; and then the dress that she was wearing was a distinctly striking one. And,” the witness added with a deprecating smile, “a female prison officer, like any other woman, is apt to have a good memory for an unusual dress.”

“This one,” his Lordship remarked, “certainly seems to have made a deep impression on the ladies who had seen it, judging by the evidence, as they all remembered it clearly. But the photographs give a very misleading rendering of it, though one can see that the sleeves and collar are of a different colour from the bodice. The painter has still some advantage over the photographer.”

“In the matter of colour, my Lord,” said Lorimer. “Not in respect of personal identity. I do not admit that the figure in the painting has been identified.”

“No, no, no!” exclaimed the judge. “I was referring only to the colour of the dress. No one has suggested that there has been actual identification of the person.”

With this, Lorimer opened a new subject. “You have said that you were present at the police court proceedings. Was any evidence produced to show that the accused had any guilty knowledge of the character of the notes?”

“None except the fact that she had the notes in her possession and had passed one of them.”

“Was there any evidence that her explanation of the way she came by those notes could not be true?”

“No. But the trouble was that she refused to say where she got the notes or who gave them to her.”

On receiving this answer Lorimer discreetly closed his cross-examination, having apparently made his point, which seemed to be that the accused might quite possibly have been innocent, the conviction notwithstanding. Why he should stress this point I could not quite see, unless he was beginning to entertain the same suspicion as that which was creeping into my own mind.

I had listened to Miss Rendell’s evidence with intense interest; indeed, I had been considerably startled, not only by the identification but by the curious coincidence of dates. But my interest was feeble compared to his Lordship’s. The new identification had evidently astonished him, and, when the date of the prisoner’s arrest was mentioned he hurriedly turned over his notes and made some comparisons; and when the photographs were handed up to him, he spread them out in a row and rapidly compared them. There was no need for a prolonged examination, as I realized when they reached me, for the two pairs appeared to be from the same negatives. The only difference was that the “originals” showed a black batten with the prisoner’s name chalked on it; fixed across the chair and occupying the foot of the portrait, whereas, in the “incomplete copies” the batten had been masked out.

But there were other interested listeners besides the judge and me. Mr. Schiller, although he still made a show of keeping his eyes closed, was evidently wide awake. Inspector Blandy followed the evidence with close attention; and Superintendent Miller, who had slipped quietly into the court some time previously with my friend, Dr. Oldfield, was listening and watching attentively, though he must have known all about Miss Rendell’s evidence.

As the latter lady made her dignified exit from the box, the judge cast a quick, expectant glance at Thorndyke; then the name of the next witness was called, and Dr. James Oldfield came forward and presented himself to be sworn and to give evidence.

In his case, as in that of the previous witness, the examination began with the passing across of the two “incomplete copies.”

“Will you look at those two photographs, Dr. Oldfield,” said Thorndyke, “and tell us whether they seem to be portraits of any person whom you have ever seen?”

Oldfield examined the photographs closely for nearly a minute; and as he looked at them, there stole gradually over his
face an expression of surprised recognition. At length he replied cautiously:

"These photographs appear to me to be portraits of Emma Robey, the woman who was murdered about two years ago at 39 Jacob Street, Hampstead Road."

"Can you say definitely that they are portraits of Emma Robey?"

"I don’t like to swear, positively, that they are. The woman had been dead about three weeks when I examined her body, and some changes had occurred. But I feel a strong conviction that these are portraits of her. Would it be permissible for me to refer to my notes?"

"When did you take the notes?" the judge asked.

"I made them in the mortuary in the presence of the body, and I compared and verified them, point by point, after I had written them."

"Then you may certainly refer to them," said the judge.

On this, Oldfield produced from his pocket a small book, and, opening it at a marked place, made a systematic comparison of the notes and the photographs. When he had finished, he announced:

"I have compared the description in the notes, detail by detail, with the photographs, and I find that they agree in every respect except one. That is that the hair in the photograph is considerably shorter than the hair of the corpse when I examined it."

"Did you note the exact length of the hair?"

"I did not measure it, but I noted it in the description as just down to the shoulders."

"With that exception, you find complete agreement between your description and the photographs?"

"Yes; the agreement is complete in every detail."

"And, apart from the written description, do you recognize the portraits as being like Emma Robey?"

"Yes. As soon as I saw the photographs I felt that they were portraits of somebody whom I had seen; and when I tried to recall who that somebody was, I suddenly realized that she was Emma Robey. I may say that I now have no doubt that these are really portraits of her."

At this point my attention was attracted by Mr. Schiller; who had suddenly awakened, and now, pulling out his watch and glancing at it with a startled air, stood up abruptly, and, with a little bow to the judge, began to make his way slowly and silently towards the door. As he rose, so also did Inspector Blandy and Superintendent Miller, both of whom moved off unobtrusively in the same direction. I followed the three figures eagerly with my eyes as they converged on the exit, Schiller leading and slightly quickening his pace. One by one they passed out, and as the door swung to noisily, after the last of them, the judge (who had also been observing the exodus) took the photographs in his hand and remarked:

"This is a most extraordinary affair. These portraits have now been confidently identified as three different persons."

"My submission is, my Lord," said Thorndyke, "that those three are one and the same person."

"That would seem," the judge began; but at this moment a heavy thump on the swing door sent it flying inwards, and, through the opening came a sound as of several persons scuffling, mingled with low but excited voices. Then, in the midst of the confused noises, a pistol shot rang out. And as the door swung to, the sounds became more muffled and distant. After a short interval, at a sign from the judge, the usher hurried towards the door, and, having peered out cautiously, disappeared, and the door swung to after him. There was a brief silence during which we all waited expectantly. Then the usher reappeared, in company with Superintendent Miller, and announced:

"This officer, my Lord, has a communication to make to your Lordship."

The judge made no comment but looked inquiringly at Miller, who stepped up to the bench and made his "communication."

"I have to inform your Lordship," said he, "that Mr. Carl Schiller has just been arrested on a charge of having murdered his wife."

"Is it permissible," asked the judge, who seemed more interested than surprised, "for you to give any particulars of the charge?"

"It is quite permissible, my Lord," replied Miller, "as the prisoner will be brought before a magistrate immediately. The arrest was made on an information sworn by Dr. Thorndyke, and the charge is that the accused did, on the 12th of December 1930, at Number 39 Jacob Street, Hampstead Road, murder his wife, Lotta Schiller, by forcibly administering poison to her."

"Ah," said the judge, "thirty-nine, Jacob Street. Then the Epping Forest tragedy, if there ever was one, is irrelevant to the case of this poor woman?"

"Quite irrelevant, my Lord," Miller agreed.

The judge reflected for a few moments; then, addressing the court, that is to say the counsel and solicitors, he said:
“You have heard this officer’s remarkable announcement. Obviously this new information involves at least the suspension of these proceedings. If there is evidence that Lotta Schiller was murdered, there must be evidence that she is dead; and if her death can be proved, that proof excludes the idea of presuming it. The hearing will therefore be adjourned sine die.”

On this, we all rose. The witnesses—there were no spectators—faded out of the court, and we were preparing to depart also. But the judge made no sign of retiring instead, he craned out of his seat towards Thorndyke, and, in a low voice, suggested his desire for a little further enlightenment. Accordingly Thorndyke stepped over to the bench, and Lorimer and I had no false delicacy about following him.

“Well, Doctor,” said the judge, “as you seem to have been making use of the Probate Court for your own purposes, I think that the least you can do is to satisfy our legitimate curiosity. Now, what I want to know is, what has happened to the woman who personated Lotta Schiller at 39 Jacob Street, and what part did she take in the crime?”

“There was no woman, my Lord,” replied Thorndyke. “The person who was known at Jacob Street as Lotta Schiller was Carl Schiller, dressed and made up as a woman.”

“God bless me!” exclaimed the judge, “it sounds incredible. I suppose you have clear evidence as to the identity?”

“Yes,” Thorndyke replied. “The two persons are identical in their physical characteristics; in size, eye-colour, form of features, and in the exact shape of the ears.”

“That won’t carry you very far in support of a capital charge,” the judge commented.

“No,” Thorndyke agreed. “It would be of no use excepting for corroboration. But there is one piece of evidence that is quite conclusive. Providence has been kinder to us than to the criminal. It happens that Carl Schiller has a most unusual type of hair.”

“Ha!” the judge exclaimed. “There is something queer about the hair, is there? I thought, when I looked at the locket, that it was odd-looking hair. Very unusual, is it?”

“It is more than that, my Lord. It presents one of the rarest of anomalies. This ringed hair, as it is called, each hair being marked by alternate light and dark bands, is of such extreme rarity that, in the whole of my professional experience, I have never before met with a case. Only a very few examples exist in museums.”

“That is fairly impressive,” said the judge. “But the specimen in the locket, which, I suppose, is what you rely on, appertains to the lady. Do you know as a fact that Carl Schiller has hair of this character?”

“I do,” replied Thorndyke. “There, again, Providence has been kind to us. During the last hearing, a very curious accident happened in court. Mr. Schiller’s head became in some way stuck to the back of the bench, and it was necessary for a person who was sitting in the bench behind him to cut the hair in order to liberate him. The piece of hair which was cut off came into my possession, and, of course, as soon as it was examined with the microscope, the murder was, literally, out.”

The judge’s eyes twinkled. “Ha!” said he. “Now I wonder how that gentleman’s head became stuck to the bench? Do you happen to know?”

“I don’t actually know,” Thorndyke replied, “but I have certain suspicions.”

“So have I,” said his Lordship.

---

XVII. — OBSERVATIONS ON THE ART OF DISGUISE

It might perhaps be of interest, if space permitted, to describe in detail the trial of Carl Schiller for the murder of his wife, Lotta. But space does not permit, nor is there any need for such description, since all the facts brought forward in evidence against him are known to the reader of this narrative. It is, however, one thing to know the facts, but quite another to perceive their application or the inferences deductible from them. I had known all the facts that were known to Thorndyke; but it was not until I had heard him reconstruct the course of the investigation that I perceived their exact connections and understood how, by piecing them together, he had evolved his startling conclusion.

The trial had run its course to its inevitable end. The jury, without leaving the box, had brought in their verdict of “Guilty”; the judge had pronounced sentence of death; and the prisoner had descended the stairs from the dock, vanishing for ever from the sight of men; and the spectators, having thus witnessed the fall of the curtain, rose and began to surge out through the open doors. I followed them as soon as I could, and, presently, in the great hail, encountered Polton, Pedley, and Vanderpuye, whom I joined to wait for Thorndyke.

For my part, I had looked on at the unfolding of the drama, at the piling up of the deadly evidence, with no single twinge of pity or compunction, even when the judge had assumed the black cap and pronounced the final words of doom. But it was otherwise with our two friends. For them it had been impossible, as they looked on the white-faced brute in the dock, facing his accusers like a caged wild beast, to forget the ties of friendship and even of affection that had once bound them to him. Looking at their pale and troubled faces, I realized that it had been a painful ordeal which had left them shocked and saddened. So, too, Thorndyke, when he came out and joined us, was instantly aware of their distressed state of mind, and, with his invariable sympathy and kindliness, sought for some means of distracting their thoughts from their late
painful experience.

“I am wondering, Polton,” said he, “whether the resources of 5A King’s Bench Walk are equal to an impromptu dinner for five?”

“The resources of Number 5A, sir, are unlimited,” was the confident reply, in a tone of persuasive eagerness.

“Then,” said Thorndyke, “I am in a position to ask our two friends to give us the very great pleasure of their society this evening.”

He glanced inquiringly at Pedley and Vanderpuye, both of whom accepted the invitation with almost pathetic promptitude; whereupon Polton excused himself and darted off like a lamplighter, while we, since it was still some time short of any reasonable dinner hour, meandered down the Old Bailey to Ludgate Hill in search of a much-needed cup of tea. When we had disposed of this, with as much lively conversation as Thorndyke and I could produce for the occasion, we set forth at a leisurely pace for the Temple by way of the Embankment.

Polton’s estimate of the resources of 5A King’s Bench Walk was justified by the result, though I suspected that the Rainbow or some other excellent Fleet Street tavern had been pressed into service. But however that may have been, the dinner to which we sat down in due course did credit to the establishment, handsomely supported as it was by the products of our own cellar, which Polton had raided to some purpose (though his own place at the table was marked ingloriously by a bottle of lemonade). The unobtrusive service was conducted by William, Polton’s domestic understudy, aided by a mysterious stranger of waiter-like aspect, who lurked in the background performing curious feats of leggerdemain with dishes and covers but never intruding into William’s domain.

The opening stages of a good dinner “when beards wag all” are not adapted for sustained conversation. So, for a time, what talk there was concerned itself for the most part with cheerful trivialities. But at the back of all our minds was the drama which we had seen played out to its tragic end a few hours before, and inevitably it had to come to the surface sooner or later. But it was not until the manducatory pace had slowed down and the wine had circulated that the subject, hitherto taboo, was broached, and even then only indirectly.

“Before I forget,” said Thorndyke, “let me make restitution.” He produced from his pocket Pedley’s note-book and Vanderpuye’s locket, and, pushing them across the table towards their respective owners, added:

“There is no need for me to tell you how much I am indebted to you both for the loan and the use of these things. You have heard the evidence and you know what invaluable light they threw on the mystery.”

Pedley took up the book and pocketed it without remark; but Vanderpuye hesitated, looking at the little bauble as it lay on the table with intense disfavour. Eventually, however, he picked it up and dropped it into his pocket with something of a gesture of disgust.

“Your property, Polton,” said Thorndyke, “is, as you see, on the mantelpiece, and is now at your disposal, with many thanks for the loan.”

“You were very welcome, sir,” replied Polton, “but I think that the loan benefited me more than it did you. It has given the picture a new interest for me, whereas I don’t see that you got much help from it except for the colour of the lady’s dress.”

“I think,” said Thorndyke, “that when you hear the whole story, as you shall some day, you will find that the picture played a more important part in the investigation than you have realized.”

“If it did,” said I, “there is at least one point that I have missed, for I had the same idea as Polton; in fact I rather wondered why you produced the picture in court at all.”

“The principal object in producing it,” he replied, “was to help the witnesses to remember the dress. The photographs gave no such help; but the dress was of vital importance in fixing the dates. A further purpose was to ascertain whether the figure of the woman was recognizably like Lotta Schiller.”

“Yes; but you seem to hint at some other function that the picture served; and you hint at some future occasion when we shall hear the whole story of the investigation. But why a future occasion? We are all here, and I think we are all in the same condition as to our interest in the case. Speaking for myself, I am still mystified. I have heard all the evidence and found it perfectly conclusive; but what I cannot understand is how you came to build up the whole scheme of evidence out of nothing. Where did you get your start? What first put you on the track? It seemed to me that from the moment when Penfield proposed the case, you went straight ahead as if you had a considered theory already in your mind.”

“But that, in effect,” he replied, “was the actual position. When Penfield informed us of the impending application, he was not, so far as I was concerned, opening a new subject, but only introducing a new phase of a problem that I had already considered in some detail. But the story of the investigation is rather long one, and, if you all really want to hear it, you had better draw up your armchairs round the fire and prepare yourselves to listen in comfort.”

There was no doubt about the desire to hear the story. Polton was “on broken bottles” of curiosity, and our two guests, each in his own way, were eager to learn how the tangled skein had been unravelled. Accordingly we drew the armchairs up to the fire and Polton placed conveniently by them the little tables with their decanters and cigar boxes, while William and the alien waiter—who now came out into the open—swiftly cleared the table of its now irrelevant burden. Then, when the two operators had finally departed, Thorndyke began his story.
“The account of the actual investigation has a necessary prologue; necessary because it explains how suspicion first entered my mind in the absence of any positive suggestion from without. Jervis knows, because I have often told him, that in the early days when I had little or no practice, I used to occupy myself in the study of hypothetical cases. I would consider how a particular crime could be planned and executed with the greatest amount of security against detection; and, when I had established the principles, I would apply them by working out in detail an imaginary crime. Then I would study this crime to discover its weak points and the signs by which it might be recognized in real life. The method was a really valuable one, for a hypothetical crime, systematically studied, yields practically as much experience as a real one.

“Now, the most important crime from a medico-legal point of view is the deliberately planned murder. Accordingly, I gave special attention to this type of crime, and, after trying over a number of different methods, I decided that by far the most secure from the chance of detection was that of a fictitious person. It seemed to me that if this method were skillfully planned and efficiently carried out it would be almost undetectable.”

“I am not quite sure,” said Vanderpuye, “that I understand what you mean by creating a fictitious person.”

“Well, let us take an imaginary case. We will suppose that a man whom we will call John Doe has some reason for wishing to eliminate a certain person. That person may be an unwanted wife. John Doe may wish to marry another woman; or he may be haunted by a blackmailer. The reason, whatever it may be, is a permanent one. The person whom he desires to eliminate is an abiding hindrance to happiness or a menace to his safety. Now, supposing him to adopt my method, let us follow his procedure.

“He begins by assuming a disguise which so far alters his appearance that he would not be easily recognized by anyone who knew him, and that gives him certain new and easily recognizable characteristics.”

“That would not be particularly easy,” I remarked.

“It would not,” Thorndyke agreed, “but we will consider that question separately. Now we will assume that John Doe has so disguised himself and has taken a new name. Let us say, Richard Roe. Under that name he takes up his abode in a neighbourhood where he is not known and there assumes a character which will bring him into fairly close contact with a limited number of people. He may open a shop or an office or practise some kind of avocation whereby he will become well known by the inhabitants of the neighbourhood and more intimately known by a few; and in that way he will carry on for some months, at least, until he has become a well-established character in the locality.

“Then he proceeds to commit his crime, at his own selected time and place. He is not hurried. He can make his arrangements at his leisure. He has no occasion to take any measures for concealment of the identity of the criminal. On the contrary; the more definitely the crime is connected with Richard Roe, the more perfect will be his security. All that is necessary is to avoid any actual witnesses of the crime or any need for him to escape quickly. Probably the most perfect method would be to lure the victim to his premises, and, having committed the murder, to lock the corpse up in those premises and quietly take his departure.

“He is still, you see, not hurried or in any danger. He simply sheds his disguise and now has no connection with the murder. Some days, or perhaps weeks, will elapse before the body is discovered; in which time he can go abroad or to a distance, write to his friends describing his travels, and, in due course, after a discreet interval, return to his usual places of resort and to the circle of his old acquaintances.

“Meanwhile the body has been discovered and the police are in full cry after the murderer, Richard Roe. They have an excellent detailed description of him, vouched for by a number of reliable witnesses who knew him quite intimately and would certainly recognize him if he were produced. But he never is produced; for, in the moment when John Doe shed his disguise, Richard Roe ceased to exist. The police are, in fact, searching for a purely imaginary person.”

“Yes,” said I, “it certainly appears to be a very perfect scheme. But yet there seems to me to be one snag. The victim is in some way connected with John Doe, and it might be noticed that the murder is very opportune for him. For instance, the murdered person might be his unwanted wife, with whom he is known to have been on bad terms.”

“I don’t think that there is much in that,” Thorndyke replied. “You see, the identity of the murderer is not in question. He is a known person—Richard Roe—and, consequently, no suspicion can possibly fall on any other person. Still, the matter is worth noticing. It would undoubtedly add to the murderer’s safety if the corpse also could be disguised or rendered unrecognizable. We will bear that fact in mind. And now let us consider the question of disguise, remembering that a mere stage make-up would be useless; that it would have to be efficient out of doors in daylight and that it would have to be used constantly over a considerable period of time.

“To change a man’s appearance so completely that his friends or acquaintances would not recognize him is not easy. But it can be done. There used to be a wig-maker in Russel Street, Covent Garden, who made a regular profession of the art of disguising, and who was able to produce the most surprising transformations. But his methods were rather elaborate, the results not at all comfortable to the subject, and, in continuing cases, the clients had to attend daily to have the make-up renewed. This would hardly do for a long-term disguise, and certainly not for an intending murderer. He would have to do his own make-up, and it would require to be reasonably comfortable.

“However, we need not dwell on the difficulties of purely male disguise, for there is another kind that is comparatively easy and extremely convincing; change of sex. When it is possible, it is completely effective; for a marked change of appearance can be produced with very little actual disguise. And the change of appearance becomes of less importance,
since the change of sex creates a new personality. To his new acquaintances John Doe is a woman, and if any of them should subsequently meet him, a slight resemblance to that woman would pass unnoticed.

"Moreover, the present fashions are favourable to such personation. Women’s hair is worn in all sorts of ways, from a close crop to a mop of fuzz; and it is not only waved or curled artificially but is also dyed or bleached, quite openly and without exciting remark. Again, there is the extensive make-up, which is almost universal and is a recognized fashion; the painted lips, the tinted and powdered cheeks, the false eyelashes and the pencilled eyebrows. All these materially alter the appearance, and by management could be made to alter it profoundly. A man, by simply dressing as a woman and adopting a feminine mode of wearing the hair, with some use of the lipstick and the eyebrow pencil, would at once be considerably disguised; probably enough to pass unrecognized by persons who knew him only slightly; and if he had previously worn a beard or moustache, his appearance would be totally changed. Even his friends would not recognize him.

“But it is a method that is subject to very severe limitations. To certain types of men it would be impracticable. For a tall man it would be very unsuitable. A six-foot woman would be rather remarkable; but conspicuousness is what a disguised man would need to avoid. Then a dark man would be almost impossible, for no amount of shaving would get rid of a dark beard, and no paint or powder would cover it up. A man with a bass voice would also be impossible. It is difficult to modify the voice appreciably, and anything like an assumed voice would attract attention. Other peculiarities such as a very large nose or marked hairiness of the chest or limbs would create difficulties.

“And now let us see what would be a really suitable case, remembering that the object is to produce a woman of an ordinary type whose appearance would not attract notice. He would be the opposite of the types which we have excluded; that is to say, he would be a rather small, slight, blond man with somewhat small features, a light voice, and not too much hair on his chest or limbs. Such a man, if he shaved twice a day and used the make-up judiciously, might pass as a very ordinary-looking woman, provided that, before making his appearance in his new character, he let his hair grow long enough to allow of some kind of feminine mode. And, conversely, if one suspected a woman of being a man in disguise, one could postulate a man of this type as the one to be sought for; and such a suspicion might reasonably arise if a woman who had committed a crime disappeared immediately and permanently.”

“I should have thought,” said I, “that the voice would have created a difficulty.”

“I think you exaggerate the difficulty,” he replied. “There are voices which are unmistakably masculine or feminine; but there are a good many others—more, I think, than we realize—that are not at all distinctive. Between a deep female voice, especially if the lower register is habitually used, and a light male voice, there is very little difference. On hearing such a voice proceeding from another room, it is often difficult to say whether the speaker is a man or a woman. The fact is that our ideas are based on extreme or typical forms.

“And now to resume our argument. We have considered only physical disguise; change in appearance. But there is also what we may call psychological disguise; the adoption of feminine habits and modes of behaviour and the creation of circumstances suggesting a feminine personality. These would act by suggestion and leave observers with an unshakable conviction of the personator’s sex, the more powerful because unconscious. But the most convincing of all would be a love affair with a man, preferably a somewhat scandalous one which would give rise to gossip. The suggestive effect of this would be intense. It would completely forestall any possible question as to the sex of the personator.

“Incidentally, we may note that the latter would be wise to associate with women as little as possible; for women, having an intimate knowledge of the ways of their own sex, might notice some discrepancy of habit or behaviour into which a man might be betrayed by the lack of such knowledge.

“And now, having considered the ‘fictitious person’ method in the abstract, we may proceed to observe its application in the case of R. v. Schiller.”

He paused to pay certain little attentions to his guests. Then, when our glasses and pipes were recharged and Polton had refreshed himself with a pinch of snuff, he commenced his narration.

---

**XVIII. — THE INVESTIGATION REVIEWED**

“IT would be a paradox,” Thorndyke began, “to say that the unravelment of the complex scheme for the murder of Lotta Schiller began before the murder was committed; but it is a fact that, as each of the later developments came into view, it found me with a body of considered data to apply to the solution of the problem presented. At first, this was not an investigation ad hoc. Until Penfield proposed his case to me, I was an outsider, watching with little more than academic interest the unfolding of a train of events in which I was not personally concerned. Hence, when the question of the Presumption of Death was raised, I had not to embark on an investigation de novo, but only to test and verify conclusions already formed.

“For me, the starting-point was the murder of Charles Montagu. The interest of that crime from a medico-legal point of view lay in the unusual method adopted by the murderer—the forcible administration of poison. But there were other elements of interest, and, thanks to Polton’s enthusiasm, we were kept fully supplied with the published records of the case. We had the lurid descriptions of the murder and of the mysterious artist on whom suspicion at first lighted, and a full report of the inquest; but above all, we had Pedley’s remarkable little picture of Gravel-pit Wood. ”
“That picture made a deep impression on me. There it is on the mantelpiece, and, if you will look at it attentively, I think you will understand its effect on me. There are three figures. One, the taller man, was recognized by Blandy as Charles Montagu; and there we see him going to his death. The shorter man must have been the murderer; and we can see him there, leading his victim to the appointed place. But, to me, the most impressive figure was that of the woman. Who was she, and why was she there? Obviously she was spying on the two men, and apparently trying to hear what they were saying. The strong suggestion was that she was in some way related to one of them; and, since she never came forward to give information, the natural inference was that she was related to, or connected with, the shorter man. For, if her relations had been with Montagu, she would surely have denounced the murderer.

“But, above all, what impressed me was the terrible position that this unfortunate woman had placed herself in; the dreadful peril in which she stood. For her life hung on a thread—the thread of her silence. If she had not actually witnessed the murder, she certainly knew who the murderer was. A word from her could have sent him to the gallows; and she alone in all the world had that fatal knowledge. It was an awful position. The man had committed his crime and vanished without leaving a trace. He must have believed himself to be absolutely safe; and yet, in fact, his life was in this woman’s hands. If ever an inkling of the truth should leak out, she was doomed. The ruthless ferocity of the crime made that practically certain.

“I must confess that the thought of the dangers that encompassed that unhappy woman caused me a good deal of discomfort; which was revived from time to time when I used to see the picture hanging in Fulton’s room; and I was haunted by an uneasy expectation that, sooner or later, I should hear of the murder of some woman which should justify my forebodings. But the months passed, and I began to hope that the woman had had the wisdom to keep her secret and that the danger had passed.

“Then, at last, came the murder of Emma Robey; and, immediately, my suspicions were aroused. It was a bizarre, theatrical crime with many curious features; but the one that instantly attracted my attention was the method adopted by the murderer—the forcible administration of poison. Not only was it the same method as that employed in the murder of Montagu; the poison used was the same poison.

“Now, when we consider the inextinct tendency of criminals to repeat their procedure, it is evident that this similarity of method suggested at least a possibility that the murderer of Emma Robey might be the same person as the murderer of Charles Montagu; and if that possibility were entertained, it carried with it the further possibility that poor Emma Robey might be the woman in the picture. There was, of course, no evidence that she was; all that could be said was that, in the only respect in which comparison was possible—the colour of the hair—they were so far alike that they might have been the same person. And at that I had to leave it for the time being. I waited hopefully for Emma Robey to be identified, assuming that, when she was, we should get into the world of realities. But she never was identified, and, after a time I decided, as an idea, I think, did the police, that Emma Robey was a fictitious name and that the marking on the clothing was a plant, done deliberately to confuse the issues. But who she really was remained a mystery.

“And now we come to another remarkable feature of this strange crime. I mean the absence of any real attempt to conceal its authorship.”

“You are not forgetting the locked door,” I reminded him, “and the elaborate suggestion of suicide?”

“No,” he replied, “but I don’t regard that as a serious attempt. The police did not entertain the idea of suicide for a moment, and neither did I. The whole circumstances shouted ‘murder.’ Nor did the murderer seem to expect that the pretence would be accepted, otherwise she would have made the discovery herself and called in the police. But she would not run this risk but took the more prudent course of absconding, and in doing so, frankly abandoned the pretence of suicide.”

“But,” I objected, “why the pretence at all?”

“It seems to me,” he replied, “that there were two objects. First, it was a ‘try-on,’ a gamble on the infinitesimal chance that the appearance of suicide might be accepted. What the criminal thought of that chance may be judged by the fact that she did not stay to see whether it came off. She preferred definitely to incriminate herself by flight. As to the other motive, we shall come to that presently.

“To return to the crime; I repeat that, disregarding the pretence of suicide, there was no attempt to conceal the identity of the murderer. There was the corpse in Lotta Schiller’s room, locked in with Lotta Schiller’s key, and Lotta, herself, nowhere to be found. When once it was decided that this was a case of murder, Lotta was the obvious presumptive murderer. She alone had access to the rooms and there was no one else on whom any sort of suspicion fell. All that remained for the police to do was to arrest her and bring her to trial.

“But Lotta had disappeared; and notwithstanding the most intense and energetic search, the police failed to discover the slightest trace of her. Now, as Jervis remarked recently, it is not very easy, in these days of telephones, wireless, and a very perfect police organization, for a known person to disappear without leaving a trace; especially a rather conspicuous person like Lotta Schiller. Yet no sign of her was discovered until the finding of the handbag in Epping Forest.

“I am inclined to regard the planting of those relics in the forest as a tactical mistake. It never deceived the police, though Blandy very wisely made a search so exhaustive as to settle the question for good. Of course, the absence of a body damned the scheme. If there had been a murder, there must have been a body in the camp, and there would not have been those admirably selected clues; and the appearances could have been so easily produced by one person with two pairs of shoes.
The only effect on the police was to confirm their conviction of Lotta’s guilt and to spur them on to further efforts to lay hands on her.

“But, as you know, their efforts failed utterly, though the search never entirely ceased during the two years that followed; for Scotland Yard has a long memory and does not readily accept defeat. Nevertheless, in all that long pursuit, not the faintest trace of Lotta Schiller ever came to light.

“So much for the crime itself. Now let us see how these developments appeared to an experienced and deeply interested onlooker. To me, the most striking fact was the one which I have just mentioned; the virtual acceptance by the criminal of the authorship of the crime. Apart from the perfumery suicide tableau, which the murderer obviously did not rely on, there was not the slightest effort to dissociate Lotta Schiller from the murder; indeed, it almost seemed as if the onus of the crime were being deliberately cast on her.

“This curiously defiant attitude interested me profoundly. What could it mean? This was no crime of impulse with an unpromeditated flight. It was a carefully prepared murder, the procedure of which had been arranged and considered in advance. The only explanation that suggested itself to me was that Lotta Schiller had never been in any danger at all; that before the crime was committed, a means of escape had been provided, so secure as to render any other precautions unnecessary. And here, I think, we have the principal motive for the suicide deception; to disguise the criminal’s confidence in her immunity from the danger of discovery.

“But what could be the nature of this infallible means of escape? I could think of only one; and the facts fitted it so perfectly that I adopted it as a working hypothesis. I decided that here, for the first time in my experience, I had met with a criminal who had put in practice my method of the fictitious person; that Lotta Schiller was a disguised person with a fictitious personality who, having committed the murder, had simply dropped the disguise and forthwith had virtually ceased to exist.

“You will see how completely this hypothesis agreed with and accounted for all the circumstances. It was just a reproduction of the case of John Doe. Here, in the assumed character of Lotta Schiller, he lures his victim into his premises, in which everything has been prepared, commits his murder at his ease without danger of disturbance or interruption, removes all in criminating traces, and, in this case, arranges the sham suicide tableau, goes away, removes his disguise, if he has not removed it already, and, having now changed back into the personality of John Doe, watches unconcernedly the pursuit of the non-existent Lotta Schiller. If he had been perfectly wise, he would have left it at that; but he was not perfectly wise, and he elected to play the fool in Epping Forest and thereby offer to the police an unnecessary suggestion of deception.

“Having accepted this hypothesis, I asked myself the further question: assuming Lotta Schiller to be a disguised person, who and what was the real person and what was the nature of the disguise? Was she really a woman, or was she a man disguised as a woman? I decided, for several reasons, that she was more probably a man. In the first place, as I explained just now, change of sex is, as a long-term disguise, much easier and far more effective than any other kind. Then the crime looked like a man’s crime. Poisoning is characteristically the woman’s method; but not forcible poisoning. That requires such an amount of strength as to make it certain that the crime can be carried out. Then there was a curious little point that cropped up in the evidence at the inquest and that seemed to me very revealing. In proof of the essentially proper character of his relations with Lotta, Vanderpuye swore that he had never kissed her; that she had absolutely forbidden any intimacies of that kind.

“Now, if we assumed that Lotta was a woman, this was rather extraordinary, considering that their relations were almost those of lovers. But if we assumed that Lotta was a man, the anomaly was quite easily explained. By careful shaving, a blond beard can be rendered quite invisible. But it cannot be rendered impalpable. By the sense of touch—especially the touch of the sensitive lips—the invisible stubble would be instantly detected. Hence, in such a case, physical endearments would have to be avoided most strictly.

“The position, then, at this stage, was that I believed the murderer of Emma Robey to be some unknown man at whose identity I could not even make a guess. For he had vanished without leaving a trace; or rather, I should say, leaving only deceptive traces in the form of a well-known but non-existent woman.

“But there remained the problem of Emma Robey herself. As the time ran on and the police failed to discover any missing woman of that name, it began to dawn on me that here, probably, was another fictitious person; that the marked underclothing had been a ‘plant’ and that there was no such person as Emma Robey. But if there was not, then who was the murdered woman? Again, it was impossible to make even a guess; though, at this time, when I used to look occasionally at the picture in Polton’s room, I would ask myself whether it might not be that the two unknown figures in that picture were Emma Robey and her murderer.

“But this was mere speculation. It could not be tested or verified and it led nowhere. As the months slipped by and no new facts came to light, it began to look as if the Jacob Street murder would have to be added to the long list of unsolved mysteries. And so the matter rested for a couple of years. And then came Mr. Penfield; and with his arrival on the scene my role of the detached onlooker was exchanged for that of an authorized investigator.

“Now, before Penfield had spoken a dozen sentences, I saw that we were going to get some important new light on the problem; for we were now in a world of realities in which systematic inquiries were possible. But from Penfield himself, as he sketched out his case, I gathered several illuminating facts. Let us see what they were.
"First, we learned that Lotta Schiller was a real person. But Penfield’s case dealt with two Lottas; one, the testatrix, who was certainly the real Lotta, and another, the lodger at 39 Jacob Street, who was assumed to be the same person.

"Then we learned that there was some sort of connection between Lotta and Charles Montagu. The nature of it was not clear, but there had certainly been a contact of some kind.

"We learned, further, that Montagu had apparently been blackmailed, and that the blackmail had been assumed to be connected with the murder.

"Then Penfield could give us the address where Lotta was lodging when she was last heard of; and we gathered the significant fact that those lodgings were near Gravel-pit Wood.

"Finally, Penfield gave us a description of Lotta. It was very sketchy, but, such as it was, it seemed roughly to agree with what we knew of the appearance of Lotta the lodger (as we may for convenience call her, to distinguish her from the testatrix, whom we may call, simply, Lotta). But it agreed equally well with the woman in the picture and with Oldfield’s description of Emma Robey.

"Here, then, was some valuable new material; and, as soon as I had settled definitely with Penfield, I proceeded to sort out the facts and to seek to add to them. I began by inspecting Lotta’s will at Somerset House and trying to memorize her signature, and, as a matter of routine, I secured copies of the wills of Montagu and of Barbara Dalton. From the former of these I learned nothing fresh, and from Barbara’s only one trivial and apparently insignificant fact; which was that she had bequeathed all her chattels to her sister Linda, with the exception of her violin, which she gave to Lotta; from which it was reasonable to infer that Lotta was able to play the violin. But that fact, though I noted it, seemed to have no possible bearing on our inquiry.

"And now I addressed myself to the really important question: Was the lodger at Jacob Street the same person as Lotta the testatrix? The most likely source of the relevant facts was Mr. Thomas Pedley, with whom I accordingly communicated without delay; and, having received from him a most gracious invitation, I descended on him, supported by Jervis, at the appointed time.

"I must admit that, whatever my expectations may have been, the results of that interview were beyond my wildest hopes. Tom Pedley was a mine of information. He was a first-class observer, with an indelible memory and the valuable gift of imparting his knowledge by means of drawings. I need not go into details as most of them are known to you, but I will take the results in order.

"First, we learned that Lotta the lodger was a sham artist; an absolute sham, a complete impostor. Pedley assumed that she was posing deliberately for some reason unknown to him. This was an important fact, for, to this extent at least, she was masquerading in a false character.

"Next, we learned that, although Pedley had been on terms of fairly intimate friendship with her for many months, he knew absolutely nothing about her as to her past history or her friends or relations, excepting the rather shadowy husband. In respect of everything concerning herself, she was uncommunicative to the point of secretiveness.

"Then there were two very significant facts. One was that Tom had never seen her handwriting, and apparently no one else had; for she never wrote either to Tom or to Vanderpuye, and avoided the use of cheques by paying her rent in cash. She did not even sign her pictures. The other was her perversive refusal to have either a drawing or a photograph of her made for the locket, coupled with the fact that her own self-portrait bore no resemblance to her whatever. The great significance of these two facts was that, when the woman disappeared, all traces of her personality disappeared, too (as she believed). No portrait remained to be shown, studied, or compared with any known person, and no scrap of writing, or even the recollection of any, to be compared with letters or documents. The two facts, taken together, offered a distinct suggestion of preparation for a disappearance.

"The forced friendship with the remarkable manifestations of affection—entirely verbal and unaccompanied by any kisses or other physical endearments—was significant, especially as the woman seemed to have no other friends until Vanderpuye arrived and became the object of similar platonic affection. But I have already referred to the value of a flirtation as support for a ‘change of sex’ disguise.

"And now we come to the description and the incomparable note-book. That description was quite masterly, and to me an unexpected windfall. For, if I was right in my suspicion that Lotta the lodger was a man disguised as a woman, this description, with its wealth of exact detail, was substantially a description of the man himself. Thus, we learned that the woman’s height was about five feet seven without her high heels, that she had ears of a certain distinctive shape (of which Tom gave us a drawing), and that her eyes were of a greenish hazel. Now, these were characteristics that no disguise could appreciably alter. It followed, therefore, that the man, if he existed, must be about five feet seven inches in height, must have ears of that particular shape, and greenish hazel eyes. But Tom was able to supplement this description by an excellent memory drawing, the existence of which had been unknown to Lotta.

"But the real windfall was the hair. As soon as I had heard Tom’s description I realized that we had got a means of definite and certain identification, since Vanderpuye’s locket contained an authentic specimen which could be examined. For the condition was obviously abnormal. I suspected it to be ringed hair, since there seemed to be no other possibility; but, whatever it was, the microscope would make its nature clear. So we had got one totally unexpected item of evidence.

"It was, however, not the only one. Another point of unexpected importance emerged when Tom, in handing us his note-
book, showed us the finger-prints of poor Emma Robey. They did not appear to be of any interest as the unfortunate woman was dead and buried, but I looked at them to see how Polton’s improvised method had answered; and then I made a curious discovery. The finger-prints showed that Emma Robey had been a violin player.”

“How did they show that?” Vanderpuye interrupted, eagerly.

“By the signs of pressure and friction on the finger tips,” Thorndyke replied. “You must remember that finger-prints show other things besides the distinctive pattern; thickenings, for instance, of the epidermis due to particular ways of using the hands. Thus a professional violinist or a regular player develops thickenings of the skin—little corns, in fact—on the tips of the four fingers of the left hand which are used in stopping the strings. They do not appear on the fingers of merely occasional players, and so are indicative of the professional or serious player. The traces that they leave on the finger-prints are quite characteristic since they are raised above the general surface, and, owing to their hardness, the pattern tends to be worn flat. These, by the way, were not at all well marked; just little areas of indistinctness in the centre of each print. Still, they were quite unmistakable, and they established beyond doubt that Emma Robey had been a regular violin player.

“The significance of the discovery remained to be proved. I had inferred that Lotta Schiller had been a violin player; but the inference might have been wrong. Meanwhile, the evidence, such as it was, supported the suggestion that Lotta Schiller and Emma Robey were one and the same person.

“These were the chief facts that we learned from Tom Pedley, and you will see that it was a rich haul; for these facts were the foundation of my case. When we came away from the studio I had the skeleton of the case sketched out pretty completely in my mind. Of course, that case was purely hypothetical and it might be entirely fallacious. Its truth or its fallacy could be tested only by further investigation, and I applied myself forthwith to the task of verification.

“The first step was to examine the locket, which Vanderpuye very kindly placed at our disposal. I took it up to the laboratory at once and examined it under the microscope with a strong top light. A single glance showed that the hair was ringed hair, though, owing to its light colour, the rings were quite indiscernible to the naked eye or even through a weak lens. But with strong magnification it was perfectly clear; so we now had an infallible touchstone which could be applied confidently to any individual suspected of being Lotta the lodger.

“But we had to find that individual; and we had to seek further evidence as to whether Lotta the lodger was or was not a fictitious person. But this question was closely bound up with that of the identity of Emma Robey. For if Emma was, as I suspected, Lotta Schiller, then Lotta the lodger must be someone else. Accordingly I turned my attention to this question, and I began by ascertaining the latest date on which the real Lotta had been seen alive. Now, we knew from the affidavits that she had never been seen by any of her friends after she had left her lodgings at Linton Green. From that time she was never heard of by them until her reported disappearance in the Forest.

“The first thing, then, to be done was to find out the exact date on which Lotta disappeared from her lodgings; to which end I dispatched the invaluable Snuper to Linton Green to make inquiries of Mrs. Wharton, Lotta’s landlady. He began by asking if she could give him Mrs. Schiller’s present address, which, of course, she could not; but instead gave him those particulars which you have heard in evidence.

“This information did not appear to help us at all; for, as Lotta left her lodgings in the morning of the 13th of June 1930 and the lodger did not appear in Jacob Street until about a month later, there was nothing to show that they might not be one and the same person. So I had to look for evidence elsewhere, and I did not quite see where I was to look for it. The position was very tantalizing. I had the finger prints of Emma Robey, and, if I could only have compared them with those of Lotta Schiller, the question would have been settled. But where was I to look for them? There is only one place in which the finger-prints of unknown persons may be found; Scotland Yard. But it seemed practically useless to look for the finger-prints of Emma Robey in that place. For whether she were or were not Lotta Schiller, she was presumably a respectable woman. Still, it was not absolutely impossible that they could be there; and, since there was no alternative, and that I might feel that I had left no possibility untested, I made a good photograph of the finger-prints in the note-book, and, armed with this, went to the Yard and sought out our old friend, Miller. He made no difficulty about taking me round to the Finger-print Department and presenting my photograph of the prints to the search officer. And then, behold the miracle! The finger-prints of Emma Robey were actually in the files; and, of course, there were also the prison photographs and a summary of the particulars.

“At first it seemed as if the discovery did not help us much, for the name attached to the prison portraits was Louisa Saunders. We seemed merely to have got another unknown person. But the particulars were much more enlightening. It was noted that the prisoner’s underclothing was marked with the initials L. S., which agreed with the name that she had given, Louisa Saunders, but it agreed equally well with the name of Lotta Schiller. The most striking fact, however, was that Louisa had been arrested in the afternoon of the 13th of June 1930—the very day on which Lotta had left her lodgings, and after her departure from them. The agreement was so complete as to be almost conclusive.

“But there was yet another agreement. From Mrs. Wharton, Snuper had learned that Lotta was practically a professional violinist. But the finger-prints of Louisa Saunders were obviously those of a regular violin player. The impressions of the corns were extremely well marked; and now I understood why they had been so ill-defined in Emma Robey’s prints. During the imprisonment the corns had atrophied from disuse, and become worn down.

“The facts thus disclosed left no doubt in my mind that Louisa Saunders was really Lotta Schiller; and, since Louisa was certainly Emma Robey, it followed that Emma Robey was Lotta Schiller. From this it followed that Lotta the lodger was
some other person; and the question was, who could that person be? And now it was possible to suggest an answer to that question. The telegram that Mrs. Wharton had received had certainly not been sent by Lotta; for it would have disclosed her address, which she had refused to give to the police. But since Carl Schiller had called at the lodgings later to settle the rent and remove Lotta’s possessions, it was evident that he knew where his wife was. Apparently, he had sent the telegram to prevent Mrs. Wharton from making inquiries about her missing lodger. Evidently, then, there were reasonable grounds for suspecting that Lotta the lodger was in fact Carl Schiller. But nothing more than suspicion. It had yet to be ascertained that his physical characteristics were such as to make the disguise possible; and this could not be decided until I had seen him or obtained a detailed description of him.

“At this point it became necessary to take Miller into my confidence to some extent, as I needed his help for the next stage of the inquiry. He was perfectly willing, personally, to let me have copies of the prison portraits and the particulars, but he asked for a letter which he could show to the Assistant Commissioner, whose permission was necessary, and I accordingly sent him one, with the result that, as you remember, he called on me and brought the copies with him. Of these prison portraits I made copies with the name board masked out and put them, with a photograph of Pedley’s portrait and a few dummy portraits, in a portfolio to be produced in court.

“And now I was ready for the opening of the case in the Probate Court, when I hoped to make the decisive move. But I was in a difficulty in regard to the procedure. For the correct course would have been for me to disclose the information that I possessed to Penfield, who would have passed it on to the other parties. But this was clearly impossible. Very unwillingly, I was compelled to adopt the quite irregular course of proceeding without the disclosure of material facts or discovery of documents, in the hope that I should be able to make my essential points before Lorimer objected.

“But I must admit that I was far from confident that morning when we set out for the Probate Court. For I had to settle certain questions, and to settle them quickly, and the opportunity might be lacking. And the results might not be those which I expected, in which case I should have to start the whole inquiry afresh. I have seldom been more anxious about a case than I was on that morning.

“The questions that I had to answer were: First, was Louisa Saunders actually Lotta Schiller? Second, did Carl Schiller’s physical characteristics agree with Tom Pedley’s description of Lotta the lodger? Third, had he ringed hair? The first question would probably be easy to dispose of, but the other two were subject to all sorts of contingencies. In the first place, Carl might not be there, although I suspected that he would; for his absence would be rather remarkable, considering his obvious interest in the case and the fact that his affidavit had to be read and that I had asked for his attendance. But even if he answered the description, there was the difficulty of obtaining a specimen of his hair. I had discussed this matter with Snuper and we had considered a number of plans, but, in the end, I had to leave it to his ingenuity and readiness to take advantage of any opportunity that should present itself.

“You know what the upshot was. When Schiller was introduced to us, I saw at a glance that he agreed perfectly with the description. He was about five feet seven inches in height, he had greenish hazel eyes, his ears exactly resembled Pedley’s drawing, and the right one had a small Darwinian tubercle while the left had none; his profile, where it was not concealed by the beard, corresponded perfectly with Pedley’s portrait, and, as he was talking with Jervis, I noted that his smooth, high-pitched voice would have passed quite well as a woman’s voice. The agreement was complete. There was not a single discrepancy; and, for my part, I had no doubt that here was Lotta the lodger, the murderer of Lotta Schiller.

“But my belief was not to the point; nor did it amount to certainty. There remained the question of the ringed hair. That was the final test; and you will notice that it acted both ways. Lotta the lodger certainly had ringed hair. If this man had ringed hair, he was certainly the lodger. If he had not ringed hair, he was certainly not the lodger, no matter how complete was the agreement in all other respects. So that the identity of this man still remained to be proved; and I considered very anxiously whether it would be possible to get the sample of hair that was necessary for the proof or disproof. It looked an almost impossible task.

“I glanced towards Snuper, who had followed us into the court, and made the agreed signal to indicate his quarry; whereupon he got to work with his ridiculous little camera and managed to take two excellent profile portraits. Then he subsided into his seat and lay in wait for his victim; who presently seated himself close by, and then, as Lorimer made his opening speech, leaned his head against the back of the bench and closed his eyes.

“I watched Snuper anxiously and could see that he was keeping in close proximity to Schiller’s head. But that was all that I could see; for Snuper has all the conjuror’s skill in concealing his movements and diverting the attention of the onlookers. What he actually did was to wait until Schiller raised his head for a moment, and, in that moment to deposit a thick smear of a quick-drying adhesive on the back of the bench just where the head had been resting. It was a most audacious proceeding but apparently no one noticed it—not even Schiller himself. And it was perfectly successful, as I realized in the sequel; for, the next time that Schiller tried to move his head, it was stuck fast to the back of the bench and had to be released by Snuper’s scissors. Then I saw what had happened and was on tenterhooks while Snuper scraped away the adhesive—ostensibly to clean the back of the bench—for fear the judge should intervene and impound the scrapings for examination. However, all went well, and Snuper took an early opportunity to escape; and then I knew that the sample was safe, whatever it might turn out to be.

“You know, in effect, what the result was. When we arrived at the Temple in the lunch interval, I found Snuper waiting for me, modestly triumphant at his success, and received from him his little camera and a folded envelope which enclosed some sticky material and a small tuft of hairs. I need not say that I lost no time in taking the latter up to the laboratory for
examination. There I picked out a few hairs, and, laying them on a slide with a drop of bergamot oil and a cover-glass, and, placing the slide on the stage of the microscope, put my eye to the eye-piece.

"It was a dramatic moment, for the life of Carl Schiller hung on the answer to my question. And the answer was given at the first glance. The hairs were ringed hair, plain and unmistakable; and it was now certain that Lotta the lodger and Carl Schiller were one and the same person. But that person was the murderer of Emma Robey; and the final question that remained was whether Emma Robey was the same person as Lotta Schiller.

"I went back to the court confident of being able to dispose of this question before the inevitable objection. And so it turned out. When Linda Dalton identified the prison portraits, my case was complete. For her identification was so confident and positive that it left no doubt in my mind, and I now knew that abundant confirmation could be obtained. Lorimer's objection came too late to hinder me, for I could, if I had chosen, have had Carl Schiller charged then and there."

"Why didn't you?" I asked. "Why did you go on with the case in the Probate Court?"

"The rest of my proceedings," he replied, "were for the benefit of the police. They would want to be able to make out a prima facie case before they committed themselves to an arrest, and, in fact, I had promised Miller to provide him with enough evidence for the purpose. But it was as important to me as to him; for we had to make sure of a committal. It would have been a disaster if the case had failed in the magistrate's court. Besides, the latter proceedings were a sort of rehearsal; they enabled us to see exactly what evidence we could produce at the trial.

"Well, I have now retraced the course of the investigation and you can see how the mass of circumstantial evidence grew up as each successive fact came into view. There is no need to go into details of the preparation of the case, such as the composite photographs and the other exhibits which were produced in court, nor to speculate on those questions of which we shall never know the answers."

"That is all very well, sir," said Pedley, "for the learned lawyer and scientist, but simple folk like myself would like to have some sort of answers to those questions. For instance, I should very much like to know why the deuce Schiller elected to take up his abode next door to me and adopt me as his dearest friend. It could hardly have been a mere coincidence."

"No," Thorndyke agreed, "that seems incredible. But if it would comfort you to guess at his motives, I think you have something to go upon. He would have been looking about for a suitable neighbourhood where he was not known and for a likely stranger to adopt as a friend. He would have seen your name and address mentioned in the papers as that of the 'mysterious artist,' and he might have noted that, as you never came forward to give information and appeared to have been unaware of the murder, you were certainly not a busy or inquisitive person. Your neighbourhood was perfectly suitable to him, and your profession ideal for the purpose of striking up an acquaintance, provided that he could pose as a fellow artist; and that the present fashion for childish and barbaric painting made quite possible, with a judicious use of the current jargon. I think he made a very good choice."

"I should have thought," Pedley objected, "that the fact of my having seen him in the wood that day would have put him off."

"But, my dear Pedley, he didn't know that you had seen him. You are forgetting. The police kept your information to themselves. It never appeared in the papers. And, after all, though you had seen him, you never recognized him. No, my friend, I don't think that there is much mystery about his having selected you; but there are some other questions that are a good deal more difficult to answer."

"You mean," I suggested, "how it happened that Lotta allowed herself to be convicted of an offence that she had not committed, for I have assumed that Schiller planted those notes on her, deliberately, and that she knew it, though, of course, she couldn't guess at his object. But why didn't she say where she had got them?"

"Probably," Thorndyke replied, "she was so terrified of him, knowing him to be a murderer, that she did not dare to put the blame on him; and it is even possible that she accepted the prison willingly as a sanctuary from him. But we shall never know the actual facts, and it is not very profitable to speculate on them."

"You speak, Jervis," said Vanderpuye, "of his object in planting those notes on her. What was his object?"

"I take it," said I, "that his object was to get her safely out of the way while he was making his preparations to personate her and be ready to make away with her when she came out, before she had time to get into touch with her friends; and I assume that he knew that she would rather go to prison under a fictitious name than make a scandal and exasperate him. What do you say, Thorndyke?"

"I think you are probably right," he replied, "but we don't know, and we never shall. Nor does it really concern us. We knew enough to defeat a really talented criminal, and that should satisfy us."

"Even though," I suggested, "it knocks the bottom out of the infallible scheme of Mr. John Doe?"

"But does it?" he retorted. "I think, Jervis, you are overlooking some very material facts. In the first place, Schiller did not carry out John Doe's programme completely; and it was his departure from it that was his undoing. John Doe, having committed his crime, simply shed his disguise and disappeared, leaving no trace, and, thereafter, making no sign. If Schiller had done this, no question would ever have arisen. But he elected to stage the bogus murder in the Forest, and thereby left a loose end.

"Then you are overlooking the enormous effects of unforeseeable chance. The ringed hair was a chance in a million, and
that of Polton’s taking the dead woman’s finger-prints and Pedley’s preserving them was almost as great. Yet, if you subtract those two infinitely improbable circumstances, there is no case left. Schiller would have been perfectly safe, for I could never have got beyond the stage of suspicion.

“Further, you overlook the fact that, in spite of all these adverse effects of chance, Schiller’s scheme did succeed. For two whole years he was at large and totally unsuspected. It is an actual fact that when Penfield came to me, not a single individual in the world, except myself, had any doubt that the person who disappeared in the Forest was really Lotta Schiller. Even the police, who rejected the bogus murder, did not question the identity.”

“Still,” I persisted, “the undeniable fact is that his scheme did fail, and that he is going to be hanged.”

“Yes,” Thorndyke admitted, “his scheme was defeated by the unforeseen and unforeseeable. His failure illustrates the truth of Herbert Spencer’s dictum that social phenomena are too complex for prevision to be possible. But without prevision, no plan can be devised that will certainly produce the effects intended. That is where social reformers and all sorts of other planners fail. They take no account of the unknown factors. But it commonly happens that the unknown factors turn out to be the operative factors, as they did in the case of Carl Schiller.”

“That is very true, sir,” said Vanderpuye; “and the operative unknown factor in his case was the existence of a gentleman named John Thorndyke.”

THE END
THE
Dr. THORNDYKE
OMNIBUS
R. AUSTIN FREEMAN
